**Richmond.**—Christopher Brown, in five days, 65lb. of roach and dace, and five barbel, the largest 7lb. F. Brown, in the same time, 90lb., and four barbel. Henry Wheeler, in six days, 150lb., and nine barbel. Job Brain, in four days, 80lb., and fourteen barbel. Henry Mansell, in six days, 70lb., and seventeen barbel. Henry Howard, in six days, 124lb., and fifteen barbel. F. Young, in four days, 40lb., and four barbel. John Bushnell, in four days, 60lb, and two barbel. The bank anglers, on their favourite day, weighed in 31lb. of roach and dace, and four barbel. The total result of thirty-eight takes in punt fishing, as reported above, represents 679lb. of roach and dace, and seventy barbel.

**Twickenham.**—Pert Hammerton, in five days, 80lb. of roach and dace, 10 barbel, and a perch of 1½lb.; Joseph Dobbin, in the same time, 62lb. and 10 barbel; Richard Coxen, in four days, 46lb. and three barbel; George Coxen, in the same time, seventy-eight dozen and three barbel; James Coxen, in five days, 40lb. and five barbel; W. Spong, in six days, forty-five dozen and two barbel; Charles Hennessy, in four days, forty dozen; Samuel Cole, in six days, 100lb. and five barbel; Edward Finch, in the same time, 105lb. and three barbel; George Chamberlain, during the week, 120lb.; H. Spiers, in five days and two half-days, eighty-six dozen and a barbel of 4½lb.; C. Miles, in one day, ten dozen; and John Spong, in six days, forty-nine and a half dozen and five barbel.

**Teddington.**—Joseph Baldwin, in one day, seven barbel, weighing 22lb., and in three other days 55lb. of roach and dace; John Stevens, in four days, 30lb. and two barbel.

**Kingston.**—John Johnson, jun., in five days, seven barbel and seventeen dozen of roach and dace; John Johnson, sen., in four days, fifteen bream—the largest 5½lb.—seven barbel, fifteen dozen of roach and dace, five perch, four eels, and a couple of flounders; James Wilks, in four days, twelve dozen of roach and dace, six dozen of gudgeon, two barbel, one bream, and the trout referred to in the "General Remarks"; Luke Francis, in one day, four dozen of roach and dace; F. Eastland, in six days, thirty dozen of roach and dace and four perch. It is estimated the bank anglers have taken during the week forty bream, thirty barbel, and six flounders, and some of the daily takes have been seven dozen of roach and dace. The taking of flounders at Kingston affords good evidence that some of the fish taken there at the end of last year still remain.

**Long Ditton and Thames Ditton.**—H. Buttery, in five days, 22 barbel—the largest 8½lb.—two chub, three perch, seven dozen of gudgeon, one dozen of roach, and three jack, the largest 3½lb.; C. Tagg, in two days, six dozen of gudgeon, and the same quantity of roach and dace; H. Rogerson, in one day, eleven dozen of gudgeon and three brace of perch; H. Tagg, in one and a half days, fifteen dozen gudgeon, nine perch, and nineteen dozen of roach and dace. The bank anglers have taken a nice quantity of roach and dace.

**Hampton Court.**—C. Stone, in three days, twenty-three dozen of roach and dace, several of the roach weighing 1lb. each. Thomas Milburne, in six days, twenty dozen of roach and dace and three barbel, the largest 8lb. Thomas Davis, in the same time, eighteen dozen of roach and dace, five dozen of gudgeon, and fifteen perch. Charles Davis, in one day, two dozen of roach and dace. William Milburne, during the week, thirty-five dozen of roach and dace and three barbel. Thomas Wheeler, in four days, twelve barbel—the largest 4½lb., and twelve dozen of roach and dace. At "Tagg's Island Fishery," the anglers from the bank have made some good takes of roach, dace, and perch. James Langshaw, at Hampton, in two days, has taken fifteen barbel—the largest 4½lb., and eight dozen of roach and dace. Roach, dace, gudgeon, and barbel, have found their way into the baskets of the bank anglers.

**Sunbury.**—Edward Clarke, jun., in six days, twenty dozen of roach and dace, fifteen dozen of gudgeon, and eleven barbel—the largest, 4lb.; and Henry Clarke jun., in two and a-half days, ten dozen of roach and dace and eight chub—the largest 2lb. The bank anglers have done well amongst the roach, dace, perch, gudgeon and chub.

**Walton.**—George Hone, in one day, an eel of 2lb., two barbel weighing 6lb., three bream and a brace of jack weighing 8lb.; another day, five dozen of roach and dace; another day, eight bream; and another day, 60lb. of bream—the largest 6lb., one barbel, and three perch. R. Watford, one day, one barbel, one perch, one chub, and five dozen of roach and dace; another day, a fine barbel of 8lb., and a couple of bream of 4lb. each; another day, two bream, one chub, four dozen of roach and dace, and four dozen of gudgeon; and another day, four bream and five dozen of roach and dace. George Hone, jun., in one day, four dozen of roach and dace. John Hone, one day, twelve bream and four dozen of roach; another day, four bream and six dozen of roach; another day, twelve dozen of gudgeon; and another day, four bream and two dozen of roach. Mr. Wilderspin has taken several good jack from the banks.

**Shepperton and Weybridge.**—H. Purdue, in one day, eighteen dozen of gudgeon and two dozen of roach and dace; and in three other days, twenty dozen of gudgeon, three brace of perch, and three dozen of roach and dace. Mr. M. H. Blamey, in one day, with D. Hackett, 40lb. weight of barbel. W. House, in one day, seven barbel and four dozen of roach and dace. F. Purdue, one day, ten dozen of gudgeon, six dozen of roach and dace, and two brace of perch; another day, seven dozen of gudgeon, three brace of perch, and six dozen of roach and dace; and another day, four dozen of roach and dace, eight dozen of gudgeon, and two brace of perch weighing over 2½lb. Herbert Curr, in one day, with Mr. Horsley, six dozen of roach and dace; and another day, with Mr. Dutton, nine dozen.

**Chertsey.**—John Poulter, one day, three barbel, three chub, one jack, one perch, and two eels; and another day, five dozen of roach and dace and a fine chub. T. Taylor, in one day, nineteen barbel and chub; and another day, with Mr. Abrams, seven barbel and three chub. James Haslett has been getting some very fair sport amongst the barbel, chub, and eels, and residing as he does at Dockett Point, where there are some of the best swims on the river, he ought to be well patronised by the anglers.

**Staines.**—John Keene, jun., one day, seven barbel and a brace of jack; another day, eight dozen of dace and one barbel; another day, eight dozen of roach and dace; and in two other days, with Mr. Bates, thirty-one barbel and two chub. J. Osman, one day, fourteen dozen of roach and dace; and in three other days, fourteen dozen of roach and dace. E. Keene, during the week, nine barbel and thirty dozen of roach and dace. Charles Hone, one day, with Mr. Randell, eight barbel; and another day, in two hours, a couple of barbel.

## UPPER THAMES.

The river is still very bright, and the ordinary fishing hardly worth the candle; but those who persevere under all and any circumstances are rewarded with a modicum of comfort in the shape of miscellaneous bags of roach, perch, chub, and gudgeon. The latter succulent dainties are feeding better than they have been all the season, and are running up to a wonderful size—2oz. gentlemen or women not being at all an exceptional size. At Bray, Mr. G. H. Panter, with a friend, last week, in two days' hard work, obtained 12lb. of roach, 6¾lb. chub, 20½doz. gudgeon, and 6 perch—the best fish of latter persuasion going 1¼lb. At Maidenhead, Mr. J. H. Clarke, with L. Wilder, has had on one occasion 21½doz. gudgeon, in addition to a swarm of undersized roach and perch returned to the water. My correspondent from this district tells me that the water is improving, and that roach and chub are likely to "soon be well on the feed"—I doubt this, my lord. At Medmenham, Bob Young, with a frequenter of the Ferry Hotel, has been daily at work; but with the exception of gudgeon, no grand hauls have been made. From Reading, I glean that on Thursday in last week 137 splendid stock trout of the Wycombe breed were placed in the Thames at the cost of the Reading Angling Association. The fish weighed from ½lb. to 3lb. each, and were liberated in excellent order. They make, with those previously put into this water, 350 trout, besides the stocking of grayling, perch, and carp mentioned in previous notes. Thursday evening.—River as bright as it possibly can be; very little chance of good sport, except with the gudgeon, which may now be had for the asking, with the addition of a nice little red worm on a No. 10 hook, and the grand desideratum of a smart knock from a supple wrist whenever there is a smell of a bite. Mr. Woodroof and Mr. J. Davenport, I have just heard, have had good sport, fishing with T. Barnes at Marlow, being located at Complete Angler's Hotel.—Marlow Buzz.

### Thames (Eynsham).

Friday and Saturday in last week, Mr. Tamen, with Mr. Geen, were very successful with barbel and chub, a lot of good fish coming to their share. Mr. Tamen had a splendid show of barbel—seven weighing 35lb., the three largest 8lb. each; in addition to these he had about 15lb. of good chub, making gross weight of fish 51b., all taken float fishing on very fine tackle. Mr. Bonvoisin has this week taken a few barbel, but has been more fortunate with perch and chub, having taken several good ones. On Monday, he (Mr. B.) caught a trout 4lb. ledgering, which he returned. The fish was in splendid condition. The river is low, but in capital condition for all-round fishing.—H. B. Howe.

### Thames (Goring).

Water very low and clear. Fishing not very good. Gudgeon biting very well. My best day, three chub and a few good perch; next best day, ten dozen of gudgeons and two dozen of perch.—John Rush.

### Sonning.

They have been taking a good many barbel since I sent the last account. Mr. Hughes along with another gentleman got over a hundred weight a day at the same place where he took over 150lb. a few weeks back. Mr. Penton has been taking some good chub, he got a very nice trout two days before the close, weighing over 3lb., it was a female fish full of row, he was very sorry when he saw it. Water still very bright and low.—W. Hull.

---

### Ancholme District.

As an evidence of the popularity which atteuds the Ancholm fishing, I may state that in a match which took place on Monday week there were nearly one thousand anglers present, and the chief prize was taken with 6lb. or 7lb. of fish. Some few stayed all night at Brigg, and had heavy catches the next day. A fine roach was taken weighing 2lb. 1½oz., and a bream of 4lb. 12oz.; a pike of 12lb. 6½oz. has also been landed. On Monday last, between three and four hundred were out. I went trout fishing on Monday after tea and caught one and a half brace, and lost three, fish of about 1lb. each. With respect to the fontinalis, which called for an editorial note last week, I may state at once that they were caught in a pond, and better sport I never wish to see with fly. I caught six fontinalis to one trout, and I know of some more ponds where they are thriving equally well. I quite agree with the Editor that they are not so good as English trout for culinary purposes. My estimate of their value is, however, somewhat higher than his. I put them in comparison with trout in the ratio of three to four, whilst for beauty of colour they are, in my judgment, superior to our own. They may possibly be a failure in Scotland and some English waters, owing to climate and absence of suitable food. I find they thrive best where there are plenty of freshwater shrimps. I am experimenting on one or two small local streams in which this food abounds, and on one occasion this season caught ten two-year-old fish. This was the only time I fished for them. The time of their introduction hereabouts, as far as brooks are concerned, is too limited to speak with confidence. In another season or so I shall be able to speak better from experience. Any way, I have met with great success when they have been put in ponds fed by chalk streams, and containing suitable food. They have then nearly doubled trout in size in the same time.—Thomas Ford.

[The fontinalis may do in ponds; but even there our English trout are better. We have not been able to find any case where fontinalis have bred, even in ponds, in this country.—Ed.]

### Ballynahinch.

Since last report the following are the takes on above:—Col. Biden, in 11 days, one salmon (7lb.) and 81 sea trout; De Whipham, in 10 days, two salmon (15½lb.) and 70 trout; Mr. Grissel, in 12 days, three salmon (23lb.) and 69 trout; Mr. Porter, in nine days, 63 trout; Mr. Pemberton, in seven days, 49 trout; Mr. Webb and Major Wallis, in eight days, 49 trout; Mr. Bromley and Mr. Birken, in eight days, one salmon (7lb.) and 46 sea trout; Mr. Higham and Mr. Oakden, in six days, 61 trout; Mr. Rooper and son, in three days, 16 trout; Mr. Nall, in six days, 43 trout; Mr. Summerville and Mr. Cadwell, in five days, one salmon (10lb.) and 26 trout; Mr. Hathabawn, in 12 days, 144 sea trout; Mr. Oliver, in eight days, and Mr. Ashwell, in four days, 72 sea trout. Total for fortnight, eight salmon (62½lb.) and 789 sea trout. Weather much improved for angling.—Walter Blackadder, Sept. 17th.

### The Bure (Norwich).

A second summer may almost be said to have set in, and this beautiful stream is alive with yachts and anglers; the latter, however, having indifferent sport, as the wind keeps in the N.E. and E., which, as all fishermen believe, is usually fatal to their efforts. Still, I gather at Wroxham, both from Simpson's and also Whittaker's, that several fairly good catches have been had during the past week; one boat in particular, which went up stream towards Coltishall, returned with nearly six stone of good bream, several being large fish, and most of them takeable size. Others have caught from two to three stone, which is not bad for two rods and these shortened days. Jack are being taken with the paternoster. I have just seen three small fish which were thus caught this afternoon. Of course, the weeds put a stopper on trailing much as yet; but success should soon attend this mode, using a dead dace for choice. Small roach appear just now to be the favourite with both perch and jack, though I prefer minnows for the former. Prospects would improve with a change of wind.—Robert Moll.

### Chichester.

During my absence anglers in this quarter have been somewhat busy. Some good bream have been taken from the Canal, while at Selham Mr. S. Young has proved successful among the roach, 14lb. of good fish falling to his prowess, a few days since. Mr. Willison informs me that roach up to 1¼lb. have been landed. At present I am among the pike in private waters; six nice fish was the result of Monday's angling, but the water is generally low and bright. At Selham some good pike have been seen, but at present are not feeding well.—George F. Salter.

### The Churnet (Macclesfield).

In the paragraph in the Gazette last week about the big trout, you have unfortunately given the angler's name as "Bingley"; it should be "Brindley." Fishing here for the past week has been comparatively *nil*. The river still continues very low. I hear of some good takes of grayling at Rocester, where the Dove joins the Churnet; and also at Hartington, in the Dove, an old piscator, J. Fossbroke, caught one (a grayling) over 2lb. whilst fishing with a gentleman. I trust to be able to send you regular notes next season.—Churnet Otter.

### The Dee and Don (Aberdeenshire).

With the advent of autumn we have, with unfailing certainty, the ascent of the autumn fish. As a writer said the other day (quoting the words of our regal Solomon), the salmon begin about this time to evince "a most natural . . . . affection for their native stream." They may be late this year in running, but they are by no means scarce. With the last spate—and we wish we had more spates—some very fine heavy fish ascended the Dee, Don, and Ythan, but the water has again subsided, and is now so low that large fish, though inclined, are unable to proceed upwards. Especially is this the case as regards the Dee, where the numerous garths check their progress. Finnock are showing abundantly in the tidal waters, but poachers are manifestly at work, as a few whitling, submitted to us the other day, bore unmistakeable evidence of having been dragged in a small mesh net. In confirmation of this statement, Inspector Cruickshank and bailiffs captured, early the other morning, a gang of notorious poachers, having in possession no less than eighty-five whitling and sea trout. We think the riparian proprietors ought to co-operate with the Fishery Board in directing the services of their keepers to be given in aid of the river watchers. A few salmon have been landed in the Ythan by the rod, and on the Don some seven or eight salmon have fallen to anglers since the close of the net fishing. On the Dee, Albert Farquhar, Esq., Carlogie, secured one salmon 8½lb. On the Borrowstone section, Walter Evans, Esq., Derby, had a grilse 6lb. and a salmon. On Kineskie, C. Wolleston, Esq., Bath, had a salmon of 10lb. On Cairnton, W. Farnell Watson, Esq., Dorking, had a salmon of 14lb., and seven or eight sea trout; and on Loch Kinnord, the same gentleman had, one day, eighteen pike from 4 to 15lb., and another day ten of a similar weight. On the Aboyne Hotel water a few fish were got, and the Glentana water has produced several, the largest 27lb. Mr. Potter has had fair sport on the Park section; and Mr. Knowles' fishermen on the Durris water landed one or two salmon, the largest by John Sheriff's, being 32½lb. General the Hon. Fane-Kane, and Mr. White, of Overtoun, are fishing the Kineskie and Crathes waters, and all that is wanted to insure them good sport is a rise of the river. The flies most successful on the middle sections (between Cairnton and Culter) have been the Jock Scott and the blue charm pattern, dressed by W. Milne, Aberdeen. Old George Craven had a fish on Durris of 9lb., and James Dawson, of Brancepeth, along with one of the fishermen, secured one of 7lb. for W. Knowles, Esq., banker, London. On Culter and Kingcausie respectively, R. W. Duff, Esq., M.P., and Archer Irvine Fortescue, Esq., have as yet been rather unsuccessful. The fishings on the Feugh are still a total blank. Trout fishing may now be regarded as over for a season. Mr. George Smith, saddler and tackle-maker, Ballater, kindly sends us the following report:—Sept. 6th, Tom Grant, gillie to J. T. Mackenzie, Esq., of Kintail, had, on the Pannanich water, one fish 10lb. Invercauld Arms Hotel water, Donald Morgan, gillie, one fish 7lb.; Monaltrie water, 13th, Captain Greig one fish 10lb., and on 15th one fish 8lb. This gentleman has had splendid baskets of fine trout during the past six weeks. Mr. Smith reports that, in addition to a number of sea trout, Greig had the largest-sized trout he has ever seen taken near Ballater; they ranged from ½lb. to 3lb. Fishing has been poor lately, but ought to grow very good soon if we get rain. Blackhall, one fish; Cairnton, Farnell Watson, Esq., one fish 14lb., and grilse 5lb; Culter, one fish 10lb.

### The Dove.

The above river has been running in fair angling order since my last report, and sport on the whole has proved very profitable. The best killing flies have been the general black, the olive dun (April and September shades), and the honey dun bumble. In the upper reaches of the river the minnow has killed freely, and I hear of one excellent take of nine and a half brace of trout with the well-known Derby killer, in the Dovedale length of water. They were a splendid sample of fish, and afforded the successful rodster some capital fun. On the lower lengths of the stream the worm and maggot have been instrumental in accounting for many heavy baskets of roach, bream, chub, perch, and barbel. The wasp-grub is rapidly going out of season, and is becoming difficult to obtain. Weather fine, but overcast.—The Splodger (Thursday).

### Exe (Exeter).

Some very fine perch have been taken with live minnow and brandling worm in the river at Cowley, Exwick, and also in the canal at Turf and the lime-kilns. Some good catches of roach have also been had near Exwick fields with wasp grub and new bread; but the heat is intense, and a cooler temperature and some nice rain are badly wanted to ensure good creels —J. A. Kelley.

P.S.—I answer Mr. Frank Gosden's letter about Salmon Pool Weir next week or by letter direct.

### Ilfracombe.

Sea fishing.—Sport has been very good this week, and gentlemen fishing from the rocks and jetty have come in for a fair share of it, but the principal catches have been from the boats. On Friday F. S. Redmore's party took 40lb. conger; R. Souch's, nine conger, the largest weighing 30lb. the smallest 10lb. T. Davie, G. Comer, J. Bushen, G. Rudd, and C. Bamford's parties each had five strings of whiting pout. Saturday and up to to-day the catches have been both numerous and varied, some having fine strings of whiting pout, others having good catches of tamlin cod, conger, &c., from the rocks and jetty. Mr. Gratte has caught some nice sized codlin and conger eel. On Saturday he hooked a large fish, but his gear was not equal to the occasion, the fish getting away with the best part of it. On Tuesday a gentleman from London fishing from the jetty caught two mullet weighing 3½lb. each. Prospects good; weather fine.—E. Comer.

### Lea (Tottenham).

Some capital fish have been taken during the week, both bottom fishing and on the surface. Master Cann, on Monday, had four roach, the heaviest going 1lb. 1oz., the smallest 14oz. Mr. Bennett, jun., four dozen capital dace. On Tuesday, a gentleman (whipping) a creel full of roach, dace, and chub, several of them going fully a pound. Mr. Wheeler, with "blow line," killed some nice chub; and "Little Harry" got some good perch close on 1lb. each, fishing under the bridge early in the morning.—Hackles Red.

### Leicester.

The attention of anglers was absorbed in the angling match, organised by the Leicester Angling Society, during the latter end of last week. The contest, as will be seen by a full report given elsewhere in these columns, again terminated successfully. There was a large gathering of anglers and their friends at the Old Town Hall, Leicester, on Monday evening, when the prizes were handed to the winning fishermen. Mr. A. Smith occupied the chair. In the course of some remarks made by the secretary to the local society, he urged the necessity of all anglers joining the society, and thus practically assisting the furtherance of sport in this locality. This week there has been a remarkable change in the weather, the heat being intense at mid-day, and anything but favourable to large takes being had. In the sharp streams some nice lots of roach have been caught. The brook at Aylestone has afforded the best sport, and several anglers showed good lots of roach and chub, the grub being used with good results as a rule. Some of the baskets contained a few nice perch, taken with the maiden dew worm. Pike fishing quiet, and but few anglers have been paying attention to the out-of-town resorts. The waters at present are fine. Thursday was another hot day, and water still rather fine for bottom fishing.—Alert.

### Lugg and Arrow (Leominster).

These streams are now in splendid order for the anglers, who have fished these streams freely this week. The water still keeps very low, but in good fly-fishing order. The fish are sporting well, and good dishes have been taken with the willow, little pale blue, and black ant, which are the best flies on at present. A fisherman visited the water near Ivington on Friday and landed a splendid lot of fine trout and grayling with the little pale blue. Good sport was had in the water near Stanton. A gentleman with the fly landed a nice dish of grayling, averaging 8oz. each, all in good condition. In the Lugg, near Ford-bridge, the fish were biting well at the black ant and willow. A gent fished the water and took a basket of 6lb. of fine trout and grayling. The water at Aymestry was fished the same day, and a splendid lot of fine fish were taken by a gent who was fishing with the little pale blue. On Saturday a good basket of fine trout were taken in the Arrow with the fly. The Lugg was tried in the Bodenham district, and a nice dish of grayling was landed with the willow. A few good trout were taken from the Arrow in the Monklane quarters on Monday with the fly. A good dish of grayling was taken with the maggot the same day. A fisherman tried the Lugg near Kingsland, and with the black ant and willow landed some splendid trout and grayling averaging 10oz. each. A gentleman tried the Lugg near the town on Tuesday, and, with the pale blue, landed a nice lot of grayling. In the Arrow a good dish of trout and grayling were landed with the willow the same day. The Pinsley is in capital fishing order, being clear but low. The fish are now sporting well, and some good fish have been landed. A gent tried the pale blue on Saturday and landed a nice lot of fine trout, a good dish of fish were taken on Tuesday by a gent who was fishing with the fly.—Gwynne.

### Medway (Tunbridge).

At last the long looked-for rain has arrived in sufficient quantity to make a run in the river and side streams, and as a result those who have been out between the storms have been tolerably successful, though some have returned home with a severe soaking. Several good pike have been taken, as well as bags of roach and bream. Mr. H. Cox, of New Cross, in two or three days, secured from 25 to 30lb. of bream in High-bridge Hole. On the 14th inst., we had an invasion of London anglers, whom, I am glad to say, were remarkably well behaved, though I am, at the same time, sorry to say they do not have much sport, owing, I fancy, to their ignorance of the swims. When the water clears, fish of all kinds will be ravenously on the feed.—Ye Medway Water Rat.

[Received too late for last week.—Ed.]

The water has fined down nicely, and early in the week bream and roach bit very freely when they had been baited. The hot sun has, however, brought them to the top during the middle of the day, and it is only possible to get them in the early morning and late in the afternoon. Chub are taking wasp grub greedily, and pike should be well on the feed.—Ye Medway Water Rat.

### The Ouse (Huntingdon).

Some fine sport, roach fishing, was obtained in the river Ouse, near Huntingdon, by Mr. and Mrs. C. A. Bryant, of that town, who captured in two days, on the 2nd and 3rd inst., five large bream and 200 very fine roach, all sizeable fish. The water is very bright for fishing. Nothing of importance has been done, only on the 14th inst., when a neighbour of mine took 98 roach, some of which were very good ones. On the 17th I was on the river noticing some most splendid roach. The water being very bright I could see a great depth, and I don't think much will be done until we have a good rain to colour the water. Jack are lying on the shallows, it being so hot, and nothing in that line of business will be done yet, unless we have a great change in the weather.—H. Rout.

### South Level Cut (Littleport).

The water is very bright here now, and the fishing is very slow in consequence. The weeds are also still very troublesome. The best I can give among a number of anglers are:—Sept. 12th, Mr. F. Lawrence, Old Chesterton, 7lb, nice roach in 2½ hours; Sept. 13th, Mr, B, Brashier and T. South, Littleport, 8lb, roach and perch during afternoon; Sept. 14th, Mr. H. C. Stearn, Cambridge, about 9lb, roach; Sept. 15th, Messrs P. and A. Holland, Newmarket, 6lb, roach; Sept. 17th, Mr. A. Pace, Newmarket, 9lb. good roach; Mr. E. Fetch, Cambridge, 6lb. roach and small jack 2½lb. Keeper Benton reports; Messrs. Piggott and Ely, 50 very nice perch on Saturday, giving an average of 7oz.—Charlie South.

### The Suir and Tributaries.

The late heavy rain, though it did not raise the river many inches, or colour it perceptibly, still put some stir in the fishing. A few good trout were killed, both on the streams and main river. Doubtless much more would have been done had not the superior (because nearer) attractions of the Gun caused many of the votaries of the rod to forget their old love and desert the river for the mountain. The grouse have been more plentiful this year than for many years past, and this is looked on with favour by the rod as well as the gun, for one of our most killing flies now is the grouse hackle, especially with orange body. It will take a great deal more rain to make the fishing anything like what it ought to be: if we only had a good flood, the trout are in such excellent condition, and so plentiful, there ought to be good sport till the end of the season, which closes in four weeks more. The salmon-fishing is almost *nil;* an odd fish or two in the week is all that falls to the rods, the majority of which are idle; still, if the flood came every stand would be fully stocked again, especially on the lower waters. I see that the Blackwater anglers are stirring themselves to have the Open Season extended to the end of October instead of the beginning, when it closes at present. They say that in the Blackwater, as in the Suir, there is a run of fresh salmon from the sea just as good in October as in March. These do not ascend the river very high, but keep to the lower waters, and thus afford sport to anglers who cannot fish in the spring on account of the netting and constant high and flooded state of the river—we wish them all success. The Suir formerly closed in the middle of September; but two years ago the Clonmel anglers petitioned for an extension, and brought such evidence forward as induced the inspectors to give us till the 16th October (we wanted to get the whole month, but four weeks additional was not bad)—thus not only giving sport but employment to the poor fishermen, and good food to the public that would otherwise be lost.—Dora.

### Teme (Ludlow).

The weather has been very favourable for angling pursuits and the water in good condition; the tributaries have almost all returned to their normal state, and are fairly free from impurities. Anglers, on the whole, have fared well this week, though the shortening of the days makes a wonderful difference to fishermen visiting some of the tributaries—the Clun, for instance. You must stop fishing very often when the fish are just beginning to take the bait well or arrange for a conveyance (which is a scarce thing) to convey you to Craven Arms Junction to catch a train. Some pike were caught the other day in the Teme down at Asford. I understand that Mr. Ralli's water was netted for the purpose of separating the rough fish from the grayling and trout, and during the process on Friday, just below Asford Bridge, two pike were caught in the nets, one weighing 7lb. and the other 5½lb. There are a number of pike I am told hereabouts, but all efforts to catch them have failed. In a meadow, near Saltmoor, on Monday, an angler, who was fishing with the little black ant, managed during the afternoon to land four nice trout, seven grayling, seven roach, and three perch, the whole lot weighed over 10lb., the trout being the best of the lot. A gentleman lower down the water, fishing in the evening, with the wasp grub, managed to land a basket of very good trout and grayling. Another gentleman went down to the same quarter late on Tuesday evening and caught nearly a dozen fish with the cabbage grub. A few fish were caught up the Leintwardine district with the maggot and wasp grub. Good fish have been caught down at Lord Windsor's waters top fishing. The Clun has risen, and fishermen can again visit that stream which is swarming with grayling. The Clun is now getting into nice order, and some very fair catches have been made in that quarter. The Corve, as usual, has been visited, and excellent fish have been landed. Up Mr. Earmer's waters a fisherman caught thirteen grayling while fishing in a meadow with the wasp grub; on going into the next field he landed four more, all splendid fish. I have not heard of the Letwyche being much disturbed of late.—S. Ludlow.

### Teme (Tenbury).

There is but little alteration in the state of this stream, it still keeping in splendid fishing order. It has now run very low again. The fish are now rising well at the fly, and some very good sport has been had. The best killing flies at present are the silver-twisted blue, little pale blue, green insect, and hare's ear dun, the latter fly being a sure killer when the other flies fail to kill. Some very good dishes have been landed with the willow in the evening. Fishing quiet with the wasp-grub and maggot. At the end of last week a gent landed thirteen splendid fish in the water below the bridge with the fly, averaging ½lb. each. On Friday capital sport was had in the water at Berrington Court, a gentleman with the hare's ear dun and pale blue landed a splendid dish of fine trout and grayling, some weighing 1lb. each. In the water near Corn Brook some very good grayling were landed with the fly. In the water at Little Hereford some good sport was had with the green insect on Saturday. A gentleman took a basket of 5lb. of fine grayling and trout. Near Rochford a good dish of fish averaging 10oz. each were taken with the fly. A nice dish of grayling was taken below the Teme Bridge with the willow. In the Eastham quarters a good day's fishing was had on Monday; a gentleman with the pale blue and silver-twisted blue took a dish of ten fine trout, all in good condition. Below the town a splendid lot of fish were taken with the fly. On Tuesday, a capital dish of fine grayling were landed by a gentleman who was fishing with the hare's ear dun. In the water near to Easton Court some fine grayling were taken with the green insect. The Kyre and Rea are both in good fishing order, but very low; the fish are sporting well at the fly. In the Kyre on Saturday a nice dish of trout were taken with the fly, and a few good fish were landed on Monday. In the Rea, near Cleobury North, a fine dish of trout were taken with the pale blue on Friday. A fisherman who was fishing on Monday at Didlick, landed a nice lot of trout with the fly. The Ledwyche is in good fishing order, but low, and fishing very quiet.—Worcester.

### Torridge (Torrington).

There was a good rise in the river on Tuesday, and several peel have been taken. One gentleman came in this morning and was going to fish; he said he took 21 trout yesterday with the fly, mostly in the broken and rough water. Weather very bright and sultry.—Practical Angler.

### Trent (Alrewas).

The river is in first-class condition for all kinds of fishing, particularly grayling. The late rain has much improved the character of the water.

### Trent (Newark).

The water has been in capital condition most of this week; but somehow or other, sport has not been very brisk. A few good chub have been taken with wasp grubs, and a few roach and bream have fancied the tail end of lob. The weather has been delightful this last day or two, and everything in favour of the angler; but the fish have got the best of the argument—that is, as far as I can learn; but, anyhow, the water is in good ply, and the patient angler should be rewarded with a good bag for his trouble. Tail end of lob will be found the best general bait just now, while wasp grub and gentles can be used for a change.—Trent Otter.

### Trent (Nottingham).

The Trent, so far as this district is concerned, is low and clear; but anglers during the week have mustered in strong force, especially at Weston and Shardlow. The barbel swims have been freely baited, and on Tuesday, amongst other fish, Mr. C. Taylor, of Nottingham, took a trout of 2¾lb. Fly-fishing has been pursued with success, more particularly at Hoveringham, Gunthorpe, and Wilford. The Sheffield contingent appear to have been busy at Marnham and Dunham, below Collingham, and fairly good sport has resulted amongst the bream. On Thursday a splendid take of barbel was effected in Sir John Crewe's water.—H. Coxon.

### Witham (Dogdyke).

During the past week we have had many of our angling friends from Leeds and Bradford, and other large towns, many of whom have been very fortunate, having secured some very good baskets of roach, perch, and dace, caught in the river Bain, which river empties into the Witham behind the flour mills at this place. We have also heard of some good pike being caught, weighing from 2lb. to 5lb. each, also some tench, from 2lb. to 3lb. each. The water is now much higher, and we consider it is in very good condition for angling.—Packet Hotel.

### Wye and Derwent.

We have had several very heavy thunderstorms since the last report, which was the cause of discolouring both the Wye and Derwent a little the beginning of the week; but the weather has been excessively hot, and has quite taken both trout and gudgeon off the feed at either top or bottom, consequently small baskets have been the order of the day. In fact, most of our local fishermen from about this district have been either out shooting or gone to the race meetings. Weather again to-day, Thursday, is excessively hot, with thunder-clouds hanging all around us.—G. J. Eaton.

### The Yare (Norwich).

Reports from the various stations on this river are not over encouraging, and I do not expect much improvement until the wind shifts from the east quarter. The best accounts come from Brundale, both at Flower's Station and also at Brown's, Coldham Hall, the anglers have, during the last few days, been doing better than lower down the stream; Professor Day has had several good catches of nice bream this week, I saw some last night which I should think weighed 2lb. and upwards, whilst I hear that four stone of good roach have also been caught at the same station, which looks as if the fish were working up stream; of course, the middle of the day is now the best time, as the mornings and evenings are chilly, and the fish are not sharp at any time. I am surprised not to have heard of some jack being taken on the stream, which I know contains plenty and of large size, but I suppose we must be patient and wait a little longer. Prospects will be more cheering as soon as we get a change of wind.—Robert Mole.

### GREAT ANGLING CONTEST AT LEICESTER.

The fifth annual fishing contest promoted by the Leicester Angling Society took place in their preserves on Saturday; £8 in prize money was offered as an inducement to followers of the piscatorial art by the society, and this amount was divided between the first, second, third, and fourth anglers in the competition. Additional prizes were kindly contributed by gentlemen of the town who take an interest in this particular class of sport. There was a large entry, no less than 123 anglers paying the required fee for permission to compete, and among these were the best known rodsters of Leicestershire. Representatives from Barrow-on-Soar, Thurmaston, Quorndon, Mountsorrel, and Loughborough took part in the proceedings, whilst it may be mentioned that the first prize fell to the lot of one of the visiting anglers. The weather, which is always an important item with this kind of competition, was not in favour of large takes, a keen north-easterly wind blowing right across the river in the faces of the fishermen. The sun was shining brilliantly the whole of the afternoon, and a large concourse of spectators, who seemed to evince the liveliest interest in the contest, assembled along the banks. The swims extended a distance of about two miles, from the Twelve Bridges, Leicester, to the Aylestone Bridge. The marking-out was done under the direction of Mr. J. Benskin, and gave general satisfaction, and the whole of the arrangements were, as on past occasions, in the hands of the able secretary, Mr. J. T. Hardy, assisted by Messrs. Benskin, Clark, Farrar, Wood, Ritson, Rowlston, and Paterson, and were carried out in a complete manner. The pistol was fired for the start exactly at 2.30 p.m., and fishing ceased at 6 p.m.

The following is a list of the prize-takers:—1st, Mr. Blount, 2lb.; 2nd, Mr. Shelton, 1lb. 12¾oz.; 3rd, Mr. Bampkin, 1lb. 7¼oz.; 4th, Mr. Hurst; 5th and 6th, Messrs. Hurst and Vincent; 7th, Mr. Burgess; 8th, Mr. W. Walker; 9th, Mr. J. Mee; 10th, Mr. Webb; 11th, Mr. G. Brown; 12th, Mr. Beddar; 13th, Mr. C. Goode; 14th, J. Parsons; 15th, Mr. Broadhead; 16th, Mr. R. Hoe; 17th, G. Fisher; 18th, Mr. Elkington; 19th, Mr. A. Marvel; 20th, Mr. A. Lee; 21st, Mr. T. Hornby; 22nd, Mr. Barrett; 23rd, Mr. Oswin; 24th, Mr. Green; 25th, Mr. Bird; 26th, T. M. Hunt; 27th, Mr. Shuttlewood; 28th, Mr. Breedon; and 29th, Mr. Gould.

### TWEED AND TEVIOT.

Angling operations in these rivers and their tributaries still continue to be almost barren of results, the most persistent disciples of the gentle art being only now and again rewarded for their pains by a capture of from 2lb. to 4lb. of trout.

On Tuesday, last week, Mr. Charles Kerr, angling on the Sprouston water, caught two grilse of 4lb. each; and on the Friday following he had the good luck to secure three others, weighing on an average 6lb. a-piece. The rivers, however, are too low for successful rod fishing; and as the net fishings have now closed for the season, a flood is much needed to enable salmon to ascend to the upper reaches of the streams and thus afford sport to the angler.

Fully a week ago the occurrence of rain in the district brought down the Blackadder and Whitadder and other small tributaries of the Tweed; and when the rivers subsided, good takes of trout were obtained.

The salmon net-fishings on the Tweed, which closed for the season on Saturday night last, have been most unsatisfactory in their results. The quantity of trout and grilse caught has been much below that of the last two or three years. The yield of salmon also has not been up to the average.

Although the prices obtained for salmon, grilse, and trout have been higher than they were last year, still, the outcome as a whole will barely pay wages and working expenses. One company, it is stated, will have to face a deficiency of something like £3,000.

The largest salmon captured this year weighed 42lb. The prices on Saturday were—Salmon and trout, 1s. 3d. per lb.; grilse, 1s. 4d. On the closing day last year the prices were—Salmon, 1s. 3d.; grilse, 1s. 6d.; and trout, 1s. 2d. On Tuesday last week, the Berwick District and Bonder Angling Clubs combined had their autumn competition on the Whitader with the following result:—1. Mr. W. Redpath, 8lb. 15oz.; 2. Mr. Melville, 8lb. 5oz.; 3. Mr. F. Richardson, 5lb. 6oz.; 4. Mr. Martin, 3lb. 3oz.; 5. Mr. R. C. Steven, 2lb. 1oz.

One day last week the salmon fishermen at Far Seas Fishery, Spittal, had the singular experience of capturing an angler or devil-fish in their nets. One of the men opened the "devil's" mouth, and, and inside of the capacious orifice he found a grilse about 3lb. weight, which was partially swallowed.

Maxwheel, Kelso.

Illegal Fishing in the Avon.—At the Evesham Petty Sessions, on Tuesday, Wm. Spragg and Jno. Spragg, of Bidford, fishermen, were summoned by Messrs. Tomes, of South Littleton, for fishing in a portion of the river Avon, the fishing of which was rented by them, on the 21st July last, by throwing a net. Defendants said they thought they had as much right as the Messrs. Tomes to fish in the water; but the Bench, taking a different view, fined each defendant 5s. and 8s. 6d. costs.

Cost of Railway Sleepers.—The other day, while journeying in the train to a fishing station, we got into conversation with a railway official who was collecting orders for the new sleepers wanted along the line, and having often wondered what sleepers cost, we asked him, and were informed the plain ones cost 3s. 2d. each, and the black ones 3s. 10d. each, and their durability depends on the nature of the ballast they lie in.

# CLUB REPORTS.

### THE ANGLERS' ASSOCIATION.

The monthly meeting of the above took place on Monday, 15th September; there was a very full attendance. Mr. Geen was in the chair. The minutes of the previous meeting having been read and confirmed, the committee representing this association on the Fisheries Society were called on for a report. Mr. Manning rose and said that the committee to the number of twenty-one members attended according to notice duly given at the Star and Garter, St. Martin's-lane, on Monday, the 8th inst., that they were there informed by Messrs. Crumplen and Hatfield that the new members of the committee would not be received, feeling that it was not the business of one association to dictate to another who should represent them on any committee whatever. The committee adjourned to the Green Man, and the following business was transacted:—Mr. Geen was voted to the chair, and Mr. Ghurney then rose and said he had had a letter on Monday, saying that the Central would not recognise the new members of the committee chosen by above association; such letter was received too late for information to be sent to the members of the committee. Mr. Geen pointed out that as Messrs. Crumplen and Hatfield had just informed him that the Central had decided upon three gentlemen to meet three others chosen from this association, for the purpose of winding up the Fisheries Society, that the decision not to receive the new members of the committee could only have been arrived at to show as much discourtesy as possible to the Anglers' Association. Mr. Nicholls said that under legal advice he was of opinion that nothing could be done without calling a general meeting of each individual member who had paid his shilling for a ticket. Various members combatted this opinion, and it was decided that the committee were empowered to act for the general body. Nevertheless, it would be advisable shortly to call a meeting of anglers generally belonging to this association. The president pointed out that the Central demanded the same voting power in the Fisheries Society as the Amalgamated Societies; this sounded very fair, but taking into consideration the fact that the united associations had paid into the Fisheries one hundred and forty pounds, and the Central only three-and-twenty pounds, the proposition could not be entertained. This preposterous proposition of the Central having been scouted, it was resolved to offer them one-sixth of the cash in hand and certain portions of the waters, the Anglers' Association to take the remainder; if no agreement should be arrived at, it was resolved to convene a meeting of the ticket-holders. Mr. Ghurney received instructions to write and inform the Central, and appoint Friday for a meeting at the Foresters' Hall, of their three delegates to meet our three (Messrs. Tibbatts, Beckett, and Manning). Mr. Ghurney received a reply on Friday saying time was inconvenient: this time also letter was too late to inform our delegates. The Central suggested any time after Tuesday next, and some place other than the Foresters' Hall or the Star and Garter after this report. The balance-sheet of the West Central up to the amalgamation was received, and consequent thereon a resolution was carried that the debts due by both old associations should be discharged at once, there being ample cash in hand. Messrs. Tibbatts and Manning were elected trustees pro tem. Mr. Grey was elected a bailiff for the River Lea. Mr. Ghurney announced amidst loud cheers the capture of another net at Clapton; 42ft. it measured. The poachers escaped, but being well known, will be summoned. Mr. Ghurney also announced that the railway tariff cards were ready. A vote of thanks to the president concluded the business.

### ACTON PISCATORIAL SOCIETY.

On Thursday last, five members of this club fished the like number of the Hammersmith United Angling Society, in punts, between Twickenham Ferry and Richmond-bridge, from 9 a.m. to 6 p.m. At 8.30, they all met at Richmond Railway Station, and there drew lots as to which members were to fish together, the stipulations being that one of each club were to fish in each punt. Everything being satisfactorily arranged, by 10 o'clock they had all commenced to fish. The weather was everything that could be desired; occasionally the wind from the east was a little troublesome, causing the lines to get entangled with the rods. From information conveyed throughout the day from one punt to the other, it was thought the competition would be a very close one, as the competitors in each punt appeared alternately to take a lead, and before 6 o'clock they had all ceased to fish, as the tide flowed fast at 5.30, it being found useless to continue the fight. They all mustered again at Richmond Railway Station with the object of returning to Hammersmith Broadway Station, as it was arranged that they should all weigh in at the club-house of the Hammersmith United Society, held at the Builders' Arms, Bridge-road, where they were to have a supper after their day's toil, the losers of the competition having to pay for it. Each competitor's fish was scrutinised by his opponent at the station, and so close did it appear that not no one felt sure of victory. Arriving at the club-house, each competitor's fish was emptied into the trays, and although there were a good many in the large room, no one felt capable of forming an opinion as to which was the heaviest. The fish in each tray having been examined, and the doubtful ones measured by Mr. Penny and Mr. W. Howell, for their respective sides, each tray was emptied into the scales by the same gentlemen, with the following result:—Acton Picatorial Society.—W. Howell, 11lb. 5oz.; F. A. West, 11lb. 5oz.; C. Simpson, 7lb. 2oz.; W. Eydmann, 6lb. 9oz.; W. A. Smith, a blank; total, 36lb. 5oz. Hammersmith United Angling Society.—G. Bacchus, 12lb. 7oz.; H. G. Penny, 10lb. 7oz.; R. Hobden, 6lb. 15oz.; J. T. Inman, 6lb. 6oz.; Mr. Peachey, 1½oz.; total, 36lb. 4½oz. Thus the Acton won this extraordinary close contest by ½oz. All the competitors and their friends, about 20 in number, after the weighing in was completed, sat down to an excellent supper very liberally provided by mine host of the Builders' Arms, the chair being taken by Mr. W. Eydmann of the Acton, and the vice-chair by Mr. Smith of the Hammersmith. The cloth being cleared, the chairman said every one who had taken part in the competition appeared to have thoroughly enjoyed themselves. There had not been an unpleasant remark throughout the day, and although the Acton had won, it was only by the skin of their teeth; and if there were more of such friendly competitions he felt sure it would greatly strengthen the clubs, and be the means of creating a good feeling one toward another, more especially if they were carried out in the same spirit as this had been. They were very pleased to think that they had won, and they were looking forward for the return match, which, he would suggest, should take place about that day month, the arrangements to be left to a small committee as before. He would now propose "Success to the Hammersmith United Angling Society," coupling the name of Mr. Hobden with the toast. In rising to return thanks, Mr. Hobden said that their thanks were really due to Mr. Penny, who had carried out all the details of this friendly competition, and on behalf of the Hammersmith United Angling Society he begged to thank them for their good wishes, and he only hoped that this competition was the first of a series of them, and before the season was over that they should have several such meetings. During the evening several good songs were sung by Messrs. W. Howell, Peachey, Reynolds, G. Howell, and others, being accompanied on the piano by Mr. Vimade.—W. E.

### ALEXANDRA ANGLING SOCIETY.

The members of the above society fished for some very handsome prizes on Sept. 14th, Mr. E. Wieks taking first prize, Mr. Flanse 2nd, Tom Gripton 3rd, and Mr. Dabbs 4th, roaming from the Ordnance Factory to Waltham Lock. Messrs. Wells and Durant had a very good show of roach and dace from the Stort, making a most excellent show of fish for the evening.—F. Wagner, sec.

### AMICABLE BROTHERS ANGLING SOCIETY.

The following members weighed in fish on the 7th inst.:—Mr. Squire, roach, 1lb. 14oz.; Mr. Harding, chub 1lb. 8oz., bleak 4ozs., dace 9lb. 5½oz., roach 5lb. 9½oz.; Mr. Partrick, roach, 2lb. 12oz. Sept. 14th, Mr. Harding, roach 2lb. 12½oz., dace 3lb. 8oz.; Mr. Moir, bream, 1lb. 14½oz.; Mr. Lake, roach, 6½oz.; Mr. Medcalf, jack 3lb. 5½oz.; Mr. Squire, roach 2lb. 10oz., perch 2oz. The members will fish a pegged-down match at Pulborough on Sept. 28th.—J. Worledge, sec.

### BATTERSEA FRIENDLY ANGLING CLUB.

On the 14th inst., most of our members fishing at Great Marlow for a prize presented by Mr. W. Burgess had some good sport; but owing to the conditions the prize was not taken. The following were the top weights who weighed in:—Messrs. A. Sampson, G. Mumford, G. Butterworth, H. Martin, and W. Johnson. The prize will now be fished for in October, pegged-down.—A. T. Sampson, hon. sec.

### BOSTONIAN ANGLING SOCIETY.

Our trays were well filled last week, Mr. Taylor having the best show with 16lb. of roach from the Thames; Mr. Brothers, roach and dace from Amberley; Mr. Elton, bream and chub; Mr. Constable, bream; Mr. Mann, bream; Mr. Jennings, roach and bream; Mr. Jamieson, a nice show of perch from the Ouse, the largest weighing 1lb. 14oz.—J. J.

### BORDESLEY WALTONIANS.

Two members of the above club—Messrs. Holloway, sen. and jun.—have been among the barbel and chub in the Trent at Barton and Walton, taking 30lb. of barbel, besides some excellent specimens of chub, on Sept. 10th, and, according to true fisherman's creed, leaving some far better specimens in the river for next time. —E. Tildesley, sec.

### BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

On Thursday last forty-one members of the above association fished their first pegged-down match of the season in the canal at Sharpness, the conditions being as follows:—Five hours' fishing, twelve yards apart, and no single fish under 1oz. to weigh. The pegging-out and judging were again most satisfactorily carried out by Mr. John Inch and Mr. H. Warr, and the weighing of fish by Messrs. F. Cornish, J. Hadden (president), H. Inch (vice-president), and L. Wride (secretary), whose decision gave great satisfaction. The fish caught were very large in numbers and of a very fair size. We are pleased to say this is the best contest we have ever had. The prizes fished for amounted to over £20, and will be distributed to successful members on Monday next, which are the following, named in order:—J. Clements, E. W. Tippitt, G. Trickett, C. Oxenham, Mr. Perry, Mr. Mallett, P. Hall, D. Ford, S. Fox, F. Withers, Mr. Bryant, Mr. Winter, Mr. Snailham, Mr. Counsell and Mr. Groves (a tie), Mr. Cox, J. Hadden, Mr. Hucker, Mr. Llewellyn, Mr. Bell, Mr. R. D. Frost and Mr. Moody (tie), Mr. Whyatt, Mr. F. Morris, Messrs. Cornish, David, and Vaughan (tie), Mr. H. Inch, Mr. Everett, and Mr. Roberts.—Lewis Wride, sec.

### CAVENDISH ANGLING SOCIETY.

Several takes of fish have recently been shown, though nothing exceptional. In my last report Mr. Canton's roach should have been given as 14lb. instead of 10lb. Our annual outing will take place at Pangbourne on Sept. 28, *viâ* excursion train. Seven prizes will be competed for on that day, some of which should really tempt the most inactive to try their fortune.—S. C.

[We have received a letter from Mr. Chambers in answer to Messrs. Reaves and Blackman, but it is too late for this week.—Ed.]

### COBDEN ANGLING SOCIETY.

On the 14th instant the majority of our members went out, but the individual takes of fish were not very great, although the total presented a nice display when laid out on the trays in the society's room. Mr. Evans had a nice show of roach, dace, and perch, the total being 5lb. 12oz.; Mr. Stead had 3½lb. of good roach; Mr. Sharland had a few roach and dace; Mr. Hallowes weighed in some very fine dace from West Drayton; and Messrs. Philpotts, Hammons, Baker, and several other members also had some nice fish from the Thames. The society's annual concert takes place on the 22nd at the Cobden Club, Kensal-road, Upper Westbourne Park. Tickets, 6d. and 1s. each, can be obtained of the secretary; also at the club.—C. Reeves, sec.

### CITY OF LONDON ANGLING SOCIETY.

Only two of our members weighed in on the 14th. Mr. Chambers, 3lb. 3½oz. of roach, dace, and bream from Amberley; and Mr. Castell, 1lb. 13½oz. of roach, perch, and gudgeons from Burnt Mill. Mr. Robson had fish from the Stort, but did not weigh in.—Cas.

### EASTERN COUNTIES ANGLING SOCIETY, GREAT YARMOUTH.

A meeting of this society was held at the Duke's Head, Hotel Quay, on Tuesday evening, the 16th inst., at 9 o'clock p.m.. the president, Dr. Mitchell, being in the chair. The prizes won at the late angling tournament on Ormesby Broad were presented to their respective winners by the president. This contest, the largest as regards the number of competitors which the society has as yet been able to get up, was fished in splendid weather on Thursday, the 11th inst., as the wind was dead east, and the water almost as clear as glass. The catches were not heavy; this fact, however, probably made the fishing all the more keen—each angler knowing pretty well what his neighbours were doing, all the boats being staked down within easy hailing distance of each other. At the end of seven hours' sport, the boats having been called together, each basket was weighed in on the president's boat. After some very anxious minutes' waiting, the following gentlemen were declared the winners of the eight prizes:—Mr. Easter, 1st; Mr. Freeman, 2nd; the president, 3rd: Mr. Harbord, 4th; Mr. Hannant, 5th; Mr. Parker, 6th; Mr. Lowne, 7th; and Mr. Bacon, 8th. The competitors then separated after having spent a most enjoyable day; not the slightest hitch having occurred to in any way mar the proceedings. It was resolved that another match should be fished on Thursday, the 25th inst. Five prizes having been offered for competition by members present at the meeting. it was proposed and carried that a sixth should be given out of the society's funds., A special meeting will be called for Monday evening, the 22nd inst., to make arrangements for the contest—all members being requested to attend. The society has presented the 1st prize, and the following gentlemen have also presented prizes:—Mr. Hannant; Mr. Lowne, Fullers-hill; Mr. Dicker, Southtown; Mr. Budd; and Messrs. Bonfellow and Freeman. Eleven gentlemen were proposed as members who at the next meeting will be balloted for, and if found eligible will be admitted. Many good catches have been weighed in during the week, the following being some of the largest:—Messrs. Chapman and Bateman, 16lb. roach, caught at the New Cut; Messrs. Freeman and Craney, 32lb. bream, caught at Ormesby Broad; Mr. Hayward, 13½lb. bream, Ormesby; Messrs. Dicker and Tooley, 26lb. bream and roach, Ormesby.—A. M.

### GLOBE ANGLING SOCIETY.

Our display of fish on the 14th inst. far exceeded previous ones, Mr. S. Howell heading the list with 15lb. of very excellent dace and bream; Mr. J. J. Holmes 10lb. 4oz. of the same class of fish; Mr. H. Lake, 9lb. of capital roach and dace; Mr. W. Whatcott, 10lb. of roach and dace, equally as good fish, one roach scaling 1lb. 3oz. Messrs. F. Lawrence, W. Lawrence, J. Brown, A. Chambers, G. Brown, H. Jeffries, W. Brown, and D. Thomas also weighed in roach, dace and gudgeon. Mr. G. Harris was unanimously elected a member of this society on our last meeting night. On Tuesday next, 23rd inst., the Alexandra Variety Club will pay us a return visit, when I hope to see a good muster of members to give them a hearty welcome. Chair taken at 8.30 p.m.—J. J. Holmes, sec.

### GOOD INTENT ANGLING SOCIETY.

There was a good show of fish at the club on the 14th. Mr. G. Bates and Mr. Snook showed about 40lb. of good bream; Mr. Maybury, roach; Mr. Hewett, dace; Guntrip, rudd. Our distribution of prizes will take place on Tuesday next, the 23rd inst. The secretary will be at the club-house on Saturday and Monday next, the 20th and 22nd inst., to receive prizes from members and friends, from 8 till 11 p.m. —R. Murphy.

### GRESHAM ANGLING SOCIETY.

The usual weekly meeting of the above society was held on Tuesday evening at the Mason's Hall Tavern, Mason's-avenue, Basinghall-street, Rev. J. Walker, M.A., in the chair. Among those present were Dr. Cash, Dr. Lloyd, Captain Alfred, Messrs. Crumplen, Lake, Bentley, Kent, Darling, White, and Ellis. The visitors included Mr. Short, of the Clapton Society, and Mr. Ghurney. The minutes of the last meeting were read and confirmed. A letter was read from Mr. Chambers with reference to a fishery which he had undertaken to inspect at a previous meeting. Mr. Bentley had a very nice show of perch and roach taken from a water which, he is of opinion, it would be desirable for the society to acquire. A vote of thanks was unanimously passed to him for the great trouble he has taken in this matter. The perch prize was taken by Mr. Ellis with a remarkably fine specimen from the Lea. A vote of thanks to the chairman concluded a most pleasant evening.—H.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

On Sept. 7 Mr. J. Watling weighed in roach and bream 5lb. 13oz.; Mr. T. Watling 6lb. 4oz. (one bream weighing 3lb. 12oz.), from Pulborough; Messrs. J. A. Fitch, Theobald S. Baker, and J. K. Fitch also had roach and bream. On Sept. 14 we had a fine show of fish, Mr. J. Dingley having 16lb. of dace, 14lb. 4oz. of bream, and 2lb. 11oz. of roach, total 32lb. 15oz.; Mr. J. K. Fitch, 2lb. 9oz.; Mr. G. Watling, 10lb. 11oz.; Mr. Theobald, 4lb. 11oz.; Mr. Walker, 1lb. 8oz.; Mr. F. Watling, 2lb. 6oz.; Mr. Baker, 3lb. 10oz.; Messrs. E. Smith and J. Hambridge also had some fish.—J. Fitch.

### GREAT YARMOUTH PISCATORIAL SOCIETY.

At a meeting held on Tuesday, Sept. 16th, Mr. C. K. Lamb in the chair and Mr. H. Lawrance in the vice-chair, the secretary reported that Mr. Baldwin and himself had taken 16lb. of bream and roach on Thursday, Sept. 11th, the day that less than a fourth took the first prize of the Eastern Counties Society, and that the Waltonians from Norwich had at least 50lb. of fish to decide a match for two rods. This occurred at Fritton, illustrating that the wind does not affect all waters alike, or something else. The Fritton water was not ground-baited till fishing commenced. The secretary also, through the kindness of the owners of some marshes, could supply young jack, roach, and bream to any society who will forward tanks for the same, but which must be done before the "salt tides" are sufficiently high to destroy them, as it does the larger fish higher up the rivers. A letter from the late treasurer to the president was read by the secretary.—J. Lark.

[Copy.]

Burton House, Great Yarmouth.
June 2, 1884.

Dear Bayfield,—As vice-president of the Great Yarmouth Piscatorials, I wish you to call a meeting of the finance committee immediately in order that some other treasurer than myself be appointed, as I wish to have the responsibility of the money belonging to the society removed from my shoulders. I wish also that all the accounts be carefully audited by some competent person, as, of course, for my own interest, I must be present.

I do not mind meeting the finance committee and auditor anywhere. Let me know a day before it meets, so I may manage to be able to attend. I will bring all bills, bank-book, &c., with me.—Yours faithfully, Alexander Mitchell.

Mr. Bayfield.

### HAMMERSMITH UNITED ANGLING SOCIETY.

On Thursday last four of our members competed in a match against four members of the Acton Piscatorials at Twickenham. We fished in pairs from punts, and the weather being fine, a most pleasant day was passed. We lost the match by 2oz., on our own total weight, and consequently obtained the honour of having to pay for the supper, to which we afterwards sat down in our room, and at which we were joined by several of our members, and of the Acton Piscatorials. The evening passed in its usual rapid manner, when the company are unanimously satisfied, and the songs good, as in this case they were, several being excellently rendered by Messrs. Peachey, Penney, Howell, and Reynolds. The toast of "The Losing Side" was proposed by Mr. Edymann, and responded to by Mr. Hobden, who in return proposed "The Health of the Winners," and after a return match had been agreed upon, this very satisfactory day's pleasure was brought to a conclusion. The following are the names and weights of the respective contestants:—Punt No. 1: Mr Bacchus, H.U.A.S., 12lb. 7lb.; Mr. West, A.P., 11lb. 5oz. Punt No. 2: Mr. Penney, H.U.A.S., 10lb. 7oz.; Mr. Howell, A.P., 11lb. 5oz. Punt No. 3: Mr. Hobden, H.U.A.S., 6lb. 15oz.; Mr. Edymann, A.P., 6lb. 9oz. Punt No. 4: Mr. Inman, H.U.A.S., 6lb. 6oz.; Mr. Simpson. A.P., 7lb. 2lb. Our fish were all roach and dace, some of the former up to ¾lb. each, and the latter 6½oz. The Acton numbered one barbel and one bream among their take.—H.

### HIGHBURY ANGLING SOCIETY.

Since my last report a goodly sprinkle of our members have met with some capital sport both from the Thames, Lea, and elsewhere. Mr. McDermott weighed in some nice and dace; Mr. Frank Temple, Mr. E. Wheatley, Mr. Chas. Lewis, Mr. Higley, Mr. Anthony, Mr. Edwards, Mr. F. Pheasant, and Mr. S. Howell, jun., also have had good takes of bream, dace, perch, roach, and gudgeon.—J. E. Wheatley, sec.

### IZAAK WALTON ANGLING SOCIETY.

Mr. W. H. Mecham had seven very good bream on Wednesday last, the 17th inst.; Messrs. T. Goodwin and A. Bass had roach on the same day. Messrs. T. Goodwin and H. Butt will give two half-guineas to be fished for on any Sunday; competitors to fish at one water, the date and place to be named on Wednesday next.—H. B.

### NORTH-WESTERN ANGLING SOCIETY.

Sept. 14 was not a big day with the members of this Society so far as decorating the trays in the clubroom. Of the numerous members out the following weighed in:—Messrs. Aldis, Plumpton, sen., W. Plumpton (jack), E. Cross, and G. Weaver (roach), and Hillier (bream).—W. Hillier, sec.

### ORIGINAL CLERKENWELL PISCATORIAL SOCIETY.

We had on the 14th a fair show of fish weighed in by the members: Mr. Lucy, one jack, 2lb. 4lb.; Mr. Crafford, one jack, 2lb. 5oz.; roach, 2lb. 15oz.; dace, 2lb. 3oz. Mr. Kent, roach, 4lb. 13oz.; dace, 11oz.; perch, 7oz.; Mr. Longman, roach, 10lb. 4oz., and dace 10oz.; Mr. Laundy, roach, perch, and dace. Our visit on Tuesday next promises to be a good one, many friends having promised to be present.—J. Obborne.

### THE PISCATORIAL SOCIETY.

Before commencing my weekly report permit me personally and publicly to thank Mr. Reginald E. Booker for having so fully reported the meetings of this society during my absence from London. The ordinary meeting of this society took place at Ashley's Hotel, on Monday evening last, when a very large number of members were present, amongst them being Messrs. Patterson, Lemann, Wright, Robinson, Jesse, Meyer, H. B. Brown, H. H. Brown, Wheatstone, J. Lander (hon. sec.), Gray, Booker, J. Huggett, Blundell, C. C. Blundell, Sachs, Dr. Brunton, Rev. G. Sumner, Mr. Butler, Goodger, Harden, Walker, &c., &c. Mr. Huggett was voted to the chair. The minutes of the previous meeting were of considerable interest, announcing as they did the winners of the club competition which took place on Monday last, were duly read and confirmed. The result of the chub competions was as follows:—Mr. H. B. Brown won the first prize with 9lb. 7oz. of chub, the largest 3lb. 5oz; Mr. T. Huggett won the second prize with two chub weighing 3lb. 12oz.; Mr. E. Foreman won the third prize with two chub, weighing 3lb. 9oz.. Mr. Blamey also weighed in 2lb. 5oz. chub. Mr. Butler showed the same evening a fine tray of chub caught the day previously, total weight 9lb. 4oz., the largest 3lb. 12oz. The whole of the above were taken from the Thames. Since our last meeting the following fish have been weighed in: Mr. Meyer, one trout 3lb. 7oz., and one perch 1lb., from Datchet; Mr. Blamey, 31lb. of barbel, the largest 4lb. 8oz., and some roach and perch from Shepperton; Mr. Fennings, one grayling 1lb. 10oz., 6lb. 8oz. of dace, 69lb. 6oz. of roach, the largest 1lb. 13oz., and two perch, all from Ringwood. A letter was read from Mr. Fennings, saying he had had good sport and fine weather during the past week. He has been unable so far to get a 2lb. roach, but hopes to do so before returning to London. He sent up this evening for weighing in and inspection a single day's tray of roach, total weight of over 30lb.—viz., 28lb. 12oz. roach, largest 1lb. 13oz., three dace, 1lb. 3oz. The chairman, with the hearty concurrence of the members, thanked Mr. Fennings for his splendid show. Messrs. Robinson and Wright weighed in and showed this evening about 60lb. weight of splendid perch, the largest 2lb., 1lb. 12oz., 1lb. 12oz., and 1lb. 12oz. respectively; also 7lb. 1oz. of chub and two jack, public waters. The chairman proposed the healths of Messrs. Robinson and Wright as the successful anglers. These gentlemen very gracefully replied. Mr. Robinson considered first honours had fallen on Mr. Wright, who had taken the largest fish. He also stated that Mr. Wright, on their previous visit to the same waters, captured a pike weinging 26lb. Mr. Wright refused to take all the credit, saying that it was only through the kindness of his friend, Mr. Robinson, that he could have captured such fish, as he had piloted him to this locality. Mr. Booker called attention to the Thames Parliamentary Committee (Mr. Storey Maskelyne's), and the hon. sec. read the same. A long discussion ensued, in which Messrs. Pattinson, Sumner, and Wheatstone took part, regretting the decision the committee had arrived at, and considering nothing further could be done in the matter. Mr. Huggett was of a different opinion, and thought that, considering the present enormous population of London, its limited amusements, and the ever-growing number of its inhabitants, to leave the question as at present decided by the committee, was to give up privileges which had been almost uninterruptedly enjoyed by the public for hundreds of years. He moved, "It is the opinion of this meeting that the Corporation of the City of London would confer a lasting public benefit by taking such steps as are necessary for carrying through Parliament an Act giving power to the Corporation to buy up the various riparian interests which at the present time appear to be of little value, and throw open the Upper River Thames, its entire length, as a place of recreation for angling as well as for boating to the general public." A long discussion ensued, and it was the feeling of the meeting that such a motion might perhaps do more harm than good. Messrs. Summer, Dr. Burton, Brown, Robinson, &c., supported this view, and the motion was not pressed to a division. The Chairman next proposed, "The continued success of the Piscatorial Society," which was most heartily responded to by all present. Mr. Wheatstone, who was amongst us for the first time since his serious accident, proposed "The health of the Chairman." Mr. Huggett replied, and the meeting terminated. Mr. Thomas J. Hodson, of Mincing-lane, has been proposed as a member by Mr. R. B. Marston and seconded by Dr. Brunton. The ballot will take place shortly.—T. H.

### PECKHAM BROTHERS ANGLING SOCIETY.

The trays of this club were moderately filled on the 13th, Messrs. Griffiths, White, Martin, Parsons, Lang, and Page weighing in fish. Two new members were elected at our last meeting. A match at Kingston on the 20th; train leaves Vauxhall at 7.30. Mr. A. Brodie (our president) killed 35lb. of the red-eyed innocents at Tring last week. It was a splendid show, and he was heartily congratulated on his success.—Gadfly.

### PECKHAM ROYAL ANGLING SOCIETY.

The above society will hold their first supper (tripe) on Thursday, the 2nd October next, at 8 o'clock punctually. Harmony afterwards. Tickets 1s. 6d. each. All tickets not sold to be returned on or before the 29th inst.—J. Moyler, sec.

### PHŒNIX ANGLING SOCIETY.

Things have been very quiet lately, either the fish or the fishermen having a very good time of it at home. On the 14th inst., Slater had a decent show of bream and roach—about 15lb.; Joe Keen was on his track with a trifle under; the Brothers Ashley, Messrs. Murch, Reed, Bartrip, Milton, Elbourn, and Packer bringing in a few to keep the scale from getting rusty. All members requested to attend next Tuesday for a little business of importance.—W. E., sec.

### RODNEY PISCATORIALS.

On the 11th, Mr. T. Hughes and H. Smithers succeeded in getting 120lb. of barbel from the Thames. On the 14th, Mr. R. Smith had about 10lb. of nice roach from the Medway; Mr. Chantry had roach, dace, and carp; and Messrs. Grant and W. H. Flower had roach and gudgeon from Datchet. At the meeting held on the 17th, it was decided that Amberley be the place for the competition of the 21st day of September. All members starting on Saturday are to meet those members that arrive by the first train at Amberley on the morning of the 21st, in order to have their boxes, baskets, and other articles used for the purpose of carrying or storing fish, examined. All fish taken by those members are to be marked in such a manner as to distinguish them from those taken between 15 minutes after the arrival of the train from London to Amberley, and 5 o'clock in the evening.—Pixie.

### SALFORD FRIENDLY ANGLERS SOCIETY—ANNUAL MEETING.

The annual meeting of this society was held on Wednesday evening, September 10th, at the Globe Inn, Bury-street, Salford. This is one of the oldest, if not actually the oldest society in Lancashire, having been formed about 70 years ago, since which time it has had an uninterrupted progress; it now numbers nearly 100 members, several of whom have belonged to it between 30 and 40 years. The secret of its continued success is the fact of a sick club being associated with the society, this having proved a most successful auxiliary. The annual members' match was held in the Bridgewater canal, at Moss reach, Barton, on Saturday, August 30th, when 34 prizes were fished for. A capital dinner having been partaken of, the president, Mr. J. Burgoyne, took the chair; and Mr. A. W. Platford occupied the vice-chair. A vote of thanks to the donors of the prizes was proposed by Mr. Walter Ashworth and seconded by Mr. Walter Foy, and passed with acclamation, and was suitably responded to by Mr. Councillor Jamieson. The prizes were then distributed to the successful competitors by Mr. Mark Baxter, of the Royal Hotel, Pendleton, and formerly treasurer of this society: 1st prize, C. Whitehead; 2nd, Wm. Kelsall; 3rd, Wm. Jones; 4th, John Vipond; 5th, Jos. Senior; 6th, Hy. Snape; 7th, Thos. Lawton; 8th, Miss Livesley; 9th, James Hare; 10th, Jos. Wainwright, sen.; 11th, Thos. Cooper; 12th, Adam Bates; 13th, Robt. Bates; 14th, Eli Harris; 15th, Wm. Bunting; 16th, Wm. Thetford; 17th, Rd. Thomas; 18th, Mr. Eckersley; 19th, Wm. Butterworth; 20th, Mark Baxter; 21st, Wm. Court; 22nd, P. W. Wardle; 33rd, J. Ahearne; 25th, Jos. Kinsey; 26th, John Hunter; 27th, Wm. Hughes; 28th, Joseph Burgoyne; 29th, J. Robinson; 30th, Jas. Daley; 31st, Wm. Wilson; 32nd, Walter Foy; 33rd, Walter Ashworth; 34th, Thos. Driver. The presentations over, votes of thanks were passed to the Bridgewater Navigation Co. for the use of the canal, and to the officers of the society for their services during the year. The remainder of the evening was spent convivially, Messrs. Thos. Roscoe, Thos. Lawton, David Lawton, Jos. Burgoyne, John Vipond, Jos. Lamb, Jos. Senior, and John Robinson contributing materially to the harmony. The president, in reply to a vote of thanks, said angling was destined to become one of the finest and most popular sports of the day. A man would not be considered respectable in the future unless he knew how to cast a fly and use a worm. The company, after passing a vote of thanks to the hostess for her able catering, separated shortly after midnight, having passed a very enjoyable evening.

### SOUTH-EASTERN ANGLING SOCIETY.

On Tuesday next, the 23rd inst., is our quarterly night, when it is hoped all, or most, of the members will kindly attend, more especially as there are three nominations standing for election on that night, which should have taken place last Tuesday; but, owing to a slack meeting, could not legally be carried out. I will also call attention to members wishing to contest for prizes on Oct. 5th, that they should give in their names at once. On the 14th inst., Messrs. Keeble and Holben were the only two to weigh in, the former with 11lb. of bream, the latter with barbel, roach, and dace, 7lb. I hope the members will all attend to this slight notification. —F. H. Weston, sec.

### STANLEY ANGLING SOCIETY.

I send you herewith a few details of the various weights of fish registered at the club room of this society during the past month. Mr. W. Ellis, 1 perch, 5¾oz., 1 jack, 3lb. 7oz.; Mr. W. R. Humby, 1 perch, 4½oz., 30 roach, 14lb. 10½oz., 13 ditto, 7lb. 9½oz., 20 ditto, 10lb. 5oz., and 7 ditto, 3lb. 4½oz.—total, 36lb. 2oz.; Mr. Lupton, 3 dace, 11oz.; Mr. H. Rose, 2 perch, 10oz., 4 roach, 1lb. 15½oz., 6 ditto, 3lb. 3oz., 8 ditto, 5lb. 9¼oz., 5 ditto, 3lb. 12oz.. 2 pike, 5lb. 10½oz.—total, 20lb. 12¼oz.; Mr. C. Scull, 11 roach, 6lb. 4oz., 16 ditto, 4lb. 13oz., 26 ditto, 10lb. 3½oz., 19 ditto, 6lb. 7oz., 22 ditto, 7lb. 14oz., 35 ditto, 11lb. 5oz., 30 ditto, 11lb. 6oz., 30 ditto, 10lb. 12oz., 43 ditto, 14lb. 12oz.—total, 83lb. 12¼oz.; Mr. G. Walker, 3 perch, 1lb. 3oz., 2 roach, 1lb. 1¼oz., 16 ditto, 10lb. 12oz., 57 ditto, 38lb. 6½oz., 16 bream, 35lb. 14oz., 5 dace, 1lb. 1oz.—total, 88lb. 5¾oz.; Mr. A. F. Wrightson, 7 perch, 3lb. 12oz., 4 ditto, 1lb. 13oz., 1 ditto, 14oz., 33 roach, 20lb. 14½oz., 23 ditto, 14lb. 8oz., 14 ditto, 8lb. 13¾oz., 93 ditto, 57lb. 11½oz., 6 ditto, 4lb. 7¾oz., and 4 bream, 8lb. 8oz.—total, 121lb. 6½oz., making a total of 354lb. 14¾oz. weighed in by the above gentlemen during the past month. I am pleased to state that our secretary (Mr. Wheatstone) is gradually regaining the use of his broken limb, and is again out on the war path, so I trust to be able to report some good takes by this gentleman in my next account.—G. E. W.

### STOKE-UPON-TRENT ANGLING SOCIETY.

Several of our members had some very fair sport on the 13th inst., some of the fish shown being very good ones. Mr. H. Evans had 5½ brace of trout, Mr. E. Cocker, 3½ dozen roach and 1 chub 2½lb.; Mr. T. Riley, a nice basket of trout and grayling; Mr. William Hassall, chub; and Mr. T. Evans, 3½ brace of trout. Messrs. Hollins and Pope had a few hours amongst the perch in the afternoon, bagging nine fish, which weighed 16lb. 3oz., a very pretty dish. The trout here are showing symptoms of spawning, and the water is still very low and fine.—J. Hollins, hon. sec.

### UNITED BROTHERS, DEPTFORD.

Several of our members were out on the 14th, but, I am sorry to say, did not turn up. The following members weighed in:—Mr. H. Tyler, 23lb. of bream from the Medway; F. Watts, 14lb. 3oz. of roach and bream from the Medway; J. Currans, roach from Pulborough.—H. T.

### WALWORTH PISCATORIALS.

Five prizes will be competed for on the 28th day of September: 1st prize given by Mr. Delhaye, sen.; 2nd, by Mr. F. Grigg; 3rd, by Mr. H. Dale; 4th, by Mr. Beckett; 5th, by Mr. J. Collins. The conditions as to where, and how, will be decided on Thursday next, the 25th day of September. All members interested in this competition are requested to attend that evening. On the 18th, Messrs. Beckett and Boalch had a nice show of roach from Rickmansworth.—Pixie.

### WALTONIANS.

On Sept. 14th, Mr. Roland had 7lb. 7oz. roach, and 15¾oz. dace; Mr. Phillips, 4lb. 11oz. roach, and a jack 2lb. 9oz.; Mr. Morris, 6lb. 11oz. roach; Mr. Hunt, 3lb. 5oz. roach; Messrs. Horsford, Read, R. Dodge, Packman, Juckes, Jas. Moore, and Morgan also weighed in.

### WAVENEY ANGLING CLUB, BECCLES.

At the ordinary monthly meeting of this club on Thursday evening, the 11th inst., at the Caxton Arms, Mr. W. P. Garrod in the chair, there was a good attendance of members and friends, and Mr. J. Hooker read a paper on "The Best Method of Fishing for Pike," in the course of which he described the various methods of taking pike by trailing, live-baiting, trolling, paternostering, and spinning, and the tackle required, together with sundry directions as to flights and hooks, and the different methods of casting. He contended that fishing was not a matter of luck any more than cricketing, billiard playing, or the sailing of a boat. But of all comparisons the soldier, in his opinion, stood *par excellence*, for, like the fisherman, was he not particular about the *formation* and *dressing* of his *line*, and did he not use the greatest efforts to induce the foe to take his *flight*—or his *hook?* and if his *line* got broken in the struggle, he had, like the fisherman, to retire defeated, *reeling* the remnant home. The *habitat* of the pike was traced in the different seasons, and the various methods devised for his capture having been criticised, Mr. Hooker concluded by saying that he was in favour of spinning where the water is clear of weeds, and paternostering where weeds abound. A discussion followed, during which the various flights and hooks described, with fishes attached, were passed round for examination, after which the chairman moved that a vote of thanks be given to Mr. Hooker for the very practical lessons he had given them in pike fishing. This was seconded by the Mayor, and carried with acclamation. A vote of thanks was also passed for the chairman. On Saturday, the 13th inst., the third match of the season, pegged-down, took place between the bathing-place and Dunburgh. The wind was very strong from the north-east, causing the water to be very rough, which spoilt the chances of good takes. Fishing lasted from 3 till 6.30 p.m. with the following results:—Mr. J. Rouse, 8lb. 2oz.; Mr. H. Stimpson, 7lb.; Mr. C. Chase, 5lb. 10oz.; Mr. J. Hooker, 4lb. 2½oz.; Mr. Knell, 3lb. 13½oz.; Mr. Oldham, 3lb. 3½oz. The special prize, given by Capt. T. Wilson, for the best six fish, was taken by Mr. H. Stimpson, with six roach weighing 2lb. 12½oz.

The Bladderwort.—Office of State Entomologist, Normal, Ill., Aug. 29.—Editor *Forest and Stream:* While the very interesting fact of the destruction of young fishes by the bladderwort is occupying the attention of your readers, permit me to mention another method than that of direct destruction, by which these plants must often greatly hinder the multiplication of fishes in waters infested by them. In an article on the Entomostraca of Lake Michigan and adjacent waters, which I published in the *American Naturalist* for July, 1882, I remarked that in ten "bladders" of *Utricularia vulgaris*, taken at random, I found ninety-three animals, either entire or in recognisable fragments, and representing at least twenty-eight species. Seventy-six of the animals found were Entomostraca, and belonged to twenty species. Nearly three-fourths of both individuals and species were Cladocera. Just one-third of all the animals found in these bladders belonged to the single species *Acroperus leucocephalus* Koch. Now, my studies previously made of the food of young fishes, reported chiefly in the third bulletin of the Illinois State Laboratory of Natural History, showed that the principal food of all young fishes, with quite insignificant exceptions, consists of the very class of minute animal forms which the bladderwort is constantly engaged in selecting from the water by means of the hundred of bladders with which each plant is covered. It thus not only occasionally entraps the youngest fishes, but likewise habitually and continuously contends with them for food, and may be said to thrive largely at their expense.—S. A. Forbes.

## HOW TO RAISE EARTH WORMS,

The *Deutsche Fischerei Zeitung* says that a confectioner of the name of Schmidt, of Wittenberg, discovered by accident that if water in which the shells of walnuts have soaked for a day is thrown on the ground all the worms below will immediately come out and crawl away to get free from the liquid. Anglers who, like Diogenes in search of his honest man, hunt with lanterns at night for worms should make a note of this. Of course, many acid liquids will have the same effect, but they often kill the worms. The walnut-shell water is comparatively mild in this respect. We believe walnut tree leaves have the same effect.

London Central Fish Market.—The *City Press* states that so far the London Central Fish Market has not proved a financial success. The accounts just issued by the City Corporation show that the receipts for the past year amounted to £2,063, while the expenditure for that period was £9,109, leaving a deficiency of £7,046.

**D. SLATER,**

8 and 9, PORTLAND STREET, NEWARK-ON-TRENT.

Awarded Five Prize Medals and Diplomas.

Also two special money prizes, value £17 10s. for bottom fishing appliances, comprising excellence with mininum of cost.

Inventor, Maker, and Patentee, of the Perfect Combination Reels, suitable for Salmon, Trout, Pike, and all kinds of bottom fishing. Price, with Check, 2½in., 10s. 6d.; 3in., 11s. 6d.; 3½in., 12s. 6d.; 4in., 14s. 6d.; 4½in., 15s.; 5in., 16s. 6d.

FISHING GAZETTE, Feb. 16th, 1884.—"I used Mr. Slater's New Combination Nottingham Winch for the first time, and am perfectly delighted with it; it is the perfection of a winch."—R. B. Marston, Esq.

Complete Outfits for Bottom Fishing, 10s. 6d. Very Superior ditto, 15s.

Very Superior Outfit for Pike and Bottom Fishing including Slater's Patent Combination Reel, 21s.

Nottingham Rods for Pike, Roach, Bream, or Barbel, 4s. 6d., 5s. 6d., 6s. 6d., 7s. 8d., and 8s. 6d., warranted perfect action and superior finish.

Superior Star-back Reels, 3in., 2s. 6d.; 3½in., 3s.; 4in., 3s. 6d.; 4½in., 4s. 6d.; 5in., 5s. 6d. Post free.

Very Superior Greenheart Fly Rods, perfect action and finish, in partition case; price 10s. 6d. each. See FISHING GAZETTE, August 2nd, 1884.

Roach and Chub Silk Lines, 80 yards, 1s. 2d.; Pike, 2s., 2s. 3d., very strong, 2s. 6d.; Superior Plaited, 1s. per score yards. All kinds of Pike Tackle, Gimp Traces, or Gut, at the lowest possible price.

Braided Waterproof Silk Lines, equal in every way to the Americans, 1d. per yard. Samples sent per post, free. Price list, to any address, post free.

**64, CORNHILL,**

Perils Abound on Every Side.

**The Railway Passengers' Assurance Company**

Insures against ACCIDENTS of all KINDS—On LAND or WATER, and has THE LARGEST INVESTED CAPITAL, THE LARGEST INCOME, and pays yearly THE LARGEST AMOUNT OF COMPENSATION of any Accidental Assurance Company.

Chairman, Harvie M. Farquhar, Esq.

Apply to the Clerks at the Railway Stations, the Local Agents, or West-end Office, 8, Grand Hotel Buildings, Charing Cross, or at the Head Office, 64, CORNHILL, LONDON, E.C.

WILLIAM J. VIAN, Secretary.

AN EXPERIENCED SALMON ANGLER, living in nicely situated house on the banks of River Eden, offers comfortable Accommodation and his chaperonage, to anyone wishing a cheap outing and a month's good salmon fishing during month of October, which is the best in the season.—Apply,

W. GLENGARRY,

3, Strawberry-terrace, Eden Town, Carlisle.

**INTERNATIONAL HEALTH EXHIBITION, LONDON.**

Patron—Her Majesty THE QUEEN.

President—H.R.H. the PRINCE of WALES, K.G.

HEALTH.

Food, Dress, the Dwelling, the School, and the Workshop.

EDUCATION.

Apparatus used in Primary, Technical, and Art Schools.

Free Library and Reading Room.

MILITARY BANDS.

Concerts will be given in the Royal Albert Hall twice a week.

Organ Recitals daily in the Albert Hall. Special Evening Fêtes on Mondays, Wednesdays, Thursdays, Fridays, and Saturdays.

The Gardens and Buildings are in the Evening Illuminated with Variegated Lamps, Japanese Lanterns, and Electrie Light.

OPEN DAILY, from 10 a m. to 10 p m. Admission, One Shilling on every Week Day except on Wednesdays, when it is open till 11.0 p m., and the admission is 2s. 6d.

For further details see London daily papers.

Season Tickets, price £1 1s., may be obtained on application to the City Offices, 27, Great Winchester-street, London Wall; at the Exhibition, Railway Bookstalls, and the Libraries.

**LIVE GOLD AND SILVER FISH.**

Agents wanted to Sell to Fishmongers, Florists, Naturalists, China and Glass Dealers. Easy sale, no opposition, good profit, never pushed before. Send 7s. for seven fine sample cold-water fish, including new fish kettle, and wholesale prices. References nearly every aquariam and dealer in the Kingdom.—GENERAL IMPORT CO., 3, Featherstone-buildings, W.C. Golden Tench, Golden Orfe, &c. Interesting, amusing, and attractive to every shop window.

RINGWOOD SALMON FISHERY.—Trout, Grayling, Pike, Perch, &c. Daily Tickets, 5s. each.—C. WARD, White Hart Hotel, Ringwood.

THE

**GREAT REMEDY**

For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. Prevents and Quickly Relieves or Cures the worst form of TYPHUS, SCARLET, JUNGLE, and other FEVERS, PRICKLY HEAT, SMALL POX, MEASLES, ERUPTIVE or SKIN COMPLAINTS, and various other altered CONDITIONS of the BLOOD.

"It

**'SAVED MY LIFE,'**

for the Fever had obtained a strong hold on me. In a few days I was quite well."—Extract from letter of C. Fitzgerald, Esq., formerly Correspondent of the Manchester Guardian in Albania, referring to

**LAMPLOUGH'S PYRETIC SALINE.**

Sold by all Chemists in Bottles, 2s. 6d., 4s. 8d., 11s., and 21s. each.

H. LAMPLOUGH, 113, HOLBORN, LONDON, E.C.

**FISHING RODS—AND TACKLE.**

BULMER'S "FISHING GAZETTE"

GOSSAMER GUT LINES,

Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—Fishing Gazette Notice, September 18, 1883.

See also notices in the Fishing Gazette for Dec. 17, 1881; June 28th, 1882; July 1, 1882; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d.; Fishing Gazette Gossamer Gut, Tapered, 8d. each; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d., and 1s. 6d.; prepared ditto, 20 yards, 1s.; stout, 1d. a yard; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d.; Gossamer Gut, 12in., 3s. 6d.; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz.; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen; Treble ditto, 2d. each. Penne Snaps, 2½d.; Jardine, 3½d. each; Gut or Gimp Spinning Flights, 6d. each; Spoon Baits (Jack's size), 9d. each; Gut and Gimp Traces, 6d. each, Fishing Gazette Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d.; ditto Twisted Gut, stout or fine, 1s. each; 3in. Jack Float, 6d.

WINCHES. — Nottingham, from 6d.; Brass, from 8d.

HEATON'S PATENT REELS, "Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ¾in., 1s. 6d.

Rods made to order or fitted with screw-joint ferrules.

Price List free on application.

Postage extra on all orders, and all must b accompanied by a remittance.

All goods marked in plain figures.

A. BULMER, 62, WANDSWORTH ROAD, S.W.,

Corner of Nine Elms Lane.

Three minutes' walk from Vauxhall Station.

BOWLKER'S ART OF ANGLING. By CHAS. BOWLKER, of Ludlow. Containing List of Flies, Directions for Fly Fishing, Trolling, Making Artificial Flies, &c.; with a List of the most celebrated Fishing Stations in North Wales, and Coloured Plate of Flies.

Published and Sold by G. WOOLLEY (Late Jones), Ludlow, Shropshire.

AS HEAD-WATER KEEPER or single-handed.—Advertiser, shortly disengaged, desires SITUATION as above. Life-long experience of all kinds of fresh-water fishing and fish-culture; thoroughly practical; last three seasons on a famous trout stream; first-class references; wages moderate; permanency chiefly sought.—Address, River Keeper, 6, Jewry-street, Winchester.

A SELECTION FROM

**MESSRS. SAMPSON LOW, MARSTON, & CO.'S**

*ANNOUNCEMENTS FOR THE COMING SEASON.*

RECOLLECTIONS OF FLY-FISHING FOR SALMON, TROUT, AND GRAYLING; with Notes on their Haunts, Habits, and History. By Edward Hamilton, M.D., F.L.S., &c. Illustrated by a Mezzotint Engraving by Francis Seymour Haden, Esq., and other Woodcuts. Small post 8vo., printed on handsome paper by Whittingham, cloth extra, 6s. Also, a Large Paper Edition, of which only *One Hundred Copies have been printed*, and each Copy being numbered from One upwards; price 10s. 6d. [*In the press.*

AN AMATEUR ANGLER'S DAYS IN DOVE DALE: being an Account of My Three Weeks' Holiday in July and August, 1884. By E. M. 18mo. Printed by W. Whittingham, Chiswick Press. Fancy boards, 1s. [*Shortly.*

⁂ Also a Large Paper Edition, printed on hand-made paper, parchment binding (100 only printed), price 5s.

NOTICE.—MR. HENRY M. STANLEY'S NEW WORK ON THE CONGO, about which we have numerous inquiries, will probably not be ready for publication till the beginning of next year.

Nearly ready, demy 8vo, cloth extra, price £1 1s.

A SKETCH OF THE LIFE AND TIMES OF THE REV. SYDNEY SMITH, M.A., Rector or Combe-Florey, and Canon Residentiary of St. Paul's. Based on Family Documents and the Recollections of Personal Friends. By Stuart J. Reid, Illustrated profusely.

NEW WORK BY JOSEPH THOMSON, the African Explorer. Mr. Thomson has just returned from Eastern Africa, and is preparing an account of his recent most adventurous journey in the Masai country, opening up an entirely new, shorter, and healthier route to the VICTORIA NYANZA. Mr. Thomson has been extremely fortunate in being the first to explore an ENTIRELY UNIQUE REGION—ethnographically and geographically—a region teeming with interest.

Mr. Thomson's personal adventures have been of a perilous character.

The work will be fully illustrated from photographs taken by Mr. Thomson *en route*, and it is hoped will be ready for publication in One octavo volume before Christmas.

IN THE PRESS.—NEW WORK ON THE GREAT NORTH-WEST, BY STAVELEY HILL, Q.C., M.P.

FROM HOME TO HOME: being an Account of two Long Vacations spent at the Foot of the Rocky Mountains. By Staveley Hill, Q.C., M.P. One volume, demy 8vo, fully illustrated by Woodcuts and Photogravures after Photographs and Drawings by the Author and Mrs. Staveley Hill.

*Preparing for Immediate Publication.*

In One Volume, demy 8vo., about 400pp, sixteen full-page Chromo-lithographs, and Fifteen Lithographs, beautifully executed by C. F. Kell, after the Drawings supplied by the Author. Price One Guinea.

THE SNAKE-DANCE OF THE MOQUIS OF ARIZONA: being a Narrative of a Journey from Santa Fé, New Mexico, to the Village of the Moqui Indians of Arizona. By John G. Bourke, Captain Third U.S. Cavalry.

In One Volume, royal 8vo, cloth extra, 21s.

THE HUNDRED GREATEST MEN: Portraits of the One Hundred Greatest Men of History, reproduced from Fine and Rare Steel Engravings. With General Introduction by Ralph Waldo Emerson.

Popular Edition, now ready, price 6s.

HENRY IRVING'S IMPRESSIONS OF AMERICA, narrated in a Series of Sketches, Chronicles, and Conversations. By Joseph Hatton, Author of "Clytie," "Cruel London," "The Queen of Bohemia," "To-day in America," "Journalistic London," &c., &c.

A STRUGGLE FOR FAME. By Mrs. Riddell. Small post 8vo, cloth, 6s. Forming the new volume of Low's Standard Novels.

*Dedicated by permission to the Queen.*

NEEDLEWORK AS ART. By Lady Marian Alford. With over a Hundred Woodcuts, Photogravures, and other Engravings. Royal 8vo, cloth extra. [*In the press.*

ARTISTS AT HOME. Photographed by J. P. Mayall, and Reproduced in Facsimile by Photo-Engraving on Copper Plates. Edited, with Biographical Notices and Descriptions, by F. G. Stephens. Imperial folio, cloth extra, price 42s.

THE ACCURSED LAND; or, First Steps on the Waterway of Edom. By Lieut.-Col. H. E. Colville, Grenadier Guards, Author of "A Ride in Petticoats and Slippers." Crown 8vo, cloth extra.

Crown 8vo, cloth, with several Maps. *In the press.*

OUR HANOVERIAN KINGS: a Short History of the Four Georges, embracing the Period 1714–1830. By B. C. Skoltowe, M.A.

*New Volume of Illustrated Handbooks of Art History of all Ages and Countries.*

PAINTING—SPANISH AND FRENCH. By Gerard W. Smith, Exeter Coll., Oxon. Crown 8vo, 70 Illustrations, cloth extra, 5s.

New Volumes of "The Great Musicians" Series,

HAYDN (JOSEPH). By Pauline D. Townsend. Small post 8vo, cloth extra, 3s. [*In the press.*

SCHUMANN. By S. A. Fuller Maitland. Small post 8vo, cloth, 3s. [*Now ready.*

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d. To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, s 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

The Fishing Gazette.

SATURDAY, SEPTEMBER 27, 1884.

## IMPORTANT OFFER MADE BY THE NATIONAL FISH CULTURE ASSOCIATION.

IT is with much pleasure that we call the attention of our readers to the letter from Mr. W. Oldham Chambers which appears in our columns this week, embodying one of the most important offers ever made to the coarse fish anglers of this country.

At a meeting of the Council of the Association, the Marquis of Exeter in the Chair, Mr. R. B. Marston stated that if the Society expected to get assistance from coarse fish anglers—by far the largest portion of the angling community—it must offer them some inducement to join, and he proposed that the Association should distribute coarse fish, and purchase nets and fish carriers for the purpose. He pointed out that there would be no difficulty in getting splendid coarse fish from trout streams and other trout waters, the proprietors of which annually destroyed millions of coarse fish, and would be only too pleased to give them to the Association. Mr. T. L. Sayer seconded Mr. Marston's proposal, which, after some discussion, was unanimously carried. The Secretary stated that he had got applications for live coarse fish from all parts of the country.

Secretaries of trout clubs and other gentlemen who desire to get rid of their coarse fish are invited to correspond with Mr. Chambers, as are also all those who want live perch, roach, dace, bream, carp, tench, pike, &c., &c., for stocking their waters. We cordially recommend Mr. Chambers's letter to the careful attention of all who are interested in improving both trout and coarse fisheries.

## SHAWFORD BROOK.

MANY a disciple of Walton and Cotton has visited the famous fishing-house on the brink of the Dove, with its dual cypher and immortal inscription, "Piscatoribus Sacrum," but few, I think, have made pilgrimage to another spot, also made classic by Walton's sojourn there and actual ownership. I allude to Shawford Brook, immortalised by him in what is, if I mistake not, the flower of his few poetic flights in verse, "The Anglers' Wish," the fourth verse of which runs as follows :—

Or, with my Bryan and a book,
Loiter long days near Shawford Brook;
There sit by him and eat my meat,
There see the sun both rise and set.
There bid good morning to next day,
There meditate my time away,
And angle on and beg to have
A quiet passage to a welcome grave.

These lines, it will be remembered, he tells Venator he composed sitting upon that very primrose bank, beneath that very sycamore, under which they breakfasted and sheltered from the showers on the third day of their memorable if mythic expedition. It is the beauties and pleasures of that scene on the banks of the Lea which he has extolled in the first three verses, till in the last his thoughts turn also to his early haunts and present possession, as if he felt they held an equal place in his regard, and the poem takes a sadder tone as he remembers perhaps the days of his youth, not altogether without some touch of "Eheu! Fugaces," for he was then in his 60th year, and, though doubtless hale and hearty, could hardly be expected to anticipate the patriarchal age he would attain to.

Since Sir John Hawkins, I am not aware of any writer who has given to the public any information respecting this locality. Possibly, the reason may be the village is now known as "Shallowford," and the brook as the "Meese Brook." Sir John Hawkins, quoted by Fitzgibbon, writes thus on the subject :—

"Shawford Brook, part of the river Sow, running through the very land which Walton bequeathed in his will to the Corporation of Stafford to find coals for the poor, the right of fishery in which attaches to this little estate. The house, described by Walton in his will, is now divided. The brook is a beautiful winding stream, and the situation such as would be likely to create admiration in a mind like Walton's."

The village is some five or six miles from Stafford in a northerly direction, and is close to Norton Bridge Station, a junction of the London and North-Western and North Stafford Railways. It is easily seen from the line, lying to the east, on the other side of the Brook, whose windings for some miles hereabouts never take it far from the line, by which, indeed, it is crossed both above and below the station. No doubt many an angler whirling north or south will have noticed from the train the pretty trouty-looking brook, without thinking for a moment that its former owner was the veritable "Father of Anglers" himself. The Brook rises in some hilly ground near Madeley, in the north-west of Staffordshire, and after a short course reaches and flows past Shallowford, to join, about a mile below that village, another brook of about the same size, the juncture of the two forming the origin of the Sow, which runs through Stafford, and ultimately into the Trent. For some miles above the Shallowford reach, the brook abounds in trout, being strictly preserved by a club of very limited numbers, and the fishing is said to be excellent, but I cannot speak from experience. In the neighbourhood of Shallowford it is, as Hawkins says, a pretty winding brook, and to the practised eye suggestive of trout, though almost devoid of positive rippling scours, for it has plenty of swirling runs beneath broken banks, glassy glides, and deep holes which promise endless charms of variety to the angler. Its banks are fairly open, though here and there alders render some parts inaccessible to the fly-fisher. Here and there, too, is some ancient ash or oak or willow, beneath their shade I have sometimes pleased myself with the thought that old Izaak may have sat and read and angled as he loitered those long days away to which he turns with such grateful memory. The stream, indeed, is one whereon he could—and doubtless did—most successfully practise his worm-fishing or his dapping, for it has many a deep hole and quiet corner or likely hold beneath the alders most fit for such practice. On the outskirts of the village, a stone's throw or so from the stream, still stands his house, now, as in Hawkins' time, divided into two. It is an ancient cottage, with thatched roof and whitewashed stone walls, the black beams built into them, like others in the village, and of a kind frequent in the neighbourhood. It is, probably, little altered since Walton dwelt there; but though cottage and brook remain, if their whilom owner were to revisit his possessions he would find vast alteration. Close to brook and cottage now runs the London and North-Western main line north, and no longer by day or night could he hope to "meditate his time away" in peace. The scream and roar of many a score of trains tearing through the little junction, mostly without a stoppage, would scarcely form fit environment for him, whose motto was, "Study to be quiet."

As to the sport obtainable on the brook, I have already mentioned how good it is said to be above Shallowford, and in Walton's day it was probably as good or better near the village. To-day, for reasons to be given later, it is but moderate. However, I have heard even now of good fish being taken from it. Trout of 2 to 3lb. weight, and of one chub of 7lb., concerning which a friend took the trouble to write to the reported captor, who confirmed the statement. Such fish, however, are few and far between. My own experience is confined to two or three evenings' fly-fishing on the length near Shallowford, fortunately under excellent atmospheric conditions, when, novice though I am, I usually took some three or four brace of trout, generally including a pounder or two, except one evening when I found the water run off and almost stagnant, and could only get a fingerling or two—of course, returned to the stream.

On one occasion, with rain falling and a little colour in the water, I put on an "Alexandra"—I believe a perfect novelty on the water, and certainly no member of Walton's "jury of flies." It created quite a sensation among the trout. They came at it with a rush and a somersault out of water, and I moved about a score in about half a mile's fishing. I took eight, and was twice broken in striking, as I was using fine drawn gut, while the hook was large, requiring a fair stroke to bury the barb. I had also, probably, got a little flurried with so many misses and the startling manner of the rises or runs. I never like to see trout come at fly or minnow in this way: it startles you to begin with; they often miss the bait altogether, or, if they take it, must be hooked, as it were, flying, or they have dropped it.

I do not, however, wonder that fish are not more plentiful in this part of the stream, but rather that there are any left at all, for at two points upon it, about a mile apart, are floodgates for irrigating purposes, and at each floodgate bag nets covering the whole apertures through which the stream flows, so that nothing can pass up or down except through the nets. Add to these the use of trammel nets in some of the intermediate parts, and the occasional visits of otters, which hunt down the very biggest of the fish, and you will see the stream must possess excellent natural capabilities to remain stocked at all.

The nets at the sluices are owned by the farmers occupying the land, who also possess the rights of fishing, and in floods, or when the water has been shut back for some time, and then the sluices suddenly drawn up are most effective. In low, clear water they do not take much. Occasionally, too, a stroke of retribution, from the angler's point of view, falls on the net in the shape of some floating plank or log, which, if drawn end on into the rush of water through the sluice, goes through the net and sets free its captives, rendering it, moreover, harmless till repaired.

Below Shallowford, to the spot at which it joins the other brook to form the Sow, it still contains a few trout; but the other brook and the Sow contain only coarse fish at this part of their courses. I am not, however, sufficiently acquainted with the river Sow to say if it is devoid of trout throughout its course.

W. T. S.

[Is "W. T. S." a member of the Izaak Walton Angling Society which has recently been established at Stafford, which preserves Shawford Brook ?—ED.]

## THE TROUT STREAMS OF ABERDEENSHIRE.

### THE MUICK.

THIS fine stream takes its rise in Loch Muick on the eastern side of Lochnagar, and, after a course of some nine miles, joins the Dee near Ballater.

The proprietors are H.R.H. the Prince of Wales, and J. T. Mackenzie, Esq., of Kintail and Glenmuick.

The scenery about the source of the Muick is of a very wild and majestic character, nothing but lofty hills and wide moors for miles around. About four miles along the run of the river the prospect is of a bare, bleak description, being almost void of trees, and marsh prevailing most of the way along the banks. After this distance we come to the Falls of Muick, where the water tumbles with a headlong rush over massive rocks into a deep whirling pool some 20ft. below.

Here the scenery changes greatly, wood being abundant all around, and, were it not for the rumbling roar of the water as it descends, one would not be aware of the existence of the falls until approaching quite near. This scene is quite worthy of a visit in itself. From this point to the confluence with the Dee the river runs along a more cultivated country, plantations and farms becoming more common as it proceeds nearer its mouth.

The upper part is generally of a slow, winding character, with occasional deep pools, and a sandy bottom. From the Falls, for a couple of miles or so downwards, large bouldery stones abound in the channel, and its subsequent course is marked by more variety in the way of stream and pool.

Salmon and grilse rarely ascend the Muick, but there is abundance of brook trout averaging four or five to the pound. Some large fish, however, are sometimes to be met with, and an occasional sea trout after a spate in summer.

We reckon May and June to be the best months for fly fishing, and the most killing flies March brown, partridge ruff, hare-lug, spiders, and duns, of a small size and used with fine tackle. Some days, however, peculiar varieties are very killing. Occasionally, we have basketed as many as five to six dozen, many of them ¼lb. and over.

In July and August, when the water is low and clear, small red worms are very deadly, and after a spate a good basket can be had for certain by using a slightly larger size.

Particularly near the mouth of the Muick there are some fine streamy pools, where good sport can be obtained with minnow whenever the water is fairly high, and in these, at such times, large trout are frequently got.

Generally, the whole breadth of the stream can be commanded with a single-handed rod, and altogether by wading in a little at the wider parts.

In some parts the Muick is not strictly preserved; notwithstanding, we advise the asking of permission, as courteous applications from respectable parties are seldom refused. Mr. McGregor, of the Invercauld Arms Hotel, Ballater, can manage to arrange fishing for his guests.

Some distance from Ballater, on a gently-sloping eminence on the south side of the Muick, is Glenmuick House—the palatial residence of Mr. McKenzie—in the centre of a magnificent expanse of birches, with fine mountain scenery in the background.

Birkhall Lodge, a residence of the Prince of Wales, and the ruins of Castle Knock, are on the north side of the river. The Prince of Wales's hut, Alt-na-guisach, is no distance from the head of the river, and under the shadow of "dark Lochnagar."

Here, as elsewhere on the Deeside Highlands, the air is remarkably pure and invigorating, and the picturesque scenery and pleasant excursions are alike attractive to the health-seeker and tourist.

Accommodation at the Invercauld Arms, or Deans' Temperance Hotel, or in the village of Ballater.

Rod season—February 11th to October 31st. Route—By rail to Ballater, thence fifteen minutes' walk to the mouth of the stream. W. M.

## THE TROUT STREAMS OF NORTH DEVON.—IV.

By Helwr.

Mr. Editor says that I give rather too rosy an account of the numbers of fish in the North Devon streams.* Whilst I am aware of his intimate knowledge of several of the principal streams of this district, I beg to assert that I do not give too rosy an account of the numbers of fish in the streams upon and near Exmoor. For example, on July 28th, I killed 50 trout in that part of the Barle between Landacre Bridge and its source, the weather being dull, and the water high after rain. The landlord of the Sportsman's Inn, Sandiway, saw my creel. My friend Mr. Lucas, of North Molton, often takes 40, 50, and even 60 fish in the moorland streams—like myself, using the fly. I do not know what Dr. Spicer, of North Molton, has done this season, which has been an exceptionally bad one; as a rule, he does not think much of taking a basketful.

With regard to the Editor's note to the effect that the Rev. R. Newman preserves a stretch of the Barle near Hawkridge, and that the open water is getting considerably over-fished, I must plead that I am aware of both facts. Still, my remarks were not *very* misleading, as there is free water not far from Hawkridge—viz., above Mr. Newman's, at Torr Steps, and below for a short distance until the water of the Dulverton Association (Rev. S. Jellicoe, sec.) is reached. The latter water is, I am informed, much improved under the present management, and I will shortly try it and report further.

At the foot of my article No. 2 the Editor says, "We are sorry to say it has been fearfully poached during the drought, and so have most of the moor streams." This refers to Dean's Brook, and is only too true. Some miscreants turned the water aside and caught every trout, big and little! Since the recent rains, a great many trout have come up this brook from the Barle, as is usual in the autumn.

In the district of which I write is one of the most beautiful trout streams I know. It is beautiful as regards its position and scenery, and *was* beautiful on account of its being well stocked with larger fish than its size would warrant one in supposing. It is called West Molland Brook, and it runs into the Yeo river at Molland station.

When treating of the Yeo river I said nothing about this brook, because it is very difficult for a stranger to get permission to fish it, and because it has been almost denuded of fish. With (or without, I know not which) the permission of the owner, the farmers upon this stream took advantage of the drought to *murder* the trout therein by all manner of unsportsmanlike means, the principle plan adopted being the simple one of turning the water aside. In the face of the agitation that is going on, it behoves the lovers of any one branch of sport to sympathise with and help the lovers of all others. For, *l'union fait la force.* I appeal to the hon. secretary of the Sports Defence Association to put me right if I am wrong. Thus it is pitiable to see the anglers decrying racing, the sporting man injuring the interests of the lover of coursing, or the man who loves hunting alone—be it stag, fox, or hare—taking fish unfairly, and thus depriving some honest brother of the angle of the sport his soul loveth. How much more sad is it when those who aspire to take a prominent position in the world of sport so act!—a steward at race meetings, a master of hounds, or the owner of a crack racing yacht.

Perhaps after this digression (all of which I consider necessary after due consideration, although I am so fond of launching out in "too rosy" a manner) I may be allowed to proceed with my text. And so we come to Dulverton.

Dulverton is, perhaps, the best known and most popular fishing station in either N. Devon or its adjacent (and for sporting considerations inseparable) district of N. Somerset. There are three good hotels in Dulverton—the Lion, Mr. King; the Carnarvon Arms, Mr. Nelder; and Tarr's Hotel. Mr. King's and Mr. Tarr's houses are in the town; Mr. Nelder's at the station. That there are plenty of good fish in the waters of the Barle, and Exe, near Dulverton, I cannot deny; but I do not think so much of the angling there as at other places I have mentioned. The great drawback to fishing near Dulverton is the extreme popularity of the place with the angling fraternity; and no one can say that a river is any better worth a fisherman's attention because its banks are crowded with his brethren. Remarking *en passant* that in the vicinity of Dulverton many hooked and pricked fish are in the water, and that those trout that have not yet felt the steel have become very wary from the constant whipping of the water, I must still admit that there are most reliable reports of good sport constantly to hand from that neighbourhood. Further, it must be said that the quarters at either of the hotels in Dulverton are better than the majority I have mentioned, and there is less "roughing it" in that place than at some others. Persons staying at the Carnarvon Arms have the privilege of fishing some miles of the Exe and Barle *free;* and as regards the latter river, there is the great advantage of being able to commence operations almost as soon as the hotel door is passed. This is convenient for those who use wading-stockings, for they dispense with the nuisance of carrying any other "togs" with them; moreover, can they can slip down to the river for an odd hour at any time when in the humour, when the water and weather are suitable, and just before dusk, when the best sport must be looked for. When the river is fining after a "spate," a good man ought to creel a score or more in a day, some of the fish being half-pounders, and many of them a quarter of a pound.

Mr. Nelder, of the Carnarvon, is a very good fisherman, and is a correspondent of the Fishing Gazette. He keeps a varied assortment of fancy tobaccos—no mean *desideratum* in country quarters.

Should the angler choose to stay at the Lion, he will find an omnibus meeting all trains. The Lion is a very favourite house with anglers and hunting men. Mr. King keeps about a score of capital hunters, all of which are in great request. It will, therefore, be necessary to give timely notice of an intention to patronise this house during the stag-hunting season; and not this house only, but all of them.

From the Lion, both Exe and Barle can be fished. In the case of the latter, a ticket can be procured in the bar for the Dulverton Association water preserved by the Rev. Mr. Jellicoe. The change is very moderate, being, I believe, only one shilling a day. Every angler knows that however great his skill, practice, and experience, he will kill more fish when he knows the water than when he does not, and that it is, to say the least, very convenient to be informed on which side the river to walk, and when and where to cross over. This being so, the angler staying at the Lion should send for John Holcombe, the water-bailiff, who lives hard by. This artful fisherman knows every pit in the river, and every stone and fish in each pit, and will accompany one for a small *pour boire.* His company, besides being very agreeable, will be found very conducive to a heavy creel.

Fishing up the Association water for about three miles, we come to the point where Dean's Brook joins the Barle, and at this brook we must fish for some distance. For the first mile or two the bushes will prevent our seeing the stream, let alone throwing upon it, except three or four places. Most of the knowing local hands advise us to push on until we come to Zeal Farm without attempting a cast. I advise otherwise. The few open places are the hovers of good fish, as I have found this season to my great satisfaction. When Zeal is reached, the angler will find good water, productive of much sport for a mile or more—viz., until a small brooklet joins Dean's Brook; then he must retrace his steps.

Time was once when above this point one might confidently expect rare sport for some miles; but the atrocious misdeeds alluded to at the commencement of this article (and mentioned by Editor) have altered all this. That the water for a distance above Zeal is good business will be seen when I say that, at the time of putting pen to paper, I have only just returned from fishing that very portion of the stream in question. Result of three hours' careful fishing (3.0 to 6.0) in drizzly weather and moderately high water, 20 trout weighing 4lb. Flies, blue upright, coachman, and hare's ear. I hooked at least forty parr, some of them weighing nearly 3oz.; but, of course, returned them to their native element.

We will now suppose that the disciple of Cotton whom I have located at the Lion is about to retrace his steps towards that comfortable hostelry, accompanied by Mr. Holcombe aforesaid—this person, by the way, will tell some marvellous yarns about the tons of trout an eel will devour in a year; I mean, the tons of what would be trout, supposing the *spawn* so eaten was allowed to grow into trout. On the homeward journey, a different style of fishing must be adopted, and, perhaps, different flies, because not only is it getting towards sundown, but we shall be fishing down stream with a long line, instead of up stream with a tolerably short one. It will be advisable to take that side of the river opposite to the one we came up along, not forgetting, however, to try once more any nice pit, hole, or stickle where we moved a good fish in the morning, and "moved" it to no purpose. Having got back to the town, having reeled up, having either dismissed the companion at the waterside or taken him up to the Lion in order to point out to him the stag's head and antlers in the bar, we will say no more about Dulverton; for the rest of the evening, being devoted to dinner, smoke, and chat, does not call for remark in a paper upon "Trout Streams."

## ON THE DESCRIPTION OF SALMON FLIES.

By Mr. Geo. M. Kelson.

### Major Traherne's Patterns *(Continued).*

### No. 14.—The "Evening Star."

We have nearly done with the distinctive features in bodies, and without disturbing the dusty corners of one's recollection to brood over every-day particulars which the fly-dresser picks up in his infancy, there is little more to add.

The ordinary chenilles behave uncommonly well in the water, but, as usual, the dyes are rather disappointing. I dip mine in a weak solution of tartaric acid to set the colours; some it suits, while others require a different mode of treatment. Another drawback is that they are rarely to be obtained sufficiently small for our work, the smallest being quite large enough. Helbronner, in Oxford-street, supplies them, and his collection is an extensive one. If we include the tinselled sort, there is nothing to beat chenilles for grubs, and that kind should always be wrapped up in special paper sold with them, and kept as much as possible from the air and light. In tying in the ordinary, do not omit first to remove the flocculent finery by pinching it away with the finger-nails in diminutive quantities.

---

* Our correspondent must not feel hurt at our pulling him up a little. It is far better to under-rate than to over-rate the fishing, as to do the former invariably causes disappointment. In speaking of the fishing in the Barle adjacent to Hawkridge, he speaks of trout being "very plentiful indeed." We have fished this water many times during the last ten years, and have taken 60 and often 30 trout a day in it; but some friends, good anglers, who have fished the N. Devon streams every year for years have been on the Barle all this season, and inform us the fishing has immensely fallen off, and the fish are smaller than a few seasons back. Our correspondent at Barnstaple pointed out that "Helwr's" remarks were more applicable to the state of the fishing some years back. We do not deny that on some exceptional days a clever angler may take great numbers; but "Helwr's" articles are not intended only for clever anglers, and we can assure him that, as we said before, it is far better an angler should be agreeably, rather than disagreeably, disappointed. Mr. Jellicoe deserves every praise for his endeavours to improve the fishing; but we are sorry to say some of those who ought to be first to support him do not scruple to pooh-pooh his exertions. His tickets can also be had of Mr. Nelder and Mr. Tarr, who both know how to make anglers very comfortable.—Ed.]

When the ribs and hackle are companions down the body of any fly, the former is the first to wind and fasten off.

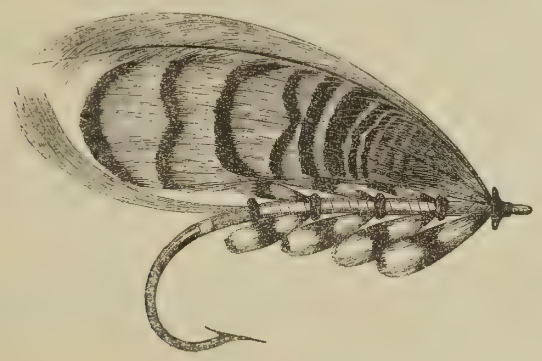
The usual way of managing Peacock, Emu, and Ostrich herls is to tie in a couple and spin them on the thread. I can scarcely say a stronger, but a much more effective way is to use only one wound on its side in close coils, after the fashion of butts; it follows that the appearance in water is more life-like.

I wish to say a few words by request on stripping hackles, my attention being called to an excellent work on angling, which in reference to this says, "Take care you strip off the right side." Coming from one considered a high authority, it is just possible "the right side" means the correct side, because it is unquestionably the left which we always take away. Another construction could be put upon it, as these feathers are on their backs, so to speak, when we double them, so the under part of them faces us during the operation, and therefore the sides then are reversed. However, it is not the first time I have known this subject under discussion, for I have been called over the coals myself. But in future let it be understood, as far as I am concerned, that the right and left sides are known by laying the feather with its point from and quill towards us, having the best side of it uppermost.

I am indebted also to an old fly-dresser for pointing out a printer's error in another article of mine, July 26. It seems that I consider the hackle should be placed on the head side of the tinsel. Not at all; I am convinced that would be incorrect. The paragraph runs to this effect: *The hackle follows alongside the tinsel on the head end;* but that line is preceded by "He (the student) should endeavour to arrange his work (the work on the body) *for the tinsel to guard the feather*" (meaning the hackle), so that could not possibly hold good unless the hackle were located on the tag side. There were other reasons given August 23rd why it would be wrong the other way. However, if I were making a "show fly" I should certainly prefer the head side, because it looks so much better there.

Beauty, at any rate, does not always guarantee security. I admit she is an ever-enticing lovely decoy-duck, but still a "latent lurking cheat," having no power of endurance, and although she has her day she is utterly unreliable—she contaminates us, and then dims the mirror of our most ardent expectations.

In all cases, from the beginning to the end of the work, the tying silk can be kept tight best by holding it between the third and little finger. All the materials that we require should be selected and in readiness, but if both hands be wanted and the fly laid down the silk should be wound three or four times spirally up to the head and squeezed in between the gut loop and shank of the hook, and for so doing sufficient room is always left there.



Now we come to throats, where it has often been said that no salmon fly is perfect without a few blue fibres. Jay is a great favourite, and the professionals use feathers from both wings, but those having the colour on the left of the shaft they wind the reverse way. We work the right easier, they are not more expensive, and amateurs always prefer them. The older the bird the better for many reasons. I intended to give an illustration for stripping these feathers, as they have the reputation of being very troublesome. This I hope to do later on, with descriptive particulars.

The Vulturine guinea fowl is a good natural blue, and much longer in fibre. Unfortunately, it has no speckle; but for very large flies there is nothing so good, in my opinion, as our Gallina. It is true we have to come down to dye, but the double-speckled feather takes the stain very readily in any shade; the white spots, or rather speckles, are so white and otherwise suited that the brightest blue can be obtained, and depended upon perhaps for a longer time than with anything else. We cannot do better than make a note of this now that the season for collecting them is rapidly approaching.

It is scarcely necessary to enumerate the other natural blues, as they are so well known. However, it is well to bear in mind that when any of the large feathers are intended for hackling, they should previously be well soaked in water.

The tippet from the Amherst pheasant furnishes this part of the fly very prettily, and can be turned to good account here in different lengthed strands, which can be dyed any colour; it is not a good feather to roll on, be it remembered.

When any kind of fibres are put in at the throat, you can get them to point properly by winding the tying silk far enough, but not too far, against the butt of the former hackle; without a little attention to this they would rest too flat, and if overdone, too perpendicular.

Talking of pheasants, I am glad to have an opportunity of calling attention to an advertisement in another column from Hereford. All amateurs are well aware of the difficulty of procuring good feathers of this description.

I have had a specimen of the Amherst's sent on, and the fibres—perfect in "bend" and condition—measure no less than 3¾in. The rump feathers, too, would be invaluable in any river; and as to the toppings, they are far superior and similar in colour to those on the throat of the East Indian Argus. (For the sake of recording an extraordinary bird, I may here mention that the other day I saw a leading tail feather 4¼in. in fibre, and although a cross between a Golden and an Amherst pheasant, this bird singularly enough retained the original marking of the former. It is not for sale.)

The Elliots' are superb and very useful, and, I believe, the only specimens in this country. Reeves' is another excellent variety, producing many taking feathers; and the decided rifle green stripes in the Versicolors afford one other grand change for small flies.

What could be a more interesting undertaking for any angler than to imitate this example of crossing suitable birds, and keeping his friends constantly supplied with all sorts of fresh material which he would assuredly have at his disposal?

The tippets of the Amherst, white, not golden, show to great advantage in the wing of the "Evening Star."

This is a new pattern to me, but fishermen can generally tell where and when to use them; the name is suggestive as well as the extreme contrast. Still, such a complete change to the ordinary and old-fashioned stock would be worth trying at any time of day; indeed, in some rivers black and white command the most attention.

It requires a good deal of patience to set the Jungle Cock legs. They ought to close, as we know these feathers are not so very flexible, and they would probably skirt the water, unless the stream was rapid, if allowed to sprout from the body in a variety of shapes. The student will just as easily manage Jungle as any other feather after a little practice. "As easily?" Well, scarcely so. Still, we cannot expect to progress or benefit much without *some* effort. This "Star" can be described:

Tag: Silver twist and tippet-coloured silk (tippet written thus always refers to the golden pheasant).

Tail: Topping.

Butt: Black herl.

Body: In four equal sections of silver tinsel, the first three having two jungle above and below, as illustrated, and butted; the last of Blue Rock-coloured silk, and the only one ribbed with silver tinsel.

Throat: Two jungle as before (these feathers slightly increase in length from the opposite end of the body).

Wings: Four Amherst pheasant tippets, back to back, as shown.

Cheeks: Summer duck and two red crow, the former in advance; topping over.

Horns: Red macaw.

Head: Black herl.

## JOTTINGS REGARDING THE DEE, ABERDEENSHIRE.

We think proper to continue our notes by remarking at the outset that most anglers having had any lengthened experience of the Dee will agree with us in ranking it a first-class salmon river. Of late years, its value from an angling point of view, in the spring season especially, has been much enhanced by the efforts of an Improvements Association constituted at the instance of the riparian proprietors. Altogether, through the agency referred to, some twelve or fifteen nets have been removed from the river, for which a yearly rental, varying from £10 to £100, and amounting in all to about £800, is now paid. The result aimed at has proved satisfactory—advantageous, we should say—in a twofold manner. Firstly, it has slightly benefitted, in a monetary sense, the proprietors from whose waters the nets were removed; and secondly, those anglers leasing water between, say, Banchory and Braemar have experienced a material increase in sport, particularly during seasons when the river flowed pretty fully. Only two nets are now plied outside the tidal waters between the opening day (11th February) and the 26th of August—the close of the netting season.

Here, as elsewhere, anglers and river proprietors are much in favour of the greatly-agitated question, an extension of open time weekly, to allow fish to run. The Improvements Association are quite cognisant of the fact that by acquiring the two remaining nets referred to, the spring fishing could yet further be improved. It may be questioned, however, if, after all, the fishing is even yet, or will be, equal to what it was some fifteen or twenty years ago. Anglers on the lower sections of the Dee unhesitatingly declare that nigh poaching is becoming quite notorious, and so much so of late has this been the case, that scarcely a night has passed but the river has been netted in some place or other. Many think that the Fishery Board are somewhat remiss in their attention to this subject. Certain it is that the staff of watchers is ridiculously insufficient to prevent poaching. It is quite evident that the proprietors are keeping in expense with one hand, clutching at exorbitant rents with the other, and trusting to their tenants to protect themselves. Now, this is very unfair, and may, if no action is taken in the matter by the proprietors, have, as it certainly ought, the effect of bringing about the proper result in a sweeping reduction of rents.

Again, we notice that many of the proprietors who have sought to enhance the value of their fishings in the way we have indicated are unwittingly working, at the same time, in a direction clearly calculated to lessen sporting results. This remark brings us face to face with the subject of upland and surface drainage.

Than the effect produced by such drainage nothing in our opinion—not even an exceptionally dry summer like the past—is so calculated to lessen sport. 'Twere necessary that an extraordinary amount of ingenious reasoning should be given before we could dispel from our minds the conviction that, year by year, as these operations are extended, a corresponding decrease in river sport will be experienced.

On what ground, it may be asked, is this statement advanced? We answer —Simply because almost all the hills are now intersected by turf-deep ruts or narrow ditches varying from 12in. to 18in. in depth, and the natural result is that when rain falls in any quantity it soon finds its way into these channels, pours headlong down the hillsides into the feeding streams and the rivers, instead of rising gradually and falling slowly, come "foaming down with doubled speed" and speedily dwindle into an almost unfishable condition.

It is therefore apparent that a complete network of surface ruts, &c., on the hills has a very detrimental effect upon the fishings. Formerly, when the water oozed through the moss in a natural way, unless, indeed, a very extraordinary quantity of rain fell, the rivers never rose so high but that some casts were fishable, and, further, after a moderate rainfall, kept in good order for a lengthened period of time. To interested proprietors we would say, you cannot drain the hills and have proper river sport.

We hope to finish these notes next week. W. M.

Burton-on-Trent Sewage.—This matter had the Board's attention in 1879. In connection with the new sewage works, it must be explained, are other town improvements; but the Conservators are now in correspondence with the Town Clerk on the subject. It will not be allowed to drop.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

### ANSWERS TO CORRESPONDENTS.

H. G. R.—Many thanks—hope to use it.

J. James.—You should try a turn at Richmond. Write to C. Brown, fisherman, tell him to bait a swim and get all ready for you.

Laplander.—We advise you to use Le Page's cold liquid fish glue, which is sold by Messrs. S. Allcock and Co., Redditch, in 6d. bottles. It is always ready for use, and is used in building the American organs on account of its great strength. It withstands the effect of wet and damp in a wonderful manner, and is used by the Americans in the manufacture of their celebrated split-cane rods. It is wonderfully handy to have in the house to repair the numberless little breakages which take place.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### THE SUPPLY OF LIVE COARSE FISH FOR STOCKING WATERS.

Sir,—In order to assist in developing the Fresh-Water Fisheries of this country, the Council of the National Fish Culture Association have determined to form an establishment for the culture of river fish of all descriptions, in addition to various species of trout, for the purpose of stocking public waters.

At the present time it is exceedingly difficult to obtain fish of this kind, and solicitations for carrying out such a project as that proposed have been so frequent that my Council have, after mature consideration, decided to take the matter in hand without delay. Much has been done to improve trout fishing, but this is the first attempt made to distribute on a large scale fresh-water fish generally, and more especially for the benefit of that enormous body, the coarse fish anglers of England.

It may be mentioned that many riparian owners, secretaries of clubs, and others, desirous of depleting their trout waters of pike, perch, dace, roach, &c., have already given permission to this Association to net and dispose of their fish, and doubtless further concessions will be obtained in due course.

The only expense to which those desirous of obtaining fish will be involved is for the carriage and labour, together with a nominal charge per hundred for the fish supplied, according to their size and species.

In order to participate in the advantages herein offered, the following rules and regulations must be observed :—

1. No club or private person can have from this Association supplies of fish for stocking purposes without first joining this Association, the annual subscription being limited to *One Guinea.*
2. The Council will require in every case a guarantee that the fish desired are for actual stocking purposes, and not for sale or disposal. Such guarantee must always accompany the order, otherwise it cannot be complied with.
3. Orders will be executed in rotation as speedily as circumstances will permit, but the Council will not be held responsible for any delay, loss, or damage accruing in the dispatch of fish.
4. To prevent miscarriage in the delivery, particular care should be taken to furnish the full address to which fish are to be sent ; and, if necessary, the nearest railway station adjoining the locality, so as to expedite transit.
5. Clubs may be represented on the Association by any gentleman delegated for that purpose.
6. Carriers for transmitting fish will be supplied free of charge, provided they are returned to the Association immediately. A fine of 5s. will be imposed in every case where they are not sent back on the day following their receipt.—I am, &c.,

W. Oldham Chambers, Secretary.

National Fish Culture Association, Exhibition Ground, South Kensington.

A prospectus of our Association can be had on application.

### GOOD GRAYLING FISHING.

Sir,—In reply to "Fluvius," I beg to say that perhaps the best grayling fishing in the British Isles is to be had at Tenbury, Worcestershire, in the river Teme. I know what I am talking about, as I have fished in rivers in many parts of the country, and after that think my native town (mentioned above) *facile princeps.*—I am, &c.,

Helwr.

### EYED-HOOKS : THEIR EARLY HISTORY.

Sir,—I think it is a pity Mr. Hall cannot discuss this subject without offensive personalities, covert sneers, and assertions that my statements are false, whilst *he does not offer a single proof in contradiction of my facts.* I do not wish to trouble you or your readers further with this dispute—anyone can see that the main facts of our two accounts agree generally ; but I cannot let the implied stigma in his last letter pass uncontradicted. I made no *such allusions* to *his* letter. I let the historical facts speak for themselves, and, as he does not and cannot refute them, I prefer to consider that our difference of opinion arises from different views of the same circumstances. I request space to reply briefly, *and finally*, to his remarks of September 20.

(1) His *Field* letters of 1880 is beside the question now—probably not one in a hundred readers of either Fishing Gazette or *Field* can remember what it contained, or will ever have a chance of again referring to it. I want to see it, but I cannot find a copy. It is useless referring people constantly for information to statements they cannot see.

(2) I pass as of no moment.

(3) Mr. Hall says I "*know* that he was in communication with Mr. Aldam as to eyed-hooks as early as April, 1877." What I *know* is that he told me so in *June last* for the *first* time ; but he admits that his recollection of what occurred is so vague that he does not know what took place.

I stated my *belief* that he took no part in the first year's efforts of Mr. Aldam and myself (between April, 1877, and May, 1878) ; and since my letter appeared in the Gazette I have received ample proof that I was right, and that Mr. Hall had nothing whatever to do with the first issue of the eyed-hooks till after he saw my samples at Rowsley in May, 1878.

(4) Turned-up Eyes.—I do not doubt Mr. Hall's assertion that he experimented in this matter in 1878 ; but, I ask again, If so—if they proved any success at all—how is it that he never mentioned this important point in our consultation about the first order for Hutchinson's sneck-bends, and that those, ordered by himself, were made with flat eyes ?

That question was ignored by him up to Easter, 1879, and the eye was not altered till after I proved the desirability of it at Abergavenny.

(5) As to 1880 patterns.—I bought *new* Hutchinson "Eyed-hooks" *in June last*, and they are identical with those approved by Mr. Hall in 1880. This is all I know about his "elaboration and refinement *since* 1880," except (as I have shown in another letter) that the alteration in bend he made on his own account, and *without consulting me*, utterly spoiled the shape of the hooks.

(6) Small sizes down to O and O O *were obtainable without any difficulty* in 1879, 1880, and 1881. It was only the O O O size that he experienced any difficulty with the makers about, and then only *temporarily in* 1882—as I understand his own version of it by letter.

(7 and 8) I pass as of no moment.

Finally, I do "plume myself on my historical facts," and on that statement I base all I have claimed, or wish to claim. Let Mr. Hall disprove any one of them if he can. I have re-read my letter of May 31, and I re-assert that I adhere to that statement now (with the exception of the one mistake I made, and corrected on June 21), and if any unbiassed person will *read* that letter *again by the light of my historical statement*, I think they will admit that there is nothing in it which Mr. Hall *ought* to have felt agrieved at, or to have raised such a "tempest in a teacup" about, *particularly after* my *earnest endeavours to explain* the matter to him *privately.*—I am, &c.,

George Bankart.

Sept. 20.

[It is only fair to Mr. Hall to say that he had sent us a very long letter, and on our strongly representing to him that everyone was getting tired of this personal dispute, he consented to make his letter very much shorter. Mr. Bankart considers he would have a grievance against us if we do not give him space, and we unwillingly do so, knowing, from several complaints, that our readers are exactly in the position of Mr. Hall himself, "sick of the subject."—Ed.]

### EYED-HOOKS AND THEIR FUTURE IMPROVEMENT.

Sir,—My remarks on this subject are not intended in the least as reflecting upon the makers of the present eyed-hooks, Messrs. P. Hutchinson and Son, whose courtesy and attention have always been all that anyone could desire ; but the *present shape* of the hooks is *not as good as it might be made*, and it would probably be to their advantage, as well as of the angling public, if they would carefully consider the following suggestions, as the alteration can be made without any additional cost or trouble, being simply a change in the bend of the wire :—

There is no better fish-hook made *for holding a fish when hooked* than the "Limerick" shape, its fault being that in the smaller sizes it is less certain to *take hold* than other kinds ; on the other hand, there is no better hook of small size *for taking hold* than the "sneck-bend," its fault being that from the angularity of the bend it is likely to break off if too highly, or to open out if too softly, tempered, a result I have too often experienced with sneckbend hooks, and also *the exceedingly ugly appearance* of flies of *large size* when dressed on these hooks.

It was with the desire of combining the advantages of the two styles that Mr. Hall and I considered the Limerick bend with sneck side twist would secure a neat-looking fly-hook with the holding power of the one shape, and the greater certainty of hooking a rising fish with the other, a result which may still be secured if properly carried out.

The finest Limerick hooks ever made were produced some thirty or forty years ago by a working manufacturer named O'Shaughnessy, of Limerick, and his pattern, taken as a guide with the sneck twist added from the *bottom of the bend*, would produce the best possible form of fly-hook which could be devised.

The chief feature in the O'Shaughnessy hooks (apart from their extremely careful make) was that the *direction* of the *point* was in a *true line with the shank* (if not even the *very slightest bit* tending outwards), and this quality gave them great certainty of hooking a fish and burying the barb, as when the point of a small fly-hook tends inwards towards the shank, it causes frequent misses in hooking fish to the rise, and the slight hold taken is more likely to tear out.

As an illustration I inclose two pattern hooks, and I select large ones as showing the principle more plainly. (A) a No. 7 eyed-hook as now made ; and (B) a slightly snecked Limerick (No. 5 Limerick scale) out of the first lot I had made to my own order in 1879—rather too heavy in size of wire, but otherwise a very well-shaped hook.

If you will hold the hook (A) by the eye, point downwards, with bend towards you, you will notice that where the bend *commences* (on the "rump" of the hook, if I may be pardoned the expression), *it is twisted sharply off to the right*, continued so to the bottom of the bend, and then turned back again, bringing the point nearly under the shank, and tending inwards towards it.

Now, what good reason can there possibly be for this side twist at the *top of the bend?* It utterly spoils the hook, and does away with the advantage proposed to be gained by the side twist.

The wire ought to run *perfectly straight from the eye to the bottom of the bend*, and then be snecked out only as much as is necessary to gain the improved hooking power (of which the old sneck-bend hook is a good illustration) ; but the direction of the point ought to be kept in a parallel line with the shank, as fairly shown in hook (B) ; and if the test of *pull from the gut* is tried on this hook, it will be seen how well the direction of the point falls on any soft substance for straight hooking.

The eyes are generally well and neatly made, but occasionally turned up a little too low down the shank, forming a sort of "neck" between the back of the hook and the eye. There should be no "neck" ; the eye should start directly upward from the shank. In other respects, of quality, sharpness, tempering, and colour, the hooks are excellent, and I consider that if an O'Shaughnessy hook is taken as a basis, the point snecked out *from the bottom of the bend*, the eye added to the existing length of shank, as now made, no better design of hook for fly fishing, large or small, could be devised.—I am, &c.,

George Bankart.

Leicester, Sept. 18th.

[Mr. Bankart's suggestions, if carried out carefully, will certainly improve the hook. It is absurd, as he points out, to make the side twist commence from the shank end of the bend. We have seen it commence slightly up the shank in some cases ; it should commence from the barb end of the bend. We hope some firm will take up Mr. Bankart's suggestion. If the shank and the whole of the bend (in fact, all but the barb and the short straight piece it is made on) is held flat between the tweezers and the barb, then gently pressed the least bit sideways, the side twist will be right ; it should not be rank. The action of this slight side twist is similar to that of a rail-end raised a little on one line in front of an advancing train—it forms an obstruction.—Ed.]

### THE LARGE WICKHAM'S FANCY FOR SEA TROUT.

Sir,—I duly received the large Wickham's fancy you sent me from Mr. Bankart ; before using it, I had half-a-dozen made to the pattern, as I knew that in the lochs and rivers I should fish there were plenty of weeds and other impedimenta by which flies are lost. I will begin by saying that the fly is an excellent one, and no one going in for sea trout fishing should be without it as a stock fly. I found it very killing with fresh-run sea trout up to a pound and a half, but I could not take any of the larger fish with it, or those which had been up in the fresh water a few days —all those, with one exception, I took with the Wickham had the sea louse upon them. I tried it well both as a stretcher and as a bob, and in all kinds of weather. I will give a few instances : In the Aline water, in one stream or run, I took seven fish—none over a pound—all with the sea louse ; in another run, deeper water, I could not raise a fish with the Wickham. I put on a larger fly—turkey wing with purple body, silver twist—and took nine fine sea trout besides losing three others ; some of these were from a pound and a half to two and a half pounds. In the Strontian I tried it on one favourite pool and could not get a rise—changed to the purple body and took five fish. On same day, on same river, higher up, I could not raise a fish with the purple body, but got three nice ones with the Wickham and lost three others—one of these I think was a very good one, as I had him on for a minute or two, and he ran out a lot of line ; and, in the evening, coming down, I got some nice fish in the streams with the Wickham. On the Carnac, the river rising, I got two nice fish with the Wickham, in the first pool both fresh run ; tried it over again, and then changed to the purple body, and took two more larger, one not quite fresh. Higher up I tried the Wickham again without effect. My friend, the other side, told me they were taking the purple body well. I changed to this, and took ten fine fresh-run sea trout in twenty minutes. In the evening, with lower water in the same pool, I got two good sea trout with the Wickham. In the lochs, the difficulty is to keep the small loch trout off this fly when fishing for sea trout. In one loch, where large flies are the rule, I could do nothing with the Wickham ; but with the large red palmer—a purple body fly—had grand sport. In Loch Doilate, I took the fresh-run sea trout with the Wickham, but all under a pound ; but the larger fish—and those which had been some little time in the fresh water—would not look at it; but with the purple body I had fine sport, taking fish from two to four pounds each. In this loch the blue phantom minnow will give good sport with the great loch trout, and they run large. During the whole time I was fishing in Scotland the weather was not in good order for fishing; there was much electricity about and the fish rose short—in fact, on the west coast, where I have been, it has been the worst fishing season for 20 years. To sum up, therefore, as regards the Wickham, as far as my experience goes it is particularly good for fresh-runners up to a certain size in bright, breezy weather, and in the evening after 5 or 6 o'clock. I should be also inclined to have this fly dressed a size larger, when I think it would kill better in lochs, and take larger fish. I tried in some low, clear streams the small Wickham's fancy, as used in the Test, and got with it some nice sea trout fresh-run, and lost others, as from the habit of these fish to continually jump out of the water, many get off, particularly from a small fly.—I am, &c.,

Silver Doctor.

## FISHING IN THE GRAND DUCHY OF BADEN.

Sir,—I take advantage of an hour's delay at this junction, after a fishing excursion, to give you one or two items of information about fishing in this neighbourhood. Any lover of angling who desires to fish about here should leave the main line at this station, Rastatt, take the single branch line to Gernsbach, and alight at the Hotels Pfeiffer, Stern, or Krone. On the spot every information will be given. Part of the fishing is in private hands, part belongs to the town of Gernsbach, but the greater portion belongs to the Baden-Baden Fishing Society. There is fair trout, grayling, samlet, and chub fishing, both in the river Murg and in the streamlets adjoining. The scenery is of a woodland, hilly character, very pleasing to the eye. The hotels are moderate in price, cooking excellent, and every attention. I have just been staying at an hotel (Zur Blume) at Obertsroth, above Gernsbach. Very comfortable, and closer to the best Baden fishing. The Grune Baum is still higher up at Weissenbach, a clean, respectable hotel. The fishing extends several miles up the valley beyond Forbach; the higher you go the more romantic the scenery. In the higher reaches and in the side brooks trout only are to be found.

Fish are very quick in these swift-running waters, and one has to be on the alert or a meagre basket will ensue. Wading is often absolutely necessary to success.

In the smaller brooks fly fishing becomes impossible; but grasshoppers on a longish, stiff bamboo rod are very killing.

The fishing has been a little spoilt of late years, from the establishment of paper manufactories, severe winters, inundations and drought. But to counteract this the Baden society has formed a fish-culture house through the munificence of a private gentleman, and several thousands of young trout are here hatched out annually for restocking.

Altogether, a fair angler may confidently look for tolerable sport, especially if he is not above taking one of the keepers with him, to show where the best runs are, and what is the best bait according to the weather. A keeper's fee for a day's outing is only 3s., and it is convenient to have someone to carry the baggage. I recommend Fischer Woerner, of Hilpertsau, who lives close to the Blume, at Obertsroth.—I am, &c.,

T. Archibald S. White, M.A.,
English Chaplain at Baden-Baden.

Rastatt Station, Grand Duchy of Baden, Sept. 18.

[On behalf of our readers we beg to thank Mr. White for this useful information.—Ed.]

## GRAYLING FLIES.

Sir,—What are the best killing flies for grayling? Although a decent fly dresser and a fair hand at trout, I cannot satisfy myself with regard to above. Have, of course, tried London-made flies, red tags, dotteril, &c., but no go. If I could but solve this, what sport I could have! Will any southern angler come to the rescue? I know where the grayling are, but cannot catch them. What a confession!—I am, &c.,

Bradford. Cinnamon.

[When we find the regular standard grayling flies will not kill we generally try brilliant fancy patterns, with gold and silver tinsel bodies. They will often take the "Artful Dodger" (made by Farlow and Co., 191, Strand), also green, yellow, and red caterpillars. These are made by using a long shank hook (No. 11 or 12) with green, yellow, or red wool body, over which a red or light-ginger hackle is run—not too many times, or the body will not show up well. Caterpillars of all kinds are in season now, and drop off the willows and other trees when a sharp breeze comes.—Ed.]

## SALMON FLIES ON EYED-HOOKS.

Sir,—I should be obliged if you, or any of your correspondents, could inform me whether there is any practical objection to the use of eyed-hooks for large-sized salmon flies, and, if not, where such hooks are to be obtained? Tackle makers seem only to keep the smaller sizes.—I am, &c., An Amateur.

[See our footnote to "Old Eyed-Hooks" last week, We think Messrs. Hutchinson, of Kendal, make salmon hooks with eyes.—Ed.]

## STICKLEBACKS AS LIVE-BAIT.

Sir,—I shall be obliged if any of your correspondents could inform me whether sticklebacks answer as a live-bait for perch, &c.? (We have plenty in this neighbourhood, and minnows are very scarce.) If not, what would be the most killing bait in the absence of the minnow? Some say the brandling, and others artificial baits. I, and, no doubt, others, would very much like to know the experience of some of our "Piscator Majors" on these points. Hoping you will kindly find a corner in the "F.G." for this subject.—I am, &c., Piscator Minor.

Westerham, Kent.

[We have heard of sticklebacks being used as bait with much success; three good, lively, well-scoured marshworms, on a fine paternoster, are the best bait to use next to minnows. But what is to hinder "Piscator Minor" trying the sticklebacks? One on a paternoster, with worms on the other hooks, would make it more attractive by moving the worms about. As a rule, the tackle sold for perch fishing is far too coarse.—Ed.]

## A SUGGESTION TO ALMANACK MAKERS.

Sir,—Your correspondent writing under the above heading complains of the scanty and, in some cases, incorrect "Fishing" information given in many general almanacks. As he specially mentions *Whitaker's Almanack* in his strictures, will he allow me to point out that the *Supplement* of the latter work contains some useful "Fishing" articles,—viz., at pages 401 to 403, p. 406, and also pp. 430-431?

Perhaps your correspondent consulted the shilling (paper cover) edition, which does not contain the *Supplement*, that mass of valuable information being given only in the two-shilling bound edition.—I am, &c., F. G.

Colebrooke Row, N., Sept. 23.

## THE ANGLERS' ASSOCIATION.

Sir,—With reference to your report of the last meeting of this association, kindly allow me to state for myself that the charge of wilful discourtesy and delay insinuated is destitute of foundation. Their secretary's letter inviting me to attend a meeting on the 12th is dated the 10th inst., and was not received until the 11th, so that how a reply could have reached him earlier than it did I am at a loss to know.

I am wearying of replying to assertions resting on no better basis than the one complained of, and for the future shall cease to notice them.—I am, &c.,

September 25. T. Crumplen.

## A NOTE FROM NOTTINGHAM.

Sir,—Angling this week has been extremely good; one gentleman at the beginning of the week caught 20lb. of chub and a trout 2½lb. in the Donnington Park water. Lower down, another caught six barbel and some dace weighing 30lb., the largest barbel about 6lb. Another friend of mine got six barbel and seven eels. One of the members of our club caught a barbel 7¼lb. while dace fishing at Colwick Weir with a maggot. I saw another nice fish at the station on Saturday night 6lb. 3oz. caught in the Shardlow length; my sport being a nice dish of dace.—I am, &c., A. W.

## A NOTE FROM KENT.

Sir,—The fishing for the past fortnight, I might say, has been very unsatisfactory, no doubt owing to the thickness of the water through the recent heavy rains and the N. and N.E. winds. However, on Wednesday, the 17th, the wind changed to a more favourable quarter, and, the water much clearer, made appearances more inviting. That evening I landed a carp, after 10 minutes' fight, weighing 3lb. 8oz.; and on Thursday morning, between the hours of 6 and 9 a.m., I made a nice basket of seven bream, weighing 9lb.; and on Saturday, during the same period of time, 20lb. weight of bream and carp, most of the latter weighing between 2½lb. and 3½lb. each. Two of the largest I sent on to Maidstone to be stuffed, both fish weighing 3lb. 8oz. each.—I am, &c.,

The Limes, Wateringbury, Kent. F. C. C.

## FINNOCK, YELLOW FIN, AND SEA TROUT—A QUERY FROM ABERDEEN

Sir,—I enclose a question which was the subject of dispute among several of us the other night, and which I would be glad if you would kindly answer.—I am, &c.

Old Aberdeen. Alex. P. Jameson.

[Query: What is the relation between the yellow fin, the finnock, and the sea trout?

We do not think we can refer our correspondent in this matter to a better authority than his countryman, the late Thomas Tod Stoddart. Mr. S. went fully into the question, and discusses it at length in his "Angler's Rambles." This is what he says:—"That the finnock and the orange-fin smolt are of one and the same species—in fact, identical, does not admit, in my judgment, of being questioned .... The observations made at Nairn on the orange-fin smolt, the finnock, and the Salmo *albus*, or whitling (sea trout), have satisfied me fully on several points, as to which differences of opinion still prevail. I am convinced, first of all, that the orange-fin smolt is the produce of the Salmo albus (white or sea trout), and that the finnock stage is the intermediate one to the acquisition of its adult or fully-developed conformation." Our correspondent should get the loan of Stoddart's book, and read what he says on this subject. The sea trout or whitling of Scotland is identical with the white trout of the Irish rivers. We have caught them in both countries, and there is no difference whatever.—Ed.]

## ON STRIKING A SALMON,

Sir,—There was a slight misprint in my letter in the "F. G." last week about striking.

Instead of "The line tightly grasped between hand and *reel*," read "The line tightly grasped between hand and *rod*." Will you kindly have this correction noticed in your next edition?—I am, &c., John P. Traherne.

## ROACH IN THE SURREY CANAL, THE LONDON DOCKS, &c.

Sir,—You can see a fine case of roach taken from the Surrey Canal on July 12, 1883, at Mr. Bates's, tobacconist, High-street, Peckham. I have seen these roach.

The case contains seven really handsome fish, the largest 1lb. 4oz., a perfect beauty. They are on the same lines as Wandle roach, and if ever you have looked upon a roach from that river 1¾lb. you will remember it.

He told me, on the impulse of the moment, he foolishly gave away *several* larger than those in the case. The total weight was 12lb. These were taken at Trafalgar Bridge. I know some good roach have been taken *this season* between Trafalgar-road and the ice wells.

Two things are very necessary—judicious and careful ground-baiting, and fishing very early and very late. You must ground-bait. Many years ago I have had some splendid *gudgeon*, roach, and bream out of this water. I have seen fine gudgeon spawning in the clear places close to the side, but I believe they are very few and far between now.

A barge of bone oil down Hatcham way capsized, and slaughtered the cream of the fish. Thousands were picked up dead. I have seen some fine eels taken with fresh-water mussels. But even the eels had to succumb to the oil. You may not be aware, Sir, these mussels are very good eaten raw, with vinegar and pepper.

I have *seen* two navvies sit down and eat a dozen for breakfast. They said they were "elephant." Why not? I have found gentles from bream or any fresh-water fish are best for the hook, with very inferior gentles for ground-bait; those from the tanneries are in great request. A little light mould or sand is generally thrown in with them. Why use these gentles? Because they are brighter, whiter, and shine more than liver gentles, and this is an advantage in a water which is sometimes *rather* clouded.

I have seen it literally *covered* with dust on a very still day. If possible, go when there is a gentle ripple. It may interest J. P. Wheeldon, Esq., to know that the reason why the Directors of the Surrey Commercial Dock Co. stopped the day tickets was this: A poor man used to go nearly every day, and he used a line with a great number of hooks on it (in fact, a huge *trot*), and he caught so many he made a living by it; but one day, meeting with an accident amongst the timber, sued the Company, won the day, and they had to pay to the tune of £50. This settled the day-ticket business.

I need not say the fishing in the docks now is far superior to that in the canal; but, strange to say, I have been told that ships laid up for any length of time give the fish a strong *coppery* flavour. If so, do you think it would be dangerous to eat them, Mr. Editor? Many fine perch *have been* taken with shrimps in the docks.—I am, &c., Mark Antony.

Pike taking Tench.—A correspondent in the *Field* of Sept. 20 describes how he caught a pike of 13lb., in which he found a ¾lb. tench, partly digested. An angling friend of ours has often taken pike with small tench used as live-bait.

The Worm Wedge.—Some time ago, says *Forest and Stream*, there was a great outcry that the English anti-pigeon shooting agitation was the entering wedge which should ultimately disrupt the interests of sport and the general well-being of this country. We have not heard much about this lately, but there is now ample material for further alarm. In the Chicago *Criterion* of Aug. 25 the following note occurs: "The English Government has passed a law forbidding the use of angle worms as fish bait, so that the angle worm paragraph will be seen no more in English comic papers." An esteemed Michigan correspondent sends us the clipping, and anxiously inquires what it means. It may imply one of two things, either the British are sick and tired of the reiteration of that angle-worm joke, and are determined to suppress the funny man even at the expense of their favourite sport; or else it means that they have taken pity on the worm, and propose in the future to protect him from impalement on the barbed hook. There is good reason then for regarding this as another direful "wedge" against sport, and we shall await with interest to hear the howl go up again that our national institutions are endangered.—[The "politicians" (!) who have begun the sickly sentimental crusade against cruelty in our sports, will certainly have a go at the "angle worm" sooner or later, but even a worm will turn, and the British sportsman objects to this grandmotherly legislation, and will not stand much more of it.—Ed.]

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,

MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE, SALMON AND TROUT FLIES, SUITABLE FOR ALL PARTS OF THE WORLD.

Mahseer Tackle in Great Variety.
Makers of Split Cane Rods.
Improved Folding Trout Landing Nets
(Very Light).
New Patent Lever Salmon Winch
(Can be regulated to any stiffness at will).
PENNELL'S TACKLE KEPT IN STOCK.

CATALOGUES GRATIS. PRIZE MEDALS. IMPORTERS OF SILKWORM GUT.

A NEW PERFECT FLY AND SPINNING LINE.

"It's Simply Perfection." Such is the unanimous report of all who have used the new line for both fly and mid-water fishing.

All the advantages of the original Acme are present in the improved and perfected make, together with well-nigh everlasting durability.

INCREASED CASTING FACILITIES; FREEDOM FROM IRRITATING ENTANGLEMENTS; and GENERAL ENHANCED COMFORT OF FISHING.

Are these things to be lightly passed by? Every follower of the art deemed Gentle will admit the value of such attainments.

"As a Casting Medium the Acme Lines are unsurpassed."—Vide the entire British Sporting Press.

Emil Weeger, in a leader on the Acme Line, appearing in the Austrian Sporting Times, says:—"I find the Acme more valuable than all others."

Samples of the Improved Metal Centred Line may be tested prior to purchasing.

Lengths returned within twelve months from date of purchase, as not meriting entire satisfaction, will be exchanged for cash originally paid for them.

This unprecedented condition of purchase is proof of the confidence of the proprietors, whose habitual patrons have largely used the new improved Line this and last season.

See the Line and test it. Samples, Post Free, to all Applicants.

D. and W. H. FOSTER,
SOLE MANUFACTURERS AND INVENTORS,
ASHBOURNE.

None are genuine without the word PATENT affixed to label.

SPIERS AND POND'S
GAIETY RESTAURANT,
STRAND.

THE HOME DINNER DAILY at 5.30 till 8 p.m.
Consisting of Soup, Fish, Joint, Vegetables, Bread and Cheese, *ad lib.*
2s. 6d.
GRILL ROOM for Suppers open till Midnight.
SPIERS and POND, Limited.

FISHING & BOATING.

SWAN HOTEL,
WALTON-ON-THAMES.

On the Banks of the River in the Centre of the best Fishing on the Thames.

This Hotel has been newly-decorated throughout. Splendid accommodation for Fishing Gentlemen and Boating Parties—parties for whom the Hotel is specially adapted, with every convenience; good Stabling and Coach-houses, Fishing Punts, Boats, and Men provided at the shortest notice. Conveyance sent to meet any train.

Mr. Alfred Mackrill took 110lb. weight of Bream at Walton on Sept. 22nd and 25th, 1884. He says the river is "literally paved with fish."

Address, PROPRIETOR, SWAN HOTEL, WALTON-ON-THAMES.

TO FLY MAKERS AND OTHERS.
Gold, Amherst, Reeves' Versicolor, and other Foreign Pheasants for Sale.

Also SKINS and FEATHERS of the same, specially selected for Flies.

Apply to Mr. HORNE, Hampton Park, Hereford.

### WALWORTH PISCATORIALS.

The conditions of the competition that takes place on the 28th are as follows:—That all members go to Tunbridge, and fish a pegged down match, with one rod and tight line; no ledgering allowed. Fishing to commence at 11 o'clock, and leave off at 6 o'clock. Messrs. Bayley and Bedford will act as the advance to peg-out swims. Train leaves London-bridge at 8 o'clock on the 28th inst. Friends wishing to see this competition to be there by that time. Fish exhibited during the week:—Mr. A. Brodie, from Tring, 12lb. 8oz. of roach; among them was one weighing 1lb. 8oz.; Mr. Delehaye, sen., had jack, roach, and dace, weighing 9lb. 4¾oz.; and Mr. Gilbert, from Datchet, 3lb. of roach.—Pixie, Sept. 25th.

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 „ | Putney. |
| | 45 „ | Hammersmith. |
| | 50 „ | Barnes. |
| | 55 „ | Kew. |
| | 75 „ | Richmond. |
| | 80 „ | Twickenham. |
| | 85 „ | Teddington. |

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | Morning. | Afternoon. |
|---|---|---|---|
| Saturday, September 27 | ... ... | 6.23 | 6.49 |
| Sunday, „ 28 | ... ... | 7.15 | 7.48 |
| Monday, „ 29 | (M'mas Day) | 8.25 | 9.8 |
| Tuesday, „ 30 | ... ... | 9.52 | 10.29 |
| Wednesday, October 1 | ... ... | 11.5 | 11.37 |
| Thursday, „ 2 | ... ... | 12.0 | 12.4 |
| Friday, „ 3 | ... ... | 12.28 | 12.49 |

## THE LOWER THAMES.

### General Remarks.

The river in the tidal waters is excessively low when the tide is out. There is very little water, and the banks are a mass of mud and filth. One of the oldest fishermen in Twickenham is very desponding about it, and he does not believe the river there will ever get to its normal condition again. The fishing, however, is exceptionally good, and, as a matter of course, when the river is low it is time to get at the barbel. One of the local reports says: "The barbel are well on the feed, and very plentiful at Twickenham, which seems now to be the centre for them. I believe there has been more barbel caught at Richmond and Twickenham this season than there has been up and down the river Thames, and they give good sport too. Mr. A. J. Little, yesterday, in landing his six-pounder, played it just 45 minutes." As regards the number of barbel exceeding the quantity taken above the locks there may be some doubts. Mr. M. H. Blamey writes: "Yesterday, I caught 11 barbel at Halliday's Hole, Shepperton, all good fish. The three largest were weighed by Mr. W. Harris, of the Lincoln Arms Hotel, and weighed 17lb. net—not guess weight—the largest nearly 7lb. The swim I fished for four days the previous week produced over 120lb. weight of barbel." In the returns of trout fishing this last season, George Rosewell, of Shepperton, reports that in 29 days his clients caught 32 fish, weighing altogether 170lb. 8½oz.; the smallest fish was 2½lb., and the largest 13lb. 8oz. It will be seen in the Angling returns at Twickenham one of the anglers got 45lb. weight of fish, including five small barbel. Mr. Wright, of the White Swan Inn, at the river side, says it is extraordinary to see the number of fish brought in to be weighed, the quantities are so great.

### Angling Results.

**Richmond.**—Christopher Brown, in five days, 85lb. of roach and dace and four barbel; F. Brown, in the same time, 45lb. and three barbel; Henry Wheeler, in six days, 100lb. and eight barbel; Job Brain, in four days, 40lb. and 13 barbel; H. Howard, in six days, 74lb.; and Henry Mansell, during the week, 70lb. and six barbel.

**Twickenham.**—C. Miles, in one day and a half, fifteen dozen of roach and dace. H. Spiers, in five days, fifty-one dozen and five barbel. Edward Finch, in four days, forty-eight dozen. W. Spong, in seven days, forty-two dozen. C. Hennessey, in half a day, five dozen and one barbel. Joseph Dobbin, in five days, fifty dozen and five barbel. George Coxen, in seven days, 110lb. and twenty barbel. John Coxen, in two part days, with Mr. A. J. Little, twelve barbel (the largest 5lb. 15½oz.), ten were put back again; and, in three other days, fifty-three dozen and two barbel. Richard Coxen, in five days, seventy-eight dozen and eight barbel. Samuel Cole, in seven days, 120lb. and seven barbel. George Chamberlain, in four days, 80lb. Mr. Nichols, of Kingston, in fly-fishing one day, five and a half dozen of dace. John Spong, in one day, with Mr. Grey, of Brixton, 45lb. of fish, including a fine barbel; and, in five other days, forty-seven dozen.

**Teddington.**—Benjamin Stevens, in three days, 20lb. of good dace and eighteen barbel. J. Stevens, in five days, 24lb. of good roach and dace. Joseph Baldwin, in four days, 20lb. and four barbel; and Charles Baldwin, in three days, 32lb. of good fish and a brace of perch weighing 3lb.

**Kingston.**—John Johnson, senr., in four days, eighteen dozen of roach and dace, two barbel, five bream (the best 4½lb.), and three brace of perch. John Johnson, jun., in six days, twenty-seven barbel (the largest 4½lb.), including one day with Captain Scrivener, when he got twenty fish, eighteen and a half dozen of roach and dace, one jack of 4lb., and eleven perch. J. Wilks, in five days, twenty-three dozen of gudgeon, twelve dozen of roach and dace, six brace of perch, and a jack of 3½lb. Luke Francis, in two days, eight dozen of gudgeon, and three dozen of roach and dace. The bank anglers have, during the week, taken about thirty barbel and twenty bream, and some of the daily takes of roach and dace have been six dozen.

**Long Ditton and Thames Ditton.**—H. Buttery, in a little over two hours, three dozen of gudgeon; and Edward Tagg, in one day, fifteen dozen of gudgeon. The bank anglers have done well amongst the roach, dace, and gudgeon.

**Hampton Court.**—C. Stone, in two half-days, fourteen dozen of roach and dace. At "Tagg's Island Fishery" eleven barbel have been taken during the week, the best fish weighing 3lb., and twelve dozen of roach and dace. J. Langshaw. jun., at Hampton, in three days, thirty barbel, the best 4½lb., and six dozen of roach and dace.

**Sunbury.**—H. Clarke, jun., in one day, fifteen dozen of gudgeon, and three brace of perch; and Edward Clarke, jun., six dozen of roach and dace.

**Walton.**—George Hone, one day, siz dozen of roach and dace, and one barbel; another day, with Mr. Mackrill, twenty-four bream weighing 50lb., the two largest scaling together 10lb., and two perch of 1lb. each; another day, seven dozen of roach; and another day, two bream of 2lb. each. John Hone, in one day, twelve dozen of gudgeon and three brace of perch. R. Watford, one day, a jack of 4lb., three bream, one chub, and four dozen of roach and dace; another day, a jack of 4lb., four bream, a perch of 1lb., and four dozen of roach and dace; another day, five dozen of roach and dace, three bream, a chub of 2lb., and one barbel; another day, with Mr. Key, two bream weighing 11lb., six bream weighing 14lb., and an eel of 1lb.; another day, nine bream weighing 22lb., two barbel, and one perch; and another day, with Mr. Luker, two barbel and one perch.

**Halliford.**—W. Rosewell, in one day, sixteen dozen of gudgeon and six dozen of roach and dace; and another day, seven bream, one barbel, and four dozen of roach and dace. E. D. Rosewell, one day, eight dozen of roach and dace, two bream, and one perch; and anothey day, seven dozen and one perch. T. Strudwick, one day, two barbel, one bream, and four dozen of roach and dace; another day, three chub, four perch, and six dozen of gudgeon; and another day, about three dozen of roach and dace.

**Shepperton.**—H. Purdue, one day, a jack of 5lb., and three dozen of roach and dace; and another day, fifteen dozen of gudgeon, three brace of perch, and two dozen of roach and dace. W. House, one day, twelve dozen of roach and dace; another day, four dozen, three dozen of gudgeon, and one perch. David Hackett, one day, three jack and one brace of perch; another day, five dozen of gudgeon and two dozen of roach and dace. F. Poulter, in one day, one barbel, three perch, and two eels. James Haslett, one day, with Mr. Waterhouse, two chub, one barbel, and one perch; another day, in four hours, three chub and two barbel; and another day, with Mr. Waterhouse, in three hours, three barbel, one perch, and three chub.

**Weybridge.**—Herbert Curr, one day, four dozen of roach and dace, and four bream; another day, nine dozen; and another day, with Mr. Donovan, eight dozen.

**Chertsey.**—Colonel Poole, in one day, with J. Poulter, eight dozen of gudgeon and a couple of barbel.

**Staines.**—Charles Hone, one day, sixteen barbel; another day, nine barbel and two jack; another day, ten barbel; and another day, with Mr. Johnson, one brace of jack. E. Keene, during the week, thirteen barbel, the largest 6½lb., and 22lb. of roach and dace. John Keene, jun., one day, seventeen barbel; another day, thirteen barbel; another day, twenty-two barbel; and another day, twenty barbel. G. Osman, one day, fourteen dozen of roach and dace and one barbel; another day, one dozen and a couple of barbel; another day, six dozen; and another day, eight dozen of dace and two barbel.

## UPPER THAMES.

It seems to be "the same old game" on the river! The water is bright and low, and the fishermen down are one and all complaining of poor sport. Thousands of Notts lobs, Sir, have I put into three likely swims during the past week, and what has been the result of such luxuries at 5s. per thousand? Why, sir, one barbel 2lb., two chub going 3lb. together, and a few unmentionable sized perch. This was mentioned to me only a few days since by a rattling good angler. Under the, to me well-known circumstances, I could only commiserate and shed a tear with him over his luck and the bad trim of Father Thames. At Maidenhead and Cookham a few hauls of roach have been had by those who can get up early and stay at river side late into the dewy eve. Marlow visitors have been busy, but little worthy of record has been done. At Harley, Messrs. Parry and King, of the South Hornsey Club, London, on the 21st, got, under very adverse condition of water, a miscellaneous bag of roach, perch, and chub, going 6lb. The Medmenham and Henley waters have been yielding up any quantities of gudgeon, not intentionally gone out for, but fallen back upon in despair of catching other sogdollagers. Thursday evening. No wind, no rain, river bright, leaves falling, the possible result I leave to the judgment of better anglers than—Marlow Buzz.

## Thames (Datchet).

The water is still very low and much in want of rain, but the cold atmosphere seems to liven the fish up, as I hear there have been some fine barbel taken at Windsor. A passer-by saw James Gray finely in among the barbel, catching half a dozen in a short time, weighing 7lb. and 8lb. each. Mr. Bambridge, Eton, caught four this morning. All of them were caught with greaves, worms being very hard to get this dry weather. Nobody has tried the barbel in this neighbourhood for some time now. I long to see some of them come to grief. Roach bite very freely at paste in the evening.—G. Lumsden.

## Thames (Goring).

Water low and clear. Best day two jack and two dozen of perch, next best day four dozen of gudgeon and one dozen of perch.—John Rush.

## Thames Oxford.

On Thursday, at the Angling Society's competition, Mr. Cooper won the prize for roach with a specimen weighing 1lb. 2oz. On September 21st, Mr. Barnum, at Bablock Hythe, had a splendid perch measuring 19 inches. What the fish would have gone, I am unable to state, for, with unparalleled vandalism, it was cooked. I should say, if in good condition, it should have turned the scale at nearly 4lb. On Monday, in the canal, Mr. Corbett, whipping with gentles, took 7lb. of chub and roach, the largest fish going 2lb. 2oz. At Medley Weir, on the same day, Mr. Craddock, jun., requisitioned his papa's trolling tackle without previously asking permission, and caught a jack of 7½lb. At Sandford, on Friday and Tuesday, Messrs. Mallett and Haithwaite had 130 roach, and to-day, Mr. Geo. Whiting at Hinksey, grassed a jack of 6¼lb. I forgot to mention that a fine chub of 4½lb. was taken on Monday week, by Mr. Griffiths in Ferrey Hinksey stream. Variable winds, unsettled weather, and exceedingly low water have militated against any chance of successful sport, and I am strongly of opinion that until we have a fresh, the returns will remain poor. The takes during this week have been small and unsatisfactory; but they have one redeeming feature in point of size: what there are of them are a little beyond the usual average. The poaching brigade still continue cheerfully on their nefarious work, with a persistency worthy of a better cause. Reports of netting are rife on every side.—Cherwell Otter.

---

## Ancholme District.

Some hundreds of anglers were out fishing on Monday, but the presence of thunder in the air on the previous day, and a greatly falling temperature, have somewhat affected the sport. Despite these effects some nice fish have been caught, consisting mainly of bream and roach, with here and there a small pike. The trout-fishing season, which closes this month, has been one of the worst on record. Personally, I have fished very little during the year, being quite indisposed to face the blazing sun and dwindled waters. We have not had one good perch all through the season. The introduction of salmonidæ in the fine waters of Sudbrooke Park is a great success. The middle and upper ponds are literally alive with fish.—Thomas Ford.

## Bure (Wroxham.)

Although sport at most places has been bad, it seems that several anglers here during the past week have had what may be considered exceptional luck. In one instance between three and four stone were killed by two rods, and in several other attempts one and a half to two stone have been safely brought to "boat." Still, ever since the cold wind set in, the fish have apparently gone off feed or shifted their quarters. I have a fancy that the higher one goes up stream just now the better chance he has of luck. The pike are striking about this evening, and we ought very soon to be amongst them. Prospects indifferent.—Robert Moll.

## The Churnet (Leek).

The river has improved in condition since last week, but sport has not been over brisk. A few trout have been taken with wasp grub and maggots. The season for trout-fishing in this district ends on Sept. 30th —Churnet Otter.

## The Dove.

Great numbers of anglers have been out on the banks of this stream since my last; but although the condition of the water has been very favourable for good sport, still the takes have, generally speaking, been rather small. The cause of this is no doubt attributable to the thunder that has prevailed, while a heavy shower on Monday caused the river to be filled to overflowing. A few good catches have, however, been effected with the minnow, above Ashbourne, and some heavy barbel have been captured near Uttoxeter, and a few miles lower down; the latter fish most successfully lured with the lobworm; and, in a few days, capital sport may be anticipated if the weather keeps fine, and the stream runs down to its normal height. The cleach net clique have been, and are still, very busy, great quantities of fish being on view at the principal hostelries in the vicinity of The Dove. In all probability, an action will be taken to prevent netting licenses in the Trent fishery district. If this by-law can be brought into vogue it will be a useful one, and will give great satisfaction.—The Splodger.

## Eden (Carlisle).

Things begin, at last, to look more like salmon-fishing. In place of warm, sunny weather, we have cold showers, and a strong west wind. We want 2ft. more water, and shall then have plenty of fish up. Just before the last of the nets, those in the Solway were taken off. On September 10th there was a good take of splendid fish, grand thick fellows, from 20 to 30lb. weight. We are all looking out our best and strongest tackle, ready for the October and November campaign. A letter from Major Traherne to Mr. Kelson, published in your last issue, is so entirely in conformity with my views, that I must say a few words upon it. In the first place, as to double hooks. I have heard them praised up to the skies on the Tweed, and seen much written in their favour in your columns. But, after using them at intervals for the last 20 years, I have quite come to the conclusion that one loses more fish with them than with the single hook. They have certainly two advantages over the single hook—namely, that they sink deeper, and present the fly to the fish in a more upright position, and I don't object to them for the smaller-sized flies; but for a full-sized fly give me a single hook. As to striking a salmon under ordinary circumstances, Major Traherne is right, "one hundred pounds to a cherry-stone." I have seen scores of fish lost from nothing but jerking the hook from between their lips; but if a man will only do as the Major says, "keep the rod in the same position as before the fish rose, without any jerk or strike, he will soon let you know if he is hooked, and need only tighten the line." The large majority of Eden anglers believe firmly in this plan; but there are about four that I know of, who persist in striking the moment they see or feel anything, and the fish they bag can be much more easily counted than those they lose, or rather those they miss. It is no uncommon thing to hear of one of them losing four four or five in a day, and not bringing one to bank. The cruel rejoinder of their mates is often, "It is a wonder you ever catch a fish at all. You won't let them have it, however keen they are." What grand patterns of salmon-flies the Major has given us in the Gazette!—Silver Grey.

## Ilfracombe.

Sea fishing.—This week all hands busy preparing for the herring fishing, which will commence in a week or two. There have been a few good catches of conger, whiting pout, &c., and this week has seen a new departure in the way of fishing here—a small steam yacht having been trawling the harbour and bays around the coast with a small trawl, and with good results, as they have had some nice hauls of soles, plaice, and skate from the rocks and jetty. A few fish have been taken with rod and hair lines. Weather fine.—E. Comer.

## Lodden.

Sport during the past week has been first rate, although I have been too unwell to enjoy much of it myself. At any rate, I have managed to get an hour among the large ones, which I thought would have stopped my writing you, as our post leaves so very early; but as they were well on the feed I left off fishing, so that you might get this in time for the Gazette. Perch and chub to any amount, averaging 1lb. each, creels full, and plenty to spare, fishing with worms and new bread. Strange to say, we have not hooked a trout, because, as a rule, we generally return several during the day when fishing with the worm. The weather is exceedingly warm, and the water bright and low.—Frank Gosden.

## Leicester.

The weather remains of a very open character and favourable for angling pursuits. That interest in this class of sport is on the increase is shown by the large number of anglers who still continue to visit the waters in the neighbourhood daily. The best fishing this week has been had among the roach; good baskets and large fish being the rule at the Aylestone preserves, which have provided abundant sport for anglers throughout the summer. Winter fishing prospects are exceedingly bright, and at the last-mentioned preserves there are great quantities of fine chub in the waters. Lately pike fishing has been more indulged in than has been the case for some time past, and several good sized fish have been landed trolling. Subscribers at Narborough continue to obtain satisfactory sport at this spot, and a few Leicester anglers have been out bream fishing to distant resorts; but with what results I have not yet heard. The weather on Thursday was fine, but cold, and waters clear.—Alert.

## Lugg and Arrow (Leominster).

There is but little alteration in the state of either of these streams, they both remaining in splendid order for either the fly or bottom fishing. They have been visited freely by the anglers this week, and good sport has been had with the green insect, blue dun, and pale blue. Some good grayling have been taken with the wasp grub. On Friday a gentleman took a splendid lot of fine trout from the Arrow with the fly. In the Eardisland waters some nice trout were taken with the blue dun, averaging 10oz. each. The Lugg was tried the same day and a capital lot of fine grayling were landed by a gent with the green insect and pale blue. In the Kingsland waters some fine trout have been taken with the wasp grub, and good sized grayling have been landed with the fly. A gentleman on Saturday tried the water near Ivington with the blue dun and took a nice dish of fine grayling and trout. A few good trout were taken in the Bodenham waters with the wasp grub. Capital sport was had in the Lugg near to Aymestry on Monday; a gentleman fishing with the pale blue and blue dun took a dish of 6lb. of fine grayling and trout. At Ford's Bridge some good grayling were landed with the wasp grub. In the Arrow near Stanton some fine fish were taken with the pale blue and green insect. On Tuesday a good basket of fine grayling were taken from the Arrow by a gent who was fishing with the wasp grub. A nice dish of trout were caught in the Lugg with the blue dun the same day. Some very good fish have been taken in the Monkland waters this week. The Pinsley is in capital fishing order, the fish are sporting; a nice dish of trout was taken on Monday with the wasp grub.—Gwynne.

## Medway (Tunbridge).

The water has cleared down nicely, and, during the week there have been some good takes amongst the bream and roach, but the weather has hardly been cold enough for the pike to bite nicely. On Tuesday Mr. E. Greenwood and a friend, fishing below the town, took no less than 194 roach, none of them under 5oz., while less bags have been made all over the fishery. The river was never in better condition for fishing than at the present time.—Ye Medway Water Rat.

## Nene (Northampton).

During the past week lovers of sport have been well rewarded. F. Wright, a member of the Nene Angling Club, killed two brace of pike on Saturday, and on

Monday landed five brace more in good condition, the largest scaling 8lb. On Saturday about thirty members of the Northampton Working Angling Club competed for their first series of prizes this season; but the water selected proved almost blank, the mills not being at work, G. Dunkley taking highest honours; T. Love, second; A. Warries, third; W. Brown, fourth; Bill Singlehurst, fifth. Large numbers have been fishing the canals in this district, and some nice bags have been taken by F. Loe and G. Johnson, A. Harmer, C. Tomlin, A. Adams, some splendid roach being shown at the club house, W. Rigby, Half Moon, Bridge-street.—T. F.

### The Ouse (Huntingdon).

Fishing has been very quiet; nothing of great importance has been done among the roach. On the 22nd 5lb. 3oz. was taken by one gentleman, but nothing more concerning the roach has come to my notice. On the 21st two anglers were out bream-fishing, and took 41lb., the largest going 2lb. 11¼oz. I was out on the 24th trying the jack, but they are not on; but I have no doubt but they will be very shortly, for the weather has changed for the better. One about 3lb. was taken by John Goodliff, who, as well as I, was searching all we could to find them; but the wind was very rough: it was a great difficulty to place the boat, so we had to give it up; but should the weather continue a little longer and a little colder it will be a better chance than now.—H. Rout.

### Pickering.

Angling has been uncommonly bad lately about here; many streams are simply a chain of water holes with a dribble between. A few light showers have fallen, but never sufficient to cleanse out or colour the streams. The best basket we have heard of for some time was fifteen grayling and three trout, taken in a private water; and also another of four grayling, weighing 6lb. 5oz. The Yorkshire Esk is in the same plight—viz., a chain of water holes. The trout fishing on this river has been rather better than usual, especially so at the lower end. A good many grilse and sea trout got up while the 12th of August flood lasted; but so far only some eight or nine have been taken by the rod. There seems to be a pretty general feeling amongst the rod licensees that the rod season should be extended till the 15th November, as in the Yorkshire fishery district, and we cannot but think it would be of advantage to the river to get a few more of the bull trout killed each year, as they are a late-running fish, and at present the bulk come after the 1st November.—North-East.

### Severn and Stour (Kidderminster).

Since my last report, there have been several spates both in the Severn and Stour. Some of ours (United Brothers) have taken the advantage offered to them, and some good takes have been the result. F. Millington (the winner of the cup in our last contest) has taken 22lb. of roach from the Stour. John Goode, though failing in taking a prize in our last contest, took 18lb. of roach and dace from the Severn. I myself have had some good dishes of fish from the Stour; other members have done fairly well this week, baits being maggots and paste, it being too early for the worm generally, though the tail end of half-grown lob-worm will be successful when there is a flush on the river. This is my opinion, though other anglers may differ from my views. I have been very successful with tail end of lob-worm, when you could see the bait to the depth of a foot or foot and a half; fish under the bank as it were, and hold back in any place where the water reverts from the bank and forms an eddy; depth about 3ft. to 4ft., but the angler must be guided by the season. A sandy bottom preferred; ground baited sparingly with crumbs of bread if fishing for roach. Our annual dinner comes off this evening. I shall report progress accordingly.—E. Earp, hon. sec.

### The Shannon (Castleconnel).

The following fish were landed during the week:—Mr. Henry Hodges, on his Doonass Fishery, on the 20th inst., two peal, 4lb. and 6lb., and on the 22nd inst. he got a fine salmon weighing 44lb. 9oz.; Major Beadnell, R.A., on Mr. E. T. Ingham's fishery, on the 22nd inst., one peal, 6lb.; Captain Newbigging, on the 23rd inst., got on some waters a peal, 6lb.; Mr. Norris Russell, Plassey, on Hermitage, on the 22nd inst., got two peal, 5lb. and 6lb.; Sir T. C. Troubridge, Bart., and Mr. E. S. St. Aubyn, both of the King's Royal Rifles, who have been engaged on prospect and landscape during the week, hooked upwards of a dozen fish, but did not succeed in landing. Trout fishing has been fairly good, and some nice baskets have been made. The river is yet very low, and as long as it remains so sport will not be the best.—John Enright and Son.

### The Suir and its Tributaries.

The largest salmon taken this season in this district fell to a rod in the upper waters, where, at Ardmayle, Michael Mahir killed one 40lb. in March. The next in size was taken by the nets at Ballydine, 38lb., a week after. A great many large fish up to 28lb. were taken during the first three months of the season by both rods and nets; but the greatest number of big ones fell to the rods, for the water was so high during the first month (February) that the nets could hardly work, and the most of the first run, which contains the largest fish, escaped to the upper waters. The season up to the middle of April promised to be an exceptionally good one; but it proved the very reverse, for with April the season practically ended. Since then the water was so extremely low that fishing by either rod or net was impossible, and there was only an odd one taken now and then, perhaps a dozen or two in all; in fact, it was the worst season we have had for a great many years, and the same may be said with regard to all Ireland. The trout fishing was somewhat similar to the salmon; the only difference was that during the hot summer and up to three or four weeks ago, there was a good rise in the evening, and at present there is fishing all day in both river and stream. The best way to fish the river is out of a cot, for near the banks it is all weeds and slime, and it is very hard to land a trout, evening if you succeeded in hooking one. The spring flies are on again, and any angler at a loss to know what to fish with has only to remember those that were taking in March and April last, and he will be all right. The only thing we want to know now is a flood to make a good wind up to a season, which closes on the Suir the 16th October.—Dora, Clonmel, September 24th.

### The Tay and its Tributaries.

The weather during the past month has been greatly in favour of anglers, and several good baskets of trout have been obtained. In the Tay, the water is running very low, and while fish are reported to be very plentiful in the lower waters, in the upper part of the river they are scarcely so numerous. There are a large number of anglers in the district, and the following are a few of the captures:—Fishing on the Stobhall water, on the 6th inst., Mr. Field and party killed three grilse and two salmon, all in good condition. The Lower Cargill water yielded two grilse to Mr. Alsopp, on the 8th inst., while he lost several beautiful fish. On the 9th inst., Mr. Powell, Eastwood Dunkeld, had a salmon and a grilse on the Upper Cargill water; and on the same day, Mr. Field and Mr. Alsopp captured three grilse and three nice salmon on the Stobhall. On the 13th inst., Mr. Field and Captain Morris had a salmon and three grilse on Upper Cargill water; and on the 15th inst., Mr. Glanvill had a salmon and a grilse on Lower Cargill. On the 22nd inst., Mr. Naylor, Leeds, who has been fishing the Stanley water for some time along with Colonel Stewart Sandeman, of Stanley House, killed a salmon weighing 20lb., casting at "Lucknow." Average sport has been obtained in this part of the river since the nets have been taken off. The Honourable Mr. Liddle had two fish on Taymount water on Monday, and on the following day Mr. Murray had a beauty of 35lb. Thistle Bridge water yielded four nice fish to Mr. Kilsall on Tuesday. Fishing in the river below Perth on Saturday, Captain Morris had a nice fish of 10½lb. On the Lower waters on Monday Mr. W. G. Ramsay had a beautiful grilse of 11lb., Mr. Campbell had one of 10lb., while three other beauties were procured by Mr. Gilbraith from the bank. Loch Rannoch is in good ply for fishing, and large takes are being procured by anglers staying at the Bun Rannoch Hotel. The average catch of each angler is about 10lb. daily. Mr. G. Shaw, London, and Mr. P. St. Quintin, London, are procuring large baskets daily. A ferox of 6lb. was captured on Friday by Miss Adell Hay.

### Teme (Ludlow).

The streams are again showing signs of getting low, especially the tributaries. The Onibury waters show signs of being the first to go down. Notwithstanding this, the fishing in the district has been good, and good baskets have been made. In a meadow opposite the Clive Almshouses, near the new bridge, a fisherman named Smith was trolling in the Teme on Saturday night, when he, with difficulty, landed a fine pike, which weighed 9½lb. This clearly shows that pike are to be found in this district. A couple of fine pike have been seen daily between the new bridge and "Dodd's" orchard. The Leintwardine portion of the Teme has come in for a small portion of the angler's attention this season. In the Steventon quarter average catches have fallen to the lot of the angler, nothing especial having occurred in the piscatorial line in this particular quarter. In the Oakley Park quarter of the Teme some fine trout and grayling have been landed daily both with the fly and the wasp grub. The best flies this week have been the blue dun, pale blue, and silver grey. We saw about a dozen grand grayling caught with the silver grey in the Park district on Monday evening. They were about ¾lb. each. Going along by the Onibury waters as far as Whettleton we found the stream very low, in some parts barely covering the bottom of the river, yet in the deep portions of the stream good fish have been caught during the week with the gentle. The fish have bitten pretty freely in the Corve, and fishermen have been lucky. The wasp grub has secured a number of fish in the Felton waters. There has not been much going on in the River Clun; a few rods have been at work with fair success. There has not been anything worth mentioning going on in the Ledwyche.—S. Ludlow.

### Teme (Tenbury).

This stream is still in good fishing order, the heavy downpour of rain which has been had in this district at the beginning of the week has slightly coloured the water, which has slowly begun to rise again. The fish are sporting freely at the fly, and are biting well at the maggot; and some good dishes have been taken with the blue dun, hare's-ear dun, and silver grey, which are the best flies on at present. Several good lots of eels have been taken with the worm. Some very good fish have been taken in the association waters this week with the fly. In the water near the town, on Friday, some very good fish were taken by a gentleman who was fishing with the blue dun. A gentleman tried the Eastham district with the green insect, and took four trout and three grayling, all in good condition. Good fishing has been had in the waters near to Easton Court. A gentleman who was visiting this part, with the silver grey and hare's-ear dun, landed a dish of fine trout and greyling, averaging 8oz. each. On Saturday a good lot of grayling were taken by a gentleman in the water near Berington Court, with the blue dun. A few very nice fish have been taken in the water near Burford with the fly. Some capital sport was had in the Rochford waters on Monday. A gentleman, fishing with the willow and blue dun, caught a splendid basket of fine trout and grayling, weighing 7lb. the lot. The water was tried near Corn Brook on Tuesday, and some fine grayling were taken with the fly. A nice lot of trout were taken in the water below the bridge, with the hare's-ear dun. The Kyre, Ledwyche, and Rea are all in good fishing order; but low. The fish are rising well at the fly. Fishing has been very slow in the Ledwyche. Good trout have been taken from the Kyre and Rea this week with the fly—Worcester.

### Torcross Ley (Kingsbridge, S. Devon).

Water here in rare condition and fish taking well. Mr. Ash had 32 runs in three days, landing 23 pike "spinning," the two largest weighing 8½lb. and 12½lb.; Mr. Goodfellow caught 365 perch in two days, one over 1lb. 10oz. Arrangements have been made to meet the 9 a.m. train from Paddington and Waterloo every day at Dartmouth. I can strongly advise anyone in search of health and good sport to have a look in at this Ley Railway journey, somewhat long, but the charming scenery, mildness of "the air and hotel charges," amply repay one for all trouble. —Joseph Balking.

### Trent (Alrewas).

River still keeps in fine condition for all sorts of fishing. During the past week some fine grayling have been landed, one member of the association taking four weighing 3¾lb. Several very fine specimens of roach have been exhibited at the Paul Pry Inn, many of them over 1lb. each. A brace of nice trout have been landed during the past week, but were carefully returned to the water. The millon fly and the bumble are, at the present time, the most killing for grayling.

### Trent (Newark).

We had a very remarkable hailstorm here last Sunday morning, the hailstones in this particular instance were lumps of ice as big as large hazel nuts, and some of them, indeed, were as big as small walnuts, and the way they peppered down at Winthorp was something to remember. The river rose on Tuesday a couple of feet, with a nice colour on it. To-day it has gone down a lot, and is not in bad condition for all sorts of bottom fishing with gentles and worms. A nice lot or two of dace have been killed this last day or two, and a few roach and bream have fallen victims to the tail end of lob. Sport should be a litte better now since the alteration in the water.—The Trent Otter.

### The Trent (Nottingham).

On Monday there was a rise of nearly 18in. in this district, but the water being thickly charged with colour, very few fish were caught. On Tuesday, the colour had improved, and some very nice bream and roach were taken at Sawley with the worm. On the following day, your contributor visited one of the celebrated upper reaches, and took with the worm upwards of 30lb. of chub, dace, roach, and perch. The largest chub weighed 4lb. 2oz., and the biggest dace 9¾oz. Barbel fishing is rapidly drawing to a close for the present season, which undoubtedly has been one of the worst on record, the reason of the failure being due to the low state of the river, combined with the vast accumulations of flannel weed. Some heavy bream were killed in the Weston length with the cockspur worm on Thursday, and one of the subscribers got with the maggot three or four prime chub.—The Man at the Clubs.

### Weldon Bridge.

River in good trim for fly, fair baskets have been caught this week with the oak and yellow body. Mr. Oliver 6lb. basket, best trout 1¼lb., on Monday; other good baskets yesterday; not many salmon up yet.—F. Brown.

### Wye and Derwent.

There was a very great quantity of heavy thunder-rain fell the beginning of the week, up in the woodlands, which was the cause of the Derwent having a beautiful porter coloured water on it the whole of the past week. Both trout and grayling and coarse fish have been feeding nicely at the bottom at wasp grubs, gentles, and small brandling worms, and baskets from four to 10 brace per angler have been made on various parts of the Derwent. There have also been several nice light trout killed by trolling with the artificial Derby trout killer. The fly-fishers, both on the Wye and Derwent, have done much better since the rain has fallen, and baskets up to nine and a-half brace per angler have been made. The killing flies have been bumbles, ash dun, red, and lean flies. Fly-fishing prospects are looking well for next week.—Geo. Jas. Eaton.

### The Yare (Norwich).

I am sorry to say that nothing of any importance has been done at any of the stations on this stream. Since the cold wind, ill luck has attended all efforts to tempt the fish; I cannot meet with anyone who can explain the cause of the sudden change from good catches to bad, but I have an idea that the fish are up stream, and would advise those who are bent on trying to go to Surlingham, or even higher reaches, where they will now find the fish. Jack fishing ought now to be commenced in earnest on this stream; they are feeding at certain hours, as can be witnessed, The weather is beautifully fine, but the last few days' experience does not say much for the prospects.—ROBERT MOLL.

### Yorė (Hawes).

We had a fresh on Wednesday last, when I managed to take a couple of brace of trout. I was much disappointed at their condition; they were badly fed and very backward, in my opinion, towards spawning. Owing to the long drought, hundreds of runners have been totally depopulated through the drying-up of the springs. In some of the small becks the fish are in a fearfully emaciated condition, being something like a finger in shape, and awfully blue in colour. I hear of thirty-eight having been taken out of one hole in Snaizeholme Beck. The season is nearly at a close, and it is generally spoken of as the worst experienced for many years. Grayling appear to be pretty numerous. I noticed several grayling a few weeks ago fearfully spotted with the fungoid disease. One was a fine fellow of over 2lb. and his back was a mass of white scabs. I have also heard of several having been picked up dead in different parts of the river, but I have no doubt, as the fish come into season they will recover. Change of feed and the necessary floods will, in my opinion, tend greatly to their recovery.—JOS. CORRY.

## ROACH FISHING.

IN many works on angling excellent instructions in roach fishing are given, and in Mr. Greville Fennell's "Book of the Roach," this favourite fish has a work all to himself, and an invaluable little work it is, too.[*] In the present instance we propose to give our roach angling friends some extracts from a little book published thirty years ago, and now scarce, entitled, "The Angler's Guide," written by an enthusiastic and skilful Lea angler, the Rev. James Martin :—

### THE ROD.

It certainly requires a good deal of adaptation, care, and skill to be a good roach angler. To fish for roach well, you should have a rod that is made expressly for the purpose, and it should be kept for roach and other light fishing only. It should be made of cane, or very light bamboo, length about 14ft., the whole not weighing many ounces. When put together it should be nearly as straight as one joint, and so constructed that it shall be very stiff, and yet very pliable. The superiority of such a rod over one of another kind will be seen in many respects. First, it will be very light in the hand, and with it you will be able to strike your fish with the greatest quickness and precision; secondly, when you strike it will not break your hair line, as a heavy one would be likely to do; and, thirdly, when you have hooked your fish it will so give to his pulling that your line will not break, though it should be a roach of the greatest weight they run.

### THE LINE.

Your line should always be single hair, of sorrel or white colour (we prefer the former), and should be very fine at the bottom, especially the piece on which the hook is tied, which should be also perfectly straight, round, and transparent, so that the water shall not bead on it, for if it does the fish will not touch it. The top length, on which is your float, should be the coarsest and strongest, so that if you break you may not lose your float, and also to give your line a proper throw and play on the water. Upon the top of your line should be looped about 8 inches of double thread, with which to loop it to your rod. By adopting this plan you will be able to throw your line out and to strike your fish much better than you would if your hair were looped to your rod. Let the shots on your line be small and close together, about 18 inches from the hook, with only one about 6 inches from the hook, which will make it hang in proper trim. Gut is now made expressly for roach fishing, as fine and as round as hair; but we still give the preference to hair, notwithstanding. Still, you might use such gut for very heavy roach.[†]

### THE HOOK.

You must never use the common Kirby hooks for roach fishing, for you may be sure you will not catch many with them; they are too thick and clumsy, and have too much show about them. It must be the hook made expressly for roach, which is of very fine wire, and lays hold more quickly and surely, and if tied on neatly is scarcely seen at all. And be sure they are not too long in the shank, for if they are it is a great objection; yet they must not be too short, for in that case they will not hold the fish after you have hooked it. Never use, even of this kind of hook, too large a size, in particular if the water be fine, for we have always found they take the small one more freely. No. 11 is, in our opinion, the best, unless they happen to be very strong on the feed, or it is almost dark. If you just prick your fish and lose them, you may be sure that your hook is blunt, in which case you should have a small piece of black stone always with you, and with it the point of your hook should be sharpened, or a fresh one put on. Sometimes you will find that your hook gets turned on the hair and hangs very improperly, the hair being on the outside of the shank, or on the side of it, instead of being inside. When it is so always put on a fresh one, or you will lose above half the fish you hook before you bring them to hand, for a hook hanging thus will not hold the fish securely.

### THE FLOAT.

The best floats for roach fishing are those made of swan's quills, which are now manufactured in great perfection (the London patent taper quill). The size of your float should vary according to the depth of the water in which you are fishing. If the water be 10 or 12ft. deep you will require a float that takes a good number of shots, or your bait will be too long in sinking to the bottom; and, besides this, the longer your line is the more shots are necessary to keep it in proper trim, and the water being deep, a large float will not be objectionable on the top of the water. But never use a large float and a large number of shots in 4 or 5ft. of water, for if you do you will be sure not to take many roach. I have seen scores of instances of it. I always use a float as small as I can conveniently, and I always find that it answers best; and it will be seen at a glance that it must be so, because the appearances in the water are the finer. Let your float be so shotted that, when it is in the water, only about a ¼in. is seen, for if there be much of it out of the water you will not be able to see the bite so well. I always use a float that is rather thick at the top, and have my cap to fit ⅜ths of an inch from the tip, so that when it is in the water the cap just catches the water. I always bind a little waxed silk on my cap also, to make it thick, which causes it to rest on the water more steadily. By adopting these methods you will be able to see the finest bite possible, which is very important in roach fishing.

### THE BAIT.

Roach at different seasons of the year, and in different waters, will take various kinds of baits—worms, gentles, grubs, blood-worms,[*] may all be used, if anglers feel disposed to use them; but for our own part we never use anything but paste. In the Lea, in the spring, sometimes blood-worms may be used with advantage, and in the summer, gentles; but even then we always prefer paste. We should not, indeed, consider we were roach fishing if we were not using paste. To make it really good, the bread must be the best, about one day old, not more nor less; be particular in that respect, for if it be too new your paste will be too sticky, and not white, and if it be too stale it will be too loose to hold on the hook. When at the waterside—and not till then, for it spoils in a short time—take a piece out of the middle of the loaf in a square shape, about as big as a large walnut, dip it into the water, and take it out again as quickly as possible, and as quickly squeeze all the water out of it, or it will become too wet and never mix well. Having done that, put it into the palm of your left hand, and work it up with the thumb and finger of your right until it is quite solid, smooth, and white. It will then be fit for the hook, and should be kept from the action of the air, for that turns its colour,[†] and to prevent that put it into a small piece of clean white rag, and put it into the left-hand waistcoat pocket, from whence we take it piece by piece as we want it. If you fish some hours, and you find that it has become discoloured, make a fresh piece by all means, or your finny company will fall out with you. Be sure that your hands are perfectly clean when you make it, or it will all be spoiled. The piece you put on the hook should be about the size of a white pea, and as round, and should be so placed on the hook that the point should be just at the outside of the round. Be particular in that, or you will run a chance of not hooking your fish, especially if your paste be too stiff.

*(To be continued.)*

## UNITED BROTHERS, DEPTFORD.

Our members were out on the 21st, and had some fine sport. Mr. W. Tyler, 33lb. 7½oz. of bream from the Medway; J. Payne, 4lb. 7½oz. of bream from the Medway; G. Belton, 3lb. 13¾oz. of roach from the Medway; J. Currant, some roach from the Medway. The members of the above society fished a pegged down match on the 7th, but rather poor sport. Mr. J. Divers, first prize; Mr. H. Muggeridge, second prize; Mr. R. Lawes, third prize; Mr. T. Beak, fourth prize; Mr. G. Belton, fifth prize; Mr. J. Currant, sixth prize. Other members also had fish. Our members will fish a jack and perch fishing match on the 5th of October in the Medway.—H. T., Sept. 23.

## USK FISHING.

SANGUINE of spirit, light of heart.
The sportsman goes to try his art;
As Phœbus rose, the gaudy fly
Soon attracted a salmon's eye;
It moved its tail, went quickly on,
To seize the lure, so gently thrown;
Nearer it came, and on its rise,
Felt a sharp prick, "what a surprise."
Up went the rod; off went the fish,
That day it ne'er would go on dish.
The angler's heart was beating hard,
The loss, though great, must be endured.
Good luck next time may be his fate,
But work he must, and ne'er abate;
More sportsmen fish, eager as he,
Some are as good, some better be.
To get a "pool" 'tis often hard,
To fish ere eight you are debarred.
Two at a catch cry "head or tail,"
One wins, the other gives "leg bail";
"Rods" are many, he must be quick,
If fish he would, or "cut his stick."
Try he can behind another
A few yards, but 'tis a bother;
Though law it is, none do so here,
Who will from Usk had best keep clear.
Anglers come from other places,
Affect airs, and make grimaces;
"Would not start" early, "do not mind,"
Some "other rods" to fish behind.
Ere long however, like the rest,
They follow suit, and try their best;
Finding, if they do not do so,
They're left alone, like poor Crusoe.
Off rushes one, to "whip the Rock,"
He's right, of fish there is a stock;
Next starts one, to try "the Binding,"
But "bolts," another there finding;
The General likes "Coed-y-Prior,"
There staunch is, as Holy Friar;
Colonel Rocke goes out rather late,
But catches fish, at any rate;
Major Traherne, as good as he,
Takes fish each day, one, two, or three;
The gallant General Mignon,
Ties good flies in my opinion;
Colonel Marsland was seldom seen—
Good sportsman he, and very keen;
His brother John, for some reason,
Was little here in the season;
Pride was elate, after a "spate,"
Six fish he caught, of heavy weight;
Ridley, who one day fished "the Crows,"
Caught seven, everybody knows;
G——n one day did a wonder,
Further south he made a blunder;
Parson A. D., a little lame,
Toiled away nearly all the same;
A good "rod," the Rev. Mogg,
Did well unless there was a fog;
The Rev. Steward, good and stout
Was seldom here, but pulled fish out;
The oldest sportsman of the lot,
A. Williams, lives upon the spot;
Wrightson, who throws a very long line,
Took fish at the "Store Pot" and "Sign"
Kekewich, Q. C., to Newbridge went,
And there some pleasant days he spent;
Mr. C——y, of "ring" renown,
To the same neighbourhood ran down;
Old Doctor Pugh, who many know,
Tried his best fly, but it would'nt do;
Poor Mr. Wood, blind in both eyes,
To catch fish with energy tries;
The one-armed Major good fish took
With his short stump and iron hook;
One day casting for a peel,
With "Jock o' Scot" he caught an eel.
Brief time had some, to fish so hard,
Amongst them is Stafford Gustard;
Cole, Seymour, Browne, who fished here,
Will come, I hope, another year.
More men there were, I did not see,
Good fellows, too, as all agree;
All their names I can't remember,
As some left before September.
The "Three Salmons" I recommend,
An inn where much you need not spend.
Be not annoyed, my angling friend,
Or an apology I'll send.
And now, kind reader, I conclude,
On going to partake of food;
But ere I do so, I must say,
"May we all meet another day."
—"SQUIB" (a member of the
Usk Fishing Association).

REPORT OF THE TRENT FISHERY DISTRICT FOR THE YEAR 1884.—The Conservators of the Trent are arranging to supply their Annual Report in such a manner that anglers, on taking out their trout licenses in February, 1885, can buy copies for 3d. each at the local distributors of Trout Licenses of the 1884 Report. It is believed that this will meet with the approval of the public interested. Hitherto it has been found impossible, without incurring great expense, to distribute the reports in any quantity. As the Conservators issue printed forms of inquiry as to the season, pollution, poaching, &c., the last week in September to all their license agents, anglers will greatly oblige them if they will give their local agent for trout licenses the benefit of their season's experience as to quality and stock of fish.

---

[*] The "Book of the Roach" is published by Sampson Low, Marston, and Co., 188, Fleet-street, London, who will send it, post-free, on receipt of 2s. in stamps.

[†] We have often tried hair against drawn gut, but could never find any advantage if the gut is good and very fine. It is an immense advantage to use gut if there are tench, bream, or carp in the water, as they often take the roach bait. A correspondent some little time back described an excellent plan for fishing with a tight line, and yet with a winch line—you simply tie a bit of match on the line, and then wind up to it so that it rests against the top ring. You fix it at the proper length for the strike, of course.—ED.

[*] The blood-worm is the larva of a fly of the Daddy-Long-Legs species. It can be bought at most of the bird and fish shops in Seven Dials, which get their supplies from the Regent's Canal or the Thames. Three or four tied together with a bit of red silk, and the hook passed through the silk make a deadly bait for roach.—ED.

[†] "King's Natural Bait for Roach" makes a beautifully white tenacious paste. We always prefer to use it with plain bread paste in equal proportions, and have had capital sport with it, especially in the Colne.—ED.

# CLUB REPORTS.

### ANCHOR AND HOPE ANGLING SOCIETY.

About thirty members of the above Society competed for five prizes on the 21st inst., roving in a distance (in the Medway), the following being the successful competitors :—Mr. Gardner, first ; Messrs. H. Scott and Dipple, dead heat for second and third ; Mr. Powell, fourth ; and Mr. West, fifth. The following members also had fish :—Messrs. J. Bowling, T. Bowling, H. Klein, Shortcliffe, D. Davis, and Roker.—D. Davis, sec.

### BROMPTON ANGLING SOCIETY.

The shows during the last fortnight have not been very grand. The principal contributors were Mr. E. Saunders, with some fine carp (weighing 6lb. and 7lb. each) ; Mr. C. Brown, roach and jack ; Mr. Schlothauer, some good roach ; Messrs. Ducker and Roach, chub ; and Messrs. Burbidge, C. Saunders, Dutton, and Stembridge bream and roach.—W. Dutton, sec.

### CAMBRIDGE FRIENDLY ANGLING SOCIETY.

On the 24th inst. Mr. Edwards had a very nice show of fish, consisting of chub, roach, dace, perch, rudd, and tench, weighing 25lb. 7¼oz. ; one dace, 11¼oz. ; one chub, 2lb. 4½oz. ; one tench, 1lb. 13oz. ; one rudd, 1lb. 13½oz. ; and one perch, 1lb. Mr. Colson also had some nice chub, roach, and dace—one chub, 3lb. ¼oz.—W. S.

### THE CAVENDISH ANGLING SOCIETY.

*To the Editor of the* Fishing Gazette.

Sir,—Your correspondents' (Messrs. Reaves and Blackman's) letter, which appeared in your issue of the 13th inst., is, in several particulars, correct. Respecting the general meeting mentioned therein, it was called by a resolution unanimously carried (in the presence of Messrs. R. and B.), which dispensed with the necessity of a requisition signed by five members ; had Mr. Reaves then stated that the time was insufficient for him to obtain his witnesses, further time would undoubtedly have been given him, therefore his frivolous protest on the 14th August was not accepted, neither would they have liked it to have been, considering that three members of the Queen's A. S. were in waiting as witnesses. With reference to our refusing to hear the evidence of a witness that fished with Mr. Blackman on the 13th July, I only need say that no charge was preferred against him for that date ; it could not therefore have prejudiced his case.

Mr. Reaves stated that he took home all fish which he caught on the 20th July. If such was the case, surely he could have brought someone from his household to vouch for it. Mr. Pearce, and also Mr. Hodges, however their friendship might have prompted them, were powerless to render any service. Mr. Hodges only gave proof that Messrs. R. and B. were at Wimbledon fishing some 50 or 60 yards away from him, and that Mr. Pratt left there at mid-day, which was confirmed by Mr. Pearce, who was not at Wimbledon on that day, but met Mr. Pratt in London, which account the members believed ; but, beyond this, those two witnesses could say nothing to materially assist us in clearing up the matter. Mr. Pratt's evidence, I may say, was the only evidence adduced in their favour : he stated that Blackman caught 3 fish before 12 o'clock, the first fish being a bream of nearly the size of one he (Mr. Pratt) had previously taken, which scaled over 2lb., after which he was prepared to admit it might have been 1¼lb. I do not wish for a moment to infer that Mr. Pratt came to the C.A.S. actuated with the desire of giving evidence which was untruthful, but that he was mistaken in the size of the fish, and did not know that the *first fish* was returned, being undersized, which return was admitted by both parties. The unjust verdict which we are accused of returning *was* given upon the evidence of the so-termed "spy," whose account of the affair only differed in respect to the size of the fish and Mr. Pratt's leaving. I used every effort in my humble ability in endeavouring to upset his evidence, but without avail, which Messrs. R. and B. will, I think, admit. As regards their names being mentioned as being expelled, *they*, at least, should know that I bear no malice in the matter. I certainly thought, Mr. Editor, that it was usual, and beg to call your attention to reports of the two societies whose names I inclose. If I have used your columns in error, to you I apologise.

Whatever the Queen's A. S. choose to do about admitting expelled members has nothing whatever to do with the Cavendish A. S. I am also sorry with you, Sir, to see betting introduced into an angling society ; but, in defence of the C. A. S., I should like to add that these bets were made at a non-fishing society, where several of the members occasionally meet. It is to be hoped that it will not occur again.—I am, &c.,

E. Chambers.

### CENTRAL ASSOCIATION OF LONDON ANGLING SOCIETIES.

The next delegate meeting will take place on Friday, Oct. 3, at nine o'clock.—J. A. Fitch, sec.

### CITY OF LONDON ANGLING SOCIETY.

Our shows of fish have not improved, two members only weighing in on the 21st—Mr. Chambers, roach, dace, and bream from Amberley, 2lb. 6½oz. ; and Mr. Castell, roach, chub, dace, perch, and gudgeon, from the Stort, 2lb. 5¼oz. Several others out. A general meeting of members will take place on Thursday next, October 2, to settle time and place for prize meeting.—Cas.

### CLAPHAM JUNCTION ANGLING SOCIETY.

A most successful evening was spent on Thursday, the 18th inst., when we presented our worthy chairman and late secretary (Mr. Wilson) with the testimonial that has been some time in hand. Mr. R. A. Banfield made a most efficient chairman, and was most ably faced by Mr. W. Maslin in the vice. Mr. Banfield's remarks were most *à propos* as regards the testimonial. He stated that, wishing the presentation could have been placed in more able hands, there still was a certain fitness in his making the presentation, considering that he and Mr. Wilson were old schoolfellows, and, although they had lost sight of one another during a few years, they had again come together, and it was his (Mr. Banfield's) hope they would remain for many years members of the same society. Mr. Banfield's remarks to the meeting were wonderfully well received, and the finish to his speech deserves to be quoted in full :—"Mr. Wilson, in handing you the key of this timepiece, let me impress upon you the necessity of seeing that it is properly wound up—do not let it run down. In business may the hands always be as regularly employed as the two we see before us ; see that the works are kept in good repair, and you will find that all will go with the swing and regularity of the pendulum, the ticking of which, I trust for many years you may be spared to listen to."—W. Maslin, sec.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly general meeting was held at the Swan Hotel, Upper Clapton, on Monday, the 15th inst., Mr. Parry in the chair, but on account of the secretary being suddenly called away from town to attend the funeral of a relative, a report of the meeting was not sent to the newspapers last week. The catches reported on that occasion were : Mr. Kiff, about 6lb of good roach, from the Sewardstone waters ; Mr. H. Howse, a handsome barbel from Sewardstone, weighing 3lb. 14oz. ; Mr. G. Colls, 17lb. 14oz. barbel, heaviest 3lb. 6½oz., a chub of 1lb. 13½oz., and a small jack from Staines. A vote of thanks was accorded to the chairman. The ordinary weekly general meeting was held as above on the following Monday, the 22nd inst., Mr. H. J. Tibbatts in the chair. The minutes of the last meeting were read and approved. A handsome lot of fish were shown, notably bream, one scaling 3lb. 13oz. and one 1lb. 14oz., taken respectively by D. Binks and H. Howse, together with barbel from the Thames at Penton Hook. Mr. G. Colls and Mr. G. Perrett, a fine show of barbel and a handsome jack of 6lb. 2oz., also from Penton Hook ; the two first gentlemen were fishing with G. Harris, the latter with E. Harris, of Saleham. Mr. H. J. Tibbatts, six roach weighing 5lb., from Day's water ; Mr. Tidbury, perch, from the same place. On Monday next, being the musical evening, it is hoped that a goodly number of members and friends will attend. Members of other societies will be welcome.—Henry Howse, hon. sec.

### EASTERN COUNTIES' ANGLING SOCIETY, GREAT YARMOUTH.

The special meeting of this society (which was well attended, between 30 and 40 members being present, called for the evening of Monday, the 22nd inst., to make arrangements for the next fishing contest) met at Mr. Seaman's, Duke's Head Hotel, Quay, at 9 p.m. The president, Dr. Mitchell, presided as chairman. After considerable discussion, it was decided that on this occasion the angling tournament should be fished on that most beautiful sheet of water known as Fritton Decoy, on Thursday, the 25th inst., between the hours of 10.30 a.m. and 5 p.m. Through the generosity of the members the officers are again enabled to offer no less than eight prizes for competition, and it is expected that over thirty competitors will take part in it. Eighteen gentlemen, having been duly proposed and seconded, were balloted for ; no black balls being shown, they were therefore elected unanimously. As a proof that the want of such a society as this, properly conducted, was felt in this district, although but about three months in existence, the society now numbers something like ninety members, and doubtless will, in a very few weeks, number over a hundred. Although the entrance-fee to angling members was fixed at 2s. 6d. for the first year, and afterwards an annual subscription of 2s. 6d., gentlemen desirous of becoming members must remember that next year the entrance fee will probably be 10s. 6d., and should therefore have their names enrolled early, otherwise they will come under the 10s. 6d. scale. Many good takes have been weighed in during the week, the following being some of the largest :—Messrs. Mitchell, Smith, and Freeman, 38lb., amongst this take being a very fine perch, which scaled over 2½lb.—it was landed by the president, bait used being lob-worm. Freeman and Smith, 45lb. bream ; Crowther, 25lb. bream and roach ; Bonfellow and Lee, 21lb. roach and bream ; Freeman, 32lb. bream ; Hayward, 13½lb. bream and roach ; Hannant, 18lb. roach. The next meeting will be held on Tuesday, the 29th inst., when the prizes will be presented to their respective winners. All members are earnestly requested to attend.—A. M.

### GLOBE ANGLING SOCIETY.

The trays of the above society were well patronised on the 20th inst., Mr. S. Howell again heading the list with 11lb. 3oz. of excellent roach and dace ; Mr. W. Whatcott. 5lb. 6oz. capital roach and perch ; Mr. H. Lake, 4lb. 10oz. of very nice roach and dace, one small chub, 12oz. ; Mr. H. Jeffries, 3lb. 1oz. of roach and dace ; Mr. G. Jeffries, 2lb. 10oz. of roach and perch ; Mr. W. Brown, 1lb. 10oz. roach and dace ; Messrs. J. Harman, J. J. Holmes, J. Brown, G. Brown, and L. Harrington also contributing with roach, dace, perch, and gudgeon. The first concert of the season was held on the 23rd inst., at the club-house, in aid of the Anglers' Benevolent Society, upon which occasion the Alexandra Variety Club paid us a visit. The chair was very ably filled by Mr. W. Brown, and the vice-chair likewise by Mr. H. Woolner, who were well supported by a host of talent, both vocal and instrumental. In the course of the evening the chairman, in a very able speech, explained to the meeting what a very great deal of good the Anglers' Benevolent Society had done to a large number of anglers in the time of need, and hoped that every member would become a subscriber to such an excellent institution. The vice-chairman, on rising, said he, as well as the members present of the A.V.C., would willingly subscribe to the box of such an excellent society, and at the same time wished it every success. He also thanked the Globe Angling Society for the very friendly reception they had given them that evening, and hoped the time was not far distant when they would meet again, after which harmony reigned till 12.15 a.m. A vote of thanks to the chairman and vice-chairman terminated a very enjoyable evening, and, I sincerely hope, a beneficial one.—J. J. Holmes, sec.

### GOLDEN BARBEL.

The members had a competition at Taplow on the 21st. The result was as follows :—1st, Mr. Henrie ; 2nd, Mr. T. Bigsby ; 3rd, Mr. Endersby ; 4th, Mr. Chapman ; 5th, Mr. Lawford ; 6th, Messrs. Harper and Hall. The fish taken consisted of barbel, roach, dace, and gudgeon. Mr. J. Green had a nice show of roach from another part of the Thames. The next competition will take place at Windsor on the last Saturday in October. Mr. J. Lancaster, of 2, Jeffries-place, Jeffries-street, Kentish Town, has returned the 10lb. 2oz. carp that he had to preserve for this society, and the style in which it is mounted gives great satisfaction to all parties that have seen it.—Pixie.

### GOOD INTENT ANGLING SOCIETY.

Mr. G. Bates had a good show of bream at the club on the 21st. Mr. Snook, roach ; Mr. Maybury, roach and carp ; Mr. Murphy, roach ; Mr. Gadbury, perch. Our distribution of prizes took place on the 23rd inst., the most successful winners being Messrs. G. Bates, Fortiscue, Bell, Hellens, Maybury, Haines, Devon, Richards, Holmes, Murphy, Ormes, G. Hughes, Sampson, J. Pluckrose, D. Sims, Tavener, Lassiter, Christie, Guntrip, Gadbury, Huggett, Winter, Wheeler, Nelson, Kemp, Rollison, Hadfield, G. Green, Phillpott, J. Robinson, Lord, and E. H. Mead. The number of prizes given up was 150. After the distribution, the prizes came in for this season, the first being Mr. W. Wright, artist, of Bethnal Green-road, his annual £5 5s. portrait of the winner, Mr. A. Salmon his annual fat lamb, followed by Mr. H. J. Tibbatts, and in twenty minutes there was £50 worth of prizes booked. So we have a good start for this season. Harmony was kept up till a late hour, and a most happy evening was spent.—R. Murphy.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

The following members weighed on the 21st inst. some fair samples of roach, dace, and bream from Amberley :—Mr. G. Watling, 3lb. 8oz. ; Mr. Hambridge, 2lb. 7oz. ; Mr. J. Watling, 11lb. 3oz. (one roach 1lb. 6oz.) ; W. Theobald, 3lb. 11oz. ; S. Baker, 6lb. 6oz. (one roach 1lb. ½oz.) ; Graves, 2lb. 4oz. ; C. Watling, 3lb. 5oz. ; J. K. Fitch, 7lb. 9oz. We pay a complimentary visit to the Little Independent Angling Society on Wednesday next, Oct. 1, and shall be pleased to meet any of our brother anglers on this occasion.—J. Fitch, sec.

### GREAT YARMOUTH PISCATORIAL SOCIETY.

The usual weekly meeting of this society took place under rather more favourable circumstances than it has previously done for a few months. The first part of the business was that Mr. Lovewell Blake had received the necessary vouchers, &c., from the late president, so at last there is some hope of getting a little way out of the difficulty the society has been under. The next business was the question of a contest which will take place on Thursday week for prizes presented by Messrs. Turner, Pretty, Lawrence, and Lark. Fish weighed in during the week : 20th, bream, Ormesby, Mr. Lamb and Mr. Brown, a visiting angler ; 18th, bream and perch, Mr. Pretty, Fritton. The secretary reported that through the courtesy of Captain Blake he had, in company with him and F. Blake, Esq., spent three days on the captain's pleasure-wherry, the *Triumph*, which was moored to the island in the centre of Barton Broad, having paid two visits to Irsted Shoals, so noted for perch fishing. Having carefully sounded the deep holes, where splendid fish abound, he would leave it until the captain arrived home, as he had gone on to St. Benedick's Abbey, and being vice-president, he had taken very great interest in the cruise, and no doubt would give an interesting description at one of our meetings, which, I am glad to say, are devoted to free conversation and practical experiences of the members in the science or art of pisciculture.—J. Lark.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held at the Masons' Hall Tavern, Mason's-avenue, Basinghall-street, on Tuesday evening ; Mr. Chambers in the chair. The minutes of the last meeting were read and confirmed. The chairman reported on his recent visit to a piece of water in Buckinghamshire recommended by

Mr. Bentley. Mr. Harding read a highly interesting paper entitled, "Ringwood Fishery, Hampshire—a Sketch." A fine specimen of the salmon-bass, weighing 7lb. 8oz., was exhibited by Mr. Parker, and a couple of very nice trout (2lb. 2oz. and 2lb. 8oz.) weighed in by Dr. Brunton. On the motion of the Rev. J. Walker, seconded by Mr. Crumplen, a vote of thanks was unanimously passed to Mr. Harding for his paper, and Dr. Brunton and Mr. Parker for their shows of fish. Dr. Lloyd has a paper in preparation which he has promised to read at an early date next month. The meeting, which was very well attended, and altogether a highly agreeable one, was brought to a conclusion with the usual vote of thanks to the chairman. Among the visitors may be mentioned Mr. Gray, Librarian of the Piscatorial Society; Mr. Tibbatts, Mr. W. S. Harding, and Mr. Hill.—H.

## HIGHBURY ANGLING SOCIETY.

The following members weighed in on the 21st inst.: Mr. Frank Temple, roach, dace, and gudgeon; Mr. C. Lewis, dace and gudgeon, and Mr. Edwards chub, Several other members were out, but did not arrive at the club in time to weigh in. —J. E. Wheatley, sec.

## IZAAK WALTON ANGLING SOCIETY.

There has been some very good shows of bream this week, Mr. W. H. Mecham having good takes on the 21st and 24th inst.; Mr. J. K. Charters had 23lb. of bream on the 23rd inst.; and Mr. G. P. Rolt had a nice take of the same kind on the 24th inst. The Doctor had a very enjoyable day amongst the flounders on the 21st inst. off Southend; although the sea was a little lumpy, he has come to the conclusion that it was better than the banks of the Lea: his fish were in prime condition. The two special prizes (given by Messrs. T. Goodwin and H. Butt) will be fished for on Oct. 12, between Burnt Mill and Harlow. Mr. W. H. Mecham won Mr. T. Dennison, sen.'s. prize of half a guinea for the heaviest fish of any kind on the Wednesdays during September.—H. B.

## LINCOLN ANGLING SOCIETY.

Our members went out on the 21st inst. for a match at Great Marlow for several prizes; but only one prize was taken, the successful winner being Mr. H. Blyth. Other very good shows of fish were brought in by the following members:—Mr. Sheen, a show of barbel; Mr. Blenham, a fine show of roach, dace, and gudgeon; Mr. Bingle, roach and gudgeon; Mr. Porter, roach and dace; Mr. Holmes, ditto: Mr, Pearce, roach, dace, and gudgeon. Other prizes would have been won had it not been of limited weights. We are going out again very shortly, as there are so many prizes to be fished for.—H. Bingle, sec.

## LIVERPOOL ANGLING ASSOCIATION.

The Competition in the Vyrnwy, at Llanymynech, came off on the 17th inst., and was a complete success in every way. Twenty-five members journeyed overnight in a saloon carriage of the L. and N.W. and arrived at the above village to sit down to, and enjoy, one of Mr. Baugh's carefully prepared and digestible suppers; after which, strolling and smoking were the order of the evening until bedtime. Some few did indulge in "nap" and "whist," but were not to be envied. It was quite a task to get some of them to bed, but perseverance and persuasion at last prevailed over all, and "silence reigned supreme." An early hour, 6 a.m., had been fixed for the commencement of the angling conflict; but before that hour most of the competitors were astir, some of them musically hailing the "smiling morn." Host Baugh had thoughtfully prepared a most tempting and appetising breakfast, to which the early risers did ample justice; after which, they made their way to their favourite swims, and were soon conspicuous by their absence. The river was in fairly good trim, and the weather turned out all that could be desired—a trifle hot perhaps, but you cannot have everything; and besides, the great majority had "flasks" and could rest, whenever they felt inclined, under the cool shade of the sprouting trees, smoke the pipe of peace and comfort, and quietly and calmly luxuriate in the charming scenery surrounding them on every side. But pleasant. as well as unpleasant, days must have and end, and so had this one. Seven o'clock sharp was the hour to weigh in at the "Cross Keys"; and, as it approached, the tired, but not weary, picators, began to converge towards the appointed place, and were all present when the clock struck. Messrs. Sergeneson and Bloomfield carefully weighed in the various takes, and the scales showed the following result:—Fly-fishing, Mr. R. Woolfall, 1; Mr. R. Ellinger, 2; Mr. E. A. Boulding, 3—winner of the silver challenge cup for 1884, Mr. R. Ellinger. Bait fishing, Mr. C. Higson, 1; Mr. W. Jones, 2; Mr. E. Chandler, 3; Mr. J. Rawsthorne, 4. Weighing in over, it was most entertaining to hear the tales that were told of how this "big" fish came, was hooked, but broke away; how this "two-pounder" rose, but came short, and how this one, and that one, and almost every one had lost fish under the most tantalising conditions—fish that would have brought their takes decisively to the front. But suddenly a change comes over the scene. Dinner is announced, every tongue is hushed, and every foot is turned dining-roomwards. And here was a sight to gladden the eyes of the hungry fishermen, and make every one eager for the fray. And "now the 'biting' began in terrible earnest, the fish being madly on the feed," not a bite was missed, and a full creel was soon accomplished. In short, every one of the twenty-five who sat round the table confessed that they had partaken of such a dinner as it was worth while coming so far to see, and, indeed, in sober truth, Mr. and Mrs. Baugh had excelled themselves, and had provided, for the very modest sum of one shilling and ninepence, a repast fit for a king or angler. And now, after a social glass or two, it was time to turn homewards, and after bidding our kind and courteous entertainers good-bye till next year, we departed in our saloon well pleased with the outing and with each other.—R. Woolfall, hon. sec.

## MARLBOROUGH ANGLING SOCIETY.

Mr. John M. Davis took a 6lb. jack in the Ouse at Bedford, on Wednesday, the 17th inst.; and on Thursday, the 18th, Mr. George Williamson, and Mr. Edward Boorman, took 24lb. and 23lb. respectively of roach, at the Tring Reservoirs. Among Mr. Williamson's take was one weighing 1lb. 9½oz., which is to be preserved.

## MARLOW THAMES ANGLING ASSOCIATION.

This association was founded in 1850, with the following objects:—To prevent the destruction of fish by nets and other illegal methods. To discourage angling during the fence months. A considerable extent of river is strictly preserved, and large numbers of trout, perch, and other fish are frequently turned in. The water at present held by the association, reaches from Temple Mills to the "Shrubbery." Every angler who has been to Marlow knows that the efforts of the association have not been without result; but what was so much wanted to support Thames angling was some action on the part of the Legislature in its behalf, and this has been given us by the Thames Conservators. Official by-laws regulating the fence months, rights of netting, and the size under which it is not lawful to kill fish when caught, have been passed. In consequence of this, our own association is, of course, greatly strengthened and placed on an altogether firmer basis. Aided by these by-laws, the officers and committee of the Marlow Association are doing their utmost to promote the efficiency of the society, and earnestly solicit the co-operation and assistance of the angling public. The by-laws of the Conservators (strictly enforced by the committee) are framed and hung up, together with the Rules of the Association, in the coffee-room of the Anglers, and other hotels. The annual subscription is one guinea. —J. Simpson Carson, Chas. M. Foottit, hon. secs.

## PHŒNIX ANGLING SOCIETY.

On the 21st inst. about 30lb. of bream, barbel, roach, and dace were weighed in by Messrs. Grist, Slater, Bentley, Keen, Reed, Bartrip, and F. Ashley.—W. Elbourn, sec.

## PECKHAM BROTHERS ANGLING SOCIETY.

Mr. W. H. Page was the only member who showed fish in the above club on the 21st, those members who fished at Kingston not showing up. Usual quarterly meeting for the election of officers on Tuesday next. A match on the 28th from Staines Bridge round Penton Hook; a club match on the 5th October. All members wishing to take part must clear the books.—Gadfly.

## THE PISCATORIAL SOCIETY.

On Monday last the ordinary meeting of this society took place at Ashley's Hotel, Covent-garden, and some considerable interest was attached to the meeting, as it was the annual roach competition. Amongst those present during the evening were Messrs. Gray, Sachs, Booker, Goodger, Crumplen, Wheeldon, Blundell, Godwin, Foreman, Bennett, C. C. Blundell, Jesse, Lemann, Attwell, Dr. Brunton, Rev. G. Sumner, Messrs. Harden, Robinson, Huggett, Walker, Pattison, Lander, hon. sec., &c. Visitors, Messrs. Vigo, Anstiss, Atwell, Sykes, &c. Mr. R. E. Booker was voted to the chair. The minutes of the previous meeting were read and confirmed. Dr. Brunton presented to this society a very nice copy of "The Modern Angler," by J. Richardson, which was very gratefully accepted. Mr. Goodger proposed, and the Chairman seconded, a vote of thanks, which was carried unanimously, to Dr. Brunton for his kindness in presenting same. The next business of the society was a long and animated discussion respecting the riparian rights on the Thames. The following members took part in the discussion:—Messrs. Wheeldon, Rev. G. Sumner, Crumplen, Godwin, Pattisson, and Dr. Brunton. The subject was thoroughly discussed in its various phases, but no motion taken thereon. The hour was now growing late, and still no fish appeared upon the tables, but as several of the members were known to be out in the South of England, the company did not despair. At last, about 11.15, Messrs. Walker, Robinson, and Huggett appeared, each with a show of fish. Upon being carefully weighed, the result of the competition was announced as follows:—Mr. Walker took first prize with 27lb. 10oz. of roach, and also had 1lb. 8oz. of dace. Mr. Robinson took second prize with 20lb. 5oz. of roach, and also had 2lb. 13oz. of dace. Mr. Huggett took 3rd prize with 10lb. of roach, and also had 7lb. 10oz. dace. Mr. Fennings (not present), 6lb. 4oz. of roach. Mr. Robinson also showed 5lb. 3oz. of perch. All the above fish were taken from the Avon, and caught in the one day, total weight 81lb. 6oz., no roach under 6oz. being allowed to weigh. Those gentlemen who remained sufficiently late were well rewarded by the sight of such fish as are rarely seen on any club tables. The two largest of Mr. Walker's fish weighed 4lb. After the show of fish and declaration of the prize winners, the business of the meeting was brought to a close.—T. H.

## RODNEY PISCATORIALS.

Several of the members visited Amberley on the 21st to compete for prizes given by Mr. W. Cotton, Mr. Ball, and Mr. H. W. Flower:—1st, Mr. Hotham had bream and roach; 2nd, C. Grant, bream and roach. Messrs. Smith, Chantry, Flower, and Co. did good business among the "Shoestrings." At the meeting held on the 24th it was decided that the prizes not taken on the 21st be given for the first and second gross weight taken between the 28th September and the 19th October, both days inclusive, open to all members. This evening Mr. Chantry exhibited his patent rod-rester, and in the general opinion of the gentlemen present it was superior to any yet brought out. It can be had in three sizes, either in iron or brass, and I shall have much pleasure in showing a sample to the members of any society within a reasonable distance of Charing-cross, or will forward circulars to any part.—Pixie.

## ROYAL GEORGE ANGLING SOCIETY.

Messrs. Longland and Hughes weighed in 2lb. and 2¼lb. respectively from Bourne-end, the latter catch including a perch of 1¼lb. Mr. Palmer showed up with 4lb. of bream from Amberley. Mr. Healey, fishing for dace with a single hair tight line and paste, was successful in landing a barbel of 3lb. at Kingston. At Richmond, Mr. Trotter took 5lb., Mr. Hewitt 6lb. 10oz., and Mr. Sinclair 9½lb., including a barbel and a fine eel. Mr. Guynan produced an exceedingly pretty show of rudd from the Ouse, which unfortunately could not be booked, as some of them had been taken on the previous evening.—C. W. W. Bernhardt, sec.

## SOUTH LONDON UNITED.

This society was formed about three years ago for the purpose of bringing together the members of the societies in the South of London, by means of return visits and friendly competitions. One of the former took place on the 22nd to the Wellington, at the Prince George, Hill-street, Walworth. About 100 or more were present, during the evening, which was passed in a very pleasant manner, with singing, reciting, and conversation. Among those societies which responded to the roll were the following: Bermondsey Brothers, Second Surrey, Rodney, South London, Peckham Brothers, United Brothers, Deptford, the Anglers' Pride, Excelsior, the Crown Anglers, Deptford; Busy Bees, Original Anglers' Pride, and the Wellington. In addition to those above named, but did not attend, are: The Anchor and Hope, South Eastern, Battersea Friendly, the Grange, the Marlborough, and the Peckham Perseverance. To those societies who have not received the new list of societies, I beg to call their attention to the following rules it has been found necessary to carry out: 1st. That the visits take place every three weeks in rotation down the list. 2nd. It must be distinctly understood to entitle a society to a visit they must be represented (or good cause shown why not) at the preceding one, otherwise the visit will go to the next on the list in rotation. The new list can be obtained by applying to the hon. sec., Mr. W. Allen, 16, Trothy-road, Bermondsey. The next friendly competition will take place at Amberley, on the 12th day of October. Tickets are now ready, and secretaries who have not yet received them and wish to have them can do so by applying at the above address. In consequence of the South-Eastern not being represented, the next visit will go to the United Brothers, the Druid's Head, Deptford Broadway. Tramcars and rail within five minutes of the house.—Pixie.

## SOUTH-EASTERN ANGLING SOCIETY.

On the 21st inst., a very moderate show in, owing to several members missing their train and arriving too late, and one or two veterans being laid up. Tuesday last was our quarterly night, when not quite so many appeared as I wished for; but I trust the members generally will take it for granted that their presence is required next meeting, to decide as to our day's outing on October 5th, some demurring about Pangbourne, as there is not, according to accounts, much fishing in that locality. I must request all our members that can to be kind enough to attend our next meeting, on September 30th, and decide as to place, &c.—T. H. W. Weston, secretary.

## WELLINGTON ANGLING SOCIETY.

On the 21st inst. Mr. Newbury weighed in roach and gudgeon, 4lb. 1oz.; Mr. Phillips, roach and gudgeon, 1lb. 10oz.; Mr. Hall, bream and chub, 4lb. 2oz.; Mr. Palmer, dace, 8oz. On Monday we had an overflowing visit from the South London United, Mr. George Mayo in the chair, Mr. Charles Wright vice. Thirteen clubs on the list were represented, as well as the City of London and St. Albans. We have to return our sincere thanks to those gentlemen who honoured us with their company, and are sorry if some of them were put to any inconvenience in consequence of so liberal a response to our invitation. Plenty of good songs and recitations enlivened the evening, especially those rendered by Mr. Wright and Mr. George, of the Second Surrey; Mr. Page and Mr. White, of the Peckham Brothers; Mr. Bovill of the Busy B's, and Mr. Heron and Mr. Rawlings of the St. Albans. On Wednesday Mr. Brand was elected a member, and Messrs. Archibald, Alexander, and Hall offered additional prizes.—W. W. Alexander, sec.

## NOTICES OF BOOKS, &c.

Camping and Cruising in Florida. By James A. Henshall, M.D., author of "Book of the Black Bass." Illustrated. Cincinnati: R. Clarke and Co. London: Sampson Low and Co.

This work furnishes an entertaining and amusing account of two winters spent in Southern Florida, "as viewed from the standpoint of an angler, a sportsman, a yachtsman, a naturalist, and a physician," and it may fairly be regarded also as a guide to future tourists in the regions it describes. The good doctor seems to have had amongst his patients a number of young men whose graves "were being dug, slowly but surely, by the frying pan." They had been indulging in a too generous and imprudent mode of living, which, it appears, is very common in Central Kentucky (and is not very uncommon elsewhere), and it became his duty, both as friend and physician, to take them into voluntary exile for a brief season. Knowing that plain diet, pure air, bright sunshine, and varied exercise would work wonders, he induced four of them to accompany him on what proved to be a thoroughly rough but most enjoyable trip to the genial climate of Southern Florida. How they sailed down the rivers and lakes, and occasionally outside on the open sea on the Eastern Coast in a "Skip Jack" yacht, called *Blue Wing;* how they fished and hunted, and what varied and amusing adventures they met with in their encounters with alligators, rattlesnakes, and panthers; what monstrous fishes they caught, and what hair-breadth escapes they had, would take up too much of our space to describe. We must content ourselves with saying that the book is a very readable one from beginning to end, and although fun and jollity are its prevailing characteristics, it contains much matter that will be found to be useful and valuable to naturalists, and it also supplies information about a new health resort, which will be of use not only to young Kentuckians, but to all who are suffering from *ennui*, a slothful existence, and a too indulgent use of the *frying pan.*

Practical Taxidermy: A Manual of Instruction to the Amateur in Collecting, Preserving, and Setting up Natural History Specimens of all Kinds. To which is added a chapter upon the Pictorial Arrangement of Museums. Illustrated. By Montagu Browne, F.Z.S., &c., Curator, Town Museum, Leicester. Second edition. Revised and much enlarged. London: L. Upcott Gill, 170, Strand, W.C. 1884.

We are very glad indeed to see a new and much enlarged edition of Mr. Montagu Browne's most valuable little work, the first edition of which has been out of print for some time. Inquiries are often directed to us by our readers as to what work we can recommend as giving clear instructions in setting up fish, and also making casts from them in plaster, &c., and we have always much pleasure in referring them to Mr. Browne's book. The first chapter gives a very clear and most interesting account of the rise and progress of taxidermy from the times of the Pharaohs, when people had their dead relatives embalmed and then set up in their dwellings like eight day clocks. The second chapter describes how to decoy and trap animals, and all the best snares; nets, &c., are explained and illustrated. Chapters III. and IV. describes the necessary tools, preservative, soaps, powders, liquids, &c., with full recipes for making them, and we are glad to see Mr. Browne is strongly against the use of arsenical soap, and describes a non-poisonous preservative and stiffener which is better in every way. This chapter will be most valuable to the amateur and professional taxidermist. The next chapters refer to the practical work of skinning, preserving, mounting, and modelling birds, mammals, and fish. Our author recommends the beginner to experiment on the perch, which is "one of the best subjects for the purpose," and yet how few even of our best professional taxidermists can set up a perch properly. This chapter on fish and how to preserve them and make casts from them will probably be of most interest to our readers, and the instructions are so clear that failure can only be the result of inattention to them; moreover, Mr. Browne, in his preface, kindly volunteers to answer my questions, from amateurs, when difficulties are experienced, his only stipulation being that a stamped addressed envelope be forwarded with the query. After that devoted to fish come chapters on the colouring of fish skins, bird's beaks, legs, &c.; drying and colouring ferns, grasses, sea-weeds, &c.; collecting and preserving insects, arranging collections, and many other matters. Even apart from its chief object—that of teaching taxidermy, anyone taking the least interest in natural history will find a mass of valuable information in this work, which we have the greatest pleasure in recommending, and congratulate the author on the great success he has achieved. The general get-up reflects much credit on the publisher.

## NOTICES OF FISHING TACKLE, &c.

Hardy's Hooks with the "Slice" added.—Messrs. Hardy Bros., Fishing Tackle Makers, of Fenkle-street, Alnwick, write: "We have pleasure to hand you samples of our well-known 'Round-Bend' and 'Needle-Point' hooks, to which we have had your patent 'slice' added. They are tied on 14in. drawn gut. Messrs. Milward and Sons say that they had to *specially* temper these fine wires, and they are well tempered. We could tie on any thickness of gut. We have some splendid selected gut, from 15 to 16in. 'fine,' that these fine wires would do well on."

The samples sent by Messrs. Hardy are numbers 6 to 9 of the "Round-Bend," and 6 to 9 of the "Needle-Point." No. 9 in either sort will answer splendidly for roach and dace fishing; Nos. 8 and 7 in each sort for bream and tench, or for trout and grayling fishing with gentles or ant's eggs; and No. 6, either in the "Round-Bend" or "Needle-Point," is perfection for fishing of any kind where the smaller worms are used, especially in up-stream worm fishing for trout, and in "swimming the worm" for grayling, as practised in Yorkshire.

We have the greatest confidence in recommending our readers to try these hooks; the "slice" to keep the bait up has been most carefully added, and even in the wee round roach size (No. 9) will be found to keep a gentle up on the shank well. Nothing could be neater than the way the hooks are tied on to the gut, and with red whipping—a distinct advantage, as, if gentles are used, the red shows like a red chrysalis, which is often so attractive to roach and grayling. The gut is beautifully fine and long. These hooks, although of such fine wire, are wonderfully strong, and tempered to perfection. Their penetrative powers are like that of a fine rapier as compared with a broadsword.

The "Halcyon" Pike Bait.—Messrs. Hardy Bros., of Fenkle-street Alnwick, have had a wonderful sale for their "Halcyon" spinner for trout and perch. When we tell our readers that this bait is practically a "Spinning Alexandra" they will know how deadly it must be. Casting it overhand like a fly, and fishing up stream in a blazing hot sun and crystal clear water, we have had good sport with it when the fish would look at nothing else. As a curious incident, we may note that a grayling followed it 3 or 4 yards down stream, and then took it boldly and was caught. At our suggestion, Messrs. Hardy have made this bait in larger sizes, large enough for pike, and we find it answers admirably. It should be fished on a stained single salmon gut trace, with about 6in. of stained gimp just above the bait.

Artificial Sand Eel.—The other day a correspondent sent us a dead sand eel, and asked if we knew where he could get an artificial bait like it. We knew one or two so-called imitations of it, but they are about as much unlike the real thing as it is possible for a copy to be. We sent on the real fish to Miss Campbell, of 2, Cecil-terrace, Maynard-crescent, Walthamstow, and asked if she could copy it in soleskin and add the automatic-action fins and tail. This she has done, and sends us a sample, which is simply perfect in shape and colouring. Those who use the sand eel as bait should certainly have this artificial at hand when they, as often happens, cannot get the real thing.

'Worth the money. A strong, light, useful Rod, exactly suited for Roach or General Bottom Fishing. We can recommend it as being all it pretends to be."—Fishing Gazette.

THE LIGHTEST ROD IN USE. Weight, 7 to 8oz.

BOOTH'S FIVE-JOINT BAMBOO ROACH ROD, 4s. 8d., for Cash only.

12 feet, stand-up rings, winch fitted, brass bottom, and bag complete, fitted in box, price 4s. 8d. Carriage paid for 6d. extra.

Booth's Fly Rod, Ash and Lance Wood, 12 feet, 3 joints, price 9s. 6d.

1 yard gut cast, 1s. 3d. per dozen; two yards gut cast, 2s. 5d. per dozen; 3 yards gut cast, 3s. 4d. per dozen.

Finest drawn gut manufactured, 15 inch, 4s. per 100; 2s. per 50; and 7d. per dozen.

Trout gut, 9d., 1s. 4d. and 1s. 10d.; Salmon, 5s. per 100.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

The Fishing Gazette.

SATURDAY, OCTOBER 4, 1884.

## NATIONAL FISH CULTURE ASSOCIATION.

WE learn that Mr. John S. Charles, of 9, Lower Grosvenor-place, S.W., has volunteered to supply gratuitously to the National Fish Culture Association specimens of marine fishes for preservation in spirits, in order to aid the Council to acquire a museum for the exhibition of a complete collection of British fishes for the use of the public. In addition to this generous offer of assistance, Mr. Charles has given a substantial sum towards the necessary outlay for shelves, bottles, &c. A gift of this nature will be appreciated by the large number of people who throng the Aquarium at South Kensington throughout the summer and autumn. We trust that Mr. W. Oldham Chambers will be able to complete the necessary arrangements prior to the opening of the Inventor's Exhibition next year.

The Piscatorial Society joined the National Fish Culture Association some time ago, and we are glad to see from the report of the Gresham Society this week that they have also done so.

## ODDS AND ENDS IN SALMON FISHING.

By Geo. M. Kelson.—No. 2.

How frequently have we read and heard hypercritical tittle-tattle touching the subject of varnish. Is it fancy, or is there really a salmon fisherman in existence who can conscientiously declare his ill-luck to be attributed to a glistening rod?

Although we like to see our tackle ship-shape, still, we are not molly-coddles, so to speak, and we do not spend Sunday afternoons in polishing up. What should we gain? Anything? Or would there be any disadvantage by so doing? For my part, in the absence of this coat of waterproof, which at least affords a protection and preserves the wood, I have never seen the greenheart rod that is not more or less affected in wet weather. Indeed, there are some old stagers who go so far as to assert that there is some necromantic spell in varnish. "Give us," they say, "a rod that glitters all over the pool." A metaphorical request presumably, but after all not one utterly beyond our comprehension, especially if there be any truth in stirring these fish into activity by reflecting the sun from looking-glass. I dare say there are many who have heard of "the man with the mirror." I happen to have witnessed the performance, and I think it a perfectly fair way of "working salmon up." You rouse and aggravate them; you get them "on the look-out"; and it is then they are—to use a fisherman's phrase—nobbled.

Under such conditions and circumstances we must know the catch to a nicety, and present a very small fly, well up to them, and scarcely worked at all; this, too, upon an extra fine cast, after allowing a good twenty minutes to settle down, and by keeping well out of sight.

We may well assume that salmon would become suspicious from such a ferreting, and although they will "snap close," they seldom or never make a long rush at the fly then, or follow it across and take it in the usual spot, which is generally on the edge of the stream. It is advisable to fish the fly deep, so hold the point of the rod down to the water, or get farther back and use a longer line, and if necessary put on three or four, or even more, split shot a good yard from the hook.

No, no; salmon are not so easily scared. Fancy stoning them down a flat into a catch a hundred yards below; beating them down the deep side of the stream with the rod; hussling them out of bushes, and in less than half an hour finding your fly well hold of one and yourself engaged in sharp conflict with long odds on you, snags and dead trees barred, having hit hard off a proper winch, without holding the line, and your fly dressed upon one of Milward's superb double hooks.

It is not all of us who care to experimentalise in this hunting expedition. Many may not believe in it, even if they have ever heard about it, and the majority are quietly contented with the usual surroundings, coming now and again upon a fish just up from the salt water which will readily take any fly offered.

However, unless we work, the true pleasure of salmon fishing can never be known or understood. But then, again, there are anglers to whom Nature has given the trick of becoming quick-sighted—to them no pains, no trouble is a consideration; such workers, seeing things at a glance that in one season they are voted tip-top, and ever after universally regarded as experts, their former doubtful reputation dropping into oblivion, and buried then and there by that sure palliator of all error—Success.

I think "Odds and Ends" rather a convenient subject, as we can jump from Rods to Reels and back again. Perhaps just now the "Eyed-hook" question might engage us for a few minutes. I tried eyed-hooks years ago, and found them rather a nuisance in one respect, for the gut cast had to be re-looped or re-knotted at such frequent intervals that I—like others in the same neighbourhood—gave them up. But modern minds militant in their favour have, I am told, provided for this contingency, and offer us hooks with their loops smooth and rounding. Still, I cannot see how they can get rid of the friction, which seems to me must take place, and canker the gut, whether it be tied or even looped on. This only suggests itself to me; my opinion, so far, if adverse, is not based upon practical experience, and therefore I am not set against them. But rather the contrary, and on the other hand, it is obvious there is a saving of time, trouble, and expense, as the best of gut has to be carefully prepared in making and attaching the ordinary loop. Then, again, most Irish flies cannot well be too thin in the body, and on these hooks the body as well as the head should only be little more than half the usual size; and to this I may observe that the gut loop, however good it may be, lasts but a very few days in constant use, and as soon as that becomes weak the fly is done for.

Anglers would find an extra reel with a fine line and a 2½ yard plaited trace married to it very useful, and should never go out without one. In salmon fishing extra fine tackle is not often wanted, but there are times and pools when and where a little punctual attention to common sense—and fishermen always have a goodly share of that—would be very beneficial.

By marrying we get rid of cumbersome loops and ugly knots, which are impediments both in and out of the water. We always carry a stiletto and waxed silk, so that in the event of getting foul and smashing the treble we easily replace it. It takes a very little while to fray out the end of the line about ⅜ths of an inch by laying it on a piece of wood and using the point of this stiletto. Then dividing the part you have made fluffy equally, you twirl it into three legs, projecting after the fashion of a milking stool, and the strands of the plaited gut—after keeping the ends in the mouth and arranging the "stool legs" in a somewhat similar way—are to be intersected and pushed in between each other as far up as they will go, so that the fluffy part which I speak of may curtain round and overlap beyond where the gut was unplaited, and the strands of the gut lay along over and beyond the frayed-out part of the silk.

To be very neat, the fringe that you have picked out on the line might be combed down with the point of the stiletto, so as to surround the gut evenly, and the points of the gut should be bevelled and made into different lengths.

In binding this splice use single Gossamer silk, well waxed; never varnish it, or there will be a knuckle at either end very soon, but paint it about once a week with cobbler's wax dissolved in spirits. Half an inch is quite long enough for the graft, but it would be better to allow a little more at first; and if you have taken pains, the enlargement when you run it through your hands should be scarcely perceptible.

Our single gut length is often changed, being frequently damaged, so it is advisable to *loop* the other end of the treble, not knotted, but merely bound, which may be varnished, though I prefer the paint brush as before; however, either way it must be watched, for without attention the binding is apt to come undone.

In making up these single lengths there is no whipping required, and even if the strands stand a test of 8 or 9lb. the cast is valueless unless properly knotted. Soak the gut for a day in cold rainwater, then take a couple of pieces, and after determining how much to allow for waste place the ends of either side by side, lapping each other. Do not make the common knot known by bending them both down and bringing them round up towards you, over, and through the loop you have made below for the single, or even by putting them through the loop again, for the double knot, as both are bad.

But bend back the point of the left strand (which is now to the right of you if held horizontally), and place it between the forefinger and thumb of the left hand also, leaving the necessary loop above; then bring the point up from under, and push it through twice, when that one can be drawn fairly close, *but not at all tight*. Turn the work round, and serve the end of the other the same, and pull it all at once into a solid knot, without touching the points again except to trim them.

To do this correctly is next to an impossibility, unless the gut is thoroughly soaked; besides, it is getting almost too late now to make up many lengths, and gut keeps so much better in hanks, wrapped up tightly in a new piece of wash-leather. So late, indeed, that it will be all up with the season of '84 if we are much longer without a good downpour.

What a number of fishermen look forward annually to this season of the year—and well they may, for there is an infinite charm just now when the fish are generally more numerous, although the summer bloom is gone, and the wild flowers faded. The scene in autumn, ever silent and sad; the tranquil trees, with foliage so rich and ripe, fulfilling their annual destiny, awaiting the useful slumber of coming winter; the hill-sides thrilled with the whisper of a thousand legends; and the valleys clothed in all the warm glow of a setting year.

Ah, well; a contrast indeed to the merry month of May! when the fields in their springtide gaiety are starred all over with big white daisies, and the fish that do ascend are so sound and so silvery.

## JOTTINGS REGARDING THE DEE, ABERDEENSHIRE.

SEVERAL of our most successful gentlemen anglers have of late been directing their attention to the subject of jetties, and considering whether or not these artificial auxiliaries have enabled them to realise to the full the object for which they were constructed. The all but unanimous opinion is that in many cases they have proved very detrimental to sport. It is said that generally they alter the course of the river, render the lie of the fish still farther off, and sometimes utterly spoil the pool. We know some once famous casts that are now practically useless, except in very heavy waters, in consequence of these artificial aids to the angler. When the water flows strongly fish invariably lie at the deep side, and it is there that on such occasions they are got.

Now, were jetties not formed, the run of the water would be more natural, and as a result more easily fished. The stream, too, in a small water would also incline to the deep side, and flowing with a more perfect current, could be fished far better. We note that jetties extending into shallow water congest a pool and render it too swift and strong for fish to lie in. We have always found that wading in shallow water is the best way to fish a pool thoroughly when the water is of an average size.

On the other hand, when the water is large we always prefer to fish pools from the deepest side, and there can be no doubt that jetties are then more of an obstacle to sport than otherwise. Many proprietors are now having them removed, and this we are very glad indeed to learn.

In "A Complaint from Aberdeen" that appeared in the GAZETTE the other week, we noticed a very sensible suggestion, and one that cannot be too strongly urged on the Fishery Boards. We refer to the protection of fish in the small streams during the early part of the spawning season. There can be no doubt whatever that a great deal of leistering and "water burning" takes place at night in the Glen streams, whence small fish have ascended to spawn.

We have heard of no less than fifteen fish being killed in a single evening. To prevent this wholesale havoc, if the aid of the farmers cannot be secured in discouraging their servants (and organised bands of farm servants scour the waters at night) from these practices, we think the Fishery Boards ought certainly to take the matter in hand, and have adequate protection given.

If to these boards more proprietors who angle themselves were elected, we feel assured more drastic measures would be taken to cope with poaching.

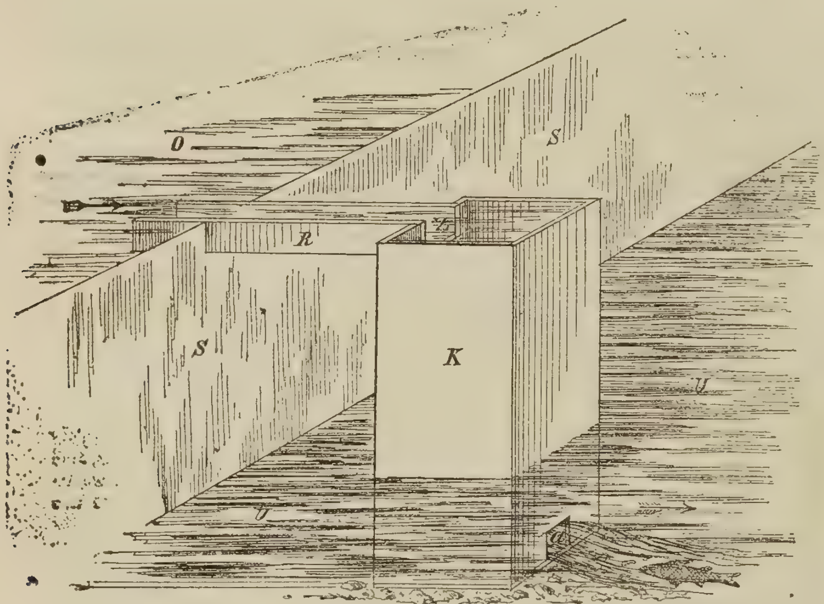
In the interest of the angler it is practically useless to have representatives who either own net fishings, or pocket large sums yearly from sportsmen, and have no further interest in the matter. Such, we regret to say, is the preponderating constitution of many of our fishery boards. A little agitation by anglers might have a very beneficial effect. It is quite evident that, unless this is done, matters cannot improve.

We now turn our attention to the subject of flies.

Those we invariably find most successful in the autumn (according to the state of the water) are the Gordon, Gardener, Rintoul, Blue Charm, Childers, Silver Doctor, and teal and magenta hackled Thunder and Lightning. For night fishing Eagles (yellow and grey) are good. The Gordon is, undoubtedly, the premier Dee fly; nothing approaches it for fishing in heavy water, and at night it is equally as good as an Eagle. A large Childers is a very good killer in a brownish water. The Gardener pattern, dressed by W. Milne, Aberdeen, has a good repute on several reaches. The Rintoul is an excellent killer. The Blue Charm and Silver Doctor are indispensable on a clear day, and the Thunder and Lightning in a fairish water, if the day is anywise cloudy. The sizes, of course, to be regulated to the state and depth of the water. Than these there is no need for any other, excepting, perhaps, a Peacock, which always comes in handy.

## ANOTHER CHEAP FISH PASS.

Some little time back we gave our readers a sketch and account by Dr. Nowicki of an extremely simple and cheap fish pass which we translated from the *Deutsche Fischerei Zeitung*. We have again to thank our German contemporary for lending us an illustration of another and even more simple fish pass, which is described by Mr. Dallmer, Fishery Superintendent. We understand Mr. D. to say that this pass has not been actually tried yet, but we agree with him in thinking it most certainly deserves a good trial, and we hope secretaries of fishery boards, and other gentlemen interested in the improvement of our salmon fisheries, will give it their attention. It is the business of the press to make improvements known and to urge their adoption.



A CHEAP FISH PASS.

Description of the illustration:—K is a box made of planks nailed together, about 4ft. square; the height depends upon circumstances. The box is closed at its lower end, which rests on the bed of the river; the top is on a level with the level of the water above the dam, A. At the foot of the box is an outflow opening, and at the top of the opposite side of the box is the inflow, Z, *which must be larger than the outflow*, A, so that the box must always be full up to the top. The outflow A must, of course, be large enough to admit the heaviest fish which ascend the river. The wooden trough, R, leads from the inflow opening, Z, to the water above the dam, and must be placed so that its sides are just submerged to the water-level and no more. Where the water-level fluctuates, this trough must be made so that it can be raised or lowered at either end as may be necessary. Thus it will be seen the pressure of the dam water is excluded from the box, and the only pressure at the outflow, A, is that of the water in the box, which is further lessened by the pressure of the outside water below the dam. The fish which are below the dam and endeavouring to get up will soon become aware of the stream flowing through the outflow, A, and will enter the box. Here they will feel the water coming down on them, and will ascend to the trough, and through it into the water above the dam. It is advisable to cover the top of the box and the trough with wire netting, so that the fish cannot jump out, and the surplus water can flow off. If the bottom of the trough, or part of it, is painted white, if the night is not too dark, the fish passing can be seen and counted. Where the dam is vertical, a very short trough will suffice, and a longer one will be required when the dam, as is usual, has a slope. Ten pounds will cover the entire cost of making and fixing this fish pass, and when it is considered that the cheapest of the fish passes in common use cost hundreds of pounds, and are even then often almost useless, it certainly seems advisable to give this one a fair trial.

The fact that the outflow opening, A, is smaller than the inflow necessitates that, however great the quantity of water flowing in, the pressure at A must always be the same, as the surplus water flows over the top. We should much like to hear the opinion of some of our scientific readers on this fish pass. Will Mr. Alan Bagot and Mr. W. Oldham Chambers, for instance, give us theirs?

## ROACH FISHING.

(*Continued from page* 161.)

### GROUND-BAIT.

The best ground-bait for roach is bread and bran. Take about 1lb. of bread of any kind, and soak it in water till it is quite soft, then put it into a bag and squeeze all the water from it, then put into the bag with it about a quart of bran, and work it together till it comes to a stiff paste. This you may do at home if you please, and take it all ready with you to the water. When baiting the ground with it, throw in pieces about the size of a walnut, one now and then.[*] If the water be deep, press each piece into the form of a cup, or put into it a small stone, so that it may sink quickly into the place where you wish it to fall, always bearing in mind that ground-bait, falling into an improper place, is very detrimental to your sport, seeing that it may coax the fish away from you. Many anglers are not half particular enough in this respect. Your baited hook should always be exactly in the place where the ground-bait is. If the water is still and shallow, the smaller your pieces are the better. If the fish are feeding well do not throw in any bait, but, as you would in more important circumstances, "leave well alone." I have sometimes found that in still waters a little bread, chewed very fine and thrown in, is a very enticing ground-bait.

### THE DEPTH.

The general rule is to let the bait just touch the ground; but we have frequently found that they will take it, at certain times, much better two or three inches above it, though at others they will not touch it unless it be on the ground. You must, therefore, use your own judgment according to the feeding of the fish, for they do not feed in all waters, places, and times alike. Generally, however, you take the largest fish with the bait on the bottom.

It is a good plan in still waters, especially when they are very fine on the feed, *to raise your float now and then four or five inches out of the water several times, and then let it settle*, for if anything will tempt them to take the bait it is that manœuvre. We have frequently been fishing for them when we could not get a fish in any other way. They see the bait moving and are excited to take it.

### THE PLACES FOR ROACH.

Roach are fond of a harbour, both in the water, or out of it, or over it. An overhanging tree, piles of an old bridge,[†] or a corner where there are a good many sedges and rushes, are all good places, if the water be still and deep. In all subscription waters such places are well known and visited, but in any other they are the places to fish for roach. Always give the preference to a place where the ground is sandy, as they are generally found in such places. A place near a very deep hole is always very likely, as they frequently rise from the hole to feed in the more shallow water. A place of this kind is always the best for winter fishing. A lowering day, with a gentle breeze and a little soft rain, is always the best for roach fishing.

### THE WAY TO KILL ROACH.

Supposing that you have obtained the tackle I have described, and have made the bait, you go to the place where you intend to fish. Don't stand over it and look into it to see if you can see any fish, neither let any other person do so if you can help it, for very often, by acting thus imprudently—especially if the bank be high and the water clear—you will drive all the roach out of the swim, and it may be a considerable time before you entice them back again. Having pitched upon your place, go to it cautiously and quietly, and immediately take your seat, and if the ground be damp take care to have a piece of cork or board to sit on. Being seated, put your rod together, beginning with the top joints; then loop on your line, and hook on your plummet and try the depth, and be sure you do it as gently as possible. Your line must be just so long as to allow about 15 inches between the top of the rod and the float. If, therefore, you find it too long you must shorten it, and if too short you must lengthen it, and in no case fish with it in any other form and think it will do, because it will not. Having your line the exact depth, and your float in the exact place, keep your plummet on and let your line soak in the water while you make your bait as before directed; this is a good plan, because a hair line unsoaked is very tender. Your bait being well made, take off your plummet, bait your hook, cast in, and take particular notice which way your float rides on the water, and then throw in your ground-bait according to your best judgment. Some will throw a lot of ground-bait in at first, and then when they begin to fish find they cannot keep the float for a second in the place where it is. Let all your movements be gentle, neat, and clever, bearing in mind that making no disturbance in the water, or about the water, and very fine tackle are the most essential things. In fact, neatness is everything, especially in roach fishing. The means employed must be of a gentle, and the tackle of an almost unperceived nature, and then you will catch them, but not under other circumstances. A clumsy angler, with a heavy rod, a coarse line and hook, a large float, a good parcel of large shots, and a bait nearly as large as the top of your finger, will drive all the roach away from him, just as a large dog drives a flock of sheep, notwithstanding the very great desire he may have to catch some of them! If the fish are on the feed, and your tackle is rightly adjusted, you will have a bite very soon after you begin to fish. Strike the moment you see your float affected, letting the movement be made with the hand only, from the wrist, not from the arm, and turning the point of your rod upwards. Don't wait until you think the fish has swallowed the bait, because as soon as he finds it is attached to something he will blow it out, unless he is very hungry, which is not often the case; and remember that your float cannot be affected by him, unless he has your bait between his lips. Do not forget, also, that the largest fish generally bite in the most cautious manner. As soon as you have hooked a fish, little or big, keep a tight line on him, your rod being raised directly over him. If he be large and pull well don't be afraid of him, for if you keep your rod up over him he must pull tremendously to break you, though your tackle be of such a delicate order. Your hair when well soaked is elastic, and your rod top is very pliable, and if your judgment be good all his endeavours to get away will be unavailing. The grand thing, especially in a young angler, is not to be in too great a hurry. Hundreds of good fish have been lost for want of a little time and patience. Keep your rod over him until he is quite still, and if you do not use a landing-net, lift him out of the water as soon as you possibly can, with the rod in your right hand, letting him hang his whole weight. Then very cautiously swing him to your left, and as cautiously get him within your grasp, and hold him so fast that he shall not stir while you take the hook out of his mouth. All this care is really necessary, for if a fish of only 4 or 5 ounces, and you pull him out quickly and let him flounder about, it is ten to one that your hair gets broken long before you get the hook out. We have seen it done many, many times. If your fish is above 4 or 5 ounces it is always best to use your landing-net. Never at any time attempt to lay hold of a fish while it is in the water, neither suffer any person to do so for you, for in that case you will be pretty sure to lose your fish, and have your line broken into the bargain.

---

[*] A deadly way to take big roach is to imbed the paste-bait in one of these ground-bait balls of the size of a pigeon's egg, and fish on the bottom. The fish nose it about, and finding the delicate morsel inside, take it when they will not look at it fished in the ordinary way. You must not strike until you get a decided bite.—Ed.

[†] In such spots as these the house fly on a small hook on which a single shot has been pinched will kill well at this time of year. Use a longish rod without float, sink the fly to the bottom steadily, then draw it up gently to the top and repeat the process. You will, if there is any store of roach in the water, see perhaps two or three rise and follow it. Let it stop at the surface, and one of them will dash at it, and give you fine sport.—Ed.

Always keep your seat while you are killing and landing a fish, unless it be upon an intricate occasion, and you are obliged to get up, for rising up suddenly and moving about your swim, if the water be clear, will drive all the fish clean out of it, and you may have to wait no little time until they come back again. We have often felt surprised and vexed at the way in which some anglers act with their fish after they have caught them. Frequently we have seen a number of them scattered here and there on the grass, drying in the wind and sun, until they are curled up like so many chips, and are good for nothing. The grand point is to keep them cold and damp in a damp, coarse linen bag. By adopting this method your fish will look as handsome eight or ten hours after they are caught as when they first came out of the water.

(In our next we shall give the Rev. Mr. Martin's recipe for cooking and eating roach.)

## THE TROUT STREAMS OF NORTH DEVON.—V.

By Helwr.

According to the determination expressed in my last, a few days ago I visited the Association water of the Barle. My success was scanty, for I only creeled 16 trout, with not a good fish among the lot. It was a tolerably favourable day—the weather was dull, with a slight drizzle, and a puff of wind blowing up stream. I commenced operations just above the town bridge, and fished to where Dean's Brook comes into the Barle. The water was fine and not high, but it was considerably above the recent summer's level. For more than a mile I never moved a fin, though I kept low down, and threw right before me up-stream. Again and again I tried some likely-looking spots—deep pits, and the edges of rolling currents—with still the same unsatisfactory results. At last I landed a fish on the stretcher (red hackle, with gilt twist), but it was only a smolt. This youthful salmon was larger than I usually take them, being fully 6in. long. I am given to understand that these little creatures are wondrous pretty eating; nevertheless, I flung him in again. Soon after this I took my first trout on a blue upright; he was not three ounces.

From ten o'clock until two I only killed about a dozen trout, and am quite at a loss to account for such poor sport. I did not miss a single fish; every rise I had resulted in a capture (many smolts being taken). At two o'clock the drizzle blew away, and the sun came out very bright and glaring. Accordingly I hove-to for an hour or more, and sat down in a beautiful spot, under some trees, facing a noisy Welsh-like cascade. In front, but slightly to the left, rose a tree-clad height, crowned by Mr. Lock's rustic summer-house. The time passed quickly and pleasantly; I lunched, and smoked, and, lulled by the plashing of the descending waters, almost dreamed. When the sun became again obscured, and began to sink behind the lofty moors to the westward, I moved onwards. Fishing carefully and patiently until dusk, I creeled four more, making a total of sixteen *small* trout. The length of water fished could not have been less than three miles, though in places it was unapproachable for bushes and trees. Had I worn waders I could have fished every yard of it, but I do not think the result would have been more satisfactory, for I was most careful to keep behind, below, and out of sight.

The cascade where I took my contemplative rest deserves some notice. It is about two miles above Dulverton, as the river winds. Upon reaching it, on the right side (going up stream) there will be found a gate, leading into a large wood. Several massive boulders in mid-stream stand high above the water, creating very deep pools, in which the waters go swirling round. When the stream has recovered the steady onward flow, temporarily interrupted by these rocks (which interruption it sonorously protests against), it rolls onwards for some distance in a channel some yards deep. For a furlong below these falls is some of the likeliest trout water that could possibly present itself to a fly-fisher's eye. And yet this length only yielded me two small troutlets. I cannot account for it otherwise than by quoting the familiar remark—"they were not sporting." Whilst hunting with the Devon and Somerset stag-hounds one day last week, I came upon a Dulverton fisherman, well known for his skill and assiduity. The stag was at bay in the Exe, just below Bridgetown, and, in the field where we watched the closing scene was a man armed with rod and creel, looking rather out of place among the booted, spurred, and mounted ones. This disciple of honest Father Izaak is the angler I commenced to tell you about. He told me that just as he was engaged in the peaceful joy of playing a trout, our stag leaped into the water close to him. Then what a change came over the scene! Instead of the clear, quiet river, with one calm, happy angler pursuing his gentle art upon its banks, suddenly a mob of horsemen, a baying pack, the huntsman's cheering cry and sounding horn form a scene truly sporting—but how widely different in character. The gallant stag, with "brow, bay, and tray, and three 'pon top," plunges backwards and forwards in the river, now and again leaping right out of 5ft. of water, and clearing easily the overhanging boughs, and the hounds savagely, yet warily, follow him noisily up and down, some on shore, and some swimming in his wake, whilst the field, with glowing, smiling faces, eagerly await the end. The water has become foul and of pea-soup colour, and our angler, whose sport is thus rudely interrupted, is much troubled to keep the long and vibrating fly-rod out of harm's way. I should have gone much farther up the Barle the day I had such poor sport in the water preserved by the Rev. Mr. Jellicoe, and when I paused by the cascade, had I found that the fish were at all inclined to be caught; this not being their humour, I spent the time doing the *dolce far niente* that would have carried me up to Withypool. Had I gone upwards as far as Withypool I should have passed the "strictly preserved" water of the Rev. R. Newman, alluded to by the Editor in the Fishing Gazette of September 20. Mr. Newman's preserved water is bounded by three fields—that is, the whole length of it—and the other side the river (the right side going upwards) is not under the reverend gentleman's control. Practically, by paying a small fee at The Lion, The Lamb, or the Post Office, Dulverton, one may fish all the way to Withypool, a distance by water of nine miles.

There is a nice inn at Withypool, where one can get fairly comfortable quarters at a moderate charge; but, as the accommodation is limited, it will be desirable to write before going there.

Twice a year, generally about July and August, Mr. Collier visits the Barle and Exe, giving a day to each river. The evening of the first day is always spent at the inn at Dulverton, Mr. Collier, his party, his whip, and his hounds, completely engrossing all the accommodation and attention. Though "ottering" is a very pretty sport, it would not be well for the man bent on angling to drop in at this inn at dusk, promiscuously, at a time when Mr. Collier, M. O. H., has "put up" there for the night. From Withypool Mr. Knight's portion of the Barle could be worked (three miles' walk before commencing operations), and also the Sherdon Brook, which will be found on the left, some distance above Landacre Bridge; the Exe is also not more than three miles off, viz., at Exford. The latter is a much better centre than Withypool, and the quarters are very superior in every way. As I have said before, Exford is a particularly good fishing centre, because the real moorland streams are accessible therefrom. About five miles below Exford, following the winding course of the Exe, we come to the pretty village of Winsford. Here there is an inn that I can particularly recommend—The Royal Oak (Mr. Evans). The inn is fairly large, very quiet, prettily situated, cooking good, terms moderate, beer first-rate.

The Exe is close at hand. I think it would be a good plan for an angling stranger to fish from Dulverton to Exford, making two days' work of it, and stopping the night at Winsford; then *vice versâ*. The stretch of water from Hele Bridge, near Dulverton, to Winsford would be fully seven miles, and one fishing it would, soon after commencing, arrive at the Rock Inn, Bridgetown, where the stag had his throat cut the other day. The day's walk upwards from Winsford could be made as long as the veriest glutton would choose by going on past Exford, and continuing *ad lib.* till dusk. Above Exford the stream is very small; but, when the springs have been broken by continuous rains, good sport is to be looked for. The head of the River Exe is six miles above Exford, and there are trout all the way. It is a very noticeable feature of Devon and Somerset trout that they are to be found in the very smallest *trickles* of water. Upon the moors there are numerous "leats," not more than a foot wide sometimes, that run into brooks tributary to the rivers. In these "leats" I have frequently seen trout ½lb. weight caught by the worm, "groping," and other methods adopted by the artful native of the wilds. These trout are exceedingly plump, shapely, and of beautiful colour.

I am grateful to "S. B. C." for the information contained in his letter to the Fishing Gazette of September 13th, when he says, "The fishing on the Mole below South Molton to its junction with the Bray is not free. It is true that, owing to the courtesy of the riparian owners, gentlemen well known in the neighbourhood are permitted to fish; but, sir, your readers must understand that permission is required."

Whilst I do not doubt that "S. B. C." is perfectly correct in saying the fishing is not free, yet, in justice to myself, I must add that South Molton anglers treat this water as free fishing—and in no small number. And, morever, I am informed by those who, like "S. B. C.," have lived in South Molton all their life, that such has been the case during that period.

Should "S. B. C." feel inclined to meet me at The George some Saturday, and stand "a little bottle," I shall be charmed with his munificence, and to discuss the question and my share of the diluent.

As the trouting season is now over, a few days ago (when it was on its last legs) I visited the Yeo river for a few hours in the afternoon, being somewhat weary of writing this and other contributions to current literature.

I was guilty of thoughtlessness, carelessness, culpability, clumsiness—call it what you will—unworthy of any angler. What words shall express, then, the guilt of a "piscatorial preacher"?

I started for a few hours' sport, to catch a brace for breakfast, with the fixed opinion that they would not sport, &c.; and so took neither creel, fly-book, or spare cast, but had simply rod and line and a cast of flies on my hat.

At the first throw I hooked a good fish on the topmost bob—a plain, smoky hackle—and at once lost both, the gut parting just where the fly is tied. Of course, having no spare flies, I could not renew what appeared likely to prove a favourite. I went on with two flies, devoutly hoping that no accident would happen to my remaining tackle. These two flies were a "red spinner" and a "little pale blue dun." The weather was dull and close after a drizzly day, and the wind blew lightly and almost up stream. The next cast I made hung me up to an alder bush, overhanging a favourite pit. My feelings were indescribable. I gave a savage pull, and got free without mishap. "This looks like luck," thought I. I found the fish in places different from where they used to lie in the spring and early summer; they lay against the banks in the still places beside the current. After killing a leash, I was down to the likely spots, and between three o'clock and half-past six so loaded the pockets of a light, thin overcoat I was wearing, that I sadly thought of my absent creel. The result of this short, but pleasant, spell was seventeen fish: seven 2oz., three 3oz., five ¼lb. fish, and two weighing exactly ½lb. each. (Fact, not *rosiness*, though unusually good, I admit.)

This was a wonderful afternoon's sport, and quite unexpected. Had I began earlier in the day, I believe I should have had the best day I have ever had in this stream out of the scores of days I have fished it. The water was rather low and not a bit coloured.

The next day I resolved to have a day; so I was on the water at 9 o'clock, fished until dark, traversed about seven miles of water, killing only eleven trout, only one of which was a fish, and that was a real beauty of 10oz. And yet wind, weather, and climatic influences were just the same as they were—or appeared to be—the day before.

## BARBEL FISHING IN THE TIDEWAY.

A Thames angler, writing by name to Mr. Spreckley, says:—"I know you will be pleased to hear of my good sport, as it shows there are plenty of fish in the river. I have been having a good try last week—two half-days with a friend on the Wednesday, and another friend on Friday by invitation; the other days by myself. On the Monday I caught a 6-pounder; he was hooked just outside the jaw, and it took me forty-five minutes to land. Tuesday I had ten barbel and some flounders. Wednesday we took twenty-one barbel, two good dace, some flounders, and a fine eel. Thursday, twelve barbel and some flounders. Friday, twenty-five barbel and some dace—we caught fourteen before eleven o'clock; and on Saturday eleven barbel, one 4lb. 2oz., some 3lb., and smaller. All these fish were caught ledgering with the exception of one or two. I am surprised at the numerous applications I have received for the fish, the poorer classes seemingly being fond of them, but, with the exception of a few, they were all returned. From all I can learn, few anglers return their barbel, which is a great pity." Mr. Spreckley guarantees the accuracy of the above very interesting report.

B.

## ANSWERS TO CORRESPONDENTS.

W. G. Harris (Tunbridge Wells).—The sea fishing is good at Ilfracombe. You can get salmon fishing in the neighbourhood of Barnstaple. Call on Mr. Rowe, fishing-tackle maker, and he will set you up with tackle and information. He has a very good rule—"No tackle, no information." Giving gratuitous advice to a party who gets his tackle at another shop won't keep a business going.

R. C. D.—The "Angler's Diary" does not give the names of the fishermen at Great Marlow; Little's "Angler's Annual" says, "The Shores, Whites, and Rockwells are the fishermen at Great Marlow," but it does not say how many there are in each family, or what their Christian names are. It would hardly do for us to recommend one before another.

E. W., Bunhill-row.—We advise you to get "Little's Angler's Annual" (15, Fetter-lane, price 1s.), and consult its pages for fishing spots on the Lea and Colne and other streams near London. There is a fine stock of fish at Godfrey's water, near West Drayton, on G.W.R.; but they are hard fished, and you must be a good hand to get on terms with them—in fact, all the public or private water near London, which one can get by paying so much per day for, is hard fished, and only those who know how to fish ever do much.

F. Ford.—We cannot tell you the weight of the heaviest roach "ever taken in any water in England." We have one of 2lb. 4oz. now being set up; but heavier fish than this have been taken.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

## IMPROVEMENT OF EYED-HOOKS.

Sir,—With some of the ideas mentioned by Mr. Bankart I cordially agree. There is no doubt that the present twist in the bend of eyed-hooks is very senseless; but Mr. Bankart is mistaken if he supposes that I have had any hand in introducing it. On the contrary, the very improvement he now suggests was advocated by me in the spring of 1881. But the makers declined to carry out my wishes, and the only course open to me was to get the hooks sent in the soft state perfectly flat, so that I could give the side-twist myself before they were tempered.

This I did in April, 1881, with one gross of May-fly hooks and one gross of No. 2. Later in the same season I had a second lot of May-fly hooks, which were twisted in the same way, but less sharply. This last batch are the best eyed-hooks I have ever seen, and I have plenty of them left. I also had, in April, 1881, some other May-fly hooks a trifle smaller, and which I did not doctor at all. For the sake of distinction these may be referred to as the "faulty bend." I gave Major Turle and Mr. Marryat their choice out of the two kinds I had in 1881, and Major Turle chose the improved bend, and Mr. Marryat the others. Another season I supplied Mr. F. Francis with some of the "faulty bend," which he asked me to get for him. All these three anglers expressed themselves satisfied, and I mention this to show that it is impossible to please everyone with the same pattern.

Now, in support of my statement that I have already advocated what is now proposed by Mr. Bankart, I inclose three packets of flies and hooks.

1. Contains a grey drake tied by myself, two loch flies tied by Mr. Bankart himself, and a third loch fly on faulty pattern—the first three being on the improved hook, and tied some time between April, 1881, when I twisted the hooks, and the following June, when I was fishing in Scotland, as Mr. Bankart will remember. If you like to send him the two flies (large March brown, and grouse wing and purple body) he will probably recognise his own handiwork. I had sent him the hooks and he tied me these two flies as patterns, and as such I have kept them, though both have been imitated since. Of the improved hooks in this packet, it will be noticed that all are bronze-coloured, and all twisted rather sharply in the direction contrary to that usually adopted, and this peculiarity Mr. Bankart will probably remember. I fancied at the time that when the hook was in the fly-vice, the reversal of twist would make fly-tying easier.

2. Contains 5 blue hooks with the approved side-twist, some more, some less. Also divers shapes of eye will be found. There is one brown hook with the faulty bend put in this packet for comparison. This lot of blue hooks I twisted in the autumn of 1881, with the exception of about two dozen which Mr. Aldam manipulated, as we had been in correspondence about this desirable improvement some months before.

3. Contains a few No. 2 hooks, which I twisted with the first lot of brown May-fly hooks in April, 1881.

I am quite sure of my dates, because I am in the habit of dating each packet of hooks as I receive them. I have friends who remember all the circumstances, and who saw me engaged in the twisting process, and I have never twisted any myself since 1881.

Theoretically, there can be no doubt that it is best to have the hook perfectly flat, and in one plane down to the *second bend*, and then a slight side-twist; but does it amount to much in practice? Some of the best and most skilled anglers in Hampshire begged me to give up theorising, and said the hooks were good enough; so, as I could not get my own ideas carried out, and had not time to twist the hooks myself, I abandoned what I felt to be a desirable improvement—at all events, in theory. I have the best part of two gross of my own twisting still left, and I think they would be very difficult to beat for any class of fly fishing. The Old Limerick, however, is not a good shape for floating flies, and it was deliberately abandoned for the "Snecky Limerick" after much consultation with those best qualified to judge of the requirements of chalk-stream fishing with tiny flies. Mr. Bankart will readily admit that his experience of this kind is extremely slight, and as I wanted practical, not theoretical advice, I did not consult him. What was wanted was a hook in which the whole of the shank should be utilised for the body of the fly, so that the hook should not only be well covered, but should have as little as possible of superfluous wire, to add weight to the fly. Mr. Bankart's *ipse dixit* that I utterly spoilt the shape of the hooks must, I think, be taken with some reservation. The "Snecky Limerick" in itself is not an objectionable shape for any sort of fly fishing, if the side-twist is properly made, and there are many who consider this bend the best for all small floating flies; so much so that this shape has recently been largely used for flies by those who don't use eyed-hooks. Even the most fastidious admirer of the Old Limerick could hardly find fault with some of the blue hooks in packet 2. Be good enough to give your opinion, Mr. Editor. In any case, I think it hardly possible that, with this letter before them, the readers of the Gazette will endorse Mr. Bankart's view that I have done nothing in the way of "elaboration and refinement" since 1880, and that in changing the shape of the hooks without consulting him I utterly spoilt them. This is one of the most unfounded and cruelly unjust assertions that ever was uttered, and so it will be regarded by all those who have helped me with advice and suggestions during the last four years. If the hooks have been utterly spoilt, how is it that Mr. Bankart did not set us right before now—when I sent him the improved patterns in 1881, for instance? If Mr. Bankart had experienced one-tenth of the trouble I have had over the business (and which I do not exaggerate, though he affects to ignore it), he would be a little more tolerant in his opinions of the work of one who has spent time, labour, and money, however unsuccessfully, in the endeavour to interest and help his brother anglers, and with no other object.

However, I am still trying once more with a new firm of hook makers, whose first samples of 000, 00, and 0 proved excellent on the Test a month ago. Fish of 2lb. and upwards came to the net on a 00 hook again and again, and we never found a faulty barb in a week's fishing. The improved side-twist has been fully explained, and patterns supplied to the makers; whether they can carry out my wishes remains to be seen. If they succeed, I shall not be slow to publish the result: if they fail, I shall give up catering for the public as a thankless task.—I am, &c.,

H. S. Hall.

P.S.—As the Editorial footnote to Mr. Bankart's first letter of Sept. 27th is a little misleading, I hope I may be allowed a word of explanation. On Sept. 8th I wrote a full reply to Mr. Bankart's letter of the previous week. It was a long letter (13 pages of foolscap), and in it I met Mr. Bankart at all points, though I was away from home and had no access to letters or other memoranda. When I sent this up to the Gazette the Editor begged me not to pursue a personal dispute any further in his columns. I acceded to his wish, and as I was asked to confine my remarks within the space of half a column, I wrote an entirely new letter on a different basis altogether, and on the understanding that it would close the dispute. It was impossible in the space allotted me to attempt to refute three columns of Mr. Bankart's, and so I contented myself with the letter of Sept. 20th, and it must have been evident to all readers that in every line of that letter there was a studied brevity and terseness of expression. Had I known that Mr. Bankart would be allowed to re-open the controversy, I should have written very differently. To Mr. Bankart's triumphant assertion that I have no proofs to offer, I can certainly give the most emphatic contradiction possible; but he has contradicted himself often enough in all conscience. On May 31st we have an account (utterly unintelligible to me even now) emphasising points the importance of which no one ever heard of before. On June 21st we learn that "Mr. Hall got the hooks perfected." On Aug. 9th Mr. Bankart says, "I wrote hurriedly, and I intended to give him the lion's share of credit." In the letter of Sept. 6th it is stated that I did nothing at all at first, and that there was no partnership after 1879, while further on in the same letter we are both represented as having been "equally active" up to that date, and everything is asserted to have been *in statu quo* since 1880. Lastly, on Sept. 27th, there appears the assertion that the hooks were utterly spoilt by me in 1880, and this is followed by suggestions for future improvements, which the present letter shows I advocated and acted upon three years ago.

[If this most unfortunate controversy leads to the improvement of the eyed, hook, it will not have been useless. Several of the samples sent us by Mr. Hall, including the sample flies dressed by Mr. Bankart, fulfil exactly the requirements mentioned by Mr. B. in his letter last week, and it seems to have been nothing but the refusal of Messrs. Hutchinson to make the hooks as desired by Mr. Hall which prevented the suggestion being carried out in 1881. We have every reason to believe that the firm which is now experimenting for Mr. Hall will carry out his wishes. It is abundantly clear that Mr. Hall not only did not spoil the shape, but that he did all he could to get the hooks made in the way he, Mr. Bankart, Major Turle, and others, including ourselves, think is the best. We know what it is to get a firm to carry out all one's suggestions! In face of the great reputation for killing powers which the eyed-hook, in its present shape, has attained, we think that Mr. Bankart will admit his expression "utterly spoilt" was uncalled for; indeed, it is still a question whether the new shape will hold, or take hold, better than the present one—we think it will; but a hook which Mr. Marryat, who probably fishes more, and more successfully, than any other trout angler, is satisfied with cannot have much the matter with it!

We must just mention that our reason for inserting Mr. Bankart's letter after we had stated the correspondence was closed was that Mr. B. considered he had the right to the "last word," as Mr. Hall had commenced the attack. Mr. Hall's contention is that Mr. B. commenced the controversy, and that he (Mr. Hall) ought to have the last word. The consequence is that we are in the very awkward position of being considered unjust by that one of our correspondents who does not get this "last word." We have it from Mr. Bankart himself that he is quite ready to shake hands with his old friend and forget this unpleasant episode; it would give us the greatest pleasure to learn that Mr. Hall was ready to do the same. Neither need fear the least loss of dignity in the matter, for if both these gentlemen went on for ever scratching themselves with this eyed-hook, not much damage would be done on either side, for the fact remains that Mr. Hall has acknowledged the help he received at the outset from Mr. Bankart; and Mr. Bankart acknowledges that the "lion's share" in the matter belongs to Mr. Hall. We should be extremely pleased to be able to state next week that these two good and true anglers have adopted our suggestion, and instead of tearing each other to tatters, or attempting to do so, were again amicably endeavouring to "improve the eyed-hook."—Ed.]

---

Sir,—We inclose you, for your inspection, a few eyed-hooks (altered) to suggestions made in the Fishing Gazette, which we think is just what the angling public want. Will you also open lot marked for Mr. Bankart, and examine large size, and forward them to Mr. Bankart? We shall be pleased to alter them in any way to suggestions made by yourself, or the angling public, either privately or through the medium of your paper. We ask you, as a favour, not to publish our names, for reasons best known to ourselves, but permit us to sign ourselves—Yours, &c.,

Redditch, Sept. 29. Waltonians.

[This firm has quickly carried out the "improved" idea as regards the slight side-twist of the point. We have sent the samples to Mr. Bankart, and asked the firm to send some to Mr. Hall.—Ed.]

---

Sir,—I shall be glad if you will allow me to say a few words in reference to the improvements suggested in Mr. Bankart's letter of Sept. 27. I inclose four flies, which were tied by Mr. Hall, and given to me by him at Loch Laggan in Aug., 1881. If you will examine these you will find that the hooks are twisted exactly as Mr. Bankart recommends, the only peculiarity being that the direction of the twist is reversed. If you hold the hook with the bend towards you, the twist is to the right in these hooks, and to the left in those ordinarily sold.

The flies inclosed are upon hooks which Mr. Hall twisted with his own hands. I have known Mr. Hall for many years, and for the last ten have been in almost daily communication with him. I have fished with him scores of times, and, probably, no man living has had as good an opportunity of discussing with him his hooks and flies. Knowing what I do of Mr. Hall's recent work in the improvement of eyed-hooks, Mr. Bankart's statement that Mr. Hall "utterly spoilt the hooks" seems to me most unjust. I beg that you will give this letter a place in your next issue, to let your readers know that the improvements now suggested by Mr. Bankart are by no means new, but were advocated by Mr. Hall fully three years ago.—I am, &c.,

Sept. 29. H. P. Luckman.

[As we have stated in our footnote to Mr. Hall's letter, in these hooks made by him (or rather shaped by him) in 1881, the slight side-twist of the point commences from the bend next the point, and not from the bend next the shank. In fact, it is just what Mr. Bankart wants, or we have quite mistaken his letters and samples. We have since received another letter on this subject, also enclosing similar "correct" patterns of hooks made by Mr. Hall in 1881, and given to our correspondent, who signs himself "*Sic Vos Non Vobis*."—Ed.]

## THE SURREY CANAL, THE SERPENTINE, &c.

Sir,—I have an angling ticket for the Grand Surrey Docks and Canal Company—charge, 1s. It is dated 1840. I have been there since, and in the Timber Docks have caught fine perch.

The Directors only can give permission. My last ticket for the Serpentine *River* is dated 1846. It was a river then, as the Westbournes from Harrow, &c., went direct through the Serpentine, and through the Vauxhall Bridge-road to the Thames, the sewers in Bayswater-road and Knightsbridge now taking the in and outflow.—I am, &c., T. R. Sachs.

22, Hyde Park-place, Sept. 27.

## TACKLE FOR PERCH FISHING WITH STICKLEBACKS.

Sir,—Your correspondent, "Piscator Minor," will find the tackle we use for bream fishing in the Trent just the thing for perch fishing with sticklebacks. They are about 3ft. long, and would comfortably kill a perch up to 2lb., if not more.

The *red throater* sticklebacks, I think, are the most attractive. You may not be aware perch are very partial to *gay* colours.

If you know a place where there are a number of perch, put a bunch of gay flowers in a clear glass bottle and mark the result. Just the same with pike: they will often take a *gold* fish when they will take *nothing* else. Change, I suppose, and, like a good many others, very often suffer for their fancy.

You say, very truly, the tackle sold for perch fishing is very often far too coarse. I have seen it strong enough for jack fishing. As a rule, there is nothing so very formidable about these Zebra-marked gentlemen to warrant the use of a *gimp bottom* with a No. 5 hook in a water where there is not a single jack. Depend upon it, the finer the tackle the greater the sport. All I know is, when a boy I have taken perch up to nearly 2lb., with similar tackle, on a *dace* line. "P. M." should cut off the spines with a very sharp pair of scissors. It is an improvement.—I am, &c., Mark Antony.

## "SHAWFORD BROOK"—THE GREEN INSECT.

Sir,—In reply to your query at foot of my short article on "Shawford Brook," in last week's Gazette, I beg to inform you that I am not a member of the newly-formed angling society at Stafford. If you inquired with any intention of visiting the locality when you may next find yourself at Stafford, it is easily reached from thence by train to Norton Bridge, a run of about ten minutes, and Walton's house is about half a mile or so from the station.

If the natives of Shallowford do not know anyone of the name of Walton living there, as one of them informed me when I asked which was Walton's house, they will no doubt be able to tell you which are the "Corporation Cottages," which is the name the building seems to have acquired now, no doubt in consequence of its division into two, and ownership by the Corporation of Stafford.—I am, &c.,

W. T. S.

P.S.—Could you give me the dressing of the fly called the "green insect," used on the Teme? If not, perhaps some of your correspondents in that neighbourhood would kindly do so.

[We do not know the dressing, but should like to.—Ed.]

## WHERE TO BANK FISH IN THE THAMES.

Sir,—Would you kindly inform me if I can get any *bank* fishing near Teddington, or where up the Thames is the nearest spot from London where I might expect to fish from the bank with some prospects of success?—I am, &c.,

Chancery-lane, London. H. M.

[We have asked Mr. W. H. Brougham, Secretary of the Thames Angling Preservation Society, kindly to answer this question. Good fish are often taken both just below the Weir and just above it, and in the Lock Cut at Teddington, *all* on the Surrey side. The rise and fall of the tide makes bank fishing uncomfortable work below Teddington, the banks are so wet and muddy, and the number of pleasure boats is much greater than above Teddington.—Ed.]

My Dear Sir,—Please inform me, from your experience up and down the river, what are the best spots for *bank* fishing between Twickenham and Kingston?—Yours very truly, R. B. Marston.

W. H. Brougham, Esq.

*Answer.*—There is, and always has been good bank fishing all the way from Twickenham to Kingston, but the nearer you get to Kingston Bridge the closer you find yourself to the rough element of anglers. Some distance lower down than the bridge I have known plenty of good fish taken near to Stevens's eyot, and then again at the One Mile Tree. In the immediate vicinity of Teddington Lock, the bank anglers get some good fish. The neighbourhood of Twickenham affords excellent sport in fly fishing for dace.

## THE RIGHT TO A THAMES SWIM.

Sir,—May I ask for your advice upon the following:—Myself and friends started with Samuel Cole, of Twickenham, to fish a swim opposite Pope's Villa, on Saturday, Sept. 20, and, on arrival, found a pole fixed, placed there by a person of the name of Johnston, butler to Lady Manners, or by his orders.

I advised Cole to fix in the swim, but he had some compunction in doing so. About 10.30 Mr. Johnston came down. I gave him my opinion, which, I am bound to say, did not agree with his—in fact, he was very impertinent. I understand it is prohibited to the fishermen to secure a swim in this way, and cannot see why a private individual should have any priority over them.

May I ask the insertion of this, and your reply in the Fishing Gazette, with apologies for thus troubling you?—I am, &c.,

Waverley Lodge, Lower Richmond-road, Putney. W. H. Britton.

[We think our correspondent should give his apologies to Mr. Johnston and not to us. It is well understood on the river that when an angler, or his fisherman for him, has put a pole into a swim, the swim is taken for the day, and no one thinks of interfering. There is no legal right to the swim, but there is a strong moral right, and Thames anglers and fishermen will do well to uphold it strenuously. It is quite possible Mr. Johnston had had the swim in question baited; but even if that was not the case, he should have been allowed to fish in the spot he had, according to the laws of angling, secured by his pole. Of course, if Mr. J. had not come down by 10.30 (quite soon enough for the feed at this time of the year), or in a reasonable time, he would doubtless have had the pole removed to show the swim was at liberty.—Ed.]

## A NOTE FROM NOTTINGHAM.

Sir,—There has been very little doing the early part of this week, the water being so discoloured, but is now fining down rapidly. Sport has been very bad in the upper parts of the river, with the exception of Mr. H. Coxen's nice basket of fish. There have been a few bream taken in the Weston water. Mr. J. Jackson caught five pike in the Shardlow length; at Coldwick there have been some good bream and barbel taken. Mr. Baker, fishing in the same water, caught a pike under rather peculiar circumstances: he was bream fishing, and had laid his rod down while getting some refreshment, when, taking it up, there was a pike on, having taken his worm, and, lucky for him, his tackle caught between two of the pike's teeth, and with the assistance of some friends landed him, weighing 6½lb. Another gentleman, fishing the same water last week, had a very remarkable bite: having left his mackintosh on the bank, a cow came up, and had got three-parts of it down her before he found it out, and, with a lot of pulling and tugging, managed to get it back again, *not much the worse.* Another fisherman got 17lb. of roach and bream at Ratcliff Ferry, on Friday.—I am, &c., A. W.

Nottingham.

## FISHING IN THE BOLLIN.

Sir,—Sam Brooks having been out of town, I could not reply to "Bollin's" letter sooner, in which he says his friend has taken larger baskets of fish "than Sam Brooks and Mr. C. Cartwright."

What I said was "that Sam caught them whilst fishing with Mr. Cartwright" (not the combined catch of the two, as "Bollin" infers). Sam requests me to state that he caught his fish in five hours—not in a freshet, but with the water low and clear. He also wishes me to say he took another basket of 25 fish, roach and dace, on the 18th inst., running (not averaging) from 7½oz. up to 1lb., one of the dace weighing 10oz., this catch occupying 4½ hours to effect.

It is probable that "Bollin's" friend has taken the large baskets of fish he mentions; but not having heard of them, I do not see how I can be over the mark in saying Sam's was the largest.—I am, &c., John Thomas.

74, Oldham-road, Manchester, Sept. 29.

## MAJOR TRAHERNE'S LETTER ON STRIKING A SALMON.

Sir,—Major Traherne's letter, published in your issue of the 20th ult., opens up such a very important question to salmon anglers, that I have no hesitation in addressing you, in hopes of gaining more information upon this subject.

When such well-known and accomplished salmon anglers as Major Traherne and Mr. Kelson differ in opinion in matters of this kind, less experienced men may be excused for desiring further knowledge of what to do at the most critical moment in a salmon angler's experience—viz., when a salmon rises to the fly: Shall he strike his fish, or allow the salmon to hook itself?

Major Traherne states that he has lost more fish with double hooks than he ever did with single hooks; but, he adds, *he did not strike from the winch.*

Now, Sir, this appears to me to be the very point of Mr. Kelson's argument. The Major omits to perform the one act necessary to success.

Mr. Kelson tells us he has fished all his life with single hooks, but finds that if the double hooks are understood and properly used, they are far better. The pith of his argument *is* to strike from the winch with flies up to a certain size, and he gave us instances when the line ought to be held instead. "The winch should be so constructed," says Mr. Kelson, "that in hitting a fish the hooks penetrate before the reel-plate revolves; but that it *will* revolve before the flesh is torn."

By following Mr. Kelson's instructions, I find it absolutely impossible to break the gut or line, or strike too hard,

The strike should be a *long, firm, but steady pull,* not a jerk. Major Traherne states, "when a salmon rises to a fly no jerk or strike should be made, and the rod should be kept in the same position as before."

Are salmon, then, the only fish that cannot discern between an artificial fly and a real bait when in the mouth? Trout, grilse, sewin, and other species of the salmonidæ will instantly reject an artificial fly unless struck, and my impression is salmon will do the same.

The only instance in which a salmon need not be struck is in a strong rapid stream, as it is likely to hook itself, but even then a steady strike from the winch is better.

The only point Major Traherne is most anxious to effect is to fix the barb: this is much more effectively done by a long, steady strike than leaving the matter to the fish. In fact, the Major has to admit this in the following statement: "But when fishing with large flies a strong pull or two may be necessary, but no jerk or strike."

This strong pull I consider to be the strike. I should never think of striking any kind of fish by a jerk; it invariably ends in the loss of tackle, fish, and temper.

Personally, I am decidedly in favour of striking from a properly adjusted ordinary check winch, but should be delighted to hear the views of other salmon anglers on a question of so much interest.—I am, &c., Wm. Thomas.

103, Talbot-road, W., Oct. 2.

## ANGLERS' BENEVOLENT SOCIETY.

Sir,—The next meeting of this society will take place on Friday evening next, Oct. 10, at nine o'clock, when the committee will decide as to the disposal of the surplus prizes left over from the late Angling Tournament.—I am, &c.,

R. Ghurney, sec.

New Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.

N.B.—Secretaries of societies will oblige by a settlement for Tournament tickets.

## THE LARGE WICKHAM FANCY.

Sir,—On seeing Mr. Bankart's letter of Aug. 23, I tried some large Wickhams, and have done better with them than any other flies. For the wing I used a pale brown feather from the wing covert of an Egyptian goose—at least, the man who gave them to me said they were from that bird. He has promised to get me some more, and if he does I will send Mr. Bankart one or two to try.

A friend wants to know the following:—In a river which is not in a salmon district, may he fish with rod and line for salmon, peal, or sea trout, until the 1st of November? I say yes, but he wishes for your opinion; kindly give it in your next.—I am, &c.,

Budleigh Salterton, Sept. 28. E. Gosling.

[He can fish with rod and line up to November 1; but we strongly advise him to make sure that the river is *not* under a Fisheries Board, as they have the power, within certain limits, to alter the beginning and the end of the close time.—Ed.]

## WHARFE GRAYLING FISHING.

Sir,—In answer to "Cinnamon," let him stick to Wharfe flies; fancy patterns are no use. From now till the middle of November is the best time for fly, and as he dresses flies, let him try Orange Partridge and Smoke, or W. Brumfitt, Otley, will supply him. I can vouch for the above being killers, and both are well known favourites. Red tag is also a capital fly; I have killed grayling up to 1lb. 8oz. in Wharfe with it.—I am, &c,, Orange Partridge.

Chester.

["Cinnamon" said he had tried the Standard flies. If he has not tried the regular Wharfe patterns, why does he not do so? "Orange Partridge" says fancy patterns are no use, and then recommends the red tag. The orange, mulberry, and other bumbles, the "Francis," the silver and gold Wickham, are all "fancy" flies, and will kill grayling as well as any other patterns. Mr. Pratt, of Otley, makes capital Wharfe patterns. As soon as frosty weather sets in, the "gardenia" kills grayling best in Wharfe.—Ed.]

## SUBSTITUTE FOR LANDING NET.

Sir,—In the Gazette of Aug. 9, "Fly Fisher" asks for information as to an instrument for landing fish. Last summer Mr. T. Thorman, fishing-tackle maker, 17, Bridge-street, Carnarvon, told me he had invented something to take the place of landing net or gaff for salmon. I have not seen it, but no doubt if "Fly Fisher" writes to Mr. Horman, he will give him all necessary information.—I am, &c.,

Budleigh Salterton, Sept. 28. E. Gosling.

[If the invention referred to is the steel spring claw with teeth, then we advise our readers to stick to the gaff or landing net; if they happen to sit down on the "claw" when set, they will not be able to sit down again for a long time; or, in getting over a hedge, when the landing net handle would be a support, this claw would indeed be a delusion and a snare. Did Mr. Gosling get our letter about his articles?—Ed.]

## THE CENTRAL ASSOCIATION.

Sir,—At the last meeting of the above, in a speech by Mr. Crumplen, it was observed that the terms offered by the Anglers' Association of so many representatives for each hundred tickets taken was unfair, inasmuch as many had joined the Anglers' Association in preference to the Central, believing they could not get the S.W.R. privilege tickets from the Central. It is only fair that anglers should know the truth of the matter. Before Mr. Crumplen made his speech, the Anglers' Association had offered the Central to let things remain as formerly up to the end of the present season—viz., 24 committee men from the Anglers, and 12 from the Central. This would be allowing a third of the representation to a body that only contributes a sixth of the funds.—I am, &c., X.

GREAT WESTERN RAILWAY.

RIVER THAMES.—The Great Western Railway, having Stations on the Banks of the River at Brentford, Windsor, Taplow, Maidenhead, Cookham, Bourne-end, Great Marlow, Henley, Reading, Pangbourne, Goring, Moulsford, Wallingford, &c., affords unequalled facilities to those desirous of visiting it for Fishing and Other Purposes.

ANGELRS' TICKETS.—Cheap Third-class Return Tickets, available for three days, are issued at Paddington, Weatbourne-park, and Kensington (Addison-road), to Stations within 50 miles of London to members of "The Angler's Association," and "The Central Association of London Angling Clubs," who present their Cards of Membership at the time of taking their tickets.

CHEAP DAY EXCURSIONS.—Cheap Day Excursion Tickets are issued daily by certain specified trains until October 31st, from Paddington, Westbourne-park, Hammersmith, Kensington (Addison-road), and Uxbridge-road, and certain Stations on the Metropolitan and District Raiilways to

J. GRIERSON, General Manager.

FISHING & BOATING.

SWAN HOTEL,
WALTON-ON-THAMES.

On the Banks of the River in the Centre of the best Fishing on the Thames.

This Hotel has been newly-decorated throughout. Splendid accommodation for Fishing Gentlemen and Boating Parties—parties for whom the Hotel is specially adapted, with every convenience; good Stabling and Coach-houses, Fishing Punts, Boats, and Men provided at the shortest notice. Conveyance sent to meet any train.

Mr. Alfred Mackrill took 110lb. weight of Bream at Walton on Sept. 22nd and 25th, 1884. He says the river is "literally paved with fish."

Address, PROPRIETOR, SWAN HOTEL, WALTON-ON-THAMES.

TO FLY MAKERS AND OTHERS.
Gold, Amherst, Reeves' Versicolor, and other Foreign Pheasants for Sale.

Also SKINS and FEATHERS of the same, specially selected for Flies.

Apply to Mr. HORNE, Hampton Park, Hereford.

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | | |
|---|---|---|---|
| Add | 30 | minutes for | Chelsea. |
| | 40 | " | Putney. |
| | 45 | " | Hammersmith. |
| | 50 | " | Barnes. |
| | 55 | " | Kew. |
| | 75 | " | Richmond. |
| | 80 | " | Twickenham. |
| | 85 | " | Teddington. |

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

FOR TIMES OF HIGH WATER AT LONDON BRIDGE.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | October | 4* | 1.9 | 1.30 |
| Sunday, | " | 5 | 1.49 | 2.6 |
| Monday, | " | 6 | 2.25 | 2.46 |
| Tuesday, | " | 7 | 3.5 | 3.24 |
| Wednesday, | " | 8 | 3.46 | 4.7 |
| Thursday, | " | 9 | 4.29 | 4.51 |
| Friday, | " | 10 | 5.15 | 5.39 |

NOTE.—High Tide October 6, 7, and 8.

* Total Eclipse of the Moon, commencing 8.15 p.m., visible at Greenwich.

## THE LOWER THAMES.

### GENERAL REMARKS.

The present period of the year is subject to a great demand for the white, or coarse fish, and it requires all the vigilance and energy of the riverkeepers to prevent the river from being poached to meet the requirements. For the last two or three years the arrangements have been so perfect by the united action of the keepers employed by the T.A.P.S., and those by the Thames Conservancy, that the Tideway, once so favourable for the poachers, has been considered free from their visits. Some of the old offenders have died out, and others are now disabled. Besides this, there is a better feeling in existence, and that has been brought about by the kindly, and no less practical, visits of Mr. Thomas Spreckley, whose judicious and excellent treatment is beginning to bear good fruit. In the report of the Tideway as regards angling, it is said, "The water is the same as last week in colour and height, and the fish appear to be taken in the same quantities." Mr. G. H. Wright. of the White Swan, Twickenham Ferry, reports some very considerable takes of barbel near to his hostelry, one of the anglers in the week getting no fewer than eighty-one barbel—only two of them exceeding over 4lb.; but there were a great number very near that weight, and he has had himself some excellent sport in fly fishing for dace. Above the locks the presence of anglers has not been so numerous, and the fishermen have expressed themselves as disappointed when the fish are so plentiful the anglers are few. There has been one notable take of barbel at Chertsey, and this should act as a stimulus in that neighbourhood for others to go and do likewise. There is a probability of the members of the Guildford Angling Society visiting this neigbbourhood for a fishing competition, as Mr. Cook, who now belongs to the Abbey river, which runs into the Thames at Chertsey and Penton Hook, has been liberally placed at their disposal.

### ANGLING RESULTS.

**Richmond.**—Christopher Brown, in five days, 80lb. of roach and dace and three barbel; F. Brown, in four days, 60lb. and seven barbel; Henry Wheeler, in five days, 80lb. and four barbel; Henry Mansell, during the week, 80lb. and seven barbel; Job Brain, in six days, 90lb. and 8 barbel; and Henry Howard, in five days, 80lb. and eight barbel.

**Twickenham.**—Richard Coxen, in three days, Mr. A. J. Little and Mr. Stone forty-eight barbel; and C. Miles, in one day, with Mr. A. J. Little and Mr. G. Wright, twenty-one barbel, nearly all the fish being put back. Richard Coxen, in two other days, twelve dozen of roach and dace and seven barbel; James Coxen, in three days, forty-two dozen and eleven barbel; George Coxen, in seven days, fifty-six dozen and seven barbel; Joseph Dobbin, in four days, thirty-eight dozen and five barbel; W. Spong, in five days, forty dozen; Pert Hammerton, in four days, 80lb., including six barbel; Charles Hennessey, in four days, thirty-two dozen and three barbel; Samuel Mesley, in four days, twenty-four dozen and four barbel; Samuel Cole, in six days, 80lb. and four barbel; Edward Finch, in two days, with Mr. Norton and friend, 60lb. of fish, and in five other days 60lb; John Spong, in six days, 148lb. weight of roach and dace, including eight barbel; Henry Spiers, in five days, fifty-two dozen five barbel and a brace of perch, the latter weighing 2½lb.

**Teddington.**—Charles Baldwin, in four days, twenty-five dozen of good roach and dace and one barbel; Benjamin Stevens, in three days, twenty-one barbel, the largest 8lb., and some fine roach and dace; Joseph Baldwin, in five days, thirty dozen of roach and dace and two jack, weighing respectively 7½lb. and 6½lb.; J. Stevens, in six days, 56lb. and five barbel. There was a time when Teddington was most famous for barbel, not only in number but in size, and the records of barbel-fishing in the weighing-in book of the veteran Piscatorial Society at Ashley's Hotel, Covent-garden, should contain some extraordinary results from the rod of Mr. F. C. Parker, the late Mr. A. Browne, and other eminent piscators. When the former angler resided at Teddington he used to put in the ballast-hole near to the railway station large quantities of fish which he caught, as the water at that time was held by him.

**Kingston.**—John Johnson, senr., in writing from Kingston says, "I have not done much fishing this week. I have had some first-rate gudgeon-fishing, and very fine specimens, as I measured dozens that were 6½in. in length. The roach have not been feeding well the last few days, and I have only got six barbel in the week. There has not been so much done from the banks by night. A few small jack have been taken by the private boats." John Johnson, jun., previous to going on an angling trip with one of his clients to Oxford, had one good haul of barbel—the best fish 9¼lb.—and another good take of roach and dace. James Wilks, in four days, 41 barbel—the largest 4lb.—four chub, and eight dace. The bank anglers have caught during the week 30 barbel and 15 bream, and nice quantities of roach and dace.

**Long Ditton.**—H. Buttery, in three days, 11 jack—the last 3½lb. The bank fishers have had passable results in roach, dace, and gudgeon.

**Hampton Court.**—W. Milbourne, in one day, three perch, weighing 4½lb.; and Thomas Davis, in three days, ten dozen of roach and dace, seven perch, and nine dozen of gudgeon. The numerous clients of William Milbourne will be glad to find he has recovered from his illness, and is now on the river again, ready to pilot his customers to the best swims. At Tagg's Island Fishery the anglers have been showing at the bar of the hotel some good takes of roach and dace.

**Hampton.**—James Langshaw, jun., in one day, three barbel and twelve dozen of roach and dace. The bank anglers have been well in amongst the roach, dace, barbel, and gudgeon. From the scanty returns which this neighbourhood supplies, it would appear that is not sufficiently patronised by the anglers, and yet it ought to afford the best roach and dace fishing on the river. It was the favourite resort of the late Mr. Stephen Ponder, who was always great amongst the roach and dace.

**Sunbury.**—Edward Clarke, jun., in five days, 19 barbel—the largest 4½lb.—eleven dozen of roach and dace, and 15 brace of perch. H. Clarke, jun., in three days, ten dozen of roach and dace, four barbel, and twelve dozen of gudgeon. Bank angling has been first rate in the Sunbury district. Roach, dace, gudgeon, perch, chub, and barbel have been the fish principally taken.

**Walton.**—George Hone, one day, two bream, seven dozen of gudgeon, and one dozen of dace. R. Watford, one day, two brace of perch; another day, one barbel and one chub; and another dry, one brace of perch and five dozen of gudgeon. John Hone, one day, four dozen of roach; another day, six dozen of gudgeon; and another day, four bream, a jack of 4lb., and one roach of 1lb.

**Halliford.**—William Rosewell, in one day, six dozen of roach and dace, two bream and ten dozen of gudgeon. Edward Rosewell, one day, five barbel, and three bream; and another day, three barbel and one brace of perch. Thomas Strudwick, one day, four dozen of roach and dace, and one bream; another day, two dozen and one barbel, and another day, three barbel.

**Shepperton.**—James Haslett, one day in four hours, with Mr. C. Waterhouse, four barbel, four chub, and one perch; another day, in five hours, two barbel, five chub, and one perch; another day, in the same time, two barbel, five chub, and one perch; another day, a barbel of 5lb., and three chub, and another day, four chub, one barbel, and one perch.

**Chertsey.**—J. Poulter, in two days, with Signor Foli, Signor Maas, and Mr. John Wood, got 150lb. weight of barbel, and four chub; another day, three barbel, two dozen of roach and dace, and one chub; and another day, five barbel and one chub.

**Staines.**—C. Hone, in one day, with Mr. Johnson, three jack and two barbel; another day, with M. J. H. Gaunt, five barbel and two chub; another day, seven barbel, and one brace of jack; another day, five jack, and three barbel, and another day, twenty-two barbel. John Keene, jun., in three days, thirteen barbel and five chub. John Keene, sen., in one day, a barbel of 9lb., another of 5lb., and sixteen dozen of roach and dace; another day, four chub, and in three other days, twenty-two barbel. E. Keene, one day, three barbel, the largest 6lb., and six dozen of roach and dace, and another day, eleven dozen.

## UPPER THAMES.

No successful angling has taken place in the Upper Thames during the past week; the water is, in fact, too bright and stale, and until a fresh takes place, or the rotting weeds are washed away, nothing of import can be done. A meeting of the executive of the various up-river associations, under the kindly auspices of Mr. C. Foottit, of Marlow, took place on Monday, and preliminaries for the acquisition of angling knowledge on various points in connection with associations were arranged; but a more detailed account of the "meeting of the waters" shall be given on a future occasion.—MARLOW BUZZ.

### Thames (Eynsham).

We have had very little angling done in this neighbourhood lately, except that Mr. Bonvoisin, who was here ten days, had a very fair amount of sport. One day he would be among the perch, another roach, then chub, and of the latter he had a good take altogether. He, Mr. B., was anxious to take a good barbel before returning, and was fortunate enough to land one of 7lb. on his last day. The water is still low, and fish are not feeding well, the weather being so changeable just now.—W. B. Howe.

### Goring (Thames).

Water very low and clear. A lot of rain is wanted before we shall get good fishing. My best day, four chub, largest about 4lb., and a few good roach. Next best day, two chub, and some very good perch.—John Rush.

### Thames (Oxford).

Such a continuance of low water has scarcely ever been known in the Oxford district. But although the autumn sport is greatly affected thereby, the first winter's flood will find, comparatively speaking, an empty river, so that the anglers will not be compelled, unless the rainfall is unusually heavy, to resort to the flams and lay-byes on the fields, whenever favourable weather permits a turn amongst the fish. The Cherwell is undergoing a severe course of dredging and reshaping, consequently, as every available drop of water has been run off into the Thames, there is not the slightest sign of current, and fishing is next to useless, and the same cry of low water is heard from everyone who tries any of the affluents. My prognostications of poor takes are, therefore, likely to remain good until we get a decided change, and I can only say the difficulty of obtaining any items worth recording is very great. On Friday, at Wheatley, Messrs. Harvey and Beckley had eight small jack. In the Thames Mr. Scurrot landed a fine jack of 8½lb. On Saturday Mr. Cleaver caught a large jack scaling 15½lb. At Sandford Mr. Chas. Mallett had about fifty roach. On the 28th ult. little or nothing was done, although there were a great many rods at work. On Tuesday Mr. Mallett was again well in amongst the roach, his catch being between sixty and seventy. On Wednesday Mr. Potter had four roach weighing together 4lb., and one day this week, but I am unable to say which, Mr. J. Carter grassed six jack at Black Jack's, the whole going over 12lb.—Cherwell Otter.

### Walton-on-Thames.

The fishing this week has been good, and several large baskets have been made. On the 28th ult. a gentleman, fishing in the back water, caught five good pike before eleven o'clock in the morning, two of them nearly 10lb. weight each. A monster was seen yesterday in the same place, supposed to be between 20lb. and 30lb. It swam leisurely under a punt into a bed of weeds, where it was lost sight of. Dick Watford has found his patrons some good sport. A party of gentlemen staying at the Swan Hotel made a large basket on the 28th ult. Another party from the Swan Hotel, on Tuesday, had a very satisfactory take of barbel and bream with the same fishermen. The barbel seem now fairly on the feed. George Hone, senr., made a large haul on Wednesday of very fine fish. Both pike and barbel are very numerous, and some good sport is to be obtained.—Goldfinch.

### Wraysbury.

Water too low and bright; almost impossible to take anything except chub, and those must be fished for "Nottingham style"—a large lump of cheesepaste, bread, or pith, and a long way off letting the bait work into the small eddies under the old withies.

---

### Ancholme District.

Some very fine fish have been taken during the past week. One angler had amongst other fish five good bream of about 4lb. each. These fish are now being caught with hard boiled potatoes. As usual, a good number were out on Monday last. The weather remains delightfully fine and the water low and clear. I had a parting shot at the trout on Monday; but only got one fish of 1¼lb. It was in the primest condition, and made a splendid supper. I relished it greatly, being for me the last of the season.—Thomas Ford, Caistor.

### Chichester.

There is nothing particularly noteworthy from Chichester during the past fortnight; a few fair bream, some roach, and a couple of small pike are all I hear of. At Selham the water is in good condition, some good roach coming to hand. I have been trying for pike in the upper reaches of the Ouse, but have met with but poor success, the river being so full of fallen timber that break-aways have been numerous. There is a large pike near Sheffield Park station, I should say a twenty-pounder, and I trust to make his acquaintance before leaving. Seven small pike have fallen to my lot in the past few days in this district, but the water is too low and bright to be successful among the larger fraternity.—George F. Salter.

### The Dee and Don (Aberdeenshire).

Though we, residenters and sojourners the north of the Grampians haven't yet been favoured with much rain, only a splash now and again, the rivers, notwithstanding, are getting into ply, and a few fish are occasionally got. On the Burgh water of Kintore, one good salmon was got last week, and another at Grandholm. Excepting good takes of white trout in the tidal waters of the Don, this is all we have heard of from that river. In the tidal waters of the Dee, sea trout are numerous, and at present are showing well to the "winged wriggler." Ten to twenty, averaging ¾lb., is no uncommon basketful. It can thus be seen that tidal-water fishing is encouraging just now; but we regret that the same cannot be said of salmon fishing higher up the rivers. On the Polldown section of the Dee, nine salmon from 7lb. to 26½lb. were landed during the week, chiefly by Mr. Robertson and Mr. Black, Robt. Clark, jun., Esq., had one in the Nether Banchory water. Another was got, a culter. Little sport on Park or Drum reported. W. Knowles, Esq., London, had poor sport on Durris water, only getting three fish within the past fortnight, the largest 27lb. General Keane, W. Scheuster, Esq., and J. Campbell White, Esq., of Overtoun, have been even less fortunate on the Kineskie and Crathes waters. On the Invery, Inchmarle, Banchory, Lodge, Riverston, Blackhall, and Cairnton sections, only two or three fish were got altogether. On the Woodend Fishery the sport was very indifferent. In the Kincardine O'Neil district a number of fish were landed within the past eight days, of which we record that Walter Evans, Esq., had two, 7lb. and 11lb.; Scott, keeper, Carlogie, four one day, 6, 7, 8, and 12lb.; Charles Farquhar, Esq., and Stewart Farquhar, Esq., on the same water, had three and two respectively on the following day, 7, 8, 6½, 16 and 18lb.; Wm. Lamont, Esq., Norton House, had one of 11lb. About Aboyne and Glentanar a few fish were landed; but on the whole the fishing was poor. Mr. George Smith, tackle maker, Ballater, reports that Captain Greig, of Bayswater, had two fish of 8lb. and 13lb. on the Monaltrie water. Heavy fish in tremendous quantities are lying all round the coast, and all that's wanted to induce them to ascend the rivers is more rain, or, speaking exactly to the point, a proper spate for a day or two.

### Dee (Aberdeenshire).

A pretty considerable rainfall on the hills within the past day or two has caused the Dee to rise a good deal; the water is now in fine fishing size, though rather dark-coloured for successful angling. Nothing approaching the run of large salmon witnessed on Thursday has taken place this autumn, or, indeed, for a long time. From break of day till evening fish continued to swarm up without intermission. The fishermen at the fords can tell the size to a nicety, and one seen ascending was guessed at little less than 60lb.—Aberdeen, Thursday Evening.

### The Exe (Tiverton).

The river continues very low and clear. Nothing has been done of late until yesterday, when two salmon were killed by Mr. Harwood and Mr. Miles, weighing 5¼ and 10½lb. respectively.—Wm. Mudford.

### Ilfracombe.

Sea-fishing.—During the past few days there has been a heavy ground sea on, which has seriously interfered with the fishing. Nevertheless, there have been some good catches, principally of whiting pout; but there have also been two or three heavy catches of conger, one party catching 1cwt. in a few hours: another party 72lb., which shows that with the abatement of the ground sea lovers of congering may look for a good time of it. Mr. Gratte, fishing from a flat rock with rod and line, caught several conger eel, the largest weighing 6lb. Also, some fine pout have been caught from the pierhead and jetty Weather at present squally.—E. Comer.

### Leicester.

The weather continues of a favourable kind, and suitable for those enthusiasts who devote their time to the pastime of fishing. The river Soar and canal, and the backwater at Aylestone have received plenty of attention, and upon the whole the sport has been of a fair character. Several nice lots of perch have been had, Messrs. Bird and Hobbs being the chief takers. Roach fishing has been quiet for some days; but those who have been trying for pike have fared well, this kind of fish having been well on the feed lately, and a number, weighing between 4lb. and 7lb., have been caught. Live bait fishing.—Our old friend Rylott, the well-known professional cricketer, now that the cricketing season has closed, has turned his attention to angling with good success, a few large pike having fallen to his share in the home waters. Not many anglers have been out of town this week, consequently there is nothing from the surrounding district to report. On Thursday a good basket of dace were shown, having been taken from the waters at Blaby by Mr. Prime; the best fish weighed 8¾oz. The weather on Thursday evening was bright but cold, and the waters fine.—Alert.

### Lea (Tottenham).

The water is very low and bright, a state of things which is not at all to the liking of many anglers. Now, there is an old rhyme which says:—

> "For every evil under the sun
> There is a remedy—or there's none.
> If there is one—try and find it;
> If there isn't—never mind it.

Anglers can find no remedy for the present condition of the river; they will have to wait until—

> "—the low-bent clouds
> Pour flood on flood."

So the best thing they can do is to "never mind it." There are many who adopt this view of the case, and keep on "pegging away," and not without results. Since my last report Mr. Pritchard has taken two jack, one 3½lb., and one 2½lb. Mr. Beresford, three jack, one 4lb., and two of 2½lb; Mr. Culse, one jack, 2lb. The above were all taken with live bait. Mr. Bennett, spinning with spoon, one jack, 3lb., and one chub; and, with the fly-rod, many dozens of roach, dace, and chub, several of the roach going 15oz. Mr. E. Day, who is becoming quite an adept at wielding the hickory, has also killed some very good fish. T. Windsor, with the blow-line and natural fly, got among the roach at the lower pool, and killed a tray of handsome fish. Some of the bottom fishers have done fairly well. A gentleman, on Thursday, filled his bag with roach, using gentles as bait, which, just now, they seem to prefer to paste.—Hackles red.

### Lodden.

The river still keeps very low and clear, but coarse fish of all kinds are well on the feed. Good creels full daily: we (two) have taken in little over half an hour, twenty-two lumping roach, two chub—the largest nearly 2lb.—and three trout; these latter are placed in the stock ponds, wherein are some 500 magnificent fellows ready for the latter end of November, when they commence spawning here. Weather very mild—wind W.—Frank Gosden.

### Lugg and Arrow (Leominster).

Both these streams are still in good fishing order either for bottom or fly fishing; both still keeping low and clear. The fish are sporting well at the fly, and some good baskets have been taken. Capital sport has been had with the wasp grub. The best flies on the water at present are the willow, little black ant, and green insect. A few good grayling have been taken with the grasshopper this week. On Friday some capital sport was had in the Arrow by a gentleman who was fishing with the black ant and green insect, and who landed eight very fine grayling, and four rough fish averaging 10oz. each. In the Ivington district a gentleman tried the water with the fly, and took a good dish of grayling weighing 6lb. In the Lugg, near Ford's Bridge, a gentleman took a small pike weighing 3lb, with the artificial minnow, and a few grayling with the fly. Good sport was had in the Stanton waters on Saturday by a gentleman, who tried the willow fly, and took a fine dish of fish, all in good condition. In the Monkland waters a nice lot of good fish have been landed with the wasp grub. In the water near the Bromyard Line, a capital lot of grayling were taken with the grasshopper. The Arrow near Eardisland was tried on Monday with the wasp grub, and a fine dish of grayling were landed. Capital sport has been had in the Aymestry quarters this week with the fly, and some very good fish have been taken in the Bodenham waters. A few good fish have been landed near Kingsland. The Pinsley is in good angling order, but low; the fish are rising well, and a few nice fish have been taken.—Gwynne.

### Medway (Tunbridge).

Ever since Sunday evening the river has been in a wretched state, the water being the colour of ink. I hear that it is caused by emptying some tanks at a tanyard, where a serious fire occurred a week or so back. If this is the case, the pollution must have come by way of the Eden, one of the tributaries of the Medway. It has happily done no damage in our fishing beyond sending fish off the feed, and nothing will be done till there is a run of fresh water.—Ye Medway Water Rat.

### The Mill Pool (Wraysbury).

This pool is full of large fish of all sorts, and only 1s. per day is charged for two rods. There is very little room; therefore it is to be regretted that men are so utterly selfish as to fish one place and stick a rod in another, so as to retain two swims at the same time, to the exclusion of an angler who, like themselves, has travelled a number of miles to fish. It is not sportsmanlike, and would not be tolerated in many places; in fact, I know a few anglers who would, without hesitation, take the rods up and cast them aside; a man cannot fish two places at once, with any grace, when by his so doing he prevents another from fishing at all. Barratt, the man in charge, informs me he will not permit it if he sees it; he is one of the right sort—likes what is fair, and is always willing to show you where and how to fish, and will provide tea, dinner, &c., at the smallest possible cost.—Roach.

### The Ouse (Huntingdon).

Nothing but a few small roach have been taken this week. Not many anglers have been out, thinking it no use, for the water is very bright. Some have been trying for jack, but nothing taken.—H. Rout.

### The Shannon (Castleconnel).

The following fish were got during the week:—Mr. Henry Hodges, on his Downess fishery, 24th ult., one salmon 26lb.; 26th, one 26lb.; 27th, one 41½lb.; 30th, two 19lb. and 20lb.; 1st inst., one 36lb. Mr. E. S. St. Aubyn, on Newgarden fishery, 25th ult., one salmon 13lb.; 26th, one 12lb. Colonel Massey got a salmon 12lb. on Hermitage. River has not risen much, and yet sport has an improvement, and prospects seem good for October.—John Enright.

### South Level Cut (Littleport).

The water has been so very low and bright for the past fortnight that it is something like fishing in a bucket, and I am afraid our best month will go by almost a blank, unless we get a heavy rain shortly. Two anglers staying down here for a few days took some nice perch, &c.—viz., Rev. A. E. Gover, Newmarket, Sept. 21st, six perch, from ½lb., largest 1lb. 2oz., and four jack, about 2lb. average ; Sept. 22nd, three perch, largest ¾lb., and two jack ; Sept. 23rd, forty roach, about 10lb. ; Sept. 24th, one perch, 1½lb., and sixty-five roach, fair size. Sept. 21st, R. W. Sprague, Esq., 6lb. roach, largest 10oz. ; Sept. 22nd, 2 good bream, 11½lb. roach, two perch, one jack ; Sept. 23rd, forty roach, 13lb., largest 1lb. 2oz. ; Sept. 24th, forty-nine roach, fair size, and two perch. Although several of the best local anglers have been down, with one exception, their catches have not gone over 6lb. for the day. Mr. W. L. Agger, Cambridge, took 13½lb. good roach last Thursday, and again to-day is having fair sport.—Charlie South.

### The Tay (Perthshire).

In consequence of heavy and continuous rain which fell in this district in the beginning of the week, the Tay and tributaries have swollen considerably, and are now in a state of flood. Previous to the rain, fair sport was got, both in the upper and lower waters of the river Tay. In the lower waters fish were very numerous, but owing to the river running so low, they were prevented from ascending to the upper reaches. The weather is now good, and when the flood subsides, large takes may be expected during the short time which yet remains of the angling season in this district. For a considerable time back the Ballathie water—in the upper reaches of the Tay—has afforded splendid sport to a number of anglers who have fished it during the season, salmon of an average weight of over 20lb. being captured daily. On the Cargill water, which adjoins Ballathie, several large fish have been caught ; and on the Burnmouth and Murthly waters equally good takes have been reported. In the waters below Perth, while the captures are not so numerous, the fish are of equally good quality. The following are the principal captures to hand :—Fishing from Dunmore Lodge, on the Ballathie water, on Tuesday last, Mr. Granville caught three salmon weighing 29lb., 20lb., and 20lb. respectively, and a grilse weighing 7lb. On the same day, the Cargill water yielded a fine salmon of 37lb. to the same gentleman. On Friday, anglers had very encouraging sport on the Cargill water, the three best takes being those of fish weighing 35lb., 37lb., and 39lb., all in excellent condition. On the Murthly water, on Saturday, Mr. Millais had a fish weighing 29lb. Up to that date, good sport was reported from several other stations on the Tay, at these points the only drawback being the lowness of the river. Since the rain at the beginning of the week, the following captures above and below Perth have been received :—On the Burnmouth water, on Tuesday, Mr. Stibbard had three beautiful salmon and six sea-trout. Fishing below Perth, Major Doncaster captured one fish in splendid condition. The river Earn is also in flood, but when the water runs off, good sport may be expected on that river.—P. M'cG.

### Taw (N. Devon).

The trout fishing is over; the last day of September closed the ball, and the season of 1884 will be long remembered because of its barrenness, and few fishermen will have recorded any big catches this past year ; the rivers for four months were dry, and what with dipping out pits, limeing, and grapping, no fish can possibly be expected to have escaped to breed for 1885. Your correspondent who has written upon the North Devon rivers would appear to have done the best. By the way, should you hear of any second edition of Cutcliffe, these articles should be added ; with a few additions of flies, &c., the book will have another good run. The peal and salmon season closes the 15th of November, and without a good deal of rain no salmon or peal, or rather, I should say, no quantities, will be found to catch. The inquiry lately held at Barnstaple, whether the fence days should still remain or another month added to destroy the few fish left, is still undecided, and although the fence days have begun, still nets and men are at work, and of course put back all fish called "salmon and peal," except when the watchman is not present, and then they are grassed until the roads are clear, and fish are bought in the different towns at 6d. per pound.—Rusty Game.

### Teme (Tenbury).

The heavy downpour of rain which has visited this district of late has made but little difference to the state of the water, which still keeps clear and in capital fishing order. The fish are rising well at the silver-twisted blue, silver grey, and hare's ear dun. Several good dishes have been taken with the wasp grub and maggot. Some nice fish have been taken with the red worm. In the Berrington waters some capital sport was had by some gentlemen from Worcester with the fly, and good-sized fish were taken. The water near Rochford was fished on Friday, and a capital lot of fine grayling were landed with the wasp grub. A gentleman tried the same water with the fly, and took a good basket of fish averaging ½lb. each. On Saturday, a gentleman who was visiting this district tried the water near Corn Brook with the silver-twisted blue and landed a splendid dish of fine grayling. A few fine fish were taken with the maggot. In the water near the town a good dish of grayling were landed by a gentleman with the hare's ear dun. Some capital sport has been had in the Eastham quarters. On Monday a gentleman, fishing with the silver grey and twisted blue, took a good basket of 8lb. of fine grayling. At Little Hereford some nice grayling have been taken with the fly. A capital lot of fine fish were landed near the bridge on Tuesday with the fly. Near to Easton Court a fine dish of grayling were caught with the wasp grub. The Kyre, Rea, and Ledwyche are all in good fishing order, but low. In the Kyre, and Rea, a few nice fish have been taken with the fly, but in the Ledwyche fishing is very quiet.—Worcester.

### Teme (Ludlow).

The grayling are sporting well in all the streams, which are still low, and water bailiffs and gamekeepers all speak in favourable terms of the quality and quantity of fish in the waters hereabouts. Fishing in the Teme has been pretty good this week, and some fair baskets made. Down the Ashford quarter some very nice perch have been caught, and some good ones at Saltmoor. A gentleman on Monday, in the former waters, with the maggot, caught six splendid perch and a couple of brace of grayling with the wasp grub. At Saltmoor a perch was caught (with the grub) which, when placed in the scale, weighed 1lb. 14oz. Some good grayling landed up Lord Windsor's waters with the fly, and a few fish on Monday night in the Burway meadows. The Clun is in better order, and some good catches had in the upper part of the stream. The waters of the Ony continue low, but a good basket of fish was landed from the stream near to Bromfield Bridge on Saturday afternoon after the rain. The Corve has been well and regularly fished, and good fish landed from the railway to Culmington. Little doing in the Ledwyche, which is almost neglected. S. Ludlow.

### Teme.

A few remarks upon grayling and how to fish for them in the Teme, Worcestershire. In the first place, I will say that of all months to take good grayling there is none like October—they are then in fine form to give sport and also in good condition for the table. If my friends will excuse me, this note shall dwell upon the use of the fly only. I will, in my next, treat upon bottom fishing for this beautiful fish. I need not describe the form of this feminine-like fish—it is enough to say, of all the finny tribe it is the most gracefully formed fish, and it is game to the back bone, though it does not jump and throw like the trout. It dashes and pulls for the bottom, and if it gets there it is three to one on the fish. Its mouth is so tender that if the hook is in the lip it will bore into the gravel and get away. I will try to explain the way I get a dish of grayling. The first thing I will call attention to is the rod that I made. The butt and middle piece are of hickory, the crop is spliced cane. It is very light, and just stiff enough to keep straight when out at length ; the line should be fine, your gut cast about three yards long. I prefer stained, and as fine as can be. Also, let the flies be tied upon the best fine stained gut. A No. 11 or 12 hook is the size. I dress the ant, willow, blue dun, coachman, red spinner, and several other duns, the hare's ear, black gnat, and little pale blue on No. 13. As the rivers are low and fine. you must be very careful, or all the grayling will see you or your shadow. When fishing the head of a ford or the smooth part, I like to fish up stream. on the contrary when in the rapids ; and I find, from over thirty years' practice, that to strike either a trout or a grayling is wrong—I have lost many fish through it. As a rule, fish in a stream hook themselves. As we are now just commencing the grayling month, I will give a list of flies I shall use for fine water. On a bright day, the willow, red ant, and iron blue ; for a dull day, pale blue coachman, and sky blue. The hare's ear and black gnat I may use if I see them upon the water. —J. A. Griffin.

### Torridge (Torrington).

River in good order for fly-fishing. One of our local fishermen took, on the 17th Sept., 21 trout ; on the 25th, 27 trout ; on the 27th, 21 trout ; and on Monday last, 32 trout. On Monday evening, I took a fish over 2lb. ; and on Tuesday evening, C. Doe took one 2lb. 6oz. All these were taken fly-fishing.—Practical Angler.

### The Trent (Nottingham).

The river is in fairly good condition for fishermen, being low and clear. Barbel and bream have been caught in decent quantities in the parts below Nottingham, Mr. Charles Smith, of the Spread Eagle, in that town, alone having taken over 30lb. of these two species. Above the "lace town," at Weston, Willington, and Shardlow, fish have been feeding freely, dace and chub being an agreeable addition to the sport afforded in other respects. Below Newark, a well-known angler has taken upwards of 30lb. of roach with creed wheat, and anglers generally who have been in the lower waters have fared better than usual. A rise just now would do a great deal of good, if only to clear away the vast accumulation of "flannel" weed.—The Man at the Clubs.

### Trent (Alrewas).

During the past week the weather has been very unsettled, and little or nothing done. The grayling have been the only fish on the move.

### Tweed (Berwick).

Just now the sea off here is full of salmon ; as there is plenty of water in the river, the fish will go up freely. At Burnmouth some nets have been seized by the bailiffs. H.M.S. *Ariel* is lying at Tweedmouth Dock, looking after the salmon fisheries. It is the general opinion here that there ought to be an extension of time for the net fishing. This interest or industry has done very badly indeed throughout the season, scarcely enough to pay wages and expenses, though best at the end of the season. No one likes paying rents under such circumstances. Mr. T. Speedy, in his book "Sport in the Highlands and Lowlands" (W. Blackwood and Son, Edinburgh), advocates a further limitation of the net-fishers' time. This would be most strenuously opposed by nearly everybody here. The opinion entertained here is that the salmon go up, get overcrowded, consequently diseased, contaminating the river, besides the great loss of food for the people. The true policy to pursue is restriction, not prohibition or free trade. There should be no more restriction than is good for the interest of the nation. The policy pursued should be governed by that consideration, and not so much in the interest of sport as at present. Over preservation is to be carefully avoided ; it does much harm, by encouraging poaching and creating disease and waste. Free trade is worse still ; a happy medium is what is wanted—i.e., an intelligent restriction. An angling friend of mine tells me that he caught three dozen smallish trout in the Whitader, on Monday : the water was quite clear. At the same time there was a slight fresh in the Tweed ; but there does not appear to have been much caught there, so far as we hear. The salmon prospect is very good now, owing to the abundance waiting outside. A correspondent in the local papers suggests burning the diseased salmon, instead of burying them, as has been the course pursued. The burying process is absurd on the face of it ; for instance, at Spital Point, the fish have been buried in a shifting sand ! This with a full knowledge of the tenacious character of the disease.—F. J. Hills.

### Waveney (Beccles).

From some cause or other very few anglers seem to have been out lately, and I have not heard of any large catches ; but let me remind anglers (roach fishermen especially) that the best time is now coming on, and instead of laying tackle on one side, thinking the season is over, I would persuade them to pursue their favourite pastime as long as the weather continues mild (for another six weeks at any rate), as the best and largest fish are now to be secured. Pike fishing seems to have been the favourite sport during the last week or two, and fish ranging from 2lb. to 7lb. have been taken. Mr. C. Chascon, the 19th ult., had five fish, heaviest going 4lb. Mr. E. Rouse, on the 20th, one turning the scale at 4¼lb. ; and Mr. Cowles, of Stratford, on Monday last, six fish, heaviest scaling between 6lb. and 7lb. ; and Mr. Brooks secured a nice perch on the 27th scaling 1½lb., taken with the worm. The above fish were for the most part taken with natural bait spinning. Weather, wind, and water all favourable to good sport.—A Waveney Angler.

### Weldon Bridge.

A few salmon have been seen in the pools. All that is wanted is rain to promise good sport. I may say Mr. Oliver, Longhorsey, had good trouting on Monday, a 5lb. basket ; J. L. Oliver and friend, Newcastle, three dozen.—F. Brown.

### Wye and Derwent.

Trout fishing is now all over for this season in the above river. Taking the season throughout, we have had a very bad one, especially on the Wye between Bakewell and Filleford Bridge. The largest baskets have been made chiefly on the private waters on the Wye, also on the higher lengths of the Derwent ; and were killed mostly in the latter end of May and all through June, and were killed principally with the yellow dun, dotterel, spider, and sand flies. The Derwent Whatstandwill length also had a lot of good trout killed on it, baskets from three to six brace of an evening, the fish running from 1lb. to 2lb. each. I firmly believe that the largest trout we have in Derbyshire is to be found in the deep water between Whatstandwill and Ambergate. Grayling fishing is now first class, especially on the Derwent, and baskets from six to thirteen brace per angler are now being daily made. One angler got twenty-nine brace of grayling in three days' fishing below Cromford with orange, bumble, furnace, ash, dun, and lean flies. Grayling are now rising the best in the rough parts of the streams, and the best fishing time is from 10 to 5 p.m. in the evening. October is a first class month for fishing the tails of the streams with the maggot and cockspur worms in the Nottingham style. Several brace of very fine grayling, roach, and dace have already been landed by this kind of fishing. I also heard of several pike being landed in the deep by line bait fishing, none of the fish being large ones. Trout are very forward spawning this season. especially on the higher lengths of the Derwent and Wye. I recommend gentlemen to lose no time in trying their skill for grayling, for now is a first-class time, especially on the Chatsworth fishery and the Whatstandwill lengths. There are a few brace being taken on the Wye, but no quantity.—Geo. Jas. Eaton.

### The Yare (Norwich).

The beautiful weather of the past week has induced many anglers to try their luck with the trolling-rod, and in many cases success has rewarded them. A very fair number of jack, though none of large size (the heaviest I have heard of being 11½lb.), have fallen victims to the spoon-bait ; and should this bright sunshine continue, I fully expect to hear of good catches. Having spent several days on the river since my last report, I can bear witness that the jack are to be seen feeding all along the banks about Buckenham Ferry. On Tuesday last a friend and I tried a few hours' roach fishing, and we caught between sixty and seventy, some of them weighing about 1lb. The general report of roach fishing is not good, the best catch reported being 135 fair fish in the day ; but those caught are in splendid condition. The bream seem to have disappeared ; even the most knowing ones cannot drop upon them ; still, I must hold to my opinion that they are high up stream. Prospects are wonderfully good for the time of year.—Robert Moll.

## A SALT-WATER FISH PRESERVE, &c.

Gentlemen fond of piscicultural experiments, and having some capital to invest on easy terms, might do worse than consider the property called "The Salterns," at Lymington, Hants. Coming up in the train the other morning with a friend who had been to the New Forest lately, he described this property as follows :—It consists of 40 acres, with a cottage residence (four bedrooms, three reception rooms) in the bungalow style, together with three labourers' cottages, barns, outhouses, &c. Twenty-five out of the 40 acres consist of ponds, in which live sea fish to any extent could be stored. These ponds have concrete sluices, and have recently been repaired at an expense of £10,000. The ponds are fed from the sea, and can be filled or emptied in a very short time. Fourteen acres are pasture. The price of the whole freehold is £4,000.

We understand the present owner—Col. H. A. Ouvry, C.B., of Lymington—nets £40 a year by growing asparagus, and that this vegetable could be cultivated to almost any extent, the soil being most favourable to its growth. But the chief feature in the place is the series of salt-water lakes ; indeed, we do not know of any similar place anywhere round our coasts where live sea fish could be stored in fine weather when they are cheap, and sent to market when a spell of rough weather has sent the price up 200 per cent., as it often does.

Our readers will be interested in a few notes on what has previously been done in the way of keeping sea fish in confinement in open ponds, and even in fresh water. In reference to which water Bacon said : "I doubt there hath not been sufficient experiment made of putting sea fish into fresh ponds and pools ; it is a thing of great use, for so you may have them new at a great distance." In Dr. McCulloch's *Journal of Science*, Vol. XIX., is a description of a lake which belonged to a Mr. Arnold, of Guernsey, about four acres in extent, chiefly supplied with fresh water. Sea fish of thirty various kinds were put into it, and "improved in quality and propagated," so that the lake, which before was worthless, produced a large rent.

The sea fish pond of Logan was formed in 1800, at an expense of several hundreds of pounds, and furnished a wholesome article of food, fatter than could be found in the open ocean. The pond, according to Mr. Matheson, "is 30ft. deep, and 160ft. in circumference ; it communicates with the tide by one of those fissures so common on bold and precipitous shores. It is the property of Colonel McDowal, of Logan ; in every state of the tide he can command a limited supply of the finest fish. The fish are fed daily, and consist chiefly of cod, haddocks, flounders, blochin, glassin, salmon, &c." Further particulars of this pond will be found in "Piscatorial Reminiscences," published by Pickering in 1835. We should much like to know if it still exists, and is in use. In the work just referred to is an account of some sea-water basins excavated out of the granite rock by a Mr. Arbuthnot, at Peterhead. These basins can be (or could be, for we cannot say if they are still in use) filled or emptied at pleasure, by high tide and low ebb. They are used as a receptacle of sea fish for the London markets. The fishermen bring them in great abundance, and feed them.

Stoddart, in his "Scottish Angler," says that "At Valleyfield, on the Firth of Forth, near Culross, there is a salt-water preserve belonging to Sir Robert Preston, in which are fed stores of fish of various kinds ; turbot, brill, salmon-trout, cod, skate, flounder, smelt, sole, and herring are the chief. The fish are fed with broken shell-fish and offal." We have not seen the ponds on Col. Ouvry's estate, but they certainly seem to offer a splendid field for experiments in storing live sea fish, and fattening them for the market. The Colonel wishes to dispose of this property simply because his advanced age prevents his turning it to a practical advantage. An Irish gentleman has recently advocated the formation of an immense salt-water preserve on one of the islands of the north-west of Ireland ; but here, in the south of England, is one ready-made, and within reasonable distance of London. We may mention that the ponds were originally made for the purpose of obtaining salt by evaporation, but the competition of the Cheshire salt mines rendered them useless for this purpose. In these days of speculation, when companies are formed to carry out impossible projects, it seems not out of place to suggest that "The Salterns" at Lymington offers the prospect of great returns for a very small outlay.

## BURTON-ON-TRENT SEWAGE WORKS.

These works, which will entirely remove the sewage from the river Trent, are in the following state of progress, from a report received by Alan Bagot, Esq. In 1879, Messrs. Buckland and Walpole, with Mr. Alan Bagot, made an examination of the sewage system, and took evidence of the pollution of the river. It transpired that the refuse from the breweries was a source of food to the fish at Burton, but then, for many miles lower down, it became a fermenting mass of putrescence, most destructive to the spawning beds. The works to remove all this are at present as regards progress as follows :—

The necessary land has been bought ; the pumping station and line of main to the sewage farm are practically completed ; the subsoil drainage works are in course of execution ; the engines, costing £20,000, have been in hand two years ; the boilers are delivered and fixed ; the works, therefore, may be expected to be in operation, and the sewage removed from the Trent and pumped on to the sewage farm, in the course of next year.

The Conservators of the Trent hope gradually to eradicate other pollutions on the principle of *suaviter in modo fortiter in re*, but with so useless and defective a measure as the present Rivers Pollution Act progress must needs be slow. On Oct. 6 a special meeting of the Conservators will be held at Derby to consider the desirability with other fishery boards of further and more stringent legislation on this point.

The Conservators observe with pleasure that trout are beginning to reappear in the river Trent itself, in the Trent Valley, and at Barton-under-Needwood, and Alrewas ; also at Rugeley, and in the Earl of Lichfield's water in Shugborough Park.

## TROUT PRESERVATION ASSOCIATION OF SCOTLAND.

The Committee of the Trout Preservation Association of Scotland reported that in May last 35,000 fry were successfully put into the tributary streams which flow into Loch Ard, and they suggested that, in view of the young trout put into the loch, anglers should return all trout measuring less than nine inches in length. Twenty-five thousand of the fry were purchased from the Howietown Fishery, while the other 10,000 were presented to the association by Sir James R. Gibson-Maitland, Bart. The committee reported that in Loch Ard, as well as in Lochs Katrine and Lomond, pike netting had been vigorously and successfully carried on. In respect of the limited revenue at their disposal, the committee suggested that all anglers interested in the preservation of the Highland lochs for trout fishing should become members of the association. While much had been done by the association in preserving these waters open for angling, a great deal yet remained for them to do, and it was now in the power of anglers to show the appreciation of the efforts of the association in connection with this matter.

## LINES SUGGESTED BY A HOLIDAY SPENT IN THE EDEN VALLEY, NEAR KIRKOSWALD.

Ah, me! who longs for *Paradise?*
Just let him turn his wearied eyes
On *Eden's* valley fair and wide,
And there in sweet repose reside.

Who would not proudly claim the land,
Or touch it with magician's wand,
Till every flower, bush, and tree,
Budded in fresh divinity?

Till the wild crags seemed peopled still
With fairy elves that work no ill,
And flowers on their petals bear
Their fairy elflings everywhere.

Till down the crystal waters go
The song of fairies, soft and low,
And the o'erhanging woods resound
With fairy mirth and sweetest sound.

Oh, who would wake the martial bard,
To hear *his* war cry loud and hard?
His songs of some old border strife
Fit in but ill with such a life.

A tale of love can only be
With such fond scenes in sympathy!
The only man who here is blind
Is the poor soul with sordid mind.

Curse on the gold that chains his breast,
What beauty finds *he* in the *rest?*
The *peace* that comes beyond express
To hearts that dwell in gentleness.

To *him* the lark's gay song is stale,
No sweet notes has the nightingale ;
The music of the river flows
Unheeded past as on he goes.

He only loves poor sordid self,
And next to this his treasured pelf ;
When in the dust lies low his face,
May it no Eden earth disgrace.

The gentle soul who casts behind
His filthy lucre—to my mind,
He 'tis alone who ought to dwell
In such a spot—*and love it well.*

The salmon cleaves the silver tide,
The trout are rising side by side ;
The fisher deftly casts his fly,
And, as he fishes, sings for joy.

The City toiler leaves his care
To bathe him in the balmy air ;
And as he wades from pool to stream,
Thinks for a moment, "'Tis a dream!"

Oh, thousands in the City pent,
Could ye learn wisdom *and content;*
And leaving gain and luxury,
Upon the verdant margin lie.

And listen when all else is still
To this dear stream, and drink your fill
Of sounds and sights that never sate,
And fragrance sweet and delicate.

There men, refreshed by Nature's food,
Find youth come back with health renewed ;
And own, when under alien skies,
Eden's an earthly Paradise.

Long may thy glittering streams run pure,
The beauty of thy banks endure ;
And many a toiler join with me,
Praise from a heart from care set free.

E. M. T.

## SCOTCH FISHING NOTES.

Thistle Bridge.—On Saturday, Mr. Kelsall, 1 fish, 22lb. ; Tuesday, 2 grilse. Numbers of fish have been caught in the Perth to-day ; the fish are running to sight very plentiful.

The Tay.—Very fair sport is being had on the Tay both above and below Perth. Yesterday, on Burnmouth water, Mr. Stibbard killed 3 fish and 6 sea-trout. One day last week, below Perth, Mr. Wardrobe killed 3 fish, and Major Doncaster 1 fish. Both the Tay and Earn are in flood to-day, but when the water runs off good sport may be expected. Mr. Granville, from Drumore Lodge, fished the Ballathie water on Tuesday, and killed 3 fish and 1 grilse of 29lb., 20lb., and 7lb. On the same day, Mr. Granville fished Cargill water, and killed a fine fish of 37lb.

Loch Lubnaig.—On Wednesday Messrs. Thomson and Ferrier killed 8lb. trout. The Balquhidder Angling Club held a special competition on Thursday. The weather was favourable, and the takes were good. The prize-takers were :—1, James Dickson, Stronvar ; 2, A. Buchanan, Ruinacraig ; 3, D. Ferguson, Achleskine ; 4, P. M'Diarmid Balquhidder.

The Orchy (Perthshire).—Fishing from Inveroran Hotel on the Orchy on Friday, Mr. Graham landed four salmon weighing 19lb., 12lb., 11lb., and 11lb, respectively.—P. McG.

Capture of a Martin by a Swan.—Standing on Longbridge Bridge, which crosses the Lodden, near Sherfield, one morning, about 8.15 a.m., I was rather interested in seeing a swan feeding, the swan being particularly active. I wondered whether it was pursuing some small fish ; at any rate, it kept placing its head and long neck into the water, and apparently swallowing the fish or whatnot upon coming to the surface. The martins were flying very low, skimming the surface of the water. The swan drew out its long neck from the water, and, holding its head erect, in the act of swallowing, when a martin actually flew into the swan's beak, which closed upon it, but was dropped into the water. It was scanned very closely by the swan, but allowed to float down the stream.

# CLUB REPORTS.

### AMICABLE BROTHERS ANGLING SOCIETY.

The result of the pegged-down match in the Rother at Fittleworth was a follows : —Sixteen of the members competed, and only four got fish. Mr. Medcalf first, Mr. Dwelly second, Mr. Marshall third, Mr. Taylor fourth. The remaining four prizes will be fished for on October 5th, roaming, between Burnt Mill and Harlow. Mr. Harding weighed in roach, dace, and gudgeon ; Mr. Squire, roach ; Mr. Partrick, roach.—J. Worledge, secretary.

### ANCHOR AND HOPE ANGLING SOCIETY.

Several members of the above society were out on the 28th ult., the following members weighing in :—Mr. D. Davis, bream, 29lb. 9oz. ; Mr. Shakel, bream, 13lb. 11½oz. ; Mr. Glass, bream, 3lb. 11½oz. ; Mr. T. Bowling, dace, 5¾oz. ; Mr. Davids, bream, 1lb. 4½oz. ; Mr. Ferguson, bream, 3lb. 7¾oz. ; Mr. Somers, bream, 10oz.—D. Davis, sec.

### BIRMINGHAM AND DISTRICT AMALGAMATED ANGLING ASSOCIATION—HIGHGATE ANGLING ASSOCIATION BRANCH.

The members of this association held their annual dinner on Tuesday, Sept. 23rd, at the Queen's Arms, Conybere-street, Mr. T. Coles in the chair, and Mr. R. Gumbley discharged the duties of vice-chairman. There was a good attendance, nearly 40 members being present. After partaking of a substantial dinner, which was well served, the chairman proposed the usual loyal and patriotic toasts, which were duly honoured. The chairman proposed the toast of the evening, "Success to the Highgate Angling Association." He remarked that it was three years since the association was established, and although during that period they had had to surmount the difficulty of being dry-nursed by one or two individuals, he was happy to say they were now in a prosperous and thriving condition, and he had no doubt that in a short period they would be enabled to take as high a position as any kindred association in the district. The toast was drunk with the greatest enthusiasm. Mr. G. E. Phillips proposed "The Officers of the Association," which was responded to by Mr Hanks. Mr. Gumbley proposed "The Visitors," responded to by Mr. Walsh. A number of other toasts were drank, and a most enjoyable evening was spent.—W. K. Hanks, sec.

### BROMPTON ANGLING SOCIETY.

Some very good shows on the 28th ult., Mr. C. Saunders having a nice show of bream, some scaling 3 and 4lb. a-piece, Mr. E. Saunders also having bream, Mr. Dutton jack and roach. Mr. C. Saunders won Mr. Kirton's prize for largest bream during September.—W. Dutton, sec.

### CAVENDISH ANGLING SOCIETY.

On the 28th ult. 23 members of the above society competed at Pangbourne for seven prizes, with the following results :—Mr. Almond, first, 13¾oz. ; Mr. Granfield, 8oz. ; Mr. Muiden, 6¾oz. ; Mr. Field, 5¼oz. ; Mr. Lee, 3½oz. ; Mr. Elliott, 3¼oz. ; Messrs. Canton and Brett tieing for the seventh prize with 2¾oz. Messrs. Canton and Tallman undoubtedly did their best, and succeeded, in almost every case, in selecting clear swims. Mr. President Humberstone officiated as referee. Beyond the takes being small our outing was a great success.—E. C.

### CLAPTON ANGLING SOCIETY.

The usual weekly meeting was held at the Swan Hotel on Monday last, when there was a good attendance of members and friends. Mr. H. J. Tibbatts in the chair. The minutes of the last meeting were read, confirmed, and signed. The secretary reported having taken a small jack, 3lb. 3½oz., from the Lea ; Mr. H. J. Tibbatts, a jack 3lb. 2½oz., and 5lb. fine perch from private water ; Mr. Tidbury, roach from the society's water at Sewardstone ; Mr. G. Short, 4¾lb. roach from St. Margaret's. Mr. G. Colls, whilst angling with G. Harris at Penton Hook on Monday last, hooked a very fine trout, which would have scaled 6lb. or 7lb.; it was of course returned to the water. This gentleman had a small jack of 2¾lb., but reports that the barbel seem now "off the feed." The secretary reported that the Lea below Tottenham Lock still remained in a most deplorable condition, but that above the lock good fishing could be had. The waters at Day's and Ford's at Tottenham were in excellent order, and Coventry's and Bailey's at Sewardstone were so also. A new member was proposed and elected subject to ballot on Monday next. The secretary reported that their landlord had willingly consented to have suppers ready each meeting-night at a uniform charge of 1s. each, and full justice was done on Monday to the fare provided. Some very excellent singing was rendered by members and friends, Mr. Winterbottam officiating in his usual brilliant manner at the pianoforte.—Henry Howse, hon. sec.

### CITY OF LONDON ANGLING SOCIETY.

The following weighed in fish on the 28th ult.:—Mr. Chambers, roach and dace from Amberley, winning the third prize, given by Mr. Duke, of the Houghton Bridge Inn, weight, 6lb. 3oz. ; Mr. W. Jones, roach and flounders from Teddington ; and Mr. Castell, roach from the Stort.—Cas.

### DUFFIELD ANGLING CLUB.

This recently-formed club has started under most favourable auspices. Already about 30 members have been enrolled. The first contest took place on Saturday last at Eggington, in the waters of Mr. Ball. The weather was very fine, and the party, numbering about 20, spent a most enjoyable afternoon. J. Myring, Esq., president, and J. M. Tempest, Esq., vice-president, acted as umpires, and the arrangements were most satisfactorily carried out by Mr. J. W. Knapton, honorary secretary. The fishing was very moderate, the successful anglers being as follows :—1st, A. Westnidge ; 2nd, H. Bryan ; 3rd, H. Haskew ; 4th, R. Strelley ; 5th, S. Swift ; 6th, W. Walker ; 7th, W. Garratt. The prizes were distributed at the club-room (Mr. Clarke's) on Monday evening by the president.

### EASTERN COUNTIES' ANGLING SOCIETY, GREAT YARMOUTH.

This society held its usual meeting at Mr. Seaman's, Duke's Head Hotel, on Tuesday evening, Sept. 30, at nine o'clock p.m., the president (Dr. Mitchell) being in the chair. Several gentlemen having been duly proposed and seconded, were balloted for, and elected members. A discussion, opened by the vice-president (Mr. Freeman), then ensued as to the advisability of raising the entrance fee to 7s. 6d. or 10s. 6d., as the society would determine, so soon as there were 100 angling members in connection with it. The president having explained that according to rule No. 5 of the rules which governed the society, it was fixed that during the first year of the existence of the society the entrance fee for angling members should be 2s. 6d., to be thereafter followed by an annual subscription of 2s. 6d. This being one of the fundamental laws of the society, he considered that it should be adhered to. It was then agreed not to raise the subscription until the end of the present angling season. A proposition was made by the vice-president, seconded by the president, and carried unanimously, that in future at any competition a prize to the value of £2 2s. or over could not be won by a catch that weighed less than 14lb. A few remarks were made by several of the members upon the advisability of ceasing to have in future the matches staked down, great dissatisfaction having been produced at the general smallness of the catches weighed in at the last angling tournament, which was most successful otherwise ; in consequence, the next competition will probably be a go-where-you-please one. Fish are reported to be still fairly well on the feed at the various angling stations, and some good catches have been weighed in during the week. The following is a description of our recent competition, with the names of the successful competitors :—Within a few minutes after half-past eight on the morning of the 23rd ult. the drag started from the Duke's Head Hotel, Quay, twenty-five competitors being conveyed to the fishing grounds by this means, the others driving in their private vehicles. After a very pleasant journey along the beautifully-wooded road which leads to Fritton Decoy the destination was reached. The morning was simply charming, and this, coupled with the magnificent scenery for which Fritton Broad is so justly famed, was recompense enough to those who had undertaken the journey, even without the further attraction offered by the prizes to be fished for. The water having been carefully staked out by the president, vice-president, and treasurer in a depth of from 10ft. to 15ft., a start was made by the fleet of boats, sixteen in number, manned by between thirty and forty well-known piscators from this district. At the appointed time—viz., 10.30—all boats were firmly anchored, and rods and lines fixed ; the given signal having been made, every line was in the water like a flash, there, however, to remain, to our misfortune, for fully two hours, not one of our finny friends of the necessary size being landed in that time. By-and-by, however, the fish came on the feed, and some fair sport was had by several of the competitors. On the whole, the fishing was poor, as it appears always to be when a competition is on hand. As the time approached for weighing in—viz., 5 p.m.—many anxious faces were to be seen with eyes fixed upon their respective floats, looking for the long-expected move, which, however, did not come unless very occasionally, and then often with a "no result." When it did happen that a good fish was landed, the cry of "There's another" (often, however, the only one landed by the catcher) resounded over the broad, with an answering inquiry from all round, "What bait ?" Good-natured chaff was freely indulged in, as something had to be done to relieve the monotony. Five o'clock having struck, the signal for "lines up" being given, very soon afterwards the anchors were weighed, and the boats began their return journey. Having reached the landing-stage, the fish were measured and weighed in by the president and Messrs. Archard and Lowne, Mr. Archard acting as umpire. Some very good fish were shown, but the gross weight was disappointing. The following is a list of the prizetakers :—Mr. Lowne, 1st ; Mr. Hunt, 2nd ; Mr. Easter, 3rd ; Mr. Tooley, 4th ; Mr. Bayfield, jun., 5th ; Mr. Harbord, 6th ; Mr. Richmond, 7th ; and Mr. Bacon, 8th. The winners having been declared, all quietly dispersed, returning to Great Yarmouth in the conveyance they started with. Too much praise cannot be bestowed upon the competitors for the manner in which they conducted themselves during this, the most imposing angling tournament ever attempted in the Yarmouth district, not the slightest hitch having occurred to ruffle the good temper of any one, and the officers take this opportunity of expressing publicly the gratification they feel at the successful result of their attempt to make angling a better understood pastime.—A. M.

### GLOBE ANGLING SOCIETY.

Our trays were not quite so well filled on the 28th ult. as on the week previous, owing in a great measure to several of the members fishing at Ponder's End for a series of prizes, which proved very unsuccessful, most of them having blanks. The following are the weights taken from various waters :—Mr. S. Howell still at the top with 14lb. of very good roach and bream ; Mr. G. Jeffries, 6lb. 10oz. of roach and perch, one small jack 2lb. ; Mr. J. Brown, one small chub 1lb. ; Mr. H. Lake, 3lb. 8oz. roach, one small chub 8oz. ; Mr. G. Brown, 1lb. 2oz. of roach, one small jack 2½lb. ; Mr. W. Brown, 2lb. 10oz. of roach and dace ; Mr. W. Lawrence gudgeon, and your humble servant, 11lb. of roach, dace, and bream.—J. J. Holmes, sec.

### GOOD INTENT ANGLING SOCIETY.

There was a good show of fish at the club on Sept. 28th. Mr. G. Bates with close on 30lb. of roach, bream, and dace ; Mr. Snook with roach and bream ; Mr. Maybury, roach ; Mr. Hains, carp ; Mr. Ormes, roach. On the 30th, there was a good attendance of members ; two members were made and one proposed, and several more prizes were given. Next Tuesday being quarterly night, I hope all members will attend. Our first match for prizes will take place at Bourne End on the 19th and 26th of October.—R. Murphy.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting on Tuesday evening was well attended, and several visitors were present. Mr. Chambers occupied the chair. The formal business of confirming the minutes and reading correspondence having been concluded, the acting secretary announced the name of another candidate for membership, after which the chairman reported the progress he had made in regard to the acquisition of a certain number of transferable tickets in a private fishing in the neighbourhood of London. He also thought it desirable to negotiate for another capital piece of water, which he used to fish some years since, but which was now strictly private. A discussion ensued on the question of the society being represented at the National Fish Culture Association, and it having been unanimously agreed that the Gresham should subscribe on the terms of the circular issued by Mr. W. Oldham Chambers, Mr. G. E. Chambers was requested to represent the Gresham at the meetings at South Kensington ; the society having also the advantage of the services of Dr. Brunton and Messrs. Crumplen and Bates, who are subscribing members of the National Fish Culture Association. It was announced that Mr. Bates had sent over from Ireland an exceedingly handsome lake-trout weighing 21lb. Amongst the visitors were Messrs. Murray (president of the Central Association), Hatfield (Silver Trout), and Stocker (New Walton and Cotton), who received a cordial greeting from the members, and who duly responded. A vote of thanks to the chairman concluded the business of the evening, after which the customary musical selections brought to a close a very interesting and successful meeting. There will be a special musical evening towards the end of this month, full particulars of which will be duly announced.—Pro H.

### GREAT YARMOUTH PISCATORIAL SOCIETY.

Nothing of importance to report, except new members being enrolled, and the contest arrangements are made for Thursday, October 2nd, between Ellingham and Gellesden in the Waveney Valley, which has the reputation of being a good place for perch fishing between the locks. None that have entered at present know the water, so it will be quite a match of adventure, which it is hoped will prove satisfactory to all.—J. Lark.

### IZAAK WALTON ANGLING SOCIETY.

Mr. J. W. Morgan was successful on Monday last in taking a fine jack which weighed, in the dry, 7lb. 14½oz. Mr. W. Wilshire had 14lb. 12oz. of beautiful roach on Tuesday last ; the heaviest one weighed 1lb. 8oz. Mr. T. Ward will give a handsome prize for the heaviest one fish (bar jack) taken on either Oct. 12th, 19th, 26th, or Nov. 2nd. There are two special prizes to be fished for on the 12th inst. between Burnt Mill and Harlow.—H. B.

### KIRKSTALL ANGLING CLUB.

On Saturday last, September 27th, the members of our club subscribed for a beautiful watch and guard, for presentation to our worthy secretary, John Baggott, in recognition of his services as secretary for the last six years. After a supper served in host Wildman's best style, and to which ample justice was done, our ex-secretary, T. Beckwith, in glowing terms, reviewed the progress of our society, which, starting 11 years ago with a dozen members, now musters upwards of 80, and presented the watch to our secretary, John Baggott, jun., who replied in suitable terms, when the evening was spent in harmony, much enhanced by our band, and all enjoyed themselves. We have some very good sport, and the club is very strong and a good balance in hand. We have resolved to limit our number to 101.—Thomas Booth.

### ORIGINAL ANGLERS' PRIDE.

A complimentary visit was paid to this society on the 29th ult., the headquarters being at Mr. Fiddis's, The Five Bells, Bermondsey-square, Bermondsey. Mr. J. Hurst presided, assisted by a friend. Mr. Benniefield, a gentleman well known in the angling world, presided at the piano, and gave great satisfaction, both in accompanying the singers and his choice selections during various intervals. Mr. W. Page sang "The Stowaway"; Mr. Fiddis, "Jolly Dog." Both songs called forth much applause. Mr. J. Wright, S.S., and several other gentlemen obliged during the evening. To give their names and the songs they sang would be encroaching too much on your valuable paper. The roll was called at 11 o'clock, and the following societies responded :—Anchor and Hope, Battersea Friendly, City of London (in reference to this society that well-known member, Mr. Castell, received a hearty vote of thanks from all parties present for his company that evening), Peckham Brothers, Rodney Piscatorial, Second Surrey, Bermondsey Brothers, Sir Hugh Myddelton, The Anglers' Pride, and The Kenningtonians. At the time required by the Act of Parliament we brought our amusement to a close, and retired to our respective homes.—Pixie.

### PHŒNIX ANGLING SOCIETY.

On the 28th ult. several members were out after the big bream. Slater, the demon, long corker, managed to find 14, weighing 40lb., a very handsome show. S. Aiston, some nice roach and perch; Messrs. Bartrip, Keen, Bentley, Baillie, Reed, and Milton supplying their share.—W. E.

### THE PISCATORIAL SOCIETY.

On Monday evening last the weekly meeting of the Society took place at Ashley's Hotel, Covent Garden. Considerable regret was expressed by those present on account of the absence of Mr. J. Lauder (hon. sec.), who was too unwell to attend. Amongst those present were Messrs. Robinson, Jesse, Meyer, Murray, Fennings, Booker, Gray, Lemann, Brougham, Huggett, Butler, Crumplin, Goodger, Bennett, Wright, Wheeldon, Walker, Attwell, Bird, Adlington, Harden, H. B. Brown. Dr. Brunton, &c. Mr. F. Strange was visitor. Mr. Jesse, upon request, was voted to the chair. Mr. Adlington weighed in one salmon during the week from Cumberland. Mr. Fennings called attention of the members present to the question of the Piscatorial Society's ball, and his remarks were well received. He will bring the question formally before the Committee as early as possible. Dr. Brunton related his experiences of trout fishing in an artificial lake at Chesham, when he took some good fish. He has also been fishing at Winchester, and had upon the table a show of trout and grayling. Mr. Fennings gave an account of his fishing while staying at Ringwood. He has weighed in more fish than last year from the same waters. His best day for roach was a total weight of 47lb., each roach retained weighing over 6oz., and in a single day's pike fishing, took 41lb. He considered the roughest days gave the best sport even for roach. There were a few nice trout in the water and plenty of grayling, the latter being very difficult to capture. Mr. Hugget stated that the Ringwood jeweller was an expert at grayling fishing, this gentleman always using the finest tackle, and fishing with a dry floating fly. Mr. Wheeldon stated that some time since, on a rough day, fishing near Fordingbridge, he took 75lb. of roach in 5 hours. Messrs. Harden and Brown have been angling at Market Deeping, the former gentleman taking 18lb. of roach and dace and one chub, all with the artificial fly in a single day. Mr. Brown also had good sport. The chairman proposed the healths of the successful anglers, Mr. Huggett and Dr. Brunton each showing a tray of fish. Mr. Huggett thanked those present for their kindness in proposing his health. He had been trying for bream, and although he had baited two places, had not a single bite. He afterwards tried for chub, and took several with cheese paste. The largest weighed 4lb., at time of capture, and 3lb. 14oz. when weighed here. He also took some roach and dace. Br. Brunton having previously described his capture, thanked the members for drinking his health, and jokingly remarked that the "chiel" who was taking notes was often reminding him of the small array of fish he weighed in at this Society. Mr. Crumplen called the attention of those present to the great efficacy of bayonet-pointed hooks, and strongly recommended all to use them, their penetrating power was much greater, and he was prepared with statistics to carry out his opinions. Dr. Brunton proposed the health of the visitor, Mr. F. Strange, whom he had had the pleasure of meeting at other societies. Mr. Strange thanked the members for their kind welcome, and regretted his absence from the grand show of roach of the previous Monday. The chairman gave the usual toast of "The Piscatorial Society," which was duly responded to. "The health of Mr. Jesse, who has so ably filled the chair," was unanimously proposed. Mr. Jesse, in reply, said he was always happy to do all he could to forward the interests of this Society to which he had the honour to belong. The business then terminated.— T. H.

### RODNEY PISCATORIALS.

On the 28th, Messrs. Smith, Chantry, and Grant visited Tunbridge. Mr. Smith had about 10lb. of nice bream; the other two gentlemen had roach. Messrs. Grant, jun., and W. H. Flowers visited Ponder's End, and succeeded in getting some nice dace. Mr. G. King has been enjoying a little sea-fishing during the past few days. One day he forwarded 14 score of pouts, whitings, and plaice, and on the Thursday evening he came home he brought with him plaice, whiting, and pout, enough to start a market in this neighbourhood. At the meeting held on the 1st., Messrs. C. Grant and W. Flower were appointed as auditors. On the 8th, the where, and how the October competition shall take place, will come on for discussion. All members interested are requested to attend. This is considered to be sufficient notice to all members, and those who do not attend must be satisfied with the work done by those that do attend.—Pixie.

### SHEFFIELD ANGLING ASSOCIATION—ANGLING CONTEST AT SAXILBY.

In no town in England is there a stronger love for angling than in this far-famed cutlery capital. Considering the difficulty in obtaining sport within anything like a reasonable distance from Sheffield, this passion for fishing would seem to be, at the first glance, wholly unaccountable. But this love for the gentle art in a town so unpromising, has been fostered in no small degree by the Sheffield Angling Association, the headquarters of which is at the Crown Inn, Scotland-street, the worthy host of which is Mr. Jarvis Sanderson, one of the best known anglers in Sheffield. The executive of the association is composed of an energetic committee of working men anglers, whose love for the sport, and a desire to improve it for their fellows, is certified by a life-long attachment to angling interests. Mr. Styring has long held the post of president, and is best liked by those who know him best; while in Mr. Walker, the secretary, the S.A.A. have one who may be safely trusted to watch sharply over the interests of every member of the Association. It has been a custom for some years past for the members to meet for the purpose of having a "Monday's outing" into the country, and though prizes are offered for an angling competition, many avail themselves of the excursion who take no part in the fishing. Foremost amongst the favourite resorts of the Sheffield angler, is Saxilby, a cleanly little village on the Fordyke, a canal more than river, which connects the Trent at Torksey with the river Witham at Lincoln. Saxilby, standing as it does about midway between the above-named places, offers every facility for carrying out a large angling contest, there being long stretch of good water both above and below the village. This water has long had the reputation of containing splendid specimens of roach, and being less exposed to the wind, the very lightest tackle may be used, and many a rare basket of the "red-finned beauties" have found their way to Sheffield club houses from the waters of the Fosdyke. No wonder, then, that Saxilby should be once more selected as the destination of over 500 Sheffield anglers at 8 a.m. on Monday last, September 29th. This year the Association offered (to members only) the sum of 20 guineas in money, and £10 in prizes. The morning opened somewhat cloudy, and a slight rain fell, notwithstanding which the day turned out beautiful and fine, and tended to make the outing thoroughly enjoyable. On calling over the names of the competitors, 440 members answered "Here!" then hopefully made the best of their way to their allotted stations. Thanks to the efforts of the worthy president and secretary, aided by Messrs. Guest, Pashley, Ridge, and Shiply, the contest passed off in a most satisfactory manner, the catch of fish for the four hours' fishing being exceptionally good. A roach 1lb. 9oz. was taken during the match. In fact, the fish throughout were a really nice sample. The names are appended below of the first six—1. W. Blackburn, 8lb. 15¼oz.; 2. G. Thompson, 7lb. 6½oz.; 3. A. Slack, 7lb. 1oz.; 4. H. T. Packard, 6lb. 7oz.; 5. T. White, 5lb. 9oz.; 6. W. Lumley, 5lb. 9oz.—Rotherwood.

### SOUTH LONDON UNITED.

All secretaries requiring extra tickets are requested to attend or send to the meeting held at the Alscott Arms, Alscott-road, Bermondsey, on the evening of the 9th day of October, for the number of tickets they require, and those secretaries who have not disposed of all that have been allotted to them are requested to return those left to the secretary on the same date. I am happy to inform all members of this Unity that two more societies have been enrolled—viz., The Kenningtonians and the Peckham Rovers. This brings the number on the list up to 20. Special notices of this competition will be sent to all societies enrolled during this week.—Pixie.

### THE STANLEY ANGLERS SOCIETY.

Subjoined are the weights of fish taken by members since my report last sent :—Mr. D. M. Humby, seven roach, 5lb. 3oz., heaviest fish, 1lb. 11½oz.; Mr. W. R. Humby, seventeen roach, 11lb. 9oz., nineteen roach, 10lb. 10oz., heaviest fish, 1lb. 12oz.; Mr. C. P. Wheatstone, one perch, 7½oz., four perch, 1lb. 4½oz., four chub, 6lb. 1oz., five chub, 5lb. 15oz., four chub, 6lb. 10¾oz., five barbel, 11lb. 4oz., six barbel, 13lb. 15oz.; Mr. A. Wrightson, ten bream, 24lb. 14oz., four bream, 11lb., two perch, 12oz., twenty-eight roach, 20lb. 9oz., heaviest fish, 1lb. 6oz.; Mr. G. Walker, one bream, 3lb. ½oz. As will be seen by this and previous reports, several of our members have been successful in securing some fine specimen roach this season.—G. E. W.

### UNITED BROTHERS, DEPTFORD.

Several of our members were out on the 28th ult., but sorry to say not much sport—Messrs. Belton, Currans, Penton, and Beak, roach from the Medway. Will our members be kind enough to attend next Saturday for some very important business? H. T.

### THE UNITED BROTHERS ANGLING SOCIETY, KIDDERMINSTER.

The annual dinner of the United Brothers Angling Society took place in the large assembly room at the Swan Hotel, on Wednesday evening, the 24th ult. The Rev. S. B. Bathe presided, Mr. Councillor Bytheway occupied the vice-chair. There was a large number present, and an excellent dinner was put upon the table by the hostess. After the removal of the cloth the chairman said he had very great pleasure in rising to propose the first toast, which was always cordially received by Englishmen, "The Queen and Royal Family." He was sure there was no more loyal body of men than anglers. One thing he might mention, and that was, that he had never heard of her Majesty throwing or using a rod of any description, yet she was always to the fore in encouraging all other sports and pastimes. The chairman then went on to say that the Prince and Princess of Wales and their three daughters were all anglers and fond of fishing. The chairman then gave "The Army, Navy, and other Forces." Mr. Tandy replied, saying, no doubt that if they were wanted they would be, not only ready, but willing. Song by Mr. Redding, "Livingstone." Mr. Councillor, Bytheway proposed the "Bishops and Clergy," which was responded to by the chairman. The president of the society, Mr. Redding, made a short statement as to the position of the society. He said, when the society started four years ago its members were small in number; in 1882 it mustered 17, in 1883 there were 40, and at the present time they numbered over 60, besides hon. members, and that there were not many larger clubs in the country. Mr. Redding went on to give a list of the takes of fish by a few of the members up to the present time. John Goode, 27 baskets, 127lb.; F. Millington, 20 baskets, 111lb.; J. Yeomans, 15 baskets, 76lb.; C. Walters, 12 baskets, 54lb. Those were the chief takes, which were not bad, considering the low and fine state of the water, and angling from the bank, too. Recitation by Mr. Butler, "The Ruined Cottage." The distribution of prizes then took place. The chairman, in handing the prizes to each successful competitor, gave some good advice to the younger anglers, whilst the older ones came in for some humorous remarks. Mr. Fearnly gave the toast of the evening in felicitous terms, "Success to the United Brothers' Anglers," particularly emphasising the good the society was doing by its fair and equitable management of the public competitions held under its auspices. Mr. Redding proposed a vote of thanks to the donors of prizes, and also to those honorary members who gave leave to the members of the society for the use of their waters. He, Mr. Redding, explained that they were about to secure waters for the members' use, besides the privileges they already possess. The president said there was one thing greatly to be regretted, that was the withdrawal of the privilege tickets by the railway companies. He was afraid it would affect the society very materially as regards their numbers, but he hoped they would think better of it, and alter their minds for the next year. Song, "Down by the River Side," Mr. Smith. Mr. Redding proposed "The Mayor and Corporation." Mr. Councillor Bytheway responded, and in referring to the present outbreak of fever in several parts of the town, said the authorities were doing all in their power to stamp out the epidemic, remembering the words—

Tender heart, stroke the nettle,
  And it will sting you for your pains;
Grip it, like a man of mettle,
  And it soft as silk remains.

The chairman next proposed "The Health of Mr. James Redding, the President of the Society." They could not, he thought, possibly have a better or more energetic president. He thanked him, on behalf of the members, for the most valuable services he had rendered to the society during the past year. The toast was received with musical honours. Mr. Redding thanked them for the confidence they had in him. He could assure them that he should do for them in the future as he had done in the past. Mr. Earp then gave "The Hostess," and spoke most heartily of the high estimation which Mrs. Titley was held by all the members of the society, complimenting her at the same time on the splendid dinner she had placed before them. Mrs. Titley having briefly responded in a few well-chosen words, several other toasts, including the healths of Mr. Bytheway, Mr. Titley, and other gentlemen present, and another capital recitation by Mr. Butler, the meeting broke up with singing the "National Anthem."—E. Earp, hon. sec.

[The very serious outbreak of typhoid at Kidderminster is yet another reason why anglers should do all in their power to prevent the contamination of our streams and springs. It appears the disease attacks chiefly the teetotalers who drink water. Why do they not boil it? And if they are wise they will add a little spirit "as medicine," while this terrible epidemic lasts.—Ed.]

### WALWORTH PISCATORIALS.

The result of the competition that took place at Tunbridge on the 28th ult. among some of the members of this society is as follows :—1st, Mr. R. Cane, with roach; 2nd, Mr. Piolaine, roach; 3rd, Mr' Griffin, gudgeon; 4th, Mr. Irons, roach; 5th, Mr. Mawbey; 6th, Mr. C. Bansback. Fish weighed in during the week;—Messrs. Gilbert and Delhaye, sen., rudd and other fish from Pitsea. Fish exhibited this evening by Mr. F. Grigg from Tring (which place I hope to speak of later on), weighed 26lb. 15½oz. of perch and roach. Among the perch were three fish weighing 1lb. 8oz. each, and several others going over 1lb. each. One roach he had turned the scale at 1lb. 15¼oz. Mr. Boalch showed 4lb. 7oz. dace; Mr. Gilbert, 2lb. 5½oz. of dace; and Mr. Beckett, had 1lb. 13¾oz. of dace from Richmond. The next competition will take place on the 9th day of October for two prizes given by Mr. Bayley and Mr. Grimmett. Conditions :—Fish where you like; private waters excluded.—Pixie.

### WIMBLEDON PARK LAKE.

A competition took place here on the 28th ult. for a series of prizes given by the proprietor, Mr. Harper. The conditions were, for the 1st, 2nd, 3rd, gross weight taken during the day, and one prize for the heaviest fish taken by any angler—not being one in the first three; two rods were allowed, and all fish over 7in. allowed to weigh, barring eels. The following is the result:—1st, Mr. Cartwright had 9lb. 8½oz.; 2nd, Mr. Underwood, 7lb. 8oz.; Mr. Corras, 5lb.; the 4th prize was taken, but the name of the winner I have not heard. Mr. J. Gafney acted as master of the ceremonies, and gave satisfaction to all competitors.—Pixie.

### WEST GREEN ANGLING SOCIETY.

Mr. Coleman's monthly prize was won by Mr. C. Firkings, being the heaviest weight by 1lb. 10oz. Mr. Orridge's prize for the month of October, go where you please, all fish to weigh in, bar jack, is now on.—J. Guyver, sec.

## PERCH FISHING IN ELLESMERE LAKE.

Having, in returning from our competition in the Vyrnwy on the 17th Sept., to pass Ellesmere, myself and Messrs. Seaman and Wood decided to stay there for the night on purpose to fish on the lake next day. We put up at the Red Lion, and after a couple of "refreshers" and a chat with Mr. and Mrs. Sparrow and their charming daughter, were shown to bed. We were astir by 7 a.m. the next morning, and after partaking of an "eye-opener," we walked to the lake. We found the water very much "broken" indeed, green as grass, and covered nearly all over with innumerable pieces or patches of scum of the same colour, nasty-looking enough in all conscience to deter any but the most ardent anglers from wetting a line therein. But nothing—well, scarcely anything—frightens the real angler, and some of these were already at work trying to beguile the tenants of this strange-looking element to bite. To our inquiries as to what sport, we only received an ominous shake of the head, or a depressed-sounding "None." However, we were there, and must, of course, have a try, *one* or more of us secretly believing that owing to our superior skill we should certainly have more success than those we had questioned. But only about a dozen roach or so rewarded our venture, and at 10 a.m. we adjourned to the Red Lion and enjoyed a plenteous and tasty breakfast which, with a "nip" afterwards, completely restored our equanimity. After resting for about an hour, we returned to the lake and fished up to 2 p.m., with the same meagre results as before. We were now quite tired of the monotony, and Mr. L. suggested trolling for jack or pike for a change. This being agreed to, I rigged up a good-sized artificial dace, and away we went, Mr. L. kindly officiating with the oars He rowed the whole length of the lake, but without a response. Turning at the top to pull back again, I had necessarily to wind up to prevent the hooks fouling in the weeds or getting fast in the bottom, as we were in shallowish water, when just as the artificial reached the surface and was "skurrying" along with the motion of the punt, something rushed for, but missed, it. I immediately cast again, and on spinning the bait, distinctly saw a large perch following it in the most eager fashion, dashing at it, and then sweeping round it in the most frantic manner imaginable. Thinking the dace too large, I changed it for a "kill devil," and at once began to take perch. Mr. L. now rigged up rod and tackle for Mr. W., and this gentleman, who had never fished this style before, when he had overcome the first awkwardness, began to take perch, too. It was a lively time and no mistake, and it was a rare treat to *see* the fish dashing at the lure. It was really astonishing to see how fearlessly the perch followed the bait so close, that we could notice how determined they seemed to have that spinning little fish for a meal, and often when a fish was being wound in, several others would be seen watching, with hungry-looking eyes, his movements, and at last most reluctantly turning back when they saw the case hopeless. We missed, after hooking slightly, a goodly number of fish; but in something under two hours we caught 38 perch of from ½lb. to 1¼lb. each. We had unfortunately to leave off at half-past 4 to catch the train, or we could, I believe, have half-filled our punt if we could have fished on.

Another peculiar feature was that the fish seemed all to be in one particular place a few yards in area, for as soon as we drifted away from this one place, not a run could we get, and we lost a lot of time by not being able to keep the punt in the right place through losing the bearings. After we left, I believe some other anglers tried the same place, but failed to get any fish, and next day also, but without success. I have fished a good number of years, but never before have I *seen* fish so madly in earnest to get a meal. It was quite a new experience to actually see them rushing at, and taking, the bait, with very often one or more hovering around watching their turn.

Liverpool. R. Woolfall.

## CONFERENCE OF THE UPPER THAMES ANGLING SOCIETIES.

A novel movement in reference to the Upper Thames Fishery Associations took place on Monday, when delegates from each society and their friends met at the Royal Hotel, Henley-on-Thames, when they went on board the launch *Austral*, and proceeded down the river to call at the various fishing stations. At Great Marlow an elegant luncheon was provided by "mine host," Mr. Chas. M. Foottit, of the Compleat Angler Hotel, and business and pleasure were most agreeably mingled. The gist of the discussion was the desirability of each association being represented in a separate body. Several instances of the associations bidding against each other for trout having occurred, it was decided that for the future, on information being received by any secretary that trout were for sale, he should inform the secretaries of the other associations, to prevent their bidding against him. The amalgamation of all the up-river associations into an Upper Thames Angling Preservation Association, with local branches to be worked much as at present, was also discussed and found much favour. The conference devoted some time to the consideration of the Report issued by the Select Committee appointed by the House of Commons to report upon the steps which are necessary to secure the Thames as a place of recreation, and it was pointed out, as regards angling (one of the principal recreations of the river), the Committee had not carried out the object for which they were appointed, inasmuch as they had not reported the steps which are necessary to secure the angling in the Thames to the public. It was decided to prepare statistics connected with Thames angling, as the number of fishermen employed in each district, the varieties of fish taken, and other matters of interest connected with the waters bearing upon the sport. The conference passed off very harmoniously, and great good feeling and mutual goodwill prevailed. It is but fair to state that the conception of this conference may be traced to the brotherly feeling which prompted the Thames Angling Preservation Society and the Maidenhead Association to come to the rescue with advice and assistance when the Windsor and Eton Society lapsed into almost extinction.

"Forestry" having changed hands, Mr. Francis George Heath has retired from the editorship.

## ROBERT BURDETTE'S SERMON ON FISHERMEN.

"The Fishers shall also mourn, and all they that cast angle into the brooks shall lament, and they that spread nets upon the waters shall languish."—Isaiah, xix., 8.

It is the time of the fish liar. He is even now in our midst. "A poor man is better than a liar," saith the wise man, which goes to indicate that even in the days of Solomon a poor man was about as useless a piece of furniture as could be found in the State, and when the liar was pegged one row below the child of poverty, he was clear down; yes, he was thirty-nine degrees below the State house. The psalmist said in his haste that "All men are liars." And, although after saying it, he had many years for mature consideration and deliberation, he doesn't appear to have moved a reconsideration. He doesn't say anything about it. He doesn't explain it. He doesn't add anything to it. He doesn't even move to strike out the enacting clause. He just lets the record stand.

But there be hope of a man, if he steal, that one short term in the penitentiary and a wholesome fear of another will cure him. If he be a drunkard, John B. Gough and John P. St. John may reform him. But if he goeth a-fishing, he will come home and lie about it. There have been men who have told the truth in a horse trade, because they knew so little about horses they didn't know how to lie to advantage. But any man can, and every man does, lie about fish. In two ways he does this—he belittles the fish his neighbour catches, and enlarges the one he took himself.

I remember once myself fishing in the eddying waters of the Mississippi about four miles above Burlington, striking a catfish. I was using a lancewood rod and set reel, and the fish ran out about twenty-five yards of line, then, turning suddenly, made straight for me as I stood in the water. I struck at it with the rod, which broke off in my hand. The infuriated fish chased me ashore, ran me through a lumber yard, pursued me across a wide stubble field, and some distance into the woods, when, being unarmed, I climbed a large cottonwood tree. The relentless fish followed me up the tree, where it was shot by some hunters just as it was "cooning" out along a big limb to get at me. It fell to the ground dead, shot through the heart. It was nine inches long, and weighed a pound and a half with its clothes on. Which, by interpretation, is dressed.

The worst feature, or rather effect, of the stories of the fish liar, and his habitual tendency to exaggerate, is that people are slow to believe a simple statement of fact, even when made by a truthful man, who does not fish as a profession, and has therefore no inducement to make even a slight departure from truth for poetic and artistic effect.—*Exchange.*

Bismarck as a Pisciculturist.—Prince Bismarck has been going in strongly for pisciculture during the last three years at Friedrichsruhe, and every stream and lake on or near his estate is now well stocked with fish. The Prince has an extensive breeding establishment at Graude, near Friedrichsruhe, from which 10,000 young trout have lately been sent out to neighbouring waters. He obtained a large stock of trout from the celebrated ponds at Wolfsbrünnen, near Heidelberg, which are, or at least which ought to be, well known to many of my readers.—("Atlas" in the *World.*)

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

**FISHING RODS—AND TACKLE.**

BULMER'S "FISHING GAZETTE"

GOSSAMER GUT LINES,

Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—Fishing Gazette Notice, September 18, 1883.

See also notices in the Fishing Gazette for Dec. 17, 1881; June 28th, 1882; July 1, 1882; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d.; Fishing Gazette Gossamer Gut, Tapered, 8d. each; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d., and 1s. 6d.; prepared ditto, 20 yards, 1s.; stout, 1d. a yard; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d.; Gossamer Gut, 12in., 3s. 6d.; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz.; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal, 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen; Treble ditto, 2d. each. Pennel Snaps, 2½d.; Jardine, 3½d. each; Gut or Gimp Spinning Flights, 6d. each; Spoon Baits (Jack's size), 9d. each; Gut and Gimp Traces, 6d. each, Fishing Gazette Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d.; ditto Twisted Gut, stout or fine, 1s. each; 3in. Jack Float, 6d.

WINCHES. — Nottingham, from 6d.; Brass, from 8d.

HEATON'S PATENT REELS, "Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ⅝in., 1s. 6d.

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d To any part of Europe, the United States, and Canada, the Annual Subscription, including postage s 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

The Fishing Gazette.

SATURDAY, OCTOBER 11, 1884.

## THE FISHERIES DIPLOMAS.

IN answer to an inquiry on our part, we are informed on very good authority that the delay has been caused by the Paris firm who have had the diplomas in hand, who are "solely to blame." The diplomas are executed by a new process, and only a small number can be printed in a day. We understand that a sufficient number to issue to BRITISH EXHIBITORS ONLY have been finished, and will shortly be sent out.

## FLOATING GROG SHOPS IN THE NORTH SEA.

THE letter which we published recently from the Lord Mayor under the above title referred to the "cooper," or bumboat, as "the pest of the North Sea." A very interesting article on this subject appeared shortly afterwards in the German *Emder Zeitung*, and the German press generally has referred to it. The fact is, although only a small proportion of the "coopers" sail under the German flag, it is German brandy which is doing most of the harm complained of by our fishermen. As showing the immense increase in the sale of spirits to the North Sea fishermen, it may be mentioned that *one* Dutch "cooper" which sold 1,649 quarts of brandy in 1880, in the first eight months of 1881 had already sold 2,247 quarts.

The German papers often contain complaints of outrages by English sailors; but they now begin to see that it is their very low duty on brandy which is at the root of the evil. In France the duty is about £2 per twenty-gallon cask; in Holland, £4 16s.; in England, even more; while in Germany it is only 8s. per twenty gallons. It will be seen at once where the brandy comes from. Fishermen do not usually take much money to sea with them, and as soon as it is exhausted the "coopers" prime them with liquor and induce them to exchange their nets, ropes, anchors, for brandy, and then the "Belgian Devil" has often to bear the blame of the loss of this property of the smack-owners.

What is the remedy? It may be difficult to find a complete remedy; but there can be no doubt if the duty on German brandy intended for consumption in the North Sea were raised to the Dutch or even the French figure, a great blow would be given to the bumboat harpy, who, after fleecing our fishermen of their money, nets, clothes, everything he can get, complains if he gets his head broken now and then in some drunken brawl which he has instigated.

## THE TROUT STREAMS OF NORTH DEVON.—VI.

By Helwr.

MY pleasant task is nearly ended, and when at the end of this paper I shall have appended my nom-de-plume (Helwr), all that I have to say upon this subject will be ready for the pages of the FISHING GAZETTE. In my first paper I wrote:—"I propose later on to give a few descriptions how to make the kind of fly referred to." After consideration, I have decided not to do so, because I make them from Cutcliffe's instructions, and he describes the method of tying flies and the materials to be used far better than I can. True, I might copy his directions; but, not believing in plagiarism, I think it better to refer my readers to his book. The book is—"The Art of Trout Fishing on Rapid Streams." London: Sampson Low, Marston and Co.

In this most valuable little book will be found some capital remarks about fowls' feathers, and I must mention that Mr. James Rowe, fishing tackle maker, Barnstaple, has some fowls of the colours alluded to by Cutcliffe. I called upon him a few days ago and saw his fowls, and consider them most useful birds for a fly-maker to have. Cutcliffe says: "These rusty feathers are by far the most rare, and by far the best when obtained; they combine several colours, and shot, as it were, over the surface of a rich glossy grounding in blue and red. Of the different varieties of feathers the rusty are the most valuable in all respects, and therefore we must seek to procure a good assortment of rusty blues, &c." The fowls Mr. Rowe showed me had just these colours about their necks and wings, and are very different to the birds one usually sees in a poultry yard. I am not aware that fanciers, as a rule, are influenced in their selection of birds by the desire to possess those the most suitable for growing a crop of feathers for fly-making.

Having said my say about the streams lying to the south of Dunkery, we must now go "out over," as they say in these parts.

Near Lynton and Lynmouth is the choicest scenery of the West of England, and there is good trout fishing in that neighbourhood. There are several hotels, all of them being largely patronised during July and August. I think the best place for the angler is the Lyndale Hotel, Lynmouth. A lot of streams can be fished from here: the Lyns, Brendon stream, and the Badgeworthy water. The landlord, Mr. Bevan, knows all about it, and will give every information.

Perhaps one would be more likely to escape the crush, and would also find it a more economical course, to stay in the village of Brendon, where there is a nice little inn. By doing this, we should get considerably nearer the Doone Valley and Badgeworthy water; but we must bear in mind that the farther we get from our fellow-men the less luxury and high living must we expect. I do not mean to say that the inn at Brendon can provide one with the same style of commissariat that we should get at the swell hotels.

As a set off against that rosiness of description to which some say I am too prone, let me here state that the Doone Valley is overrated; for this Mr. Blackmore is to blame, because he has thrown such a glamour around the place in his delightful romance of "Lorna Doone." Here we see the old proverb exemplified—"One man can steal a horse, where another must not look over the hedge at one"; for that tendency to regard things *couleur de rose* which is to me a cause of reproach, has been the means of making Mr. Blackmore famous. [Mr. Editor must not think I am galled—not at all, I am getting quite callous; it is only my fun.] Well, the Doone Valley is a wild, lonely, desolate place; well worth seeing under a summer sun, but not so attractive to the stag-hunter when winds are cold, moors brown, and mists are sweeping across from ridge to ridge, at last coming down into the valley itself.

Taking wing and flying west across the high table-land, we soon reach the pretty village of Martinhoe, for it is only five miles distant from Brendon, and that is not much of a fly. Martinhoe lies high above the sea, from which it is distant about half a mile. The best place to get down to the water is at Woodabay. This is rather a romantic valley, well worth seeing, but not quite up to the Lynmouth standard. But fresh water is what I am treating of, not salt; so, harking back to my subject, I will tell you that a very nice trout stream flows into the sea at Heddon's Mouth, about half a mile west of Martinhoe. This is the Heddon, and it is fishable for about three miles up it—say, to Paracombe. I can confidently recommend the Hunter's Inn (Mr. H. Berry), and permission to fish is here obtained—at least, such was the case a few months ago; but as the property has recently changed hands, other things may be changed, although I believe matters piscatorial are *in statu quo*.

When I last visited this stream it was pretty well stocked with fish, averaging about five or six to the pound.

In last week's FISHING GAZETTE, owing to a stupid mistake (of printer or author), I am made to say that "the evening of the first day is always spent at the inn at *Dulverton*, &c." Of course it is obvious that I meant *Withypool*, not *Dulverton*, for it was of the *inn* at Withypool I was speaking, and not of the hostelry accommodation of Dulverton, which contains, as I said in a former paper, three good *hotels*. When speaking of the Yeo River in my second article, I took care to describe its vicinity very carefully, viz., as running from Molland Station down to Bish Mill; yet I am informed that, as there are several streams of that name in the West of England, I ought to have been more explicit. I do not see how I very well could have individualised the water more; but, in order that there shall be no doubt as to its identity that I can avoid, I will state that by the inhabitants of its banks it is known as "The Old River." It was in this "Old River" that I had the good sport recounted in my last, notwithstanding my disgraceful behaviour.

In my fourth article I alluded to Sherdon Brook, and only alluded to it. I intended dealing more fully with it in the next paper, but forgot to do so; and unless the sight of it a few days ago, when hunting, had brought back my erring thoughts into a proper channel, I should have finished my remarks upon "The Trout Streams of North Devon" without saying what I desired to say about one of the best of those streams. Sherdon Brook runs into the Barle exactly half a mile above Landacre Bridge, and is on the right side of that river—the right, of course, as one proceeds downwards.

It is admirably adapted for fly fishing for at least four miles up from the "big river," the four miles being in two sections. Whilst fishing the first, or lower half, we are proceeding in a south-westerly direction; and as we proceed onwards, we turn a decided bend, and then go on towards the north-west. From this it will be seen that if the day be at all windy (which it often is hereabouts), we want the wind to blow from the east, south-east, or south, and that the prevailing wind of the fishing season—viz., from the westward—is not so convenient for that throwing up stream which is so indispensable to success upon a stream so small, narrow, and shallow, that the trout can easily see one approaching from the front, though at a great distance. Fortunately, the course of this stream is so exceedingly tortuous, that no matter what the wind is, we can always get a nice forward cast in parts of it. At the lower end the bed of the stream is strewn with boulders, dividing its course into two, and sometimes three portions, and forming nice little still hovers where the trout anxiously await flies washed down by the current. Here they do not disdain the artificial fly, if properly offered to them, provided always that we do not give them a sight of our charms, dress, tackle, or any part thereof, whilst displaying the lure. As we ascend the stream, it alters in character. In most places it flows onward with a steady, undulating surface. On such portions of the water the fish may be inveigled in mid-stream, or any part thereof. Higher up still we constantly find sharp bends and deep pools—not quite still, but with a slight swirl. In these pits, when there is plenty of water, half-pounders are to be caught, and the higher we go the larger the fish appear to get. It will be found exceedingly difficult to get a good creel upon this brook when the water is low and bright, though then they are to be caught; but after "the springs have broken" (as they say), it is astonishing how freely they sport. For about a mile of the middle portion of the stream, a low wall abuts on the water's edge. This affords a capital screen, behind which one can deal certain death into the ranks of the enemy. There is not a yard of water that cannot be fished, on account of bushes, trees, or other impediments, at least on one side. Usually, both sides are quite clear and open.

It is wonderful the amount of bird-life one meets with when fishing quietly along this interesting, lonely stream.

Water-ouzels constantly utter their startled cry, and, darting swiftly up stream for a short distance, alight upon a stone in the water, and wait till the human trespasser gets close to them, when they repeat the process.

Kingfishers I often see, though never very close. They give forth a shrill, crisp note, and flash by, a glittering mass of green. These most brilliant birds are, I believe, getting very rare in England. Though not common, I think they are more plentiful in this district than most people suppose. Even gamekeepers tell me they rarely meet with them, and the reasons why I see so many are that angling keeps me longer by the water than any man would be, unless drawn there by the ardour of the fly fisher, and because, also, the nature of the fisherman's occupation makes his approach quiet and stealthy. In the latter respect, it is widely different with the gentleman in velveteens and the death-hurling weapon he usually carries.

After traversing the four miles I have mentioned, proceeding up stream, we come to the road leading from Simonsbath to Sandiway, striking it at a point about three miles from either place—perhaps a little less.

In addition to the water-ouzels and kingfishers I have mentioned, and wood-pigeons, rooks, magpies, thrushes, blackbirds, tiny wrens, and swallows in clouds, that I have not mentioned, there are, alas! a great many herons about. These skilful fishermen, locally known as cranes, come from Dulverton, and are so numerous that one morning about six o'clock I saw a score sunning themselves on a high crag overhanging the Barle, just above Landacre. Notwithstanding the immense amount of mischief they do, I rather like to see them, for they are such noble, interesting birds.

And now I have said my say about the trout streams of North Devon, and will conclude with this: If Exmoor and its vicinity will not yield as many trout *per diem* as other parts of England, nor fish as large, yet its wild moors, with the gorgeous varied hues, its sombre, lonely wastes, its streams, either mountainous and swift, or flowing more slowly through the most delightful wooded valleys, and last, but not least, its bracing air, its palatable food, and its charming, hospitable people, will cause the angling stranger who visits it to say that it is as well worth a summer holiday's stay as any place he has hitherto known in those little islands that compose the United Kingdom. HELWR.

(*Conclusion.*)

[We hope next year that our correspondent will be able to describe the streams of Dartmoor in the same pleasant way he has done those of Exmoor. What a jolly life his must be—hunting, shooting, and fishing, one or other, all the year round! How is it readers of "Lorna Doone" so often forget that the Doone Valley, the water-slide, &c., are described as seen by a *boy* in the winter, and not by a full-blown British tourist in the summer?—ED.]

## FRESHWATER FISHERIES.

THE following extracts are from an interesting article in the *Justice of the Peace*, No. 37, Vol. XLVIII.:—

Though legislation, for the last quarter of a century, has been most active as regards our salmon fisheries, it is pretty generally conceded that that legislation has become so involved, intricate, and almost unintelligible, that, like Lord Dundreary, few people can hope to understand it. And, as might be expected, the freshwater fish could scarcely be let alone, seeing that these are often mixed up with their imperial brethren. It was thus inevitable that the legislature, after bringing the salmon laws into a network of unintelligible details, should take up the freshwater fish, and make them also much more complicated and difficult to comprehend. Indeed, until a few years ago, except in the Thames, legislation there was none as regards all these minor fish.

At last power was given to salmon fishery conservators to appoint by by-laws a close season for these fish, and even to issue licenses for fishing them. There still remained many places where there was no salmon fishery district, and therefore none of these latter restrictions applied. But in course of time the legislature has gone the length of enacting that there may be fishery districts where there are no salmon, and that whatever be the kind of fish that are found, there may be a board of conservators appointed, and a power given to them to make by-laws and impose suitable restrictions as to that fish for the common good—that is to say, so as to multiply and protect the fish, and thereby enhance the sport and amusement of the people who delight in fishing.

The result of the legislation, though now embracing all kinds of freshwater fish, as well as and including trout and char, is still to separate those two fish from the common herd; and separate laws govern them. Thus the close time for trout and char is usually between 2nd October and the 1st February following; and while power is given to boards of conservators of salmon to vary the season within certain limits, yet the total close season for trout and char is not to be made less by the board than 123 days. Moreover, in a salmon fishery district there is power given to issue and enforce licenses for trout and char fishing, but care is taken that these shall be very moderate and much less than the salmon rod license duties. One important advantage which the trout anglers have over salmon anglers is, that the trout license may be had for the day, week, season, or any part thereof; and hence it must, at most, be a mere bagatelle, and it can scarcely be a serious check to a few days' amusement in any strange country.

While, therefore, trout and char anglers may in many cases now require to have a license to fish, yet this drawback is counterbalanced by the increased protection given to their fish by the conservators who tax the angling fraternity. There are water bailiffs who reconnoitre the district and repress all irregular practices. The board can prohibit altogether most of those practices, and in particular they can prohibit the fishing of trout and char with nets during the night time. This practice, it is needless to say, is most prejudicial to the breed of fish, and has no pretensions to be a branch of sport. And even when net fishing for trout and char is not illegal, yet the board can prescribe the length and mesh of the net, and can prohibit nets altogether in particular spots. There are also prohibitions against destroying the fish with lime and poisonous matter, though this last protection is equally enjoyed by the other freshwater fish.

Having thus alluded to the law generally as to trout and char, the other freshwater fish are under somewhat different regulations, though in several respects trout and char are also affected by the Freshwater Fisheries Acts. The first of these Acts was passed in 1878, and introduced the thin edge of the wedge; while the last Act of this year considerably amplifies the legislation, and embraces all kinds of freshwater fish. These Acts are, respectively, 41 and 42 Vic. c. 39, and 47 Vic. c. 11. By the first Act a fishery district was authorised to be formed for trout and char only, irrespective of salmon. But by the last Act the same power is now given to constitute fishery districts for other or all the other freshwater fish.

The most important part of the law now affecting freshwater fish is this—namely, that when a fishery district is once formed, and this will be done on the model of the salmon fishery districts, a power is given to the board to make by-laws as to a variety of matters. One is to determine the size of mesh of nets for freshwater fish, for though nets are seldom used for these fish, yet the owner of a river might now and then make a sweep of the stock of fish—at least, so far as particular pools contain such a stock. But the important power given to boards now is that contained in 47 Vict. c. 11, s. 1 namely, "for prohibiting the use of any mode or instrument of fishing for freshwater fish within the district of such board, where such mode or instrument appears to be prejudicial to the fisheries." This large power will enable most of the boards to grapple with the chief enemies of the sport, for, as everybody knows, the pleasure of angling, like the pleasure of hunting, lies not in the actual catching, but in the constant desire and intention to catch. And hence spectators are apt to say that the more difficult and uncertain the art of catching fish can be made, so much the better for the angler. Nevertheless, as he is apt to lose his temper if he goes wholly unrewarded with a fair basket, it cannot be disputed that the best thing of all that can happen is to secure a plentiful breed of fish so as to distribute perfect happiness among the greatest possible number of aspirants. And this result must usually be attained by judicious by-laws containing regulations as to the instruments of fishing.

Another important part of the new law as to freshwater fisheries is that relating to a close season. The sole object of a close season is to secure to the fish, at the time of year when they breed, as much rest and non-interference as will give nature fair play. Fish do not, like hares and rabbits, live at the expense of some owner of the soil, so that what they eat—and the more of these the more will be eaten by them—is so much deducted from somebody's pocket. On the contrary, fish feed and support themselves entirely either out of the air and the flies above, or the worms and insects found below the surface, and cost nobody a farthing for their keep. All they require is to be let alone—at least, during a few months in the year. This object has, to some extent, been secured by the Freshwater Fisheries Act of 1879, for by 41 & 42 Vict. c. 39, s. 11, a close time is enacted for all England and Wales. That time is between 15th March and 15th June, both inclusive. So that if the freshwater fish are left undisturbed for three months, they will usually supply ample sport during the other nine months of the year. And this close season has also been adopted in the Thames for nearly all the freshwater fish there, except trout, these last being more akin to the salmon, and requiring another and longer time to grow.

While a close time has thus been laid down for freshwater fish, some attempts are made in the Act 41 & 42 Vict. c. 39, s. 11, to make exceptions to its applicability and to secure the owners of private fisheries from being bound by it. Thus it is said nothing shall apply "*(a)* to the owner of any several or private fishery, where trout, char, or grayling are specially preserved, destroying within such fishery any freshwater fish other than grayling; *(b)* to any person angling in any several fishery with the leave of the owner of such fishery, or with the leave of the fishery board." These exceptions show a hopeless bewilderment as to the effect they must produce. As to the words, "where trout, &c., are specially preserved," these are very loose; for who or what must be the owner who does not specially preserve his trout? It will be impossible to find a reasonable meaning to these words. But the other exception as to "all anglers in a several fishery with leave of the owner" is still more unfortunate, for they make the exception almost as large as the rule. All fisheries for freshwater fish being substantially several fisheries, it will follow that no owner, nor his licensees, need pay any regard to the close season at all. Hence, none but poachers will practically be affected by the enactment of a close season, and as there must usually be few poachers this useful enactment seems too likely to be nullified in practice.

## A THREE-AND-A-HALF POUND ROACH.

WE have just had a sight of the finest roach we have ever seen. It was sent up to our office by Mr. Cooper, the fish preserver, of Radnor-street. It appears to have been sent to him by Messrs. O'Handlen and Co., of Bristol, to be set up. It was caught at Malmesbury, Wilts, March 10th, 1884, and weighed 3½lb., and it certainly looks every ounce of this weight, and a more handsome specimen of the true roach we never saw; there is no bream or rudd or any other cross about it. Someone wrote the other day to ask us the weight of the biggest roach ever taken in England? We said we did not know, but that we had one of 2¼lb. being set up, and had heard of even larger than this; but all we have seen or heard of must take a back seat in presence of this well-authenticated three-and-a-half pounder. Let us hope he was taken by fair angling. Perhaps Messrs. O'Handlen will give us his history?

## ON THE DESCRIPTION OF SALMON FLIES.

BY MR. GEO. M. KELSON.

### MAJOR TRAHERNE'S PATTERNS (*Continued*).

### No. 15.—THE "LAPWING."

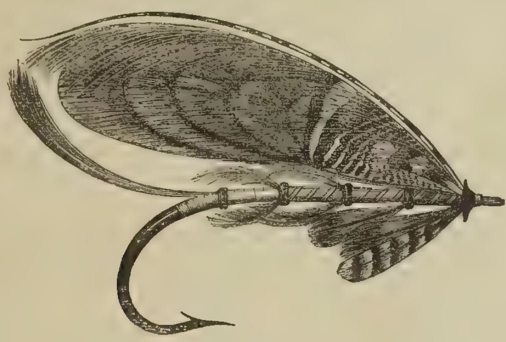
IN continuing the remarks relating to throat hackles, &c., I may remind the student that the fibres of these feathers, whether they are wound spirally or set in as butts, should increase gradually in length from the tag to the wings, When short ones were fashionable we used to draw a square with a pencil and lay the fly inside across the centre, placing its head to the right. The rule was for the throat hackle to extend to a diagonal line from the top left angle to the bottom right, and no farther. I believe I have tried them all ways, not in one river but in several, to see which is best, and decidedly prefer those that nearly or quite reach the barb of the hook. The chief secret of success with long hackled flies is to present them properly. To shake the rod about spasmodically, giving the fly fits and starts, and converting it into a rough and tumbled mass of riotous fibres, is not much use. Sometimes even for all that the fish may be enticed from under the rent red rocks, and rush through the swirling streams; but nine times in ten they would be as likely to take a birch broom in a fit. Upon another occasion—in "Odds and Ends" most likely—we will dwell a bit upon that subject.

One cannot offer any general standard as to the amount of hackle at the throat; the best plan, I think, is for strangers to follow the example of the most successful angler in the district. We often hear that some rivers require a good batch, while in others a mere nothing will suffice; but I cannot believe in any of these hard-and-fast laws, and so rarely listen to them; indeed, I have frequently "landed" by offering these fastidious fish something or other entirely novel, and opposite to all rule and custom. How inexplicable are the frequent freaks of salmon. For instance, not very long ago from one pool in a few hours I had a regiment of six on the bank, all taken with the king of flies—Jock Scott; and although there were fresh fellows up in the catch daily—for the water was in good fettle—the fly failed afterwards entirely. I tried several others I thought likely at odd intervals, but to no purpose; at last, coming to the end of my invitation, I whipped up a monster "Black Eagle," minus wings. The first time down I hooked and lost a jiggering 10 or 12-pounder, and banked a beauty of 13lb. the next.

I can quite believe that salmon fidget and lose their "sense of safety" in haunts that have been very much disturbed by similar or any other means. They may just take shelter perhaps and no more, but not even that sometimes. During a netting expedition a few years since a somewhat remarkable opportunity happened of noticing their little pranks, and that, too, in a good stretch of water where the drag-nets had swept the bed of the river almost spick and span.

There was a small run of fish coming up, "all of a heap" (as the local paper put it), and the moment they came upon this freshly-swept half-moon arena some of them would run over it like lightning, while others danced about like a wild bird caged. Now, where rocks are pretty well perpendicular—although they may be smooth—as the water becomes vapid and dead, so does mess and muck gather upon them. We may well fancy all that cut and gashed about in places, especially in a small pool, not only by the line in playing two or three salmon, but also by their tails, which surely flip off and expose to view conspicuous patches of bright stone, or may be chalk.

"Something has put the fish off," we say. And how can we account for such matters? Indeed, any decision would be in a degree doubtful. We can come to our own conclusion, and we may form our own opinion, and keep it if we like, which is both pleasant and cheap; but we really have to rest content with probability, after all, as we cannot get beyond, for our best reasonings will reach no further. However, let us always balance arguments, and make the most of them in the hope of progressing, and let us take care at the same time, even if we favour preferences, to fight shy of all prejudices, so that we may store up in that philosophical chimera—the mind—principles which take their rise in, and rest upon the best of all evidence—Practice.



We have this week another splendid novelty in flies, and the "Lapwing" is one of the most beautiful of all these patterns. It is suited to every river, and can be dressed any size, certainly from the smallest up to four or five sizes larger than the illustration. The enamelled Thrush has no great reputation; indeed, I believe until now it has never been quite understood, inasmuch as the feathers have been misplaced, and not worked correctly.

It is very odd that we always practise more easily what we already know; but would it not be better to pay a little attention to what others glory in. Their theory and practice may possibly be a cut above our own, and the chances are we should at least learn something. Solid and substantial advice to quicken every sense and nerve to acutest perception is what we want, and that is only capable of being imparted from minds freed from bias and misconception after long and close experience.

The blue feathers in the wings here are from under the tail of the bird, though along its back there are others, small, yet equally effective, and could be used similarly even for our diminutive grilse flies. This Thrush is about one-third the price of a light blue Chatterer, and may be bought at almost any of the tackle shops. The fly is described:

Tag: Silver twist and green silk (same shade as the green feathers from Macaws).
Tail: Topping.
Butt: Black herl.
Body: In four equal sections, the first three butted with the herl. No. 1 division, silver tinsel, with canary Toucan above and below. No. 2, topping coloured floss silk, ribbed with fine oval tinsel, and the ordinary Toucan above and below. No 3, orange silk, ribbed likewise, with Red Crow above and below. No. 4, red claret silk, ribbed again as before.
Throat: Five or six Red Crow and Jay feather, as illustrated.
Wings: Ten Enamelled Thrush, as shown and described.
Cheeks: Summer Duck and Jungle Cock, two toppings over.
Horns: Amherst pheasant.
Head: Black herl.

I am told that this bird is called the Jaffa Finch in Syria. Fishermen, or rather fly makers, always know it as the Enamelled Thrush. We had better make a note of it, though I do not like altering names, as that only causes confusion.

## POLLUTION OF THE RIVERS SHERBOURNE AND AVON.

### Important Government Inquiry.

Mr. Harrison, one of the Inspectors of the Local Government Board, has just held an inquiry at St. Mary's-hall, Coventry, respecting the application of the City Council for an order declaring that the third section of the Rivers Pollution Prevention Act, 1876, shall not be in operation until the expiration of a period to be limited in the order, so far as regards the discharge of the sewage matter into the river Sherbourne.

Mr. T. Browett (town clerk) appeared for the corporation, and Mr. Colmore for the Warwick Town Council, who have entered proceedings against the Coventry authorities for polluting the river Avon.

Mr. Colmore said it might possibly shorten matters if he stated that he did not appear there in any hostile spirit. He, with the mayor and town clerk of Warwick (who were present), had had an opportunity of looking into the scheme proposed, and, with one or two little exceptions, the scheme appeared satisfactory, and they should not interfere at all.

Mr. Melliss, C.E., was examined as to the scheme proposed. He stated that when the present works were erected ten years ago they were sufficient, but the city had grown, and there had been a large increase of sewage.

After some discussion and examination of plans, the Inspector said he should have to report that if the scheme, as sketched by Mr. Melliss, were carried out there was every reason to think it would purify the sewage properly before it was passed into the river, and on the town council of Coventry undertaking to prepare plans and estimates, and make application for sanction to the works proposed by Mr. Melliss within six months, then the protection of the order asked for would be granted for that period, and the Local Government Board could grant on application an extension of the time of the order, say eighteen months, or as long as might be necessary for the execution of the works, without further inquiry. The inquiry then terminated.

## ANSWERS TO CORRESPONDENTS.

J. R. T.—We are very glad to hear you liked the article; thank you for your letter.

A Tyro Pike Angler.—We should advise you to get an American spoon-bait from Messrs. Watson, of 308, High Holborn—they are the English agents. A fluted spoon with a red feather on the triangle, the whole about 3½in. in length, is a good medium size. You can spin this from a punt or from the bank. If you do not use a lead you must use plenty of swivels on your trace, or your winch line will kink. A Fishing Gazette lead, which can be put on or taken off in a moment, and hangs below the line, entirely prevents kinking. We cannot tell you who keeps it in stock, but fancy Messrs. F. Williams and Co. do.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### IMPROVED EYED-HOOKS.

Sir,—Since writing my last letter for the Gazette, I have received the first samples of the new hooks I was waiting for, and I am much pleased with them. They are most accurate imitations of those I twisted myself, and if all the different sizes can be as satisfactorily dealt with as these (May-fly size), I shall be quite content. As soon as possible I will publish the maker's name, prices, &c.; to do so before our experiments are concluded would only result in tiresome requests for samples, and orders which cannot be carried out until all details are definitely fixed.

One word about O'Shaughnessy hooks. I have always understood that O'Shaughnessy was a watchmaker, and that he made every hook singly, even cutting and filing them separately after the steel was tempered, and that for every hook he made he charged one penny. Certainly in respect of temper, point, and barb, they were marvellous hooks, but most irregular in shape. If what I have heard about their manufacture is correct, it would account for the peculiarities of bend.

I have a few of the real O'Shaughnessy hooks given me by Mr. Aldam, who had them thirty years. They are all sorts of shapes and sizes, and most of them decidedly "roach-backed." The inclosed samples will show what I mean. Though I should be very glad to secure the temper and finish of these hooks in future patterns, I cannot but think O'Shaughnessy's shape in 0, 00, and 000 eyed-hook would be intolerable.—I am, &c., H. S. Hall.

Sir,—I am not writing to continue the eyed-hook controversy, only to offer an explanation which I trust will be satisfactory to Mr. Hall.

I hope, and think, that *good will come out of it* in the shape of improved hooks, judging by the specimens received from you (forwarded by "Waltonians"), so let us devote our attention to that end.

I am glad to learn that Mr. Hall is not responsible for the bad shape of bend of the present eyed-hooks, and after this explanation, I frankly withdraw my expression that *he* utterly spoiled them. Some one, however, must have done it, as hooks were made for me of much better shape in 1879 and 1880 than they *are now*. I complained of the hooks purchased *this year*, though they appear the same in shape as for two or three years past, and as I had never heard of any difficulty with the makers as to *shape of bend* (only as to smallest size), the natural conclusion I came to was that this particular bend was the approved result of Mr. Hall's twisting of patterns. After 1880 sizes were produced; but as Mr. Hall asked the makers in 1881 to make the same shaped hook as I now advocate, and they refused to do it, that puts quite a different aspect on the case and exonerates him.

More than thirty years ago I went over Messrs. Hutchinson and Sons' factory (I am not quite sure if it was then Hutchinson and Sons or Adlington and Co.). I saw the whole process, made some hooks myself, and paid my "footing," so that, unless machinery has since been introduced, I know something about the process as *then* conducted in making sneck-bend hooks of trout-fishers' sizes. They are (or were) all made by hand; no expensive machinery is used which would require alteration and entailing cost, and I cannot understand why they should refuse to make any kind of bend asked for.

I have not stated that the present hooks are bad hooks. I said the present shape is "not so good as it might be made," and as you say Mr. Marryat (than whom probably no better judge exists as to what would be perfect in such matters) may be satisfied with them, it probably has been a case of "Hobson's choice," as he, like myself, could get no other shape under the circumstances. But, I presume, neither he nor you will reject an improved hook if it can be got, or defend the present one as unimprovable; therefore, *why not try to get them as perfect as possible?* Judging by the first attempt of "Waltonians" in the samples received, and by Mr. Hall's remark as to his "new firm," I think it is most likely we shall get it shortly.

The alteration desired is very simple. At present the sizes, strength of wire, size and shape of eye, colour, sharpness, and tempering are good. The only alteration required is to make the body of the hook straight, sneck it from the bottom of the bend, and keep the point in a true line with the shank.

I strongly approve of Mr. Hall's rather more sudden drop from the *straight back* of hook in comparison with the gradual curve of the Limerick, as it enables the body of the fly to be dressed nearer down to the *bend*, making *that* less visible and lighter for floating flies; but the absurdity of the present hook is that instead of the drop being kept straight, *it is canted off to the right*, and then the *point* brought *back again* nearly under the shank, thus nearly doing away with the advantage of the sneck-twist. The sneck should not be made from the *base* of the *barb*, because that is the weakest point in the hook, and any twisting of the metal at the place the barb is cut out of the wire will make it very liable to snap off.

I hope you will soon be able to announce that the desired hook has been offered by the trade.—I am, &c., Geo. Bankart.

[Mr. Hall said he had sent samples of Hutchinson's shape, and those he had shaped, to Mr. Marryat and Mr. Francis, and they preferred the Hutchinson. We learn from Mr. Bankart that the hatchet is buried, and he is now on friendly terms again with Mr. Hall.—Ed.]

### LOOPED FLIES v. EYED-HOOKS.

Sir,—The controversy concerning eyed-hooks has created some interest. For a good many years I have been using, with undoubted success, particularly in Northern rivers, a substitute for hooks with steel eyes. So far as I can see, for all practical purposes, eyed-hooks chiefly are superior to those whipped on in the usual way in respect of *wear*. There is no knuckling or breaking of the gut close to the shank. Mr. Hall gave me a sample hook, by the Tummel's banks, years ago, a fly most creditably tied, by himself, and I had a lot of his eyed-hooks sent by Hutchinson and Co., and had them dressed by Forrest and Sons, of Kelso, to my pattern, and I confess that I have seldom or never used them, and when I have done so, I have not met with great success.

My honest objection to them is that the *eye* is so conspicuous. Now my own idea is simplicity itself. I don't wish to make capital out of it; but, seeing this controversy, I am led to give my little invention the light, hoping only that some practical fisherman may *try* it, and report thereon. I use any ordinary hook, round, sneck, Kirby, or Limerick, for it applies to all. But what made me think of the invention was the large accumulation every year in my book of flies not in any way pulled about by the trout, but from being "broken" at the neck, having to be nipped off the gut. This I found specially the case in (A) flies, particularly the larger size of river trout flies, dressed on the finest drawn gut; and (B) loch flies dressed on good strong gut, which latter "break at the neck" long before they are "fished out," and, thus, *many a good fish is lost*. I simply tie the fly on a loop, and so it has a double thread of gut to play on, and lasts, in the case of *river* flies, more than *double* the time of flies dressed on the *single* strand of fine drawn gut, and in the case of loch flies it has the enormous advantage of permitting a *finer* thread of gut to be used, which will outlive two flies dressed on *thick* hard gut which so often "knuckles," as some call it. In both cases the head, if knotted after due soaking, is *hardly observable.* I will only add that the fly I now inclose is one of my own patterns for Scotch rivers, dressed by myself, and in the simplest way, and I can vouch for its killing excellently on the Tweed, Teviot, and Tummel, and many a Northern stream besides. I use it myself, and shall continue to use it, but I would much prefer to use eyed-hooks, if I could really believe that they killed equally well amongst shy trout—such as those one has seen in the barge river at Winchester. Trout that *do* know, in no ordinary degree, "a hawk from a heronshaw," or, as some interpret the passage, "a hawk from a heron!" They can be so readily changed, are put into so small a compass, last so long, and so forth; but I always feel that the eye of the wary trout must be on the eye of the eyed-hooks *I* have in my possession, one of which I send for a fair comparison in this respect. If you decide in favour of the eyed hook, I shall in no way feel sore, and, moreover, if a hook is produced which I *can* place faith in, with an "eye" of the smallest possible dimensions, I will gladly take up the eyed-hooks, *and use them constantly.* And I would venture to ask the gentlemen who have been labouring at this, "have they ever tried a hook with a small round or flat knob at the end, so made that a piece of gut can be knotted on it securely, or, in lieu of a knob, a short *barb*—in fact, something which may possibly show less than the eye, and do equally well?" I throw it out merely as a suggestion. I have twisted up a piece of soft steel wire, in the form of a hook of the simplest crooked-pin form, and placing it in a pin vice, have endeavoured to fashion, roughly, a head, in the shank end, and then, with a single running knot, all but invisible, I have securely tied it on, and it seems to me as if, in the hands of a hook maker, a small *stud* would answer the purpose of the eye, and show less—yes, even look, if carefully made, like the head of a natural fly. This, with my own simple plan, may open up a field for discussion, and if, in any way, I may have given a useful hint to any honest angler I shall have served the end, the only end, for which these lines are penned.—I am, &c., E. M. Tod.

[Our correspondent sends us samples to show his plan, and it is certainly a good one for hooks tied on gut, because just at the head where the single gut usually cracks and wears, the gut is double, but the knot is so small and so close to the head, that, to all appearance, the fly is tied on a single strand of gut. There is no more difficulty in tying a fly on in this way than with the ordinary fly on gut: you simply make a loop in the end of the gut and fasten it with a knot. If you cut the end of the loop you have your gut single down to the knot and double below it; it is on this double part and close to the knot that you fasten the hook. All kinds of bait hooks might also, with advantage, be mounted in this way. But if our correspondent objects to the eyed-hook because the eye is rather prominent, and the fish see it and get used to seeing it, why does not he dress his flies, or get them dressed, with fine and small stained gut loops? Mr. Kelson tells us he often makes even the smallest trout flies with a gut loop, or rather eye, for it is not so large as the metal eye. For our own part, we do not consider that the metal eye of Mr. Hall's hooks is likely to frighten fish, though in Wheatley's eyed-hooks, made thirty or more years ago, the shank has been filed down before the eye was made, and thus the wire of the eye is finer than that of the rest of the hook. We gather from Mr. Hall's letters to us that he is aware of the ease with which the eye may be reduced in size in this way.—Ed.]

---

## SALMON FLIES ON EYED-HOOKS.

Sir,—In accordance with your suggestion I wrote to Messrs. Hutchinson for some large-sized eyed salmon hooks, and in return received some of the inclosed patterns. Now it seems to me that for a salmon fly this is clumsy, thick in the wire, and too short at the point, nor do I think that the fly would swim well; in fact, it seems to me that the hook is much better suited for putting on a night-line for eels, or for bait-fishing in the sea, than for a salmon fly. Do those correspondents to the Fishing Gazette who recommend eyed-hooks for salmon flies use such hooks as these? If not, and if any of them can tell me where to procure "Limerick bend" eyed-hooks for salmon flies, I shall be much obliged. I had hoped that my previous inquiry would have elicited some replies from anglers who have had some experience with these hooks.—I am, &c.,

H.M.S. Lord Warden, Sept. 8th. An Amateur.

[We quite agree with the strictures of our correspondent on this large eyed-hook. Cannot Messrs. Hutchinson put the *same eye* on an ordinary finer wire Limerick bend salmon fly-hook? We feel sure it would answer admirably. Will some of our Irish correspondents kindly send us a sample of the kind of eyed salmon-hook they use? —Ed.]

---

## TWO NICE THAMES PIKE.

Sir,—At Maidenhead, fishing with Clark, Mr. S. Renaut and Mr. W. Turpin caught two jack weighing respectively, 5lb. and 8¾lb., the former a very handsome fish. On our way we came across a very large eel minus tail and head, evidently the work of an otter. We heard later on that one had been killed at Clevedon weighing 14lb. The jack in question are being set up by Cooper, and can be seen when finished in the billiard room of the Old White Hart, Borough.—I am, &., S. Renaut.

---

## A FINE ROACH.

Sir,—One of our members, Mr. Charles Dyson, caught a roach in this neighbourhood in July which turned the scales at 2lb. 8¼oz. Have you heard of anything heavier than this?—I am, &c.,

A. Malloch,
Sec. Southport Angling Society.

[We have elsewhere, in this number, described a roach of 3½lb.—Ed.]

---

## USE FINE TACKLE FOR PERCH.

Sir,—I can indorse the remarks made by you and "Mark Antony" about the absurdity of using coarse tackle for perch. There is not the slightest necessity for it.

I used to fish a great deal for perch at Sonning, and I had a special paternoster made for me by Mr. Holroyd, the fishing-tackle maker of Gracechurch-street, which I recommended in *The Field*. He used to sell it as "Pickerel's paternoster." It is the best paternoster I ever used.

The excuse made for using coarse tackle for perch is, that a jack may come and take the minnow. Well, let him come, I say, and let the angler do his best to land him. Better to have your paternoster broken occasionally than spoil your perch fishing for fear of jack.—I am, &c.,

75, Mark-lane. R. Cullen Dewy.

---

## THE GREEN INSECT.

Sir,—I inclose pattern of green insect as used on river Teme. It was myself that made the addition of the red tag to them, and it answers remarkably well. Dressing: body green, part of the moon of peacock's herl; hackle very pale blue dun. (I add red tag).

I daresay it would be called a bumble or a peacock fly in the North. If not troubling you too much, would you kindly tell me what the gardenia is?—I am, &c.,

13, Raven-street, Ludlow. T. B. Hodges.

[The green insect seems to be as popular as the red tag. The pattern Mr. Hodges sends is a very good one with a red tag to it. The gardenia is an æsthetic name for the angle worm or earth worm,—we fancy Dr. Brunton is responsible for this *double entendre*.—Ed.]

---

## THE GREEN INSECT—HOW TO KNOT GUT.

Sir,—My stock of green insects is quite exhausted, with the exception of the three I now inclose. You will observe it is made:—Body, bright green peacock herl; hackle, any small white feather. I have fished the Teme for the last 25 years, and, as far as my experience goes, it is an excellent fly for Teme grayling. Those inclosed are rather spare; I prefer them a little more bushy.

If you like to send them on to "W. T. S." pray do so; but do not trouble to return them, as I can get more when wanted from "Page," of Teme-street, Tenbury. Another good fancy fly for Teme grayling is the "red tag." The tag should be made of floss silk, and not wool; the latter fades almost directly.

Whilst on this subject I should like to know how you fasten your droppers on to the cast? My way is to fasten two small loops together, then open, and pop the dropper through and pull tight. I never saw a fisherman yet who did it in this way. The loops, if small, do not make any more show than an ordinary knot, and the fly is changed instantly without the aid of a pin or scissors, by simply pushing the two loops apart. I never lost a fly from this fastening.—I am, &c.,

Knutsford. H. B. S.

[We are obliged to our correspondent for the dressing and samples. If we have time this week to prepare them, we will give sketches of the methods we use for fastening flies to a collar, or second or third hooks, to a gut bottom.—Ed.]

---

## THE GREEN INSECT, &c.

Sir,—Body, green peacock herl, hackled at head only with a blue dun hackle. I believe that one dressing of the red tag is like the above, but with the addition of a piece of red worsted or floss silk; to my mind the floss is much preferable, as it is brighter and glistens more in the water.

What are the dressings of the *Silver Wickham* and *Coachman?* I mean the one without the invariable white wings. This latter fly was mentioned recently by a Teme correspondent in his report, and he then goes on to refer to the white-winged Coachman.

Does "Orange Partridge and Smoke" mean more than one fly? If so, what is the dressing of the "Smoke"? Where could I buy a copy of the *Fish Culture Journal?* —I am, &c., J. B. J.

Hull.

[The Silver Wickham is the ordinary pattern with a turn or two of silver twist on the body. A good fancy grayling fly is one with starling wing—a slight ginger hackle confined to the part close under the wings, and the body silver tinsel with one turn of gold; it is especially good when the water is just coloured enough not to prevent the fish rising. Mr. Cummins, of Bishop Auckland, makes the coachman with a reddish-brown wing (landrail answers very well). "Orange Partridge and Smoke" are two different flies—see our Wharfe River report. Write to W. O. Chambers, Esq., National Fish Culture Association, Health Exhibition, South Kensington.—Ed.]

---

## POACHERS AND NETTING.

Sir,—I beg to inclose you a cutting from the *Daily Chronicle*, Sept. 27th, 1884, as I see no mention of the case in your last edition; perhaps you may be glad to have it. The only thing I have to say in reference to the subject is, that the T.A.P.S. and other kindred societies deserve not only the hearty thanks of all true anglers, but to be more liberally supported by them to enable them to carry out their good work even more efficiently than at the present time, and I may add that when an offender is captured belonging to a notorious family well known to the river-keepers as poachers and netters (the Beesley family was mentioned some time ago in the Fishing Gazette as old offenders), the full penalty of the law should be asked for, instead of a "small fine," which would be laughed at, and which would very likely be paid by other members of the gang.—I am, &c., W. L. G.

[The following is the cutting. Our Oxford correspondent sent a report, but it was too long to insert. The barest outline of these police cases is all anglers care for, and the brief style in which Mr. W. H. Brougham reports his cases is much to be commended.—Ed.]

Oxford.—At the City Court, John Beesley, of 3, Luther-terrace, was summoned for having a prohibited net in his possession, and also for using the same. Mr. Dudley prosecuted on behalf of the Oxford Angling Society, who, he said, during the past year or so, had placed in the city waters something like a million of fish. As a small fine was only asked for defendant was fined 2s. 6d. in each case and 12s. costs, and the net to be destroyed.

---

## WHARFE GRAYLING FLIES.

Sir,—If I had succeeded either with cinnamon, orange, partridge, or smoke fly, or any other well-known local fly, I should not have made the inquiry. The fact is, fancy flies undoubtedly do kill grayling well at times. If I were as prejudiced as some local celebrities, I should not have tried either red tag or Wickham—both good trout flies in a fresh. Grayling at this time of the year go in for a small insect which falls from the overhanging trees, and I have seen large flies pass over them unheeded. I have found Eaton's honey bumble a good fly; but not being prejudiced I inquired for information. I quite agree with you, sir, a little later on gardenia will do her work.—I am, &c., Cinnamon.

[We have sent our correspondent a sample of the green insect to try. Of course, if the grayling are "midging," we fear "Cinnamon" will not get anything that will kill them well; at least, we never could, and never came across anyone who could, *in practice*, though we have heard of its being done with some secret pattern which no one ever saw. Certainly if grayling or trout took the artificial well when midging, they would soon be cleared out of our rivers, for they rise so freely.—Ed.]

---

## "GUMMAS PALCUM," &c.

Sir,—This being the last week for weighing in for the summer clubs, and it being holiday week here, very many have availed themselves of the opportunity to pay a visit to the banks of the Trent; but sport (with the exception of a few instances) has been very indifferent. On Monday some very good baskets of dace were caught at Willington, one member of our club weighing in several over 10oz. each. A few very good barbel were got in the same water on Saturday. I tried the same water myself on Thursday and never caught a fish, the river being full of "gummas palcum," Nottingham Latin for Burton slime; in some places it lay a foot deep. At Colwick Mr. Baker has got some very nice perch and 10 pike; on Friday at Hickling two other gentlemen killed 40lb. of the same fish. Mr. Dann brought about 15lb. of roach and dace on Saturday, taken with the fly.

Nottingham, Oct. 6th, 1884. A. W.

---

## ROACH FISHING.

Sir,—Many thanks for the splendid article on "Roach Fishing," in the Fishing Gazette of Sept. 27, and continued in this week's issue. They are very acceptable to myself and friends, who are *amateurs* in every sense of the word; and no doubt there are many more of your numerous readers who, like myself, anxiously await the next issue, in hope of finding something to enlighten us in the art of fishing. We get some good fishing in the Society's waters at Peterborough, which extend along the river Nene some 6 or 7 miles, but I find that we might have had double the sport if we had only had the valuable information you have now given us. Thanking you once more, and hoping to hear the opinion of some other of your numerous readers, —I am, &c., W. Lakin.

Peterborough, Oct. 6.

[We shall have further notes on roach fishing shortly.—Ed.]

## A HINT FOR ROACH ANGLERS.

Sir,—As a little addition to the very excellent article on the above subject, it may not be generally known that a basket of roach may sometimes be obtained, particularly if the water is low and bright, by the very simple mode of mixing some of the ground-bait—viz., bran and bread with the white paste, *i.e.*, just sufficient to make it adhere to the hook, and using it instead of the white paste alone—and if used ledgering, you get the largest fish; but care must be taken in putting it on the hook, otherwise it flakes off before reaching the bottom. At the present time, as the water, particularly in the river Lea, is so bright, I and several friends have found it the most killing bait. Another plan most successfully used is to pinch a small portion of the ground-bait, about the size of a hazel-nut, on the line, about 2in. above the paste, and as it flakes off, the chances are you will get a bite if they are feeding at all.—I am, &c.,

Mile-end, E. Act on the Square.

[We are much obliged to "A. G." for the hint. We should be glad if other readers could give hints on roach fishing.—Ed.]

## ROACH TAKING LIVE-BAIT.

Sir,—Looking over one of your old numbers, August 23rd, I saw an account of a large roach being taken with an artificial dace. Last July, fishing at Ems, Germany, with bleak on paternoster, I took an eel of about 1lb., and the next cast brought to land a roach of about the same size, or rather over 1lb. I never met with an instance before of a roach taking live-bait; perhaps you may think it worth notice.—I am, &c.,

Aldgate. W. C. M. H.

[We presume it was a very small bleak, as a 1lb. roach has a small mouth. We have not heard of roach taking live fish, as far as we remember. It is most unusual at any rate.—Ed.]

## A NOTE ON BREAM.

Sir,—In fishing for bream on the 3rd inst., I was successful in landing a fine specimen of 6½lb. Then, as on several previous occasions during the past summer, I was surprised to find the fish containing a considerable quantity of partially-matured spawn. In my last specimen there was certainly as much as 1lb. of roe. Can you kindly tell me at your earliest convenience if this is of usual occurrence, or is it an abnormal condition brought about by the unusual mildness of last winter, and the well-nigh unprecedented heat of the summer we have just passed through? The bream undoubtedly were on the spawning beds late in April or very early in May, and began to take the brandling worm a few weeks after the expiration of the close season. It may be that, in common with the other members of the carp family, spawn in a more or less developed condition may be found in *Abramis Brama* during any of the summer months; but I have not noticed it before. Would fish ova so far developed wait for the usual spring time before being deposited, or would it be prematurely shed?—I am, &c., Fredk. Miller.

[There is nothing abnormal in finding roe in bream at this time of year; the fish will not spawn until spring. Yes, we should like to have a short article.—Ed.]

## "WICKHAM'S FANCY."

Sir,—I have read carefully the remarks in the Fishing Gazette anent the "Wickham's Fancy," and as I am probably the first who made the fly, and am acquainted with its early history, and as I have used it successfully in various forms for trout and grayling, roach, and dace in Hampshire, Yorkshire, and Oxfordshire, for sea trout and salmon in Canada, and for sea trout, saith, and lythe in Scotland. I do not think I am presuming if I claim for it a foremost position in an angler's fly-book. Although it has been called a fancy fly, it may be made to represent many natural flies—one, for the Itchin (when dressed with landrail wing), is the small "red rail"; another (when dressed as the original was), with amber-coloured silk showing between the ribs of tinsel, the "Cockerton." This last was Captain John Wickham's idea, the originator of the fly.

Inclosed is my *Natashquan* Wickham for salmon, and a very telling fly I found it. It would fill a small volume were I to relate the various changes to which the "Wickham" has been subjected under my hand alone. Suffice it to say, I have ever turned to it in some form when everything else seemed to fail, and have never discovered time or place it would not prove useful.—I am, &c.,

Winchester. George Currell.

[The fly sent is a medium double hook (eyed), salmon or grilse pattern; but there is not much of the "Wickham Fancy" about it. It looks a killing fly.—Ed.]

## THE RIGHT TO A THAMES SWIM.

Sir,—The above interesting and important question appearing in the Gazette, may I ask your permission to be allowed to say a few words?

I am totally unable to trace, Mr. Editor, in your reply to W. H. Britton's inquiry, any definite solution to the vexed question, for, as a rule, in your inestimable paper, both legal and moral rights regarding fishermen are governed by a strong sense of justice; but in this instance the contrary line is adopted, for the liberty you would allow to the private individual is not given to the fisherman, whose living depends not only on his skill, but also upon the pitch he might select for his customer.

My knowledge of the Thames and fishing laws may be small; but I have fished the river from Oxford down for many years past, more especially over tidal water (being more convenient for a business man), and during my whole experience I cannot recollect an opinion being given on this subject so fatal to the interests of the tidal fisherman.

There surely can be no morality in upholding an illegal act, and by your reply to "W. H. B." you certainly sanction the committal of one.

Some time back I was given to understand that the puntsmen of Richmond, Twickenham, and Teddington received early in this present season printed notices prohibiting them from adopting this very means of securing a swim, unless their punts duly occupied were placed at the station they intended fishing, and in violation of this order steps would be taken to endorse their licenses. This I hold myself to be a fair and just regulation, and should be strictly observed, not only by the men themselves, but more especially by the individual who dispenses with the use of a man.

Above the locks there appears to exist a time-honoured acknowledgment of this custom you would favour; and I trust it may be confined to the upper reaches of the river, for half-measures are as abominable as they are unjust, and the liberty of the man who angles for his personal pleasure should not be in the least degree greater than the man who angles for his living. Apart from the above remarks, the placing of a punt-pole in mid-stream at such a place as Twickenham is highly dangerous to the traffic of small boats, and I venture to say the Thames Conservancy would strongly object to such a system. One might as well permit the London costermonger to place the wheel of his barrow at the kerb side of the street where he intended to pursue his day's trade. Trusting you will insert this in your issue of Saturday next, assuring you of my best thanks.—I am, &c., Walter Long.

[To strain at the pole and swallow the punt seems unreasonable. The interests of anglers and professional fishermen are identical, or ought to be, and we claim no right for one more than for the other. The principle is the same, whether you claim a swim by means of a punt or of a pole, and what we strongly object to is that one angler should forcibly take possession of a swim already chosen, and perhaps baited, by another angler. If you see an angler's tackle on the bank, you don't select that spot for your swim, even though he may be absent at the time. Our view may be very immoral and very illegal, but we have heard no argument likely to induce us to alter it at present.—Ed.]

Sir,—I differ from the opinion you express upon the above right. Never yet have I found anyone who believed that he had a right to any particular swim by the mere fixing of a pole; yet without doubt he does if a punt or boat is fixed to the same, and a fisherman or someone in care is left in the same, and such a rule, in my opinion, is sorely needed.

In the first place, it secures the fisherman's day's pay should his employer not put in an appearance, which you must allow is too often the case. Yet there the pole remains—can this be fair?

Then, again, it is a common practice for the same fisherman to have two or more poles fixed, leaving one swim for another, and returning just as the fish may feed or leave off. You must also bear in mind that these swims are the known, and perhaps, only favourite swims near Putney; there it should be imperative that when a fisherman leaves a swim, he should take up his pole and so leave the swim open. It has long been a subject for argument if or not any man has the power to leave a pole standing in the river at any time, the same being attended with danger to small craft, particularly after the hours of daylight, many being left in position the entire night.

Living upon the river, many are the disappointments and complaints that come to my knowledge, so that I think this would be a good time to ventilate the subject.

You will allow that I do not write in my own interest, not having sat in a boat for bottom fishing three times in twelve years. Inclosed is my name and address, which, if desired, you may give to any one; yet in your issue, I beg merely to subscribe myself—Yours, &c.,

October 8th. A Lover of Fair Angling.

[Our correspondent is well known to all Thames trout anglers, and his letter leads us to think still more strongly that, as we have said elsewhere, the whole matter should be taken up by the T.A.P.S. or the Thames Conservancy. We should much prefer to see the matter in the hands of Mr. Spreckley, because he would take care to get the opinion of the majority both of anglers and professionals.—Ed.]

Sir.—I quite agree with you that if any person, either professional or amateur, baits a swim, he has a right to expect the use of the swim for the next day, and no one but a very mean person would rob him of it; but at the same time you appear to be ignorant of the fact that Mr. J. held the swim opposite Pope's Villa for two weeks, and fished it when he liked. One Saturday afternoon during the time he held it I was in the deeps, and am ready to swear that from three until half-past four there was no punt or man at the above-mentioned swim, only a ryepeck. Several men came up with fares, and had to do the best they could in out-of-the-way swims, simply because all the other swims were taken by fishermen with fares, and this one with Mr. J.'s pole.

I will now point out an evil which arises out of the before-mentioned gentleman's example. Since he held the swim with a pole, it has become the practice of several fishermen in the employ of a punt proprietor to engage a man that has nothing whatever to do with the river, to get up early and take their poles and fix them in the best swims, so that they can get up at 9 or 10 o'clock and take their customers out; whereas, a man that gets up as a fisherman should, and tries to get a good pitch himself, finds that he has to do the best he can, as all the good swims are taken by one man that perhaps gets a pint of beer for each pole he has stuck up. I don't think any man has a right to expect to keep a swim that he has baited for more than one day, and when he has finished he ought to pull up poles and chance getting it the next if he wants to come out again.

Perhaps these people that stick up poles are ignorant of the fact that any respectable jury would return a verdict of manslaughter against them should anyone row down the river and get capsized and drowned through coming in contact with the aforesaid poles.

I for one shall take no notice of poles in the future. If a man wants a pitch let him be there with his punt, or else leave his punt there with some one in it to take charge of the swim.—I am, &c.,

Twickenham. One who Gives and Expects Fair Play.

[Our correspondent, who is a professional fisherman, certainly throws a new light on the matter, and the abuse of the "custom" (which has been the custom from time immemorial) by which anglers can now write to a professional and get a swim baited ready for them, will lead to its abandonment and give a severe blow to Thames fishing. If a fisherman can always manage to have his punt in the selected swim, let him by all means have it there; but how many of them can always do this? It would be a good thing if the T.A.P.S. took up this matter in the interests of anglers and fishermen. Surely it would be best for all if there were one rule acknowledged by all.—Ed.]

Sir,—In your reply to my letter upon "The Right to a Thames Swim," you have been pleased to advise me as to the direction in which I should apologise. I do not think I asked you for a lesson on good manners, that being a matter totally irrelevant to the question of angling.

You certainly uphold the moral rights of a private individual to secure a swim by fixing a pole; but may I ask, Mr. Editor, have the fishermen no moral rights?—as that point you entirely ignore. I think it a most important matter.—I am, &c.,

Putney. W. H. Britton.

[Mr. Britton wrote to us last week to say that he had insisted on fishing in a swim which had been previously taken by another angler, and in spite of the "compunction" his (Mr. Britton's) fisherman had in doing so. He began his letter by saying, "May I ask your advice upon the following?" We gave him our advice: in our opinion, the only thing left to him to do was to apologise to the "person of the name of Johnston," whom we consider he treated as no angler ought to treat another. We should like to ask Mr. Britton what he thinks is to become of the pleasure of Thames angling if the question of the right to a swim is to be settled as he settled it? The abuse of a custom is no reason for still further abusing it. In the old times, when anglers were few on the Thames, the rule that an angler could secure a swim he had baited, and wished to fish, by putting a pole in it, as an outward and visible sign that he had done so, was invariably observed. Now that anglers have so enormously increased on the Thames, it becomes more than ever necessary to "give and take," or else we shall see very few anglers inclined to risk the expense of baiting, say, a barbel swim, with the probability of finding another "brother angler" has taken possession of it. Mr. Britton should not ask for advice if he cannot take it.—Ed.]

## THE HALCYON SPINNER.

Sir,—Seeing your notice of Hardy's halcyon bait, I would like to state my experience of it. In August I obtained a small one (No. 1). On August 16th I took 32 trout, only keeping 19, averaging ¼lb. each; on Aug. 23rd, 21 trout, keeping 15, about same weight; on August 25th, seven trout. I should have no doubt got more, but I hooked one about 1lb. or rather more, and after playing him a short time, the tail triangle came off the spinner. The only way I can account for it, is that the little ring which fastens the triangle to the skeleton (so to speak) of the bait, must have been improperly soldered, and opened wide enough to allow the hooks and also the fish to escape. It was in a place with a rooty bottom, or I should not have put so much strain on the tackle. These fish were all taken in a small burn, in some places not above 10ft. wide, and so much overfished that it requires a great deal of skill and patience to kill a dozen good fish with worm in clear water, even the day after a spate. Can you tell me where I can obtain some really good dotterel flies and also midges? I inclose you a midge I found in an old book (at least it is 10 years since it was used) which I had given me. I consider the gut rather coarse for the size of the fly, and the hook might be better. I have about a dozen of them, and will be glad to exchange specimens with anybody. I found some about half as large again kill very well on the Carron and Allan waters at dusk, about two months ago; I had not these then, or would have tried them. Hoping you will find me space for the insertion of this,—I am, &c.,

Bannockburn. Captain.

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add 30 minutes for Chelsea.
40 „ Putney.
45 „ Hammersmith.
50 „ Barnes.
55 „ Kew.
75 „ Richmond.
80 „ Twickenham.
85 „ Teddington.

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | October | 11 | 6.6 | 6.33 |
| Sunday, | „ | 12 | 7.5 | 7.41 |
| Monday, | „ | 13 | 8.22 | 9.5 |
| Tuesday, | „ | 14 | 9.50 | 10.30 |
| Wednesday, | „ | 15 | 11.5 | 11.38 |
| Thursday, | „ | 16 | 12.0 | 12.7 |
| Friday, | „ | 17 | 12.31 | 12.54 |

Note.—New Moon October 19.

## THE LOWER THAMES.

### General Remarks.

The continued absence of anything like a fall of rain is being seriously felt by both anglers and fishermen—the former will not come whilst the water is so low and bright, and in consequence the latter get no employment. The report from the tideway is, "The spring tides are bringing the mud up in wholesale quantities, but the fish with it. It was quite an anglers' fair on the 5th between Richmond and Twickenham Deep, but the fish, on account of an easterly wind, were not much on the feed." Another movement is about to be made in the removal of some flounders from Putney and neighbourhood to the waters above the locks. The first movement of this kind was made in the month of October, 1863, when, as the "Blue Book" for 1864 says, "Upwards of 5,000 flounders taken from the tideway were turned into the waters of the Thames between Sunbury and Moulsey Lock ;" and it further adds, "In former times this sweet-fleshed fish was tolerably abundant in these waters and grew to a good weight." The revival of this movement by Mr. Thomas Spreckley is certainly a move in the right direction, as the fish taken up as youngsters will drop down in the tidal waters of a good size, and so improve the flounder industry amongst the netsmen. This is the aim of Mr. Spreckley and to benefit the netsmen. The Thames Conservancy has put into circulation a notice to "Fishermen in Punts," cautioning them against mooring their boats in the navigable channel of the river.

### Angling Results.

**Richmond.**—Job Brain, in six days, 140lb. of roach and dace. Henry Howard, in four days, 70lb. and a couple of barbel. Henry Mansell, in three days, 60lb., and in one day 35lb. of good roach and a few dace. T. Young, in four days, 30lb. and three barbel. Henry Platt, in three days, 20lb. Christopher Brown, in six days, 100lb. and five barbel. F. Brown, in five days, 90lb., and seven barbel. Henry Wheeler, in six days, 100lb. and two barbel. S. Aldridge, in four days, 40lb. and a couple of barbel. One of the bank anglers in one day got five dozen of good roach and a smelt.

**Twickenham.**—John Spong, in five days, 152lb. weight of fish, including eight barbel. William Spong, in five days, thirty-five dozen of roach and dace. Edward Finch, in six days, 120lb., including three barbel. P. Hammerton, in four days, 50lb. and five barbel. Samuel Cole, in seven days, 100lb. and three barbel. James Dobbin, in three days and one half day, thiry-one dozen and six barbel. Charles Hennessey, in three days, eight dozen of dace and five barbel. John Coxen, jun., in three days, eighteen dozen of good roach and dace. Richard Coxen, in one half day, with Mr. A. J. Little, four barbel ; and in two other days, fifteen dozen of roach and dace and six barbel. George Coxen, in four days, 48lb. and four barbel ; and Henry Spiers, in five days, seventy dozen and a couple of barbel. In this report the united takes of fish by John Spong and Edward Finch in eleven days produced 270lb. weight, or an average of 25lb. each day.

**Teddington.**—Joseph Baldwin, in five days, 25lb. of good roach and dace and seven barbel. Charles Baldwin, in four days, 32lb. and one barbel. Alexander Kemp, in six days, 50lb. of good fish and seven barbel.

**Kingston.**—John Johnson, sen., says :—"I have been unwell this week, and have only been out twice, one day twenty dozen of gudgeon, and the other day three barbel. John is up the river with Mr. Bond, but not doing much." James Wilks, in four days, eight barbel, the largest 4lb., four perch, one chub, four dozen of roach and dace, and five dozen of gudgeons. The bank anglers are not doing very much, and the night fishing, which has been so objectionable in this neighbourhood, is, owing to the cold nights, somewhat abated.

**Long Ditton.**—H. Buttery, in two days and one half day, five jack, the largest 4½lb., six brace of perch, the best fish 1½lb., and eight dozen of gudgeon. The bank fishers have done well amongst the roach, dace, and gudgeon.

**Hampton Court.**—A gentleman from Surbiton, fishing at the Water Gallery from the bank, caught five jack, the largest 5lb. The fishermen do not appear to have been out this week. At "Tagg's Island Fishery" there has been some good takes of roach and dace.

**Sunbury.**—Edward Clark, jun., in seven days, twenty-five dozen of gudgeon, twenty-five perch, twelve bream, the largest 7½lb., twelve dozen of roach and dace, and two jack, the largest 4¾lb.

**Walton.**—George Hone, in two days, two dozen of roach, four barbel, five bream, and five dozen of gudgeon ; another day, eight barbel and two bream ; and another day with Mr. Phelps, two jack, weighing respectively 5lb. and 7lb. R. Watford, one day, two barbel, three bream, and three dozen of dace, another day, two barbel, the largest 5lb., a chub of 3lb, three dozen of dace, and a perch of 1lb. ; another day, three barbel, and two bream, and another day, two brace of jack. John Hone, one day, four barbel, six bream, and two dozen of roach ; and another day, three barbel and one brace of perch.

**Halliford.**—E. D. Rosewell, in one day, four barbel.

**Shepperton.**—James Haslett, in one day, with Mr. C. Waterhouse, six barbel, and three chub ; and another day with Mr. G. F. Bambridge, two chub and one barbel. F. Poulter, for David Hackett, in one day, five dozen of roach.

**Weybridge.**—Herbert Curr, in one day, with Mr. Dowdeswell, a jack of 3½lb., four dozen of roach and dace, the largest roach 1lb., and one perch ; and another day, six dozen of good roach and dace.

**Staines.**—John Keene, sen., in one day, four barbel and some roach and dace, weighing altogether 30lb. John Keene, jun., in three days, five barbel, eight chub, and thirteen dozen of roach and dace. Charles Hone, one day, six barbel ; and another day, one barbel and two dozen of dace.

## UPPER THAMES.

The river, during the past week, has been as clear as gin, and those angling enthusiasts out have had poor sport indeed. Mr. Bayley, at Cookham, on one occasion has taken some 7lb. of roach, and the following day four jack, one of 4½lb. being only retainable. The Marlow district has been visited by many eager piscators lately, but the evening reflections have formed a mournful ending to the morning's hopes. On the 4th inst., at the Complete Anglers' Hotel, Great Marlow, the annual meeting and dinner of the Angling Association was held, a detailed account of which I annex, and ask you to give full publicity to in your columns. Thursday evening : Rain has been falling heavily for some 12 hours, and continues to do so as I write this note. This will take away the staleness of the water, and should induce all kinds of fish to come on the feed ; roach and chub I feel sure will be well on during the coming week, and all the more so if the rain will but keep falling.—Marlow Buzz.

### Thames (Datchet).

There was a sharp frost this (Thursday) morning and the ice was ¼in. thick ; now it pours with rain, which will make things look up—even the roach had left off biting. A few barbel have been caught at Windsor with greaves. J. Hoare, on the 6th inst., caught a barbel of 7½lb. and a jack of 5½lb. ; on the 8th, two barbel, with greaves. I have not done much in the fishing line this last week or two—one jack on the 4th of 10lb. Now the lob-worm promises to be plentiful, I hope to have something more encouraging to say when I write again.—G. Lumsden.

### Thames (Eynsham).

Our local anglers have been busy all the week amongst the jack, several having been taken trolling ; but I have not heard of anything larger than 5lb. being caught. The perch and roach have been feeding well in the Evenlode. On the 3rd inst. Mr. Green, Mr. Gatward, and myself had a very enjoyable day's sport in the Evenlode, each of us having a very nice take of perch, roach, and chub, all taken with lob worms on roach tackle. We have had heavy rains the last two days (with a prospect, according to the weather-glass, of more), this will, no doubt, improve the fishing in the Thames.—W. B. Howe.

### Thames (Oxford).

I have reasons to believe thet there are plenty of fish in the Thames, but during the past week they have displayed a strong disinclination to come to bank. Considering the lowness of the water and the piercingly cold north-east winds which have prevailed, this is not to be wondered at. A friend of mine at St. John's Bridge on the Upper Thames on Thursday, Friday, Saturday, and Monday, had 38lb. of roach ; two of the best fish turned the scale at 1¼lb., and the general average of the whole was about ¾lb. On Saturday, Messrs. Butler and Corbett had sixty perch, chub, and roach, in addition to several which were returned.—Cherwell Otter.

### Ancholme District.

Angling has been very fair during the past week. Boiled potatoes continue to catch the bream in fair numbers. A nice lot of fine roach have also been taken with maggots and paste. I advise perch-fishers to try the stickleback for bait. It abounds in all the little feeders of the main river. Pike-fishing is very much improving. Those who want gudgeon for bait will find an abundance in the neighbourhood of

Bishopbridge. Several fair-sized pike have been taken during the week, chiefly with the live bait. A spinning minnow on stout gut trace is perhaps the most scientific way of taking these fish. They then show excellent sport, and require playing like salmon or trout. One caught in this way is, in my judgment, worth twenty taken with the dead gorge. I caught four in an hour in this way last season, and it was the best bit of coarse-fishing of the season.—Thomas Ford.

### Ballynahinch.

For this last fortnight there has been but few anglers on above, first week being very unfavourable ; but this week we have had a good spate with south and south-west wind. Mr. B. Winthrop, in four days, killed six salmon weighing 8lb., 11lb., 11lb., 14lb., 10lb., and 8lb. Mr. Bury and Mr. N. Winthrop had a few dozen of trout each for the fortnight.

### Chichester.

During the past week nothing of importance has to be noted from this district. A few good bream have been taken, and a pike of 6½lb. near Birdham. At Selham some good roach have been landed, but pike have not been on feed. In the upper waters of the Ouse a few roach up to 1¼lb. have been secured, but pike have been very wary. Mr. Colgate, on Tuesday, having three runs with live bait without securing a fish. Bait is difficult to procure here, all pike fishermen should provide bait, when, with a change in the weather, some good sport may be had.—George F. Salter.

### The Dee and Don (Aberdeenshire).

Salmon Angling.

So far as it has run, the present autumn, we regret to say, has proved the greatest failure experienced for many years. The weather is much too fine, the water being too small, and though fish in the lower reaches since the last fill of the river have been quite plentiful, they disinclined to rise freely. In the present condition of the water and state of the weather, little improvement can be looked for with any degree of hope. From this date onward the fishing would require to be very fine indeed ere anglers could realise anything like an average season's sport. As yet, the Don has been fished a blank, or nearly so. This year the precariousness of salmon angling has been strikingly exemplified, and the experience of the past summer and this autumn ought, we should think, to have the salutary effect upon the many high rented tenants of Dee fishings. The principal takes of last week, we need not say the best, for best they can scarcely be called, were obtained by using small blue charms, Jook Scotts and Gordons. In the tidal waters of the Dee fair catches of whitling have been common of late, the winged wriggler being the deadliest lure. The following takes on the Dee are reported :—Polldown, Mr. Black, one fish, 19½lb. Mr. Balfour, one fish, 15½lb. Deebank, Mr. Duncan, jun., three fish, 15lb. to 21lb. ; on Blair's water, three salmon, 14lb. to 24lb. ; and again, three salmon, 18lb. to 29lb. Murtle, Mr. Nicol, four fish, 6lb. to 15lb. ; Maryculter water, two fish, 9lb. and 14lb. ; Culter water, two fish, 6lb. and 10lb. J. Lyell, Esq., on the Culter water on Saturday, had five fish, 11lb., 15½lb, 17½lb., 20lb., and 21½lb. Drum water, Mr. Irvine, three fish, 9lb. to 20lb. Mr. Buckley, one salmon, 18lb. Mr. Deans, on Maryculter, three salmon, 14lb. to 22lb. Mr. Potter's party, at Park, two fish, 7lb. to 18lb. Durris water, W. Knowles, Esq., three fish, 8lb. to 16lb. ; T. Knowles, Esq., two fish, 16lb. to 18lb. ; G. Knowles, Esq., one fish, 16lb. Crathes and Kineskie, Gen. Fane, H. Keane, and J. Campbell White, Esq., of Overtoun, nine fish, 10lb. to 25lb. Invery, R. Brands, keeper, two fish, 15lb. and 18lb. Blackhall, Watson, one fish, 17lb. Inchmarlo, Greville Douglas, Esq., one 26½lb. Duncan Davidson, Esq., one fish, 35lb. Cairnton, D. Rae, fisherman, one fish, 10lb. Woodend, R. C. Menzies, Esq., one fish, 22lb.—Mr. George Smith, Ballater, reports Tom Grant, Pananinch, having a fish of 12lb., on Wednesday ; and that three were got on the Invercauld Hotel water, 8lb. to 14lb. At Aboyne and Glen Tana, five fish, ranging from 8lb. to 19lb., were got. The following takes in the Kincardine O'Neil district were kindly reported to us by Messrs. Wm. Blacklaws and Son, rod and tackle makers there :—Monday—W. Evans, Esq., Borrowstone, two fish, 19lb., 5lb. Tuesday—Wm. Lamond, Esq., Norton, two fish, 26lb., 7lb. ; Albert Farquhar, Esq., Carlogie, one fish, 18lb. Wednesday—J. Mortimer, keeper, Ballogie, one fish, 18lb. ; Mr. J. Harper, Desswood, one fish, 12lb. Friday—Albert Farquhar, Esq., three fish, 18lb., 8lb., 7lb. Saturday—W. Evans, Esq., Borrowstone, one fish, 14lb. ; Mr. J. Harper, Desswood, one fish, 12lb. Total, twelve fish. Very few fresh fish have yet come our length.—G. B.

[By Telegram.]

A good deal of rain fell on Thursday night. The Dee is in spate, and fish are running well from lower reaches. Last week's run of fish ought, if not netted, to ascend into the higher reaches. No beats well occupied by anglers. Weather colder, and larger flies necessary in consequence. Fish are healthy ; indeed, there is no appearance of disease ; but a lot of poaching goes on. More water bailiffs are required. Can nothing be done ?—W. M.

### The Dove.

Grayling have been rising capitally since my last ; but there have been very few rodsters out, in fact, I never saw less at this time of the year. Rain fell heavily on Wednesday, and the stream was consequently coloured. Considering the small number of anglers out, the sport has been fairly good, several bags of three and four brace of grayling having been taken with the fly. The most successful artificials have been the October duns and the claret bumbles ; but a great number of flies, fancy and otherwise, have been killing. Bottom-fishers have not been very successful. Up to Wednesday the river was low and clear to a surprising degree, considering the amount of rain that fell in this district a short time since. The weather to-day (Thursday) is bright, and sport should be of the best description.—The Splodger.

### Eden (Carlisle).

Tuesday, Sept. 30, was the first day that one could call the river in fair order for salmon fishing, and the opening of the Church Congress in Carlisle was not sufficient to keep all the anglers off the water. Mr. E. L. Hough opened the autumn season with a 36-pounder in the Crosby water. On the following day he had two of 25lb. and 23lb. ; next day he had the chance of six, landing four which scaled 81lb., and Mr. Hodgson, of Newby, killed three fish, all in the same water ; Sam Wright had one 26lb., Waters one, and Serg. Fox one, in the Angling Association water. Everyone was pleased to hear of Colonel Sharp's success on October 4th. He is very popular amongst anglers, partly owing to his ready wit, and partly to his big flask. He killed a beautiful fresh-run fish of 35lb. in a very difficult place, and gave another one a bad toothache. On Monday, 6th, he killed one 21½lb. at Syke Foot, and in the same water Mr. Wilson took two, 21lb. and 10lb ; Col. Aitchison a small one at Holme Eden, and Mr. Hannah a 20-ponnder at Armathwaite. No doubt many other fish have been killed, of which I have not heard, for the water is in grand order, and there are plenty of fish.—Silver Grey.

### The Exe (Tiverton).

On this river the season for salmon-fishing will close at the end of the present month. The complaint that was heard all summer—want of water—interferes with fishing for salmon now, as it has so long interfered with trouting. In September, a brief rise of water brought up a run of grilse, which, under favourable circumstances, would doubtless furnish excellent sport, but the low state of the river now gives little chance of success. Last week, when the water was somewhat higher, the fish showed a disposition to rise in a capricious way just at sundown, and one evening a friend of mine hooked four fish within an hour, only one of which he killed, the others succeeding in breaking away ; and on other days during the week he landed two more fish. These were all grilse, bright, and only recently up. One or two of the fish that got away are spoken of as being very small—only, perhaps, two or three pounders. Can they have been peal ? Peal are almost unknown in the Tiverton waters, but there seems to be no reason why they should not come up now. It is said they are in large numbers in the estuary and about Exeter. The weirs are now so fitted with passes and facilities for the passage of fish ; that salmon get up with only a slight freshet, and there is every reason to believe that peal can follow suit. If they do, some good autumn sport may be looked for in future in the upper waters of the Exe.—R. A.

### The Exe and Canal (Exeter).

Some few takes of perch near Cowley Bridge, and in the canal, near Turf, have come under my notice, as also some roach and dace in the river at Exwick, and near St. David's Station. At last we have been fortunate in getting a good downpour of rain, and there are now brighter hopes for piscators generally. We have for some weeks had the river so low that sport has been out of the question, and the salmon season for the rod fishermen has been the worst on record for some time. Mr. Kalmardine took a nice pike of 7½lb. in the backwater near Cowley Bridge, last week, and a few perch ; but next week I hope to send you a better account of our doings generally. Weather wet, wind westerly.—J. A. Kelley.

### Ilfracombe.

Sea fishing : owing to the stormy weather, there has been very little doing from the boats ; but parties fishing from the rocks at Shallow Path and the Parade and Jetty have had fair sport, Mr. Gratte, Mr. Brooks, and Mr. Pile getting the best catches. The herring fishing commenced on Monday last, but with poor results as yet. Weather at present stormy, with a heavy sea running.—E. Comer.

### Lea (Tottenham).

No change in the condition of the water. Most of the roach fishers who have been down have managed to get a few fish, but there have been no big takes. One of the monarchs of the lower pool—a pike weighing 14lb.—poached his last fish on Friday, the 3rd inst., the fortunate angler being Mr. Culfe. A handsome little fish, weighing 4½lb., was taken from the same pool by Mr. E. Day on Wednesday last. Two or three smaller ones have also been taken.—Hackles Red.

### Leicester.

Angling items of any importance have been very scarce for the last few days, but this may be attributed to the change in the weather. Cold winds and rain have lately prevailed, and it is only the old stagers that have put in an appearance at the river side. The sport has been of a varied character. In a few instances fair lots of roach were shown, principally taken from the brook at Aylestone. Chub and pike fishing has been more actively indulged in, but with no great amount of success. A few brace of chub were caught and several pike, but only moderate-sized fish. The weather on Thursday was very cold, and heavy rains fell during the day.—Alert.

### Lugg and Arrow (Leominster).

These streams still keep in good fishing condition, but very low. In both streams the fish are rising well at the fly, and some good lots of grayling have been taken. Good sport has been had with the grasshopper, and some nice fish have been landed with the wasp grub. A gentleman visited the Lugg near Kingsland on Friday, and with the red ant took a good basket of grayling. In the water in the Bodenham district, some very fine fish have been taken with the willow and coachman. A good dish of grayling were taken with the wasp grub. The Arrow, near Eardisland, was tried the same day, and with the grasshopper a gentleman took eight very fine grayling, averaging 10oz. each. At Ivington, on Saturday, a gentleman fishing with the red ant, landed a nice dish of grayling, 5lb. the lot. The Lugg, near Aymestry, was tried with the fly, and some very fine grayling were taken. A gentleman tried the water at Ford's Bridge, and with the willow and red ant took a good dish of capital fish averaging ½lb. each. The Arrow in the Stanton district was fished on Monday with the coachman, and some fine grayling were taken. The Lugg was tried the same day and some capital fish were taken with the grasshopper ; a few good grayling were taken with wasp grub. A gentleman tried the Arrow on Tuesday, and with the red ant and coachman took a nice dish of fine fish. A few very nice grayling were taken in the Lugg the same day with the willow. Fishing very quiet in the Monkland water. The Pinsley still keeps in good angling order, but low ; the fish are rising well, and some good dishes have been taken.—Gwynne.

### Medway (Tunbridge).

The water below the town has again been poisoned, apparently by sewage matter, and consequently there has been little doing. The Angling Club had the matter under their consideration at a meeting of Tuesday night, and do not mean to play with the matter any longer, as owing to the occurrence of the same thing every year, their efforts to provide good fishing in the free part of the water is rendered futile. Several anglers have promised to subscribe if legal proceedings should be necessary, and I am informed that the London clubs would not be behindhand. The following resolution was passed at the meeting :—"That the attention of the Tunbridge Local Board be again called to the pollution of the river Medway on the 2nd Oct., between Child's and Eldridge's Locks, and the consequent destruction of fish thereby ; and that they be informed that unless a letter be written to this society forthwith, containing a promise to obviate the nuisance in future, that a petition be presented to the Local Government Board, asking them to send down a commissioner to inquire into the matter." I cannot conclude my report without referring to the determination of three anglers—members of the Hoxton Brothers, I believe—who, in my peregrinations last Saturday at midnight, I found ledgering at High Bridge, below the town, by lamplight.—Ye Medway Water Rat.

### The Spey.

This river has been in good fishing trim for the past week, and anglers have been getting capital sport. On the Wester Elchies section Mr. Charles Lethbridge, on the 3rd inst., killed three salmon, weighing 8½lb., 15½lb., and 24½lb. The same gentleman secured a basket of six salmon on the 4th, weighing 9lb., 18½lb., 19lb., 26lb., 27½lb., and 29lb. respectively. On the 6th Mr. Lethbridge secured five splendid salmon, weighing respectively 8lb., 11½lb., 21lb., 22lb., and 30lb. On the Aikenway Water Captain Menzies killed six salmon, weighing 17lb., 20lb., 20lb., 12lb., 11lb., and 26lb. respectively. On the Easter Elchies Water, on the 6th, Rev. Robert Cameron caught six fine fish. On the Rothes section Mr. John Dallas killed a salmon weighing 20lb. On the Craigelache Water Captain Grant killed a fish of 19½lb. on the 6th, and on the following day he had two nice salmon, the heaviest weighing 18lb. On the Wester Elchies section Mr. Walter Gordon Cumming caught two salmon weighing 12lb. and 29lb. ; and on the same section Mr. Gordon, West Park, Elgin, killed a salmon 8½lb. On the Arndilly section, on Thursday, Mr. George Sheach, fisherman to Mr. Myburgh, killed a fish weighing 7lb. On the following day Mr. C. Myburgh landed a salmon 22lb. weight ; and Mr. Macdonald, gamekeeper, another weighing 17lb. On Saturday General Hume had two salmon, weighing respectively 6lb. and 18lb. On the same day Mr. P. A. Myburgh, Q.C., killed a salmon weighing 11lb. ; and on Monday the same gentleman and party killed six fine fish, two of which weighed 17lb. and 22lb. On the Aberlour section, Mr. H. Macdonald, on Friday, killed a salmon 13lb. weight. On the following day Sergeant Sims caught a grilse weighing 5lb. On Monday Mr. John Laing killed a grilse 7lb. , and Sergeant Jameson a grilse weighing 4lb. On the Maerfiddock secton, Mr. Ross, Graigelachie, killed a grilse and a sea trout. On the Aberlour House water, Mr. Thomas Duff killed two salmon weighing 7lb. and 25lb. On the Pitcroy Lodge section, Mr. Charles Cruickshanks caught two salmon weighing 6lb. and 29lb. On this section, on Thursday last, Mr. Daun, gamekeeper, killed a grilse weighing 5lb. ; and on the following day a salmon weighing 14lb. On the Birchfield water during the week good sport was got. On the Carron Lodge water, on Monday, Mr. Mainwaring caught a salmon 22lb. weight. —P. M. C. G.

### Severn and Stour (Kidderminster).

There is not much news to relate in respect of angling. The rivers keep very low and fine, and I think the Severn is lower than ever. I can hear talk of one or two fishermen that can manage a coracle taking a few fish when there is a gentle ripple on the stream. Two of our members, J. Goode and C. Wellings, were out this week, and secured 16lb. of chub with pith and bullock's blood. Several good baskets of roach have been secured with paste and gentles for bait. I have had some good fish since my last report, so have some others of our members, with paste for bait. I tried the fly two days, but the catches were very meagre. Two dozen of dace the first day, one dozen the second day. Flies: a small gold palmer, small cinnamon, and a dark spider fly, one of my own making. The way I make the spider is:—Body, bronze peacock herl; hackle, black cock's neck feathers; hook. No. 11 or 12. I took most fish with the cinnamon. It has set in to rain here. I hope it will continue, so as to freshen us up a bit, to say nothing of the rivers, and especially the fish, so that they may be within the reach of most anglers, especially—E. E.

P.S.—Thanks for your advice on boiling the water before use, and especially the 'leetle drop of the crater."—E. E.

## South Level Cut (Littleport).

With the water so bright and the strong north-east wind we have had until yesterday, I am pleased to have anything to report at all. The few anglers who have faced the piercing cold wind have, although none of them have had what ought to be October sport, done something, as the following will show. Oct. 2nd, Mr. F. G. Tuck, New Barnes, Ely, 6lb. nice roach; Mr. Hailstone, Bottisham, 7lb.—a fair lot; Mr. S. O. Beeman, Littleport, a nice bag roach and one jack. Oct. 3rd, Mr. Hailstone, 8lb. roach; Oct. 6th, 8lb. roach; Oct. 7th, 9½lb. roach; and Mr. F. G. Tuck, 4lb. in a short time. Yesterday, with a west wind blowing, we got fairly among the roach, Mr. Hailstone taking 11lb. good ones; Mr. S. O. Beeman, 5lb., and pike 3¼lb.; Mr. W. L. Agger, Cambridge, with son, a nice show of roach and 3 small pike; Mr. T. Allpress, Ely, with friend, a splendid bag, in 4 hours, going 23lb.—Charlie South.

## The Tay (Perthshire).

Burn Mouth Water. (Saturday.)—Major Curtis, three fish; Mr. Glyn, one, 23lb. Thistle Bridge Water. (Saturday.)—Sir William Eliott, five fish. John Bright, M.P., has been enjoying good sport on Stanly water. On Monday he killed five fish, other three fish were killed on the same water. Scone Palace Water. (Tuesday.)—R. M. Jolly, five fish, one was killed from the bank by Peter McKinley, 28lb. Great numbers of fish are being killed all along the banks of the Tay. If an angler can throw a line at all, he has no trouble in getting on a fish. Splendid sport is being got on the Earn. Dupplin Water. (Monday.)—Lord Dudley's party: eighteen fish. One gentleman had thirteen fish to his own rod after twelve o'clock. On the Lower Dupplin water, Captain Murray had seven fish out of one pool. A great deal of rain has fallen last night and to-day, which is sure to bring out the rivers. Trout-fishers are having very good sport, the weather being so mild great numbers of flies are on the water.—P. D. Malloch.

## The Tay and its Tributaries.

The spate, which last week prevented good sport being obtained in the various rivers in this locality, has now run off, and the streams are in splendid angling condition. Reports received from all quarters are of a very favourable character, and state that the fish are very numerous, are of good quality, and are large sized. During the last few days the number of fish taken from the Tay—especially from the upper waters—has far exceeded the captures made during the earlier parts of the season. The two causes which chiefly account for this are the rise of the river and the fact that the nets were taken off the river some time ago. So numerous have the fish been, that in three days at the end of last week Mr. Barclay Field's party secured no less than ninety fish in the Stobhall water. On Thursday last Murthly water yielded the largest salmon that has been caught with the rod in that part of the river for the past twenty-five years to Mr. J. E. Millais, Birnam, the fish being a perfect beauty, and weighing 44lb. It was hooked with a "silver doctor" in a pool called the "Girnal," and gave some fine play before it was landed, running wildly for upwards of an hour. Mr. Millais sent the fish to Mr. P. D. Malloch, High-street, Perth, for preservation. A large number of anglers have come into the district to enjoy a few days' sport previous to the closing of the season to-morrow (Friday). The Right Hon. John Bright, M.P., has been the guest of Colonel Frank Stewart Sandeman at Stanley House for the past few days, and during his visit the right hon. gentleman has had very successful fishing on the Stanley water in the Tay. Mr. Bright left Stanley on Tuesday for Kelso, where he is to stay for a short time for the fishing in that district. Since the recent rain the river Earn, a tributary of the Tay, has greatly improved, and is now in good angling ply. Until within the last few days this river was very low, and the fish were prevented from ascending to the principal waters. Since the rise of the Earn anglers have been very numerous in the locality, and reports to hand state that large numbers of good-sized fish have been captured. The following are details of the sport in the Tay and its tributaries. On Tuesday, last week, Mr. Henry Curr, Pitkellony House, factor to the Baroness Willoughby D'Ersby, caught four salmon, averaging 11lb. each. On the same day Mr. Andrew Dickson, Innerpeffray, caught three salmon in the same river, one of which weighed 10lb., and the other two 7lb. each. Mr. Graham Stirling, of Strowan, secured two salmon of 16lb. each, and three grilse, weighing 7lb., 6lb., and 5lb. respectively, while fishing on the Strowan waters in the Earn on Tuesday and Wednesday. A gentleman from Crieff had a 7lb. fish in the Earn on Wednesday. Mr. P. Jack, Crieff, secured a fine salmon weighing 20lb. on the same day. On the Murthly water on the Tay, on Thursday, Mr. J. E. Millais had three salmon weighing respectively 25, 23, and 20lb. Upper Cargill water on Thursday yielded fourteen salmon and a grilse to Mr. Barclay Field's party, while on the same day they secured nine fish and a grilse in Lower Cargill water, and on Stobhall Beat they had seven beautiful salmon and grilse. Mr. Stewart, St. Martin's, on Friday fished Lower Cargill water for a few hours in the afternoon and killed four fish and one grilse. Mr. Field's party on Saturday had seven fish and grilse on Lower Cargill water, while the Stobhall Beat yielded a similar number of fish to them on the same day. The Earn on Friday was in fine ply, and anglers were having good sport. General Briggs secured seven salmon, averaging from 8lb. to 18lb., and all in fine condition. Mr. Henry Curr, Pitkellony, secured a salmon weighing 17lb., On the same day, Mr. M'Intosh, gamekeeper, Aberuchill, last week landed a newly run salmon from the Earn, weighing 15lb., besides several sea trout of good size. Mr. M'Intosh had on another occasion two fine salmon, weighing 14lb. and 6lb. On Thursday last, Mr. P. Christie secured a nice plump salmon which scaled 14lb. Anglers have enjoyed better sport on the Isla, a tributary of the Tay during the past few days, than has been experienced for a considerable time past. Heavy rain fell in the district at the beginning of last week, causing the river to rise several feet, and enabling fish to ascend the stream, with the result that good baskets had been obtained. Mr. James Baxter, on Friday, had two very fine fish, weighing 12½lb. each. Mrs. M'Intosh had a beautiful fish on Friday, and another of a similar character on Saturday. Messrs. Stewart and Winter had one each on Friday, and Mr. John Hill, jun., had one on Saturday. On the Birnam Hotel water in the Tay, on Monday, Mr. Pople and Mr. Ritchie landed two salmon weighing 20lb. and 10lb., and lost a very large one in the act of gaffing. Mr. P. McInlay, Perth, fished the Tay below Stobhall on Monday, and killed a salmon weighing 25lb., after fully half-an-hour's play. Mr. Durrant Stewart, of Dalguise, fishing in the Dalguise water for a few days, recently caught five fish weighing 21lb., 18lb. 15¼lb., 10¼lb., and 8lb. Mr. David Hodge, Dundee, fishing on the upper waters of the Tay on Tuesday afternoon, killed two salmon weighing 22lb. and 24lb.

## Teme (Ludlow).

The streams, though low, keep in excellent condition for angling, and good sport has been had in this district during the week. The willow fly, blue dun, and silver grey have been killing flies this week, also the silvertwisted blue. A sharp, frosty night or two has improved the grayling fishing. the fish sport well and the angler is almost sure of success. Some very good grayling have been taken in the Park district. A gentleman on Saturday visited that quarter with the willow fly. After about one hour's fishing he had landed but one grayling; he changed the fly for the blue dun, and during the remainder of the afternoon he managed to land fourteen good sized grayling. The lot weighed 8lb. Down the Steventon water on Monday a fisherman using the silvertwisted blue caught several very nice fish. At Ashford on Tuesday some fair-sized grayling were landed with the blue dun. Now that trout fishing is over, it is to be hoped the fish will be allowed to rest the allotted time allowed by law. The close season for all kinds of fish has been loosely observed for some years in this neighbourhood; in fact, until a water bailiff was appointed, the close season, either for salmon or trout, was scarcely recognised at all by many. There appears to be little doing up the waters above Downton, owing to the shallowness of the stream. The Clun remains in the same state, and a few baskets have been taken up stream. The Onibury waters continue rather low, but some good grayling have been landed there, also by Trippleton with the willow fly. The grayling rise well about here from eleven o'clock in the morning until half-past five in the evening. A gentleman on Tuesday caught some thirteen nice fish. The Corve in pretty fair condition, and some good catches up Felton waters.—S. Ludlow.

## Teme (Tenbury).

This stream and all its tributaries are now in splendid order. The fish are sporting well at the fly. The water is still very low but clear, and some good dishes of fine fish have been taken with the willow and Hare's ear dun, which are the best flies on at present. A few nice fish have been taken with the maggot. In the water near Easton Court a gent with the willow on Friday landed a good dish of grayling weighing 5lb. the lot. A gentleman fished the water near Eastham with the fly and landed a capital lot of fish, averaging ½lb. each. On Saturday a gentleman tried the water below the bridge, and with the Hare's ear dun took a nice dish of grayling. A few very nice grayling were taken with the maggot. In the water above Little Hereford some capital sport has been had, and some splendid fish have been taken with the fly. Tye water near Corn Brook was tried on Monday with the willow, and some very fine grayling were landed. A good day's sport was had near Berrington Court. A gent fishing with the fly landed a dish of good grayling averaging 10oz. each, and a few perch. Several very good trout were hooked, but were returned to the water at once. A good dish of fish were caught with the maggot. On Tuesday a gent fished the water near Rochford, and with the hare's ear dun took a good dish of fine grayling. Good sport has been had in the Association waters this week, and some very fine fish have been taken. The Kyre and Rea are in good fishing order, but low. There have been but few visitors to the Rea, and but little doing. A few fish have been landed from the Kyre with the fly, and a few with the maggot. The Ledwyche is still very low, and scarcely any fishing has been done in it of late.—Worcester.

## Torridge (Torrington).

River is rising fast with the heavy showers we had last night and this morning. This will bring up lots of fish. There is now little over a month left for fishing, and any of your thousands of readers who require good quarters and fishing, weather and water permitting, and will apply to Mr. Bastard, Torrington, North Devon, he will, I am sure send them the information they require. Only send stamped envelope for reply. Weather showery.—Practical Angler.

## Trent (Newark).

The water is now very low and clear, and sport on the whole is not very good, although a few good bags have been landed in various parts of the river. One or two of our local anglers have been getting some very nice catches of bream and roach this last fortnight, and I heard of another getting four good barbel last Saturday, one of them going over 12lb., a grand fish, if true; but I cannot say whether the report is true or not, as I only heard it from another angler. Barbel fishing is getting about over for this season, and I cannot remember a worse season for those fish; scarcely a good bag has been landed, and I know good anglers who have baited up likely swims, and stuck to them for days manfully, and yet not a barbel did they get. A few roach and dace have been killed with gentles and small red worms; bream also have been killed with cockspurs and tail end of lob; chub have fancied a bit of stinking cheese, and a lump of scratchings, at least the few fish that came under my own observation did. Prospects, in my opinion, are not very bright, although it will be possible to get a few fish, if angled for properly. Cockspur worms, tail end of lob, gentles, and scratchings will be found the best baits, in my opinion, while jack should reward the toiler and spinner by allowing themselves to be bagged.—The Trent Otter.

## The Trent (Nottingham).

There was a welcome downpour of rain on Wednesday, and on Thursday our anglers were busy in all directions. Fairly good sport has been met with, and the latest news at the Wellington Association—the most influential in the town—is to the effect that Mr. J. Tomlinson and Mr. C. Goodall, most respected members, have each weighed in dace above 9oz. They are, however, out-beaten by Mr. W. H. Cooper, of the Waltonians. Mr. E. West boasts of the heaviest barbel, and the business of the half-yearly meeting of the society was transacted last (Friday) evening. The annual dinner and distribution of prizes are fixed for the 17th. Mr. Butler, of the St. George's, has taken a splendid brace of grayling close to Burton-on-Trent; and a friend of Mr. J. Stanley, the celebrated taxidermist of Trent-street, has caught a very fine barbel weighing over 6¼lb. The winter term has now commenced, and judging from the numerous applications made to Mr. H. Coxon for railway travelling tickets as issued by the Midland and Great Northern Companies to the clubs, the ensuing winter season bids fair to outrival its predecessors in the matter of piscatorial popularity.—The Man at the Clubs.

## Trent (Alrewas).

River very low and fine, and with the wind north-east all the week, very little has been done. A few good grayling have been taken with the gentle, and a nice sample with the bumble, willow, and red palmer. Pike are running well; a handsome fish of 11¼lb. was captured with the spoon bait, and several smaller ones were lost.—Anon.

## Waveney (Beccles).

Water during past week has been in good order, but wind rather cold, and not many anglers have been out. Mr. W. Buck on Saturday last had a good catch of roach. Mr. Brooks, on the 27th, captured a pike weighing 5lb. This should have been mentioned in my notes of last week when reporting the capture by the same gentleman of a 1½lb. perch, but, through a misunderstanding, was omitted. A few pike fishermen have been out. On Wednesday a special competition for pike took place with members of the Waveney Club between the Cut and Burgh Staithe, but not with so good results as were anticipated. About ten members competed. Mr. Cowles, of Stratford, who came down especially, was again to the front with three fish, the heaviest scaling 5¼lb. Four other members secured one fish each, between 2 and 3lb. Water at present good colour, and wind S.E.—A Waveney Angler.

## Wye and Derwent.

Grayling fishing continues good on the Derwent. On last Saturday there were baskets from 8½ to 13½ brace per angler made on both the Chatsworth club waters and the Matlock Angling Association waters below Cromford. The killing flies have been bumbles, ash dun, furnace, black and lean flies. Pike have been well on the feed during the week; as many as five and six of a day have been killed below Cromford in the Derwent, chiefly by trolling, with small dace for bait. No doubt, if the Darley Dale Club waters, between Rowsley and Matlock, were only tried while the pike are on the feed, some heavy fish would be killed. Now is a good time for grayling fly-fishing on the Derwent. The Wye: very little is doing on this river; it wants rain.—G. J. Eaton.

### The Wharfe (Yorkshire).

It would be very difficult to imagine anything much more unprofitable than angling at the present time. There was, certainly, a little fresh water down both the Yore and Wharfe last week; but the fish turned sulky, and would not stir; it is not cold enough yet for grayling to take worm or maggot freely, and for some reason known best to themselves, they have, up to now, ignored the fly. The cinnamon, small willow, orange partridge, and smoke fly are the best flies to employ for grayling at the present time. The last named is a great favourite in Wharfedale, and is identical with the fly known in Derbyshire as the "little chap." Your worthy correspondent "Watchet" told me the other day that he dresses it from an Andalusian cock's hackle and bronzy peacock's herl for body, and I seldom find his advice in matters relative to angling "far out," as we say in this country. I am, however, now engaged on an article upon autumn flies, which I hope to send you shortly.—Francis M. Walbran.

## ROACH FISHING.

(*Continued from page* 167.)

### How to Cook Roach.

(A Hint for the Wives of Piscators.)

Roach being not an every-day sort of fish, some servants do not know how to clean them in a proper manner, and if they are not cleaned properly they are of no use for the table. We have seen a great mess made with them in the kitchen, and the fish spoiled after all. To prevent this, adopt the following simple method:—

Having turned the fish out of the bag, lay them in a pile on the board, their tails toward you, and taking them one by one, with the bluntest knife you have scrape off the scales, beginning from the tail, and pressing it fast on the board with the fingers of your left hand. Be sure you get every one of the scales off, for one only is very disagreeable while eating them. As you scrape them lay them aside, one by one, until the whole are finished. Then wipe your knife quite clean and put it away. Having done that, take an old pair of scissors, and cut them open from the vent up to the head, laying them as you do them in a pile until they are all done. Then wipe your scissors clean and put them away. Then take out the insides of them, putting them as you do them again into a pile. That being done, get a pan of water and wash them in it, taking them one by one from the board, and as you wash them put them in a cullender to drain. Be particular in this respect, for if they be all tumbled into the water together, and are in it only a few minutes, they will all be spoiled, and this is the case with all freshwater fish. As soon as they are all washed and in the cullender, take a cloth and wipe them, one by one, as dry as possible, and put them into a dish, in which dredge them well with flour, and they will then be ready for cooking. Take the insides and scales from the board and throw them away, wash your board clean, and throw away the water, and your kitchen will be as clean as before you commenced the operation.

There are several ways in which roach may be cooked: they may be boiled, or stewed in vinegar, or baked like any other fish; but as we consider that frying them is by far the best method, we shall just throw out a word respecting it, knowing that there are many servants quite as deficient in the art of cooking them as in cleaning them. Let, then, the following plan be adopted: Put your pan on the fire and make it warm, then wipe it well with a cloth, and be quite sure that the pan is all over as smooth as possible, for if it be not, the fish while frying will stick to it, and having begun to stick will keep on sticking, until it will be such a sticky affair that all your roach will be spoiled, and be much more fit to put down to the cat than to bring to the table. If the pan be not quite smooth, make it so by rubbing with sand or ashes. It being quite smooth and clean, put it on the fire, which should not be too fierce, and put into it at least five or six ounces of lard, or if you use salad oil, a cupful. It is a very bad plan to put small quantities of fat in the pan, and then keep on adding to it, for in that case it keeps burning away and the fish are all spoiled; while if there be a good quantity it does not waste, and at the same time it rises high enough to penetrate into the flesh of the fish. Your largest fish should always be cooked first, while there is the most fat in the pan, and bear in mind also that in proportion to the size of the fish you are going to cook so should be the quantity of fat, in order that it may rise to the thickness of the sides of the fish; it need not be wasted after you have cooked your fish, but may be put away for the next cooking.

Having put your fat in the pan, let it be on the fire until it boils, for if you do not the fish will stick in spite of you; then put in your fish, letting their heads be towards the back of the stove, and placing the largest in the middle of the pan. Let them fry till their eyes begin to turn white, then turn them over with a knife, and let them fry not quite so long as they did before you turned them. Those in the middle of the pan will generally be done first, especially if they be all of one size, and if any of those that have been on the sides are not quite done, bring them into the middle of the pan for a little time to finish them off before you put any fresh ones in. As they are done, put them on a strainer, and serve them up with brown sauce, melted butter, or any other sauce that may be preferred.

### The Way to Eat Them.

There are many persons who are quite as ignorant of the way to eat roach as they are of the right way to catch, clean, and cook them. They may understand the anatomy of a large cod or salmon weighing 20lb., but that of a roach is far too intricate for them; therefore, for their instruction, and to make our chapters on roach complete, we shall just give one word of advice. Having a roach on your plate, first pull out gently all the fins, and put them aside; then put your knife into the middle of the side of the fish and turn off the flesh, taking care that none of the bones come with it; if they are well cooked they will not, and the flesh you turn off will be fit to eat without any fear of bones. Having eaten one side, turn the fish over, and take off the flesh of the remaining side in the same way. Never let the sauce be over your fish, but keep it on the side of your plate, or you will not be able to see the bones and to dissect them properly. If any be left save them for breakfast, and you will find them very good cold.

To conclude, we will only add: let roach be thus caught, kept, cleaned, cooked, and eaten, and depend upon it the opinion of many who sneer at them will be quite altered, if they should have the opportunity of partaking of any. And we do think, after all, that it is more rational and proper for anglers to take care of their fish, and have pleasure in partaking of them with their families than to throw them about and waste them, or, as we have said, give them away to their friends.

[We feel sure our roach angling readers will have appreciated these plain and practical hints about the roach; the recipe for cleaning, cooking, and eating will equally apply to perch, dace, gudgeon, &c.—Ed.]

"**Tree Gossip**" is the title of a new book by Mr. Francis George Heath, to be published shortly at the Leadenhall Press by Messrs. Field and Tuer.

## NOTICES OF FISHING TACKLE, &c.

A Very Natural Bait.—Mr. Wm. Brown, of 36, George-street, Aberdeen, sends us a capital imitation of the elver, or young eel. What it is made of we cannot say, but it appears like horn, and is very strong, also semi-transparent. It is very neatly mounted, and we can easily understand that, as Mr. B. says, it has been found most successful, both as a trout and sea-trout bait. Its shape causes it to spin slowly when pulled through the water.

Messrs. Farlow and the Sliced Hook.—Messrs. Farlow and Co., of 191, Strand, write: "Dear Sir,—Herewith we beg to hand you four different-sized sample 'Sliced' hooks. These are the only sizes we have ready just yet, but have ordered all other sizes of Messrs. Milward. The price of those inclosed is 1s. per dozen, tied on the very best gut." As several correspondents have written to know where they can get the "Sliced" hook in London, we have much pleasure in publishing Messrs. Farlow's letter. The gut is of first-class quality, and the hooks sent are just the size for a lively, well-scoured marsh worm for perch. The mountings are strong, neat, and well-varnished.

Autumn Grayling Flies.—Messrs. D. and W. Foster, fishing tackle makers, Ashbourne, Derbyshire, remind us that the grayling is in full season now by sending some patterns of autumn grayling flies. We confess we are extremely fond of fly-fishing for grayling after the glare and heat of the summer are gone, and the trout are no longer fair game. These patterns are extremely nice, and consist of the following winged "floaters": grey quill gnat, grey gnat, two October shades of the iron blue dun, two killing midges—viz., General Black and the Little Chap; the brown earwig, the needle fly, the mulberry and light bumbles, and the brown palmer. We are always pleased to notice the things sent us by Messrs. Foster, as from our own experience and that of all anglers we know who know them, we are sure they leave nothing undone to secure the satisfaction of their very numerous customers. We are glad to learn that increasing business will compel them to remove shortly to larger premises. We often wondered how they could get through their work in their present rather cramped quarters.

The Automatic Baits.—Miss Campbell, of 2, Cecil-terrace, Maynard-road, Walthamstow, writes to say that, at the suggestion of several anglers, she has made her baits so that by simply bending the tail end they will spin. This is a great advantage. Miss C. deserves encouragement, for she puts no end of talent and work into her baits.

## THE NATIONAL FISH CULTURE ASSOCIATION.

Mr. Andrews, of Guildford, has just sent to the National Fish Culture Association's tanks at the Health Exhibition some specimens of Salmonidæ of 1884 hatching. The grayling, which were turned out in May, have attained to the length of 5⅝in. The Loch Leven and brook trout, which were hatched in January and February, have reached 6⅜in. in length. They were reared in Mr. Andrews' nurseries at Haslemere, Surrey.

## THE GREEN INSECT.

Since the correspondence about this capital grayling fly, Messrs. Foster, of Ashbourne, have sent us some dressed by them, and they certainly look most deadly customers to put before the fanciful grayling.

## SCOTCH FISHING NOTES.

Tweed and Teviot.—The late flood in the rivers, although not so large as was to be desired, did an immense amount of good in the way of bringing up fish from the sea to the upper reaches, and as great numbers of salmon were in the bay at the mouth of the river, at the time the rise occurred, the various salmon fastnesses are sure to be fairly well stocked. The rivers have again run in very low, but, notwithstanding this, fairly good sport is being got. Reports from Berwick state that there are plenty of salmon ready to take the river whenever a rise takes place. Anglers, therefore, will have good sport whenever the much desired flood occurs. The following are the reports from the districts:—

Selkirk District.—The flood of the 26th September, brought up large numbers of salmon and sea trout to the spawning grounds. Hundreds of both kinds of fish were daily to be seen running up the cauld at Selkirk, as also shoals of yellow trout.

Melrose District.—On the Dryburgh waters on Wednesday Sir Wm. Scott, of Ancrum, Bart., and Mr. Edwards, had two salmon, one a fresh run fish of 24lb. On Friday a small spring salmon was landed on the same water. On Saturday, on one of the Mertoun casts, five salmon were killed before 2 p.m.

Kelso District.—Friday October 3rd. Mr. Jas. Brunlees, C.E., London-on-the-Dub, at Sprouston, killed six salmon weighing 7lb., 9lb., 13lb., 22lb., 27lb., and 27lb. respectively. On the Carham water Mr. Hay Gordon had a couple. On the Ednam House water Mr. Drummond had two salmon, and on the Floors water the Duke of Roxburghe had one. On the Mertoun water the Hon. A. Brougham has had good sport, and on the above date he had four excellent salmon. On Burgham Dub Mr. Denison had one of 24lb. and one of 7lb. Saturday, October 4th. On the Carham waters Mr. Hay Gordon killed four salmon, two of 18lb. each and two of a smaller size. Monday, October 6th. On the same water Mr. Hay Gordon killed a grilse. Last week Mr. Cockburn, London, who holds the Makerston water, had very satisfactory sport, Saturday's fishing being remarkably good in respect to the weights. Besides having a grilse, he had three grand salmon, averaging 28lb. each. On the Floors Castle waters (his Grace the Duke of Roxburghe's) Lord Walshingham, on Tuesday, killed two fish, one of 20lb. and one of 7lb. On the same day, on the Mertoun water, the hon. H. Brougham killed four, all about 18lb. each. The waters are very low and fine, and a flood is much wanted.—Maxwheel, Kelso, October 9th.

Conviction of a Well-Known Oxford Poacher.—Heavy Fine.—A notorious character, named Lazarus Cox, appeared at the Oxford City Police Court, on Friday last, charged with using an illegal net on the 30th ult. P.C. Tundell stated that he was on duty on the morning in question, and about twenty-five minutes to five he saw the defendant come from his house and go into his punt, on a stream at the back of Duke-street, New Botley. Defendant was using the draw nets produced, and he told him they were illegal, and that he intended to take possession of them. Thereupon defendant resisted, and attempted to destroy them with his knife. The Mayor said he was reluctantly compelled to trouble Mr. Cox for £2, together with £1 10s., the costs of the prosecution, or he would have the option of sleeping on a plank for the next few weeks. Mr. Cox did not appear entirely satisfied with his worship's decision, and on coming out of court he was heard to remark "My eyes, but they gave it me stiff."—A second case against Antony Beesley was then proceeded with. From the evidence which was given, it seems that Mr. Beesley was found on the Thames on the 8th of September, in company with his brother and another man, who was using a scoop net. That netting trip cost Antony Beesley exactly £1 1s. 6d.

# CLUB REPORTS.

## AMICABLE BROTHERS ANGLING SOCIETY.

On Oct. 5th several of the members fished the Stort for four prizes; the result was as follows:—Mr. Dacey first, Mr. Pedley second, Mr. Say third, Mr. Chevalier fourth. Mr. Medcalf, jack from the Lea; Messrs. Moir and Worledge also weighed in fish. A roaming match for fourteen prizes will take place on Oct. 26th in the Lea, between the Fish and Eels and the top of the Black Pool.—J. Worledge, sec.

## BATTERSEA FRIENDLY ANGLING CLUB.

On Oct. 5th, fishing at Richmond, Mr. G. Anstiss caught two nice barbel, also a nice show of roach and dace, the total weight, 6lb. 10oz. Mr. G. Mumford, H. Martin, and F. Newton also had fish from Amberley. Members going for Mr. Burgess's prize must give in their names on Tuesday, when all are requested to attend for important business.—A. T. Sampson, hon. sec.

## CLAPTON ANGLING SOCIETY.

The general weekly meeting was held on Monday last, Mr. G. B. Parry in the chair. The minutes of the last meeting were signed, and formal business having been completed, the chairman gave an interesting account of his visit to Newark, fishing the Trent, in the strictly preserved waters of the Muskham Angling Society, by invitation. He described the waters as teeming with fish of all descriptions, and his experience of the Nottingham style of angling was most favourable; the weather was so unpropitious that he only got about three hours' angling, but in that time he caught upwards of 15lb. of very fine roach and dace. The evening he spent at the headquarters of the Muskham Society, and he expressed the great satisfaction at the friendly treatment he experienced from the members, who gave a cordial invite to any members of the Clapton to come down and try their waters. Mr. Parry, in thanking them for their kindness, gave a return invite from the Clapton Society to any of their members who might be visiting London, stating that although the Clapton had not such grand water as the Trent, they had a hearty welcome at their club house, and could promise a good day's angling at private water. On the arrival of Mr. G. Colls, and Mr. Wood, a magnificent show of roach was exhibited, weighing 73lb., the take of those gentlemen in private water; a finer show it was hard to conceive, as the fish ranged from ½lb. to 1¼lb., in splendid condition—a few perch, the heaviest 1lb. 1oz. These gentlemen took a much larger weight, but distributed them amongst their friends. Two other members at the same water were unsuccessful with the jack. Mr. G. Short had 5lb. of roach from St. Margaret's. Sundery minor catches were reported, and the society's water had been visited with fair success. A hearty vote of thanks to the chairman closed the proceedings.—Henry Howse, hon. sec.

## CLAPHAM JUNCTION ANGLING SOCIETY.

Since reporting last, we have had two prize contests. In the first, Mr. R. Wellman took first, Mr. W. Maslin second, Mr. Weyer third. In the second match (Oct. 5th) Mr. R. Banfield, 10lb. 6oz., first; Mr. Maslin, 8lb. 10oz., second; Mr. Wilson, 6lb. 14oz., third. We have had some good shows of late, Mr. Wilson having about 90lb. of barbel and roach in five days from Staines; Mr. Speed had 30½lb. ditto; Mr. Banfield, 27lb. 12oz. bream (two days), two fish weighing 8lb.; Mr. Favell, one bream, 3lb. 6oz.; Mr. Speed, a very handsome chub, 4lb. (sent for preservation); Messrs. Wakeford, Gomm, Wellman, Moore, and Maslin also had fair sport. Mr. L. Boisseau has been giving his attention to a pretty swim at Weybridge, and I expect he will have a nice take shortly.—W. Maslin, sec.

## COBDEN ANGLING SOCIETY.

Several of our members were out on October 5th. Mr. Stead weighed in some nice roach from Uxbridge weighing 8½lb.; also Mr. Webley some roach, about 3lb. On Wednesday last, Messrs. Maples, Hayward, and Howland were out at Richmond, and weighed some barbel, roach, and dace, about 13lb. Messrs. Stead and Baker were at Uxbridge, and weighed in some very fine roach—Mr. Stead, 8lb. 2½oz.; Baker, 4lb.—C. Reeves, sec.

## EASTERN COUNTIES' ANGLING SOCIETY, GREAT YARMOUTH.

A meeting of this society was held at the Duke's Head Hotel, Quay, on Tuesday evening, the 7th inst., at 9 o'clock. The president, Dr. Mitchell, occupied the chair. The honorary secretary, Mr. Lee, was instructed to again write Edmund Birkbeck, Esq., M.P., with a view to knowing whether, now that that gentleman is in possession of a book of rules, he will become an honorary member of the society. The president announced that Alfred Nuthall, Esq., Mayor of Kingston-on-Thames, had expressed a desire to become a member, and towards this end he was proposed and seconded in due form, and unanimously elected. A vote of thanks was accorded by the society to Captain Styles, C.M.R., and to Mr. Nuthall, for their kindness in offering each a prize to be fished for on some future occasion. It has been suggested that a competition for jack be fished some time next month, and there is every chance of this being carried into effect. Very few catches of any weight have been weighed in during the week, the fish not being nearly so well on the feed now as they were last month. The pike season is now on, and several members have notified their intention of being amongst them shortly. A few days ago I saw a take made by Mr. Barber, of Regent-street. There were ten jack, not large, but in excellent coddition; they afforded very good sport. Mr. Barber caught them in the North River, near St. Bennett s Abbey, spinning with spoon-bait.—A. M.

## GRANGE ANGLING SOCIETY.

The ordinary fortnightly meeting of this society was held on the 2nd inst., when there were present about thirty members. Mr. J. H. Rich was voted in the chair. After the usual business, the chairman distributed three of the prizes given for September. The prizes were for the first, second, and third heaviest weight of fish (except jack), taken during the month, and the heaviest weight of perch. The winners for the first three prizes were Messrs. Haigh, W. Rich, and J. H. Rich. Mr. Gibbons's prize is to be fished for by Messrs. Fowler and Sherval on a future date, both gentlemen having weighed in exactly the same weight of perch. A peg-down match will be held on the 21st inst. near Egham, for four prizes. The first is presented by Mr. Varney, the second by Mr. Roxbury, and the third and fourth by Messrs. Calwell and Brooks.—W. K.

Sir,—What was your opinion, please, of Mr. Gibbons's gauge-board, a specimen of which I sent you with my report for insertion in your paper of the 12th July last?—I am, &c., W. Kayes.

[We thought it a very useful gauge, but did not know who sent it.—Ed.]

## GRESHAM ANGLING SOCIETY.

There was a good attendance of members on Tuesday evening last, when the chair was occupied by Dr. Theodore Cash. The minutes of the previous meeting having been duly confirmed, Mr. Chambers reported the result of his negotiations with respect to the acquisition of certain fisheries by the society. Dr. Brunton favoured the members with a narration of his adventures by night in the neighbourhood of Shepperton, on the occasion of the barbel competition, when owing to the mist which prevailed he mistook the road, and arrived at his destination considerably later than was intended. He was corroborated in his opinion of Docket Point as a barbel swim by Capt. Alfred, who reminded the members that in the Gresham Museum was a case of two barbel, specimens of 26, which he had caught with a very light cane rod and fine tackle in one afternoon in 1850, a friend who was fishing in the same swim with him, but with ordinary strong tackle, not taking a single fish. Mr. Parker followed with some experiences of Elstree late at night, when we fancy he might have found his hydroscope useful in finding the level of the road, as, from his description, there must have been a second edition of the Deluge. Mr. Crumplen also caused some considerable amusement by describing his nocturnal adventures at Hendon with two friends, the effect of the lights carried by the bream-fishers, who were taking up their swims, being very curious. After some further discussion, the formal business of the meeting concluded with a vote of thanks to the chairman, and the remainder of the evening was devoted to harmony.—Pro. H.

## GLOBE ANGLING SOCIETY.

Several of our members competed for two special prizes on the 5th inst. with the following result:—Mr. S. Howell, first, with 5lb. 11oz. of roach and dace, and Mr. H. Lake second, with 2lb. 12oz. of roach and dace. Messrs. W. Brown, G. Brown, A. Chambers, C. Ellis, and A. Harris also weighed in roach, dace, perch, and gudgeon. Mr. Alexander Payne was proposed and seconded to become a member of this society at our usual weekly meeting. It was also arranged for the next smoking concert in aid of the Anglers' Benevolent to take place on Wednesday evening, the 22nd inst.—J. J. Holmes, sec.

## GOOD INTENT ANGLING SOCIETY.

The following members weighed in on the 5th inst.:—Mr. G. Bates, roach, bream, and dace; Mr. Snook, roach and dace; Mr. Maybury, roach; Mr. Haines, bream; Mr. Barrington, roach; Mr. Murphy, roach and chub. On the 7th inst., being quarterly night, there was a good attendance of members. The members rescinded a previous resolution—that we fish at Bourne End for prizes; but fish at Burnt Mill on the 26th of this month for ten prizes instead; I am very pleased to say. Mr. H. Brookwell is going to bring his handsome collection of fish to the club to take up their old position.—R. Murphy.

## GREAT NORTHERN BROTHERS ANGLING SOCIETY.

On the 5th inst. our show of fish was not up to the average. Mr. J. K. Fitch had a nice tray of roach and dace, several of the latter over 8oz., the total weight being 9lb. 3oz.; Mr. J. Dingley, dace and bream, 7lb. 2oz.; Mr. W. Theobald, 3lb. 12oz.; Mr. S. Baker, 2lb. 13oz.; Mr. G. Watling, 2lb. 12oz.; and Mr. C. Watling, sen., roach. We pay a complimentary visit to the Original Anglers' Pride Society, Five Bells, Bermondsey-square, on the 15th inst., when we mean to spend a jolly evening.—J. Fitch, sec.

## GREAT YARMOUTH PISCATORIAL SOCIETY.

The contest noticed in the last report to take place on Thursday, the 2nd inst., proved nearly a total failure, so far as only one prize was claimed, and that was for two fish only, not weighing 1lb. total. Now, as readers will say "What is the reason?" as far as I can I will give it. No one contesting knew the water, and we ought not to have had a staked-down match. Again, these inland rivers, on a bright, sunshiny day, the water is so clear that you can easily see 6ft. to the weeds, and ought not to be fished till the cold weather has destroyed the weeds at the bottom and the water not so clear. When that time arrives I intend having, if possible, some of the large roach that were continually swimming by our bait. It is much to be regretted that no catches were made, as our vice-president, Captain Blake, with his pleasure wherry, accompanied by F. Blake, Esq., and members of the Waveney Preservation Society, were purposely brought up at the fishing ground, the vice to act as referee, which he did in true sailor fashion, by first asking the exhibitor of the catch if he claimed a prize for two fish, and on receiving a reply that he did, awarded it, with the remark, "Come on board, have a glass, and hope for a better match next time." I may tell you that the vouchers and the auditor's report are now in the society's hands, but very great disapproval was shown by new members when they were informed that Dr. Mitchell, the late treasurer, had paid over their entrance fees to Messrs. Harmer and Ruddock on account of the Higham Sounds case, together with the balance left of that fund. The meeting stands adjourned, it being a summoned meeting to receive the auditor's report. Among those present we were very pleased to see Mr. Field, who, like many of our London friends, is a member of this society.—J. Lark, sec.

## IZAAK WALTON ANGLING SOCIETY.

Mr. J. W. Morgan had a splendid take on Thursday last, the 2nd inst., the particulars of which are as follows:—1 chub, 4lb. 1oz.; 1 do., 3lb. 15oz.; 1 do., 3lb. 8oz.; 1 do., 1lb. 14oz.; 1 barbel, 4lb. 3oz.; 4 roach, 4lb. (heaviest 1lb. 12oz.); 7 dace, 3lb. 15oz. (heaviest 13oz.), making a total of 25lb. 5oz., the whole of which were in fine condition. Mr. G. P. Rolt had 10lb. 12oz. of good bream on Friday, the 3rd inst. Mr. H. Butt weighed in dace on the 5th inst., the heaviest one weighing 9½lb. Mr. G. Bliss had some handsome roach on Wednesday, the 8th inst., the heaviest one weighing 1lb. 2½oz. Mr. R. Perrin had a tray of roach on the same day. Mr. G. Rolt will give a prize to be fished for on Wednesday, the 22nd inst., at the Ferry Boat Waters at Tottenham; and Mr. G. Wood will give a prize value 10s. 6d. to be fished for on the same date and place. Bream and roach only to be weighed in for these prizes. Nothing under 8oz. gross weight to take either of the prizes. No competitors to leave London before 5 a.m. on the morning of the competition. As a reminder to the members, there are two special prizes to be fished for on October 13th between Burnt Mill and Harlow; also the 12th inst. is the first day members can weigh in for Mr. T. Ward's prize.—H. B.

## IZAAK WALTON ANGLING ASSOCIATION, STAFFORD.

The first angling contest of this association took place on Monday last, in the waters at Hayford, near Stafford, kindly placed at the disposal of the club for this occasion by Mr. Sproston. The members met at the club house in the morning and proceeded to the rendezvous by train. Sport commenced at 9.30 a.m., and terminated, so far as the contest was concerned, at 12 o'clock noon. Some of the members subsequently adjourned to the river Sow, by the kind permission of the Right Hon. the Earl of Shrewsbury and Talbot, and a fine quantity of fish was exhibited at the club house by Mr. Chesworth. There were eleven prizes to be angled for, and the following gentlemen were the respective winners:—1st, Mr. Harvey; 2nd, Mr. Chesworth; 3rd, Mr. Brown; 4th, Mr. Holmes; 5th, Mr. Gardiner (the president); 6th, Mr. Hadley; 7th, Mr. Holford; 8th, Mr. Sturland; 9th, Mr. Rowley; 10th, Mr. Picking; 11th, Mr. Eley. A special prize was offered for the largest quantity of roach, and this was won by Mr. Harvey. In the evening the members sat down to a substantial repast, supplied by the host, Mr. John Gibson (treasurer of the association), and a most enjoyable evening was spent. The prizes were distributed after dinner by Mr. Charles B. McLaren, M.P., assisted by Mr. George Howell. These gentlemen had, most reluctantly, to leave the company of the members of the association (of which they are both honorary members) at 8 o'clock, having to address a large meeting in the Borough Hall. The duties of umpire and weigher-in at the contest were most efficiently carried out by Mr. N. Holmes, and everything terminated most satisfactorily. The remainder of the evening was spent in songs, and there seems every prospect of the success of this association, which has, although young, met with great encouragement, and bids fair to become a permanent club in the town, which claims the honour of being the birthplace of him after whom they have named the club. The chair was taken by Mr. C. B. McLaren, M.P., and the president, Mr. H. H. Gardiner, in the vice-chair.

## LIVERPOOL ANGLING ASSOCIATION.

We turned out thirty-five strong on the 2nd inst. to compete for several valuable prizes in the little river Gowy, three miles from Chester, and travelled in one of the L. and N. W.'s saloon carriages to "Ye Ancient City," from whence we were conveyed in two waggonettes to the scene of action, through a beautiful country on as lovely an autumn morning as the world has seen. Under such circumstances, with the balmy air fanning our cheeks, the drive was thoroughly enjoyed and appreciated, and everyone felt thankful at being able to avail themselves of so rich a treat, so great a blessing. On arriving at the river side every competitor was soon at work, and the banks of the mimic stream quickly presented an animated appearance. There were both bait fishers and fly fishers, but the latter were in a decided minority. The day turned out a most pleasant one, though the wind was somewhat chilly ; but, as it kept fair with the sun shining brightly, this was scarcely noticed. At the time appointed (6 p.m.) for the homeward journey, the whole party took their seats in the conveyances and were driven through the gloaming to Chester, thence in the saloon to Liverpool, where all arrived in capital trim for the sundry refreshments that were gladly and freely partaken of. The weighing in was at the club house, and on the creels being emptied it was soon apparent that the results of the day's efforts were very meagre indeed. Messrs. Pearson and Fearnett most carefully weighed in the various catches, with the following result :—W. Davies, 1 : R. Roberts, 2 ; E. W. Boulding, 3 ; J. Lofthouse, 4 ; J. Rawsthorne, special prize for gudgeon, 5. At the meeting held afterwards a circular from the National Fish Culture Association was read and cordially approved of, and a resolution unanimously passed that, "The Liverpool Angling Association enrol itself a member of the N.F.C.A., and that the hon. sec. obtain from the treasurer the requisite fee of one guinea, and forward the same to Mr. W. O. Chambers without delay." It was also resolved that the winding up competition of the season take place in the river Vyrnwy, at Llanymynech on the 23rd inst., the party to travel overnight as before. The usual circular for this, with full particulars, will be sent out to the members in due time. In my account of "Perch Fishing in Ellesmere Lake," in last week's Fishing Gazette, the printer has put Mr. "Seaman" instead of Mr. "Leaman."—R. Woolfall, hon. sec.

## LINCOLN ANGLING SOCIETY.

Only a few members went out on October 5th to various places, and met with the following sport :—Mr. Embleton, a jack weighing 3lb. 3oz., and a few roach from Uxbridge ; Mr. Bingle, some fine roach, weighing in all 2¾lb., from West Drayton ; and Mr. Sheen last Wednesday brought in a very nice show of roach, and a jack weighing close upon 2lb. More members will go out on October 12th, and I trust they will bring in some good shows of fish.—H. Bingle, sec.

## LIVERPOOL CENTRAL ANGLING ASSOCIATION.

The members of this association held their last competition of the season on that favourite resort of Liverpool anglers, the Vyrnwy, at Llanymynech, on the 29th September. There was a fair attendance and the weather was all that could be desired, and the result a most enjoyable one. The following is the list of prize winners :—First, Mr. Smith, 5lb. of chub, heaviest fish, 1lb. 4oz. ; second, Mr. G. McKee, with chub 2lb. 1oz. ; third, Mr. R. Poston, heaviest fish, perch, 1lb. 12oz. ; fourth, Mr. J. Howarth, heaviest roach, 12oz. All the fish taken were in grand condition ; but, unfortunately, the water became discoloured early in the afternoon, or the baskets would have been much heavier. Still, all present enjoyed themselves thoroughly, and were unanimous in saying the out was one of the pleasantest they had had this season.—W. V. Narracott.

## MARLOW THAMES ANGLING ASSOCIATION.

The annual committee meeting was held at the Complete Angler on the 4th inst. Mr. T. H. Wright was in the chair, and he was supported by Major J. Simpson-Carson and Mr. C. M. Foottit. Letters were read from the National Fish Culture Association, and it was thought that as the Marlow Association had so many opportunities of obtaining fish-stock upon better terms than could possibly be offered by the National Association, and as the activity of the officers rendered assistance in obtaining the fish unnecessary, the Marlow Association could not see its way clear to avail itself of the offers made.—Letters of a friendly nature were read from the promoters of the National Fish Culture Association, from the Editor of the Fishing Gazette, Mr. T. Spreckley and other gentlemen unable to attend. The bailiffs reported that over 500 trout had been captured, about 100 of which were killable. The hon. secretaries reported that a conference of the executives of the up-river associations had been held at the instance of the Marlow Association, at which friendly relations were established between the executives present, representing Reading, Henley, Medmenham, Marlow, Maidenhead, and Windsor, and at which excursions of interest were discussed, and the Parliamentary report upon angling was considered. It was stated that a general improvement had taken place in the affairs of the association, and that a greater weight of large fish had been turned in than had ever been the case before. It was also reported that three new and most respectable fishermen had been added to the list of Marlow professionals. A decided decrease of complaints as to the character and behaviour of the fishermen had been noticed, and there had been a considerable increase in the number of members, with a large increase in the number of anglers, who altogether had been more successful this year in their fishing than in previous seasons. Thanks were voted to the chair, and the party having been joined by the vicar, Dr. Shore, Mr. J. S. Kirkpatrick, and Mr. Maskell, adjourned to a very excellent dinner at the Angler Hotel. A novel feature was introduced on the menu cards, in the shape of the portraits of the hon. sec. and hon. treasurer, which were declared unique and very good.—Marlow Buzz.

## PECKHAM BROTHERS ANGLING SOCIETY.

The club match fished on the —th inst. resulted as follows :—T. Turner, first ; W. H. Page, second ; and T. Phipps, third. Fifteen members of this society will take part in the South London match at Amberley. A match will be fished on the 19th for the cup, from St. Margaret's Lock to Rye House. Train leaves Liverpool-street at 8 o'clock. The dinner to commemorate the founding of this society will take place on Monday, Nov. 3rd ; A. Brodie, Esq., president, in the chair. The cases of fish belonging to Messrs. Gafney and Watkins, recently in the possession of the Anglers' Pride, are now to be seen in the club room. Four bream weighing 17½lb. are fish one can be proud of.—Gadfly.

## THE PISCATORIAL SOCIETY.

On Monday evening last the usual weekly meeting of this society was held at Ashley's Hotel, Covent-garden, and there was an exceedingly good attendance of members. Amongst those present were Messrs. Fennings, Sachs, Gillatt, Lemann, Blamey, Goodger, Foreman, Pattisson, Bennett, Inderwick, Huggett, Wheatstone, Meyer, Blundell, Gray, Lander (hon. sec.), Booker, Wheeldon, Jesse, C. C. Blundell, Harden, Adlington, Dr. Brunton, Rev. J. Sumner, &c., &c. Mr. Blamey was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed. A ballot took place on the nomination of Mr. G. J. Hodson, proposed by Mr. Marston, seconded by Dr. Brunton, and the committee recommended him for election ; in the result he was unanimously elected a member of this society. It was incidentally mentioned that Mr. Hodson is a first-class fly fisher. It was announced definitely that a ball will take place this season, to be called "The Piscatorial Society's Ball," and several gentlemen have consented to become stewards. Members of the society wishing to become stewards are requested to forward their names to the hon. sec. It was further announced that in future on competition evenings the leisure time (if any) will be devoted to harmony, &c. Mr. Blamey related some of his latest experiences in barbel fishing. He fished one swim (which had been previously baited) for three days. The first day he had a good take. The second day, although he fished patiently and well the whole day long from early morning till late in the evening, he never got a single touch. He put in more bait, determined not to give in, and on the third day took more fish than on the first day. Could any member present give any reason for the fish refusing to feed on the second day ? Several members on previous occasions had had similar experiences, and the question was discussed by Messrs. Pattisson, Wheatstone, Sachs, Wheeldon, and Rev. G. Sumner. No good reason could be given. The chairman announced that the annual supper will take place in these rooms on the 20th inst.—tickets 3s. 6d. each. In order that proper provision may be made, members who intend being present will oblige by forwarding their names, and the number of seats required, to the hon. sec. on as early a day as possible. It is expected there will be a full attendance. Members' vocal friends will be appreciated. The Rev. G. Sumner has been fly fishing for dace in the tidal Thames with considerable success. He refreshed himself at the Star and Garter Hotel with a glass of stout—charge 6d., which he considered excessive. Mr. Fennings called attention to the reports of our society in the daily press, and thanked Mr. Wheeldon for his exertions in behalf of this society. The Chairman rose and proposed the health of the successful anglers, Messrs. Fennings and Huggett, who both had trays of fish on the tables. Mr. Fennings said he had been fishing that morning at Deeping St. James's. The average depth of the river at the present time was not more than 1ft., and the deepest holes not more than 3ft. The Welland was a good river, especially for fly. Mr. Huggett thanked the gentlemen for their wishes. He showed a few chub, but they were difficult of capture, there being so little stream. The Chairman next proposed the usual toast of "Success to the Piscatorial Society," which was duly responded to. Mr. Wheatstone proposed "The health of the Chairman," who gracefully replied, and the business of the meeting was brought to a close. Our hon. sec. (Mr. J. Lander) was again with us this evening, but I regret to report his health is not re-established.—T. H.

## RODNEY PISCATORIALS.

On the 5th Mr. R. Smith visited Tunbridge. He managed to get a few bream and roach by wandering about for them. He could not fish his favourite place on account of the inky state of the water and the number of dead fish lying about. "In one place I saw about a bushel of gudgeon all of a heap, to say nothing about the big bream and roach." Messrs. Chantry and Grant visited Wateringbury, but they only managed to get some roach. C. Grant, jun., had some nice dace from Ponder's End. On the 8th it was decided that the October competition take place on the 26th at a place on the Thames within 30 miles of London. Members wishing to know the place must attend the society's house on the meeting night previous to the outing. The prizes for competition are given by our worthy hostess.—Pixie.

## ROYAL GEORGE ANGLING SOCIETY.

I have no angling items to mention this week (although we had arranged for an outing to Goring) in consequence of the sudden death of our secretary, Mr. C. W. W. Bernhardt, for some years a member of the above society. He was in his usual place on Tuesday night, September 30th, and appeared to be as well as he was in the habit of looking (he always suffered more or less from rheumatic gout), but the next evening he was seized with a fit of paralysis and expired within an hour, without uttering a word, leaving, I am sorry to state, three children and a wife in such a condition that she will not be able to assist them or herself for some considerable time, and they are in great need of help. In order to increase the subscription list already started by the members, the smallest sum will be received (and thankfully acknowledged in the Fishing Gazette) by W. H. Rider (chairman), 14, Wells-street, Oxford-street, W., or at the society's headquarters as above.

## SOUTH LONDON UNITED.

The committee of the above met on the 9th inst. to decide as to how the competition of the 12th should be carried out. Ninety-eight tickets have been sold. The prizes will remain as stated on tickets, and notices sent round to the societies entitled to compete. Start for swims as tickets for the same are drawn for, and commence fishing as soon as possible up to 4.45. Fish only weighed according to Thames rules. Messrs. Allen and Gafney will start on Saturday afternoon in order to mark out swims. The next return visit will go to the Deptford United Brothers, The Druid's Head, Church-street, Deptford Broadway, on Thursday, the 16th inst. All members of this unity who can make it convenient to attend on that evening are requested to attend.—Pixie.

## STOKE NEWINGTON ANGLING SOCIETY.

Very moderate shows of fish the last week or two with us, Messrs. Martin, Webb, Harris, Whitmore, Watkins, and Gretton weighing in small quantities of jack, bream, and roach—Mr. C. Martin having the best catch, 6lb. 4½oz. On the 28th ult., eight members had a trip to Dagenham Lake by road, and although a most enjoyable day was spent the sport was very poor. Plenty of small fish were taken, but few weighable ones, Mr. W. Webb being first with 1lb. 11¾oz. ; Mr. C. Martin second with 1lb. 2½oz. On the 5th inst., Mr. Thos. Harris had some nice roach from the Stort ; Mr. T. Millington, bream and roach from Pulborough. At our last meeting we had a visit from our old friend, Mr. R. Ghurney, who very kindly gave a prize to be fished for by the club. Three prizes, presented by Messrs. John Davis, T. Gretton, and C. Martin, will be fished for on the 26th inst. ; conditions to be named at the usual club meeting. The musical society at this establishment has commenced, and holds its meeting every Thursday evening. Any angling friends paying a visit on these occasions will be heartily welcomed by the proprietor, Mr. P. Godfrey.—T. Gretton.

## THE UXBRIDGE ROVERS ANGLING SOCIETY.

On the 5th inst., one jack, taken by Mr. R. Hawkins in the Canal at Cowley, weight 11lb. 2oz. ; also some fine roach, the largest ¾lb., by R. May.—T. Skillin, sec.

## UNITED BROTHERS, DEPTFORD.

The members of the above society fished a jack and perch match on October 5th, and had some very good sport amongst the perch. Mr. W. Tyler, first prize ; Mr. Penton, second prize ; Mr. Deangate, third prize. Other members had fish. The next visit on the South London list will be to the above society, on Thursday, the 16th inst., at the Druid's Head, Church-street, Deptford. I hope to see a good muster Commence 8.30 sharp.—H. T.

## WALTONIANS.

Oct. 5th, Mr. Phillips had a fine show of pike ; in all, 46lb. 8½oz.—one fish, 17lb. 11oz. ; another, 16lb. 3oz. Several other members weighed in, but no takes worthy of special mention.—A. J. Marriott.

## WALWORTH PISCATORIALS.

The result of the competition of the 9th is as follows :—1st, Mr. Beckett ; 2nd, Mr. Delhaye ; 3rd, Mr. Crisp ; 4th, Mr. Gilbert ; 5th, Mr. Boalch. Fish exhibited consisted of dace, roach, and jack, the gross weight going 33lb. 2½oz. Fish taken during the week about 36lb. Among them was 15lb. of nice perch, taken by Mr. Brodie from Tring on the 7th. Mr. Grigg has forwarded to Mr. Lancaster several nice perch and roach for preservation. The same when finished will show what the waters at Tring can produce. The next competition will take place on the 25th of October, for prizes given by Messrs. Holland and Piolane, the when and how to be decided on the Thursday evening previous to that date.—Pixie.

## WELLINGTON ANGLING SOCIETY.

On the 30th ult. Mr. Hopkins weighed in a barbel of 1lb. 15oz. ; Mr. Jenner, barbel, 3lb. 5¾oz. ; Mr. Brand, roach and dace, 8lb. 10oz. October 5th, Mr. Rowen, two jack, 9lb. 3½oz., the largest 6lb. 7oz. ; Mr. Hopkins, roach 5lb. 15oz., dace 2lb. 2½oz., and barbel 9lb. 13oz.—total, 17lb. 14½oz. ; and Mr. Newbury, barbel and roach, 4lb. 1½oz. On Wednesday we had a very crowded attendance and spent a very enjoyable evening, principally in harmony. Several gentlemen of the Busy B's gave us the pleasure of their company.—W. W. Alexander.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices : Point Flies 2s. 6d. per Dozen ; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

## "FROM GRAVE TO GAY."*

"From Grave to Gay" is the title of a dainty little volume of charming verse by Mr. H. Cholmondeley-Pennell, author of "Puck on Pegasus" and other poetical works, and well known to our readers through his angling writings. It is an open secret that Mr. Pennell is now engaged upon a *magnum opus* on fish and fishing for Messrs. Longmans. What we have gleaned of its design, coupled with the experience of Mr. Pennell's previous works on the subject, leads us to anticipate a most comprehensive, practical, and valuable addition to angling literature.

In the little work under notice we have looked in vain for any lines over which "Piscatoribus sacrum" might be written, and the only sense of disappointment an angling reader will have is that Mr. Pennell has not included some angling verse. Let us hope that when he resaddles Pegasus, that mythological charger will assume his other form of *piscis volans.*

When in his lighter, or, as he himself calls it, "gay" vein, Mr. Pennell frequently reminds us of those delightful flights for which Herrick and Sir John Suckling or Carew are now chiefly remembered—short poems, having a charming idea as their foundation, and whether the idea be of fact or fancy is all the same; it is equally well painted. But Mr. Pennell can also touch a deeper note, as witness the following lines:—

(From "The Thread of Life.")

Unsearchable depths of a mother's heart!
Unfathom'd ocean by line or chart!
Can you gauge me, I say, one thousandth part
Of the feelings that stir within it?
What a freight that little existence bears
Of pallid smiles and tremulous tears,
Of joys never breathed into mortal ears,
Griefs that the callous world never hears,
Suffering that only the more endears,
And love that would reach into endless years,
Snuff'd out, it maybe, in a minute!

Would you look on a mother in all her pride?
Her radiant, dazzling, glorious pride?
Then seek yon garret—leaden eyed—
And thrust the mould'ring panel aside;
The door that has nothing to lock it;
And the walls are tatter'd, and damp, and drear,
And the light has a quivering gleam, like fear;
For the hand of sickness is heavy here,
And the lamp burns low in the socket!
'Mid rags and want and misery piled
A woman is watching her stricken child
With a love so tender, a look so mild,
That the little suff'ring babe has smiled—
A smile that is strangely fair!
And lo! in that chamber, poverty-dyed,
A mother in all her dazzling pride—
A glorious mother is there!

We have much pleasure in recommending Mr. Pennell's poems to our readers, because we are sure they will have pleasure in reading them—even in those "vers de société," written for a fashionable and frivolous public, he does not forget the axiom that a true poem or picture is ever, and must be ever, true to nature.

## CLOSE OF THE ANGLING SEASON ON THE TAY.

The angling season on the river Tay was brought to a close yesterday. The season has been a very successful one, and during the past two months excellent sport has been got. During the spring and earlier part of summer, in consequence of a protracted drought, the river was running very low, and during that time the captures were of moderate dimensions. About the middle of May the river rose rapidly again, and fish of good quality became very plentiful. Fish were also very numerous in the various tributaries of the Tay. The lochs of Perthshire—especially Lochs Tummel, Rannoch, and Ericht—afforded splendid sport to anglers during the summer. The Tummel, one of the largest tributaries of the Tay, was extensively fished during the season. In May last Mr. Archibald Young, Inspector of Fisheries, prepared a report with reference to the construction of a salmon ladder at the Falls of Tummel. Since then the matter has been taken up favourably by the Tay District Fishery Board, and it is to be hoped that the proposal will speedily be carried out. The area of rivers and lochs that would be opened up by the suggested ladder would be about one-fifth of the whole amount of water in Scotland at present barred against the ascent of salmon by unpassable waterfalls. It would be a grand, and there is no doubt a successful, experiment to inaugurate the opening up of this vast extent of loch and river by commencing with the Falls of Tummel.

In the beginning of June a trout, measuring 27in. in length, 15½in. in breadth, and weighing 7½lb., was caught in Loch Rannoch. About the same time a salmon weighing 60lb. was captured at Kinfauns, a few miles below Perth. In the beginning of July the Tummel was stated to be yielding better than it had done for several seasons past. In the River Earn, another tributary of the Tay, although the sport during the earlier part of the season was not particularly good, the captures during the past two months have been very satisfactory, and, as the season on this river does not close till the 31st inst., it is expected that the remaining part of the season will be exceedingly good.

## A DAY'S FISHING AT WALTON.

A very jolly party of us, six in number, left Wimbledon about one o'clock the other morning. The waning moon gave us sufficient light to see our way very comfortably, and, having with us a friend of inimitable humour, who must always be known as the "lively gentle," kept us in roars of laughter, which must have roused up more than one slumberer on the way. Arriving at the Swan Hotel, Walton, about 4 o'clock, some time before daybreak, we had not long to wait before the worthy proprietor was with us, and at this early hour our horses were taken charge of and comfortably housed, and in a surprisingly short space of time we were enjoying hot coffee and other good things, peppered with the wit of the "lively gentle." We had previously telegraphed to the proprietor of the Swan to engage us the necessary punts and men. When daylight burst upon us, the veteran, Dick Walford, made his appearance and notified that all was ready. Another glass and off we went. Dick, with two of us, took up position in Walton Deep, which he had previously baited. We had been fixed a short time when the float signalled a nibble. "Strike," says Dick, and had him—a nice bream of about 2lb.; another bite, another bream; and before the sun rose we had eleven splendid fish. The biting suddenly ceased, from what cause we could not tell—perhaps from the presence of Mr. Pike, who is very numerous in this part of the river. We then moved our quarters to another good place, "the Tumbling Bay." Here we had good sport with roach, and caught a few good ones; but, as the day advanced, the sport declined. We returned to the Swan and had a few hours' nap; we arose about three, had a splendid dinner, and resumed our fishing. But the sport was not good, except for small roach and dace, which bit very freely. The continued traffic of boats disturbed the large fish. I have been down there many times lately, and find the same thing. There is no time to catch big fish, except in the early morning, when every fish in the river seems to be feeding, and those who wish good fishing cannot do better than go to Walton overnight. Send to the landlord of the Swan Hotel, to save any hitch or disappointment, he is a thorough business man, and takes care of his visitors, and looks well after their wants; and, moreover, it saves a lot of trouble. We intend giving Walton Deeps another turn shortly, and may have a few lines to write you on the subject of pike fishing there.

Wimbledon. H. G.

---

* "From Grave to Gay," a volume of selections from the complete poems of H. Cholmondeley-Pennell. London: Longmans, Green and Co. 1884.

COMPLETION OF "FAMILIAR WILD FLOWERS."
Just ready, complete in 5 vols., price 12s. 6d. each.

**FAMILIAR WILD FLOWERS.** By F. E. Hulme, F.L.S., F.S.A. With 200 Full-page Coloured Plates in each, with Descriptive Text. Handsomely bound in cloth gilt, in cardboard box.

"The coloured figures are exquisitely beautiful; they are more like finished paintings than prints, and the appearance of the work is elegant throughout."—*Gardener's Magazine.*

CASSELL and COMPANY (Limited), Ludgate Hill, London.

Now ready, Vol. I., price 5s.

**CASSELL'S POPULAR GARDENING.** A Comprehensive Practical Guide to the successful cultivation of Flowers, Fruit, and Vegetables. Illustrated throughout. 384 pages, with Coloured Frontispiece, royal 8vo, cloth.

"'Cassell's Popular Gardening' contains something for everybody."—*Gardener's Chronicle.*

"Magnificently illustrated, and an exceedingly helpful work to all interested in gardening."—*Edinburgh Daily Review.*

CASSELL and COMPANY (Limited), Ludgate Hill, London.

COMPLETION OF "PAXTON'S FLOWER GARDEN."
Ready shortly, complete in 3 vols., price £1 1s. each.

**PAXTON'S FLOWER GARDEN.** By Sir Joseph Paxton and Prof. Lindley. Thoroughly revised and brought down to the present date by Mr. Thomas Baines, F.R.H.S. With upwards of 100 Coloured Plates, including many entirely New Plates executed for this Edition.

CASSELL and COMPANY (Limited), Ludgate Hill, London.

Notice.

**A CLASSIFIED CATALOGUE,** giving full particulars of Messrs. Cassell and Company's Publications, ranging in price from

SIXPENCE to TWENTY-FIVE GUINEAS,

will be sent on request *Post Free to any Address.* It will be found of the greatest convenience to those who may be selecting Books for Special Reading, Educational Purposes, or Presentation, as it contains particulars of Several Hundred Books, so arranged as to *show at a glance* the various Works in this valuable selection, which can be procured at the prices named at all Booksellers' and at the Bookstalls.

CASSELL and COMPANY (Limited), Ludgate Hill, London.

THE
**GREAT REMEDY**
For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. Prevents and Quickly Relieves or Cures the worst form of TYPHUS, SCARLET, JUNGLE, and other FEVERS, PRICKLY HEAT, SMALL POX, MEASLES, ERUPTIVE or SKIN COMPLAINTS, and various other altered CONDITIONS of the BLOOD.

"It
**'SAVED MY LIFE,'**
for the Fever had obtained a strong hold on me. In a few days I was quite well."—Extract from letter of C. Fitzgerald, Esq., formerly Correspondent of the Manchester Guardian in Albania, referring to

**LAMPLOUGH'S PYRETIC SALINE.**

Sold by all Chemists in Bottles, 2s. 6d., 4s. 8d., 11s., and 21s. each.

**H. LAMPLOUGH, 113, HOLBORN, LONDON, E.C.**

**JAMES OGDEN**
ON
**FLY-TYING.**

"This most useful little work gives very clear instructions in the beautiful art of artificial fly-making, as well as much other practical matter, by a master hand both at fly-tying and fish catching."

SAMPSON LOW and CO.,
188, Fleet Street, London.

PRICE £2.
**First-class Bait Drag Net,**
12 yards long, 7ft. deep; quite new; only been used twice. Warranted sound and complete. Owner leaving England.—Apply to ROBERT HUNT, 66, Red House-lane, Bredbury, near Stockport.

**RIVER COLNE.**

Two RODS TO LET, on one and a half miles of water; half an hour from town; from 25th December, 1884, to December 25th, 1885. Trout. Price £25 each per annum.—Apply to V. E., 18, Milton-street, Dorset-square.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d. To any part of Europe, the United States, and Canada, the Annual Subscription, including postage s 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

The Fishing Gazette.

SATURDAY, OCTOBER 18, 1884.

## NATIONAL FISH CULTURE ASSOCIATION.

A MEETING of the Council of the National Fish Culture Association was held at its offices at the Exhibition Ground, South Kensington, on Tuesday last, under the presidency of the Marquis of Exeter. Among those present were Mr. Wm. Senior, Mr. Henry Ffennell, Mr. R. B. Marston, Mr. Alfred Jardine, Mr. T. J. Mann, Mr. T. Andrews, Rev. J. J. Manley, and Mr. H. Lee.

The Secretary, Mr. W. Oldham Chambers, announced that Lord Walsingham had forwarded two hundred brace of exceedingly fine golden tench to the Aquarium, and had promised more if they were required. His Lordship had also expressed his willingness to become a member of the Council of the Association. The Duke of Bedford had contributed twelve golden orfe and some valuable specimens of *Cyprinus rex Cyprinorum*. His Grace had now become a life member. It was further announced that Lord Donoughmore had joined the Association. The Secretary next read a report of the Sub-Committee lately appointed to inspect a suitable site for a fish culture establishment, which strongly recommended a property in the neighbourhood of Uxbridge.

The Marquis of Exeter, in moving the adoption of the report, stated that he had inspected the *locale* with the members of the Sub-Committee, and found it to be just what the Association required. He thought it fully met all the desiderata of the Association, the property being situated in close proximity to the rivers Calne and Misbourne, which were teeming with fish. The Sub-Committee had inspected various other sites, but could only recommend this one for the required purposes. After a lengthened discussion, it was unanimously resolved that the report of the Committee be adopted, and instructions given to the Aquarium Committee to carry it out.

## POACHING AT OXFORD AND ON THE LEA.

THE Oxford Angling Society is to be congratulated on the recent convictions of poachers in their district. A little more punishment of the kind will convince the netting fraternity that it will pay them much better to employ their time in gaining their living in an honest manner. It is sincerely to be hoped that Oxford anglers will not relax their efforts, and that the Oxford magistrates will continue to enforce the law against those who, while doing themselves little or no good—as witness the wretched condition in which they and their families exist—do an immense amount of harm to the interests of Oxford. As Mr. Thomas Spreckley, President of the Thames Angling Preservation Society, says, the fishing in the neighbourhood of Oxford might be the best, or among the best, in the kingdom, if the fish were protected from the poachers. If the fishing at Oxford is protected, the hotels will benefit by the visits of anglers, and also the tradesmen who supply the hotels. Those who keep boats and fishing punts will benefit—indeed, it is difficult to say who would not benefit, directly or indirectly, by the influx of angling visitors which must take place if the fishing improves.

Lea anglers are to be congratulated on the capture of the poachers who were heavily fined last Tuesday, and their net destroyed. A net in a comparatively small stream like the Lea can do an immense amount of damage. In fact, anglers in all parts of the country can adopt no more efficient method of improving their fishing than by using every endeavour to put an end to the wholesale poaching by means of nets of any kind.

## SHORE FISHING.—No. III.

By E. G.

THE baits for the style of angling I have been endeavouring to describe are very numerous. The following are the best: Lug-worms, rag-worms, live and dead sand eels, prawns and shrimps, strips of squid, cuttle fish or octopus, soft crabs, mackerel, herrings, pilchards, sprats, sand smelts, and the worm in the soldier crab. To bait: Pass the hook twice or three times through the lug-worm, crosswise; rag-worms, if small, should be hooked only once through the head; if large, run the hook a little way down them, and bring the point out. The new "Sliced Hook" would do well for this, as the head of the worm might be made to rest on the point of the slice. If live sand eels can be got, there is no better bait for all kinds of fish. The plan of baiting described by Mr. Wilcocks is the best. Put the hook in at the mouth and out of the gills; then hook the fish lightly across the throat. If the sand eel is dead, use two hooks, the upper one the smaller. Put the larger hook in at the gills, and bring it out as low down as possible; then pass the upper hook through the nose. Get the bait as straight as you can, as unless you have a swivel just above it, it will twist up your gut when drawn back against the tide. Prawns and shrimps, if alive, should be hooked through the tail (two or three of the latter, if small, may be used); if dead, run the hook down them from the head. Cuttle-fish, squid, or octopus must be cleaned and skinned, then for the ordinary-sized hooks cut off strips about 3in. by ¾in. at the broad end, tapering off to a point; hook the bait through the broad end. It is not a bad plan to use a lug worm or mussel with this. Of course, if you are using very large hooks, put on a big bait 4in. to 5in. long, and proportionately wide. Mackerel, &c., &c., should have the backbone taken out, and then be cut in strips diagonally. In using fish-bait, be very careful to keep it in the shade until used, or it will get so soft that the flesh will fall off from the skin. Pass the hook through the thick end of the strip.

Trawlers, dredgers, and men who have crab and lobster pots get large quantities of soldier crabs. These are pretty generally known to all seaside visitors; but the knowledge that the soldier has a lodger is confined to a few. A large worm (Nereis) takes up its abode in the extreme end of the whelk-shell, and (according to Gosse) steals the crab's victuals. When he has cut it up, and is just conveying it to his mouth, the Nereis slips out under him, grabs the morsel, and retires to his apartment behind the crab's tail. In "The Salt Water Aquarium," there is a very interesting account of this annelid. But however interesting the worm may be to the naturalist, he is no less so to the fisherman, being a very choice bait. The length of a large specimen will be, when extended, some 4in. to 5in., and half an inch in width. It is amazing how so large a worm can find room in the small end of a whelk-shell. Crack the shell with great care: the worm will be found in the last quarter of an inch of the shell. The tail of the soldier crab is a good bait in deep water; but I have never done much good with it along shore.

Soft green crabs are very good. They may be found under weed or stones in harbours, or in the rock pools outside. They are taken well by bass and flounders. In some places fishermen put old pots, kettles, &c., as hides for them, and so can always get a supply. If, however, there is no one who makes a practice of catching them, an offer of coppers to the boys will generally be found effective in producing a quantity. I have omitted one very good bait—viz., a live flat fish. In any sandy or muddy creek, harbour, or bay, any amount of small flounders may be taken with a shrimp net or small-meshed landing net. They run from the size of a sixpence upwards. Get some about 1½in. to 2in. across; hook them on by the nose, as you would a minnow, and they will live a long time, unless they find a tomb in the maw of a bass. Mussels are good bait, but are best used in conjunction with a strip of squid, mackerel, or any bright fish. The oniscus, or sea-louse, as some call it, is very plentiful in some places, and is taken by all kinds of fish. It may be found under stones in harbours, and also among rocks on the shore about high-water mark. In shape it resembles the common wood-louse, but is much larger, sometimes being an inch and a half long. Use a small, but strong hook, and pass it through the tail. Two will make a good bait. They are best kept in a tin box with a little damp seaweed. Snails and large black slugs will kill well in deep water, and in the absence of other bait may be used along shore. They are most affected by whiting pout. The common lob-worm and brandling are taken by sea fish; but they are very troublesome baits to use, as they turn white in a few minutes in the salt water, and are then useless, and must be renewed. If you should see any fish break the water or play on the surface, take off your float tackle and put on a spinning bait. If the water is clear, use a single gut trace with brass swivels. Steel ones are no use: after once using they will become too rusty to turn. Any artificial bait will do—dace, spoons, Totness minnows, tassel baits; in fact, anything that spins well. There are a great variety of rubber baits made for salt-water spinning, which are cheaper and more durable than the metal ones, and quite as effective. For these, write for catalogue to C. and R. Brooks, fishing-tackle makers, Stonehouse, Devonshire, who will also supply the sliding floats and other tackle mentioned in these articles. A great many other baits for the float tackle may be used, which I will deal with when I come to rock fishing. My next article will be devoted to fly-fishing at the mouths of rivers, and from projecting reefs and headlands in the open sea.

[In my paper of September 6, in the ninth line, for "30ft." read "20ft."; and in the thirtieth, for "30" read "8/o."—E. G.]

## ODDS AND ENDS IN SALMON FISHING.

By GEO. M. KELSON.—No. 3.

IN salmon fishing, after all, when one comes to think of it, there are very few matters upon which we are all agreed. The "ins and outs"—or the art, so to speak—is still only in its infancy, and in this feverish reign and race for honours, considering the average ability of so many members is scarcely up to par, it is not very surprising that one or another of us "kicks over the traces" occasionally in the hope of finding opportunities for originality to develope.

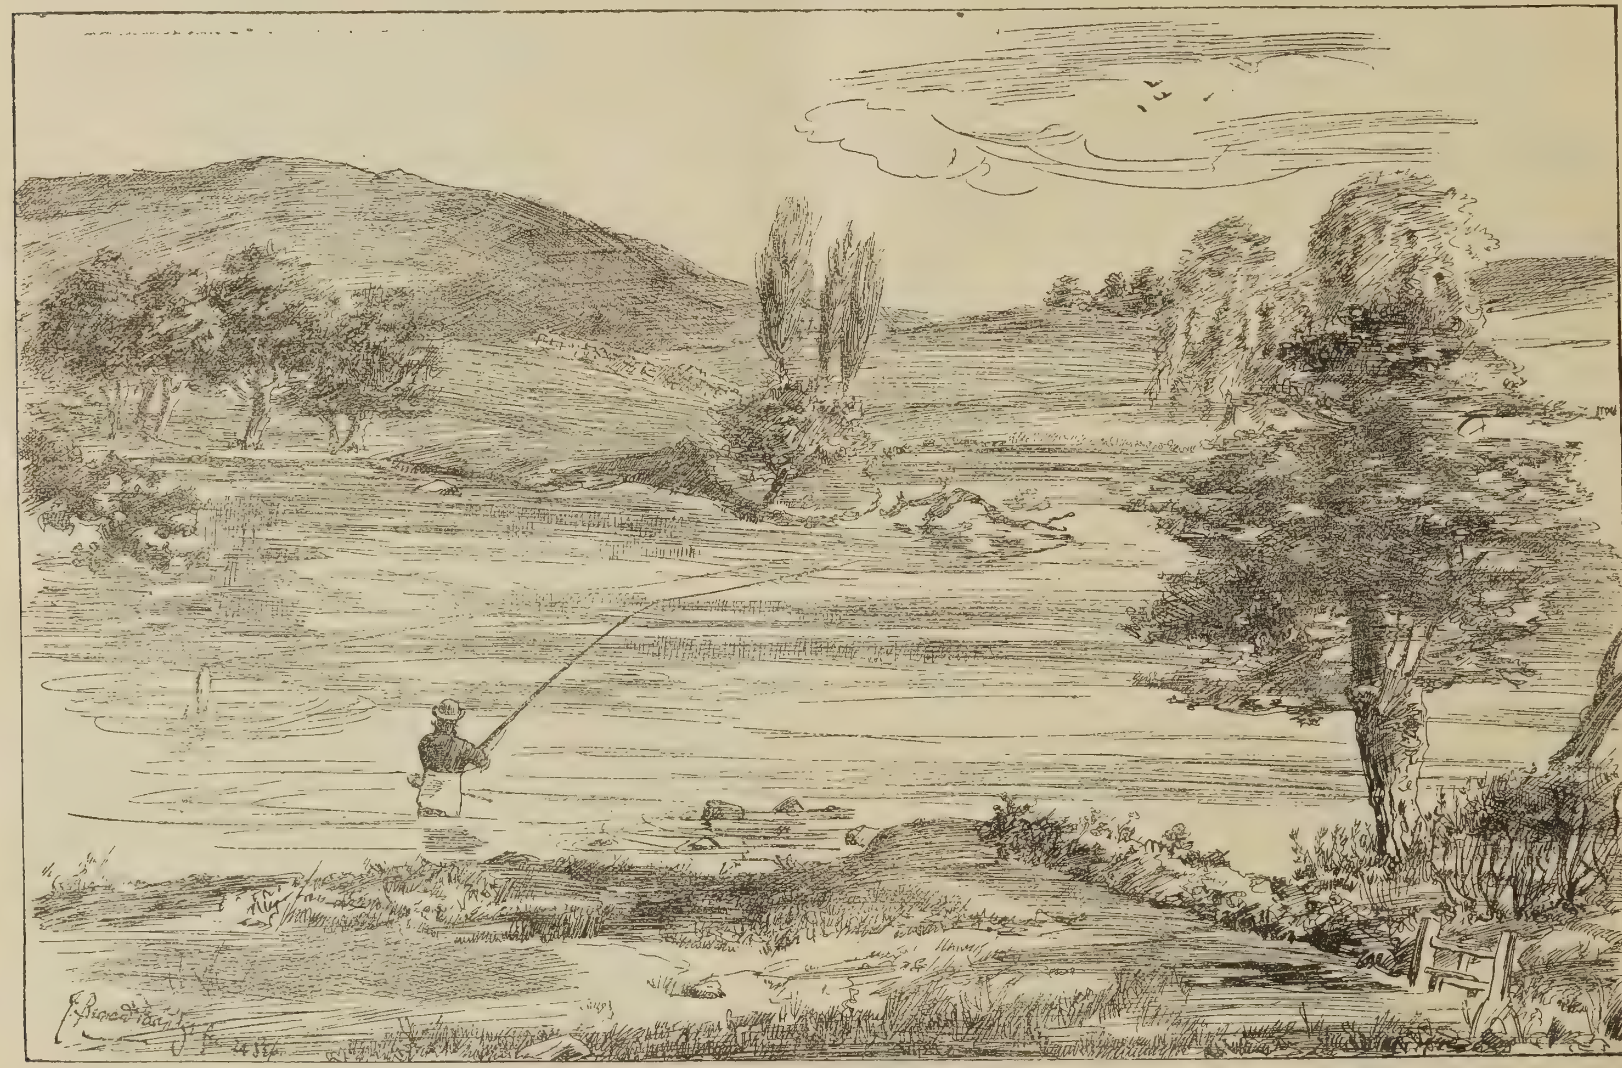
However, if we are really frank in purpose, perhaps we may be turning over a new leaf to some advantage by going against the temper of the age. To be thoroughly orthodox and go with the fashion may be easy enough and all very well, but we are not so likely to see outside the usual limits; and if we happen to reach the front rank at all, it is only the same old story over again—luck.

Let us consider for a moment the infatuation for twisted traces looped on to the line in the "venerable and time-honoured way" with all their unsightly—or, I should say, hideous—knots. Our younger members must be lucky indeed if they are not always hitching up, and, in windy weather, everlastingly unriddling and disentangling.

I venture to suggest, and I think it stands to common sense, that any of us can present the lure much neater and cleaner with these modern and improved casts, married to the line; so prettily plaited and tapering as they are, and having no knots at all; certainly, the tyro would be more likely to avoid such mess and muddle. It seems, somehow or other, to have got abroad that they do not bear so great a strain as the twisted; but that is absurd. I lifted 12lb. with a light three-yard length from Ramsbottom the other day, and I doubt if we could put half that pressure on to a salmon with a rod—even one of Farlow's best greenhearts 18ft. in length; still, I certainly have seen some manufactured very clumsily. By rights they should be regularly and evenly plaited and made with the choicest material. If they stretch much before they are wetted, depend upon it the gut is bad, and perhaps only refuse stuff; but remember, please, that this would easily be set at naught if the workmen were to pull it hard beforehand, while it is in single strands.

These and many other trifling matters are seemingly unimportant, but we cannot forget our schooldays, when we were always being told that "perfection is nothing but a heap of trifles." Anglers above all class of sporting men seem to know intuitively when they are well appointed, and fancy really has a mighty effect upon effort. Indeed, what greater faculty is there of the mind than imagination. Surely it is unceasingly in front of our victories.

By way of change, let us fancy ourselves watching a youth thrashing away down to a likely-looking flat, having waded on to a scour or tongue of gravel jutting out into the stream, the water at once is rough and flowing fast, so fast that, although the path begins but knee deep, he is compelled to step sideways with the utmost care and with one leg well in advance. He endeavours to reach a fish down below at "heads and tails," being especially encouraged so to do from the bank, which, by the bye, he has no chance of making except by the same line of retreat. He is soon up to the top of his waders, and, fortunately, provided with an extra long line upon his reel. The fish immediately takes a rather well-put "Bluebell," and is off down the river "ducks and drakes."



AN INCIDENT IN SALMON FISHING.

I will just say briefly what passed, as the picture happens to be from reality. In a wood, on the opposite side, sat the spectators—they heard and saw all; but the angler being against the wind, and so close on to the noisy splashing water, any advice from that quarter was impossible. The gillie, or rather a wretched boy "from the Bridge," was sitting with the gaff blowing a cloud and a half from a large cigar in the meadow. After the fish had done quite as it liked, and all it could under the circumstances, there was a slight attempt to haul it up the rapid; this naturally failed, for had it even been quite dead there would to all appearances have been no chance whatever that way, particularly with at least three yards of single gut on the line.

The next dodge was to throw the gaff which the angler missed catching, and that was out of sight at once.

Then the boy—who had spent all the brilliancy of his brain in heaping endless and contumely remarks—signed to wind in the fish and lay hold of it, and at last, after several scrambles and grabs, it was so handled, only just and that's all, for in a moment all was gone, save hope—for the rod, unfortunately, went bobbing down stream.

With all that, as luck would have it, the next pool was handy, and headed on that side with huge boulders. There the rod reached and mercifully rested half in, half out of water, and well within arm's length; so that then a fine fresh fish, dead beaten, and scarcely without another struggle, was quickly led ashore.

Now to say what ought to have been done, not positively being on the spot, would hardly be justifiable, and I am inclined to suppose that even if novices were actually told what to do they could not often be expected to do it in such a predicament, therefore the whole question, as far as they are concerned, is beset with difficulty. But we may rest assured that there were ways and means beyond any drawn conclusions. Perhaps the little gaff lately christened the "Aide-de-Camp," to do battle or give the final touch, is what was wanted. Attached and suspended from the top of our waders on the left side, it is never in the way; made of Molucca cane, with special fittings, it cannot come to grief, and if in the course of time the water wears the worm of the screw, there is a new one ready at the other end which is protected by a nut that projects a little, and gives one a splendid hold. Messrs. Bernard and Co., Piccadilly, are the sole manufacturers of this delightful invention, brought out a few years since by Major Philpot, a gentleman up to every wrinkle, and one of our best and most successful salmon anglers.

To hint that we should sometimes ignore the fundamental tenets cherished from our earliest associations might not be altogether approved or appreciated; but no doubt that by giving up the command for a moment—say, while the fish was at rest—to have waded back, pointed the rod below an impassable tree at the entrance, payed out enough line so that it could have been reached by the boy, who might have drawn it entirely off the winch—is a way not altogether impracticable. The angler could then have stepped out, put the line in order, and almost in the twinkling of an eye resumed the attack on fresh and more favourable terms.

After plenty of practical experiment old salmon fishermen under difficulty are often stirred by deep and knowing impulse; any idea that strikes them when pushed to extremes—indeed, any suggestion that they advance then is sure to be full of wholesome promise and teem with soundness of principle. And so I have heard of wrapping up the hand in a pocket-handkerchief, for if the fish is hooked in the upper jaw, which is more often than not, it comes up when played out with its mouth open; the plan then, if you can manage it, is to take hold of the lower jaw and put your thumb in its mouth—the little sharp teeth are sure to cling tightly to the linen, and this makes the business so much easier.

You see, there are so many things to contend against that are beyond the physical power of the uninitiated; it requires a deal of practice to stand against a good push of water, and, supposing this fish had been "boned," what could anyone have done? But even then stonegrubbers or jiggering fish are often mastered by able anglers who know what's what. The dodge is, the moment you feel them shaking their head, to give line, as you can always depend the hook is in a bone, or uncomfortably close there; and, should it be actually inserted through one, they break it in double quick time, unless the point of the rod be lowered immediately.

It is always better not to gaff but to gravel these fellows, if possible, and, when within distance of a sandy, shelving bank, you run hard with them down the river, their head being turned that way, you can invariably drag them out yards away from the water without much risk.

In suitable places where such favourable opportunities are afforded, if the angler is suffering from any acute attack of austere virtue (should such be), he need never remove the gaff from its sheath; and does not it follow that any other fish could be so landed? We can always turn the head of a salmon by getting below; but it is unwise to encourage a novice in this rather dangerous experiment, unless it is certain the bed of the river is free from snags, boulders, &c.

I think "dancers" are the most difficult of all to manage, and in our "profession," as some are pleased to call it, it is only now and then we meet with them. I may say that in the whole course of my adventures, I have never seen more than half-a-dozen.

I give an illustration of one, and, to my mind, the hardest battle I ever fought, with the odds no less than three times, as I thought, considerably in my favour.

Though the sketch does not profess to be a faithful representation of the spot; still the stile, the poplars and the old wall on the opposite side, and the dead, troublesome tree with its horrid arms extended and ever skirting the water, may help frequenters of the Usk to recognise this the "Top catch in the withy bed."

Now, when a fish sweeps gently up from the water, having by its decidedly devilish device contrived to settle preliminaries by way of getting the line taut, it stands to reason, if it rests on its tail and shakes its head the right way violently, something or other must go.

When this pool is in trim, the stream is unquestionably fast, and the wading is fearful; precisely so. The catch (rather awkward to command from this side) is in front of the dead tree, as shown, in the water. Well, and perhaps, good; but, directly the fish was hooked, it ran foul there and sulked. However, I let loose some 50 yards of line, after switching it well over, and put the point of the rod down as deep as I could. This had the desired effect, for in winding in I found the fish free and flying up stream. I knew the bottom was dangerous, and so hurried back; the dancing, however, commenced then and there. Now, no boy in his teens would think of holding on then, and out went a few yards of line.

I should mention that the stream is considerably faster just above, and, therefore, I knew there would be no long-continued fight up there; but, long before I had time to think about it, the fish returned to its haunt, fouled again, and took down the river, where, at short intervals, the dignified dance was repeated. After much difficulty I waded back beyond the stile, and, switching the line still farther over, we were freed once more, and "at it" again.

To get below was impossible, either by wading, or down on the bank, and with a new fish of from twenty to five-and-twenty pounds in such water, there was no persuading it up above, or even holding it when it was there.

As a matter of fact, "the more they do—as the saying runs—the quicker they die"; but this one was at the "tip-top of the class," and marvellously well educated. The instant the cancanette was over, down it went and sulked again. There was nothing for it but to put on all the strain one could whenever the opportunity offered.

I quite made up my mind after the second time to hold on and prevent, if possible, any further falling foul. All stuff and nonsense, I admit, for in such a run of water it was entirely out of the question.

Again did he head down, and again was I round the tree, or I should say, "up a tree," and to some tune this time, for the salmon made almost straight for me, only once more to dance and—to smash.

I have often heard it said, "the deeper the intricacies, the deeper the interest"; but in all conscience I ask, where is the guidance of common sense—where the teachings of experience to leave us at rest and to qualify us for such desperate superiority?

As a rule, when not burdened with these stubby obstructions and the course clear, we can bid defiance to such tactics, and no harm happens if we give line, and that, too, without a moment's hesitation.

It is a splendid sight to see these fine fellows fight, even if in the insolence of their strength they do get the better of us; even if they do snatch away, vanish, and go—like a bubble from the palm of our hands—to leave nothing behind but the damp of disappointment.

## THE REANIMATION OF FISH WITH SPIRITS.

The following appears to-day in the *Fish Culture Journal*, published under the auspices of the National Fish Culture Association:—

"The truth of the assertion recently made by an American authority to the effect that brandy acts as an immediate means of revivifying fish on the point of expiration, has been completely and unquestionably vindicated by Mr. W. Oldham Chambers, Secretary of the National Fish Culture Association, who conducted an experiment in the presence of several gentlemen at South Kensington a few days since. Taking two Prussian carp from the tanks of the aquarium, he deposited them in separate dry cans, adorning one with blue ribbon to denote its enforced temperance principles and to distinguish it from the other, which was selected for the administration of spirituous liquors. After a lapse of four hours the fish were placed in water, evident signs of expiration being apparent in both cases. A small quantity of brandy and water was then given to the carp selected for the imbibition of intoxicating liquors through the medium of a feather, and no sooner was the fish replaced in water than it was restored to vigour and strength. The carp enlisted under the banner of the 'blue ribbon league' to all appearances died half an hour after its more fortunate associate, and was taken out of the water and thrown on to the ground. About four hours later, however, the fish was picked up by Mr. Chambers, who observed it by appearance to be *in rigor mortis.* He then at once operated on the seemingly inanimate fish by opening its mouth and pouring a dose of brandy and water down its throat, and again inserting it in the water, when to his utter astonishment he noticed slight signs of animation. For five minutes the unfortunate object of the experiment floated helplessly on its side, when presently, to the still greater astonishment of those who watched the experiment, it gradually asserted itself in the water, and with considerable effort made use of its fins—feebly at first, but afterwards energetically. Both the resuscitated fishes, who show no signs of their late prostration, now swim about with their *confrères* in the tanks as usual.

"The instantaneous reanimation produced to the carp in the first instance was indeed remarkable; but what can be said of the latter, which recovered after remaining out of water for eight hours? Surely this discovery will prove of the greatest utility and value to the National Fish Culture Association in restoring fish that would otherwise perish, and be the means of securing greater longevity amongst them."

[We hope Mr. Chambers will experiment on a fish which dies quickly out of water—like trout, roach, or dace; carp will live for weeks out of water, and the Dutch keep them alive in nets suspended in the air, a little damp moss being put round them. What a capital thing it will be if we can keep our Thames dace alive when pike fishing merely by putting a little brandy into their water. —Ed.]

**Capture of a Large Salmon.**—A salmon, weighing 45lb., and in fine condition, was caught on the 2nd inst. at Bowes fishing station in the Tay, opposite Kinfauns Castle, by Mr. Pitcaithly, Elcho Cottage. It was brought to land in twenty minutes after being struck.

**The Teith.**—Recently Colonel Robertson caught a salmon of 21lb.; Mr. John Ferguson, three of 8lb., 17lb., and 18lb.; Mr. Norman, two of 16lb. and 23lb.; and Mr. W. M'Alpine, a grilse of 6lb. and a fine salmon of 18lb.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

## ANSWERS TO CORRESPONDENTS.

W.—Several of the best broads have been closed to anglers, and we should, for our part, prefer to try Torcross. A great many pike have been taken there, and it is a very comfortable place according to all accounts.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

## PUBLIC ANGLING RIGHTS ON THE UPPER THAMES.

Sir,—I shall be greatly obliged if you will give me an opportunity of publicly criticising the report issued by Mr. Storey-Maskelyne's Select Committee on Thames Preservation. Until recently there were only a few claims to private fisheries on the Upper Thames; but, owing to the report of the committee, which committee was appointed expressly to state the "steps necessary to secure the river as a place of recreation," every inch of the Thames, from Staines upwards, is now, as regards angling, claimed as private. Thus the appointment of the committee, which was made ostensibly in the interests of the public, has had the extraordinary result of placing them in a far worse position than they were before.

Owing to comparatively recent attempts by a few riparian owners to prevent angling in special parts of the river, and also on account of some half dozen interferences with the navigation in backwaters, this committee was appointed. By the very terms of the resolution appointing them, the House of Commons unanimously expressed its opinion that the river Thames should be kept as a place of recreation for the public. On August 14th the committee issued their report. It was to this effect: That when legislation on the subject should take place, the navigation should be declared public all over the river. This presumably settles the case of the half dozen interferences in backwaters. Next they advised that the tow-paths should be bought and converted into public footpaths, concerning which I may remark that the public have always walked along the tow-paths and have met with very little interference. This much and no more can I find in the report at all conducive to the enjoyment of the Upper Thames as a place of public recreation; but I find that the committee recommend all boats to be taxed to provide funds for that by no means public-spirited body—the Thames Conservancy; and that, after saying that "angling has only been interfered with by riparian owners in a few places—at any rate, in modern times," they add that "the public at large have only to know that their rights are imaginary to induce them to be content with the extant system under which permission is freely given," &c. Now, "the extant system" was this: In a few backwaters and mill-tails the public asked for permission to angle, and usually got it; but, as regards the main stream of the river, such a thing as a private or *several* fishery was never heard of. It is very difficult to see what induced the committee to take upon themselves to decide what is, to say the least, a most intricate question of law, and upon which very high legal authorities differ, more especially as their decision is at variance with the object for which they were appointed. Surely a more proper course would have been to have reported the facts so far as really known—viz., that the public had been in the habit of angling without interference in most parts of the river, but that claims to *several* fisheries had been made in certain cases; that angling is, next to boating, the principal recreation of the river; and that it is extremely desirable that the greater portion of the Upper Thames should be, therefore, kept as a public fishery. Following these remarks might have come the recommendation that certain legal machinery be created to inquire into, and adjudicate upon, these claims to *several* fisheries, and that if the fisheries of the whole, or a greater portion, of the Upper Thames should be satisfactorily shown to be *several* or private, that certain portions, more particularly those in the neighbourhood of railway stations, should be declared public by the Legislature, and the owners of such private fisheries should be compensated. Such a report as this would, I contend, have properly carried out the instructions given to the Select Committee by the House of Commons. The committee also say that the relations between the riparian proprietors and the angling public are satisfactory. If they are, why was the committee appointed? And why, after having been appointed, should they issue a report which must make those "relations" highly unsatisfactory? Is it likely that these riparian owners, many of whom have shown the greatest *animus* against the public, will, on feeling certain of being possessed of private fisheries, grant permission to everyone who desires it to angle?—for many thousand persons are in the habit of angling on the Upper Thames. The committee absolutely make no suggestion as to angling; they place the public in a far worse position than they were before, and leave them there. Should the Upper Thames be closed as an angling resort to the public, the lower river—from Staines downwards—could not by any possibility bear the strain put upon it, and would, in a very few years, be depleted of fish.

For the benefit of those who have not studied the question, I would add that the contention of the public is this: that the angling is, in most parts of the river, public, as being vested in the Crown. Strong presumptive evidence of this is the fact that certain undoubted owners of private fisheries hold such fisheries by charter direct from the Crown. Again, no riparian owner can take soil from the bed of the river without a license from the Conservators, and *with* this license *anyone* may do so; thus the soil undoubtedly vests in the Crown. According to the riparians the fisheries are covered by the manors and do not necessarily follow the soil of the river. There have been no legal decisions on this question, yet a committee, consisting for the most part of gentlemen without any legal training, have taken upon themselves to settle the law of a case which none but high legal authorities are competent to decide. Space forbids me going any further into the matter.

I would mention that the Upper Thames is protected by four or five angling associations who, like the Thames Angling Preservation Society, act only in the interests of the public, and are not angling clubs. Under their care the river has, so far as trout fishing is concerned especially, vastly improved. I know one weir-pool where, on any moderately favourable day, six to a dozen and a half nice trout may be taken with the fly. They would mostly be under the legal size (16in.); but I mention this to show how plentiful trout have become. Three years ago a Fishery Preservation Association was formed at Henley. Since then the Association has put over a thousand trout in the river, varying from yearling size to 2lb. in weight; they have also hatched immense quantities of *ova*, and turned into the river about 50,000 fish, of the Loch Leven variety of trout. The work of the Association is done by honorary officers, whose feelings may be imagined when they read in the report that their labour and all the money expended had gone only to benefit a private fishery. The other associations have been equally active.

When Parliament comes to legislate on these matters, it is to be hoped that some other "relations" than those "generally satisfactory" ones which the Select Committee imagine to exist may be arranged between the public and the riparian proprietors. All liberal-minded men will, I think, support the public in this matter. Where riparian owners have been in the habit of excluding the angling public from these waters, and have done so legally, let these places by all means be kept as preserves; but where the public have always angled without let or hindrance, which is over the greater portion of the river, let these parts be declared public fisheries. If any claim to *several* fisheries should crop up to any such parts, a very small sum would fully compensate the owners. It seems hard to believe that under a Liberal Parliament the public should, by action of the Legislature, be excluded from angling on the river above Staines. I trust you will consider the importance of the subject to many thousands of artisans and the middle class of London a sufficient excuse for the length of this letter. My principal object is to show that Parliament cannot, after the terms of its resolution appointing the Select Committee, logically act upon that committee's report—a report which has done so little good and so much serious harm to the public in respect of their rights on the Upper Thames.—I am, &c.,

A Founder and Sometime Hon. Secretary of an Upper Thames Fishery Preservation Association.

## THE RIGHT TO A THAMES SWIM.

Sir,—I observed Mr. Britton's letter in your issue of the 6th inst., but as your editorial note so fully answered him I had no intention of troubling you with a reply. This time my pole was fixed in what is known as the boat-house swim, but it was only left whilst I went away to breakfast, as I had been fishing there earlier, and thought no harm could result from such a proceeding. The rights or wrongs of the case have never yet been determined, but I think it will be a bad time for anglers and fishermen alike if the right to bait and claim a swim by the proper means is made unlawful and liable to be appropriated by any stray angler of Mr. Britton's position who might feel disposed to seize it. No angler could expect to get barbel or bream unless the swim had been baited beforehand, and it has long been the rule and custom acknowledged by all true fishermen above lock that the pole put by the side of the swim is secured against all comers, and no one can claim the swim, but it is left there by common consent and honesty. But that does not appear to be Mr. Britton's idea or system from his letter, as he seems to consider that he has a right to seize any swim it may suit him to fix upon, a view which your editorial note very properly rejects.

With regard to "Fair Play's" letter, appearing in your issue of the 11th inst., alleging that my pole had been fixed and I was fishing in swim for a fortnight, I simply say it is utterly untrue, as all the professional fishermen of Twickenham except two—Mr. C. Miles and Mr. Spiers, his fisherman—have signed a memorandum denying the statements made by "Fair Play," and other fishermen who fish most days on most parts of the river also strenuously deny the truth of "Fair Play's" statements, and protest against such reckless and untruthful language. I a short time since fished a swim for barbel as an experiment for four days, but took up my pole each evening and replaced it in the morning early when I went to bait the swim and fish it, or employed a man to do so for me. The swim is out of the navigable part of the river, and no fisherman, neither before nor since, has fished this identical spot, as most of the anglers who fish at Twickenham fish for roach and dace; very few anglers who come here to fish would care to go barbel fishing entirely, as they might for a day or two after baiting get nothing. This being an exceptional year in the tideway, they might have been more successful, but it would be all a chance. I took from this swim two tench, two dozen very fine dace, and two perch. Mr. Wright, fishing in the same swim, took six tench and a few dace, all taken Trenting. Now, as this swim can only be fished with any chance of success in this style, and there are few men who come to fish who adopt this style of fishing, what difference did my taking the swim make to the general body of anglers, whether I fished this swim four days or four months? The few fish taken from this swim for so many days' baiting would not satisfy many anglers. I don't complain of my sport or the expenses of baiting; but to get up two hours earlier than most fishermen expect to do for a day's fishing, it would be hard lines if I left my position for an hour, intending to return, and should have the swim taken from me, or begrudge me of my success if I were fortunate enough to get good sport. You may gather from the foregoing that "Fair Play's" next complaint of several fishermen bringing at fares, and having no chance of getting a swim on account of my pole, is equally misrepresented. I may have been away, as stated by "Fair Play," for a short time; but I should never think of removing my pole unless it was in the navigable part of the river—then I should put some person to keep an eye on it to see that it was not in any one's way, which I did on the very morning referred to by Mr. Britton.

"Fair Play's" experience of the river and fishermen generally is very vague, as he complains of the evil consequences of my example, whilst every man who has the slightest knowledge of the habits of Twickenham fishermen knows very well that if he is anxious to get a good day's fishing and would like to obtain a certain swim, he either employs someone to take the swim he fancies for him or does so himself—that is, if he is anxious to do his best for his customers. Are these men to be blamed for so doing? I say they are to be commended by every right-thinking, energetic angler, and if "Fair Play's" customers do not get good sport on account of his inability to be up early enough, the sooner he alters his indolent habits the better for him and his customers. And assuming "Fair Play" pretends to be a professional, as he states, he probably goes out a few times a year, and imagines when he does every other fisherman must give way to him, and give up their swim to satisfy his jealous disposition. Let "Fair Play" and every other angler, before he rushes into print headlong, ascertain the facts and consider for himself personally before committing them to public criticism, as a more scandalous fabrication has never been put before them. If the remarks made by me in this letter are doubted, I ask Mr. Spreckley, the President of the T.A.P.S., or any independent gentleman who takes an interest in angling matters, to come and see each individual fisherman himself, or ask any gentleman who has the means of knowing. He will then find "Fair Play's" statement to be utterly unfounded, as I trust I have sufficiently explained to you and your readers.

We, the undersigned professional fishermen of Twickenham, beg to say we have not authorised anyone to write to the Fishing Gazette on our behalf, and, further, that Mr. Johnson's pole has not been in any swim as spoken of by "One who Expects Fair Play":—Messrs. R. Coxen, J. Coxen, John Coxen, sen., James Coxen, J. Spong, W. Walker (Two Sawyers), Alfred Perrin (late Two Sawyers), J. Chamberlane, G. Lee, James Moffatt, Edward Finch, S. Cole, John Coxen, jun., Pert Hammerton, James Darbin, J. Anesey, G. Coxen, S. Mesley, W. Hammerton (waterman), J. Munro (waterman).

I should be obliged to you to insert this letter.—I am &c.,

Twickenham, Oct. 14th. W. Johnson.

[This letter from Mr. Johnson comes in, curiously enough, just as we are off to fish a Thames swim which has been baited for three days at considerable expense. We do not expect to find any other angler has taken that swim, though it has only been marked by a pole probably.—Ed.]

Sir,—You were good enough to insert in your impression of last week my opinion regarding the above, and as I now think the matter is drifting into experienced and impartial hands, I do not intend to venture much more upon the subject, so please forgive me for troubling you a second time. I regret, Mr. Editor, I cannot agree with you in your reply to mine, for I do not think the fixing of a punt duly occupied, and the mere fixing of a pole, to be a method quite opposed to each other for securing a swim, and I feel sure I am not alone in that judgment. Again, Sir, may I ask you, if it is a fair question. Would you care to risk placing your tackle, &c., on the riverside at 7 p.m. at the station you intended fishing, and come down at 10.30 to commence business, as Mr. J. did his pole? I think not; nor do I think bank anglers are in the habit of adopting such a course; hence, I fail to trace the one principle being applied to both classes of fishing.

You also go on to say no argument at present is likely to induce you to alter your view. Now, Sir, I think if one reads the correspondents' letters that follow mine, a distinct change in your opinion will be noted; for, after all, both the other letters carry out my view, although possibly expressed somewhat differently. I have also again read the original letter from W. H. Britton, and do not see the word "insist," as you have it in your last reply to him; and I must say, had I written to you for an opinion on a technical point of fishing law, I should not have expected the Editor of the Fishing Gazette to wander so entirely away from the question asked; for the advice you give that correspondent appears to me as vague as it is unmerited. Trusting you will again give this space in your next issue,—I am, &c.,

50, Clifton Hill, St. John's Wood, N., Oct. 14. Walter Long.

[We said Mr. Britton informed us he had insisted on fishing in a swim already claimed by another angler. Mr. Long says he does not see the word "insist" in Mr. Britton's letter, and hints that it is an unfair construction to put on his words. By his own confession Mr. Britton did have his punt fixed in the swim; he admits his fisherman had "compunction" in putting it there, that he refused to give it up to Mr. Johnson, who had previously, as he thought, secured it in the ordinary way. If this is not "insisting," what is? What advice does Mr. Britton or his friend want? Just what suits their view of the matter doubtless; anything else is "vague, unmerited," &c., &c.—Ed.]

Sir,—In the first place, I think the best thanks of all lovers of angling are due to Mr. Britton for ventilating this vexed question, and also to you, Sir, for allowing it to occupy a prominent part in your issues, although, in common with many, I would have preferred your hearing both sides before introducing your editorial notes. Anyone accused of having fixed a pole up and kept it there for 14 consecutive days in one swim must be an enthusiastic angler, and Mr. Johnson is known to be, not only that, but a staunch supporter of Thames fishing, and, although he generally carries off a valuable prize or two at the Richmond Piscatorials, yet his name is always down for a prize or two, and what is more, no angler returns more fish into their native element. But this is, after all, beside the question, which is, "Has an amateur or professional fisherman the right to place a pole up over night (*without the punt*) and claim that pitch throughout the day or day?" I say, decidedly not. When a fishing match takes place, here or elsewhere, the rule is that a start shall be made from the shore at a certain time, and the man who "shoves" the smartest, gets what he considers the best swim. Up river, say Cookham, Streatley, Maidenhead, Marlow, &c., the customers going out are pretty well known over-night, and as here baiting swims is tolerably universal, the fishermen work together, and there is very seldom a wrangle; but in the tidal waters it is totally different, Take Twickenham (which appears to be the chosen arena for the debate); well, the known swims from the Orleans to Chillingworth's, a distance of about half a mile, number at the most, ten, and there are fourteen punts belonging to fishermen. Walker has five: Coxon four; Miles three. Now, for the sake of argument, suppose these were to combine and send a man over-night to fix 12 poles in pitches; according to your editorial theory they would be perfectly in order. It is generally known that, despite the dearth of water, the fishing in the tidal waters has been the best known for many years, and consequently more punts are to be built this winter for the next campaign. Now, I wish to ask you, Sir, if your theory be adopted, how it is possible for the old-fashioned fishermen, who owning their own punts, are able to accommodate their customers, who either come down without notice or wire in the morning? All fishermen understand a temporary absence for luncheon, shelter from storms, &c.; but I, for one, most emphatically protest against the wholesale system of "poleing" now going on. A punt should be moored, and somebody in it to prove a right to a pitch. Mr. Johnson was going round amongst the professional fishermen of this place on Sunday last getting their signatures to a document to the effect that they had never seen him have his pole up more than five days together (!) instead of fourteen, as "One who Gives and Expects Fair Play" accuses him of. If Mr. J. is well advised he will let the matter drop; and I may as well state that, with a view of avoiding any further unpleasantness, I have written to the Thames Conservancy as to their power of removing obstacles sticking up in the fairway of the river, and asking them to exercise the powers they possess. This appears to be the best way of striking at the root of the evil. As regards barbel swims here, this has been an exceptional year with these fish. I remember a few years ago "Robin Hood," the able Coursing Correspondent of the *Field*, sending Stephen Grant 6,000 worms from Nottingham. They were duly chopped up and dropped in a so-called barbel swim opposite his house, and 'narry a bite the next day. This is the same hole where Alfred Little got his 48 barbel two or three weeks ago! In conclusion, I say let the question be thoroughly threshed out, for the benefit of all parties.—I am, &c., M. B.

Twickenham, Oct. 15.

[We must remind Mr. B. that our advice was *asked;* also that if we waited till we heard both sides of the question we might wait for ever. Mr. Johnson has not begun to answer yet. The postscript to our Sonning river report this week refers to this question. We mention it, as it may be overlooked.—Ed.]

Sir,—In your issue of October 11th you misquote my former letter. I did not insist upon fishing in the swim in question, and thought my letter on the subject sufficiently explicit, as I mentioned the fact of Mr. Johnson coming down about 10.30. Myself and friends fished below.

I think you will agree with me that to advise apologies being given to a person who had threatened one with personal violence, would be rather an extreme view for anyone to accept.

You ask me what I think is to become of the pleasure of Thames angling if the question of swims are to be settled as I settled it? Well, Mr. Editor, I think if private individuals were to exercise a more rigid observance of their real rights, as the fishermen are compelled to do, the pleasure would be greatly enhanced and it would obviate the necessity of seeking your advice and opinion upon one subject and getting it upon another.—I am, &c.,

Putney. W. H. Britton.

[Rather too much, is it not, Mr. Britton, to expect us to have taken into consideration, in answering your question of two weeks ago, matters which you only now bring forward? Your letter of Oct. 4 can only be read as an account of how you took another man's swim, and how he was impertinent, and you gave him your opinion. Now you say you "fished below"—i.e., in another swim, we presume. If you had said that at first, of course we should not have advised you to apologise. We could only advise you on the facts as stated by you at the time, and we defy anyone to read your letter of Oct. 4 otherwise than as showing you had insisted on fishing in another angler's swim.—Ed.]

## EYED DOUBLE SALMON HOOKS.

Sir,—May I ask, does "An Amateur" wish to have any double-eyed hooks? I think I can obtain some, such as the fly I sent you was dressed upon. They are expensive—4s. 6d. a dozen the smaller, 5s. a dozen the larger size. I can, or may, obtain all the intermediate sizes. If these I inclose will suit him, I will do my best to obtain a set of 10 dozen or part of a set such as he requires.

I beg to say I perfectly agree with your remarks, "There is not much of the Wickham Fancy, &c." Few of the modern dressing bear a strong resemblance; and I would add, any departure from an original destroys its identity.—I am, &c.,

6, Jewry-street, Winchester. Geo. Currell.

[We do not like the position of the eye in these hooks. The shape and position of Mr. Hall's eye is by far the best for the salmon fly.—Ed.]

Sir,—In response to your note to "An Amateur's" letter, I inclose a couple of eyed salmon hooks, the remains of some which I got from Messrs. Kelly and Sons, Dublin, some five or six years ago.

You will observe that the eyes are differently formed on the two patterns. That on the larger is the best, though I think it is open to improvement. Hoping to get same with all the latest improvements, I wrote, the other day, to Messrs. Gillett and Co. for some, but was informed that they had not got *any* eyed salmon hooks. I then wrote to the A. and N. Co-operative Stores, and was told that they would be procured for me—this was a fortnight ago, but I havn't got them yet.

There seems to be a prejudice against them, of which I cannot see the reason; flies tied on them are practically everlasting, a lot of trouble is saved, and the bodies can be tied much finer. I think the system should answer specially well for double hooks. Could any of your correspondents tell me where to get—1st, double salmon hooks; 2nd, bronzed salmon hooks?—I am, &c., Green Wren.

[We are much obliged to "Green Wren," and will send the samples on to "An Amateur." They are very good.—Ed.]

## SALMON FLIES ON EYED-HOOKS.

Sir,—With reference to "An Amateur's" remarks in your issue of 11th inst. we inclose for your inspection samples of our *patent cranked-shanked eyed-hooks*, also a "silver doctor" salmon fly dressed on one of them, which give great satisfaction and are much appreciated by anglers, and we have no doubt would meet with the approval of your correspondent, who may obtain them from any respectable fishing tackle dealers.—We are, &c.,

Standard Works, Redditch, Oct. 15th. S. Allcock and Co.

[In some other foot-note we have referred to Messrs. S. Allcock's eyed hooks. This letter came since we wrote the note; but we have only to add the hooks are very nicely made. We think the metal eye should be perfectly smooth and round, or the gut will get cut very soon.—Ed.]

---

Sir,—It is quite probable that your correspondent, "An Amateur," will get the *true Limerick* hook salmon sizes eyed from Kelly and Son, of Dublin. They sent me samples, in 1878, of small salmon hooks, with both vertical and horizontal eyes.—I am, &c., Geo. Bankart.

Leicester.

## IMPROVEMENT OF THE EYED-HOOK.

Sir,—It was with great pleasure I read in the Fishing Gazette of last Saturday your foot-note to Mr. Bankart's letter, in which you state, "The hatchet is now buried, and that Mr. Hall and he are again on friendly terms." This is very satisfactory. I have followed their letters with almost painful interest in both the *Field* and Fishing Gazette, and the uppermost wish in my mind has always been "that the unfortunate controversy should have its present happy termination." We as fly fishers are much indebted to both these gentlemen, and if they only now join efforts, I think we shall not be long before we arrive at the very desirable improvements in the shape of the eyed-hook. I quite agree with Mr. Bankart about the present shape.—I am, &c.,

2, Dunster House, Mincing-lane. Thos. J. Hodson.

## ANOTHER FORM OF EYED-HOOK.

Sir,—In common, I have no doubt, with most of your readers, I have followed the correspondence about eyed-hooks for trout flies with the utmost interest, and, whilst acknowledging, in the fullest possible manner, how much fly fishers are indebted to the inventors of the eyed-hook, and especially to Mr. H. S. Hall, I confess that the criticisms of a correspondent in your last number as to the conspicuousness of the eye as at present manufactured strike me as being very much to the purpose, and well worthy of full consideration.

There is no doubt that the large, turned-up eye, as I find it in the hooks which have been supplied to me, *is* conspicuous. Not only so, but the directions given by Mr. Hall, in your paper, for attaching the gut to the casting line, involve an "in-and-out" sort of process, easy enough in the angler's sanctum, but by no means so easy by the side of a trout stream, when perhaps "half a gale" is blowing, or a March wind is reminding the fisherman of the old saying about "all his fingers being thumbs,"—

> "The wind is in his eye, the water is in his boots." . . .

I confess I fail to perceive the advantage, from whatever point of view it is looked at, of the eye being *turned up*. I find that an eye simply like that of a needle gives apparently, at least, an equally good—shall I go so far as to say a much better?—result, whilst the simplest of all forms of fastening—a double half-hitch (if that be the correct word)—makes a knot perfectly straight, of the smallest size, and which, as it only involves the simple "threading of the needle" (so to speak), can be tied with great facility and rapidity under the most unfavourable conditions of wind and weather. I should very much like to hear your opinion, and that of Mr. Hall, on this modification of his eyed-hooks, observing at the same time that I cannot claim any merit whatever for the improvement, if such it should prove to be, as the suggestion was made to me by my preceptor in the "gentle art," Henry Ralph Francis, Esq., M.A., the accomplished author of "The Fly-fisher and his Library," and well known as one of the very best trout fishers that ever threw a fly over the clear trout streams of England.—I am, &c., H. Cholmondeley-Pennell.

P.S.—In order to explain more fully what I mean, I send you a needle with the gut attached as described.

[Although we have never seen a fly dressed on a needle-eyed-hook, the latter have been made for some years past by Messrs. Warner and Sons, of Redditch, Messrs. Milward and Son, Messrs. S. Allcock and Co., Mr. Guise, and other firms. If any of them like to send samples for Mr. Pennell to our care, we will forward them. We do not like any needle-eye which is straight, and for this reason: when Mr. S. Allcock called on us with samples of a needle eyed-hook, some months back, we pointed out that the gut must support the hook, and not hang loosely from it when the gut is held horizontally, and further that the pull should be on a line with the shank, and not at an angle. We bent a soft hook he had with him, so as to give the eye the same slant as Mr. Hall's eye (in his hooks, we mean), and they have done this. To fasten the gut you simply make a slip-knot round the shank after passing it through the eye, and you thus get just as straight a pull as if the gut is whipped to the shank.—Ed.]

## FLOUNDERS AT KINGSTON-ON-THAMES.

Sir,—It may be interesting to some of your readers, more especially to those gentlemen who were instrumental in stocking the Kingston waters with flounders some time back, to know that a member of this society, Mr. H. Adeane, while fishing there a few days back, caught one of the above named fish that weighed exactly 15¼oz., and measured 13in. in length. As far as could be ascertained by various inquiries at Kingston, and further down the river, it appears that a flounder weighing ½lb. has always been considered a good specimen, so that the one now recorded is worthy of special notice, being double the weight. Have you heard of any this size and weight?—I am, &c., H. Thompson.

Hon. Sec. Westbourne Park Piscatorial Society, Oct. 15th.

---

Sir,—Mr. Spreckley has arranged to place a considerable quantity of flounders from the tideway into the river Thames at Hampton Court on Wednesday, Oct. 22nd, at 3 o'clock.

Those desirous of witnessing the operation must be at the Mitre Hotel, at Hampton Court, not later than the hour specified. There is a train from Waterloo Station (Hampton Court line) at 1.50.—I am, &c.,

7, Ironmonger-lane, E.C., Oct. 14th. W. H. Brougham, Secretary.

## LOSS OF WEIGHT IN FISH AFTER DEATH.

Sir,—While ledgering from a house-boat at Hampton Broads, on Saturday afternoon, the 4th inst., I caught a chub, which, as I had no steelyard with me, a friend took to the neighbouring town, where it was weighed (at a bootmaker's), and the weight returned at 3lb. 13oz. I took it to Cooper for preservation on the following Monday, when it weighed 3lb. 12oz.

The length was 19½in. On referring to the scale of weights in Pennell's "Angler Naturalist," I find that a chub of 19in. weighs 3lb. 15¼oz., and one of 20in., 4lb. 9½oz. Mine was a deep and broad fish, in fine condition.

I cannot help thinking that there was a mistake about the first weight given. Surely the fish would have wasted more than 1oz. in two days. Will you favour me with your opinion?—I am, &c., A. C.

Gray's Inn.

[We should say that a chub of this size would not lose more than an ounce at this time of the year, when they are, as a rule, in good, firm condition; an ounce, or about half as much liquid as an ordinary dinner port-wine glass holds, looks a good deal when emptied out on a plate or dish. The tables giving relative weight to length are, of course, only approximately correct—or rather correct on the average. After the first 48 hours or so, and until it begins to decompose, a fish loses little or nothing in weight. A flabby, out-of-condition fish will lose more than a firm, good-conditioned one.—Ed.]

## WHARFE GRAYLING FLIES.

Sir,—If "Cinnamon," as he says, has tried Wharfe flies and cannot kill with them, I should say his case was hopeless. I had a letter the other day from a friend giving as a result of two afternoons' fly-fishing on Wharfe during last week in September, eleven grayling, besides six trout (this on a hard-fished length). "Cinnamon" was the best fly. I only gave "Cinnamon" the results of my own experience. It seems his is widely different. I have at different times had 20s. worth of flies from London, &c., and have found them worthless. I have about two dozen in my book tied on hair, which he can have if he cares for them. I certainly miscalled red tag, but that is the only fancy fly I have found to kill well.—I am, &c.,

Orange Partridge.

## SUBSCRIPTIONS ON BEHALF OF THE WIDOW AND FAMILY OF THE LATE S. MORGAN.

Sir,—I beg to acknowledge to this date the sum of £39 6s., including £5 5s. from T. Spreckley, Esq., £3 1s. from T. Crumplen, Esq., £2 2s. from P. Geen, Esq., £2 2s. from the late J. Hervell, Esq., £1 1s. from R. Teale, Esq. (Rye House), and £6 5s. from the *Sporting Life*, the balance from angling societies and lists from private friends and anglers. I am informed that there are other lists from angling societies and friends to come in, which are promised to be forwarded shortly, after which I will acknowledge and give a full account. In the mean time I beg to thank all those kind friends for their liberality in subscribing so handsome a sum.—I am, &c.,

Oct. 15th. R. Ghurney.

## APPARATUS CONNECTED WITH FISH HATCHING WANTED.

Sir,—I shall be very glad if some of your correspondents will be kind enough to tell me where I can get a good slicing or mincing machine that will cut up liver or meat very fine indeed for feeding trout fry as soon as they get out of the alevin stage?

Also where I can obtain the large glass tubes, with a bulb or globe in the lower half of the tube for examining eggs or fry?

We are now erecting a new hatchery, the cost of erecting alone being upwards of £60. Hitherto our hatching operations have been carried on in two places and under difficulties.—I am, &c.,

King's Lynn. H. Bradfield.

[Sorry we did not see the letter.—Ed.]

## A NOTE FROM NOTTINGHAM.

Sir,—Several old hands have been out salmon fishing this week, and several fish have been caught on Monday in the shallow water, one Derby angler getting one 11lb., whilst another got smashed twice through using an old line; with the spinning bait the same angler has killed 20 salmon this season. Mr. Moll, of Castle Donnington, got another nice fish. With the change in the weather and water I expect to hear of some more being taken, as plenty have been seen. Several barbel have been caught at King's Mills. In the lower parts of the river very little has been done this week.

At our club dinner on Saturday it was the general complaint amongst the members that it has been a very bad season. The following is a list of the heaviest fish weighed in:—Barbel 7lb. 4oz., bream 3lb. 10oz., dace 10¼oz., perch 9¼oz. roach 1lb. 5oz., bleak 1¾oz. A. W.

P.S.—Mr. Editor, in my report last week you make Mr. Baker catch his pike at Colwick. If you refer to my letter you will see he got them at Hickling. As Mr. Baker and several of the gentlemen who fish the Colwick water have become subscribers of your paper, you will see that anything but a correct report would never do.

## PSHAW!

Sir,—In your issue of last Saturday you make me write nonsense by leaving out a single word. Speaking of the Winchester trout, I said that they know in a very special manner "'a hawk from a heronshaw' (or young heron)—or, as some interpret the passage, 'a hawk from a heron!'" This on the face of it is nonsense. What I wrote ran thus: "Or as some interpret the passage, 'A hawk from a heron! Pshaw!'" This makes just the difference between "point" and "bosh."

In reference to your note, I may say that I do not like a gut eye for small river flies so well as the loop, for many reasons.

But I am most anxious that the error should be corrected. I believe in the original version it was "a hawk from a handsaw." Then it was altered to heronshaw as being in consonance with hawking for the young heron; whilst one bold dramatist gave it additional "point" by the contemptuous "Pshaw!"—I am, &c., E. M. Tod.

[We must apologise to Mr. Tod for cutting out his "Pshaw." In hurriedly reading his note last week we missed the "point." We forgot last week to advise him to write to Messrs. S. Allcock and Co., of Redditch, for some samples of their patent needle-eyed crank shank. We fancy it would meet his requirements.—Ed.]

## WHAT IS IT?

Sir,—Whilst out at Walton last week my attendant took a fish he called a "Thames rudd." So far as I could judge, it resembled a roach in every respect but one, which was, that the anal fin was very much elongated and similar in shape to that of the bleak. It had not the projecting under jaw of the rudd, and was furnished with teeth in single rows only, one of which (the other unfortunately got damaged) consisted of six teeth. Neither the rudd or bream has that number (see "Pennell's Angler Naturalist," and no roach that ever I saw had a fin suchas I have described, hence the query at the head of this letter.

If you or any of your readers can, through your columns, throw any light on the subject, I shall feel greatly obliged.—I am, &c.,

Regent's Park. E.

[So many fish from other waters have been put into the Thames from time to time that it is impossible to say what is a Thames fish. We should say the fish in question was a hybrid of some kind.—Ed.]

## RUDD.

Sir,—I have caught a rudd, ¾lb., with a minnow, and also an eel spinning with a spoon bait, as well as a salmon. Are not bones attractive to perch? What is the largest rudd known?—I am, &c., G. P.

Navan.

## A CORRECTION.

Sir,—In your issue of last week there is a mistake in the weight of one of the jack: it should be 15lb., not 5lb. I do not think I made the mistake.—I am, &c.,

S. Renaut.

The Old White Hart, Boro' High-street, S.E.

[The printer regrets to say that it was his mistake.—Ed.]

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | | |
|---|---|---|---|
| Add | 30 | minutes for | Chelsea. |
| | 40 | ,, | Putney. |
| | 45 | ,, | Hammersmith. |
| | 50 | ,, | Barnes. |
| | 55 | ,, | Kew. |
| | 75 | ,, | Richmond. |
| | 80 | ,, | Twickenham. |
| | 85 | ,, | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | October | 18 | 1.15 | 1.34 |
| Sunday, | ,, | 19 | 1.53 | 2.10 |
| Monday, | ,, | 20 | 2.27 | 2.44 |
| Tuesday, | ,, | 21 | 3.0 | 3.16 |
| Wednesday, | ,, | 22 | 3.33 | 3.48 |
| Thursday, | ,, | 23 | 4.5 | 4.21 |
| Friday, | ,, | 24 | 4.37 | 4.54 |

Note.—New Moon October 19.

## THE LOWER THAMES.

### General Remarks.

There can be no doubt the result of the rainfall will have a beneficial effect on the river, and the strong probability of a good push of water coming down will have a tendency to disturb the jack and perch in their present retired quarters. The last few weeks have been distinguished by the large quantity of barbel that have been taken, and wherever anglers have adopted the necessary steps of previously baiting the swims the results have been strikingly satisfactory. There has also been some good bream caught and some good days made, notably those of Mr. Alfred Mackrill fishing with the veteran George Hone at Walton. The gudgeon have not been sought after this season to the same extent as usual, and yet from the reports of John Johnson, sen., at Kingston, those he has taken have been very fine and in goodly numbers. A day's gudgeon fishing is not to be despised : they give plenty of sport, and are very nice eating when properly cooked. Some anglers will not fish for them, as they are small : they go on the principle of George Hone, "Big 'uns or none." The report from the tideway is as follows :—"There is no difference in the water or the takes of fish : but some of the Richmond fishermen have not been out so many times the last few days as they would like to. The weather has been very cold lately on the water. The barbel are going off now, and the perch appear to be coming on at Teddington." Mr. Spreckley intends to take up another cargo of flounders from the tidal waters, and according to present arrangements they will be put in at Hampton Court at three o'clock on Wednesday afternoon next. There is a considerable falling off in the attendance of anglers, and if this rain continues it will improve everything.

### Angling Results.

**Richmond.**—Christopher Brown, in three days, 42lb. weight of roach and dace and one barbel. F. Brown, in four days, 48lb. and three barbel. H. Wheeler, in two days, 31lb. and one barbel. Henry Mansell, in two days, 50lb. and three barbel. Job Brain, in five days, 90lb. Henry Platt, in three days, 22lb. and five barbel. Henry Howard, in six days, 120lb. and one barbel.

**Twickenham.**—Henry Spiers, in three days, thirty-seven dozen of roach and dace. John Spong, in three days, 60lb. and one barbel. Pert Hammerton, in three days and one half day, 65lb. and one barbel. Joseph Dobbin, in one day, eight barbel (two put back) and nine dozen of roach and dace ; and in four other days, thirty dozen. James Coxen, in four days, seventy-three dozen and one barbel. Richard Coxen, in four days, 40lb. and four barbel. George Coxen, in the same time, 44lb. and eight barbel. F. Wiggins, a fine barbel of 7lb. 11oz. Samuel Cole, in six days, 90lb. of roach and dace ; and Edward Finch, in five days, 80lb.

**Teddington.**—Joseph Baldwin, in four days, twenty dozen of roach and dace, one and a half brace of perch, and three barbel. Benjamin Stevens, in three days, twenty-five dozen of roach and dace ; and Charles Baldwin, in four days, twenty-five dozen, two and a half brace of good perch, and one barbel.

**Kingston.**—John Johnson, sen., in four days, 15 barbel—the largest 4½lb.—one dozen of fine roach, and fifty dozen of gudgeon. Luke Francis, in one day, sixteen dozen of roach and dace, and a couple of bream. The bank anglers at Kingston, Surbiton, and Thames Ditton have been doing well amongst barbel, bream, chub, perch, roach, dace, and gudgeon.

**Hampton Court.**—Charles Davis, in one day, two chub of 3lb. each. Thomas Wheeler, in one day and a half day, four dozen of roach. Thomas Milbourne, in one day, nine brace of fine perch, several of the fish weighing 1lb. each. At "Tagg's Island Fishery" there has been taken ten dozen of roach, dace, and gudgeon.

**Sunbury.**—Edward Clarke, jun., two jack—the largest 3lb., twenty-five brace of perch, thirty dozen of gudgeon, and one dozen of fine roach, as the result of four days. H. Clarke, in one day, six brace of perch and nine dozen of gudgeon. The bank anglers are estimated to have taken in this neighbourhood not less than forty dozen of roach, dace, and gudgeon, in addition to perch, chub, barbel, and bream. The fishermen are hoping, after the rain, to see some customers, as there are plenty of fish.

**Walton.**—R. Watford, one day, four dozen of roach and dace, five dozen of gudgeon, one perch, and one chub ; another day, two barbel, two bream, and two dozen of roach and dace ; and another day, four bream and one chub. George Hone, in one day, seven and a half brace of perch. John Hone, one day, four barbel and two dozen of roach ; and, another day, three barbel and four bream.

**Halliford.**—W. S. Rosewell, in one day, five jack.

**Weybridge.**—J. Upsdell, in one day, five jack weighing 26lb. ; and Herbert Curr, in two days, twelve dozen of roaeh and dace.

**Shepperton.**—James Haslett, in one day, with Mr. G. F. Bainbridge, two jack, one perch, and a chub of 4¾lb ; another day, in two hours, three chub ; another day, three barbel and one brace of perch ; and, another day, five barbel and two chub.

**Chertsey.**—John Poulter, in one day, three barbel and three chub.

**Staines.**—Charles Hone, one day, fourteen barbel and three jack ; another day six barbel ; and, another day, eight jack, two weighing 6lb. each, and four barbel. John Keene, jun, in three days, fifteen dozen of roach and one barbel. John Keene, sen., in two days, two dozen of roach and dace and seven barbel. G. Osman, one day, six dozen of roach and dace ; and, another day, one brace of jack.

## UPPER THAMES.

Although rain has been falling fairly continuously for the past eight or nine days, the river does not seem to be affected by it, and keeps on the even brightness of its career. The weeds, I am pleased to say, are beginning to flag, and a few frosty nights will settle their upright manner, and make jack-fishing enjoyable and remunerative in the way of sport. At Pangbourne I hear that Mr. Whetstone, in about two hours, on Monday last, captured 27lb. of jack, and thus won the Shentonian Thames Piscatorial Club prize. He was lucky, in such water especially, as many other warriors bold were on the war-path ! At Purley a 3lb. jack has been picked up choked by a roach of ½lb., which was found by E. Sheppard protruding from the fish's mouth. In the Henley and Medmenham districts jack and barbel have been well to the fore, Neal and Bob Young especially leading their patrons to success. Harley boasts of three jack this week taken by Mr. Astor and friend. Those gentlemen are out to-day, but as yet I have not heard of any success. Thursday evening.—Jack will be now the coming fish, perch also will begin to herd, but frosts are required a bit for the latter fresh-water soles. Weather simply perfect for pleasant autumn outing.—Marlow Buzz.

### Thames (Datchet).

The good autumnal sport which should have been here among the roach and barbel is almost despaired of, and the water as low as ever. A jack or two might be got in the morning, and three or four roach in the evening. Mr. Lock, High-street, Eton, has had one or two goes among the perch, and has been fairly successful. Their appetite depends on the atmosphere. If it is a frosty morning, or a cold rough day, you will get perch. What a pretty sight I saw at Windsor yesterday ; 84 trout, 13in. and 14in. long, turned in at the expense of the Windsor and Eton Preservation Society. I have had two turns with patrons at the jack, and have managed to hook a fish each turn, but bad luck, they got off, one a large one ; but amends were made to-day ; out with Mr. Whitfield, Eton, with a beauty 17lb.—G. Lumsden.

### Thames (Goring).

Water low and clear. My best day four jack, largest 8lb., and two dozen of perch.—J. Rush.

### Sonning.

Water still very low and bright. Several have been out ; they have got a few roach, the largest ¾lb. Another party got a jack 12lb. ; and on Monday two men in a punt got two jack, one 6lb. the other 4lb. Mr. Coptan got two nice chub. There have been a few barbel, nothing of any size ; they got a nice lot of perch down by the Elle Buck, wehre an old tree had lain some time. The weeds are beginning to get rather nasty. There are several good jack to be seen moving about. You can see some trout, just by my place, under the bridge. Mr. Steed and Son have just come in ; been fishing in my water all the day ; got over four dozen of roach, largest ¾lb. They saw a nice jack : they tried to get him, but he was one too many for them.—W. Hall.

P.S.—I think it quite time there was a stop to putting a ryepeck in. I went out one day to a place I fished the day before. When I got there the next day, there stuck a ryepeck, and no one fishing. About a hundred yards up I saw a punt, with three men fishing. I watched them for some hours. They then went to the place where the pole was, and left another where they had been ; so it was the whole of the day. I am very pleased the subject has been brought forward in your paper.

### Ancholme District.

There has been a great falling off in the number of anglers during the past week, owing to the advent of cold and tempestuous weather. The wind has been mainly in the north, but to-day it is much milder. When the weeds have rotted down a little, I should advise anglers to try the water above Harlem Hill Lock. Here there is a good sprinkling of pike, and the water is more lightly fished than any other portion of the river.—Thomas Ford, Caistor.

### The Coquet (Weldon Bridge).

River in good trim ; an immense lot of salmon up.—Frederick Brown.

[Are they not Bull trout ?—Ed.]

### The Dee and Don (Aberdeenshire).

The weather has at last changed, and with the rain in the end of last week, the rivers have risen to a considerable height, so that the angler has now hopes that the season, at least the end of it, may, after all, turn out much better than was expected. The fish are practically swarming up, and as the water is in first-class ply, some excellent work has been done, especially on the Dee, and there seems every likelihood that the rivers will be in a good fishable condition till the end of the season. The flies most successful on the Dee since the commencement of the spate have been "grey heron" and "ackroyd." Mr. Smith, saddler and fishing-tackle maker, Ballater, reports :—On the Invercauld Arms Hotel water, during the past week, — Henderson, Esq., had seven fish from 7lb. to 12lb ; John Sturton, sen., one weighing 8lb. ; John Sturton, jun., four from 7lb. to 9lb. ; James Bruce, Esq., one of 14lb., and on the Morven water the same gentleman killed six fish ranging from 7lb. to 10lb. ; Colonel J. S. Skene also had three fish of 8lb., 9lb., and 10lb. on the Hotel water. Mr. Smith informs us that the fish are getting very black. Messrs. George Blacklaws and Sons, Kincardine O'Neil, send us the following report for the week :—W. Lamond, Esq., on Norton House water, had one of 24lb. and one 10½lb. On Borrowstone section, Walter Evans, Esq., Derby, landed two fish of 14lb. and 15lb. On Carlogie, Stewart Farquhar, Esq., one 7½lb. and another 9lb. ; and on Ballogie water, Frederick Pickop, Esq., landed one of 14lb. The Durris water has, during the past week, afforded William Knowles, Esq., London, splendid sport, he having, up till Tuesday forenoon, landed no less than 12 fish, scaling from 7½lb. to 31lb. On Crathes and Kinneskie, the sport has been very fair, General Keane, R. B. White, Esq., and — Smith, Esq., having got six fish from 26lb. to 15lb. in weight. J. T. Hay, Esq., on the Blackhall water, had two fish ; and — Farley, Esq., one at Cairnton. On the Park section, — Potter, Esq., landed one of 16lb. on Monday. On Cutler House section, R. W. Lyall, Esq., got five salmon from 11lb. to 21lb. ; and — Gordon, Esq., two weighing 10lb. and 14lb. On Blair's water, on Friday last week, one of 19lb. was got. We have received no report from the Don, as the water is only getting into fishable condition ; but we hope that by next week's publication there may be some accounts of successful angling.—W. M.

### The Dove.

We have had another favourable week on this river. The weather has continued its open character, and the water has been in beautiful condition, there being that nice woodland shade in the liquid which rodsters so much like to see. The falling leaves are, however, just now proving rather troublesome to anglers both on the surface and the bottom, but this is always the case at this time of the year, especially on the Derbyshire rivers, which are noted for the superincumbent timber by which many of their banks are lined. The grayling have been rising with considerable freedom during the week, and the most destructive flies have been the claret bumble and the October dun. These lures were killing well last week, and it is the same this. The slight frosts we have had at night have stirred both the grayling and pike up considerably, in fact, the latter are feeding better just now than they have done for some months past. The live minnow seems to have operated with success, though I also hear of fair sport with the Gregory, the Derby killer, the archimedean, and other spinning baits. The grayling dishes have realised 5½ brace each to the expert fly-fishers. Roach and dace are taking the maggot eagerly on the bottom, while chub and bream appear to be affecting the cockspur worm the most freely.—The Splodger.

### The Earn (Perthshire).

This tributary of the Tay is now swarming with fish, and splendid sport has been reported. On Wednesday, Mr. Dickson, Drummond Arms Hotel, Crieff, caught a salmon weighing 7lb. Mr. T. Cappell fished the Earn on Thursday, and killed a fine fish of 18lb. On the same day a fish of similar weight was secured by Mr. Stewart, of Lawers. Mr. James Reed, on the Auchterarder House water, on Thursday, killed a salmon weighing 11½lb., and four grilse weighing 7½lb., 7lb., 6¾lb., and 6½llb. respectively. On the following day, Mr. Hew Reid, on the same water, killed a salmon of 10lb., and a grilse of 7lb. On Saturday, Mr. Moncur had a salmon of 10lb., Mr. D. Broadley one weighing 21lb., and Mr. P. Christie one weighing 9lb. On the Drummond Castle, Mr. Duncan Forbes had four fish, and Mr. Greenhill two fish. On Saturday, Mr. Henry Curr, Pitkellony House, killed a fine salmon weighing 24lb. On the same day, Mr. McKenzie, Drummond Arms Hotel, Crieff, landed a salmon of 25lb.—P. M. C. G.

### Eden (Carlisle).

A fair number of fish have been killed during the last few days. On Saturday, Oct. 11th, Mr. John Scott landed one of 18lb. ; Wm. Smith, two ; and T. Warwick, two. On Monday Sergt. Fox had a 24-pounder ; Mr. Waters, one about 20lb. ; and two others came to grass at Grimsdale. All the above were killed in the Angling Association waters near Carlisle. On Tuesday Major French killed a nice fish at the Lammer-house Pool, and a fish looking like 30lb. was landed on the opposite side. Mr. Hodgson, of Newby Grange, has had three good fish in the last day or two ; Mr. J. W. Stubbs, one at Warwick ; and Mr. Murchie, one. The prospect for the next few days is not very good, especially in the lower waters. Very few fish are showing. They have no doubt pushed on to the spawning grounds, and we want another spate to bring up a fresh supply.—Silver Grey.

### Ilfracombe.

Sea Fishing.—During the last few days those fishing from the boats have caught some fine conger, the average of each boat being about 60lb. per tide. Some large pout have been caught by those fishing from the pier-head and etty with rod and handlines. Weather at present very unsettled.—E. Comer.

### Lakes of Killarney.

There has been very little fishing these last few months owing to the low water ; last week, we had some good freshes and broken weather ; the trout fishing was splendid sport while the soft west wind held, then it turned north-west with cold showers of hail, and they would not take at all, only some brown and dusky yellow flies tied on No. 8 Limerick hooks. On 10th inst., Tim M'Carthy, two salmon with the large trout fly, and three and a half dozen bream trout ; Dan Cournane, three dozen trout ; Daniel Twomey, two and a half dozen trout. 12th inst., Mr. B. Bernerd got four salmon on Flesk and three salmon since then ; Mr. D. C. Coltsman, jun., five salmon on the upper part of the Flesk ; Mr. J. C. Coltsman, seven salmon for three days ; Callaghan McCarthy, three salmon on Flesk. On the 14th, Mr. D. C. Coltsman, two salmon 16lb. The season closes here on the 16th of October, which ends our fishing until the springers come on.—Tim McCarthy, Fisherman.

### Lea (Tottenham).

The colder weather at the end of last week, and the commencement of this, sharpened the appetite of the jack, and brought them well on the feed. Mr. Bell killed five, the two largest weighing respectively 3¾lb. and 3½lb. A barbel of 4¼lb. also fell to the same angler's rod ; Mr. Culfe killed two jack, 4¼lb. and 2¼lb ; Mr. Goddard two, 4¼lb. and 3¼lb. ; Mr. Cox one, 5lb. A gentleman on the 10th, with gentles, got some capital roach from the Copper Mill stream, several of them going ¾lb. Messrs. Sibley and Williams also got some good fish from the same stream. Mr. Bennett, whipping, with very small olive dun fly, killed three dozen dace on Tuesday, and four dozen dace and one chub on Thursday. Water slightly improved.—Hackles Red.

### Leicester.

There has been a great improvement in the fishing this week, in the Leicester Society's waters the roach and perch having been well on the feed. Messrs. Bird and Golding have shown some large takes of perch, averaging from 10lb. to 12lb. per day, all good fish. Chub fishing has also improved, several large fish having been taken during the last few days, Mr. Lee, as usual, weighing in some fine specimens of this species. Pike fishing has also been fairly good, a number weighing from 5lb. to 8lb. being caught. On Thursday, Mr. Hardy, among a lot of pike, weighed in one scaling 8lb. Weather favourable, and water in good condition.—Alert.

### Lodden.

During the past week the weather has been exceedingly cold ; sharp frosts a night, leaving ice half-an-inch thick on the duck ponds, which the young ducks seemed scarcely to understand, and the poor little martins have died by the hundred. The weather is much milder now ; but not a martin is to be seen. No doubt the stronger birds have gone southward for the winter. The river is still very low and bright ; but sport is everything one could wish for ; plenty of pike, chub, perch, roach, and dace ; chub and roach exceedingly fine. Yesterday (Thursday) myself and son landed, in less than two hours, several jack of the following weights : 6lb., 4½lb., 3lb., 2lb., 2lb., and 1lb. Four chub, average 3lb. each ; forty roach, many over 1lb. each ; one perch, ¾lb., and several dace. Eels are conspicuous by their absence. Trout are numerous and fine, heading up stream to the spawning grounds, and from their good and rotund looks, a good spawning season may be anticipated. My stock fish (trout) are looking superb. It has been quite a summer day to-day with scarcely any wind ; wind S.S.W.—Frank Gosden,

### Lugg and Arrow (Leominster).

Both these streams are now slightly coloured, and have risen about a foot since the heavy storms which have visited this part. There have been but few visitors to either of the streams this week, and but few fish have been landed. The best fly is the green insect or the willow at present. On Monday, the water near to Aymestry was fished, and a small dish of grayling were taken with the maggot. A few nice fish were taken in the water, near Kingsland, with the green insect. In the Arrow, at Eardisland, a gentleman fished with the worm and took four small grayling. The water near Ivington was tried, on Tuesday, with the fly, and a few nice grayling were taken. In the Lugg, the same day, a nice dish of grayling were taken by a gentleman who was fishing with the willow. Fishing very quiet in the Stanton water. A few fish were caught near to Ford's Bridge with the grasshopper. The Pinsley is now slightly coloured, and there has been scarcely any fishing had in it.—Gwynne.

### Medway (Tunbridge).

Water in first-class condition, but I have not heard of many good catches. One gentleman about the end of the week above the town had a good basket of bream as well as chub, above 3lb. All fish should feed well now.—Ye Medway Water Rat.

### The Ouse (Huntingdon).

The water is still very bright ; nothing doing with the roach or bream ; jack are coming on very nicely. Three were taken last week, one 7½lb., one 4lb., the other I don't know the weight. I was out with Squire Powell on the 16th, when he took one about 3½lb., and lost four through some mishap or another. One, I believe, was a fine fish ; he left his mark behind, such a mark I've not seen for some time. The bait was gored as if done with a large knife. He was using some very fine dace, which I believe are the best bait. There is every prospect of good pike fishing during the coming season, for there are plenty of fish. On the 6th of August I caught a person illegally fishing with night lines, who gave his wrong address. He gave his name Charles Bedford, 27, Calthorpe-street, Clerkenwell ; but he has not been seen since the 7th of August. If he is a member of any angling club, it is to be hoped it will be investigated by the club authorities and he be expelled from the club for illegal practices.—H. Rout.

### The Ribble and Hodder.

We have had a very poor fishing season. The rivers have been so low through the dry weather, there has been very little fishing, and really nothing to report this month, which ought to be the best time for salmon fishing. We have had some gentlemen from Manchester, and one from Southport, staying here, but they have only caught a few sprods and trout. It has been raining all day, and the salmon are coming up. If it keeps on and makes a flood, I expect there will be some good sport next week.—E. Dugdale.

### The Spey.

For the past few days anglers on the Spey have had very good sport. The weather on Thursday was stormy, with frequent showers of hail and snow. On the Aberlour section, Mr. Chalres Grant, Schoolhouse, killed a salmon weighing 21lb. On the same water Mr. Charles Hendry, Tillicoultry, caught a fish 24lb. weight, and Sergeant Jamieson secured a grilse weighing 6lb. On the Easter Elchies water, on the 7th inst., Mr. McKinnon, fisherman to the Hon. R. P. Bruce, M.P., killed three salmon. On the Inverfiddoch section, on the 7th, Mr. James Cumming, Craiglachie, killed a fish 15lb. weight, and on the 8th, one of 11lb. On the Aberlour House upper water, Mr. Thomas Fanning, fisherman to Mr. John Thomson, The Parsonage, Aberlour, on the 8th had a salmon of 19lb. weight, and, on the 14th, two salmon of 18lb. and 19lb. On the Rothes water, Mr. John Dallas, on the 13th, killed a salmon weighing 30lb. On the Arndilly water, on the 7th, Mr. P. A. Myburgh, Q.C., killed a salmon weighing 12lb ; Mr. Robert, Myburgh, a salmon of 27lb. ; Mr. George Sheach, fisherman, four fish, weighing respectively 25, 15, 9, and 6lb., and on the 8th, two salmon 14lb. and 23lb weight. On the Pilcroy Lodge water, on the 6th, Mr. Daun, gamekeeper, killed a fish 6½lb. weight ; Mr. Charles Cruickshanks, fisherman, had three salmon weighing 6½lb., 10½lb, and 30lb., and, on the 9th, Mr. Porter Huntly two grilse, 8lb. and 5lb. weight. On the Loggan water last week Messrs. Joseph Gillott and party killed five salmon weighing 15lb., 18lb., 18lb., 20lb., and 22¾lb. respectively ; on the same water, Mr. Watt, gamekeeper, on the 13th, killed two fish, and Mr. Stewart, fisherman, on the 14th, had a salmon 17lb. weight. On the Arkenway water, on the 1st, Capt. Haynes killed 12 trout weighing from 1lb. to 2½lb ; on the 3rd, a salmon 11lb. weight and a grilse of 6lb. ; on the 4th, 24 yellow trout ; on the 7th, 4 salmon weighing respectively 8lb., 16lb., 17lb., and 18lb., and 108 trout ; and on the 13th, three salmon weighing 10lb., 22lb., and 23lb., and 12 yellow trout and finnocks. On the Aberlour section, Mr. Thomas Morrison caught a grilse weighing 5lb, ; Mr. James Gordon 5 finnocks, 8 yellow trout, and a grilse ; Mr. John Laing, 5 finnocks, 1 yellow trout, and a grilse; Mr. John Tennent, three finnocks ; Mr. William Grant, 2 finnocks ; Mr. Charles Hendry, 2 yellow trout 4½lb. weight ; Mr. James Wilson, Edinburgh, 5 finnock, 2 yellow trout, and a salmon 12lb. weight ; Mr. John Hendry, Benrinne's Cottage, 11 finnocks ; Capt. McCowan, Aberlour, 12 yellow trout ; Mr. Lewis Inkson, 30 yellow trout. On the Rothes section, Mr. John Dallas landed a salmon weighing 30lb.—P. McG.

## The Tay and its Tributaries.

During the latter part of last week the weather was stormy, with frequent showers of rain. The following are reports of sport got on the Tay for the four days previous to the close of the rod-fishing on Friday, and from these it is evident that the last week has proved the most successful that has been experienced for many years. On Friday the river rose several feet, and was very unfavourable for fishing all forenoon, but it cleared up sufficiently in the afternoon to enable the fish to see the fly, and a good many fish were killed in the different beats. Large numbers of fish were secured from the bank, Mr. P. D. Malloch, Perth, being most successful, capturing ten fish, weighing respectively 25, 20, 19, 18, 17, 17, 14, 11, 9, and 8lb., being the best take of salmon caught from the bank for many years. No signs of disease have been observed either on the Upper or Lower waters. The following are details of the sport:—On Derculich water on Wednesday, the keeper caught a nice salmon of 15lb., and on Thursday a newly run fish of 22lb. On the Ballechin water on Wednesday, the keeper caught two salmon weighing 18lb. and 10lb. respectively; and on the same day, Mr. Walker, keeper, caught a salmon weighing 11lb. in the Findynate Water. These waters, as also Pitcastle—Mr. Guthrie Lornie's—have fished well during the season. On the Findynate, Cluny, Killiechassie, Castle Menzies, and Breadalbane Waters the takes have been disappointing. The river was very low for a long period, and although plenty of salmon were observed they would not take. Trout fishing was good throughout the season. On the Lyon, Loch, and Dochart, small tribularies of the Tay, the fishing was better than usual. Fishing on Dalguise Water for a short time on Thursday forenoon, Mr. Durrant-Steuart, of Dalguise, captured a salmon weighing 10lb. In another pool on the same water, Mr. David Hodge, Dundee, on the same day, killed a fine clear run salmon of 18lb. The rising of the river in the afternoon put a stop to the sport. On Murthly Water, on Friday, Mr. J. E. Millais killed five beautiful fish, and Mr. Gray made a similar capture on this water. Mechleour Water yielded five fish to Mr. Evan M'Gregor on Wednesday. On Cargill Water, on Thursday, a good number of fish were killed by the keepers at Drummour. On Thursday, eight fish were killed on the Stobhall Beat. On Taymouth water on Tuesday Mr. C. A. Murray and two friends killed the extraordinary number of twenty-eight salmon, weighing 470lb., the largest fish being 40lb. The fish on this day were rising in all directions in this water. Major Curtis and Mrs. McGlynn had two nice fish in Burnmouth Water; and Sir W. Elliot and Mr. Kelsall had five fish in Thistle Bridge Water on Tuesday. On Monday Mr. Field's party had sixteen fish and grilse in Cargill Water, and five fish and grilse in Burnmouth Water. On Tuesday, on Upper Cargill, Capt. Morris had twelve fish and grilse casting from the boat—the best day's sport for one rod this season. The whole of this capture consisted of very heavy fish. On the same day two gentlemen, casting in Stobhall Beat, had nineteen fish and grilse. On Wednesday three fish were killed at Cargill, and two at Burnmouth. The river was in bad order on Wednesday. On Thursday Mr. Panly and Mrs. Eastwood fished Cargill, and killed seven fish and grilse—all of heavy weight. Mr. Fletcher and another rod fished Stobhall, and had six fish and grilse. Mr. Paulon, Murthly, had a fish of 38lb. on the same beat. The river got in bad ply in the afternoon, owingto the heavy rains. On Friday Mr. Fletcher fished Cargill Water and killed seven heavy fish and three grilse. He had splendid sport for the few hours' fishing. Mr. Pauly, on Burnmouth Beat, had one fish and one grilse. On Monday Lord Stormont and party killed four beautiful salmon in the Red Gorton water. On Tuesday Sir William Elliot fished the Benchill water and had two fish, one of which was an excellent specimen, in capital condition, and weighed 42lb. On the 9th Sir William had two fish on the same water.—P. McG.

## Teme (Tenbury).

This stream, after the heavy rains, accompanied with snow, which fell in this district at the latter end of last week, has risen, and the water slightly coloured. There was no fishing done on Friday and Saturday, the weather being too rough. On Monday, the weather being fine, a gentleman visited the water with the green insect and took a few fish, and a few were caught with the worm. The water was tried on Tuesday by a gentleman, who had very bad luck, only taking two small grayling with the maggot. There has been but little doing in the Association waters this week. A few fish have been caught near Little Hereford with the willow. The Kyre, Rea, and Ledwyche are all slightly coloured, and there has been no fishing had in them this week.—Worcester.

## Teme (Ludlow).

The weather was so bad from wind, snow, and rain during the end of last week, that it was almost impossible to visit the waters. The rain which came down incessantly on Thursday caused all the streams to rise, but not to any considerable extent. By Monday they had cleared themselves, and it being a bright day, several fishermen visited the rivers, most of whom used the green insect; one gentleman secured four and a half brace of grayling from the Teme. On Tuesday a few nice fish were secured. An angler up the Corve caught two and a half brace of grayling on Tuesday. The Clun has risen slightly, and so has the Ony, both being rather stained. Nothing doing in the Ledwyche.—S. Ludlow.

## Teme (Worcestershire).

I promised to give some further instructions how to take the grayling in my last note. I dwelt upon the fly. I will now give my advice when using grubs, gentles, or worms—all of these baits are used with great success when the streams are slightly stained. A light cane rod, three joints or four, will do. Let it be 3ft. 6in. or even 4ft. each joint, with a fine top not too stiff, one that will give to the fish when hooked, though he be but a half-pounder. The same line as used for a fly-line will do, that is, a London patent, the gut as fine as can be, hook No. 10, short in the shank, the shot about 8in. or 10in. from the hook. When fishing with the gentle or worm upon a ford, I prefer fishing without a float. I cast my bait near about where I see or expect to find a fish, and the stream takes down the shot, dragging on the gravel. From the crop of my rod to the shots I keep a tight line. By that means I can feel the fish. I then slightly raise the point of my rod and strike the fish. Then if carefully played in the stream, you will soon be able to place your prize in your creel. The Teme is low and fine, and the grayling are on the fords. Mr. Russell, of Powick Mills, and myself tried the fly near Stanford, and we met with some capital sport. I furnished Mr. Russell with three flies, as it was his first turn with the grayling. He used the same flies all the day and landed 12 brace of grayling, returning 16 fish being under 8in. long. The best brace out of the four he kept was 1lb. 4oz. I landed 30 fish and kept 14, near the same size as Mr. R.'s. We kept close to the instructions I recommended in my last note to the Fishing Gazette. I am going with A. V. Holland to-morrow.—J. A. Griffin.

[Received too late for last week.—Ed.]

## Torridge (Torrington).

River now in good order for fishing. There was a flood on Monday, and scores of salmon were showing at the Weir. Lots of peal and salmon have been taken this week, mostly with the improved Devon bait. I fished the free water yesterday, and hooked six fish, and saved four, the largest, 2½lb. On Tuesday I fished four runs, and took two fish, 2¼lb. and 2½lb. Only another month left for fishing this season. Weather mild.—Practical Angler.

## The Trent (Nottingham).

The river still remains very low and clear, but salmon anglers have been busy during the week, especially at Kings Mill and Weston. On Monday five very good fish were caught with the worm inclusive of one (15½lb.) by Mr. R. West, of Nottingham. On Tuesday six were hooked, with the result that two were brought to bank. At Willington Mr. H. Coxon, of the town named, has taken a nice lot of chub, roach, and dace. Good barbel have been secured in "Fitchett's Hole." The members of the Northern St. George's Association celebrated their half-yearly dinner on Thursday evening at the Ram Hotel, and last night (Friday) the Wellingtonians held high festival.—The Man at the Clubs.

## Trent (Alrewas).

Since the last report the weather has been very cold, wind N.E., and few, if any, fishermen out, and no report has come to hand of anything worth noticing. At the time of writing, the weather has completely changed, with a warm south-westerly wind, and fish ought to be freely on the move, particularly grayling.—Anon.

## Trent (Newark).

Sport during the past week has been of such a meagre character that it is scarcely worth paper to report it. A few roach and dace have been killed with cockspurs and gentles, and a few bream with tail end of lob. A very few chub have been had, and an odd jack or two is about the extent of the sport in this district, so far as I can learn. Water is very low and clear. I had a walk a few miles down the river to-day, and tried a few likely places, spinning for jack; but not a single run did I get. I saw two or three anglers about, and on asking them if they could account for the bad sport lately, one said, "Water too low and clear"; another, "The vast lot of flannel weed on the bottom"; another said, "Wind has been shifting about in all points of the compass this last few days." And as for myself, I am inclined to think that all three reasons combined have had something to do with it. One of the Newark Angling Clubs had a fishing contest last week (Saturday) in the Witham, and according to the report in our local paper, it produced a rather startling result, as far as the weighing in was concerned. The second prize was won with thirty-seven fish, producing the extraordinary total of 1lb. 8oz. for the lot. Then we had fifteen fish weighing 12oz., thirteen fish 6¾oz., fifteen fish 2¾oz., thirteen fish 1½oz., fourteen fish weighing 1oz. the lot, and so on *ad infinitum*. Shade of Izaak Walton! Fancy fourteen fish weighing 1oz.! Talk about "Brougham's babies"; why, at that rate a microscope will be a necessary article in an angler's outfit.—The Trent Otter.

## Walton-on-Thames.

The fishermen have been very little engaged this week, consequently few fish taken, although we have had several good days for fishing. A gentleman, with Dick Watford, caught a nice lot of barbel last evening in a very short time. The perch fishing is getting very good here: a gentleman from the Swan Hotel killed a good dish yesterday with live bait. The voracity of the perch is surprising—two of them, under ½lb. in weight, were taken with good-sized gudgeons upon a pike paternoster. Both pike and perch fishing will improve now, and more or less sport with live bait may be relied upon. The proprietor of the Swan Hotel has introduced a very killing kind of perch tackle for use with a float; anglers coming to Walton should call to see it and take a pattern, for it is a capital method of catching these fish, and a great improvement upon the tackle generally used. As I write, I hear of another good take of barbel in the deeps, but have no details.—Goldfinch.

P.S.—I hear the proprietor of the Swan Hotel, Walton, has arranged to provide anglers with live bait, which will save them a lot of trouble, as they can now get gudgeon, dace, or minnows fresh on arrival.

## The Wharfe (Yorkshire).

I am pleased to be able to report rather better news this week, the cold frosty nights having destroyed all the worthless midges and brought the grayling on the feed. I had a day upon the Wharfe last Saturday, and began the legitimate grayling season auspiciously; I killed nine beauties, hooked another six which escaped, got smashed twice and caught six trout besides, which, of course, were promptly returned unharmed; this piece of good sport was positively refreshing after the awful experiences of recent date. I regret very much to have to announce the death of another fine old sportsman, I allude to Mr. Ed. Bond, of Burley House, Leeds, who passed away on the evening of Tuesday, Oct. 14th; his name has far more than a mere local interest, as hundreds of anglers can testify, and his name will be familiar to many more who have read that most charming of books "My Life as an Angler," written by Mr. Henderson, of Durham. My copy of that work was presented to me by Mr. Bond, and very much more do I now value it on that account. I can only briefly allude to his death to-day owing to want of time, but hope to give an extended obituary notice in your next issue.—Francis M. Walbran.

## Wye and Derwent.

Both of the above rivers have been in capital order for grayling fly-fishing the whole of the past week, and baskets from four to nine brace per angler have been daily made, chiefly with bumbles, ash dun, furnace, and lean flies. Pike have been well on the feed lately, as many as four and upwards have been daily killed, chiefly by trolling with small dace and gudgeons. There has also been a trout of 4lb. killed very lately with the maggot in Mr. Lowe's field near the Lea in the Derwent. The fish was in splendid condition, and is being preserved. The bottom-fishers have killed some fine grayling, chub, perch, roach, and dace, with maggots and cockspur worms, by swimming the bait in the Nottingham style. Weather to-night (Thursday) looks very black with thunder-clouds hanging all around us. Rain expected.—Geo. Jas. Eaton.

## CLOSE OF THE ROD FISHING IN THE FORTH DISTRICT.

Wednesday night saw the close of the rod fishing season in the river Forth and tributaries, which has, on the whole, hardly come up to what was expected when the nets were taken off on the 25th of August. Although there were plenty of fish in the lower waters, the long-protracted drought in the end of August and part of September, kept the river very low, and prevented the fish from getting forward until the best of the season was over. The late heavy rains, however, were the means of flooding the Forth to the extent of several feet, which allowed a large number of fish to get to the upper waters, where some good sport has been obtained during the last few days. The following are some of the most successful anglers, along with their several catches: On Monday, Mr. James Mitchell, Stirling, had a salmon of 30lb. from the Forth above Stirling; Mr. Crockart, Blairgowrie, and Mr. Crockart, Stirling, landed a salmon of 19lb., and two grilse; Major Hannay, Stirling Castle, had a salmon of 28lb.; and Mr. Xie, Bridge of Allan, one of 15lb.; Captain Bribber, Stirling Castle, Mr. Campbell, Lorne Inn, Sterling; Mr. Murray, Stirling; and Lindsay, Sterling, had each a grilse from the same water. On the same day, Mr. Bayne, joiner, Keir, landed a beauty of 30lb. weight from the Teith near Keir. On Tuesday, the Messrs. Crockart had a grilse from the Forth above Stirling; Mr. Campbell, one grilse; Mr. Lindsay, a salmon of 16lb.; and Mr. Hadaway, Glasgow, one of 28lb. On Tuesday, Mr. Scotland, Airdrie, had a salmon of 21lb.; Mr. Campbell, a grilse of 5lb.; and Mr. Halliday, Stirling, from the Teith at Blair-Drummond, a fine salmon of 30lb. The largest fish caught in the district for many years was got by Mr. Halliday from the Teith at Blair-Drummond on Friday last, and weighed 44lb. In addition to this immense fish, the same veteran angler has caught salmon of the following weights during the season, viz.:—37lb., 35lb., 33lb., and two of 32lb., besides others of less weight. Several of the fish are now getting very lean and lanky; but we are glad to learn that there is no appearance of any disease as yet, although there were symptoms of it by this time last year.—P. McG.

**Angling Competition.**—The autumn competition of the Coldstream (Berwickshire) Angling Club took place on Thursday, fishing being confined to the Tweed. There was a good muster of competitors, but the day being unfavourable for good sport all the baskets were light, the heaviest not exceeding 4lb. The following were the prize-winners:—1st, James Lamb, 3lb. 8oz.; 2nd, John Guthrie; 3rd, George Guthrie; 4th, John Batten; 5th, John Tait; 6th, James Edmond. Special Prizes—1st, John Guthrie; 2nd, James Edmond. Extra Prizes—1st, John Guthrie; 2nd, J. Lamb; 3rd, George Guthrie; 4th, J. Tait. The extra prizes were presented by Mr John Collingwood, Cornhill House.

## AUTUMN FLIES FOR THE YORKSHIRE STREAMS.

By Francis M. Walbran.

There are many anglers, and enthusiasts, too, who put aside their rods at the end of August and devote the remainder of the year to other field sports, never looking at them again until the hedges are once more bursting into leaf and Mother Earth is once more donning her new season's garment of verdant green; but, as far as my experience goes, September and October are generally capital months for the fly fisher, and during the first named of them there is nothing more attractive in the way of sport than to make up a really good dish of trout and grayling mingled. What a splendid contrast these two handsome fish make when laid side by side, and how gratified you feel at the exclamations of your friends as you turn them out from your panniers at the conclusion of your day's sport.

But September is now past and gone, so we must allow the trout to have a rest, after a season during which they have had it all their own way, and now comes the time when the happy resident upon the banks of a grayling stream must look out his finest casts and run over his stock of flies specially adapted for this class of angling. Our earnest hope is that the fates may be propitious, and that having failed to score successfully with the trout, we may be able to take our revenge out of the grayling.

On the rivers Yore and Wharfe almost all the local fishermen employ single horsehair for fly fishing, and if you can only obtain it round, clear, and strong there is certainly nothing to beat it for grayling fishing. This fish when hooked indulges in such a variety of fantastic gyrations that a cast made from finely-drawn gut, after taking a fish or two, becomes so frayed and ravelled that it is more conspicuous than hair, to say nothing about the danger of breakage at the frayed portion. One of the best anglers in the county recently told me that he experienced such difficulty in procuring really good hair that he was obliged to have recourse to drawn gut. From September to the end of the year fly fishing for grayling may be practiced for a few hours in the middle of the day, providing the weather and water are favourable; perhaps the best plan being to "swim the worm" or maggot in the early part of the morning, put on fly as soon as you see the fish stir after surface food, and then about three o'clock in the afternoon have recourse again to worm or the "gardenia," as our worthy Editor euphoniously terms it. A dozen patterns of flies are amply sufficient, and in the subsequent list I have selected four winged patterns (which must always be used as *top* droppers) and eight spiders, which may be relied on for either the Yore or Wharfe.

### 1st.—Dark Olive Bloa.

Wings: Inside of water hen's wing.
Body: Lead-coloured silk.
Legs: Dark olive or black hackle.
Tail: Three small rabbit's whiskers.

This fly is one of Jackson's patterns, and if dressed small upon a No. 0 hook is a capital grayling fly. I have used it upon cold, dull autumn days with great success.

### 2nd.—The Apple-Green Dun.

Wings: Inside of waterhen's wing.
Body: Gosling green silk, waxed.
Legs: Grizzled hackle.
Tail: Three small rabbit's whiskers.

This fly is a great favourite upon the Derbyshire Wye, and is taken well in September by both trout and grayling. I obtained the pattern from Hensburg, the river watcher at Bakewell, and since then have used it successfully upon both Yore and Wharfe.

### 3rd.—The House Fly.

Wings: Lark's quill feather.
Body: Light-brown silk, ribbed with drab ostrich herl.
Legs: Grizzled hackle.

During October this fly gets weak and drops on the water in considerable numbers; the grayling then take them with avidity.

### 4th.—Small Olive Bloa.

Wings: Starling's quill feather, stained in onion dye.
Bony: Yellow silk, waxed.
Legs: Olive stained hackle.
Tail: Two strands of the same.

Another of Jackson's patterns, and a good killer on likely days to the end of the season. Judson's olive dye, *largely diluted*, will answer very well for staining the feather and hackles.

### 5th.—The Small Willow Fly.

Body: Light brown silk and a little mole's fur, hackled with feather from inside a snipe's wing or a small grizzled hackle.

This fly answers best on a dull, mizzling sort of day, and is a sure killer on eddying flats fringed with willow trees, from frequenting which this fly obtains its name.

### 6th.—Dark Grey Midge.

Body: Olive-coloured silk, and hackled with a dark grey partridge feather. Hook No. 0.

According to Jackson, this fly is one of the last out upon the water. He mentions in his work that in the year 1851, on December 16th and 17th, he killed eleven large grayling, mostly with this fly.

### 7th.—The Blue Midge.

Body: Lead-coloured silk, hackled with feather from a landrail's *back*. Hook No. 0.

Taken on the same class of days as mentioned suitable for No. 5.

### 8th.—The Peacock Blue.

Body: Gosling green silk, ribbed with gold wire, very finely hackled with a feather from the breast of a love bird. Hook No. 0.

The above is a fancy title that I have given to a pattern given to me many years ago by an angler who is now no more. He used to kill a great many grayling with it in the autumn, and, when I have read accounts in this paper about the good catches made by the "green insect," I used to think that it must be the same thing as my dead friend's pattern, but it appears from recent correspondence that it is not. I can vouch, however, for its killing properties, and think that it must be taken for some of the small larvæ or beetles bred among the decaying weeds and leaves of autumn. It must be fished at point, as it is almost invariably taken under water.

### 9th.—The Smoke Fly.

Body: Bronzy-green peacock's herl, with an Andalusian cock's hackle wound neatly over it. Hook No. 0.

This is a standard Wharfedale fly. Some of the local anglers dress it from the fine feather taken from a chicken's ruff; but I prefer the above pattern, and one of the most practised fly fishers on the lower Wharfe confirms my opinion. It really is identical with the Derbyshire "Little Chap."

### 10th.—Orange Partridge.

Body: Orange silk, waxed, and hackled with the brown mottled feather of a partridge.

Although this appears, at first sight, the most plain and insignificant pattern that I have given, I am by no means sure that it is not the best. There are many first-rate anglers in Wharfedale who *always* have their favourite "Orange Partridge" on the cast, and, considering that it is a fairly correct general imitation of all the mottled winged browns, I am not surprised at their partiality to this pattern; anyhow, it always kills its share of fish in a season's fishing on either Wharfe or Yore.

### 11th.—The Cinnamon Fly.

Body: Dull orange-coloured silk, with a little mohair of the same shade worked in, hackled with a feather from a brown owl or a landrail.

As this fly comes out strongly on fine September evenings just before dusk, and being rather a large insect, it may be dressed on a No. 1 hook, which is a size larger than is usually employed on the Wharfe, and rather more hackle may also be used. It also takes well on wet, windy days. I prefer the owl's feather myself.

### 12th.—The Honey-dun Bumble.

Body: Peacock's herl, ribbed with orange floss silk, yellow tying silk, with a pure honey-dun hen's hackle wrapped neatly on.

This list would certainly have not been complete without this excellent pattern. From September to the close of the season no better fly can be thrown for grayling. The variety of bumbles that can be formed from different combinations of silks, herl, and hackles is almost endless; but, in my opinion, the above and No. 9 are quite enough for any river.

In conclusion, I may remark that, in order to fish successfully for grayling, your flies must be dressed small, on the finest of drawn gut or single hair, with a cast to match. And a last word of advice: never be in a hurry to land your fish when hooked, as a grayling's mouth is so excessively tender, that if you handle him at all roughly, the hold is almost certain to give way. Many a good fish have I lost through neglect of this precaution, and many have been the anathemas that I have showered upon my own head afterwards. I find the best plan to adopt is the following:—As soon as ever you hook your fish, let him take out as much line as he likes—the more the better, as the weight of it is bound to tell in the end; then gradually bring him down stream into a favourable landing-place and net him. If you follow this plan, you will be surprised at the few fish that escape.

With the twelve patterns that I have given above, the angler need not fear to visit any of the Yorkshire rivers, and, if he finds his basket empty at the finish of the day's sport, he may at once conclude one of two things—viz., either that the grayling are not in the humour to feed at all, or that the fault rests with himself.

[Dr. Brunton, in his "Essay on Grayling Fishing," mentions that it is a good plan in fly-fishing for grayling to put about 8in. of fine round elastic between the gut cast and the reel-line. The Doctor has tried this plan, and found it answer admirably.—Ed.]

## NOTES FROM BOWLKER'S "ART OF ANGLING."

(From the Edition of 1814.)

"Remember that the wit and invention of man were given for greater purposes than to ensnare silly fish, and that, however delightful angling may appear, it ceases to be innocent when used otherwise than as a mere recreation." [From Introduction.]

Bowlker's commencement of his work reads like a quotation from the Book of Common Prayer:—"Whoever would become a complete angler, let him use all natural or artificial baits in such seasons, at such times, places, and waters as Nature hath provided and ordained them, and as reason must best inform him."

*Bowlker and the Salmon Disease.*—"When salmon have spawned, they grow out of season, are weak and flaggy, break out in filthy scabs all over their bodies, loathsome to the sight, and very unwholesome to feed on.

*Grasshopper Fishing for Grayling.*—Foster, in his "Scientific Angler," says Wheatley invented this style of fishing, but it was evidently known to Bowlker. "He is to be taken with a cabbage-grub, grasshopper, or cod-bait, either natural or artificial. This method of fishing is to sink and draw as the hook is leaded upon the shank, either for the natural or artificial, and might be used in standing waters, as well as bubbles, curls, or streams, being a very killing way."

*On Snaring Pike.*—"When you have spied a Pike, fix your eyes steadfastly upon him, without looking off him, which will make him lie the stiller. . . . The keeping your eye as much as you can on the pike will cause him to look on you the more, and mind the gin less."

*Bowlker on the Roach.*—"The Roach is a leather-mouthed fish, *has no teeth* (!); his eyes, fins, and tail are of a red colour, and is a very bony fish. The roach is a healthful fish, not subject to any disease, from whence comes the proverb, '*As sound as a Roach.*' . . . There is another excellent bait for roach in the winter, which is a white worm with a red head, about the size of a cod-bait or caddis, to be found after the plough tail, upon heath or sandy ground, or turning up the greensward of fresh land. I, myself, have taken with this bait, in the river Trent, thirty pounds weight in a morning. . . . When you use this bait, throw into the place you intend to fish stewed malt or fresh grains."

## NOTICES OF FISHING TACKLE, &c.

Mr. Henry Richardson, who carries on business at the sign of Ye Plucky Perch, 77, Finsbury-pavement, London, called the other day to show us a new winch-fitting patented by a firm at Reading, for which he is the London agent. It has the great merit of simplicity: The brass ring next the butt is fastened to a spring inside the rod, which presses it towards the other ring. To fix the winch you press back the lower ring, fix the winch under both rings, and the spring then presses the lower ring forward over the winch-plate, and holds it firmly. The only suggestion we have to make is that the spiral spring inside the rod should be made rust-proof. Our readers who may be in the neighbourhood of Moorgate-street Station should pay a visit to Mr. Richardson's shop, and country anglers would do well to write for his price list.

## USEFUL FISHING KNOTS.

Several of our readers having asked us to give an illustration of the method we recommend for fastening gut together and putting on the dropper flies, we have pleasure in doing so.

Fig. 1.—In this figure the single knots, A and B, represent the ordinary, and, as we think, by far the best manner of fastening lengths of gut together, whether for traces, fly casts, or float or ledger lines. It is so simple that the illustration needs but little explanation. The end of the strand A is knotted once over the strand B, and the end of the strand B is knotted once over the strand A. The knots being pulled quite tight the strands are pulled, and the knots slide together; but if you wish to fasten a dropper fly to the collar, make a double knot in the end of the gut 3 inches from the fly, and before you pull the single knots together insert the double knot between the strands as shown in the drawing, and then pull the knots together. When all is tight the ends of gut are cut off neatly close to the knots (if the latter is very fine about 1-16th of an inch should be left). It will be seen that the dropper stands out well at right-angles to the line. In making knots on gut the latter should *always be well soaked in water or else held in the mouth for some time until soft.* Fig. 1 represents a fastening known to most anglers of any experience; but we give it, of course, for the benefit of those who do not know it.

Fig. 1.

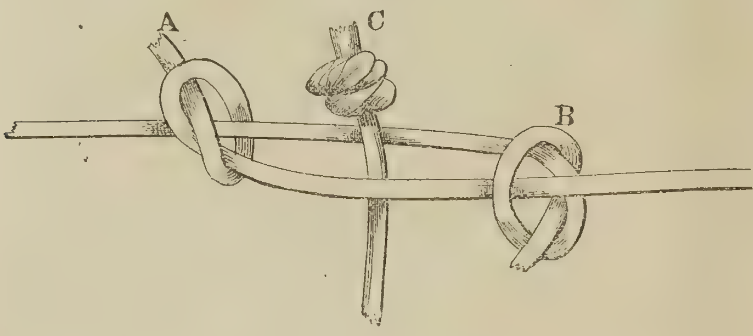

Fig. 2 is an illustration of a knot which we use for fastening hooks on gut to a gut line when we use a second hook above the bottom one, or when we want to put a dropper on to very fine gut. It is an idea of our own, and we have never seen it illustrated or described; but from experience we can recommend our readers to give it a trial. It is extremely strong, and as only two single knots are employed, it is the neatest that can be employed. To make it, put a single knot B in the middle of a strand of the gut line A, then pass the end of the hook, or fly length of gut C, through the knot B, and make a single knot in it C including the gut line A, pull the knots tight, first one and then the other, and then pull the two knots so that C slides down to B, and cut off the projecting end. Mr. Tod would, we think, find this an excellent plan for making his loop to get the double gut on which he fastens his flies as described last week, as two single knots must be neater than when the gut is doubled before the knot is made—as will be seen at once if a rather coarse piece of string is used to make the experiment.

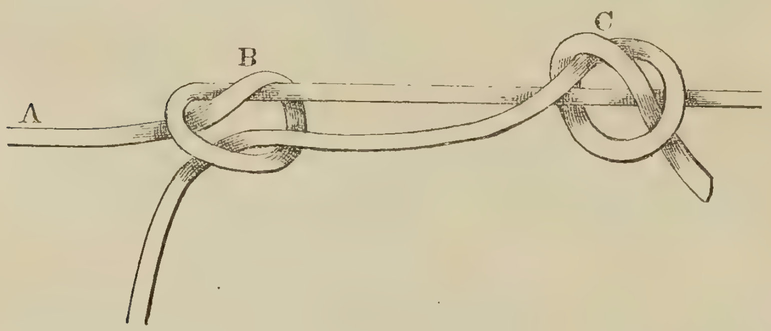
Fig. 2.



## SALMON ANGLING ON THE TWEED.

The success which attended the efforts of the salmon angler last week has, we are glad to say, continued in a very marked degree. The weather became unsettled on Friday last, and rain falling heavily both the Tweed and Teviot came down in flood to the extent of 1½ft. This rise brought up a large number of salmon from the sea, and now all the pools in the middle and upper reaches of the rivers are pretty well stocked with clean-run fish. Trout anglers, too, have had a fair good time of it, many baskets of 3½lb. to 8½lb. having been killed. The following are the salmon takes since our last report:—Thursday. Oct. 9: On the Mertoun water, the Hon. H. Brougham, London, killed four salmon, three of which weighed 16lb., 16lb., and 18lb. Friday, Oct. 10: Hon. H. Brougham, on the above water, four salmon—18lb., 20lb., 23lb., and 25lb. Saturday, Oct. 11: The river came down to-day, consequently angling was somewhat interfered with. On the Ednam House water Mr. James Gibson had one of 20lb.; on the Carham water Mr. A. Hay Gordon, Liverpool, had two fish—one of 16lb. and one of 19lb.—while Mr. Gosling had one of 22lb.; on Birgham Dub Mr. A. Denison had two salmon, the heaviest being 26lb. Monday, Oct. 13: On the Ednam House upper water Mr. Drummond had good sport, killing four fish—5lb., 9lb., 16lb., and 18lb.; on the Sprouston water Mr. Balfour, Paradise, had one of 17lb. Tuesday, Oct. 14: On the Carham water Mr. Gordon had a grilse of 6lb.; on the Ednam House lower water Mr. Drummond killed two salmon, weighing 8lb. and 9lb. respectively. Wednesday, Oct. 15: Captain Fairfax, R.N. (H.M.S. *Monarch*), Ravenswood, one fish of 29lb. On the Mertoun water, the Hon. H. Brougham, three fish, 24lb., 25lb., and 27lb. On the Carham water, Mr. A. Hay Gordon had four, 6lb., 10lb., 11lb., and 12lb. respectively. On the Ednam House water, Mr. Drummond two, 21lb. and 22lb.; Mr. Whatman, Paradise House, Kelso, one of 20lb. on the Sprouston water; and Mr. Balfour, on the same water, killed five fish, two of 9lb. each, and three of 18lb. each. On the Earl of Home's water, Mr. Jas. Moffat had good sport, two of his fish weighing 26lb. and 38lb., the latter being the heaviest salmon killed during the back-end season so far as it has gone.—W. Maxwheel, Kelso.

# CLUB REPORTS.

### AMICABLE BROTHERS ANGLING SOCIETY.

On the 12th inst., Mr. Moore one jack from the Lea; Mr. Partrick, roach. The members are requested to attend on Wednesday next, October 22nd, to make the final arrangements respecting the roaming match to take place in the river Lea, on the 26th inst., from the Fish and Eels to the gate above the Black Pool, for fourteen prizes.—J. Worledge, sec.

### ANGLERS' BENEVOLENT SOCIETY.

Since my last report, I beg to acknowledge with thanks the receipt of 5s. donation from Mr. Towell, of Charing-cross.—R. Ghurney, sec.

### BATTERSEA FRIENDLY ANGLING CLUB.

On October 12th, Mr. T. Smith, fishing at Weybridge, weighed in a nice brace of jack, 4lb. 3oz. and 5lb. 2¼oz.; also a nice chub going 3lb 12oz. Mr. H. Ford, a nice show of dace and roach from Staines. On October 19th, a pegged-down match at Windsor. On Tuesday last, the members of the Clapham Junction Angling Club paid our members a return visit, when a most enjoyable evening was spent. Chairman, Mr. G. Mumford; vice, H. Martin. Mr. J. Dodds officiated at the piano. A few of the performers' names are appended. According to the list of talent present, if everybody had sung the meeting would have broken up on Thursday morning Messrs. A. Blackburn, H. Martin, R. Welman, W. Johnson, C. Hedges, Moore, E. Heighton, and others followed until a late hour.—A. T. Sampson, hon sec.

### BROMPTON ANGLING SOCIETY.

Very few members have weighed in any fish lately. On the 5th, Mr. E. Saunders, bream, and C. Saunders, bream and jack; on the 12th, Mr. E. Saunders, jack. Members are requested to attend next Wednesday, 22nd, to decide for the day's outing.—W. Dutton, sec.

### CITY OF LONDON ANGLING SOCIETY.

A few of our members fished a pegged-down match on the 5th inst., in the Grand Junction Canal, at Cowley, only one prize being taken; the fortunate member was Mr. Plumstead, sen. We all got fish, but returned them to their native element to grow larger. Mr. Nitz weighed in bream from Pulborough. On the 12th inst., only three members went out, two weighing in—viz., Mr. Nitz, a small jack, from Pulborough, 2lb. 5oz.; and Mr. Castell, roach, chub, and gudgeon, from Burnt Mill, 2lb.—Cas.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting was held on Monday last, Mr. H. J. Tibbatts in the chair. The minutes of the preceding meeting were signed, and general business transacted. In answer to the question as to an "outing," the secretary stated that it had been thought prudent to postpone such a meeting till the weather promised better for jack fishing, as the waters at St. Margaret's would be in better trim later on when the weeds were down. Mr. Tregenza had a small jack from these waters on the preceding Saturday, and Mr. G. Colls weighed in three nice jack and barbel from Staines. A most interesting leading article appeared in the *Morning Post* of Thursday last specially relating to the river Lea. The writer describes it as containing fish "almost beyond belief," and that "there is no better river in England for bottom fishing than the river Lea." But the purport of the leader is to draw attention to the just punishments awarded to the two poachers, "Brandy Hearne" and Tyrrell, the former £5 fine or two months, and an additional fine of £5 for assaulting T. Verdun, the water bailiff, through whose efforts the poachers were captured. I wrote you of this capture when it occurred a few weeks ago, and it is very gratifying to notice so important an organ as the *Morning Post* writing down the river poachers of the Lea. We are well "on" the poachers; would that we were as well "on" the "polluters." "Receivers" are in all cases considered as bad as the thieves. We are on the track of some wholesale receivers of the fish from the "Lea." Although we rent "preserved waters" on this river, still there are many "fishey spots" in the open river known and frequented by several of our members, and for them, as well as for the general body of brother anglers, the Clapton Angling Society has done, and will continue to do, good service in the preservation of the fish of the Lea.—Henry Howse, hon. sec.

### GLOBE ANGLING SOCIETY.

The greater portion of our members were out on the 12th inst., but owing to the severity of the weather their sport was very limited. The following are those most successful:—Messrs. W. Brown, one jack 3lb. 13oz., one chub 1lb., roach 8oz.; G. Brown, one jack 2lb. 8oz., roach 1lb.; H. Lake, one bream 1lb. 11oz., and 6lb. of splendid roach.; W. Whatcott, 6lb. 13oz. of roach of the same description, dace 5oz.; F. Lawrence, roach and dace 1lb. Mr. Alexander Payne was unanimously elected a member on our last meeting night, and another gentleman proposed. Our next smoking concert will take place on Wednesday evening next, the 22nd inst. Chair taken at 8.30 p.m.—J. J. Holmes, sec.

### GOLDEN BARBEL.

On the 5th inst. Mr. Green had some nice roach from the Thames; Mr. Chapman exhibited chub, roach, and dace from the Colne, some of the dace weighing 8oz. each: Mr. Hall had roach from the Arun. On the 7th inst. Messrs. Stoner and J. J. Jones had a nice lot of roach, chub, and dace from the Thames; Mr. F. Kemp and Friend Clarke visited the tidal water, and managed to get 28lb. of roach and dace. On the 12th inst. Mr. Green had roach from the Thames, and Mr. Chapman chub and perch from the Colne. On the 14th inst. Mr. J. J. Jones had some roach from the Colne. Notice to those members who were unable to attend on the 14th inst.: That the next competition will take place at Windsor on the 26th inst. Members wishing to compete are requested to send in their names to Mr. J. Roach.—Pixie.

### GREENWICH ANGLING SOCIETY.

At our usual meeting last Thursday week Mr. H. Ware weighed in some splendid perch, and Mr. E. Eldridge a jack. Members are requested to attend more regularly. —J. Ware.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening, at the Mason's Hall Tavern, Mason's Avenue, Basinghall-street, Capt. Alfred in the chair. The minutes of the last meeting were read and confirmed, and Mr. A. F. Meaden was unanimously elected a member of the society. A notice was read from the Central Association, calling a special general meeting of the delegates for Friday evening next. Dr. Lloyd read a very admirable paper entitled "Angling as a Sport," for which, on the motion of Mr. Chambers, seconded by Mr. Bentley, a hearty vote of thanks was unanimously accorded to him. "The Health of the Visitors," proposed in flattering terms by the chairman, was coupled with the name of Mr. Short, of the Clapton Angling Society, a frequent visitor to the Gresham, who made a suitable reply. Notwithstanding the unfavourable state of the water and weather, some very good fish were shown for the roach competition, Mr. Thomas obtaining 1st prize with a remarkably good tray; this gentleman also exhibited a very fine catch of dace. The 2nd prize was taken by Mr. King, of Windsor, who weighed in a very handsome take. The healths of the successful anglers were duly proposed and responded to. During the later portion of the evening the duties of the chair were undertaken by Mr. Parker, to whom and Capt. Alfred a vote of thanks having been passed, the meeting, which was an exceedingly well-attended one, was closed in the usual manner.—H.

### GREAT YARMOUTH PISCATORIAL SOCIETY.

A special meeting was held on the 14th inst., the chair being taken by Capt. Blake, vice-president ; vice, Mr. C. K. Lamb. The first business consisted of arranging for the finishing competition of the season for bottom fishing, which it was finally arranged should be on Thursday, the 30th inst., three prizes being in abeyance, but which was supplemented by Mr. Bunn, the successful competitor in the last, offering the society a prize, which, it is needless to say, was duly accepted ; likewise the offer of £1 1s. for fishing tackle, by the vice-president, for jack fishing in a contest in November. The next business was the secretary's request that a committee be appointed to assist him in checking all accounts, &c., belonging to the society, and to make certain alterations in the matter of receipts and payments in future. Capt. Blake made the following proposition, which was duly seconded and unanimously carried :—That, in consequence of the important responsibility this society owes to the various subscribers to the Heigham Sounds Fund, and to the members of the society who have paid this year's subscriptions, the following gentlemen to be forthwith appointed a committee of inspection to check all monies, &c., passing through the hands of the treasurer and secretary, and to have full power to collect all monies now due to the Fund or society, reporting the result of their labours to the society in general on any meeting of the society. The following gentlemen were duly appointed :—Messrs. C. K. Lamb, Barrett, C. H. Harrison, Pretty, Lark, and secretary. Three of the above to constitute a quorum on any occasion it may be requisite. The secretary also called attention to the fact that perch in a great measure prefer one of their own specie to other food, as one of 3in. in length was found in one caught by Mr. Hutchinson at Fritton, weighing 1¼lb., which makes the second report of such an occurrence, the other occurring in front of Cantley red house. It seems strange, because at Fritton there are roach, rudd, and gudgeon, and it clearly shows the bait that should be used for large perch.—J. Lark, sec.

### HIGHBURY ANGLING SOCIETY.

During the last two or three weeks the members of this society have well sustained their reputation in producing some very excellent specimen fish from various waters, and among the most prominent may be mentioned Mr. Frank Temple, Mr. Devonshire, Mr. Lewis, Mr. Howell, jun., Mr. Edwards, Mr. Anthony, Mr. Champ, Mr. McDermott, Mr. K. Middleton, Mr. Shipley, Mr. White, Mr. Higley, Mr. E. Wheatley, Mr. C. Otway, and Mr. C. Rose. We compete for twelve prizes on the 19th inst. from the Thames, and a large muster intend going out.—J. E. Wheatley, sec.

### IZAAK WALTON ANGLING SOCIETY.

Two special prizes were fished for on the 12th inst. in the Stort, at Burnt Mill, Mr. R. Perrin taking the first and Mr. B. Crook the second. The two special prizes, given by Messrs. G. Rolt and G. Wood, are to be fished for on Wednesday next, at Tottenham. For particulars see last week's issue of the Fishing Gazette. Mr. G. Wood had a tray of nice roach from the Lea on the 15th inst.—H. B.

### LINCOLN ANGLING SOCIETY.

Our members went out on the 12th inst., and a pretty good show of roach and bream were brought in, the principal best angler being Mr. Sheen. Weybridge was the place selected.—H. Bingle, sec.

### LIVERPOOL ANGLING ASSOCIATION.

We are now located at the Canton Hotel, 14, Victoria-street, Liverpool, where all letters and communications must in future be addressed. When the final moment of parting from our birthplace came, it brought an amount of keen regret to the hearts of those who for five years had made the Strawberry Hotel their resort that could not have been credited. Here we had passed our infancy ; here we had grown to manhood ; here we had met on numberless pleasant occasions ; and here we had grown to maturity and strength. What wonder, then, that to a good few the wrench of severance was in a measure painful ? And although Mr. W. Jones was at times a little erratic and perverse, he had a kind heart, and this was often and often displayed—to the writer more especially. And his good wishes and help were invariably with his children, as I may term the members of the Liverpool Angling Association, and he was ever ready to sacrifice his own interests for the good of the cause. He is no mean angler himself, and has more than once taken high honours ; and his better half, too—a help meet for him and the pastime he loves so well—was always eager and willing to make each one as comfortable as possible, and her generosity was never failing. My warmest thanks are due to Mrs. Jones, and I give them freely and truthfully. And Miss Kate—what can I say about her ? At times disdainful, but in the main attractive and lovable, sometimes pouting with her rosebud of a mouth, but mostly merry and gay. Farewell, Strawberry Hotel ; many are the happy nights I have passed under its roof during the last six years ; sorry am I that necessity compels us to abandon thy time-honoured surroundings. But I shall never forget thee and those I have met within thy walls, and memory will ever cherish a fond and green remembrance of many pleasant and social gatherings under thy roof. Members, remember 4.15 prompt on Wednesday afternoon next, the 23rd, at Lime-street Station.—R. Woolfall, hon. sec.

### THE NEWARK PISCATORIAL SOCIETY.

On Saturday afternoon the members of this association held a special competition in the Witham, at Bennington, for a handsome prize, kindly given by Mr. James Wragg, of the Queen's Head Inn, Scotland-street, Sheffield, with a view of promoting the interests of the "gentle art" in Newark. Twenty-seven competitors, members of the association and those who had fished in Mr. Wragg's matches during the last three years' availed themselves of the opportunity of competing for the valuable prize, supplemented by various minor prizes. Excepting the winner, the "takes" of fish ran small, minnows being predominant in most of the catches weighed in.

[Fancy minnows being allowed to weigh in !—Ed.]

### THE PISCATORIAL SOCIETY.

The Shentonian or Thames Pike Competition of this society took place on Monday last, and it certainly proved to be one of the most popular competitions of the year. The spacious room was well filled with members, and it was particularly remarked that several were present who rarely attend. There were also several visitors. Amongst the members present were Messrs. Gillatt, Lemann, Goodger, Meyer, Jesse, Hodson, Huggett, Perelli Rocco, Booker, Bennett, Sparrow, Blundell, H. B. Brown, Fennings, Clegg, C. C. Blunden, H. H. Brown, Attwell, Russell, Butler, Batt, Bird, Adlington, Arter, Gray, Lander (hon. sec.), Foreman, Harden, Pattisson, Wheatstone, Robinson, Dr. Brimton, Dr. Coates, Rev. G. Sumner, &c. Amongst the visitors were Messrs. Watson, Aldridge, &c. Messrs. Lemann was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed. Mr. Lecluse has weighed in one jack during the past week from Goring, 8lb. Messrs. Norman, Harrisson, and H. B. Brown have weighed in 32lb. 10oz. of roach from Deeping St. James, all taken with artificial fly, each fish 6oz. and over. Mr. Brown explained on behalf of himself and Mr. Harrisson that the Welland was a very prolific river, and abundance of good roach therein. Up to the present time the artificial fly has been the most successful of the baits used this season. The accommodation was good and the charges moderate. Mr. Perelli Rocco kindly announced his intention of lending a piano for the evening of the supper, and hoped that Mr. King would attend as accompanyist. The chairman proposed, and Mr. Huggett seconded, a vote of thanks to Mr. Rocco for his kindness, which was unanimously responded to with cheers and wishes for his better health. Mr. Meyer, fishing at Staines with Hone on Saturday last, took eight pike. He had nine runs, and secured eight fish, the largest nearly 6lb., and two others nearly 5lb. each, and was congratulated upon taking eight pike from the Thames for a day's fishing. He also took some barbel, but they were small, and the cool weather seemed to have taken all the fight out of them. Our supper takes place on Monday evening next, and will be well attended. Messrs. Foreman and Harden hope to have a show of pike on that day. The supper will be served at 8.30. After supper, the rest of the evening will be devoted to music, singing, &c. About 11 p.m., all the competitors for the pike competition had arrived from the various places, and a fine show of Thames pike graced our tables. Mr. Wheatstone took the first prize with five pike weighing 24lb. 12oz., and also the prize for the largest fish of the competition. Mr. Robinson took the second prize with two pike, 8lb. 4oz. Mr. Huggett showed one pike 4lb. 4oz., and Mr. Foreman one pike 3¼lb. There were several other members who caught fish, which, at the time of capture, no doubt weighed 3lb., but Mr. Gray, who always insists on full weight, could not pass them. Altogether, with Mr. Meyer's three best fish, there were twelve pike upon the table, not one under 3lb., and several between 5lb. and 6lb., which, for Thames fishing, was considered a most satisfactory result. The health of the prize winners and successful anglers, Messrs. Wheatstone and Robinson, was proposed amidst loud cheers. Mr. Wheatstone replying, said that the water was really so bright that he did not expect to get a single fish. Strange to say, all his fish were taken with roach on snap tackle; the pike seemed to refuse to have anything to do with dace. He took them all in one place—in the reach above Mapledurham Lock. Mr. Robinson, who was obliged to leave early, explained that he took his fish at Lechlade, the water being somewhat coloured. Mr. Foreman was glad to see the great and increasing interest taken in the competition, and he attributed the great popularity of the present one to the fact of the fish having to come from the Thames only, and the chances of the competitors being more equal than where the prizes are offered for fish taken in any public water. The Chairman proposed "The Continued Prosperity of the Piscatorial Society," which was most heartily responded to. Mr. Goodger proposed "The Health of Mr. Lemann" (the chairman), and remarked how efficiently he had carried out the duties of the evening. Mr. Lemann replied, and the business of the evening terminated about 12 p.m.—T. H.

### PECKHAM BROTHERS ANGLING SOCIETY.

Messrs. Turner and Gardham upheld the honour of the club in the South London United match by taking third and fourth prizes. It was a very rough day —in fact, I believe, if "Pixie" had taken "Madam" down on that occasion she would never wish to go again. Charles White had a nice show of perch from Godfrey's water at West Drayton. A match on the 19th at St. Margaret's ; train leaves Liverpool-street at 8 a.m. The tickets for the dinner are now ready ; early application requested, as the number is limited.—Gadfly.

### RICHMOND PISCATORIAL SOCIETY.

A large number of members attended the weekly meeting of this society on Wednesday evening, Mr. A. J. Little in the chair, Mr. Dickenson the vice-chairman. A letter was read from Mr. Andrews, of Guildford, announcing that some of the trout ordered by the society would be forwarded the next day, and the chairman announced to turn in the fish in the afternoon, after the flood tide water had run off, several members promising to attend. It was announced that the roach competition would take place in the Thames on Wednesday, the 29th inst., and a pike competition on Wednesday, 26th November ; also on the names for three prizes in each competition. The smoking concert was to take place on Wednesday, 12th November. Mr. Taman introduced his resolution referring to the desirability of up-river associations and societies amalgamating for the purpose of forwarding angling matters, more particularly with reference to the action of the Select Committee of the House of Commons upon angling rights and privileges above Staines, and the hon. sec. was directed to communicate with the secretary of the Maidenhead Association. In the discussion that followed, it was thought that this proposition might lead to the formation of an Anglers' Parliament for quarterly meetings, for the consideration of matters affecting anglers and fishing generally.—G. H. Hester, hon. sec.

### RODNEY PISCATORIALS.

Mr. Flower saved us from a blank on the 12th with perch from Roydon. Mr. Grant, jun., had a lively time with something large at Ponder's End ; either a barbel or else a chub, he had on for some time, but failed to bring his opponent on shore ; his rod breaking placed him *hors de combat*. Members intending to compete in the October competition are requested to send in their names on or before the 22nd to —Pixie.

### ROYAL GEORGE ANGLING SOCIETY.

Our vice-chairman, with his usual forethought, knowing that any other fishing would be useless considering the state of the river, offered a prize for the gross lot of gudgeon taken from the bank on Oct. 5, on condition that not less than eight members went out for it. Mr. Longland gave a second, Mr. Hughes a third. I went to the station, and found over the number. Off we went. On arriving at our destination each one set to work with a will (a will that only anglers possess), but wind and rain was so bad that several gave it up after a few hours as a bad job. Mr. Holden (not by any means on "old 'un") came in No. 1, although it was almost a tie between him and Mr. Sinclair—I don't think there was ½oz. difference. Of course, Mr. Sinclair took second, Mr. Palmer third. Mr. Wood brought home a fine show of roach from the Thames last week, one going close on a pound lot. He lives in hopes of getting a lot more from the same spot as soon as some rain falls, I know another member in the same hopeful condition, and his name is—W. H. Rider.

### SOCIETY OF CAXTONIAN ANGLERS.

The annual competition for the society's silver cup took place on Thursday, Oct. 2nd, in the Thames, in the vicinity of Twickenham, and was numerously attended by the members. The prize was for the largest roach, which was taken by Mr. George Head (who fished with Mansell, of Richmond). The members afterwards assembled at the club house, The Falcon, Gough-square, Fleet-street, partook of the first monthly supper of the season, and spent a very enjoyable evening. The gross weight of fish taken during the day and exhibited at the club house was nearly 200lb. weight.—A. B.

### THE SOUTH-EASTERN ANGLING SOCIETY.

On the 5th inst., eleven of our members fished for their special prizes in cash, at Pangbourne, with the following result :—Mr. G. Sharman, 11¾oz. perch, 1st prize ; Mr. H. Bayley, 7¾oz. perch, 2nd ; Mr. T. Keeble, 5¾oz. roach, 3rd ; Mr. J. W. Smith also weighing in roach 4¼oz., none others being successful. On the 12th inst., some half a dozen members were out, but having small shows did not trouble the undersigned to weigh in. Mr. T. Keeble was out again on the 15th inst., and weighed in some nice fish consisting of barbel, jack, perch, roach and dace, in all 28½lb., from Staines. On the 14th inst., at our meeting, one new member made and one proposed. I would ask all our members to attend the next meeting in force—club-room newly decorated, and again at home.—T. H. H. Weston, sec.

### SOUTH LONDON UNITED.

On the 12th inst. over 100 of the members of the above visited Amberley, 98 of whom competed for six prizes in a "pegged down" from Houghton Bridge to the Railway Bridge at Bury : the result is as follows :—1st, Mr. Davis, A. and H. ; 2nd, Mr. Andrews, W. ; 3rd, Mr. Fernier, P.B. ; 4th, Mr. Garnam, P.B. ; 5th, Mr. Jenner, W. ; 6th, Mr. Liston, A. and H. Messrs. T. Wright, Gilman, Lock, Wright, and Frost also had fish. The swims were marked out by Messrs. Allen and Gafney, and considering the number and the distance, gave great satisfaction, and it was not their fault if the majority did not get fish ; for the day was right, the water was right, and the weather was right ; but the fish were all wrong, for very few of them would feed, and that was only for a short time in the morning, and just as it was time to leave off. I caught a gudgeon.—Pixie.

## WELLINGTON ANGLING SOCIETY.

On the 12th inst., thirteen of our members fished in the South London Visiting List Competition at Amberley, and succeeded in winning two prizes: Mr. Andrews, second prize, with 1lb. 14½oz., and Mr. Jenner the fifth, with 7¾oz. We also fished for three other prizes concurrently with the above, the winners being Mr. Andrews first, Mr. Jenner second, and Mr. Herbert Sloper third. Mr. Harris weighed in jack, 7lb. 14oz., from the Medway, and Mr. Palmer a ½lb. carp.—W. W. ALEXANDER, sec.

## FISH BREEDING IN 1705.

THE following extracts are from a curious little book entitled "England's Interest, or the Gentleman and Farmer's Friend," by Sir J. More, third edition, 1705:—

"It is unknown but to such as have made Tryal what a great Profit may be made by breeding of Carp, especially near the City of London, or within reach of any Eminent City or Town in England Inhabited by the Nobility or Gentry. The Pond for the Carp is no great Charge in making; the stocking of it with fish much less, and the looking after it no Charge at all, it being only the Expence of Idle Hours.

"As for the Scituation of the Pond, we will suppose it near London, on the River of Thames: Let your Pond be of an Acre of Land, Planted with Willows in different places, but not all round it. Let it not be in every place of an equal depth, but in some places deeper than in other, that the fish may lye there and keep themselves warm in hard winters. Make an Aqueduct, either by an arch or by Wooden or Leaden Pipes, to convey the water from the Thames into your pond, so that the Tide may Ebb and Flow in Your Pond, as it does in the River. By this means you may have a Breed of Carps the same of those of the River, so much applauded by Curious Palates; and who knows, but if you put a Quantity of the Thames Flounders (which are now killed so very small) into these Ponds, but they may thrive and grow to a large size?

"The Female Carp will be Eight or Nine Year before she will Multiply, therefore you must stock your Ponds with Carp of that Age, or else it will be too long before you come to have any Profit of your Ponds; and in every Pond you must put in several Females, lest one should dye.

"The Male Carp must be three ot four years old, and to every Female you must put 12 or more Males. A Pond of an Acre will feed every year 200 Carps of three Years old, 300 of two Years old, and 400 of one Year old.

"If you have a Design to make them very Fat, and grow very Large, you may remove them from your Ponds, and put them into Pits and Puddles in Pastures, or into deep Ditches in Meadows; where, by a short continuance, they will grow to a great Bigness. You must draw your Pond about Alholland Tide; you must kill all that are above three years old, except the Breeding Females, then put the rest that are three years, two years, and one year old, into the Pond, as many of them as it will feed. This must be done every Year, and Constant Care must be taken to keep the Females in sufficient Number for Breeding; for sometimes the Females will dye soon after they have Spawn'd. The Female must never be Kill'd, but kept from Year to Year, and a Female well kept will be in heart 40 or 50 Years.

"There is no part of the Kingdom free from Thieves; there are *Poachers* for Fish, as well as for Hares and Conies; and therefore you must take care of those People, for if they draw your Ponds they will make no distinction betwixt Males and Females, betwixt Breeders and Store-fish, they'll take 'em as they rise, for they are all profit to 'em. The Method of Staking Ponds will *not* do in this Case—where Men make a profit of breeding Fish. The Stakes will hinder the Thieves from drawing your Ponds, and it will you also, who must be able to come at your Fish, as Occasion shall require. Ponds are generally Staked by Gentlemen who breed Fish only for the Diversion of the Angle, and they know where abouts the Stakes are, and how to dip their Line clear of them.

"But your best way to preserve Your Carps is to make Home Ponds pretty deep, and bring them near Your house at Winter. You may put five or 600 Carps in a Pond of twelve foot square, where they will lye Warm in the Rigorous Winter; for 'tis to be noted that a Carp never Feeds but in the summer season.

"The same Order may almost be observed in Ponds for other sorts of Fish, only they are not to be removed. In your Ponds for Pike and Jacks, you must put in Roach and Dace, on which the Pike will feed. The large Roach which grown too big for the prey will be a good profit in the Market, especially those bred in the Ponds near the Thames, into which the tide flows. You may put Pearch into these Ponds, which are a Profitable Fish, and on which the Pike cannot feed, by Reason the Pearch have Prickles on their Heads, Backs, and Fins, which hinder the Pikes from gorging them."

[The time of greatest fecundity of carp is when they are three or four years old. We should think that 600 carp in a pond 12ft. square would indeed "lye warm in the Rigorous Winter!"—ED.]

FISHING RODS—AND TACKLE.

BULMER'S "FISHING GAZETTE" GOSSAMER GUT LINES,

Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—FISHING GAZETTE Notice, September 18, 1883.

See also notices in the FISHING GAZETTE for Dec. 17, 1881; June 28th, 1882; July 1, 1882; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d.; FISHING GAZETTE Gossamer Gut, Tapered, 8d. each; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d., and 1s. 6d.; prepared ditto, 20 yards, 1s.; stout, 1d. a yard; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d.; Gossamer Gut, 12in., 3s. 6d.; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz.; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal, 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen; Treble ditto, 2d. each. Pennel Snaps, 2½d.; Jardine, 3½d. each; Gut or Gimp Spinning Flights, 6d. each; Spoon Baits (Jack's size), 9d. each; Gut and Gimp Traces, 6d. each, FISHING GAZETTE Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d.; ditto Twisted Gut, stout or fine, 1s. each; 3in. Jack Float, 6d.

WINCHES. — Nottingham, from 6d.; Brass, from 8d.

HEATON'S PATENT REELS, "Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ⅝in., 1s. 6d.

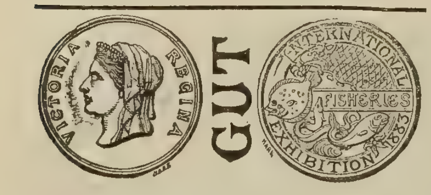
Rods made to order or fitted with screw-joint ferrules.

Price List free on application.

Postage extra on all orders, and all must be accompanied by a remittance.

All goods marked in plain figures.

A. BULMER, 62, WANDSWORTH ROAD, S.W.,
Corner of Nine Elms Lane.
Three minutes' walk from Vauxhall Station.



GOLD MEDAL AND DIPLOMA OF HONOUR GREAT INTERNATIONAL FISHERIES EXHIBITION, 1883-4.

Only Medal awarded for Gut and Gut Casts.

SEND NAME AND ADDRESS FOR GUT REPORT AND PRICE LIST, TO

R. RAMSBOTTOM,
GUT IMPORTER,
81, MARKET STREET, MANCHESTER.

THE NOTTINGHAM STYLE.

JOHN W. MARTIN,
(THE "TRENT OTTER")
No. 4, NORTHERN BUILDINGS, LOVERS' LANE, NEWARK-ON-TRENT, NOTTS,

By his success and experience as a Practical angler can confidently recommend all goods sent out. Superior Pike Rods, 11 or 12 feet, 5s. 6d. each; with partition bags, safety rings, superior finish, complete and warranted, 6s. 6d., 7s. 6d., and 8s. 6d. each. Best value in the market. Roach, Bream, or Barbel Rods, 11 or 12 feet, same price.
Superior 3-joint solid Greenheart Trout, Fly, Worm, or Minnow Rods, 9 to 12 feet long, perfect action, finish, and warranted, in partition case, 9s. 6d. each. Do., 14 or 15 feet, 15s. each.
Superior Star Back Reels, from 2s. 6d. to 5s. 6d. each.
Strong Waterproof Pike Lines, 9d. per score yds.
Strong Nottingham Pike Lines for spinning, 40yds., 1s. 3d.; 60yds., 2s.; 80yds., 2s. 6d.
Superior Plaited Silk Do., 1s, 2d. per score yds.
Roach and Chub Silk Twist, fine or stout, 40yds., 8d. and 9d.; 80yds., 1s. 2d. and 1s. 6d.
Complete Outfits for Pike and Bottom Fishing, 12s. and 15s. 6d. each. "The Boy's Own Outfit," comprising a good Rod, a Reel, Silk Line, Floats and Tackle, 5s.
Complete Traces and Flights for Pike Spinning, best gimp, 4d., 6d., and 8d. each. Live Bait Tackles, 2d., 4d., and 5d. each.
20 Page Catalogue post free to any address.
"Float Fishing and Spinning in the Nottingham Style," by the "Trent Otter," post free 2s.

TROUT OVA & FRY.

SEASON 1884-5.

Orders booked at the following low rates:—

| | | | |
|---|---|---|---|
| OVA SALMO | FARIO | 20s. to 30s. | per 1000 |

YEARLINGS £2 per 100, £15 per 1,000.

**Hatching Apparatus and Fishing Tackle of all kinds supplied.**

THE "MARSTON" FLY-ROD, 17s. 6d and 21s.

BEST TROUT FLIES, 2s. per doz.
Advice given, and Fisheries laid out.

ADDRESS:
THOMAS FORD
MANOR FISHERY
Caistor, Lincolnshire

"Trout Fishing," 1s.; 130 different flies with way of manufacture and seasons of use.

N.B.—Certain kinds of Coarse Fish supplied.

COUGHS, COLDS, ASTHMA,
BRONCHITIS and NEURALGIA.
DR. J. COLLIS BROWNE'S
CHLORODYNE.

A few doses quite effectual. CAUTION.—The extraordinary medical reports on the efficacy of Chlorodyne render it of vital importance that the public should obtain the genuine, which is protected by Government stamp, bearing the words "Dr. J. Collis Browne's Chlorodyne." See decision of Vice-Chancellor Sir W. Page Wood, *The Times*, July 16, 1864. Numerous testimonials from eminent physicians accompany each bottle.

From W. C. WILKINSON, F.R.C.S., Spalding:—
"I consider it invaluable in phthisis and spasmodic cough; the benefit is very marked indeed."

Sold in bottles, 1s. 1½d., 2s. 9d., and 4s. 6d., by all Chemists.

Sole Manufacturer, J. T. DAVENPORT,
33, Great Russell-street, W.C.

ESTABLISHED 1851.

BIRKBECK BANK.—
Southampton Buildings, Chancery-lane.

Current Accounts opened according to the usual practice of other Bankers, and Interest allowed on the minimum monthly balances when not drawn below £50. No commission charged for keeping Accounts, excepting under special circumstances.

The Bank also receives money on Deposit at Three per cent. Interest, repayable on demand.

The Bank undertakes for its Customers, free of charge, the custody of Deeds, Writings, and other Securities and Valuables; the collection of Bills of Exchange, Dividends, and Coupons; and the purchase and sale of Stocks, Shares, and Annuities.

A Pamphlet, with full particulars, on application.

FRANCIS RAVENSCROFT, Manager.
*March 31st, 1884.*

**The Birkbeck Building Society's Annual Receipts exceed Five Millions.**

HOW TO PURCHASE A HOUSE FOR TWO GUINEAS PER MONTH, with immediate Possession and no Rent to pay. Apply at the Office of the BIRKBECK BUILDING SOCIETY.

HOW TO PURCHASE A PLOT OF LAND FOR FIVE SHILLINGS PER MONTH, with immediate Possession, either for Building or Gardening purposes. Apply at the Office of the BIRKBECK FREEHOLD LAND SOCIETY.

A Pamphlet, with full particulars, on application.

FRANCIS RAVENSCROFT, Manager.
Southampton Buildings, Chancery-lane.

THE
GREAT REMEDY

For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. Prevents and Quickly Relieves or Cures the worst form of TYPHUS, SCARLET, JUNGLE, and other FEVERS, PRICKLY HEAT, SMALL POX, MEASLES, ERUPTIVE or SKIN COMPLAINTS, and various other altered CONDITIONS of the BLOOD.

"It
'SAVED MY LIFE,'
for the Fever had obtained a strong hold on me. In a few days I was quite well."—Extract from letter of C. Fitzgerald, Esq., formerly Correspondent of the MANCHESTER GUARDIAN in Albania, referring to

LAMPLOUGH'S
PYRETIC SALINE.

Sold by all Chemists in Bottles, 2s. 6d., 4s. 8d., 11s., and 21s. each.

H. LAMPLOUGH, 113, HOLBORN, LONDON, E.C.

THE AUTOMATIC PERFECT SAND EEL.

PATENT (9,064).

A most killing Bait for Salmon (in an Estuary), also for Sea Trout, Pollock, Bass, &c.
Sizes:—3¼in., 1s.; 4¼in., 1s. 6d.; 5in., 2s. each.
"Simply perfect in shape and colouring."—Ed. FISHING GAZETEE.
N.B.—Any size made to order.

IMPROVEMENT ON AUTOMATIC SWIMMING BAIT (Patent).

Viz., can be made also to spin by simply bending the tail-end. The nearest approach to life ever produced.
Trout sizes:—1½in., 1¾in., 2in., 2½in., 2s. 6d. each.
Salmon sizes:—3in., 3s.; 3½in., 3s. 6d.
Pike sizes:—4¾in., 4s. 6d.; 5¼in., 5s. each.
"We do not remember to have seen a more life-like deception, especially when in the water, and the fins are working."—Ed.

M. C. CAMPBELL,
Practical Fishing Bait Manufacturer,
2, CECIL TERRACE, MAYNARD ROAD, WALTHAMSTOW, ESSEX.

N.B.—All Orders by Post must contain a remittance.

RIVER COLNE.

TWO RODS TO LET, on one and a half miles of water; half an hour from town; from 25th December, 1884, to December 25th, 1885. Trout. Price £25 each per annum.—Apply to V. E., 18, Milton-street, Dorset-square.

HOGE'S HOREHOUND HONEY

Hawthorn Lodge
Finchley New Road
N.W.
March 30. 1883.

Gentlemen— I have much pleasure in stating that I consider your "Horehound Honey" the most wonderful remedy I have ever tried, possessing properties which are nothing short of marvellous for the cure of affections of the throat and chest. I shall never be without a bottle of "Horehound Honey".

Yours very truly
Marie Roze-Mapleson

SUPPLIED BY ALL CHEMISTS 1/1½ PR BOTTLE.

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

### ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d To any part of Europe, the United States, and Canada, the Annual Subscription, including postage s 12s. 6d.

### ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

# The Fishing Gazette.

SATURDAY, OCTOBER 25, 1884.

## BRANDY AS A FISH REVIVER.

MR. W. OLDHAM CHAMBERS, Secretary of the National Fish Culture Association, sends us a letter, which we publish this week, in which he says he has carried out our suggestion that he should experiment on fish which die quickly out of water, and that the restorative effect of a little spirit is equally marked ; in fact, a dace becomes as mad as a March hare after a dose of brandy. We can imagine nothing more likely to shock the feelings of any respectable pike than to see an inebriated dace come rolling into his premises ; he would be compelled to make an example of such a graceless intruder.

All pike anglers know how dead and dull the dace get in very cold weather, and they should remember Mr. Chambers's recipe.

## "WANTED," BY THE NATIONAL FISH CULTURE ASSOCIATION.

WE beg to draw the attention of our readers to the advertisement of the above Association in our columns this week, and we hope any who may be able to do so will kindly help the Association by giving the Secretary, Mr. Chambers, particulars of any places they know which might suit.

## TROUT FISHING ON AN IRISH STREAM.

By H. W. PEARD, M.B.

"WHY tarry the wheels of his chariot ?" These, or some similar words, would have expressed my thoughts on a bright and breezy morning at the end of the first week in March last, while I was waiting for a friend who had promised faithfully to join me at 10 a.m., but who was now late by some 20 minutes. With profuse apologies for unpunctuality, Colonel W—— at length arrived, and, my trap having been ready for some time, off we started. The scene of our intended sport was the river Bride, one of the largest tributaries of the Southern Blackwater. This is a pretty river, and particularly well suited for trout—indeed, I know none better if it were only decently preserved ; but, I am sorry to say, for seven miles of the best of it one cannot find a single bailiff. One might as well look along its banks for the four-leafed shamrock, and with about the same success ! The result of this is obvious. The wretched salmon who are venturesome enough to run up are gaffed and stroke-hauled without mercy. (I am not sure that even burning does not sometimes go on at night.) The larger trout are occasionally swept out of a good hole with a net, and numerous unlicensed fishermen fish and carry gaffs with impunity. Nevertheless, I do not altogether despair ; these rod fishermen are, at best, but coarse "brethren of the angle," and clumsy in their method of fishing, and in the manufacture of their flies and tackle. I have often got a few trout with neat flies on the finest gut, when the streams had been thrashed by three or four other rods, and, on such occasions, I feel infinitely better pleased with myself than when I have caught much heavier baskets in better preserved, or, rather, in less hacked, waters. We arrived at a certain wooden foot-bridge at about 10.40 a.m., and, on inquiry, I found we were in luck, and that no one had as yet been seen fishing that morning. Colonel W—— fishes well and carefully, but I had the advantage of knowing every yard of the river, whereas he was a complete stranger to it ; also I fished with a 14ft. greenheart rod, of Castleconnell pattern, that I could put a fly well under the opposite bank with, while he had a 10ft. cane rod, made in the north of England, and rather stiff to please me. I put up a cast of flies for the worthy Colonel the same as my own, and started him off from the wooden bridge, while I walked half a mile up the river before beginning. The flies were : Tail fly, the Grey Coughlan ; first dropper, a pale blue Dun ; and, lastly, a fly called the Coshtheen. The Blue Dun is well known to the reader, but I doubt that one in ten knows the Grey Coughlan, or one in twenty the Coshtheen, so I shall describe them. The Grey Coughlan is one of the ephemeral (order *Neuroptera*) which makes its appearance on the water some weeks before the Brown Coughlan, which is the Irish name for the March Brown. The best way to dress this fly, and to make an almost exact imitation of the natural insect, is this : First, having tied a small hook (No. 1 Hutchinson) to a length of the finest gut, tie in a couple of long whisks from a spotted brown Mallard feather for a tail, then the end of a little bit of lemon-yellow tying-silk ; now make a nice, slightly tapered, but thin body of chocolate-brown floss silk, and rib it four times with the aforesaid yellow silk. Make the legs of a pale mottled grey hen's hackle, add a little "cocky-up" wing of light starling's quill, finish off in the orthodox way, and you have a killing fly. The Coshtheen is the Irish name of the little blue titmouse. The fly is one (order *Diptera*) which appears on the water on fine bright days in March and part of April, and when well imitated is a capital fly. Tie it as follows : Tip and one-third of the body of deep, dull orange floss silk (a brown orange I think describes the proper shade), the rest of the body a bright blue floss silk or mohair (I like mohair best) ; legs, a dull blue feather from the titmouse's tail wound on as a hackle ; wings made nicely double from pale starling's quill feather, and tied so as to lie down very flat ; hook No. 1 or 2 long. While walking up the river, I saw some trout rising at the Grey Coughlans which were flitting about in considerable numbers. I began at a very rapid stream, and very soon stuck and killed a lively half-pound trout with the tail fly, and at the tail of the stream another a little smaller. On I hurried to the next stream—an equally good one —but, to my disgust, I did not even get a rise. I saw the seal of a large otter by the bank on some soft sand, so his having been there early that morning may have frightened the fish. I believe the harm chiefly done by otters is not so much in killing the trout as in frightening them. Otters prefer eels to anything else, and, when there are plenty of those to be had, they do not care much for hunting the trout. All the same, I wish the otters were a less numerous body—we have biped poachers in plenty, and to spare ! A noble earl does keep a pack of otter hounds "not a hundred miles away," but his visits are few and far between, and it is on very rare occasions that an otter is killed on this unfortunate river I regret to say. On I fished with varying success ; here and there a small trout, but nothing much over a quarter-pound, until, at length, I came to a turn of the river, called the "luggeen," where there is a deep hole. This is a good spot for salmon early in the year, so I changed my casting line and put up a small Jock Scott. In less than half-a-dozen throws I hooked a fish and off he went down the stream, taking out about 40 yards of line. I got in most of it again, and was congratulating myself, and thinking I could gaff him in a few moments, when he gave another run and a jump, and took the fly with him to the bottom of the luggeen, where he may be still for aught I know. On examining the end of my line I found that the loop to which the fly was tied had cracked across. It is a great mistake when varnishing the head of a fly to let the varnish get on the loop of gut, for it prevents the gut from becoming soft in the water, and renders it liable to crack off, if, indeed, the spirit of the varnish has not some effect in rotting it. Well, I tried the luggeen again with with another fly—an Orange Grouse ; but, although I rose two fish, I did not hook either, and had to go back to the trout fishing. I now took off my two droppers, as they were not doing any good, and put up a single dropper instead —a fly called here a Grey Dun : tail, two whisks of mallard ; body of grey hare's ear fur, picked out with a needle and left rough ; legs, a black hen's hackle ; wings, starling quill feather. This change was a good one, for now the trout *(varium et mutabile semper trutta)* disdained my tail fly, and devoted all their admiration to the Grey Dun, so that I again made a change, and gave it the more honourable position of point fly, and dispensed with any dropper. Presently I came up to where my friend was fishing, and found that he, too, had some trout, but he found his short rod a nuisance, as he could not get out a long enough line to fish some good spots under the opposite bank, which, at this place, was steep and bushy down to the water's edge. Good spots they were, for I caught a couple of trout, fishing beyond his reach, one of them over a pound. I got a couple of pulls, too, that made my mouth water, but that was all the notice they took of my "line of invitation,"—just returned with thanks, or without any more likely. Colonel W—— now hooked a good fish, but he broke off, after, however, giving him some fine play. He told me that several others had behaved in the same way, and he began to think at last that his rod was too stiff, and bore too hard on the mouths of the fish. Soon after this he had better luck, and I landed a nice trout of about 12oz. for him. The breeze now freshened up considerably, and we got a few trout on the flats, but nothing of any size ; and presently they stopped rising altogether, so we left off fishing for that day, having between us three dozen and four trout, weighing about eight and a half pounds. Another day we did somewhat better, but I have already trespassed and exceeded the limits of your forbearance.

## SALMON FISHING NOTES.

RETURNING at the end of last week from an expedition combining the pleasures of tramping the roots and stubbles for partridges, and of whipping a favourite old pool for salmon, I found the numbers of the FISHING GAZETTE which had appeared during my absence awaiting me. In one of them I notice a letter from Major Traherne upon never striking a salmon. My own principle is always to strike a salmon at the moment when an instinct, born of practice, tells me to do so—sometimes before I feel him, sometimes after ; but when such a well-known fisherman tells us that it is best never to strike, great deference must be paid to his advice. Firstly, let me explain the rules I employ as to striking founded partly upon the instructions of authorities, partly upon experience—the best of teachers. Afterwards, I will describe a peculiar method of rising to the fly which the salmon adopted during my recent expedition, and will ask Major Traherne whether he would have stuck to his system of never striking under those circumstances. Let me here remark that I consider that the way in which the fly is thrown has a good deal to do with the rule as to striking. Some men throw almost straight down stream, or, at any rate, at an angle of forty-five, or less ; and in this case, as the stream keeps the line taut from the beginning, there is less necessity to strike. Personally, I always throw straight across the stream when possible, believing that, as my original instructor—one of the best fishermen in England—impressed upon me, twice as many salmon rise to the fly as it comes dancing across them as rise when it is being worked straight up and down stream. With this method of throwing, especially if you are coaxing a fish out of a curling backwater on the opposite side, some bagging of the line is unavoidable, as the line, in the stream, travels faster than the fly against the backwater. In this case, therefore, I generally strike quietly as soon as I see the fish rise or feel the slightest tug ; for I do not believe that a salmon would thus hook himself by his own weight before he had time to feel the nature of the fly and spit it out. Many fisherman object to throwing straight across, on account of this bagging of the line ; but I am convinced that more fish are risen by it, and that few need be lost or missed if struck at the proper time. Of course, at all times the salmon angler must fish with his head, and keep his presence of mind, so as not, for instance, to strike before his fish has actually taken the fly, but is only following it with a wary rush through shallow water. This is a moment when a young hand, seeing the rush, and not waiting for the final roll, is very apt to strike too soon, and thus snatch the fly from in front of the eager fish. I once saw a case where an over-excited beginner thus snatched away the fly too soon seven consecutive times, and at the eighth caught his fish ; nine fish out of ten would have sulked long before.

When the fly has got round straight down stream, and the line is taut, I give a fish plenty of time when he rises boldly, though always striking to insure the hook penetrating over the barb. I have tried both single and double-hooks, and have no decided preference for either.

Now I will pass on to the experiences of my past three weeks' fishing, and, for that purpose, will describe the nature of the pool to which I devoted my attention in the intervals of partridge shooting. At this favourite spot, the river makes a short turn, running round a slight corner into a long pool below 20ft. deep. On the inside of the turn there is a long gravel bed, from which it is most convenient to fish, both on account of wading, and for the playing and landing of the fish. On the opposite side, both the bed of the stream and the bank is a mass of rocks and boulders, amidst which backwaters curl round close to the shore. For 50 yards above the pool the stream runs fast and shallow, until, thrown from each bank, it forms a V-shaped rapid, breaking at its point into rippling and jumping water, which deepens to the ledge of the pool, where it again runs smoothly, curling round into oily backwaters on each side. Now, last year, from this one pool I took 45 salmon, and a large majority of them were taken, rising boldly and well, either in the V-shaped stream, or the backwaters at its side. When I went down recently to try a fly over the beloved old spot, I naturally fished most carefully over the ledge where the water ran smooth and fast, looking expectantly for the rush and rise. But, no! the fish have changed their habit, and I found that this season their favourite place was right below where the water ran deep just before the pool. This I could have forgiven them, if they had risen in their old bold style, with a good salmon-like wallow, or quiet porpoise-like dive; but instead of this, all the indication of his presence that a fish, big or small, would give was a slight tug under water, like a chub. Of course, in all seasons a salmon will occasionally rise thus, but here it was the invariable rule. Mr. Francis Francis, in his book on angling, gives the advice on these occasions "to strike instantly," and this I found the only way by which I could hook a fish. If there was much slack line, or I did not instantly strike, the fish was gone in a moment, making a slight derisive boil as he went. Even with immediate striking, I lost a heart-breaking number of fish before the first rush was done, and only managed to land six fish. It was some comfort to learn from a local friend that it was the same thing all down the river, and that he had heard of seven fish being missed and lost at one pool in a morning; but yet it was terribly trying to temper and language that the fish should be thus disposed during the short time that I could leave the smuts of London to try my luck amongst them. I should like to hear how Major Traherne would have acted under these circumstances, and whether he would not, at any rate temporarily, have adopted the plan of striking? Of course, I used the smallest of flies, and wish that I had seen Mr. Kelson's plan of a few shot upon the cast before I started, as I should certainly have tried it, seeing that the fish were taking so deep. When fishing for shy fish with small flies, not knowing at the time of the rise whether it be a 25lb. salmon or a 4lb. grilse, surely it is best to strike; for if it be the 4lb. grilse, will he hook himself by his own weight?

As to striking from the winch, I do not actually do so, because mine has but a slight check; but I practically produce the same result by holding my line lightly between my fingers, not beneath my hand. It seems to me that the whole matter and question of striking a salmon is a question of individual discretion at the moment of rising the fish, and that there can be no hard-and-fast rule to govern the subject.
VINCENS.

## THAMES FLOUNDERS.

It is now exactly twenty years since the first attempt was made by the Thames Angling Preservation Society to re-introduce the flounders into the river above the locks, when five thousand were purchased by the Committee and turned into the Thames between Moulsey and Sunbury. This was again repeated about six years afterwards, and nothing has been done since until last year, when, through the visits amongst the netsmen by Mr. Thomas Spreckley, the men expressed a desire to contribute some five thousand small flounders to be put in the river above Teddington Lock, with the idea they would thrive in those waters, and then drop down as larger fish, and thereby improve the character of the flounder fishery below. With the energy of Mr. Spreckley, he very soon made an important point in this movement, and not only accepted the offer of the netsmen, but established the best of feeling amongst them, and so zealously has he laboured in their interest, he is now in their entire confidence; and not only so, but wherever it was necessary, he has vindicated the law, and during the present season has obtained several convictions for taking unsizable flounders, thereby giving proof that the taking of such small fry for sale is against the interest of the men themselves. Indeed, the very men who were the offenders in those cases are now to be found amongst those ready to contribute the small fry for introduction in the upper waters. About twelve months ago Mr. Spreckley took up five thousand flounders to the Kingston water, which was then noticed by the press. The result this year has been so eminently satisfactory, that Mr. Spreckley, in his visits and labours amongst them, found they were ready to contribute again, and it was arranged for Wednesday last to convey them to the neighbourhood of Hampton Court. Accordingly, Mr. Spreckley met the men and flounders at Putney, and in one of the large peter boats some seven thousand flounders were taken up the river by the Thames Conservancy steam-launch *Brent*, kindly lent for the occasion, under the entire command of Mr. Spreckley. On the arrival at Richmond, a difficulty was experienced in getting up the river, through the lowness of the water. About two thousand of the fish were put in here and there between Richmond and Kingston, and the remainder of the seven thousand were put in the Thames just above Hampton Court Bridge, where the bed of the river is of a purely sandy nature, as suitable for the fish to propagate in, many of them being already in spawn. This was done in the presence of Messrs. T. Spreckley, W. H. Brougham, T. R. Sachs, Alfred Nuthall (Mayor of Kingston), James Temple, Henry Ffennell, H. B. Bromhead, B. Perelli-Rocco, R. B. Matthews, &c., &c. At the request of Mr. Spreckley, Mr. T. R. Sachs, one of the oldest members of the Thames Angling Preservation Society, introduced the five thousand youngsters into the Thames, and Mr. Sachs was well entitled to this graceful compliment. This ended a very satisfactory day, and full of hope for good results. Mr. T. Spreckley and Mr. W. H. Brougham, on their return home, paid a visit to the Richmond Piscatorial Society, this being the evening of the weekly meeting under the presidency of Mr. A. J. Little, who is a most valuable ally to Mr. Spreckley in the preservation of the Thames fishery. There was a very large muster of members, and in addressing them on the removal of the flounders, Mr. Spreckley made some thoroughly practical remarks, as showing how each of of the members could assist his Society in the preservation of their dear old river.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

## ANSWERS TO CORRESPONDENTS.

E. B. A.—We do not like or use the plan of threading the gimp under the skin of the bait. We feel certain Mr. Jardine's live snap-tackle is much better than the one you propose.

T. McC. is evidently not aware that it is illegal to use salmon roe as bait, and very properly so.

T. B.—We think you will find the nearest fishing is in the Surrey Canal. There is a lake of 4 or 5 acres near Norwood Junction, which contains fish—pike, perch, roach, &c. They charge you so much per day, 2s. 6d. for jack and 1s. for perch and roach, we think.

Ireland (Clonmel).—Will answer your query next week; it only comes in just as we go to press.

G. (Great Marlow).—If you put the hooks of the paternoster on with a very small loop round the main line of the "pater," and a shot nipped on above and below, the bait can then swim round without entangling so much as if you use a slip-knot. You can make a very fine "pater" in this way.

Lobworm.—We hope to have a note on lobs, &c., and barbel fishing next week.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

## THE QUESTION AS TO "STRIKING" A SALMON.

Sir,—I have read Mr. Thomas's remarks in the Fishing Gazette of the 4th inst. on my letter about striking a salmon, and am glad to know that there is some-one who takes an interest in this question. If Mr. Thomas will refer to my letter he will find that what I stated related almost entirely to fishing with single hooks. All I said about double hooks was "that I had not been successful with them, and that perhaps this was in consequence of my not having adopted Mr. Kelson's plan of striking from the winch." My experience of double hooks dated long before Mr. Kelson's articles on this subject were published in the Fishing Gazette, and I have not given his plan a trial because I am convinced in my own mind that the point of the hook cannot be driven in over the barb with a reel as easy running as I consider should be used, and that this can only be done by using a very stiff-running reel which I think is a great disadvantage in many ways.

I should be very sorry to contradict anyone who did not agree with me, and last of all a man of such experience as Mr. Kelson, with whom I agree on most subjects connected with salmon fishing; but I differ from him in this one, and merely state my opinion for what it is worth.

Mr. Thomas, after alluding to the mode of proceeding I advocate when a salmon rises, says: "Are salmon, then, the only fish that can discern between an artificial fly and a real bait when in the mouth? Trout, grilse, sewin, and other species of salmonidæ will instantly reject an artificial fly unless struck, and my impression is that a salmon will do the same."

I quite agree with Mr. Thomas in so far as that a salmon will instantly eject an artificial fly when he finds out it is not natural food; but I cannot agree with him that it is necessary to strike in order to hook him. On the contrary, it is my opinion that to strike would defeat this object. A fish very often rises at a fly with his mouth wide open, and if he is struck at the chances are that the fly will be snatched away before he has had time to close his mouth on it, which he might have done if the hand had been held steady, and the chances of hooking him would then be far greater. I will take it for granted that in either case the point of the hook has come into contact with some part of the mouth, and then the question arises as to whether it is advisable in order to fix the barb of the hook to hold the hand steady as I have recommended, or to strike as soon as the fish rises before it is felt that he is hooked. Mr. Thomas says: "I should never think of striking any kind of fish by a jerk. It invariably ends in loss of tackle, fish, and temper." I am pleased to think that he agrees with me so far, and that a jerk is to be avoided; but he says he considers that the long pull I advocate is a strike, and here I differ from him, and maintain that to strike or hit a fish, as Mr. Kelson calls it, is to give the point of the rod a sudden upward jerk, and this definition of the word is accepted, to the best of my belief, as the correct one by the majority of anglers.

Mr. Thomas acknowledges that he strikes a salmon, and very hard too, on certain occasions; but as he strikes without a jerk, and evidently does not adopt the plan of holding the hand steady when a fish rises, or giving a long, steady pull or two when necessary, to fix the barb of a large hook, he must have some method of striking hitherto unknown, and if he would explain how it is done I shall be very much obliged to him. I quite agree with him that it is a very important question and should like to know what some other anglers have to say on the subject.—I am, &c.,

Junior United Service Club, October 19th. John P. Traherne.

[We think Major Traherne has very clearly defined the difference between the long, steady pull which he advocates, and the "strike" as it is usually understood.—Ed.]

Sir,—Major Traherne, in your number of Sept. 20th, asks for the opinion of "some old anglers" as to striking a salmon when he rises at the fly. When I first began salmon fishing—I will not say how many years ago—from ignorance of the manner in which a salmon rises at the fly, I used to strike, and thereby often missed many a fish, and the first time I got hold of a big fish I broke the top joint of my rod (landing my fish, however, by good luck). Since then, except under very peculiar circumstances, and then only with the greatest caution, I have never struck a salmon; and I put this question to one of the oldest, best, and most successful salmon fishers on the Tweed, and his answer was "*Never.*" When fishing with treble gut and big flies strong enough to hold a whale, it perhaps does not signify whether you job at a fish or not; but if fishing with single gut and fine tackle, you will probably lose a good deal of it should you strike a heavy fish even when striking from the winch. The salmon's rise (so different from the trout's) does not necessitate a strike. In the act of taking the fly he turns downwards, and his very weight is sufficient to fix the hook. Like Major Traherne, I have often landed a fish so slightly hooked, that, had I struck, the hold must have given way. If your correspondent, Mr. Thomas, will carefully observe the difference between a salmon and a trout rise, he will see the reason why it is necessary to strike the one and not the other.—I am, &c., Silver Doctor.

P.S.—In using the word "strike," I use it in the sense employed when speaking of trout fishing.

## FISHING AT NEWARK.

Sir,—I with many others in this district read our Gazette with much pleasure, but feel very dissatisfied to see that other fishing districts have their doings faithfully reported week by week while the account you give of Newark is most unreliable.

Only last week we read of four barbel being caught, one of which weighed 12lb. Why, sir, your correspondent need not have gone far to assure himself of the fact that the total weight was a little over the 12lb., and this is not by any means a solitary instance: it is rarely a week passes but some such inaccuracy appears. We are told this week, "The sport has been of such a meagre character, it was scarcely worth reporting." There is no doubt that the season has been a bad one for us, but last week was anything but the worst—any quantity of dace and bream could have been caught by any fair angler. About 10 stone of bream was taken; and one angler for an afternoon's sport had 8¼lb. dace, and many had smaller weights;

jack also have been on the move, and among several others one has been had nearly 10lb.

In the report of the fishing match we are *not* told that the match was a pegged-down one, the weather most unfavourable, and that the 1st prize was taken by Mr. Thompson with over 6lb. of fish in 2½ hours.

To read the season's register as given by your correspondent would lead one to believe there had not been any fish taken here at all. What about Mr. Alcock's takes of chub and barbel? This gentleman is credited with nearly 200 of these two kinds alone.

Mr. Dale has had fair bags of dace and chub almost every week. Mr. Slater, owing to his extending business, has not been out often, but rarely without something good to show on his return. Then there are Messrs. Lunn, Lane, Dobbs, Chatterton, Hessay, Baxter, Norledge, and many others, who have had fair baskets to show, week after week; but rarely has a report of any of these catches been given, and I trust, sir, that another season your correspondent will give us something a little nearer the mark.

Several of my London friends (I am a Thames angler transplanted) write to me, "We see there is nothing doing"; so that a fair report would not only benefit us here but friends away.—I am, &c.,

F. T. Levick, president, Newark Piscatorials.

P.S.—Catches since last Tbursday, which have come before my notice: Mr. Butler, 2 stone bream; Mr. Edlington, 1 stone bream; Mr. Fenton, 2 stone bream; Mr. Alcock, sixteen barbel and chub, about 45lb.; myself, three barbel and a few flounders; Mr. Dale, dace, 8½lb.; Mr. Smith, roach and dace; Mr. Lunn, 16lb. bream and roach.

## THE EYE OF THE EYED-HOOK.

Sir,—I had hardly intended writing any more on this subject, though I was half tempted to answer Mr. Tod's letter of the 11th instant. He raises a point which has now been taken up by Mr. Cholmondeley Pennell, and as the latter writer asks for my opinion, I propose to go into the question as fully as space will allow.

There are two things commented on—(1) size, (2) position of eye. Now, with regard to the size, I cannot believe for one moment that the size of the eye in the hooks now in use makes the smallest difference, if the fly is well made, and well fished. *Crede experto;* ask any one of a score of recognised skilful fishers I could name in Hampshire. The answer will be, I firmly believe, that they have never known Itchen or Test trout rise more shyly to flies on eyed-hooks, than they do to flies tied on gut. But besides this, it must be remembered that natural flies have large, prominent heads—bigger, far bigger, than the heads of many artificial flies; and why we should quarrel with the eyes of our hooks, because in size they approximate to the heads of the natural insects, I really cannot understand. If Mr. Pennell will examine some of the little duns I sent him a few months ago, and compare them with the natural flies they are supposed to imitate, I think he will be ready to admit that there is nothing very conspicuous about the head of a dun, neatly tied on an eyed-hook. But I have my own ideas of how such a fly should be tied, as readers of the Gazette are aware, and in my flies the tying is all done behind the wings, and *there is no head, except the eye of the hook.* Now, turning to Mr. Tod's letter, I notice that he had his flies tied by a tackle maker who may, for all I know, have tied hackle down first, then wings on top of hackle, and thus, with sundry whips of silk and varnish, made a bunchy head between wings and eye. This is the way eyed-hooks used to be treated, until quite recently, when a few of the best fly dressers adopted the neater plan I have described more than once, and briefly alluded to above. Then Mr. Tod confesses he has "seldom or never used" the eyed-hooks, and further on he speaks of the possibility of a hook being made in which he "*can* place faith in, with an eye of the smallest possible dimensions." Also he alludes to plans of his own, in which "the head, if knotted, after due soaking, is *hardly observable.*" (The italics are his.) Now I really cannot see why we should try and improve upon nature, and as long as fish feed on flies with large heads and prominent eyes, it seems to me somewhat unnecessary to trouble ourselves with the idea of making artificial flies with heads almost invisible. Mr. Tod admits in his letter that his objection is a fanciful one, not based on actual experience. If he would give the eyed-hooks a fair trial (and he himself says, "I would much prefer to use eyed-hooks"), and either tie his own flies, or see that they are properly tied, I am convinced that he would never have to regret the lightness of his basket because the eye of the hook has frightened the fish.

It is impossible to please everybody; there are anglers second to none in experience and skill who even say there is a tendency for the eyes to get too small. In September I was fishing the Test with a friend, and one of his last injunctions to me was, "Don't let them make the eyes too small." And this is the verdict of an angler who has given eyed-hooks a very fair and thorough trial for several years among the shyest of fish, and he sums up his experience by insisting on having his hooks *blue*, and with *biggish eyes.* With such hooks he has this year killed a trout of 4lb. 4oz., and a grayling of 3lb. 5oz. It is the old story, "It is not so much the fly as the driver," and knowing as I do what a skilful angler Mr. Tod is, there cannot be a doubt that eyed-hooks in his hands would prove equal to all requirements. But it is evident that he has a good deal of prejudice to overcome, and this he can hardly hope to do so long as his eyed-hook flies remained untouched in his fly-book, and he is daily using his own pet patterns tied to gut, improving in their use and manufacture, and learning to put more confidence in them every day.

The turned-up eye is less conspicuous than the flat eye. Surely this is something in its favour, from Mr. Pennell's point of view; but this advantage is quite a minor consideration. There are numberless ways of tying the gut to the eye; but all are faulty if the gut does not support the hook. When properly attached, the gut should pull from underneath the eye and in a direct line with the shank of the hook. Further, the knot should be perfectly rigid and secure, incapable of slipping from side to side, and this is obtained much better with the turned-up eye than with the straight eye. If I understand Mr. Pennell's suggestion about a straight eye and his way of knotting the gut, there is nothing to prevent the gut from slipping round till it stands at right-angles to the shank of the hook. This is, of course, absolutely fatal, and it is not an imaginary state of things, for I have seen it happen in the hands of anglers who did not understand how the turned-up eye was intended to be used. The "in and out" process is extremely simple, and I have never (except at dusk) found any difficulty whatever in fastening the gut to the hook by the riverside. It gives me less trouble and takes less time than to tie the ordinary slide-knot for joining two strands of gut. The knot I use is the well-known salmon knot, and in using this, is it not found that the gut-loop at the head of the fly takes an upward turn naturally when the gut is pulled tight? This upward turn corresponds with the turned-up eye of the eyed-hook. I have tried flat eyes, round eyes, oval eyes, and I have seen needle-eyes. None, in my opinion, fulfil the requirements of small trout flies, except the round, turned-up eye now in use, and I think it is extremely improbable that I shall ever use any other, for, candidly, I do not, from my own experience, know of any objection to the present form of eye either in size or shape.

Mr. Tod has alluded to our meeting on the banks of the Tummel, and he has recalled pleasant memories. It is a curious coincidence that Mr. Bankart was also fishing there at the time he mentions. I have all the incidents before me in black and white, as they were recorded in the *Field* rather more than three years ago. This is what happened. June 17th was my first day on the river, and I did little. Mr. Tod made "a nice basket of about 10lb. of decent-sized fish." The next day Loch Rannoch was so stormy that no boats could go out. Eight rods fished one mile and a quarter of the Tummel. Only three had any sport—namely, Mr. Tod, Mr. Bankart, and myself. In aggregate weight there was little to choose between the three baskets; but Mr. Tod will perhaps forgive me for reminding him that the Hampshire fly on eyed-hook did the most execution on that day. My basket contained twenty fish, fifteen of which succumbed to the point-fly mentioned above. "Amongst them I had one fish of 1½lb., and two others over 1lb., and several half-pounders. T. and B. ran me very close; they both had more fish, but neither of them had anything over ¾lb." This I glean from the *Field* account written shortly after, and I only mention it for the purpose of showing that my eyed-fly did not frighten the fish, that it landed fifteen that day, and that, thanks to the eye and a possible change of gut when necessary, that fly did a week's more fishing and is still in my possession—not really worn out, but pasted in a scrap-book with other veterans, each with his doughty deeds fully recorded, reminding me of pleasant days and weighty baskets. I have never had the pleasure of meeting Mr. Tod but once, nor have I heard of him again till his letter of October 11th appeared; but that little yellow dun with blue wings and honey dun hackle which did me good service the first time I put it on, reminds me of June 18th, 1881, and its pleasant associations every time I turn over the leaves of my scrap-book.—I am, &c.,

H. S. Hall.

P.S.—I have hundreds of hooks with flat eyes, some round, and some pear-shaped If Mr. Tod or Mr. Pennell care to have any of them, I shall be very glad to give them away. I never use them.

[We quite agree with Mr. Hall that the shyest and hardest-fished trout will take flies dressed on the eyed-hook. We have repeatedly found this the case in Hampshire, Kent, Surrey, and other trout streams.—Ed.]

## *RE* SALMON EYED-HOOKS.

Sir,—After reading the letters in the two last Gazettes, we determined to see what we could do in making these hooks, and herewith inclose samples of a few *hastily made*, both double and single. Will you kindly send a few to each of your correspondents, who wish to see these kinds of hooks, so that they may give their opinion to salmon fishers through your columns, and much oblige,—Yours, &c.,

J. Warner and Sons.

Redditch, Oct. 22.

P.S.—From the inclosed papers you will see that our Mr. J. Warner patented the needle eyed-hooks in Feb., 1866, nearly 19 years ago.

[We see Mr. Greville Fennell, the Earl of Breadalbane, Mr. H. Wade, and other well-known anglers spoke very highly of these needle eyed-hooks. We have sent them to Mr. Cholmondeley Pennell for his opinion, and will send them to Mr. Tod, "An Amateur," and "Green Wren."—Ed.]

---

Sir,—I beg, through your paper, to return my thanks to Mr. Currell, Mr. Bankart "Green Wren," and others for their courteous replies to my request for information about eyed-hooks for salmon flies, and hope, through their assistance, to be able to obtain what I want. In reply to "Green Wren," double salmon hooks can be procured from W. J. Cummins, of Bishop Auckland; or Messrs. Hutchinson and Sons, Kendal. —I am, &c.,

H.M.S. *Lord Warden*, Oct. 21st. An Amateur.

---

Sir,—In glancing over the correspondence in regard to eyed-hooks of your last issue, I observe there are many conflicting opinions concerning them. In the first place, you notice in your footnote the eye should be perfectly smooth, which, no doubt, is quite true. Mr. Pennell, in his letter, fails to see what advantage the eye turned up has over a straight shank with the eye like a needle. I inclose two hooks with the gut properly attached. You will notice that the pull of the gut, which is also double as it passes through the eye, is parallel to the shank, and the great draw or friction of the gut is on the outside of the hook, round the shoulder of the eye, which also is perfectly smooth; whereas the draw of the gut in ordinary needle eyed-hooks must undergo a great deal more in wearing the gut through than the cranked eye, and which, in my humble opinion, is very suitable for salmon flies, as the eye is in the proper position, and the gut supports the hook to pull central.—I am, &c..

Redditch. Charles Court.

[The eye is evidently stamped out as a needle-eye is done, and this leaves a sharp edge just where the strain on the fastening comes. If Mr. Court can punch his eye so that it gives a round surface and not a sharp edge, it would be perfection.—Ed.]

## EYED SALMON HOOKS—PIKE FISHING IN IRELAND, &c.

Sir,—Since writing to you on this subject last week I have received from the A. and N. Co-operative Stores some eyed salmon hooks, and also some double salmon hooks with eyes. I inclose a sample of each, but I am afraid the latter must be improved on before they are of much value. The eyes are much too large and clumsy.

Could any of your correspondents tell me where double-hooks could be procured, made with reasonably small eyes?

Would Mr. Kelson, or someone learned in feathers, tell me if the inclosed feather is kingfisher or blue chatterer? Almost every lake and pond in some parts of Ireland is full of pike, which are seldom fished for. Would some of your correspondents, who are great at pike fishing, give a few hints as to fishing in lakes? Live-baits are not easy to obtain in winter, and the pike are seldom tempted with anything more toothsome than a spoon or artificial minnow trailed after a boat, or a frog or piece of bacon on a very coarse night-line, set by the natives.—I am, &c.,

Newry, Ireland. Green Wren.

[If we were in "Green Wren's" place, we should write to Messrs. Gillett and Co., 40, Fetter-lane, London, and ask them to send two or three dozen large Thames dace, packed in a box in bran, each fish sprinkled over with King's preservative powder. When we got them we should make a solution of this powder, and put them in it till wanted for spinning with. We have sent the feather on to Mr. Kelson. It looks like kingfisher.—Ed.]

## HINTS FOR ROACH ANGLERS.

Sir,—Starting as soon as it was light one morning for an hour or two at roach fishing, I put a few of "Huntley and Palmer's" Osborne biscuits in my pocket to eat. On reaching the river I found that I had left my carefully-prepared paste at home, but nipping a small portion of chewed biscuit on my hook, I soon had a pounder in my net. This was followed by others of varying weight, until the biscuits were exhausted. Since then I have, on several occasions, tried the same bait, finding the roach take it more freely than bread paste. Thus chewed and nipped on the hook, the biscuits form a more tenacious bait than would be supposed. As you invite hints for roach anglers, I mention this, as, although nothing new, it is a *bonâ-fide* wrinkle, and worth a trial by your readers when the roach refuse bread paste. Ledgering with a light lead and fine tackle, with brandlings or gentles for bait, secures the largest roach at this time of the year—at least, in my experience.

The articles and notes on "Roach Fishing" are highly appreciated by myself and other anglers, who have perforce to content ourselves with bottom fishing, trout and salmon being out of our reach.—I am, &c.,

A Coggeshall Volunteer.

## FISHING IN THE PARISH OF OFFORD CLUNY, NEAR HUNTINGDON

Sir,—The fishing in the above parish is now leased from the Lady of the Manor by Rev. Eardley, C. Holt, and Mr. Priestley, of the Manor House, Offord Darcy. The fishing is strictly preserved: a handsome reward is offered to anyone who, by giving information of persons trespassing and fishing, without permission, from boat or bark, enables the solicitors of the above gentlemen to obtain a conviction at sessions. Information to be given to Mr. Priestley, or to his foreman, Mr. Afford, Buckden Mills.—I am &c.,

Q. E. D.

### "I KNOW A HAWK FROM A HANDSAW."

Sir,—I believe that Mr. E. M. Tod is not quite correct in his account of the history of the phrase he refers to. It was originally used in hawking countries as an expression of contempt for a stupid person, the whole phrase being "He does not know a hawk from a hernshaw,"* the significance being obvious. With the disuse of hawking the proverb has become corrupted into its present form, "he does not know a hawk from a handsaw," which has no sense in it whatever, and in this form it is still commonly used in those parts of England where hawking was formerly a favourite pastime.—I am, &c.,
W. H. Corfield, M.D.
10, Bolton-row, Mayfair.

[We think our correspondent is mistaken in supposing that "with the disuse of hawking the proverb has become corrupted," because Hamlet says :—" . . . I know a hawk from a handsaw," and hawking was at its height as a sport in Shakespeare's time, and can scarcely be said to have begun to decline even a hundred years after his death, as witness Somerville's fine poem on "The Chase," in which he, a keen sportsman, refers so enthusiastically to falconry :—

> Next will I sing the valiant falcon's fame :
> Aërial flights, where no confed'rate brute
> Joins in the bloody fray ; but bird with bird
> Justs in mid-air. Lo ! at his siege the hern,
> Upon the bank of some small purling brook,
> Observant stands to take his scaly prize,
> Himself another's game. For mark behind
> The wily falconer creeps : his grazing horse
> Conceals the treacherous foe, and on his fist
> Th' unhooded falcon sits : with eager eyes
> She meditates her prey, and, in her wild
> Conceit already plumes the dying bird.
> Up springs the heron, redoubling every stroke,
> Conscious of danger, stretches far away.

We should say that Shakespeare's using it has had far more to do with perpetuating the saying than anything else—just as scores of other popular sayings still in daily use are to be traced to Shakespeare ; not that he invented all of them, but being there they partake of the undying nature of his works. Certainly Hamlet is feigning madness when he uses the expression, but we are sure Mr. Corfield will admit there was too much method in his madness for there to be "no sense in it."—Ed.]

### A KIND OFFER.

Sir,—Would you allow me to say that I would be pleased to give a pair, or a couple of pairs, of landrail's wings (of which I have 16 pairs) to anyone applying to me who subscribed to the fund of the widower of the late S. Morgan ?—I am, &c.,
Caythorpe, near Lowdham, Notts, Oct. 22. John Foster, River Keeper.

### THE LARGE "WICKHAM FANCY" AND STEEL EYES v. GUT-LOOPS.

Sir,—I think it is of comparatively little importance of what feather the wings of the large "Wickham Fancy" are made. I selected pheasant as a good speckled brown feather, *easy to obtain*, *pleasant to work with*, and *making* a very elastic and *durable wing*. The wings may be varied very much, and if a decided orange-tinted fly is desired to harmonise with the body and hackle, a couple of feathers from the Capercailzie *hen*, orange with a black tip, placed with the under sides together, make a capital wing, one which I have found very killing as a loch fly, dressed with orange silk or pig's wool body and red hackle. But the prime attraction to the fish in the "Wickham Fancy" I believe to be the gold body and *the play of the hackle wound over it spirally*, and if it has no wings at all, but is made like a palmer, rather bushy at the head, it will probably kill as well, particularly if used as a "drop" fly. But I like to use it as a "point" fly, and then it should be winged.

A brown feather like pheasant for light shade, or woodcock for dark, seems to harmonise nicely with the body, and being common feathers are easily accessible to everybody ; but the Egyptian goose, bustard, and some other pretty fancy feathers are not so generally available. Besides, what with the cost of "toppings" and good gold material for the body, the fly is sufficiently expensive in raw material to a professional fly dresser to enable him to turn them out at a moderate price, without further enhancing the cost by fancy wing feathers. But this does not apply so much to amateurs who dress their own, and to whom cost is a question more of efficiency of the fly when made. I am glad to hear that someone approves the fly, and I fancy if "Silver Doctor" had tried it of a *larger size*, he would have found it good for the larger sea trout, as well as the medium ones ; but the pattern I sent to the Editor (forwarded to "Silver Doctor"), was right size only for a *large loch* fly, or *smallest sea trout* size.

Mr. Tod's opinion on fly fishing is one to be highly respected, as he is well known as a skilled angler on the waters he frequents ; but I think if he will give the eyed-hooks *a fair trial* (which he admits he has not done, and that his objections to the eye are rather fanciful than practical) he will change his opinion.

As he invites discussion on this point, I ask—Why *should* the size of the eye be objectionable ? Examine carefully any natural flies of the ephemeræ class, and notice the remarkably large head and eyes they have in proportion to their bodies. If a natural fly is to be *fairly imitated* by an artificial one, it seems to me that the old way of dressing them, with the wing and hackle close up to the end of hook-shank, and *showing no head at all*, is somewhat of a libel on the real fly, and not according to nature ; that the eyed-hook provides exactly what was wanted in the old pattern fly to give it a natural head ; and, as the *eye* of the hook *is filled up underneath by the gut knot* (if properly knotted on), the actual eye of the hook is not visible to the fish.

Again, if a gut loop is substituted, and made as small and as neat as the steel eye, it must occupy about as much space and prominence in advance of the wings as the steel one, practically forming the same head, only of a different shade of colour, and on that account probably rather less visible. Practically, the gut loop will not last so very much longer than the single gut—say three times as long—which determines the life of the fly ; but the steel eye is *indestructible*, and I have no hesitation in saying that a loch fly, well and *strongly* dressed on an eyed-hook, will wear out ten—aye, even twenty—strands of good fine gut before it is pulled to pieces by the trout. I have some in my book now, four years old, and nearly as good as new.

The gut loop method possesses this very marked disadvantage in dressing *small* flies, but which is not so perceptible in large ones, that there being two thicknesses of gut to wrap down on the shank of the hook (and which will naturally be selected of rather stouter substance than the gut used for the "casts" for the sake of durability), it makes the head of the shank about the wings *three times as thick* as the bare shank of the eyed-hook ; this means three times the bulk about the wing attachment and thorax, and enhances the difficulty of putting on a short, soft hen's hackle neatly, as it uses up the length of the feather so rapidly in winding round the bulky thorax of the fly.

If Mr. Hall's method is used for winging the fly closely up to the head with just one turn of the hackle in front of the wing, the eye of the hook comes so closely up to the shoulder of the fly as to make returning the gut (the second time through the eye) a matter of practice, and then the *head* of the fly is only slightly visible. If you want *small*, *slender* flies like nature, dress them on eyed-hooks ; if you like them fat and stumpy, the gut loops will help the thickness of body.

As to the eyes being *as small as possible*, I believe it to be a mistake : the eye aperture *must be large enough* in the smallest hooks for a strand of *fine* gut to go *twice* through, or you don't get the best knot, or *the best pull on the point of the hook*, and smaller apertures than have been made would be hardly advisable.

The first hooks made for us, and obtained from Mr. Aldam, had smaller eyes. I inclose patterns of three middle-sized ones for Mr. Tod, if you will kindly forward them, and if he fancies them I can let him have a few dozens of each size, and others rather heavier in the wire. If he wants still smaller eyes, he can have them punched through the wire itself, like those of needles, but which I would not use on any consideration, as I should expect the gut to wear out faster than by the old plan of wrapping the gut to the hook.—I am, &c.,
George Bankart.

P.S.—If any Northern sportsmen can send me a few small feathers from the *hen* Capercailzie—orange with black tip—I should be obliged, as the birds are not seen in this neighbourhood.

### THE COACHMAN, GREEN INSECT, &c.

Sir,—In answer to "J. B. J.," the dressing of the coachman, as used on the Teme is the same as of the ordinary white-winged fly of that name, only that the wing is made from the pale blue wing feather of the jay, with a turn of gold tinsel at the tail, or as a ribbing. A sort of green insect with the addition of an orange floss silk tag, is a most excellent fly on the above river for grayling ; but an even better one is one locally known as the "Rutting Stag,"—why, I don't know, unless on account of the time of year when it kills. I inclose you some patterns I have tied of the above three flies. As regards the coachman, I have found the jay wing infinitely more killing than the white one, as the former kills equally well both in the day and in the gloaming, and for the four summer months I never take it off my cast. The "Rutting Stag" is dressed thus :—Body, blue rabbit fur at the middle and shoulder, and orange floss silk wound round at the tail ; hackle, honey dun if procurable, if not, a grizzled blue does almost as well. Hook, No. 12.—I am, &c.,
Richmond. Amateur Fly-tyer.

[The patterns are excellent. We shall have some made from them.—Ed.]

### TROUT FOR THE THAMES TIDEWAY AT TEDDINGTON.

Sir,—I shall be obliged by your publishing the inclosed, if you think it worthy a space in your columns.

Early in the spring of this year, at one of the weekly meetings of the Richmond Piscatorial Society, held at the Station Hotel, Richmond, I proposed that we should put some young trout in the Thames below Teddington Lock by way of experiment. After a certain amount of discussion it was agreed that we should do so. I then suggested we should not touch the funds of the society to purchase them, but to make a collection among the members. I need hardly tell you the call was heartily responded to, and the amount required quickly forthcoming. A sub-committee was then formed, consisting of Messrs. Spreckley, Brougham, Little, Powell, and myself, to wait upon Mr. Forbes, of Chertsey Bridge, the pisciculturist, to ask his advice as to what sort we should get, where to get them, and what time in the year to turn them into the river. He was very pleased to be able to give us the required information, and appeared to take a great interest in the matter. He stated he did not sell his fish. I then said I had proposed to purchase them of Mr. Andrews, of Guildford. He at once said : "You cannot do better than go to him ; he will do you justice." After further conversation he invited us to partake of luncheon with him. We were then shown over the whole of his establishment, finally leaving about six o'clock, after having spent a most enjoyable day.

The result of the interview was reported next meeting night, and the secretary was asked to write to Mr. Andrews for particulars. The letter was answered to our entire satisfaction, the fish were ordered, and the first instalment of 25 forwarded to The Swan, at Twickenham, on Thursday, the 16th inst. They were fine specimens of the "Salmo Fario," or common trout, measuring from 8in. to 11in. in length, and were carefully and successfully turned in at "Stoney Deep," in the presence of many members and friends.—I am, &c.,
H. Dickinson.
High-street, Kingston-on-Thames, 22nd Oct.

P.S.—I am now turning my attention to our own water at Kingston, in which I intend to put 100 of the same species, about this time next year, part of the funds necessary for doing so having already been subscribed.—H. D.

[We are always very glad to hear of trout being put into the Thames, and in this case no coarse fish anglers can grumble (as we have heard them do), at their money being used for the benefit of the trout anglers. Hampshire trout are the best to put in the Thames : they frequently grow to 7lb. and 8lb., even in the comparatively small streams of Hampshire. They are the fish which stocked the New Zealand trout streams—superb trout, unsurpassed in sporting or eating qualities, or in beauty of appearance. Mr. Andrews supplies them.—Ed.]

### HINTS ON CARP FISHING.

Sir,—Anything of interest and of good to the large body of anglers is, I am aware, always welcome at the office of the Fishing Gazette, and the fact emboldens me to give a hint or two on carp fishing, which may be of value to some of my brother anglers. I am not of a greedy disposition, and wrinkles picked up cheap are at the disposal of the lovers of the rod at the same figure. Some few weeks since, feeling rather seedy, it occurred to me that a ramble over Putney-heath might be of use in dispelling an attack of "blues" I was at the time suffering from. A visit to the Green Man led me to the immediate neighbourhood of a pond known as Lady Grantham's, and the moves I was there put up to served largely to remove any lingering dyspepsia that may have been knocking about. The pond, which is no doubt known to many of your readers, is not of large dimensions, and owing to the very dry season, was, at the time I write of, so low, that the carp could be clearly seen as they roamed about at their own sweet will. Two anglers (?) were trying their luck—time, 4 p.m. on a bright, sunshiny afternoon—as follows. They stood on opposite sides of the pond, their running lines attached together, and dangling from the middle was a float (large enough to fish the most rapid swim in the Thames when raking for dace) and line, depth about 3ft., with a bunch of gentles quite in keeping with the size of the float, and with this arrangement they were stalking the game from end to end of the pond, guided by the sun's rays in placing this very tempting bait immediately in front of the noses of the fish. Always on the look-out for information, I watched the game for some half an hour, when the fish declining the "gentle" invitation, the amalgamated lines were taken to one end of the pond and the Siamese twinship severed, each angler taking to business on his own hook. I was under the impression that I had learnt as much about carp fishing in one afternoon as I could reasonably expect to do ; but the grand finale was yet to come. Having placed their lines at about a yard's distance from one another, the junior member of the firm took himself to the roadside end of the pond, and by the aid of lumps of clay, stones, &c., endeavoured to coax the fish from the comparatively shady nook to which he was evidently under the impression they had betaken themselves, toward the several bunches of gentles paraded for their inspection. If from this description, which I have endeavoured to make as clear as possible, any brother "Bob" should see his way to circumventing one of the most artful of fish, and should be in want of a mate to stand on the opposite side of a pond and make a double attempt on our friend the carp, you are at liberty to refer him to,—Yours, &c.,
R. A. B.

### FISHING IN AUSTRALIA.

Sir,—Will you kindly inform me through your paper where I may purchase a book relating to fishing in Australia, if such a work is published ?—I am, &c.,
New South Wales.

[The 1884 edition of the "Angler's Diary," published at the *Field* office gives some useful information about the native fish. English trout are now plentiful in many of the streams of Tasmania and New Zealand, and piscicultural establishments there keep up the stock. Mr. Wm. Senior's pleasant volume, "Trout and Travel at the Antipodes," published a few years ago by Messrs. Chatto and Windus, will give "N. S. W." much interesting information.—Ed.]

---

* A short form of heronshaw.

## THE RIGHT TO A THAMES SWIM.

Sir,—Referring to Mr. Britton's letter of the 18th inst., this gentleman did not fish the swim taken by me, but it was evidently because he was acting under prudent advice. Mr. Britton's charge that I threatened him with personal violence is a thing of his own imagination; but if he thought that I was going to allow him to say, and do, what he pleased without retaliating, he, for once, mistook his man, and from the impulsive manner he spoke to me no Englishman could but resent it. However, your editorial remarks have completely answered the complaints, and it is not my intention to follow your correspondents through all their whims.

Your correspondent, "M. B.," is in error when he says there are only ten known swims from Orleans Club to Chillingsworth's; I could point out at least fifty. When the water is as low as it is at the present time, one might fish in any part of the river, and get good sport; when there is land water the case is different—then there may be only ten. The fixing of poles in the morning is not a new thing at all, as "M. B." states. I have spoken to one of the oldest fishermen living here, and he told me when Dorey, Coxen, and Hennessy were young men, if he wanted a particular swim, he had to be up at daybreak, and has many times remained in his punt all night to secure it. I think "M. B." should have adopted his own advice, and let the matter drop, instead of communicating with the Thames Conservators, as they were sure to do what was right whether he had written or not.

It appears that the whole matter arises from disappointment, and I do not require the advice of anonymous correspondents. Let them sign their names and fight the battle openly, as I am not afraid to face my opponents, who seem to accuse me of doing what did not occur, and evidently made reckless charges against me without first ascertaining the facts.—I am, &c., W. Johnson.

Twickenham, Oct. 22.

Sir,—The right to retain a swim by sticking a ryepeck or pole in the river leaves open the way to so much chicanery that I think no one should be entitled to a swim unless he is fishing it, or has only left temporarily, and has left his tackle during his absence. In the event of punt fishing, I should be prepared to recognise a moored punt, because a man can't very well moor half-a-dozen punts in as many different swims. I suppose the Conservancy would allow no punts to be moored in the navigation. If a man baits a swim, there should be a regulated time for him to take possession of it. I consider one hour after legal sunrise reasonable.—I am, &c., A. J. Marriott.

Sir,—According to Mr. Johnson's letter published in your issue of Saturday last, he only held the pitch four days; then, of course, I have done him a great injustice by stating that he had held it for two weeks. But I was under the impression when I wrote that letter that he had, as it was a continual thing to hear people grumbling about Mr. Johnson keeping that swim for a fortnight; but they would not come forward publicly and state their grievance, so I thought by getting you to publish the letter that Mr. Johnson justly complains about, it would stop one or the other—viz., the grumbling, or the taking of pitches with poles.

As it is through the columns of the Fishing Gazette that I have attacked Mr. J., it is through the same organ that I willingly apologise for having wrongly accused him; and if I have told an untruth it was not wilfully done—it was only from information I received, as I have no animosity against Mr. J., and I don't think he has any against me.—I am, &c.,

One who Expects to Receive and therefore Gives Fair Play.

## NOTE ON HARD STRIKING FOR GRAYLING.

Sir,—I was last week fishing a piece of water on the Itchen, and on seeing what I felt persuaded, from its significant fluttering or splashing-like rises, was a grayling, I threw over him a very fine Wickham, which I soon found I had lost. I then put on an iron-grey, and after waiting twenty minutes, I found another rise a few yards higher up the stream, but very near the spot where I lost my first fly. I managed to hook my fish, but broke again. I walked from the spot of my misfortune, set light to another cigar, that great care-breaking luxury of a fisherman, and once more ventured to return to the same locality, when I soon observed grayling were still on the rise. I put on an olive dun for a change, as my servant had just caught one off the water. After the first throw, I hooked, played, and landed in good condition a fine grayling just under 2lb. Securing him in my landing-net, my servant exclaimed, with a grin, "Why this is how you lose your flies, and your fish, too, sir! The fish has three flies in his mouth!" On examination, I found *the three* flies I have named above nicely fixed in the folds of his jaws, and quite fit for use. They are beautiful specimens of flies tied on eyed-hooks by Mrs. Cox, of Winchester.

I am more accustomed to salmon-striking, hence the cause of my losing more trout and grayling than I have landed this season.

I should mention that the incidents above given took place within an hour.—I am, &c., J. W.

["J. W." should certainly try Dr. Brunton's plan of putting 12in. of fine round elastic, such as ladies use for their veils, between his collar and winch-line.—Ed.]

## HINTS ON ROACH FISHING.

Sir,—I approach this subject with considerable trepidation; but at the risk of being thought egotistical, &c., strongly advise your readers not to use a plummet. In eight cases out of ten the depth can be obtained much better and quicker without the use of that article, especially when fishing in ponds, and those quiet, circling places near the shore, in rivers, &c., I mean where the current goes round and round sometimes—where, as Lord Tennyson so beautifully puts it, the water "Dimples in the dark of rushy coves," that I am surprised the method is not more adopted. If you try it when fishing streams, it only wants a little more care. Make all your preparations some little distance from the side, even to preparing your ground-bait, and baiting your hook. All being ready, be seated, then put your float at a depth you consider a little deeper than the bottom shot, or shots; you can generally judge pretty well—often the first try. Use caps in these cases.

Carefully throw where you intend to fish—*i.e.*, where you know the ground-bait *has gone*. If your float assumes a flat position on the surface, you know as certain as it is possible to know your lowest shot, or shots, are on the bottom, and that you are too deep; then all you have to do is to carefully make the depth shallower and shallower, until the float just cocks, then allow for the distance between the bottom shot and the hook, and the thing is accomplished. Do you understand? Then try it. No splashing, no disturbing the water, and "messing" in and out, dragging a piece of lead about, plomp, plomp, "plomping" here and there, much to the chagrin of the red-finned beauties below—perhaps waiting for a meal, instead of which they probably get a knock on the head.

On several occasions I have actually seen this "plomping" business go on for ten minutes. Take my advice, and do not plomp; but let your light float drop on the surface as silently as a leaf dropping from a tree.—I am, &c., Mark Antony.

N.B.—I have adopted this plan for years, and found it answer admirably.

["Mark Antony's" advice is very good. We often get the depth in the same way; but even a better plan is to put a small lump of stiffish ground-bait on your hook, and when your float is an inch under water, and the bait on the bottom, you are right, and can strike the ground-bait off. A very small weight will take a properly-weighted roach float under.—Ed.]

## PERCH FISHING NEAR EXETER.—FLY-TYING SILK.

Sir,—Will your Exeter correspondent please say if any decent perch fishing can be had in the Exe, above Cowley Bridge; and, if so, its whereabouts, and what permission to fish is necessary?

I should also be glad to be informed where very fine tying silk, for dressing midge trout flies, may be purchased.—I am, &c. R. A.

Tiverton, 23rd October, 1884.

## THE SHAPE OF THE EYED-HOOK, &c.

Sir,—Many thanks for Mr. Bankart's courtesy in sending me the three hooks, which are in many ways a puzzle to me, particularly the very long-shanked hooks.

I am old-fashioned enough, and conservative enough, to prefer the round bend-hook as made by Adlington to all other shapes for small flies, and Limerick for lake and salmon.

I would fain have all the practical reasons (for I regard purely scientific reasons with suspicion) as to why the inventors prefer the new hooks with such a long shank and such a short turn-in bend; also the reason why the twist is given to the point.

It may hook more trout; but does it not tend to *lose* them when hooked? I always fear that it "pricks" many more than the old shape.

Allcock's needle eyed-hook you kindly sent to me—the larger size—meets with my unqualified approval. Such a hook seems all one wants for lake, sea trout, or salmon flies.

I am not prejudiced against the eyed-hooks, but I am puzzled with them. Now, the smallest size sent would make a very good-sized fly. I am accustomed to use the small sizes generally. I maintain that the needle-eye is *the* eye to aim at. If needle-makers can make them and sell needles for a mere song, it is merely a matter of knowing how. The best of the eyes you sent from Mr. Bankart is not on a par with a needle-eye. Of course, to make a hook thus one would need to have the wire thicker at the end in order to drill a hole in it at all; but this cannot be an insuperable obstacle, and we would *pay* for a perfect eyed-hook.

The *slight* turn-out of the point in No. 13, ordinary shank (smallest), seems to be an improvement. The shanks of all Mr. Aldam's patterns are beautifully fine; but I should fear much that a big fish would snap or straighten one of them now and again.

With all my heart I will be guided by those who have devoted time and study to bends and curves; but I must have fine eyes.—I am, &c., E. M. Tod.

## A LARGE PIKE.

Sir,—The splendid 25½lb. pike which was taken from the lake pond in Stratfield-saye-park, and presented to your humble servant by his late grace the Duke of Wellington, arrived at the fishery this week after being cast and painted to life by Mr. Edon, of the Buckland Museum, and which does the artist very great credit, it not being, as in many cases (I am sorry to say), over-painted. More life-like it would be impossible to have painted it, insomuch that a rev. thorough naturalist said, had it been lying on the grass, it would have thoroughly deceived him.—I am, &c.,

Frank Gosden,
Fish Culturalist to His Grace the Duke of Wellnigton.

## SALMON FISHING AT NOTTINGHAM.

Sir,—The sport amongst the salmon during the past week has been exceptionally good. As many as 12 fish have been taken just below King's Mill's, in the Shardlow water on Monday, Mr. Moll getting two, one 10lb. and another 14lb.; Mr. Stanley one, 11lb.; Mr. Hibbert one, 13lb.; and myself one, 12lb. On Tuesday Mr. Moll again with another 8lb.; Mr. Frank West, one of 6lb.; and another angler landed one, but I did not get the weight. On Wednesday Mr. Moll was to the front again with another 10½lb., and myself 5lb. of dace and one barbel. On Thursday Mr. Albine Bull took a salmon 10lb. On Saturday two more 12-pounders were taken, one falling to the lot of your correspondent, and a nice lot of dace. Some very good pike have been caught in the Weston water, Mr. Isaac Jackson getting 11 during the week in the Shardlow length. Very little doing down the river.

In my last letter the printer put "shallow" water instead of "Shardlow" water.—I am, &c.,

October 20th. A. W.

[The printer says: will "A. W." kindly write the names of places a little more plainly?—Ed.]

## BRANDY AS A FISH REVIVER.

Sir,—In compliance with your request contained in last week's Fishing Gazette I have continued my experiments in relation to brandy as a means of restoring suspended animation with quick-dying fish, the results being equally as satisfactory as with carp.

It was highly interesting to see the plucky manner a trout (*S. ferox*) battled with his fainting condition and came out the conqueror. Strange to say, the salmon (*S. salar*) did not once attempt to rouse himself after being dosed, the consequences being fatal to him; this was the only fish that succumbed under the treatment.

As regards the dace (*Leuciscus vulgaris*), I had him out of water three times of five minutes each. He was exceedingly faint and almost dead; but immediately the brandy was given, he pulled himself together, and in the course of a few minutes not only recovered, but darted round the can with a rapidity positively amazing.

The result of the latter experiment tends in the most conclusive manner to show to anglers the great value of a judicious administration of brandy to a dace prior to being used for bait.

How often, Mr. Editor, have we felt the want of a nice lively dace when on the warpath for pike? To have the means at command of not only restoring an inanimate bait, but also increasing its strength and vigour, will be of much service to the angling fraternity.

I shall look forward with interest to reports of future catches of my friends, Jardine and Sachs.—I am, &c., W. Oldham Chambers, Sec.

National Fish Culture Association, South Kensington, Oct. 22.

## SEVERN FISHERY BOARD—SIR RICHARD HARRINGTON AND THE FISH IN THE RIVER TEME.

At the Herefordshire Quarter Sessions, on Monday, Sir Richard Harrington, Chairman, on proceeding to the appointment of four Conservators of the Severn Fishery District, said Mr. O. Partridge had never attended the meeting, and he had not answered the letter of the Clerk of the Peace, asking whether he was anxious to continue on the Board. He suggested Mr. John Chile Freeman, who was a riparian owner on the Teme, in the place of Mr. Partridge. He believed that the Freshwater Fisheries Act was capable of being worked so as to produce serious irritation and annoyance to the owners of grayling and trout streams in the county. The only river in the county in which their Conservators were interested was the Teme, which was known as a grayling and trout stream. Any attempt to interfere with the coarse fish in the Teme would considerably depreciate the value of the property of riparian owners. In nominating their fresh Conservators he would suggest that it be an instruction to them to oppose in every legal way in their power any statute for the destruction of coarse fish in the river Teme.

Mr. J. H. Arkwright, of Hampton Court, said they had the power of insisting upon the owner of any river or stream preserving any fish they like to name; they could prohibit any mode of fishing they liked; they could make the mesh of the net so small that it would be utterly prohibitory to those who preserved trout and grayling. If discretion was not used they would make enemies instead of friends of the breeders of these fish, and would create irritation and vexation, which would surely do harm. The best thing was to show good common sense, and not to interfere with the well-preserved streams which fed the rivers.

The proposition of the chairman was agreed to.

SALMON & TROUT-FISHING.

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 ,, | Putney. |
| | 45 ,, | Hammersmith. |
| | 50 ,, | Barnes. |
| | 55 ,, | Kew. |
| | 75 ,, | Richmond. |
| | 80 ,, | Twickenham. |
| | 85 ,, | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | October | 25 | 5.12 | 5.30 |
| Sunday, | ,, | 26 | 5.52 | 6.14 |
| Monday, | ,, | 27 | 6.38 | 7.8 |
| Tuesday, | ,, | 28 | 7.41 | 8.16 |
| Wednesday, | ,, | 29 | 8.57 | 9.39 |
| Thursday, | ,, | 30 | 10.17 | 10.49 |
| Friday, | ,, | 31 | 11.20 | 11.47 |

## THE LOWER THAMES.

### General Remarks.

Although the river continues low, and the water and the anglers not mustering in any great numbers, there is a fair amount of sport, and what is better, the jack and perch are beginning to show themselves, the former having been taken up to 14lb. each, and the latter up to 1½lb. The gudgeon are still in good force at Kingston, and the fish run of a good size. The barbel are also to be found, as there is a take in one day by John Johnson, sen., at Kingston, of nearly 60lb. weight. In the tidal waters the report is that the water is about the same as last week, and the fish do not run quite so large. There were twenty-five good trout of about 9in in length put in this portion of the Thames on Thursday in last week, under the superintendence of Mr. A. J. Little, the respected chairman of the Richmond Piscatorial Society. The anglers in the tideway should feel much indebted to Mr. Little for the interest he takes in all matters connected with the protection of the fishery ; and since his attachment to the Thames Angling Preservation Society he has always been ready to assist Mr. Thomas Spreckley in all the grand movements he has promoted, and in directing the preservation of the river in his important district. There are some good takes reported this week from Richmond.

### Angling Results.

**Richmond.**—Henry Howard, in one day with Mr. Brooks, 25lb. weight of roach and dace ; another day, with Mr. King, 20lb. ; and in two other days, 25lb. Mr. Bigley, in two and a half hours, 15½lb. of roach. Christopher Brown, in one day, with Mr. Thomas, 12lb of roach ; and in three other days, 46 lb. and four barbel. F. Brown, in seven days, 105lb. of roach and dace, and a couple of barbel. Henry Wheeler, in five days, 90lb. and two barbel. Job Brain, during the week, 90lb.

**Twickenham.**—John Spong, in seven days, 105lb. weight of fish, which included twenty-nine barbel. Joseph Dobbin, in five days, thirty-eight barbel and sixteen dozen of roach and dace. Edward Finch, during the week, has made some good parcels of fine roach. James Coxen, in four days, forty-eight dozen of roach and dace. R. Coxen, in three days, 46lb. and one barbel. Pert Hammerton, in three days, 20lb. and twelve barbel. C. Hennessey, in two days, 24lb. Samuel Cole, in five days, 90lb. ; and Henry Spiers, in three days, thirty-one dozen. Mr. Abbett, of Twickenham, on Tuesday last, in one hour's fishing at Teddington Weir, caught three carp weighing respectively 6¼lb., 4lb., and 2¼lb. These fish were afterwards possessed by Mr. A. J. Little, who put them back again in the river at Twickenham deep.

**Teddington.**—Joseph Baldwin, in three days, 20lb. of roach and dace. Charles Baldwin, in the same time, seventeen dozen and one and a half brace of perch. Benjamin Stevens, in three days, 60lb. weight of fish, which included eleven barbel ; and John Stevens, twenty-four dozen of roach and dace.

**Kingston.**—John Johnson, sen., in four days, twenty dozen of gudgeon, five brace of perch, twenty-nine barbel—the largest 5½lb.—and one chub. John Johnson, jun., in five days, eight barbel—the largest 3½lb.—five dozen of dace, fourteen dozen of gudgeon, and three and a half brace of perch—the largest fish 1½lb. J. Wilks, in two days, sixteen dozen of gudgeon, and four dozen of roach and dace. The bank anglers at Kingston and Surbiton have been getting barbel, bream, perch, chub, roach, and dace in nice quantities.

**Thames Ditton.**—Edward Tagg, in a couple of hours, four and a half dozen of gudgeon ; Mr. C. Lawless, fishing from the bank in two hours, secured 19lb. weight of perch, several of them weighing 1lb. each ; and other anglers of the same class have caught a good quantity of gudgeon and perch.

**Hampton Court.**—Thomas Milbourne, in one day, ten and a half brace of perch, the best fish ¾lb. Charles Davis, in one day, four and a half brace of perch and three dozen of roach and dace. Thomas Wheeler, in three days, nine barbel, the largest 6½lb. At "Tagg's Island Fishery" the anglers have recorded at the Island Hotel twelve dozen of roach and dace and three jack, the largest 5lb. The bank fishers on the towing-path have been getting during the week a nice supply of roach, dace, gudgeon, perch, and chub.

**Sunbury.**—Edward Clarke, jun., in three days, eighteen brace of perch, twenty dozen of gudgeon, and ten barbel, the largest 5lb. Henry Clarke, in two days, eighteen brace of perch and fifteen dozen of gudgeon. Considering the large quantity of perch put into this portion of the river out of the Chelsea Waterworks reservoirs, it ought to be attractive to the perch fishers. The bank anglers have been getting great takes of roach and dace, and some good perch, chub, and barbel.

**Walton.**—George Hone, one day, with Mr. Smith, three barbel of 3lb. each, three bream of 1lb. each, and two roach of 1lb. each ; in two other days, with Mr. Alfred Mackrill and Mr. R. B. Marston, over 50lb. weight of barbel, a perch of 1lb., another of ½lb., and a chub of 1½lb. ; another day, with Mr. Luken, a barbel of 2lb., and three bream of 1lb. each ; and another day, two barbel and two bream. R. Watford, one day, with Mr. Abbett, nine barbel, one bream, and an eel of 1lb ; another day, three barbel ; another day, five barbel, two bream, and one jack ; and another day, three barbel, two bream, and a couple of roach.

**Halliford.**—W. S. Rosewell, in one day, four jack weighing 21lb. ; and in three other days, a jack of 3lb., and thirty dozen of roach and dace. George Rosewell, in one day, eight barbel and three chub ; and another day, three jack—the largest 14lb. Thomas Strudwick, in one day, five barbel and one chub.

**Weybridge.**—Herbert Curr, one day, with Mr. Foster, a jack of 6lb., one barbel of 2½lb., and five dozen of roach ; another day, with Mr. and Mrs. Boyton, eight dozen of roach and dace ; another day, a similar result ; another day, with Mr. Foster and Mr. Dutton, twelve dozen of roach and dace ; and in two other days, fifteen dozen and a dace of 8½oz.

**Shepperton.**—David Hackett, in one day, with Mr. John Wotton, three jack ; and another day, one jack. James Haslett, one day, one jack, one perch, two chub, and 10 roach ; and another day, eleven dozen of gudgeon and one and a half brace of perch. James Haslett, jun., in one day, five barbel and two chub.

**Staines.**—Charles Hone, one day, seven jack — the largest 8lb. John Keene, two days, three dozen of roach, one and a half brace of perch, two barbel, and three chub ; and George Osman, during the week, one barbel and six dozen of roach and dace.

## UPPER THAMES.

The angling news upper river way this week is of the most meagre description—in fact, hardly worth record. The Thames is very low, stale, and bright, and it is with the very greatest difficulty fish can be induced to feed. At Boveney Messrs. Bentley have had three jack going respectively 4½lb., 5lb., and 5¾lb., together with a pretty sample of perch, 13 scaling 6½lb. At Harley Messrs. Parry, on Sunday, only nobbled some 13 roach after toiling 11 hours ; but a banker in same lucky spot got hold of some 18lb. of roach. At Medmenham Bob Young, with a patron, has had daily fun with barbel. The largest fish, however, has not, I believe, exceeded 5lb. Thursday evening.—River still exceedingly low, and until many days' heavy rain comes as a blessing, angling will hardly be worth the candle ; but still the weather is grand in the extreme, and the outlook from the Thames is worth a journey from the "Land's End" to see.—Marlow Buzz.

## Thames (Datchet).

Water as low as ever ; at the same time fishing is not such a miserable failure. The barbel are biting, and the colder the better. Six fish this morning from 10 till 11 ; then the sun came through, and gudgeon began to bite. Richard Gray, of Windsor, has been catching a rare lot of barbel, but I can gather nothing authentic. My patrons' takes the past week, 18 barbel—largest 6lb., and three jack—largest 5lb.—and three dozen dace. J. Hoare has been catching a lot of gudgeon and a few fine perch.—G. Lumsden.

## Thames (Goring).

Water in good order for jack and perch. Some good baskets of perch have been taken here. I have had only one day this fortnight—four dozen of perch, one jack 4lb.—J. Rush.

---

## Ancholme District.

The holiday season has now nearly ended : as a consequence there is a falling off in the number of visitors, but local fishermen continue to wield the rod. Varied success has been obtained during the past week. Some old hands have done tolerably, whilst others have had but few fish. The weather now is quite summerlike again in the daytime, so that it is very pleasant by the water side. The falling leaves are rather troublesome. Rain would do much good, as the water remains very clear and low. —Thomas Ford, Caistor.

## The Bure (Norwich).

Very little has been doing in this river during the last fortnight, but with the more settled weather of the past few days several friends have been out and tried their luck, with varied success, one party that went up from Wroxham towards Coltishall had good luck, catching three nice size jack, and then angling caught some very fine perch at Wroxham. There is always sport to be had, but its quality is not always up to the mark, little bait being, in most cases, the result of a day's fishing. The reports from Horning are not good, but lower down, by St. Benet's

Abbey, I hear of some good sport being had amongst the jack. My own opinion is that with this delightful weather almost any fish may be caught, only many anglers have put away their bottom-fishing tackle, and have been busy refitting their pike tackle cases and testing their lines, &c. Prospects good.—ROBERT MOLL.

### The Coquet (Weldon Bridge).

Any amount of bull trout on the streams.—F. BROWN, of the Anglers' Inn.

### The Dee and Don (Aberdeenshire).

During the past week there has been a continuance of very fine weather, and the waters are getting quite small and clear again, so that sport has not improved. On the Don, in consequence of the low state of the river, fish cannot get over the dam-dykes, and are therefore lying in great numbers in the pools below, so that good sport is got there—or, rather, many fish have been taken—for "sniggering" is not sport, at least anglers who call themselves sportsmen ought to look upon the practice with disgust. We heard last week of as many as five salmon to one rod in a single day, by fishing in the above manner, and the destruction may be imagined when we take into consideration the fact that dozens of these implements are used daily. All night the river is netted by poachers, who no doubt possess themselves of a goodly share of the fish lying in the pools. The reason of this being permitted is that the staff of bailiffs is quite insufficient to cope with them, and of course when poachers know that, they will go on as successfully as ever. On the higher sections we believe that a few fish have been got, but no reports are still to hand. On the Dee some anglers have had very fair sport indeed, and we are aware that the water is well stocked with fish, but that they are not rising freely at all. The most successful flies have been "grey heron" and "ackroyd," and besides these "Jock Scott" has done very good work, and on account of the smallness of the river, the sizes used are about 1in. Mr. George Smith, Ballater, sends us his report for the past week as follows: Col. J. Skene, on the Invercauld Arms Hotel water, had, on Tuesday, two fish of 8lb. and 9lb.; on Wednesday, one of 9lb., and on Thursday, two of 9lb. each. Messrs. George Blacklaws and Son, Kincardine o' Neil, report: On the Borrowstone section, Walter Evans, Esq., Derby, had, on Monday, three fish of 4lb., 10lb, and 26lb. weight; on Tuesday, one of 14lb.; on Thursday, one of 27lb., and on Saturday, one 24lb. William Lamond, Esq., on the Norton House water, had two during the week, weighing 6½lb. and 18lb. respectively. On the Ballogie section, W. E. Nicol, Esq., had one, on Monday, weighing 6½lb., and J. Mortimer, keeper, had, on Saturday, two of 10lb. and 20lb. G. Cambell, Esq., on Carlogie, on Monday, landed three salmon, scaling 10½lb., 12lb., and 21½lb., and on Wednesday, on the same water, Charles Farquhar, Esq., landed one of 36lb., the largest fish reported on the Dee this season. On the Durris section, William Knowles, Esq., banker. London, and party, had, on Monday of this week, three fish of 23½lb., 23lb., and 22lb.; on Tuesday, last week, they killed five fish, ranging from 15lb. to 26½lb.; on Wednesday, six, scaling from 6lb. to 28lb.; on Thursday, two fish of 13lb. and 25lb., and on Saturday, one weighing 18½lb. On Crathes and Kinneskie, R. B. White, Esq., and General Keane had, on Tuesday, four fish from 18lb. to 30lb.; on Wednesday, two, weighing 20lb. and 26lb.; on Thursday, four, ranging from 15½lb. to 28lb.; on Friday, two, of 20lb. and 23lb., and on Saturday, one weighing 16½lb. G. Douglas, Esq., on the Inchmarlo section, had on Thursday two salmon of 18lb. and 27lb., and on Saturday one of 23½lb.; on Monday, of this week, he landed two, weighing 10lb. and 12lb. respectively. On Cairnton, Turner Farley, Esq., and party, during the week have killed thirteen fish, ranging from 14lb. to 26½lb. On Park, — Potter, Esq., on Wednesday had a fish of 18lb.; and on Invery, General Oliphant has killed three fish, weighing 16lb., 20lb., and 23½lb. High up the river, at Braemar, seven salmon, from 7½lb. to 11lb., and a grilse of 4lb. have been got during last week; and our correspondent reports that they are all in excellent condition for this time of the year. There is no indication of disease amongst the fish. The rod season for the Dee, Don, Deveron, and other Aberdeenshire rivers closes on the 31st October.

### The Dove.

Though the weather has been very favourable and the river in first-class order, yet sport during the week has only been of a fitful character. The grayling have been extremely shy at rising, and I don't think the general takes have averaged more than two brace per rod. I cannot give the reason why grayling have come up so badly. Everything seems to have been suitable, and yet they would not feed. What few have been captured have fallen victims to the grasshopper, tipped with live maggots, and odd fancy flies, of which the green insect (with or without red tag) has been as useful as any. A good many roach and dace have been killed with the maggot and cockspur worm, but this is about all the success that has been had, and I think anglers will have to wait for colder weather before there is much improvement in sport.—THE SPLODGER.

### The Earn (Perthshire).

Great numbers of salmon and grilse are daily being killed on the tidal water of the Earn, but mostly with worms. Splendid sport has been obtained on Dupplin water by Lord Dudley's friends. One day two rods landed twenty-eight fish, one rod had eighteen fish. Another day the same gentleman had thirteen fish to his own rod.—P. D. M.

### The Exe and Canal (Exeter).

Some pike and perch have been taken in the Canal and in the river near Exwick and Cowley, but nothing calling for special comment. I hope to have a fuller angling report next week.—J. A. KELLEY.

### Ilfracombe.

Sea fishing. During the past week those fishing from the boats have had some good catches of conger, tamlin, whiting, and skate, and Tuesday evening three boats were out drifting for herrings—they brought in about four maize, which caused all fishermen to be busy gathering their nets in, as they anticipate a good season. Amateurs fishing from the rocks and jetty have had good sport. Saturday evening, a conger, 20lb., was caught from the jetty, and several pollack, whiting, pout, and eels from the rock. Weather at present fine and prospects good.—E. COMER.

### Leicester.

We have lately been treated to weather of a very open character, which, although rather cold, has been favourable for angling. The sport has been fairly good. Some very nice catches continue to be had from the home waters, perch and chub being especially well on the feed. Several large chub up to 4lb. have this week been weighed in at the clubs. Mr. Thos. Hardy showed two perch weighing respectively 2lb. and 1½lb.—a very fine brace of fish. Some pike were also caught up to about 7lb., so that generally the sport has lately shown a decided improvement, whilst it may be said that the prospects of winter fishing appear of an encouraging nature. The weather of Thursday was again cold, but fine and bright, and waters are rather low and clear.—ALERT.

### Lea (Tottenham).

On the 19th inst. we had a few sportsmen down, and the takes were very good. Some good barbel and eels were taken in the back water, and some big perch in the barge cut.—T. A. WARD.

### Lugg and Arrow (Leominster).

These streams have greatly improved since last week, having now run clear again and in splendid order for the anglers, who have visited these streams in good numbers this week. The fish are rising well at the whirling blue and green insect, and some good grayling have been taken with the grasshopper. A gentleman on Friday visited the Arrow near to Stanton, and with the whirling blue took a nice dish of grayling. In the Eardisland water a nice dish of fine grayling were taken by a gentleman with the grasshopper. The Lugg at Ford's Bridge was tried the same day with the green insect, and a very nice lot of fish were taken. In the Aymestry district some capital fish have been landed with the fly. On Saturday a gentleman visited the Arrow with the grasshopper, and took a good dish of fish averaging ½lb. each. In the Ivington quarter some very nice fish were taken with the fly. A few very good grayling were landed from the Lugg with the green insect. A gentleman fished the Lugg near the Bodenham waters on Monday, and took a splendid dish of fine grayling with the whirling blue. In the Arrow near Monkland a gentleman took a nice dish of fish with the grasshopper. The Lugg was tried on Tuesday, and a very good basket of grayling was landed with the green insect, and some capital sport was had with the grasshopper, and a good lot of grayling were taken. In the Arrow some very good fish were taken with the whirling blue and green insect the same day. The Pinsley is now in splendid order for the angler, having run clear. The fish are sporting well at the fly. A few good fish were taken on Saturday with the fly, and a nice lot on Tuesday.—GWYNNE.

### Medway (Tunbridge).

The river is still in first class condition but a run of water is sadly wanted to make angling what it should be. I have heard of one or two bags of roach and dace besides several jack. Below the town, the veritable leviathan tried conclusions with an angler whose tackle came away considerably mauled. The pike, no doubt, had a quiet laugh and made grand resolves what he would do when he next saw a bait suspended by a bit of string; but the angler used, no doubt, very strong language. At a meeting of the angling society attention was called to the large number of London club anglers who used the river and do not pay one penny towards the preservation and stocking; and it was thought desirable that each club should be asked to subscribe an annual sum; as there is no desire on the part of local brethren to curtail the sport of anyone.—YE MEDWAY WATER RAT.

### Nene (Northampton).

Since last report takes of fish have been small, the river being very clear; but some good sport has been had in the canals and brooks. On Saturday G. Johnson killed a nice bag of 12lb., roach, chub, and dace; H. Hind killed a nice sample of roach; W. Turner, of Deal, and C. Eyte have been having some fair sport. On Monday evening Mr. Meyers had on view a grand pike of 28½lb., taken from the private pond in this district. Length, 45in., but that in good condition.—T. F.

### The Ouse (Huntingdon).

A little work has been done with the jack this last week. On the 19th five were taken by one fisherman. On the 21st I saw one that was taken by Mr. W. Woodward, weighing 10lb., a very good fed fish. On the 20th the same gentleman took three more, but I don't know the weight. I don't know the result of the 21st, but he is out again. The water is still very bright, but the dull weather in the morning does not affect the fishing—it does good, for it takes off the brightness of the water. The weather is very favourable, and could not be much better according to the beginning of the season.—H. ROUT.

### Oulton Broad and Dyke (Lowestoft).

I have not sent you a report lately, owing to the fact that the fishing during the latter part of the summer has been very partial, and on the whole not good, and I dislike a meagre report evidently dressed up. There are plenty of pike here now, and we only want some sharp weather to put them on the feed. A few have been taken, but at present nothing beyond 5lb. The weeds are now beginning to die down in Borrow's Ham, where some fine fellows lie, and I anticipate some glorious sport. —GEORGE MASON.

### Severn and Stour (Kidderminster).

Not much news, as usual, from these rivers. Several parties have been out this last week, but have met with no success. There has been a flush in the Severn of about a foot, consisting of snow broth, doing more harm than good. It has chilled the water and put the fish off the feed; no sort of bait seems to entice them. It will take a good flood to put the river in good fishing order again. I went to the Severn this week and there were a dozen other anglers out, some of them had been there the day previous, some of them had one, some two fish, some none at all. I succeeded in taking four roach in two hours with paste. Baits in use were worms, gentles, and paste. There was a strong north wind blowing down stream. Half an hour before dark the wind dropped, the fish then began to rise all over the river. I wished then I had my fly rod. The cinnamon being out strong, I suspect the fish were after them. The Stour—our beautiful Stour! It would be a beautiful river if it was not for the mass of impurities that are poured into it. I went two days last week to the Stour, thinking to have an hour or two roach-fishing, but was sadly disappointed, the water being stained badly from the dye liquor, which had been put into the stream. You can judge for yourself how dark the water was when you could not see the bottom of a 2in. quill float. The water above the town is good generally, but below it is an abomination. You can depend upon it, Sir, the air cannot be very refreshing for anyone to inhale as they walk along the side of the stream. Besides, it will do the fish no good. The Stour is a very prolific river, and the fish grow to a good size; plenty of trout have been taken this year, from 1lb. up to 4lb. each. I have taken dace 14oz. each, roach and bream of good weight also. It is a pity that a river like this should be destroyed by such impurities. If the epidemic raging in Kidderminster (I am glad to say it is decreasing) had been traced to the milk brought into the town, I should have said at once it was owing to the impure water which the cattle were obliged to drink, for there was nothing else to quench their thirst but this mixture. Whose fault it is that the river is in such condition I cannot tell; but this I do know, it ought to be seen to at once, and put a stop to, before other evils arise.—E. EARP, hon. sec.

[When will the inhabitants of our towns see that they cannot allow some few of their number to pollute a stream in this way without damaging the general health and interests? The owners of the factories which pour their refuse in the stream generally preserve a stretch of the water. Do they ever do it below their drain outfalls? Cannot the anglers of Kidderminster get up a petition to the authorities, and get it influentially and numerously signed?—ED.]

### The Shannon (Castleconnel).

Annexed are the takes during past week:—Mr. Henry Hodges, on his Doonass fishery, 15th inst., one salmon, 30lb.; 20th, two 10lb. and 18lb.; 21st, one peal, 6lb. Mr. H. R. Laing, London, on Mr. E. T. Ingham's fishery, the Summerhill, 18th inst., one peal 6lb., and three salmon, 12lb., 18lb., and 30lb.; 19th, two peal, 6lb. and 7lb.; 20th, one 7lb.; 21st, one 7½lb. On the 15th the fisherman on the same waters got a peal 5lb; 16th, two peal 8lb. and 8½lb. Mr. E. S. St. Aubyn, 60th Rifles, got a salmon 30lb. on Prospect and Landscape, 15th inst. Mr. Norris Russell, on Hermitage, 16th inst., got a peal 6lb., and a salmon 22lb.—J. ENRIGHT AND SON.

### South Level Cut (Littleport).

Although the river is very low and bright, the roach have been well on the feed from one to four hours since last Tuesday week. I am sorry to say I had no time last Thursday to make out a report, otherwise it would have been a good one. The following is the cream of what has been done since:—Oct. 17th, Mr. W. Rowton, Cambridge, 10lb. roach; Mr. T. Hunnybun, Cambridge, 16lb. good roach; Mr. R. Hall, Ely, 7lb. in two and a quarter hours; Messrs. H. Wingfield and H. Stewart, King's School, Ely, 19½lb. very good roach in two and a half hours. Oct. 18th, Messrs. R. H. Legge and E. F. Felton, Cambridge, 12lb. roach, very fair; Dr. Cooper, President Cambridge and Ely Angling Society, 18lb.—sixty fish in all; Mr. Osborne, Cambridge, 9lb.; Mr. Tillett, Littleport, 7lb. fine roach in one hour; Messrs. E. L. Richardson, H. Wingfield, and H. Stewart, King's School, Ely, 20lb. very good roach. Oct. 19th, Mr. F. A. Fielden, Centre Vale, Todmorden, 8lb. very good roach in three and a half hours. Oct. 20th, Messrs. H. C. Saville and W. Grimsdale, Cambridge, 32lb. roach, largest 1lb.; Mr. W. L. Agger, Cambridge, 17lb.; M. F., Ely, 10lb. in two and a quarter hours. Oct. 21st, Mr. R. Hills, Cambridge, 13lb.: Mr. J. Miller Cambridge, 15lb.; Mr. Hailstone, Anglesey Abbey, Bottisham, 13lb.; myself, in one and a half hours, 7½lb. These four lots were all very good roach. Oct. 22nd, Mr

Hailstone, 14lb. good roach; Mr. R. Hills, Cambridge, with a friend, 28lb. fine roach in four hours; Messrs. R. Hall and E. T. Richardson, Ely, 12lb. in two hours.—CHARLIE SOUTH.

### Teme (Worcestershire).

There could not be a more favourable autumn for fly fishing, and the anglers of this district have done well in many instances. The willow, true blue, and silver dun are amongst the killers, the pale blue coming in for a second place with nearly all who have given them a trial. I will give a list of those whom I have come in contact with during the past week: Mr. B. Smith and Mr. A. Davis, over thirty brace of grayling; in two days, Mr. Martin Pirks 16lb. of grayling, dace, and chub, all these were taken with the gentle; Mr. Gwilliam, two brace; Mr. Russell, four and a half brace; A. B. Holland, six brace; myself, seven brace with the fly. Mr. Holland and myself returned many under size. We had excellent sport with the willow and blue dun. It was a wet day. I will let you know how I get on next Saturday at Stanford. Mr. Smith, the host, will give anyone leave to fish free. I had the pleasure of showing him a creel full.—J. A. GRIFFIN.

### Teme (Ludlow).

Since last report the weather has been fine and welcome after the three terrible days at the end of the week before last, bad as the weather was. On the 11th of October I am informed that J. H. Leech, Esq., of Carden Park, Chester, was fishing in the Leintwardine Club water on that day in the river Teme, between 12 o'clock and 2 p.m. Notwithstanding a severe storm of snow and rain was pelting down, he caught nine grayling averaging over 1lb. each. One was taken with the red tag and eight with the grasshopper. The weather was too severe to continue longer at the river side. The Teme has risen, but has not reached its average height. The tributaries are all going on pretty fairly, the colouring having disappeared from most of them, and they may be considered to be in good angling condition. An angler went up the Teme on Saturday from Burnay Meadows up into the Park waters. After trying the whirling blue for two or more hours, he gave it up in despair and tried the grasshopper. He soon landed a nice grayling, 1½lb., which was followed by six more fine fish and several small ones. These were thrown back again into the Teme. A gentleman, on Saturday afternoon (a day he always devotes to piscatorial pursuits) visited a favourite spot of his just below the weir at Steventon, near Mr. Duggan's. Here he tried the green insect, and was fortunate enough to catch a large grayling, which weighed ¾lb., in capital condition. He only caught this single grayling. He then turned his attention to bottom fishing with the maggot, and quickly caught seven perch and other rough fish. The remarks of the chairman of the Hereford Quarter Sessions (Sir R. Harrington) on the fish in the Teme will be read with interest.—S. LUDLOW.

### Teme (Tenbury).

This stream is now in splendid condition for the angler, having run clear. The water has slightly risen since our last report, and has been visited freely this week, The fish are biting well at the fly and the maggot, and some very good baskets have been landed. The best flies the fish are rising at are the green insect and willow. A few grayling have been landed with the worm. A gentleman visited the water near to Eastham on Friday, and with the green insect landed a good basket of grayling, all in good condition, averaging ½lb. each. Several trout were hooked and brought to land, but were returned to the water as soon as possible. In the water near to Can Brook some fine grayling were taken by a gentleman who was fishing with the willow. On Saturday the grayling were sporting freely. A gentleman tried the water near Easton Court, and with the fly took a splendid dish of grayling. Near to Rochford some very good grayling were landed by a gentleman with the green insect. In the water above the bridge a nice lot of fish were taken with the fly. The water above Little Hereford Bridge was fished on Monday, and a good basket of grayling was landed with the willow and green insect. Some capital sport has been had in the Berrington district this week with the fly, and some nice grayling have been taken. A gentleman tried the water with the green insect on Tuesday, and took a nice basket of grayling averaging 8oz. each. A few good fish were taken with the maggot the same day. The Kyre and Rea are now in good fishing order a few fish have been taken from the Kyre, little doing in the Rea. Fishing in the Ledwyche quiet.—WORCESTER.

### Torridge (Torrington).

River in fine order for fishing. I saw some peel taken with the improved Devon bait on Tuesday, and many fine fish were showing at the weir, and the salmon leaping and sporting in the big pools.—PRACTICAL ANGLER.

### Trent (Alrewas).

Fishing in the Association water during the past week has been of a very encouraging nature, a large number of very fine grayling having been taken with the fly. A basket of eleven grayling were taken with the gentle, scaling 10lb. Barbel are still on the feed, and a nice one of 4½lb. was taken with the lob. Roach are feeding well, and a basket of 16lb. was taken by one member, six fish weighing 6lb. 9oz., and one 1lb. 9oz. Pike have not been on the run lately.—ANON.

### The Trent (Nottingham).

Fine open weather has prevailed during the week, and anglers have been numerous in both upper and lower waters. At Willington some excellent lots of dace have been caught with the worm and maggot, and fair bags of chub have also been obtained. The river here, as elsewhere, remains unusually low and clear, and the great bulk of the fish continue to be caught in the streams. One of the dace, caught by Mr. P. Wilson, of the Alexandra Association, weighed 11¾oz.; and Mr. H. Coxon, of the same society, has weighed in one over 9oz. In the lower waters Mr. W. Dann, of the St. George's, bagged, with a friend, a rare lot of dace and roach on Monday; and on Wednesday the former species were well on the rise on the shallows at Wilford. A roach of 1lb. 6oz. was taken in one of the upper tributaries on Tuesday. The barbel season is now practically over, and amongst the old stagers it is universally admitted to have been one of the worst known for some years past. Chub fishing will soon begin, with pith and brains for bait. Just before closing I learn that Mr. J. Tomlinson has weighed in a fine grayling at the St. George's Society.—THE MAN AT THE CLUBS.

### Tweed and Teviot.

The past week has been one of fair success to the salmon angler. The weather, however, has been too fine and bright for excellent sport, but, on the whole, the disciples of the rod and line have had very little cause to grumble, although during Wednesday and Thursday some of them relinquished the rod for the gun. The following are the best takes during the week:—Oct. 16: Mr. Moffat, on the Hersel water, had three, 5lb., 9½lb., and 18lb.; Mr. Hay Gordon, on the Carham water, had one of 19lb.; and on the Floors lower water, a grilse of 6lb. was caught. On the Sprouston water, Mr. Balfour had one of 20lb.; and on the Ednam House water, the Hon. and Rev. R. Liddell had a sea trout of 5lb. Oct. 17: Mr. Moffat, on the Hersel water, had four, 16, 16, 17, and 20lb. On the Ednam House water, Mr. Drummond had two, 18 and 28lb. On the Carham water, Mr. Hay Gordon had three, one 22lb., and two smaller; on Sprouston, the Hon. John Bright had one fish; on the Mertoun Water, the Hon. H. Brougham had six, weighing 14lb., 16lb., 18lb., 20lb., 21lb., and 23lb.; the Earl of Bathurst had one of 18lb.; and on Brogham, Mr. Denison had one. Oct. 18: On the Hersel Water, Mr. Moffatt had four, 8lb., 9lb., 25½lb., and 26lb.; on Carham Water, Mr. Hay Gordon had three, 7½lb., 18lb., and 18lb.; on Sprouston Dub, Mr. Balfour had four, 12lb., 18lb., 18lb., and 13lb.; on the Ednam House Water, the Hon. and Rev. R. Liddle had one of 18lb.; on the Sprouston Water, Mr. Bidder, Q.C., London, had five fish; on the Mertoun Water, the Hon. H. Brougham had four, all about 18lb. each; on the Brogham Water, Mr. Denison killed one fish; and on the Teviot, Mr. R. Robertson had a 9lb. grilse—first fish of the season for this river. Oct. 20: Very little done to-day, the weather being too bright. On the Sprouston Dub, Mr. Bidder, Q.C., had three, about 20lb. each. Oct. 21: Mr. James Brunlees, C.E., London, fishing on the Sprouston Water, had four fish, 14lb., 18lb., 20lb., and 20lb.; and on the same water, Mr. Bidder one of 23lb.; on the Hendersyde Water, Captain Griffiths had six; on the Birgham water the Hon. and Rev. R. Liddell had three—22lb., 22lb., and 30½lb. To-day, on the Ednam House water, Mr. James Gibson had one of 9lb. In the Melrose district, although the river has not been in good order, yet fair sport has been had on the Pavilion water, as the following takes testify:—Monday, Oct. 13: Major Dillon had four, the heaviest 19lb., and Mr. C. Henry one of 25lb. Tuesday, Oct. 14: Major Dillon four salmon, the heaviest being 19½lb.; General Henry had a couple of 15½lb. and 20lb.; Captain Erskine one fish, and Mr. C. Henry one of 19lb. Wednesday, Oct. 15: Mr. C. Henry killed three, weighing respectively 8lb., 16lb., and 25lb.; Major Dillon two, 10lb. and 17lb. Thursday, Oct. 16: Capt. Erskine had one of 10lb.; Mr. C. Henry one of 17lb., and General Dean three fish—6½lb., 8lb., and 18½lb. Friday, Oct. 17: Mr. C. Henry one of 8½lb., and General Dean one of 12lb. Saturday, Oct. 18: Mr. Bain one of 6lb. In the Galashiels district good sport has been had in salmon angling. Mr. McLean, Galahaven, got one of 20lb.; Mr. Scott, Linton, one of 16lb.; Mr. C. M. Stewart had four—7½lb., 8lb., 9lb., and 10lb. respectively; and Mr. Middlemass four—8lb., 14lb., 16½lb., and 20lb.—MAXWHEEL, Kelso.

### Walton-on-Thames.

Heavy mist has been hanging over the river here night and morning, which seems to suit the bream. They are now well on the feed. Dick Watford, with some gentlemen from the Swan Hotel, had a large basket last night of good fish, a fine basket yesterday morning, and another good lot this morning of large average, three of them weighed 9lb., 4lb. and 5lb. respectively. I have heard of many others being taken. Persons fond of bream fishing should take the opportunity of running down to Walton (if a punt is required, sending to the Swan Hotel will save all trouble) while the fish are on the feed, as a good basket may be got in a very short time with well-scoured red worms upon a small hook. It is very probable within the next day or two we shall hear of another haul like the one Mr. Mackerel made a short time ago when he took 110lb. weight in two days. Bream appear to move about in large shoals, appropriating certain parts of the river to themselves, driving all other fish away. Even the barbel seem to give place to the bream, as they move from one place to another. In bream fishing the greatest care should be taken not to lose a fish after it is hooked, for it will stop the best of sport immediately. Use fine tackle, but let it be new and strong, and handle your gut carefully if they are large.—GOLDFINCH.

### Wharfe (Yorkshire).

Still no rain, and the rivers as low as it is possible for them to be. The grayling certainly have begun to rise but it is at the most diminutive of midges or insects that are bred among the decaying leaves with which the surface of the water is plentifully besprinkled. I tried them for an hour or two last Saturday afternoon, but only succeeded in basketing one fine grayling about 1lb. I lost several others after hooking them, and landed four trout; the latter take hold in a most aggravating manner now that their time is over; I was fishing worm in the streams. I tried fly, but could not touch a fish, although I rose several at the October Dun. Next Tuesday evening there is to be a grand meeting of Yorkshire anglers at the Queen's Hotel, Leeds; there is to be a dinner, after which the evening is to be spent in social harmony, or, as the invitation circular quaintly puts it, "for ye mutual exchange of ye divers thoughts and opinions and most strange experiences of ye fyshermen, which some do call yarnes, through ye profane scoffer calleth ym lies." The original limit of tickets was 60, but so many gentlemen earnestly solicited a further extension, that 120 guests will be nearer the mark. I predict that the meeting will prove an immense success, and hope to give details of the same next week.—FRANCIS M. WALBRAN.

### Wye and Derwent.

Last Friday there was a beautiful woodland water came down the Derwent from the heavy thunder rain that had fallen upon the moors. We had no rain fall in this quarter, so this sudden surprise coming on the fish from Chadsworth downwards has been the cause of taking the grayling completely off the feed again. In fact, I fished myself on last Monday with the fly at a regular first-class grayling place and never killed a single fish; neither did I see a good fish rise the whole day. In fact, grayling are not feeding at either top or bottom at the present time; and if we get some good sharp frosts, it will set them on the feed again at both top and bottom. The leaves are very troublesome just now both on the Wye and Derwent. Several pike up to 7lb. each have been taken off the Derwent during the week between Cromford and Ambergate. Small grayling, about 3in. and 4in. long, are very numerous this autumn on the lower lengths of the Derwent.—GEO. JAS. EATON.

### The Yare (Norwich).

After a fortnight's silence, I am pleased to have to report that things piscatorial are looking up once more. Several good catches of roach have been made, and some number of jack have fallen victims to their love of something bright. The greater number have fallen under the lurement of "spooning" (and these are interesting victims of that fashionable amusement). Live baiting can now be practised all along the banks, gently urging the boat forward by aid of the reeds. A long stretch of water can thus be fished without the bait being troubled or hurt. Reverting to roach once more, one catch of about forty or fifty deserves special mention, as they were all good large fish, the three finest weighing 2¾lb., and the lot averaging about ½lb. The weather is simply charming, and one only wants the opportunity to be off and at it again, as under a lee to-day would be quite warm and cheerful. I hope to be able to send you good accounts shortly with regard to jack fishings. Prospects excellent.—ROBERT MOLL.

## THE DEATH OF MR. ED. BOND, A WELL-KNOWN YORKSHIRE ANGLER.

THIS gentleman, whose death I briefly alluded to in last week's issue, was born in the year 1807. Throughout his long and busy life he spent the greater portion of his leisure time in pursuit of sport with both rod and gun; but angling was decidedly his favourite amusement. Up to within three years of his death he rented an extensive shooting ground in the vicinity of Ripon; through the midst of it ran a small stream, on which, I believe, Mr. Bond had his last day with rod and line. I remember listening to his recital of that day's sport as though it were but yesterday. He had used the natural minnow as a bait and basketed 16 fine trout; not many sportsmen can accomplish such a feat when 74 years of age.

It was, however, in his younger days that he achieved his greatest performances with the rod. He was a member at that time of the famous Sprouston Club, and in Mr. Henderson's work, "My Life as an Angler," frequent mention is made of Mr. Bond, who was an intimate friend of the author. In July, 1846, Mr. Bond had a memorable day's fishing on Sprouston Dub—a length of water well known to salmon fishers. He only fished until early afternoon, but succeeded in landing five fresh-run fish, which weighed altogether 118lb.; this considering the time of year, was an almost unprecedented feat.

Here, again, is an account in Mr. Bond's own words of another red-letter day upon the same water:—"I began the day unluckily. As soon as I started I hooked the biggest fish I have ever seen on a line. There can be no mistake as to this, for I fought him a full hour, during which time he threw himself out of the water at least fifty times, and we saw him as plainly as though we had had him in the boat. At last the fly came clean away, so little injured that it killed several fish afterwards. Such was my beginning! Then my luck changed, and from that time until it was dark I was never for 10 minutes without a fish on my hook. I only changed my fly once, and still keep both in remembrance of the day. One is a silver doctor, the other a plain dark-winged Tweed fly. At night I had 12 salmon and a grilse, of the aggregate weight of 252lb. The weights of each were 37½lb., 28lb., 26lb., 24½lb., 21lb., 19lb., 17½lb., 15½lb., 14½lb., 14lb., 14lb., 12lb., and 8½lb. You will see that six average 26lb., and the whole above 19lb. each. This was the most slaughtering day's fishing that I have ever had or witnessed."

I should think so, and cannot help wondering what salmon fishers at the present day would give to have anything approaching such magnificent sport. Truly may it be said of angling, as indeed of many other things, "*tempora mutantur*."

Mr. Bond's cabinet of salmon and trout flies was a sight not to be forgotten; many a pleasant hour have I spent in looking over its contents, with its owner at my elbow making comments upon the various flies as I went through them seriatim. He was also the possessor of a magnificent collection of English and foreign china. In his hall were several cases of specimen fish, the most prominent being a 40lb. pike, while on the staircase wall and first corridor were hung four beautiful examples of Mr. Rolfe's matchless delineations of angling subjects.

As a private individual, Mr. Bond was in disposition so kind and gentle that I do not think it possible for him to have a single enemy. He was twice married, the death of his second wife taking place in the early part of this year. She was buried in the quiet little churchyard of Scalby, near Scarborough; and by Mr. Bond's request his remains were conveyed by train on Friday morning last to the same resting-place. The number of influential persons who attended the funeral was ample testimony of the respect and esteem in which the deceased gentleman was held by all who knew him.

By his death the writer has lost a kind and sincere friend, as indeed have very many more; in fact, it would be very difficult to find a man throughout the large borough of Leeds, the tidings of whose death would convey such a widespread feeling of regret as that of Mr. Bond's caused upon the morning following the calm October evening upon which he passed away. *Requiescat in pace!*

Ivy Cottage, Pool, Wharfedale. FRANCIS M. WALBRAN.

## ENGLISH FLIES IN AMERICA.

SOME little time ago the *American Angler* said it was glad to see the British were following the example of American anglers, and recognising the "stream value of fine tackle." I ventured to point out to the editor that the tackle and flies in this country were, *as a rule*, finer—that is, more delicate—than those used in the States. The editor of the *American Angler* seemed to doubt this, and referred to Mr. W. C. Prime, author of that charming book, "I go a-Fishing," as using very fine tackle. I sent the editor of the "A. A." some English-made flies, and asked him to be good enough to send them on to Mr. W. C. Prime with a note from me, and the other day I got the following very pleasant reply:—

"Profile House, New Hampshire, U.S.A.
"September 8th, 1884.

"DEAR SIR,—That I have not, long ago, thanked you with all my heart for sending me the flies has been more my misfortune than my fault. When I received them, by the kind hands of Mr. Harris, I had left town with intent to pass the spring and summer, as usual, rod in hand each day. But at the very time they reached me at Franconia, near this place, I was overtaken by an attack of illness, and I have not had a well hour since. Three several unfinished letters to you attest my desire to tell you how thoroughly I felt your kindness in sending the flies, and what a revelation they were to me of the possibilities of high art in the angler's employments and life. But if you know the weariness of body and mind which accompany constant pain for months, you will, I am sure, appreciate my own regret that I could not write as I wanted to, and understand why this acknowledgment has been delayed. With the cooler weather of autumn I begin to feel some of the return of vigour and health.

"I have shown to a host of friends these flies, not only as marvellous specimens of delicacy and perfection of work, but also, as I esteem them most, as evidences of the relationship among anglers of all countries and all peoples. It was exceeding gratifying to receive them on this account. It is many years since I have tied a small fly or a gnat, though I use more of them probably than any four other American anglers. I depend for my supplies on Scotland and England. It is only within three years that any of the American dealers in tackle have had gnats or small flies on sale. This was, doubtless, because of the abundance of trout in many of our waters, and the freedom with which they rose to almost any cast. But from my childhood, years ago, I have been accustomed to use fine tackle and small flies. It was my pride as a small boy to kill large trout on a single horse-hair, and I have always since enjoyed the use of the most delicate leaders and gnats when killing the heaviest fish. But I never saw or dreamed of such exquisite bits of fly-making as these. I have two or three hobbies. I have given a long life to the collection and study of early illustration in books. I have devoted a good deal of time to the study of ancient art. I have filled my house with a collection of pottery and porcelain. I live, when in town, among these associations; but all my life, my heart, is shut upon my rod case, until I get away from town, and then it escapes and enjoys its beating.—With renewed thanks, I am, sincerely yours,

"R. B. Marston, Esq. "W. C. PRIME."

Some years ago, when noticing *Forest and Stream* in this paper, I said what a good thing it was that the Continent of North America, with its unrivalled sporting grounds and waters, was in the hands of an English-speaking and practically English race, which produced as keen, good, and true sportsmen as the old country. Since then I have met or corresponded with many American anglers, and I have always experienced the same feeling of good fellowship which is shown by the very pleasant letter quoted above. May the feeling grow and extend. R. B. MARSTON.

## THE ARLEY BROOK FISH POISONING CASE IN WARWICKSHIRE.

AT the recent Quarter Sessions for the County of Warwick, William Wilson, on bail, was indicted for having unlawfully placed a certain noxious material in Arley Brook on June 16th, 1883, with intent to destroy the fish therein. Mr. Fitzgerald prosecuted; prisoner was undefended. Mr. Rawlings, who has the right of fishing in the brook, while there on the afternoon of the date named, observed that the water was very much discoloured, and that it emitted a strong chemical smell. Upon walking a short distance he saw the prisoner and two other men in the brook. One of them had a fish in his possession, and close by was a quantity of destructive chemical. Next day nearly all the fish in the brook were found to be dead. The prisoner afterwards called at a neighbouring publichouse and exhibited a quantity of the fish. Subsequently the men absconded, and the prisoner on returning in July last was apprehended under a warranty. Prisoner called no witnesses, and threw himself on the mercy of the Court. He was found guilty, and receiving a good character, was only required to enter into his own recognisances in £10 to come up for judgment when called up, the Chairman expressing his belief that prisoner had been led into trouble by his companions.

# CLUB REPORTS.

### ANCHOR AND HOPE ANGLING SOCIETY.

Several members of the above club competed for three prizes at Amberley on the 19th inst., with the following results:— Mr. Watkins, first, 4lb. 12½oz. bream; Mr. Glass, second, 11¼oz. roach; Mr. Harris, third, 11oz. roach. The following also had fish:—Messrs. J. Bowling and C. Daniels. Mr. D. Davis, 15lb. bream from the Wey. —D. DAVIS, sec.

### THE ANGLERS' ASSOCIATION.

The delegates' meeting was held on Monday evening last, Oct 20th, Mr. P. Geen, president, in the chair. The two Lee fishery bailiffs, T. Verdun and W. High, attended, and gave an account of the capture of the net at Clapton, and the conviction of the two poachers at Worship-street Police-court. The delegates gave them a very hearty vote of thanks for their energy and tact in making the capture, and something more substantial in the shape of a reward of three guineas between them, to which was added another guinea, generously presented by Mr. P. Geen, the president of the Association. There was a large attendance of delegates. Two new societies were enrolled—the Turnham Green Sundial Angling Society, and the Sons of the Lea Angling Society, making seven new clubs that have been enrolled since the formation of the Anglers' Association.—R. GHURNEY.

A CORRECTION.—The sentence on the two men for netting at Clapton was £5 in each case, or *one month's imprisonment* in default; not two months in each case.

### AMICABLE BROTHERS ANGLING SOCIETY.

On the 19th inst. Mr. Harding weighed in one chub of 2lb. 13½oz., dace 4lb. ½oz., roach 5lb. 4oz., and bleak 7oz.; Mr. Taylor roach 2lb. 5oz. and one perch. The members for the roaming match on the 26th inst. will meet at the Rye House and start fishing at 9.30, and all to meet and have the fish weighed in at Mr. Coomes's, the Five Horseshoes, Hoddesdon, at 6 p.m. sharp. A meat tea will be provided.—J. HORLEDGE, sec.

### BROMPTON ANGLING SOCIETY.

Some good shows on the 19th—Messrs. Sparrow, Roach, Jewel, and Brown having roach; Mr. Burbidge, dace; and Mr. E. Saunders, jack. On Wednesday, Mr. Anstiss, roach.—W. DUTTON, sec.

### BURDETT ANGLING SOCIETY.

We had a fare show of fish here on the 19th inst. Mr. Collins had two very nice chub weighing 5lb. 11oz., and about 2½lb. of roach and dace; Mr. Eaton, 4¼lb. of roach; Mr. B. Smith, one barbel, 4lb. 1oz., and 1¼lb. of roach. The members fish for five special prizes on Nov. 2, and all those that wish to compete will sign at the clubhouse on the night previous.—T. G. WALKER.

### CAXTON ANGLING CLUB (BECCLES).

The annual dinner and distribution of prizes of this club took place on Saturday evening last at the White Swan, when an excellent spread was set before the members by Mr. and Mrs. Wright, to which all did ample justice. The chair was occupied by the secretary, Mr. A. E. Mickleburgh, Mr. Hooker ably filling the vice-chair. The tables having been cleared, the prizes were distributed. The committee this year decided to alter the rule that all prizes should be taken in fishing tackle, in consequence of members generally being very well supplied. The following was the order of the prize-winners:—Messrs. J. Hooker, C. Chase, W. Buck, F. Ulph, T. Rackham, A. Piper, T. Palmer, G. Knell, G. Holland, W. Upcraft, W. Lee, E. Elvin, S. Rushmer and H. Elvin, J. Blomfield, J. Edwards, W. Richer, and H. Block. In addition to the above eighteen prizes a special prize was given for the largest fish in each of the four competitions, and two for the largest fish caught during the season. These prizes were taken by Messrs. Ulph, Hooker, Palmer, and Holland; the prizes for the largest fish going to Mr. Palmer, The total value of prizes amounted to £6 15s.; a balance of 5s. being voted to the subscription list for the Waveney and Oulton Preservation Society for 1885, the last contribution to which amounted to £2 10s. After the prizes had been disposed of, the late secretary, Mr. C. Bumstead, was presented with a timepiece, which had been subscribed for by the members in recognition of his past services on behalf of the club. The secretary reported that this had been the most successful season since the club was formed in 1877, there being over fifty members, forty-seven of whom had fully paid up. The average weight of fish caught per member in the four competitions was 4lb. 12½oz., against 3lb. 14½oz. for 1883, or an increase of 14oz. Comparing the Nottingham style with tight-line fishing, the tight-liners carried the day, probably owing to the Nottingham men being comparative tyros in that method. Two matches had been fished with the Waneney Club, both of which that club had won. In both of those matches tight-liners also showed the heaviest catches. On the whole, the angling had been fairly successful, many more fishermen having been out this year than on any previous year, which perhaps may be accounted for by the formation of the Waveney Club and the generally increased interest taken in angling. A rod, value half a guinea, has been given for a prize by Mr. Chase for next year, when it is hoped that the club will be as successful as heretofore. During the remainder of the evening some good songs were sung, Mr. Peterson kindly presiding at the piano, and with toasts and recitations a very enjoyable meeting was brought to a close by the "National Anthem" at eleven o'clock. It should be stated that the following members were handicapped in the competitions:—Mr. J. Hooker, 4lb.; Mr. W. W. Peachey, 3lb.; Mr. W. Upcraft, 2lb.; Mr. S. Rushmer, 1½lb.; Mr. C. Chase, 1lb.; and Mr. F. Ulph, ½lb.—A. E. M., hon. sec.

### CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 19th: Mr. Chambers, roach, dace, and bream, from Amberley, 3lb. 3oz.; Mr. Nitz, bream and a small jack, from Pulborough; and Mr. Castell, roach from Dagenham.—CAS.

### CLAPHAM JUNCTION ANGLING SOCIETY.

Takes have fallen off somewhat of late, being very difficult to get. Mr. Wilson had, on the 5th inst., 5lb. 10½oz. (roach), and on the 9th, 15lb. 5oz., from Staines; Mr. Banfield, 4lb. 7¾oz.; Mr. Speed, 7lb. 4½oz., and several other members also had small takes. On Thursday last a very strong muster met at the club-house, and a most enjoyable evening was spent. Mr. Roberts (visitor) very kindly assisted at the piano in a most masterly style. Another working member was added to our number, and two hon. members proposed. I beg to remind all that a match will be fished on the 26th, for three prizes, same conditions as on Sept. 14th. I hope to see a large number compete.—W. MASLIN, sec.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting was held on Monday last, Mr. C. Graham Bennett in the chair. The minutes were signed, and business transacted. A new member was proposed, seconded, and elected, subject to confirmation next Monday. Mr. Wood weighed in a small jack, and Mr. Colls also small jack from the Thames; minor catches were reported. There was a good attendance of members and visitors, the Good Intent and Dalston societies being well represented. The secretary reported that he had some capital preserved jack water in Suffolk offered to him for a few days' angling. He was privileged to take a few members with him, and he had arranged to go with them on Friday, the 31st. The show on the following Monday at the club room he hoped would be a good one. A somewhat singular incident occurred to Mr. G. Colls, when out with Harris, the fisherman, at Penton Hook. A large jack was seen lying in shallow water, who allowed the net to be put under him, and he was brought into the punt, offering very little resistance. It was found that he was totally blind, a portion of a trace was hanging from his mouth, which Harris removed, together with as much of the gimp, on which the line bait had been used; they then returned him to the water. Query? Had the fish been attempted to be landed by the eyes, and had it got away with the damage to the eyes, which caused his blindness? Mr. Colls describes the eyes as presenting an opaque appearance. Some very excellent music, vocal and instrumental, was rendered; Mr. Anderson, from the Good Intent, delighting his audience with his magnificent singing. Miss Binks most kindly and skilfully officiated at the piano, Mr. Winterbottom being unavoidably absent. A most enjoyable evening was spent. A hearty vote of thanks was accorded to the fair pianist and to the chairman. Will the members please remember that the usual monthly musical evening will be held on Monday next? Several musical members and friends have promised to attend, and a capital concert may be depended on. I hope we may have a full attendance. Brother anglers will be welcomed, and I am sure will be well entertained.—Henry Howse, hon. sec.

## COBDEN ANGLING SOCIETY.

Several of our members were out on the 19th inst. Although the weather was very boisterous, we can congratulate ourselves with the success we had, for Mr. Stead weighed in some splendid roach from Uxbridge; also Messrs. Giles and Hayward, from the Thames, some roach and dace; likewise Messrs. Sharland, Howland, Andrews, and Maples, some barbel, roach, and dace. On Wednesday last, Mr. Green caught some splendid roach from Harefield weighing on an average from ½lb. and upwards; total weight about 12lb.—C. Reeves, sec.

[Received too late for last week.—Ed.]

## EASTERN COUNTIES' ANGLING SOCIETY, GREAT YARMOUTH.

The usual meeting of this society was held at the Duke's Head Hotel, Quay, on Thursday evening, the 21st inst., the president, Dr. Mitchell, being in the chair. According to instructions given him at a previous meeting, the honorary secretary, Mr. John Lee, again wrote to Edward Birkbeck, Esq., M.P., with a view to knowing whether that gentleman would become an honorary member of the society. In answer to Mr. Lee's communication, the following answer was received by him:—

"Horstead Hall, Norwich, 13th October, 1884.

"Dear Sir,—I beg to acknowledge receipt of your letter of the 8th inst., inclosing copy of rules of the 'Eastern Counties' Angling Society,' and for which I am much obliged. Your previous letter must have miscarried, as the copy of the rules now sent is the first I have received. I have red them through, and it will give me great pleasure to become an honorary member of your society.

"Yours faithfully,
(Signed) "Edward Birkbeck."

"John Lee, Esq."

We are pleased to note that to our list of honorary members we find, this week, added the names of John Drain, Esq., 5, Britannia-terrace, Great Yarmouth; and J. C. Swails, Esq., Cromwell House, Hammersmith, London. The honorary secretary has been requested to write to the following gentlemen, soliciting them to become honorary members—viz.,—Sir Saville Crossley, Bart., Somerlayton Hall; Henry Edmund Buxton, Esq., Fritton Hall; and Edward Pitt Yorrell, Esq., Gorleston. The secretary intimated that the accounts for the preceding three months were being audited by Messrs. Bonfellow and Archard, the auditors, and that the result would probably be read at the next general meeting. A lengthened discussion ensued as to the advisability of holding the meetings fortnightly instead of weekly during the winter months; but as the vast majority of the members were in favour of the present arrangements being adhered to, and as the president considered it better that the members should not get out of the habit of regularly attending, it was decided that the meetings should be continued weekly. Mr. George Archard announced that he had determined to present as a prize a handsome pocket aneroid barometer to be fished for at the next competition. There being now three prizes promised—viz., one by Alfred Nuthall, Esq. (Mayor of Kingston-on-Thames), one by Captain Styles (Colonial Staff), and Mr. Archard's, the society has determined to add a fourth to the value of £2 or £3; and it has been arranged that an angling tournament for pike and perch only will be fished, on water to be hereafter determined, on Thursday, Nov. 13. Several small catches have been recorded since my last report, but the summer angling season is rapidly drawing to a close. Pike and perch are, however, now coming on the feed, and favourable reports have recently been received from several of the fishing stations. Some days ago Dr. Mitchell, vice-president, and Mr. Nuthall, Kingston-on-Thames, succeeded in landing on Hickling Broad and the adjacent waters three fair jack and several good perch, two of the latter scaling just upon 2lb. each.—A. M.

## GLOBE ANGLING SOCIETY.

Only a few of our members weighed in on the 19th inst., as follows:—Mr. G. Brown, two chub, 2lb. 9oz., one roach, 9oz., and two brace of small jack, 8lb.; F. Lawrence, roach, 2lb. 8oz., one perch, 13oz.; W. Whacott, roach, 2lb., dace 10oz.; H. Lake, roach, 1lb., dace 7oz.; W. Brown, 4lb. 5oz. of handsome roach from the Stort. —J. J. Holmes, Sec.

## GOLDEN BARBEL.

On the 19th, Mr. Stanton weighed in barbel, roach, dace, and gudgeon. Mr. Green had roach from Thames. On the 21st, Mr. J. J. Jones had chub and dace from the Colne. Competition on the 26th will take place at Windsor from Boveney Lock to the Mansion. Start from Paddington at 8.30, and leave off fishing at 5.15.—Pixie.

## GOOD INTENT ANGLING SOCIETY.

Mr. W. H. Snook showed a good take of roach and dace, 26lb., on the 19th. Mr. H. Devon had some handsome roach from the Lea, several fish weighing over 1lb. There will be a select concert take place at our club-house on Monday next, the 27th inst., on behalf of the widow of the late Mr. Nelson. I hope all members will attend and support the widow. There will be some special talent for the occasion. The members will fish for 12 valuable prizes at Harlow on the 26th inst.—R. Murphy.

## GREAT YARMOUTH PISCATORIAL SOCIETY.

The meeting on Tuesday was not of much importance. The minutes of the previous meeting having been read and confirmed, the secretary's report showed that the committee appointed had at once been to work, as he, the secretary, presented the sheet certified as correct to the meeting, which brought about the following resolution, carried unanimously:—"That, in consequence of the false statements now being circulated—viz., that this society has collapsed, the position of the society on July 1st, 1884, together with the receipts and expenditure from its foundation, be printed forthwith, and sent to the various subscribers and donors to the test case *re* Heigham Sound. The balance-sheet is now in printer's hands, and will be issued on Tuesday, the 28th inst.—J. Lark, sec.

## GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening, at the Masons' Hall Tavern, Mason's-avenue, Basinghall-street—Mr. Kent in the chair. The minutes of the last meeting were read and confirmed, and some other routine business disposed of. A discussion took place upon the recent experiment made by Mr. Oldham Chambers, of resuscitating fish by means of brandy, during which Mr. Bartlett mentioned that the experiment was anything but a new one, he having successfully tried it upon a carp some years ago. Two very nice volumes were presented to the library by Dr. Brunton and Dr. Lloyd, for which a hearty vote of thanks was ordered to be recorded to them. Mr. Crumplen and Mr. Young had each been out in search of sport since the last meeting, and had succeeded in getting in some very good fish. Mr. Parker exhibited some bones of various fishes, in which the chairman, Dr. Brunton, and Mr. Crumplen took part. The usual vote of thanks to the chairman terminated the proceedings.

## HAMMERSMITH UNITED ANGLING SOCIETY.

A special meeting was held on Thursday last for the purpose of distributing several prizes already won in the matches fished by members of this society. The number of matches fished up to this time is six—viz., two club and four private. We were favoured during the evening by several visitors from neighbouring societies, amongst whom were Mr. Evans, of the Westbourne Park, and Mr. Eydmann, of the Acton Piscatorials, which latter gentleman attended with his brother to arrange the details of the return match, which we fished with them on Thursday last, the 23rd, at Twickenham. This and the usual business having been disposed of, the musical and vocal talents of the company were called into requisition, and some excellent singing was the result. The prizes were then distributed—viz., two first and one second prize to Mr. Lewis, one first and one second prize to Mr. Smith, one first prize Mr. Hobden, one first Mr. Inman, one ditto Mr. Peachey, one second by Mr. Alders, and two sweepstakes by Mr. Bacchus. More capital songs followed, among which special mention should be made of the names of Mr. Evans, Mr. Reynolds, Messrs. Elms, Penny, Peachey, and Gatward, whose pathetic rendering of "The Children's Home" was much admired. Our old brother member, and I may say, the founder or our society, Mr. Tom Hoole, was with us, having come all the way from Wraysbury for the purpose of being present; and had Mr. Philip Geen, also one of our old members, condescended to have been present; our evening's enjoyment would have been complete. We are proud to number among our members two such illustrious names in the angling world as those of Mr. Tom Hoole and Mr. P. Geen; but we suppose now that the latter gentleman has attained to the aspiring height of Mount Ararat, he is thereon resting on his amalgamation ark, which rest, I am sure, we do not begrudge him after the troublous times the said ark has experienced. However, doubtless the soothing air of the chaste locality of the Star and Garter, and the beneficial advantages of the company of the Richmond Piscatorials, will soon have the desired effect of causing him to return to his old love, the H.U.A.S., where, after all, his best fishing days have been passed, and through whose expeditions his favourite hunting-grounds have been discovered. It occupies just about 20 minutes to descend from Mount Ararat to the H.U.A.S. Mr. Hobden, our representative at the late tournament, has now received his prizes—and very excellent ones they are, too, consisting of a splendid general rod by Christie, a Nottingham rod and patent winch and line by Slater, of Newark, and one of Richardson's telescopic landing-gaffs. May the day come when he will have to use it on a 20lb. jack, struck 72 yards off from the bank.

## HOXTON BROTHERS ANGLING SOCIETY.

There was a good attendance of members on the 19th inst., a few only having been out. Mr. Osborne had 30½lb. of splended roach and a few dace. Messrs. A. Dean, W. High, and A. Hattemore had roach and dace, and R. Ghurney jack; Johnny Benjamin did not put in an appearance. I should like to see a few more members attend as the winter season comes on.—R. Ghurney, sec.

## IZAAK WALTON ANGLING SOCIETY.

On the 19th inst., Mr. Hayward, 14½lb. of dace and roach; Messrs. B. Crook and C. Green had dace and roach on the same day; Mr. H. Auburn, chub. As the water has been so bright and low, several members tried a day on the "briny," and were very pleased with the change. Instead of the trays being covered with freshwater specimens, dabs, flounders, and whiting took their place. About ¾cwt. were displayed, causing a great deal of interest. Of the two special prizes fished for at Tottenham on Wednesday, the 22nd inst., only one was taken—that was by Mr. R. Perrin.—H. B.

## LINCOLN ANGLING SOCIETY.

Our members went out on the 19th inst. to various places to fish for two prizes, and, although a very fine show of fish was brought in, neither of the prizes were taken. Some of our members brought in a very fine specimen of roach, bream, and perch, but unfortunately they did not come up to weight. We are going out again on the 26th, and hope to meet with better results.—H. Bingle, sec.

## LIVERPOOL ANGLING ASSOCIATION.

In consequence of many of our members taking part in the competition on the 23rd inst., this week's meeting was held on Tuesday evening, the 21st inst. We again had a splendid muster, and a most cordial gathering at The Lion and the Lamb—fly and bottom fisher sitting down side by side most harmoniously. The hon. sec. announced that he had seen the agent of the proprietor of the two reservoirs, who assured him that this association should have the refusal of the fishing. In consequence of leaving the city, our president, J. Wilkinson, Esq., had resigned the office. This was received with regret, as no abler or more suitable gentleman could be found for the onerous duty. It was resolved unanimously that a vote of thanks be passed and recorded on the minutes to Mr. Wilkinson for his able, kind, and courteous—but firm—conduct in the presidential chair. Mr. Sergencson was afterwards, on the motion of Mr. Ellinger, seconded by Mr. Harrison, and strongly supported by Mr. Higson, elected to the high office of president for the remainder of the year. Mr. Ellinger having suggested that, during the winter especially, readings should be given and lectures delivered, and being ably supported by Mr. Sergencson and other members, it was agreed that members desirous of giving such readings, &c., should send in their names to me, together with the subject and the date of their reading or lecture. Mr. Burrows suggested that the Fishing Gazette should be filed for the use of members, and this was at once agreed to. Mr. Gass brought forward the question of an angler's library, and in his address to the meeting dwelt strongly on the advantage that the possession of such a library would be to every member. To show how thoroughly the matter was taken up and laid hold of, Mr. Ellinger said he would present the Association with that grand work "British Fishes," by the Rev. Mr. Houghton. Mr. J. Evans promised "Fly Fishing," by Bainbridge; and Mr. Sergencson—who has a rare and valuable library of books on angling—said that any member of the Association was freely welcome to the loan of any book in his library for the purpose of perusal; but, that not being desirous of breaking up his grand collection—and why should he?—he could not at present go further. Amid a perfect harvest of good wishes and kindly sentiments, the meeting was closed, and everyone wended his way homewards perfectly satisfied with the result. I entirely forgot to mention that, in reference to the anglers' library, Mr. Harrison most liberally came to the front with the promise that he would *make and present* to the Association a bookcase, with glass folding doors, for the books—more power to that same elbow, friend and brother Harrison—and it is not more than that gentleman's due to say that he has given to this Association many valuable productions of his own workmanship—notably, a case for pike, ditto for tench, and box for minnows for reservoir.

We had a rare gathering at our club-house, the Canton Hotel, 14, Victoria-road, on Thursday evening, the 16th inst. Never in Liverpool has there been brought together such an array of true and expert anglers as were present on this one house-warming. It was heart-stirring in the highest degree, and must have convinced everyone that "The Liverpool Angling Association" is a solid fact, whose foundations are in the rock, and against which the sneers and mendacious statements of anonymous letter-writers beat in vain. Members not present at this meeting will be glad to learn that we have a good prospect of renting the right of fishing in two reservoirs of about sixty acres in extent, and within half an hour's journey from the city. We do not intend to let this chance slip by if price will secure it, and it is hoped that the figure asked will not be prohibitive. These waters are well stocked with pike, bream, and perch, and if we succeed in obtaining them, of which members will be at once informed, Mr. Sergencson has most generously promised to present us with two boats to put on the water, for which I think we shall all cordially thank him. Our annual dinner is fixed for the last Thursday in November, the 27th, at the Canton.—R. Woolfall, hon. sec.

## NOTTINGHAM ALEXANDRIA ASSOCIATION.

The half-yearly dinner and presentation of prizes connected with this young but flourishing association took place on Monday evening, at the Alexandria Inn, Carrington-street, Nottingham, under the chairmanship of Mr. F. Thompson, the president. There was a large gathering of members, who were rather surprised on entering the dining saloon to find it illuminated by means of the electric light, which had also been extended to the vases adorning the centre table. The society includes some of the most practical anglers in Nottingham, and during the evening the chairman, in an appropriate speech, congratulated them on the marked success which had attended their efforts during the summer season. Mr. J. Ball, the indefatigable secretary, handed over the prizes in the following order :—Barbel, 1st, Mr. F. Ghent ; 2nd, Mr. J. Theaker. Roach, 1st, Mr. C. Taylor ; 2nd, Mr. J. Clayton ; 3rd, Mr. W. Teverner. Bream. 1st, Mr. C. Jackson ; 2nd, Mr. R. Whaley (the worthy host) ; 3rd, Mr. J. Stanley. Dace, 1st, Mr. P. Wilson ; 2nd, Mr. J. Bates. Chub, 1st, Mr. H. Coxon ; 2nd, Mr. J. Jackson. Perch, 1st, Mr. J. Ball ; 2nd, Mr. A. Brooks. Many members have joined the winter club, which opens under highly favourable auspices.—H. Coxon.

## NOTTINGHAM WELLINGTON SOCIETY.

The members of this, the most important and prosperous society in Nottingham and the district, celebrated their half-yearly dinner at the Wellington Hotel in that town, on the evening of the 17th inst. After an excellent repast had been served, Mr. F. Warsop, the vice-president, took the chair, and was supported by a numerous and influential body of the followers of the "gentle art," including the sheriff of the borough, Mr. F. F. Cleaver. The prizes, monetary and special, were awarded to the successful competitors, and the hon. secretary, Mr. G. Cass, reported that since the last gathering the association had made considerable progress. The usual grant had also been made towards the working expenses of the Trent Fishery Board, who hoped ere long to be able to appoint another water bailiff. We might add, in conclusion, that the first prize takers were Mr. E. West (barbel), Mr. W.Wild (chub), Mr. C. Taylor (roach), Mr. C. Jackson (bream), Mr. T. Sylvester (perch), and Mr. C. Goodall (dace). Numerous other prizes were awarded, and the "specials" were of a very costly and unique character. The winter term opens with 63 paying members.

## PHŒNIX ANGLING SOCIETY.

On the 18th, T. Grist and R. Stephens weighed in 17lb. of roach and two jack, 5lb. and 3lb. On the 12th, Slater was up to his old games again, weighing in seven bream, scaling 28lb. 4oz. Reed had a very nice show of roach, Frank Ashley, Bartrip, Elbourn, Milton, and Baillie contributing their mites towards the gross weight of the season. All members are requested to attend next Tuesday evening to decide where the three prizes shall be fished for.—W. Elbourn, sec.

## THE PISCATORIAL SOCIETY.

The annual supper of this society took place, in accordance with previous announcements, on Monday evening last, at Ashley's Hotel, Covent Garden, and was numerously attended. Considerable satisfaction was expressed at seeing the president of the society (Mr. F. J. Pearce) occupying his proper position in the chair. Messrs. Lemann and T. Huggett acted as vice-chairmen. Grace was said by the Rev. G. Sumner. Nearly 60 members sat down to the repast, which was excellently (but rather slowly) served by the management of the hotel. The after grace was said by the Rev. G. Sumner. The chairman then announced that smoking was strictly allowed. The chairman, rising, said it was the 49th year of the society's existence ; he was always glad to be amongst it. He hoped all had enjoyed their supper, and had the pleasure to propose a toast, which was "The Continued Success of the Piscatorial Society." This was right royally responded to, the members all standing. The musical part of the evening now commenced by Mr. King playing with great spirit an overture. Mr. Norman Harrison commenced the vocal entertainment by a song, "The Parent," which was very amusing, and was received with marks of satisfaction. Mr. King next sang an old favourite, and narrowly escaped an encore. Mr. Fennings rose to propose the health of "Our President," and trusted he would be spared to be with us for very many years. Every member joined in drinking this toast with the greatest enthusiasm. The president, in a few well-chosen words, expressed his thanks to all present, and then retired. Mr. Fennings then took the chair. Mr. Munday gave a very capital comic song, "Our Fishing Match," which caused the utmost merriment. Mr Adlington sang "The Powder Monkey," and was applauded. The hon. sec. announced that he had the pleasure to announce the nomination of a new member, Mr. John Holland, jun., proposed by Mr. Lander, seconded by Mr. Fennings. Mr. Arter rose and said he had the pleasure to propose two gentlemen as members of the society—viz., Mr. Aldridge and Mr. George Watson, the former gentleman seconded by Mr. Fennings, and the latter gentleman by Mr. Phillips. Loud cheering followed these nominations. Mr. Jesse, who was in splendid voice, sang "In Cellar Cool," and was deservedly applauded. There were two trays of fish exhibited on the table—a tray of chub by Mr. Huggett, and roach and chub by Mr. Fennings. The healths of these gentlemen were proposed as the successful anglers, and briefly responded to. Mr. Munday next sang another comic song called "Girls at the School," which was cleverly sung and applauded. Rev. G. Sumner gave an old Irish ballad, and was cheered. Mr. Green gave a sketch of actors, including the late Mr. Buckstone, Fechter, Compton, &c., and Mr. Irving, and was loudly applauded. Mr. King next sang "The Blue Alsatian Mountains," which he rendered with the most charming effect. He received an encore, but time did not permit of his responding. Mr. Jesse sang "The Bugler" in excellent taste. Mr. Procter next gave a splendid recitation from Dickens's "David Copperfield" in a thoroughly professional and realistic manner, and finished amidst rounds of cheers. Mr. Adlington rendered most excellently another song entitled "Sailing," and was well cheered. At this hour, 12.30, "God save the Queen" was sung, and the musical entertainment closed. A vote of thanks to Mr. King was unanimously accorded for his musical services. This gentleman replied, and a most successful evening was brought to a close.—T. H.

## RODNEY PISCATORIALS.

On the 19th Messrs. R. Smith and R. Chantry had a trip to Pangbourne ; they managed to get some perch. Messrs. Marsh, C. Grant, and C. A. Grant managed to get some roach, dace, and chub from Richmond and Shepperton. The chub were taken with a fly by the last-named gentleman, who thought they were dace ; but the illusion was soon dispelled when the black line round the bottom lip, the thick head, and the shape of the fins on the chub were pointed out to him. Mr. R. Smith won the first gross weight prize given for the month with about 15lb. of fish. Mr. C. A. Grant took the second with about 6lb. Our monthly competition will take place on the 26th at Datchet, all to start by the first train that leaves Waterloo on that morning ; commence fishing as soon as destination is reached, and fish till 4.45. —Pixie.

In consequence of the alteration in the time table of the South Western Railway trains leaving Datchet on the 26th, members of the above are informed that the competition at the above-named place on that date will be brought to a close at four o'clock, and not 4.45, as previously stated.—Pixie.

## SOUTH LONDON UNITED.

Some of the members of the above paid a visit to the United Brothers, at Deptford, on the 16th, and a very pleasant evening's amusement they had. Mr. Tyler presided, assisted by a friend. Mr. Gaston gave great satisfaction for the manner in which he accompanied the vocalists on the pianoforte. I managed to drop down and hear Mr. Walker's "Midshipmite," R. Smith's hunting song, Mr. George's "Dick Turpin," Mr. Taylor's account of "How Paddy Stole the Rope," Walter Bates's salvation song, "Come and Join Us," Mr. Bignall's "Sarah Jane," and a "Topical Song of the Times." Mr. Page recited "The Fisher Boy at Sea." Among the other contributors to the evening's amusement were Messrs. Grant, Evans, Davies, White, Wright, &c. The roll was called a few minutes before 11 o'clock so as to enable those who wished to catch the last car up to town to do so. The following societies were represented in good numbers :—The Second Surrey, Rodney, Anchor and Hope, Peckham Brothers, South-Eastern, The Angler's Pride, United Brothers, The Crown, Original Angler's Pride, and the Peckham Perseverance—10 societies out of 20. Mr. Tyler thanked all present for their company that evening, and stated it was the largest meeting that the United Brothers had had. He had no doubt that more societies would have been represented if the distance was not so far, as some members do not leave off work till late. He was happy to say that the United Brothers had been represented at every visit the South London United had made, whether it was at Peckham, Battersea, or Blackfriars. The next return visit will go to the Angler's Pride, held at Mr. Bate's, White Hart, Old Kent-road, the date of which will be announced by the secretary of that society. Having reached thus far, I beat a retreat and left the majority to carry on the amusement as long as they could, I preferring a car a little after 11 o'clock, to "shank's ponies" after 12.30, to Camberwell.—Pixie.

## SOUTHPORT ANGLING SOCIETY.

We held our third and final competition on Monday, October 20th, about a dozen of our members, who could get off for the outing and competition started out by the 7.55 a.m. train for regions beyond Warrington. Having arrived, and everything got in readiness, the captain, Mr. C. Dyson, gave the order "all in" for two hours ; at the conclusion it was found that Mr. C. Clegg had got the 1st prize, £1 ; Mr. J. Bullock 2nd, 15s. ; Mr. T. Kershaw 3rd, 10s. ; Mr. A. Cole 4th, 5s. ; with very creditable baskets. Considering this is our first year of existence, all enjoyed a very pleasant day, and are looking forward to next year to further fun and angling.—A. M., Sec.

## THE SOUTH-EASTERN ANGLING SOCIETY.

Some of our members were out on the 19th inst., among them being Mr. J. Smith, jun., who brought home some fair jack, 14lb. in all, and one barbel, 3lb. 9oz., from the neighbourhood of Staines ; Mr. Sharman, 1lb. 4oz. of roach, dace, and perch ; Mr. H. Holben, 12oz. of roach, both at Kingston. At our regular weekly meeting on Tuesday only a portion of the members attended of the number who promised so to do, at which I was somewhat surprised, seeing that it was the night for deciding our next outing. However, it was resolved that we fish at Ware on November 2nd. All fish to weigh but jack. Time of starting and finishing to be stated at our next meeting. Those members who intend going will please take note of this. I would urge upon all our members the necessity of attending more regularly, and in greater force than of late.—Thos. H. H. Weston, sec.

## UNITED BROTHERS, DEPTFORD.

Several of our members were out on the 19th, but did not show up, Mr. Payne just saving the club from a blank with 6lb. of bream. Will all members be kind enough to *attend* next Saturday ?—H. T.

## UNITED LONDON FISHERIES SOCIETY.

The members are hereby informed that the agreement for the Springwell Fishery, Harefield, has terminated, and we no longer have the right of using that water. The following fisheries can be used by the members of societies holding privilege tickets from the Anglers' Association and the Central Association, until further notice :—Pike and Anchor Fishery, Ponder's End (Great Eastern Railway) ; old river Wey, from Weybridge Lock to Pyford Lock (London and South-Western Railway) ; Uxbridge Canal, from Battle Bridge to Slough (Great Western Railway) ; Grand Junction Canal, from Batchworth Lock (No. 81) to Springwell Lock (No. 83) (North-Western Railway) ; Grand Junction Canal, from Cheddington-road Bridge (No. 126) to Leighton and Linsdale-road Bridge (No. 114) (North-Western Railway) the smaller Lea, from High-road, Waltham, to Enfield Lock (Great-Eastern Railway) —R. Ghurney, sec.

## WALWORTH PISCATORIALS.

On the 15th Mr. A. Brodie visited Tring. He managed to get about 12lb. of fish, which he placed in a large bait kettle. Coming home the kettle was placed under the seat in the train that reaches Euston at 7.50 in the evening. Having several baskets and parcels to look after, the bait kettle was not thought of, and it was not until he reached Walworth that he missed it. Any person having found that bait kettle is welcome to the contents, and expenses will be paid if it is returned in good condition to Mr. A Brodie, the Albion, 155, Commercial-road, Peckham. Mr. Boalch and a friend visited Richmond on the 16th, for a few hours, and managed to get some sport among the roach and dace. At the meeting held in the evening, Mr. Piolaine presented a very handsome box to the society for the purpose of collecting money for philanthropic purposes, to be distributed as the committee think fit.—Pixie.

## CLOSE OF THE TAY SALMON FISHING.

The rod-fishing on the Tay and tributaries is now closed for the season, the last week proving the most successful that has been experienced for several years. On the 10th the river rose several feet, and was very unfavourable for fishing all forenoon, but it cleared up sufficiently in the afternoon to enable the fish to see the fly, and a good many fish were killed on the different beats. A good many fish were also killed from the bank, Mr. P. D. Malloch, Perth, being most successful, getting ten fish, weighing respectively 25, 20, 19, 18, 17, 17, 14, 18, 9, and 8lb., being the best take of salmon caught from the bank for many years. No signs of disease have been observed either on the upper or on the lower waters. The following notes have reached us since last report :—

*Derculich.*—On Wednesday, the keeper caught a nice salmon of 15lb. ? and on Thursday, a newly-run fish of 22lb.

*Ballechin.*—On Wednesday, the keeper killed two fish of 18 and 10lb.

*Findynate.*—Mr. Walker's keeper killed one of 11lb. on Wednesday.

*Dalguise.*—Mr. Durrant-Steuart, while out for a short time on Thursday forenoon on the lower pool of the Dalguise water, killed a salmon of 10lb. ; and in the bridge pool of the same water Mr. David Hodge, Dundee, killed a fine clean-run salmon of 18lb. The rising of the river in the afternoon put a stop to sport.

*Murthly.*—On Friday, Mr. J. E. Millais killed five fish, and Mr. Grey also killed five fish on this water.

*Meikleour.*—On Wednesday, Mr. Evan M'Gregor killed five fish.

*Cargill.*—On Thursday, a good number of fish were killed by the servants at Drumour.

*Stobhall.*—On Thursday eight fish were killed on this beat.

*Taymount.*—Mr. C. A. Murray and two friends, on Tuesday, killed the extraordinary number of 28 salmon, weighing 470lb., the largest fish being 40lb. The fish on this day were rising in all directions on this water.

*Burnmouth.*—Major Curtis and Mrs Glyn had two fish on this water.

*Thistlebridge.*—On Tuesday, Sir W. Elliott and Mr. Kelsall had five fish.

The Earn.—The rod-fishing on the Earn does not close till the 31st inst., and excellent sport is expected, as the river is swarming with fish. Mr. T. Cappell was out on Thursday, and killed a fine fish of 18lb. On the same day, Mr. Stewart, of Lawers, had a salmon of 18lb. On the Drummond Castle water, Mr. Duncan Forbes had four fish, and Mr. Greenhill, two fish. On Saturday, Mr. Henry Curr, Pitkellony House, killed a fine salmon, weighing 24lb. On the same day Mr. M'Kenzie, Drummond Arms Hotel, Crieff, landed a salmon of 25lb.

## AN EVENING WITH THE BREAM.

Mark Twain, in one of his latest and perhaps most delightful books, has described with much force and humour the midnight perambulations of himself as a semi-somnambulist, when, to the evident discomfort of himself and his friend Harris, he went "pawing around" under the disquieting influence of a strange bed in a strange land.

Our peregrinations have been of a different and perhaps less exciting character, but nevertheless worthy of note, as showing the enthusiasm of lovers of Nature and lovers of Art, when the latter is more particularly the gentle Art so well portrayed under its ever-varying characteristics in the Fishing Gazette.

The great spirit of Johnson has immortalised the "fool and the worm"—the one watching and the other waiting to verify the truth of the old proverb "that one fool makes many." What ponderous anathemas, pure and undefiled, would have relieved the mighty soul of Boswell's idol had he fallen like great Dagon upon us in the deep gloaming we cannot surmise; but doubtless our language would have been enriched by some gem from his choice and copious vocabulary, now unfortunately lost for ever.

Indulgent critic, this is by way of introduction; but there is a continuity and illustrative force in these prefatory gropings which the sequel will, we hope, make more apparent. What say you? We have lingered late with Nature; the night hath been a more familiar face than that of man, and in her dim and starry loveliness we inquired anxiously and frequently of the domestic arrangements of the inhabitants of another element, and were desirous of supplying those little creature comforts which we thought lacking in their snug and placid retreat.

Gentle critic, you have already expressed a devout hope that the departed soul of Byron may not haunt our lonely spot for this wilful parody of his descriptive poesy. We thank you, and ask your company to an imaginative sanctum sanctorum by the side of a clear and rippling river. A venerable willow, gnarled and gaunt, lies well-nigh prone upon the surface of the stream. Time has not only bent its giant form, but hollowed its aged trunk. Grey rats sport in its mouldy hollows, and in the rushes on either side the "quack-quack" of the moorhen disturbs the silence as the shadows deepen and the twilight subsides into darkness. A younger and statelier tree bounds the upper extremity of our trysting-place, and between the two is the sheltered deep on which our hopes have been long fixed. Mr. Senior, in his delightful sketches, has given us a graphic account of his search after bream, accompanied as he was by a connoisseur of no mean pretensions. Our experience was a facsimile of his in one important particular. The day of our modest adventures was indeed a memorable one in this memorable summer. A soft, rippling breeze, a warm sunshine, a calm and delightful evening had been ours. We had watched a playful school of joyous bream rise to the surface and pursue their way up stream in giddy frolic. They returned with joy unrestrained to their deep hiding-places in a way to remind us of our pleasant author and his pleasant book. We had tried bait after bait to no purpose, and the glowing pipe of peace was well-nigh supplanted by the gloom of disappointment. Floats were no longer visible, though surmounted by the blackest of feathery plumes; but we determined to hope on and to fish on, trusting to the whirr of our reels to remind us of our duty. The choicest of golden-ringed worms and the daintiest blue-bottle larvæ adorned our hooks, which lay far out of nought but finny ken in the still three-fathom water at our feet. We sat nursing our knees and our wrath, when suddenly a reel began to move with rapidly-increasing momentum. A strike—a struggle—and the landing-net made visible our first capture.

As you have recently pointed out, anglers are wont at times to equivocate, prevaricate, and occasionally to exaggerate—glorifying themselves and depreciating their brother rivals. Fellow float follower, you will believe in my detestation of such trivialities when I tell you that this well-favoured and broad-shouldered denizen of a deep river weighed six and a half pounds! "Oh, fly not yet, 'tis just the hour." We, I need hardly say, used no fly; it was just the hour for supper on worms and gentle wriggling waifs. Another run, and another fish of six pounds fit for a matrimonial alliance with his predecessor was becoming remuneration for struggling humanity. Fate was generous: we lifted rod number three, and in doing so hooked a third fish, which made our total weight eighteen pounds. The day was far spent; our friends were calculating how far down stream our bodies would be found. We "pawed around" once more with more or less success, and eventually reached a genial hearth happier as men and wiser as anglers.

Fredk. Miller.

The Devil!—We heard of the following amusing case of absent-mindedness on the part of a young lady evidently in love, who was giving orders for lunch to the cook. Young Lady: "Will you cook the devil's legs, please?" Cook: "Good gracious, miss!" Young Lady (confused): "I mean devil the cook's legs." Cook collapses.

Restocking of Elstree Reservoir.—Worthy old James Hill, the lessor of the above water, having obtained a grand supply of English carp and tench, invited a party to witness them turned in the reservoir. On the company examining the fine tubs, each tub containing 100, they were found to average from 8oz. upward to 2½lb. each, and being placed in a punt by the boatman, G. Cheshir, was rowed out to the centre and turned in. The company afterwards adjourned to the Fishery Inn to drink success to J. Hill and the fish. The company included F. Watson, H. Spurgeon, R. Hicks, G. Underwood, J. Riley, S. Thompson, R. Tavener, Inspector Wilson, C. Cooper, and some dozen other anglers and villagers.

**FISHING RODS—AND TACKLE.**

BULMER'S "FISHING GAZETTE" GOSSAMER GUT LINES,

Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—Fishing Gazette Notice, September 18, 1883.

See also notices in the Fishing Gazette for Dec. 17, 1881; June 28th, 1882; July 1, 1882; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d. Fishing Gazette Gossamer Gut, Tapered, 8d. each; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d. and 1s. 6d.; prepared ditto, 20 yards, 1s.; stout, 1d. a yard; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d.; Gossamer Gut, 12in., 3s. 6d.; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz.; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal, 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen; Treble ditto, 2d. each. Pennel Snaps, 2½d.; Jardine, 3½d. each; Gut or Gimp Spinning Flights, 6d. each; Spoon Baits (Jack's size), 9d. each; Gut and Gimp Traces, 6d. each, Fishing Gazette Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d.; ditto Twisted Gut, stout or fine, 1s. each; 3in. Jack Float, 6d.

WINCHES. — Nottingham, from 6d.; Brass, from 8d.

HEATON'S PATENT REELS, "Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ⅝in., 1s. 6d.

Rods made to order or fitted with screw-joint ferrules.

Price List free on application.

Postage extra on all orders, and all must be accompanied by a remittance.

All goods marked in plain figures.

COUGHS, COLDS, ASTHMA,
BRONCHITIS and NEURALGIA.
DR. J. COLLIS BROWNE'S

**CHLORODYNE.**

A few doses quite effectual. Caution.—The extraordinary medical reports on the efficacy of Chlorodyne render it of vital importance that the public should obtain the genuine, which is protected by Government stamp, bearing the words "Dr. J. Collis Browne's Chlorodyne." See decision of Vice-Chancellor Sir W. Page Wood, *The Times*, July 16, 1864. Numerous testimonials from eminent physicians accompany each bottle.

From W. C. Wilkinson, F.R.C.S., Spalding:—"I consider it invaluable in phthisis and spasmodic cough; the benefit is very marked indeed."

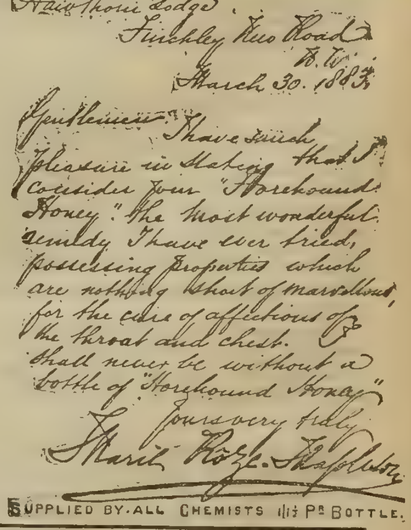
Sold in bottles, 1s. 1½d., 2s. 9d., and 4s. 6d., by all Chemists.

Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, W.C.

*IMPORTANT.*

A Lady wishes to dispose of (privately) her complete SUITE of Old English Pattern ELECTRO-PLATED SPOONS and FORKS. All Stamped, A 1 quality, never used. The Set comprises one dozen each Table and Dessert Forks, Dessert and Tea Spoons, half-dozen Table Spoons, four Salt, six Egg, and two Mustard Spoons, with gilt bowls—66 pieces in all. To an immediate purchaser, the low sum of 50s. accepted for entire suite. Great bargain.—Mrs. MACGREGOR, care of Drallim and Oliver, 18, Ironmonger-lane, Cheapside, E.C., where the plate may be seen, or can be sent on approval.

**HOGE'S HOREHOUND HONEY**



Hawthorn Lodge
Finchley New Road
N.W.
March 30. 1883.

Gentlemen:— I have much pleasure in stating that I consider your "Horehound Honey" the most wonderful remedy I have ever tried, possessing properties which are nothing short of marvellous, for the cure of affections of the throat and chest. I shall never be without a bottle of "Horehound Honey."

Yours very truly
Marie Roze-Mapleson

SUPPLIED BY ALL CHEMISTS 1/1½ PR BOTTLE.

Anglers' Benevolent Society.—Since my last report, I beg to acknowledge with thanks the receipt of 15s. donation from the Watford Piscators.—R. Ghurney, Sec.

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advanee, for the United Kingdom is 8s. ; or post free, 10s. 6d To any part of Europe, the United States, and Canada, the Annual Subscription, including postage s 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and CO., the Proprietors, 188, Fleet Street, E.C.

## MR. KELSON'S ARTICLES IN AMERICA.

THE *American Field and Sportsman's Journal* has copied, week after week, every article Mr. Kelson has written in the FISHING GAZETTE, and every illustration we have given in connection with those articles, including all Major Traherne's patterns of salmon flies. Imitation is the sincerest flattery, but we should not object to receive a pecuniary acknowledgment from our American contemporary.

## ON THE DESCRIPTION OF SALMON FLIES.

By MR. GEO. M. KELSON.

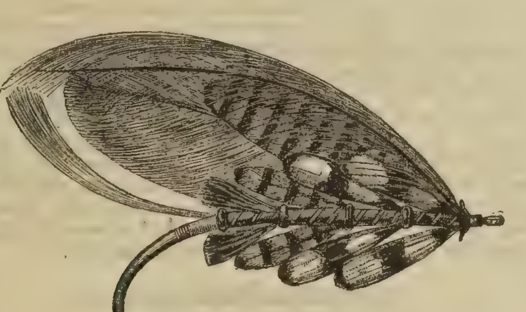
### MAJOR TRAHERNE'S PATTERNS *(Continued).*

### NO. 16.—"NELLY BLY."

IN completing my remarks upon the throats of flies, it may be observed that I have alluded principally to feathers which are seldom if ever provided here by professional dressers. In addition to preceding observations, let me mention that the tippet of the Golden Pheasant has a very smart effect. It is not a feather that winds well, and is better fixed in fibres as suggested for those from the Amherst.

I cannot call to mind any standard flies with either of these situated here, but it seems to me that they help to provide a "good change," whether used in their natural state or dyed. Crimson magenta gives the golden ones a very taking and gay appearance, but the Amhersts come better in blue.

Dyed Teal is another uncommon accompaniment, and looks exquisitely delicate in golden yellow. I allude to the hackles, wound in the usual manner, not to the more favoured side-feathers tied in fibres, which, by the way, are the making of almost all mixed wings, and it is well we should remember that both dye any shade splendidly.



Strands, again, of the Summer Duck answer admirably either dyed or plain.

Then Houdan hen's breast feathers I highly recommend ; they are very rare, and therefore difficult to procure at any price. I mean the feathers that have a dark black ring round the edge, with creamy-white centres ; and, if intended for dyeing blue, the whitest again should be chosen. The worst of them is that they are laurel-leaf-shaped, and fly-makers generally discard all such kind. Of course hackles for ordinary purposes should taper gradually, and not only be fine in texture, but transparent in appearance, running so throughout, and up to the shaft. Certainly those with fluffy lists are next to useless. It is astonishing how the hackles on poultry, whether of the male or female, are affected by diet. I remember to have seen some interesting experiments by the late Mr. B. P. Brent, and still have a few of the samples in my collection.

The darker feathers of Houdans are of no value ; the colour underneath is shocking, and this ought always to be a principal point in judging of any hackles that are to be employed in their natural state. Even if we take into consideration the horrid shape of this feather, it is invaluable to us on account of the superb black tips ; but then, shape is not of so much importance either to throat or butt hackles, and when used in sequence for butts, working the smallest of the set first, with the colours blending well, the feathers, although hard to find, are very hard to beat.

Mohair in various hues may be, and often is, added ; still, it is not so effective as Goat's beard, which takes the dye as nicely as Pig's wool, and so provides a brilliant reinforcement to any of the foregoing specialities.

You know, one of the most pleasant and engaging themes of this all-important pastime (should I not say business ? ) of fishermen—this study, the charm of which "time dare not dull"—is the power of invention. Now we should soon be contented, and therefore soon tire, if we merely had to imitate and only reproduce ; for truly, then, all art would be exiled.

But is it not curious how many of us there are whose rapturous conception of ideal beauty is immeasurably superior to the power of execution ? And perhaps, so far, we may be said to be like the every-day artist, for surely the visible form we give our ideas is never "half so happy" as that seen through the golden haze of our mystical imaginations. Indeed, were it ordained otherwise we should require a gigantic collection of feathers to carry out anything approaching a truthful detail.

Many a time have I asked friends how they contrived to get this, that, or the other tint in hackles, receiving the invariable reply—"by accident" ; what is the moral ?

Always carefully measure and retain a written record of the quantities mixed in the dye bath, note the time allowed for the feather to be immersed therein, and keep samples.

The dye ingredients are to be purchased of Messrs. Woolley and Co., wholesale chemists, 69, Market-street, Manchester, and their Bismarck Brown is simply magnificent. I hear a new and improved golden yellow will fetch white hackles identically the same in tone as Golden Pheasant toppings.

Where fish put up with it, we can scarcely use too much hackle—of this I speak confidently ; we are more likely to under than overdo it for the majority of rivers, provided also that the shades be not too gaudy and conspicuous. We must, however, remember that ever so little too much will cause the fly to skirt the water, and that *must* be avoided. Neither, as a rule, can we select them too long in fibre—say, up to the barb of the hook. The black-pointed plumes are my especial favourites, and I believe them to be the best. With such feathers as Jay's, of course, a little goes a long way ; then, again, undyed Gallina should not be laid on extravagantly.

In "fastening-off" all throat hackles—under the hook, so that they may not molest the wing—be sure to press back their coils there before the final touch with the tying silk ; and before using your thumb and middle finger nails for this purpose, unwind two or three turns of the silk—I might say all except the last, if you have had sufficient practice to make sure of its not slackening, and in replacing it you also bind for the first time the gut (which has been exposed here till now) *as firmly and as closely as possible* in single layer for

### THE WINGS.

And that is of much consequence, for without an even and unwrinkled surface it is impossible to set up the wing on either side properly.

Now it is universally upheld that the wings are the most important and pleasurable part of our work, and may I say—to those who do not understand it—the most difficult. With regard to that, I think the development of practical perceptions would be hindered by any determined adherence to old-fashioned and immemorial usage, exploded traditions, and obsolete ideas. Therefore, it will be my pleasurable endeavour to explain to the best of my ability the immense advantage of "building up" the right material on this end of the hook in the right way, for I am also one of the "universal believers." Take two anglers of equal ability, persistence, and a match physically ; place them on a fair footing to fish a stretch of water for a fortnight with flies the same in size and colour, those of the one dressed correctly, while the others are made coarsely with lopsided bodies, and the wings having irregular strips of feather spurting out in all manner of ways. What would be the result ?

Well, now, surely you know. Could there be a single doubt about it ? Is an answer wanted ? Yes ? Then I can only say that you might very easily ascertain at any time by interrogating any such experienced fisherman as he who invented and dressed the original "Nelly"—the subject of our present illustration.

Of Miss Bly's predecessor I believe I expressed a very high opinion, and although she may be so beautiful, the "Lapwing" could scarcely be surpassed.

Where are frequenters of the Shannon, the Spey, Tweed, Tay—let me add *etcetera* to save time—who could not find a few fair words in favour of this comely and gorgeous specimen of artificial entomology.

A great deal has been broached from time to time of the cost of this beautiful collection ; really, if we were to review these flies, what could we find to object to on that score, particularly if we omitted one of the best of all—the Chatterer ?

Nelly, made to sail along evenly with her Crow and her Jungle and the rest of the work in her perfect body, would require a deal of care ; indeed, to fix these feathers to play regularly and in a line in the water would need much experience I maintain the effect would be lost, the attraction nearly gone, if they were to tumble together in one confused mass.

My experience teaches me that salmon prefer *decided* patterns, whether they be sombre or showy.

Green legs, pink wings, and purple toppings, or any other fantastic make-up, may just bring us into conflict now and again when all ordinary means fail ; but, if my mind is made up upon any one point more than another, I candidly and fearlessly submit my implicit confidence in regard to make, colour, size, and mode of presenting one's flies—oh, yes—but mine is only an opinion, after all ; nevertheless, in the whole course of my travels, I have always observed (I wonder if I may ask you to read slowly) that those who catch most fish are the most careful upon each and every of these considerations.

We are all aware there are plenty of salmon fishermen who believe otherwise, but are they the successful ones—not occasionally, but invariably ?

This fly may be described as follows :—

Tag : Silver twist and green silk (the same shade as the green feather of the Macaw).

Tail : Topping.

Butt : Black herl.

Body : In four equal divisions of floss silk : No. 1, the same colour as the two feathers of the red Crow, which are above and below, and butted with black herl, as also is each of the rest. No. 2, the silk is the same blue as the four Jays. The best idea I can offer of No. 3 is that the silk is the same in tone as that of a green Parrot, and a few shades darker than the tag ; and No. 4 of magenta silk, each having four Jungle Cock, as shown.

Ribbed : Flat silver tinsel.

Wings : Two red orange Macaw feathers, with one Jay feather on either side, as illustrated, which are from the overgrowth, having blue on both sides of the shaft ; two golden toppings above.

Horns : Blue Macaw.

Head : Black herl.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices : Point Flies 2s. 6d. per Dozen ; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

## LEDGERING FOR BARBEL.

By R. B. Marston.

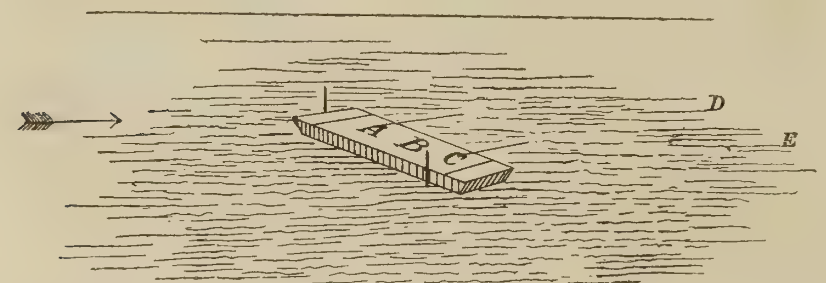
Mr. Alfred Mackrill, who fishes a great deal at Walton-on-Thames, is one of those anglers who thoroughly deserve success, and it is very rarely that he returns home after a day with his fisherman—old George Hone—without a good show of fish of some kind. I needed no second invitation when he asked me if I would join him in a day's barbel fishing on the Thames. We arranged that I should stay at his house at Kingston the previous night, and drive over to Walton early in the morning, and fish a swim or two which old George had got well baited for us. We spent a pleasant evening in chat about angling generally, during which I got Mr. Mackrill to promise to write for the Gazette an article on how to obtain, preserve, and prepare worms for ground-baiting and for the hook, a subject in which he is thoroughly up ; indeed, I know no one who takes so much care and trouble in this matter as Mr. M. Next morning we went over his wormery. "That barrel contains some thousands of lobs, this one red worms, here you have brandlings, this"—pointing to a hot-bed about 12ft. square and 2ft. deep—"I had made to breed worms in. By next spring I shall have millions in it. It is made of mixed loam and rich garden soil, and on the top is put refuse from the kitchen." Mr. M. is certainly great on worms, and believes that when properly prepared and properly fished there is no bait like them for the Thames, and certainly I agree with him.

It was a fine bright morning, with a soft, south-west wind, as we started on our pleasant drive of eight miles to Walton. We found "Old George" ready for us. "Good morning, George ; thought we wer'nt coming, didn't you?" "You be a bit late, sir, but I hadn't no fears about your not coming." George knows that it must be something very extraordinary which would prevent his "guvnor," as he calls Mr. Mackrill, from carrying out an arranged day's fishing. The other day some anglers were out with old George, and wanted to fish a certain backwater for perch. "'Tain't a bit o' use your goin' there. My guv'nor fished it all down yesterday and never had a touch, and if he can't get 'em nobody else can."

"Oh, then, your governor can fish, can he?"

'Fish! I'm d—d if he can't. Fish as well as I can, and I larned him."

George proposes that we give the bream a turn in the deeps just to see if they are on, and in ten minutes our poles are fixed, one a little lower than the other, so that the punt can lie in the best position for ledgering—*i.e.*, at an acute angle with the stream. For the benefit of those who do not know the plan I give a diagram of it.



The arrow shows the direction of the stream. If two anglers are fishing, one sits at A, the other at C, and the fisherman in the middle at B, and throws in the ground-bait so that it will be carried down in the direction of D and E. A.'s ledger rests at D, and C.'s at E.

Mr. Mackrill commenced with a lob as bait, and I tried a couple of little reds scoured to perfection. I must just say a word or two about the rods and tackle we used. The rods were made by a man who sells them to the fishermen, and Mr. Mackrill gave Hone 10s. 6d. apiece for them. They are all greenheart, in three joints, length about 10ft.—very light, fairly stiff, and powerful enough for any Thames fish. It was on this rod in Walton Deep that Mr. M. killed his great carp—12½lb.—after a tremendous fight of fifty minutes, besides a multitude of other fishes, including recently 110lb. weight of bream, some of 5½, 6, and 6½lb., and a Thames trout of 6lb. on the last day of this season. Before I had used it at all I asked Mr. M. to get one of these rods for me, and I can recommend any Thames angler who wants a perfect punt rod to invest 10s. 6d. in one of these. G. Hone, sen., fisherman, Walton, can get them to order—that is, if the maker is not dead, for old George told me he had not seen him very lately. He is a London man, lives near King's-cross, and if any of my readers can give me his address I shall be obliged.

We used Nottingham winches and very fine silk running line. The ledgers were very fine stained gut, about as fine as you can get it undrawn, and the hook length stained drawn gut. Mr. Mackrill wisely has his hooks bound to the gut almost to the bend. A perforated round bullet put on the gut above a shot pinched on about a yard from the hook completes the tackle.* I have, when barbel fishing previously, found the sliced hook most useful, as it keeps the worm well up on the shank, and the fish cannot strip it off so easily as with the smooth shank.

But to return to our fishing. The bream were not on. I got one touch and then a bream of about 1lb., and then we decided to go down to what I have christened the "Steak Pudding Swim," which had been well baited. On our way down, I was delighted to see countless numbers of small fry on the shallows, tiny perch, barbel, roach, dace, bream, &c.—a splendid prospect for future sport. We saw one or two birds floating down dead. Old George explained that they were young martens, too weak on the wing to make the long journey south with their brethren, and the cold weather of the previous fortnight having killed the flies and gnats, they had died of starvation—he had seen hundreds of them. I think White, in his "History of Selbourne," somewhere mentions as a belief of the country people that swifts hibernate in this country in holes in banks, but it would seem they cannot stand even a few days of frosty weather.

Settled down in our swim, which is nearly in mid-stream in about twelve feet of water, we cast out our ledgers, draw gently till the line is taut, and then wait for the electric shock on a small scale which tells that the invitation has been accepted, or that a barbel has rolled over the line. Anyone who has watched the habits of barbel, and seen how they sometimes wallow about on the bottom, will easily understand that every lug he gets at the ledger does not mean a bite ; often, when the fish are not feeding at all, they will roll about the ledger and bait, and in this way not infrequently get foul-hooked. And how a barbel does fight when he is foul-hooked ! Mr. Mackrill had one of seven pounds recently hooked in the left side, which went up stream for nearly half a mile, leading him to fancy he had got his "picture barbel" at last. There are limits to pressure when you use drawn gut, and there was nothing to be done but follow what pulled like a twelve-pounder at least.

"Have a pipe of my tobacco, George," I say to the old 'un, who is mixing up boiled rice, gentles, redworms, and clay into a Christmas pudding-like mess. "When I have given 'em this dose I don't mind if I do," says George. I put down the rod to get the tobacco, and, of course, there is immediately a twitch at the top, and equally, of course, I am too late. On winding in we find the bait, two reds, cleaned off. Mr. Mackrill is quietly waiting, regarding his rod as if it were a gun-barrel with his finger on the line for a trigger. My bait has hardly touched bottom before I have another lug, lug, and being prepared I force the point of the rod slantingly upwards—it is not a strike, but exactly the kind of movement advocated by Major Traherne for putting the hook into salmon. Old George and my friend give me the best advice possible under the circumstances—viz., to keep my rod up ; and, although I don't, I feel inclined to say, as Mr. Francis said once to somebody who saw him playing a fish, and gave him like advice, "Teach your respective grandmothers to suck eggs." As he drops into the well, a plucky barbel of between 3lb. and 4lb., George remarks that "he is as fat as a pig." "We shall get them now," says Mr. M., and we both fish as carefully as possible for twenty minutes without a touch. I tell George I will try a gentle for a change, and he puts on nine ; the bunch can hardly have settled down before I get another pull, and another barbel rather smaller is soon in the well. M. does not get a touch, nor do I ; in fact, the fish seem dead off. But if the fish don't feel like biting, we do, and begin to turn anxious backward glances in the direction of Walton for our boy who is to bring lunch: At last he turns the bend on the towing-path, coming along leisurely as Shakespeare's schoolboy, "creeping like snail to school." Ten minutes later, and we are seated behind a hedge, thick with aromatic fennel, as George points out, and with a perfect sea of wallflower plants, some still in bloom, in front of us. "Do you like steak-and-kidney pudding, George?" says M. George answers not, but his look speaks volumes. My friend, who fishes at least one day every week during the season, has, I find, reduced other matters besides angling to a science, and proved by that best of all proof—the pudding itself—that it is possible to have a really *hot* meal two miles away from any fire ! While we are discussing lunch, Mr. M. amused me with some anecdotes about old George and that important institution. On one occasion the worthy veteran was out with a party, who came well provided with a substantial lunch. They had had a good morning's sport, and at midday disembarked for the meal. George kept respectfully in the background, doubtless wondering when his share of the fast-disappearing pies and pasties would be forthcoming. Presently, having finished, one of them suggested to George that he had better have his dinner. G. intimated that he was quite ready, and, to his astonishment, was told he had better make haste and get it, as they wanted to resume their fishing ; so G. quietly got into his punt and leisurely punted up home—a mile or more. The gentlemen waited and waited, but no George appeared. About three hours later they saw him slowly punting back again. "Hi ! fisherman, what a time you have been ; we are losing all the afternoon !" George explained that when he got home there was no dinner ready—his wife did not expect him ; the fire was out, and she had to go up the village for some meat. "And what's more," says G., when he tells the story, "they didn't catch narry another fish !" Whether this was their fault or George's I leave the reader to imagine.

The old fisherman is not treated in this style when he is out with the "guv'ner." When we got back to our swim, our luck for a time was much the same. I got another brace of barbel, and Mr. M. hardly a touch ; then he made up, for at dusk, in about half-an-hour, he got six good barbel, while I could not feel even a "roll." It was the same next day ; he began with a smash—his gut being bad—then I caught the same fish with the hook in his mouth ; then I got three or four more fish, and he caught me up again in the afternoon. The fish were never well "on," but when we turned out our punt-well in the evening, we had a pretty show of 20 barbel, going about 60lb., with an odd perch, bream, and chub or two. In returning we had a narrow escape of a capsize. It grew dark very rapidly soon after five, and, as we punted along the edge, we suddenly heard a bargee, leading a horse on the towpath, sing out, and, the next instant, I saw the rope pass within an inch or two of the old boy's head as he stood up punting along ; if the rope had been slack in the least—as it often is—he must have gone over, for it was impossible to see it in the dark.

---

* I wonder if any anglers now ever use the "clay ledger" described by John Baddeley in "The London Angler's Book" (1834). He says :—"I prefer, when ledger fishing, a piece of clay ground-bait, worked on a hollow piece of bone or ivory, placed in lieu of lead ; on the piece of bone there should be fixed some pins sticking out all round ; this prevents the clay from being washed off, and I have been more successful this way than any other. This is called the clay ledger."

## SOME CAPITAL GRAYLING FLIES.

Mr. W. J. Cummins, fishing tackle maker, Bishop's Auckland, Durham, sends us a few samples of grayling flies, and very nice patterns and well-made flies they are, on No. 1 sneck bends of a capital thickness of wire—neither too thick nor too fine ; the gut is fine drawn, and quite satisfies us. The flies are orange and mulberry bumbles, the bumble palmer, silver twist, Walbran's red tag, little chap, grayling autumn dun, the Francis and hare's ear dun. The bumbles are not dressed quite after the Derbyshire patterns, but they are very good. The hare's ear dun is, in our opinion, one of the most deadly flies for trout or grayling. This is an excellent pattern.

## SUPERB SALMON GUT—ANOTHER RED TAG.

Looking in the other day at Messrs. Chas. Farlow and Co.'s, 191, Strand, to see how a greenheart spinning-rod they are making for us was getting on, they showed us some of the very finest salmon gut we have ever seen—in fact, we may say the finest. Messrs. F. and Co. say they have never seen anything like it before. They have only been able to get two thousand hanks, and wish they had twenty thousand. Salmon anglers who do not mind paying a good price for an exceptional sample of gut should examine this gut.

### The Red Crow Tag.

This fly is made, Messrs. Farlow and Co. informed us, from the pattern of one of their customers, who recently took twenty-one brace of grayling with it in one day. It is dressed with a red hackle at shoulder ; body, rather long, of green peacock, with three turns of gold twist over it ; tag, the brilliant little orange and red-tipped feather from the Indian crow. Being a natural feather, the colour is permanent, and the feather works in a lively way in the water. It makes the fly rather more expensive.

## DINNER OF YORKSHIRE ANGLERS IN LEEDS.

On Tuesday evening about seventy gentlemen interested in fishing, and representing the Yorkshire Angling Clubs, sat down to dinner at the Queen's Hotel, Leeds.

Mr. F. E. Pritt, who had been called to the chair, proposed the usual loyal toasts. In proposing the healths of the Yorkshire anglers, the Chairman said that the art of angling was not learnt in a day. Angling was somewhat like poetry, said Izaac Walton; a man must be born an angler. In practical detail man had made but little progress since the days of the ancient Romans. But if man had not made much progress, the fish had undoubtedly acquired a greater knowledge of man, and many a fisherman would say "that fish are not such fools as they used to be." The reasons for this were twofold. In the first place, the railways had brought towns to the riversides, so that the trout had become familiar with the man with the pole. Besides this the moden system of drainage carried the water very quickly off the surface, so that a fresh which formerly lasted a week now only extended over a couple of days. Thirty years ago, when the water percolated over the land, it gathered together microscopic nutriment, which conduced to improve the quality and size of the fish. But the fisherman of the present day had to be content with things as they now were. It was not the mere fact of catching fish which constituted the pleasure of fishing. In every angler was born a love of Nature, more or less predominant; and angling, more than any other outdoor sport, offered the means of gratifying this pure pleasure. Yorkshire was pre-eminently the county for anglers. They might go to the Wye or the Derwent, the Tweed, or the Dee, but there was no place like home. (Hear, hear.) But the fish in the streams of our county were difficult to catch. They could not be tempted with the first bait offered to them, and the tyro must long learn the art before he could become a fisherman. His experience led him to the opinion that they must "fish fine and keep low." (Hear, hear.) Perhaps the most important point in connection with Yorkshire angling was the necessity of watching the becks where the fish went to spawn. It was only by doing this that fish could be cultivated. At Loch Leven, where the finest trout were found, men were employed for the purpose of protecting the fish spawn. In drinking this toast they must remember that it applied to all brothers of the "quill" and "cork," rich and poor alike. (Applause.)

The toast having been drunk with musical honours, Dr. Park, Mr. Rickards, Mr. Burrows, and Mr. J. Stubbings responded.

The Rev. E. S. Gough proposed the health of the "Scoffers." He said that he had fished in America, in Ireland, and in many parts of England, and had always met with the same good fellowship among the brethren of the rod.

Major Middleton was called upon to respond, but he denied that he was a scoffer. He said that in his youth he was a keen fisherman, and had ever considered it one of the most charming amusements and sports.

Mr. Charles Pebody, Mr. Harold Nicholls, and Mr. Alex. Mallinson also responded.

Mr. Rickards proposed "The Yorkshire Angling Clubs," and gave an account of the various fish to be found in the Yorkshire rivers.

Mr. Pratt, of Otley, replied on behalf of the clubs of the Wharfe. He thought the Leeds Corporation ought to do something towards preserving the Washburn.

Mr. Walbran replied on behalf of the clubs which fish the river Ure. He thought that if the Ure were preserved and watched it would be as fine a trout river as the Wharfe. For all-round fishing, however, he did not think there was a better river in Yorkshire.

Mr. Ed. Middleton replied for the Driffield Club.

Other toasts followed. During the course of the evening a glee party sang a number of glees and part-songs.

## LOCH LEVEN ANGLING ASSOCIATION.

The shareholders of this Association held their annual meeting in Kirkland's Hotel, Kinross, on Tuesday week, Mr. George Henderson, of Turfhills, the chairman, presiding. The secretary, Mr. George Bogie, solicitor, submitted the tenth annual report and balance-sheet, from which it appeared that the income from all sources amounted to £2,020 18s. 5d., and the expenditure to £1,888, leaving a balance of £132 18s. 5d., to which sum £62 4s. fell to be added, making a total of £195 2s. 5d. From this sum it was agreed, on the recommendation of the directors, to declare a dividend of 15 per cent. on the paid-up capital of members, and to carry forward a surplus of £17 16s. 5d. to next year's account. The retiring directors were re-elected—viz., the Hon. G. Waldgrave Leslie, Messrs. George Henderson, Robert Burns Begg, and Robert Greig. Messrs. Wilson and Steedman were re-elected auditors. Mr. Henderson was re-elected chairman of the company. The following table shows the number of trout killed during each month of the past season, with their aggregate weight and average of each :—

| | 1884. | | | 1883. | | |
|---|---|---|---|---|---|---|
| | | Weight. | Average. | | Weight. | Average. |
| | Trout. | lb. | lb. | Trout. | lb. | lb. |
| April | 2319 | 1964¾ | ·846 | 335 | 352¼ | 1·050 |
| May | 3220 | 2742¼ | ·851 | 3838 | 2998¾ | ·781 |
| June | 5292 | 4318¾ | ·815 | 5301 | 4391½ | ·828 |
| July | 1384 | 1306 | ·943 | 1335 | 1296¼ | ·970 |
| August | 3211 | 3040½ | ·946 | 3124 | 3595 | 1·150 |
| September | 208 | 160¼ | ·769 | 129 | 117¾ | ·906 |
| | 15,634 | 13,532½ | ·865 | 14,062 | 12,742½ | ·906 |
| Netted | 306 | 400 | 1·307 | 165 | 248 | 1·503 |
| Total | 15,940 | 13,932½ | ·874 | 14,227 | 12,990 | ·913 |

## LET OF SALMON FISHINGS IN THE TAY AND EARN.

The salmon fishings in the river Tay belonging to the city of Perth were exposed to let on Friday. There was a large attendance of tacksmen, and bidding was very spirited. The total rental received for the fishings this year was £978, as compared with £782 last year, and £617 in 1883. The fishings in the Tay and Earn belonging to the Earl of Wemyss and March after stiff bidding brought £1,475, as compared with £1,957 last year, and £1,744 in 1883. The fishings in the Tay and Earn belonging to Sir Robert D. Moncrieffe, Bart., of Moncrieffe, were exposed to let, those in the Tay at £100, and those in the Earn at £20. The upset price not being offered for the Tay fishings, they were withdrawn; while those in the Earn were let to Messrs. Corsar and Currie, Glasgow, at £20. The salmon fishings in the Tay in the locality of Perth belonging to Sir James Richardson, of Pitfour, Bart., were let at £1,900.

## ANSWERS TO CORRESPONDENTS.

Ireland (Clonmel).—Mr. Willis Bund, LL.D., the best authority on our fishing laws, tells us he knows of no law prohibiting fishing with live cormorants, as in China. We should say a law would soon be made if the birds were used in our fresh waters. We know no book on rearing, training, and breeding these birds. Some encyclopædia may give an article on the subject.

Westbourne Park.—The shrimp tail is far too brittle to use in fly-making.

A. Mason (West Kensington Park).—When using the live snap we generally wait until the pike begins to move off after he has taken the bait, before striking—perhaps a minute.

Whipper (Buckfastleigh).—Have you seen Mr. Reuben Heaton's new lock-fast joint? It is extremely simple and neat. His address is Universal Works, Hospital-street, Birmingham. We are not sure that he has made any quantity yet. For trout rod we prefer ash butt and rest greenheart, as the "Marston" fly rods are now made by S. Allcock and Co., of Redditch.

C. Hooker.—It is really wasting your fine energies to attempt to dictate to us what we shall put in or leave out.

Club Sec.—If you will take the trouble to count the words you will find you get over three times as much for your money.

H. V.—As regards the peers and the people, we can only say, "May the best men win."

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### STRAIGHT NEEDLE-EYES v. TURNED-UP.

Sir,—I never meet a really practical fisherman without finding that I have more to learn than I have to impart. I have also found the pleasure and comfort which one derives from being able freely to acknowledge and accept a defeat, whether in argument or otherwise—from being able to say, in fact, frankly and without reserve, "I see that you were right and I was wrong." I can, therefore, assure those of your correspondents, and my friend Mr. H. S. Hall in particular, who dissent from the views I recently expressed of Straight *versus* Turned-up eyes for trout-hooks, and the best mode of knotting them to the gut, that in taking up my pen to reply, I do so from no desire to establish my own theories, but simply, on a point so important to fly fishers, to endeavour to arrive at the actual facts dispassionately and without prejudice.

Were the question one depending to any great extent upon long practical use and trial of eyed-hooks, I should at once bow to the superior claims of Mr. Hall and others in this respect. I fully admit that Mr. Hall's experience of eyed-hooks is vastly greater than my own; but I think the points now under discussion can be argued almost as well with a tumbler of water and a strand of gut over a dining-room table, as after the most elaborate experiments by the river side. The main issues are really little more than questions of mechanical fact, and if any of your readers will provide themselves with some well-soaked gut, two or three "turned-up" eyed-hooks, and a few straight or really "needle-eyes" (or failing these latter, with mere ordinary sewing-needles broken off short), they will be in a position to practically solve the problem for themselves, and to readily verify or disprove what I have advanced.

Be it noted that the question is not whether hooks with turned-up needle-eyes are not a great stride in advance of the old tied-on hooks, nor whether Mr. Hall and other skilful fly-fishers may not find them admirable in practice for killing fish, nor whether they can knot them to the casting line; but whether certain blemishes in the perfection of the invention exist or not, and whether, if they do exist, they are capable of being remedied.

The case, then, stands thus :—

I contend, with your correspondent Mr. Tod, (1) that the turned-up eye on the pattern of hook Mr. Hall kindly sent me is *conspicuous*—by which I mean unfly-like, and, therefore, objectionable. Mr. Hall replies that we need not try to improve upon nature, and that as long as fish feed upon flies with large heads and prominent eyes we should not trouble ourselves to make our imitations with heads "almost invisible." In this observation, as it stands, there is much with which I have no desire to disagree; but I would suggest that the question is not as to flies with "invisible," or even with ordinary, heads, but between comparatively small straight heads and very large turned-up heads.

*If Mr. Hall can show that natural flies have heads turned-up nearly to a right angle, and eyes like the eyes of his hooks, I shall be quite prepared to reconsider my proposition.*

Thus far as to the first point. The second is, That flies tied through straight needle-eyes in the way I suggest will not stand out straight—or rather in a line with—the gut. Of course, if this were the case, I should at once admit that the objection was fatal, as equally with your able correspondent I fully recognise the vital importance of the fly always standing straight in the position indicated: but here we come to a matter of fact. My contention is that when a fly is knotted on in the neat and simple way suggested in my last letter (that is, the gut passed once through the eye and secured by a double-hitch round the strand above), it will *stand out perfectly straight and always keep so.* I sent you, in my former note, as an illustration, the half of a needle attached in this way to a strand of the finest trout-gut, and I am quite satisfied that if you soak the gut and, after pulling the knot tight, set the fly—or rather the needle—in its proper position, it will remain so. I have found this to be the case also in practice—even when the gut is attached in the way I describe *to one of Mr. Hall's own patterns of Turned-up eyes.*

But, as I said before, let any of your correspondents try it for themselves, bearing in mind always the conditions—those present in actual fishing—gut soaked, and knot drawn tight.

Further, I am prepared to assert, and shall be pleased to give you occular demonstration of the fact, that the same thing holds good even in the case of salmon hooks, in which, of course, the weight of the hook is proportionably much greater as compared with the supporting power of the gut. (I reserve, however, the whole question of eyed salmon hooks for a future communication.)

Point number three is, again, one of simple matter-of-fact which anyone can test for themselves in a few minutes. Mr. Hall says that his knot—or, to borrow his own descriptive term, the "in-and-out" process—is "extremely simple," and that he has never found any difficulty whatever in tying it by the river side. I have myself, on the contrary, experienced both great difficulty and delay in the process, and when it is effected I can—at any rate, in the case of small trout flies—perceive no advantage whatever resulting. I make, of course, every allowance for the fact that Mr. Hall has had great practice in tying his knot, and that I have had very little; but that argument would apply equally to his or mine or any other knot, and, *cæteris paribus*, I believe mine could still be tied in a third, or more probably in a sixth, of the time that his could, by anyone equally skilful in both knots; whilst in the case of the tyro, I venture to think that the "in-and-out" process would, in practice, be found an obstacle at starting well-nigh insuperable. This is really the gist of the whole matter, and much more important than the relative conspicuousness or otherwise of the turned-up eye.

Once more I say *try it.*

I hope Mr. Hall, whose letters in the Fishing Gazette have given so much instruction and pleasure to your readers, will not for a moment think that in these observations I am wishing to decry or in any way depreciate the "eyed-hook system," of which he has been our latter-day apostle, or the very valuable results to the cause of fly-fishers and fly-fishing, which I cannot doubt are destined to result from his able advocacy.—I am, &c.,

H. Cholmondeley-Pennell.

## HOW TO LAND A SALMON WITHOUT GAFF OR NET AT A PINCH.

Sir,—In Mr. Kelson's interesting paper of Oct. 18th, he speaks thus ; "Salmon fishermen under difficulties are often stirred by deep and knowing impulses," &c.

In the case in point the gaff was lost, and the fish had to be landed somehow—anyhow : â la Briggs.

Mr. Kelson goes on to say : "And so I have heard of wrapping up the hand in a pocket-handkerchief, &c., &c.," and speaks of taking hold "of the lower jaw and putting your thumb in its mouth" (see page 190).

Now I take it that Mr. Kelson is a master of his craft, but, perhaps, ever since his young days, he has used gaff or landing net, probably with an attendant at hand, till now he can gaff his own fish. My salmon fishing was begun in the upper waters of the Tweed, where I had to be my own gillie. Since then I have frequently fished the lower stretches of water, where, after a certain time (I think the last day of September), a gaff is forbidden, and landing nets are used.

If Mr. Kelson, alone and unaided, was to try to land his friend's fish in the way he describes, I will make a bet that his friend would lose a few good fish, and for these reasons : First of all, it is sheer madness to go at a fish's *head*—you are so near the line that you always must risk fouling *that*. Again, to place your thumb in a salmon's mouth is a risky thing, particularly when a hook is present. Doubly, trebly risky must it be when you have a horrid handkerchief, which will catch the teeth or the hook so very readily, and which can protect the hand from *neither* appreciably.

Far better to run the thumb under one gill—close under the jaw—and the forefinger and thumb under the other, and the fish is helpless. But this is mere theory, and I am entirely opposed to the whole practice. Even in a difficulty, whatever one *attempts*, it is well to bear in mind that, in the event of missing one's first grasp, and the fish making a dash of it, that no risk of a foul, or any other muddle, *is possible*.

Again, to effect the landing of a fish by this process, a man must wait till the fish is quiet in shallow water—half dead, in fact. If he tried it with a lively fish in deep water, he might, some day, find the hook in his hand, and the fish "never more" in *his* bag.

Now has Mr. Kelson not been mixing up matters ? for he speaks as if he had only "heard" of handkerchief, &c.

The *real* idea of winding a *silk handkerchief* round a man's hand springs from the operation known as "tailing" a salmon. Some fishermen avow that the *silk* gives a firmer grip. To those who know how to tail a salmon without any such aid I have nothing to say. To those who do *not* know I have much, and, without any boasting, I can say that, given a fairly good chance, a good man, who is cool, is sure of his fish, or nearly so. This is how it is done ; and I will illustrate it by a story, going back to the year 1862 :—My poor friend B———l, now these many years in his early grave, had the salmon fishery at a place on the Tweed, rented. I had been his guest for two or three weeks. At last my visit came to an end. It was the 3rd of November, and the river was brim full, and a succession of small floods kept it dirty, and fish were constantly on the move upwards, so that for a week he and I could do nothing. The evening before I went, the river clearing somewhat, I dressed him a "Jock Scott," and in my city garments, thin boots, &c., went to see him fish the first cast—waiting till my train started. He hooked a fine fresh-run fish with my new fly ; the water at one side was 10ft. to 15ft. deep, the bank 2ft. or so above the level of the water. I said to him quietly, "Give me a good chance, and I won't miss your fish, *but follow my directions*." When he was near shore, I then said, "Hold him up as hard as you can now." This the fish answered by diving head downwards, but every now and then showing his tail. My hand was ready, perhaps, half a dozen times close to the tail before *it* was still enough, and also far enough out of water ; but the hand *followed that tail* whenever it rose. At last it was well above water, and then a thumb and forefinger were very deliberately, but firmly, placed on the root, and, like lightning, the wrist was turned outward and the arm raised straight out, the other three fingers not touching the tail at all, this being of the first importance. But I had never before attempted to lift a salmon of 16lb. so far below me. The strain was enormous. I had to stoop and then lift the fish, with a straight arm, till the hand was as high, or higher, than my shoulder, and then I lost my balance and fell—not into the pool, by good fortune, but on my face, on the very edge of the steep overhanging bank. I *just* managed to fall *on* the fish, and I was rather funky then ; but I wriggled back, sticking to my fish all the time, and got him. B. then went down to fish the "Web Stream," a perfect torrent in the state of the river, and most dangerous wading, amongst sharp slabs of rock from the cliffs overhanging. Here he soon hooked a fine salmon ; but the bank being no longer steep close to shore, I wet my feet, and made dead sure of every fish he brought to my hand, and he got four, the 16-pounder being the smallest. He lost *many* more on the run, and for two hours I never saw so many fish--nor did he—hooked and lost, or come to bank, as the case might be. He rose and hooked *thirteen*, and was "broken" several times. The fish took in the quiet eddy at the side of a *very strong stream*, and when hooked often rushed right through the whole breadth of the whey-coloured flooded river. To follow was impossible, and wading most risky : one false step and he would have been easily carried off and drowned. Wading, too, was essential, for a wooded scaur, or cliff, rose behind him, and he could only fish by an overhand cast, at which he was a perfect master. I never missed a single fish. At last the excitement and fatigue told on him, and he declared that he would not fish more unless I took a cast from the point of the cairn below. I did so to please him, and in a few throws I hooked a lively fish--a perfect beauty, but quite the smallest of the day, only 8½lb., and this I also got, after which, curiously enough, the fish ceased rising. Now he did not expect to get a fish that day, and he went from home more to have "a cast" to while away the time than aught else, and I walked down in my ordinary garments, just for the fun of the thing, to see him "wet my fly."

Since writing the foregoing, I have unearthed an old diary, and I find that the weight of B——'s fish were 15½lb., 16½lb., 19½lb., and 21½lb. each. Mine 8½lb. Many anglers would have said 16lb., 17lb., 20lb., and 22lb., &c., but we were accurate in such matters.

Now this, I feel sure, will not be misunderstood as brag. It is the system, not *self*, I am anxious to write in praise of, and in any case, not being original, *I* have nothing to boast of. But I can vouch for the fact that this wrinkle has saved me many a fish hooked by a trout rod, and when I have gone out, as I often have done, a whole month without attendant or gaff, landing my fish alone and unaided, by my forefinger and thumb as described.

Now for the way *not* to do it, which is to grasp the root *with the whole hand*, for even a silk handkerchief would be of no avail with *me*. I would miss fish after fish in this fashion.

The secret lies in grasping the fact that the thumb and forefinger alone must be used, the others spread out *and not touch* ; and next to this the *wrist* must be turned outwards till the right hand is much in the position in which one holds a single stick on the hanging guard—the back of the hand next you, or, at least, turned towards the river, your face being turned in the same direction, the little finger being the highest point, for the hand is on its edge. Let any one grasp his left wrist with *all* his hand, and he will feel how easily it can be pulled out of the grip of his strong right hand ; but if he will but grip firmly, with a "click" of forefinger and thumb, and turn the wrist upwards till the thumb is lowest and the small finger highest, he will have no difficulty in lifting a dead salmon, which is good practice, and very soon will learn the knack of taking a strong fish long before he is gasping quite as well as I can. When a fish is stranded, gasping on a shallow, this is simplicity itself.

One caution alone : Never attempt to tail a fish by putting the hand under water. His tail is his strength in the water, and he will, with one single lash of that, go away from the strongest of men without effort, and the first real attempt to grasp *should* be the last, if done by a man cool and collected, with confidence in himself. Given a fairly good place, I would never feel afraid of landing any fish for a friend thus, or even for myself. One's footing must be good, rocky ground or slippery wading being awkward ; worst of all, a perpendicular bank and deep water at one's own side. Even to lift a two-pound fish thus is a strain ; but in such a position only the few can tail a big fish successfully, and no weak man would have a chance. The tail once grasped, the fish never seems to give a struggle, and you can deliberately and leisurely *trail him along the surface of the water*, and then *well on to the bank*, ere you release him, in order to give the "coup de grace."

I may mention that the same rule is not in the same degree applicable to large *Salmo ferox*, brown trout (*Fario*), or sea trout, for the root of the salmon's tail is much smaller in proportion, and gives a *grip*. It is just the difference between a fine "clean" ankle and a "gummy one"—"like Lancashire mutton, beef to the heels," as I once heard a gummy pair well described, many a day since.

I hope this rambling paper may amuse, and I can promise that, in "a difficulty," it is really worth while *to know* "the art and science of tailing a salmon."—I am, &c.,

E. M. Tod.

[When fishing in the Dee in the spring we hooked a lively kelt, of twelve or fourteen pounds, and Major Traherne very kindly "tailed" this fish most neatly for us, and another very soon afterwards. The object was to avoid the use of the gaff, and consequent injury to the fish.—Ed.]

---

## ON STRIKING A SALMON.

Sir,—It must give anyone who goes in for salmon fishing great pleasure to see any observations from your experienced correspondent, Major Traherne ; but it seems to me we should not overlook one circumstance in this controversy.

Major Traherne agrees with Mr. Kelson in his opinions generally, but differs with him on this point.

Now, I understand from the Major's letters that he has not exactly followed Mr. Kelson's directions. "I did not strike from the winch, which will account for my want of success," says the Major. If this is a stipulation, ought we to place too much reliance upon the Major's remarks in this matter ? That is all I ask.

I am a lake fisherman, and if I fail to give a good "tug" at the right moment, I lose my fish.—I am, &c.,

X. Y. Z.

---

## HINTS ON ROACH ANGLING.

Sir,—I notice that you invite your readers to give their views on roach fishing I have great pleasure in giving mine. I may say that I have been a roach fisher for the last fifteen years, and have, on the whole, been very successful among them.

I was fishing the river Waveney in August last for a few days, and succeeded in killing and landing some splendid roach, the largest pulling the scales down at 1½lb. ; and as to 1lb. fish, I killed so many that I really cannot recollect the number, and I have also killed some very nice roach in the Lea this year.

I use an ordinary roach rod (one of Sowerbutt's), the best fine taper gut (not fine drawn, as I find that it frays after the first time of using), a quill float, a crystal hook, No. 13, one shot about a foot from the hook, and the remainder about a foot from that. I also use about 2ft. or 3ft., sometimes more, of fine silk line between the point of the rod and the gut line, so that I am able to keep well back and throw well over the hole ; but am always very particular not to let the line get below the water level when the float is far out, always keeping a taut line, so that I can strike directly, and I may say that I have never lost a fish for the want of striking soon enough. I find that *home-made bread* makes the best paste, and is very killing. I use nothing else ; and as for ground-bait (bran and bread), I use very sparingly—sometimes not at all. As soon as I commence I throw in a little ground-bait (if I have it) and a small handful of pellets of paste about the size of a large pea, which I keep on occasionally throwing in, which brings the fish on the feed, and I have brought them on by these means when the ground-bait would not. Trusting that your readers may be as successful amongst the roach as I have been,—I am, &c.,

Bromley-by-Bow. Wavene.

[We have often found roach take plain bread, not made into paste, when they won't look at any other bait. Cut a square bit, half crumb and half crust, as the latter is far tougher in the water.—Ed.]

---

## FISHING IN BALA LAKE.

Sir,—Could any of your readers who have fished Bala Lake, in North Wales, give a short account of their catches there ? And say, also, what part of the lake they considered the best for pike and perch ?

I had eight days' fishing there last month ; but owing (so the boatman said) to the weather being so bright and fine, and the water in the lake being low, I only had two runs with jack, but caught both ; one was 5½lb., the other 3½lb., both very strong fish, and I considered them to be far better sport than Thames jack are. They are also much better eating.

One day I got 34 perch, one of which was 1½lb., and another close on 1lb. ; and another day 33 (with live minnows), but other days I only got seven or eight fish ; but the weather was so lovely and the scenery around the lake so beautiful, that it was almost impossible to complain about the sport.

There must be some very big fish in the lake, as my daughter picked up on the shore a trout about 1½lb. weight that had been seized by a big jack and pretty well cut in half. I only wish I had had the chance of hooking the fellow that killed him, as it must have been a big fish by the marks of the teeth.

I caught both jack trolling with artificial bait, which seems to be the best way in such a large lake.

I was told that one jack, 25½lb., had been caught during August by a gentleman who lives in the district. If any of your readers think of going to Bala next year, they cannot do better than to "put up" at the White Lion Hotel, which has a good boat on the lake, and two men to go in it (as a big boat is necessary) who can be thoroughly trusted, but are not quite so scientific in their ideas of fishing as our Thames men.

This was my third visit to Bala, and I never had a blank day there.—I am, &c.,

Queen Victoria-street. John C. Chubb.

---

## THE LOSS OF THE *MIGNONETTE*.

Sir,—On Nov. 1st the Exeter Assizes open, and a bill of Murder will be presented to the Grand Jury against Thomas Dudley and E. Stephens, for the death of the boy Parker in the boat of the ill-fated *Mignonette*.

It was not for us to argue whether, after twenty-one days of starvation and exposure, this death was murder or justifiable homicide. That will be brought out at the trial, which is necessary in the interests of humanity, and for the protection of human life. All such disputable matter we must leave to the proper tribunal. But what we most urgently desire is to place before your readers the fact that two British seamen—men who have filled in their arduous calling responsible situations ; men who, in their time, have been foremost in our great national sport of yacht racing for their pluck and zeal ; men of good character and ability—are now about to be tried for their lives for an action which, however dreadful, is still open to difference of opinion.

These men have lost their all ; they have literally no adequate funds to defend their lives with. The expenses of their defence are already considerable, and will be greater. We ask your readers to give us some assistance for these men who have passed through frightful sufferings, and who now appeal for help in their dire distress.

The appeal has hitherto been but very poorly responded to. We most gratefully acknowledge the receipt of £38 2s. 6d., which has been forwarded up to the present date.—Yours, &c.,

S. Harman Sturgis,
(Vice-Commander Corinthian Yacht Club, Erith).
Augustus G. Wildy,
(Rear-Commander Junior Thames Yacht Club, 13, Furnival's Inn).

Subscriptions will also be received by A. H. Glennie, Esq., 1, Arlington-street Piccadilly ; and H. N. Custance, Esq., Mansion House, E.C.

## SAMPLES OF FLIES—THE "RUTTING STAG," &c.

SIR,—I inclose you three palmers, and shall be pleased if you will give them a trial when grayling fishing. I have only tried them for sewin and trout, and find the first named very keen on them when water is low and bright. Trout take them best in high water.

The two small palmers and olive-winged fly are, I know, very good grayling flies, but I don't expect they are known to the public. The three midges will rise trout when I can't get them to look at any others. The whole nine are my own patterns—at least, I have never seen them with anyone else, unless I have given them. The large palmers I dressed myself; the rest are by James Ogden, Cheltenham.

The winged fly I have never been without for 16 years, and in Welsh rivers or brooks it never fails. I have it dressed a shade or two lighter after April.

How much better it would be if amateur fly-dressers would describe their flies, or, rather, the dressing of them, correctly. In your paper of to-day's date, "Amateur Fly-tyer" describes the "Rutting Stag." I give it up; I expect he means—tag, orange floss silk; body, blue rabbit's fur; but whether the hackle is at shoulder only, or run up body from tag, I am at a loss to know.—I am, &c., N. S. W.

[In the "Rutting Stag" the hackle is put on at the shoulder only, two-thirds of the body is rabbit's fur, and the rest (or tail part) is orange floss silk wound round the hook, and not put on as a tag. The body is pretty full, and tapers to a point. We like the samples "N. S. W." kindly sends us very much, and should be glad to publish the dressings if he will describe them.—ED.]

## FLY-TYING SILKS.

SIR,—"R. A." should write to W. H. Aldam, Esq., Chilcombe, Winchester, who has, or had, a quantity, in all colours, of the best that ever was made. He had these silks specially manufactured to his own instructions by a personal friend at Leek, and I don't think the silks can be got from there or anywhere else now (I shall be glad of correction) so strong, yet so fine, and with fixed, lasting colours.

Mr. Aldam used to give the skeins away to friends in every direction (I got some); but this liberality became spread about over too many, so he now charges. I hope he may have a few sorts left for "R. A."—I am, &c., NOSE.

Sheffield, Oct. 25.

## FISHING IN THE GRAND DUCHY OF BADEN.

SIR,—The kind way in which you received my letter last month induces me to send you a few more notes.

The season that closed on the 19th of October has been, on the whole, a fair one in the neighbourhood of Baden-Baden for trout and other fishing. Owing to the severe inundations of the winter 1882-3, and the no less severe frost of the winter previous to that, the fishing has been much impaired. The establishment of two paper factories on the river Murg has also much damaged the fishing. But to counteract these baneful influences, the Baden-Baden Fish Culture Institution has been specially active in hatching out young trout, and the keepers have been exceedingly successful in checking the operations of poachers, both human and otter. The footprints of the latter I have seen fresh on the sand, and each full grown otter is computed to consume about 7lb. of fish per diem. And one keeper told me that he secured six human poachers in ten days. This was during the drought in the midst of the past excessively hot summer, when the water was very low, and the fish, therefore, easily to be caught by netting.

Undoubtedly the month of April was the best for fly fishing, as there was a fair stream constantly running, and, when the sun came out, the fish rose greedily and hungrily after the flies, owing to their long winter fast from those dainties. I had the misfortune to sprain my ankle during that month, so, personally, I came off rather short; but a great many good fish were landed about us during that month. In July and August the water began to run low and the fish to hide under the stones and weeds. September also continued very dry. October has been wet and stormy. The rivers have filled up again; but in the Oos—the stream that runs through Baden-Baden—trout fishing ends with September 30th, and is not again allowed till March 1st. I see some fine fellows—up to 1lb. weight—now and then, rejoicing in their freedom from attack. In the river Murg the regulations are different. Trout fishing ends only with the 19th of October, and commences again with the 21st of January. Grayling are also caught in the latter river at the rate of about one brace to every six brace of trout, but they are always of good size, rarely under ¾lb., and they are strong in the water with their powerful tail and back fin, thus affording excellent sport. One of your correspondents asked, some time back, for a good grayling fly. I inclose one which has been very successful. In the river Oos we use two flies at a time, the stream being small. In the Murg, where we have a good breadth, three can be used on the line at a time, and the grayling fly is always one of them. The March Brown nearly always kills.

The restrictions as to size in taking trout in these streams are very lenient. A hand's length from the back of the eye to the fork of the tail is all that is demanded. In brook fishing this lenient restriction is of great benefit, for the fish rarely attain any considerable size (except in the deeper pools), and the little dark brook trout make the most delicious fry that ever epicure tasted. They revel in the purest spring water, and are as fresh and clean as it is possible to be.

Really, for anyone who has been a little overworked with the mental strain of our modern times, or who is otherwise out of health, I cannot imagine a more invigorating and recruiting relaxation than a month or two spent in fishing in these beautiful valleys. The cost is very trifling. The ticket for the Baden-Baden fishing is 5s. per day, £2 per month, £4 per annum. This includes, not only miles upon miles of excellent river and brook fishing for trout especially, also grayling, samlet, and chub, but also stretches of backwater from the Rhine, where the winter months can be filled up with pike and perch fishing. The climate is agreeable, the air pure and fresh, the landscape charming. I cannot be too thankful, personally, for the recreation I have enjoyed myself, during occasional outings in the interstices of clerical work, during the past few months. In my own case, some indigestion from which I was suffering, and which induced me to undertake the exercise, has entirely disappeared.—I am, &c., T. ARCHIBALD S. WHITE, M.A., British Chaplain at Baden-Baden.

11, Maria-Victoria Strasse, Oct. 22.

[The fly inclosed is a yellow dun, made in the North of England, we should say. It is a good pattern. We must again thank our correspondent; his letter makes us wish to revisit the Rhine and its tributaries. Twenty years ago fish were neither preserved nor cultivated in Germany.—ED.]

## FLANNEL-WEED IN THE TRENT.

SIR,—I have just received a letter from my brother, at Collingham-on-Trent, and he says: "I never saw the Trent in such a fearful state in my life."

He goes on to say: "You will scarcely believe me when I tell you that, in many places, the flannel-weed is *one yard* thick, and some of it is as black as soot, and stinks enough to knock you down. . . . The fishing in *this neighbourhood* is good for nothing. I have been down several times and have not caught one fish; it is most difficult to find a clear bottom."

So, Mr. Editor, if you, or any of your readers, think of going there, I should say don't, for pike and chub fishing are quite out of the question. They are evidently collecting this weed to use for manure, for he says: "You never saw the like; there are *hundreds of tons* of it in one heap."

Can you tell me anything about this particular weed, Mr. Editor, of an interesting nature? I have noticed it has been increasing and increasing ever since I was a boy. "Ah," says one, "wait until we have a terrific flood, and every bit of it will go." Yes, my friend; but floods or no floods, in the following spring it comes back again thicker than ever. It is just like walking on a carpet. I have seen the same weed—heaps of it—in my water tank, and that *after scrubbing it out*. How did it get there?

I *presume* the roots of the Trent specimen remain; or does the weed shed seed? Please say. Lastly, supposing I wanted to keep a quiet eddying flat, about 10 or 15 yards long, 3 or 4 yards from the shore, 7 or 8 feet deep, could you suggest an *effectual* plan? By so doing you will oblige,—Yours, &c., MARK ANTONY.

## THE HEIGHAM SOUNDS CASE AND THE GREAT YARMOUTH PISCATORIAL SOCIETY.

SIR,—After many promises made by me to the subscribers of the fund raised to test the rights of anglers at Heigham Sounds, through your columns, and to yourself personally, I now have the pleasure, after having many obstacles to surmount (some, I am afraid, purposely put in the way), through the assistance rendered by the committee appointed on the 14th inst., to respectfully submit for your consideration and fair, upright criticism you are always ready to give when solicited, the balance-sheet of the Yarmouth Piscatorial Society, from the day on which I first wrote and asked your advice, being the 1st May, 1882, to July 1st of this year, a memorable day to this Society, it being the day after the case was last before the judges, and the day on which, according to a letter you published, that, for certain reasons never yet given, Dr. Mitchell resigned his post of president and treasurer, at the same time requesting that no more subscriptions be sent to him. The sheet is made up to that date in consequence of the doctor giving a written request to our present president that he wished the whole accounts to be audited, which has been done, the result shown on the sheet. I have been informed that the tone of that letter, respecting subscriptions, has left an impression on many minds that something must be wrong, and, personally, I may tell you that where I once had friendship I have experienced a coldness. That coldness has prompted me not be driven away from the fact that it was my duty, if it was no one else's, to show our subscribers what has become of their donations, &c. That being so, I think you will say that I am not overstepping the bounds of prudence when I submit everything, either for your condemnation or approval. Therefore I must inform you at once that, although Dr. Mitchell had resigned the treasurership, he has, within the last month, paid over to the solicitors, not only the balance of the Heigham Sounds Fund, but the entrance fees of members to the society, and the last entrance fees to a fishing contest, and that, although you will observe we paid already the sum of £75 14s. 4d., we have still a bill of £66 9s. 2d., and the costs of the other side amounting to £24 4s. 9d. These last bills have never yet been considered by the society; and, besides that, the solicitor entered into an agreement, which was to the effect that he would indemnify the Society against all costs, and carry the case to a successful issue. This was made on May 13th. Now, not having fulfilled that agreement, or any part of it, how he can claim by simply give the late treasurer an indemnity all the monies in the funds, let alone the entrance fees, I frankly confess I am so illiterate that I cannot understand it. You may say, Why was this done? I am not going to pretend to answer; but it is very plain there will be an answer one way or the other, for the members who have paid every attention to the upholding of the honour of the parent angling and piscatorial society in Yarmouth have, by their resolutions, taken other advice than that of the solicitors to the Heigham Sounds case, so you will at once see that the clearing up of all belonging to this vexed right case must still remain a little longer. One thing I can assure you: we have not yet collapsed, however eloquent some have been in stating so, but we are working now on a system dearly bought by experience that will not allow such irregularities in future. Those that were so loud in voting a test case, when they could have fishing in Heigham Sounds on very simple conditions imposed upon them by Mr. Boult, would have a test case; but where are they now? Just where they were when I came to London for money—conspicuous by their absence, but at once attended when I came back with your subscriptions, declaring eternal friendship and assistance, voting again thanks out of number, but stop when I come home, following the letter I had sent previously, describing what, to my foolish mind, was the greatest bungle I ever saw made of a good case, if even the recommendation I received at the Piscatorial Society and other places had been followed out. You were not wide of the mark when, at the footnote of "I. B.'s" letter, on March 8, you said it seemed as if the case was being muddled away. How say you now, sir? I recollect the reply to that letter, and I cannot say that "I. B." saw things upside down. My impression now is he saw it too straight, and in its true position. I have now endeavoured to do my duty. You must always recollect I have only one voice in all matters, and that has often been one too many for some members. What I have erred in, tell me of! I have not wasted your subscriptions. What has been spent has been practically wasted, of course. I have nothing to do with legal charges, because I think, with all honour to an honourable profession, it's very dangerous to have much money in a law case, because it will take so long to settle it all up. I have now, on behalf of myself and the society, to give you and your readers our cordial thanks for your kindness and assistance in endeavouring to carry this test case out, but which, I am in duty bound to say, has not satisfied anyone at present.—I am, &c., JAMES LARK, sec.

[The balance-sheet would occupy far too much space for us to publish, and any subscriber can get a copy from Mr. Lark. As we have said before, it is abundantly clear to us that Mr. Lark has done all, and more than all, he could be expected to do in the matter, and it is no fault of his if the legal proceedings fell through.—ED.]

## A COMPLAINT AGAINST A RICHMOND FISHERMAN.

SIR,—I wish to bring to your notice the behaviour of Howard, the fisherman of Richmond Bridge. I engaged him on October 18th for Sunday, the 26th, and meantime I wrote to him, saying I should be down with two friends at 7 o'clock on Sunday morning; but when we arrived at Richmond we were told he had gone up the stream with two punts. We then walked half a mile past Eel-pie Island before we saw him, and just as we got there he shoved off with somebody else, and treated us with a certain amount of insolence. Apologising to you for the trouble,—I am, &c., E. HAYWARD, Member of the Cobden Angling Society.

Kensal Green.

P.S.—I think if you publish this it would be of interest to the fishing fraternity in general, as I was told that this party is in the habit of treating other people just the same.

[We are not defending Howard; but should like to know how often anglers engage fishermen and then never turn up or send the money for the lost day, as every angler should who cannot keep an appointment? There are a few insolent fishermen who ought to be shown up, so that anglers can avoid them.—ED.]

## PERCH FISHING NEAR EXETER, &c.

SIR,—In reply to "R. A.," tickets to the end of the year can be obtained of Mr. Hayman, Lamb Inn, Exwick, near Exeter, for 1s. 6d., including perch, pike, and roach fishing in Exwick waters, and fair perch fishing is also to be had in the Exeter Canal at Turf, where the host at the Turf Hotel, Captain Pearson, will give every assistance and advice, and some good carp and pike fishing may also be had at the Limekilns, near Cowley Bridge. The perch fishing has gone off. Should this letter meet Mr. Frank Gosden's eye, he will oblige me by sending his private address. Fly-tying silk can be had at Prickman's, Exeter, I think.

Any of your readers are welcome to any information I can give by writing me as under.—I am, &c., J. A. KELLEY.

1, Linden Vale, Exeter, Oct. 20.

## A NOTE FROM NOTTINGHAM.

SIR,—Angling news this week is only moderate; not a good basket of fish has been taken. On Monday some very good dace were caught at Willington, a member of our club weighing in one over 10oz. I got a nice lot on Tuesday in the Shardlow Water. Mr Draper took a salmon 14lb. on Thursday in the same length; Mr. Jackson several pike, the largest 5lb., one of very unusual size having been caught at Beeston weighing 18¼lb. As we have had a lot of rain these last two days, I expect to hear of some better sport.—I am, &c. A. W.

P.S.—A gentleman told me he caught some nice perch at Colwick on Saturday.

SALMON & TROUT-FISHING.

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | | |
|---|---|---|---|
| Add | 30 | minutes for | Chelsea. |
| | 40 | „ | Putney. |
| | 45 | „ | Hammersmith. |
| | 50 | „ | Barnes. |
| | 55 | „ | Kew. |
| | 75 | „ | Richmond. |
| | 80 | „ | Twickenham. |
| | 85 | „ | Teddington. |

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | November | 1 | 12.0 | 12.13 |
| Sunday, | „ | 2 | 12.35 | 12.56 |
| Monday, | „ | 3 | 1.17 | 1.39 |
| Tuesday, | „ | 4 | 2.0 | 2.22 |
| Wednesday, | „ | 5 | 2.44 | 3.6 |
| Thursday, | „ | 6 | 3.28 | 3.50 |
| Friday, | „ | 7 | 4.15 | 4·39 |

High tide Nov. 4, 5, and 6.

## THE LOWER THAMES.

### General Remarks.

At one time Teddington Weir was famous for the capture of fine carp, and the names of Messrs. W. Hawkins, F. C. Parker, A. Browne, A. Frickenhaus, and others will ever be associated with achievements for that fish. It is well known that Mr. Parker, as a rule, took the fish he caught to a piece of water near to the Teddington Railway Station, which he at that time rented from the railway company, and there can be no doubt plenty of them have become leviathans by this time, and are still there. It may fairly be assumed that if the carp were fished for at Teddington as they used to be there would be some good ones taken. There was a notice in the Fishing Gazette of last week of the capture of three good fish in one hour by Mr. Abbett, of Twickenham, and since then the same angler has taken one of 10lb., which, instead of being sent to the fishmonger's for sale, he has wisely determined to have preserved as a trophy. It will be remembered that some years ago a large quantity of carp and tench were put into this portion of the river from the lake at Gothic House, Twickenham, through the kindness of Mr. Gustav Class, in the special movement of netting ponds, which originated at that time by Mr. Francis Francis and Mr. W. H. Brougham from a fund raised for that purpose. These fish by this time must have grown considerably in size, as they were put in about 3lb. each. The conviction of a steam launch for running down an angling punt is important, as it evidences the readiness of the Conservators to prosecute if any one will come forward to give the necessary information. The Board has always had a willingness to do this, and the only difficulty has been the unwillingness of those who complain to come forward and prove the facts. It would appear from the reports this week that the jack are on the feed, and only require to be fished for. They have been caught at Weybridge up to 10¼lb-, and at Shepperton up to 9lb., and at Staines up to 7lb. The bream are also taken in nice quantities at Walton. The chub have been taken in goodly numbers at Kingston. Roach and dace fishing in the tidal waters has been keeping up the average. Mr. Thomas Speckley got amongst some good roach at Isleworth at the end of last week, the largest weighing 1¼lb. He had intended to try the water below Kew Bridge, but on his arrival there he found they had been cleaning out the Brentford Dock, and thereby destroyed the condition of the water below which he was desirous of fishing. The anglers have not mustered nearly so strongly this week as regards numbers.—B.

### Angling Results.

**Richmond.**—Christopher Brown, in five days, 60lb. weight of roach and dace and a barbel of 4¾lb. Henry Mansell, in five days, 85lb. and one barbel. F. Brown, in one day, 28lb., and another day 10lb. Job Brain, in four days, 80lb. Henry Howard, in one day, with Mr. King, 35lb., and in three other days 30lb.

**Twickenham.**—Pert Hammerton, in four days, 60lb. of roach and dace and two barbel. J. Dobbin, in three days, thirty dozen and fifteen barbel. John Spong, in six days, thirty-three dozen and nine barbel. F. Wiggins, in five days, thirty-eight dozen and six barbel. H. Spiers, in four days, thirty-nine dozen. George Lee, in one day, three dozen. C. Lee, in the same time, four dozen of roach. W. Spong, in three days, thirty dozen of roach and dace and two barbel. Edward Finch, during the week, some good takes of roach and dace. Samuel Cole, in three days, 34lb. Richard Cole, in three and a half days, twenty-two dozen and three barbel. John Coxen, jun., in two days, 34lb. and three barbel; and George Coxen, in three days, twenty-four dozen.

**Teddington.**—Joseph Baldwin, in four days, twenty-four dozen of roach and dace. Benjamin Stevens, in five days, thirty dozen, and J. Stevens, in two days, ten dozen.

**Kingston.**—John Johnson, jun., in four days, eight barbel (the largest 3½lb.), eight brace of perch, and ten dozen of gudgeon. John Johnson, sen., in four days, twenty barbel (the largest 5lb.), ten chub (the largest 3½lb.), eighteen fine dace, and twenty dozen of gudgeon. Joseph Wilks, in four days, sixteen dozen of gudgeon, six dozen of roach and dace, and four barbel (the largest 4¼lb.) The bank anglers at Kingston, Surbiton, and Thames Ditton have been taking roach, dace, chub, perch, and barbel, but not in such large quantities as they have been.

**Hampton Court.**—Mr. Woods, of East Moulsey, has caugh five jack (the largest 6½lb.) At Tagg's Island Fishery there have been some good takes of roach, dace, and perch.

**Sunbury.**—Edward Clarke, jun., in three days, twenty barbel (the largest 4½lb.) and twelve and a half brace of perch (the largest 1lb.) H. Clarke, in two days, twenty brace of perch up to 1lb. each. Mr. Arthur King, fishing from the bank, a handsome pike of 9lb. The perch are well on the feed.

**Walton.**—Jone Hone, in one day, twelve bream; and another day, twelve bream and roach: R. Watford, in one day, four bream; another day, with Messrs. Abbett and Perrin, 30lb. of bream; and in two other days, eight bream. George Hone, in one day, with Mr. Mackrill, three barbel of 2lb. each, and a perch of 1½lb.

**Shepperton.**—H. Purdue, in one day, six dozen of roach and dace; and another day, two dozen, one brace of jack, and two brace of perch. W. House, in one day, two jack weighing respectively 9lb. and 5lb; and another day, a jack of 5lb. James Haslett, in three days, five barbel, four and a half brace of perch, three jack, and two chub.

**Weybridge.**—Mr. Peters has taken three jack weighing respectively 10¼lb., 3½lb., and 3lb.

**Staines.**—Charles Hone, in one day, five jack; and another day, eight barbel. John Keene, sen., in two days, four jack. George Osman, in two days, one jack, four dozen of roach and dace, and one barbel; and another day, one dozen of roach and dace. John Keene, jun., in one day, five jack, the largest 7lb, and one barbel; another day, one brace of jack; another day, three dozen of roach and dace, and one barbel; and another day, four dozen and two barbel.

## UPPER THAMES.

Very little seems to have been attempted in the angling way during the past week, and consequently nothing done worth record. At Medmenham Bob Young has been having fair sport with perch and chub, and tells me that with a good supply of minnows any quantity of the former fish can be had, but at present they run small. At Hurley a bank angler on Sunday obtained 18lb. of roach from two swims, nearly the whole being taken in the morning and evening, not a fish coming to hand for three or four hours in the middle of the day. Messrs. Fitch and Thompson, out with "The Boy" on Thursday, had a fair take of roach and perch. At Marlow Mr. Foottit, with Barnes as attendant sprite, has had good sport amid the perch, and Mr. Faulkner has also done well. Fred. Saunders, of Streatley, tells me that the fishing there is now first class since tbe weeds have got down. Thursday evening.—Rain has fallen heavily in the Thames Valley within the last 24 hours. This will bring on a little push of water, and conduce to all-round angling success.—Marlow Buzz.

### Thames (Datchet).

There seems to be a change in the weather on the board, the boisterous days in the fore part of the week seem to have made the jack move, as I hear of one or two good ones being taken, and by the only people that have tried this week, to my knowledge. Mr. Stevenson, a beauty, 10lb. Mr. Manning, same day, 27lb., one of 6lb., and some good perch. Richard Gray, on the 28th, three jack, largest 8lb., and some barbel; the latter fish have been biting very greedily, Gray taking 40lb. and 50lb. a day, but very small.—G. Lumsden. P.S.—Water same as usual.

### Thames (Oxford).

Amongst the worst poachers the Oxford Angling Society have to deal with are several members of the celebrated Beesley family, who earned for themselves such unenviable notoriety in their efforts to vindicate the supposititious rights of the Oxford Freemen, by attempting to drown Captain Etheridge, the greater part of the city police force, including the superintendent, together with the Corporation bailiff, and a few river keepers, in 1869—a course of procedure which ended in one of the party taking regular exercise up an endless staircase for a period of six months. Most of the worthies in question are employed by the University authorities in the capacity of watermen, and they have just had it, unpleasantly but conclusively, demonstrated that in future they must discontinue if they wish to serve the University and poach as well. Yesterday (Wednesday) William Beesley was charged before the Vice-Chancellor and delegates with taking up a night-line from the Thames on the afternoon of Saturday, the 8th of September. Being a University servant, this will have a more salutary effect than any prosecution the Angling Society could have entered against him, because, as far as I can learn, a charge of this sort against any of the watermen will entail their immediate dismissal. Fortunately, the Revs. Hopkins and Dr. Boyce, the head of Hertford College, are both fishermen, and another of the gentlemen, Mr. Leonard Courtenay (the Proctor) is also a first-rate sportsman, so that the Oxford Angling Society are to be congratulated at having received such powerful and unexpected allies. A tiny bird whispers to me that the society contemplate turning some grayling in the Thames. The piece of water between Osney Lock and Folby bridge offers splendid facility for the experiment, unless my preconceived idea of what a grayling stream should be is wrong. For the whole of the distance the river alternates in heavy deeps and short shallows, with a medium current. Being very close to the town, it is well fished, and consequently jack and perch are scarce. The present Lord Abingdon, according to all accounts, is a worthy successor to his predecessor the late Earl. Not content with excluding the public from fishing between Godston and Eynsham Lock, he is now endeavouring to prevent people fishing on the river. Only a few days since a rod was seized from a boat pulling over at the weir on Conservancy ground. The river from lack of rain has grown malodorous, and sport is consequently like the shares of the defunct building society, somewhat below par. Pike seem on the move, but they do not feed well. On the 25th, out of twenty people I found one who had a dozen good roach, and another was reputed to have caught a jack of 2lb. On Tuesday, Mr. Corbett, in the canal, 10lb. of chub. On Wednesday Mr. Staymaker had a jack 11½lb., at Broadmoor ditch. At Tumbling Bathe, Mr. Beesley, six jack averaging 2lb. each. Lower down, Mr. Clarke, one jack 2lb. 2oz. In the canal, Mr. Corbett 5lb. of chub. Mr. Davis, eight perch at Kirtlington.—Cherwell Otter.

[Received too late for last week.—Ed.

### Thames (Sonning).

As the water has been so low and bright for such a long time I thought there was no chance of getting any fish; but was very much mistaken. Last Saturday, Mr. Mortimer, out with Clark, got 16 barbel, average 2lb., largest 4lb.; 16 chub, average 2¼lb., largest 4lb.; and 3 perch, all taken float-fishing. They went on Monday, but did not have such good luck—it was much colder; they never got a touch from a barbel. They got 2 chub and 4 jack, but nothing of any size. I hear there have been several jack taken below, the largest being 6lb. They will soon get out of the weeds, which are getting very slimy.—W. Hull.

---

### Ancholme District.

Owing to increasing cold, but few anglers have been out during the past week, and, so far as I have been able to glean, but little has been done. The leaves are falling fast, and the weeds are beginning to rot. At present the wind is high and in the north, with prospect of frost.—Thomas Ford.

### The Bure (Norwich).

Some good sport amongst the roach is reported from Wroxham, two gentlemen landing about 90 during the afternoon, some running ¾lb. Several others have had fair luck at different parts of the river, whilst spinning for jack has been fairly rewarded, though nothing of any size has yet been caught. There must be many very large pike roaming about on the river, as the Broads have abundance of monsters. My opinion is that almost any part from Coltishall down to Thurne Mouth will now yield good sport to the persevering anglers. Prospects first-rate.—Robert Moll.

### Chichester.

Since my last letter little has been done by anglers in this district. Mr. Wright has taken some small pike from the canal, while Mr. Young has been fairly successful among the perch. At Selham the water is much too low and bright. From the Ouse my friend writes me that a couple of small pike is the only record for the past three weeks. Some of the trout streams in this locality are quite dry, and until we get heavy rains, or the springs break, angling is almost a failure.—George F. Salter.

### The Dove.

Since my last the weather has continued its "mugginess." I don't much like that word, though it is exactly what describes the situation It is no more like October than July is like April. Neither grayling nor other kinds of fish are biting with any degree of freedom, and anglers generally complain that no matter what baits they use sport is only moderate. You hear of an occasional good dish, but, like angels' visits, they are few and far between. There will be no great improvement until we get a thorough change in the weather; and, in fact, it is no use looking for it. What few decent dishes have come to hand since last week have fallen to the cockspur worm. The maggot does not seem to "fetch" at all in the present state of the water. Pike are not stirring. They want a hard frost to set them moving; but judging from present appearances we shall not have any this side of Christmas.—The Splodger.

### The Dee and Don (Aberdeenshire).

The weather is now turning very cold, and there has been a good deal of snow in the higher districts during the past week, besides rain over all the country, so that the rivers have risen considerably. Sport has not been quite so good as might have been expected; but some anglers have had very fair results. Sniggering is going on as usual on the Don, which is stocked with fish, and a few of these have been got with fly and minnow. The flies which have been doing well on the Dee are glentana, blue doctor, and Gordon. We hear that large numbers of spawning fish are ascending the higher and back waters, and there is as yet no appearance of disease. On the Ythan some splendid sport has been got, as the sea trout are very numerous there, and two gentlemen who were out one day caught eighty-eight between them. A few salmon have likewise been killed on the Ythan. On the Don at Parkhill, during the last week, A. Muirhead Aitkin, Esq., has killed five salmon, ranging from 7lb. to 22lb. in weight. We have the following report from Mr. George Smith, Ballater:—J. B. Keith, Esq., fishing at Cambus o' May, landed a salmon 20lb., one of 9lb., and a grilse 4lb. John Simpson, Esq., at Monaltrie, had a fish of 8lb.; and Mr. Savage one weighing 6lb. For the Kincardine o' Neil section, Messrs. George Blacklaw and Son report:—On the Borrowstone Water, Walter Evans, Esq., Derby, had on Monday one salmon weighing 20lb.; and on Friday the same gentleman had three, weighing 19, 24, and 25lb. On the same beat Mr. S. M. Smurthwait had on Friday two of 10 and 17lb. respectively. At Ballogie, J. Mortimer, keeper, had one of 20lb. on Monday. On the Norton House water, W. Lamond, Esq., had on Monday, one salmon of 18lb.; on Tuesday, two of 18 and 19lb; and on Thursday, one of 23lb. Albert Farquhar, Esq., had one of 25lb. at Carlogie on Friday. On the Crathes and Kinneskie water General Keane killed one fish weighing 19lb. on Monday; on Tuesday he had three, weighing from 20 to 26lb.; and on Wednesday one of 17lb. On the same water J. White, Esq., had on Monday one of 16lb.; on Tuesday, two of 14 and 15lb. respectively; and on Friday two weighing 18 and 22lb. At Invery, there have been two killed during last week, scaling 8 and 28lb. On the Durris section the Messrs. Knowles on Wednesday had two salmon of 11 and 24lb.; on Friday they had two of 15½ and 30lb. weight; and on Saturday one weighing 21½lb. On Monday of this week a fish of 19lb. was killed. On the same water W. Mosley Dawson has killed three salmon, the largest being 29½lb. weight. At Park Sir George Chetwynd landed a salmon of 24lb. on Saturday, and on Monday this week he had one of 44lb., this being the largest fish taken from the Dee up to present time this season. At Blackhall, J. T. Hay, Esq., on Tuesday, had two salmon of 15 and 16lb.; and on Wednesday other two weighing 15 and 21lb.; and Colonel Boothby had one salmon 19lb. On the Inchmarlo waters, — Douglas, Esq., had two fish weighing 9 and 12lb.; and on the Woodend water R. C. Menzies, Esq., on Wednesday, landed one salmon 21lb.; and on Saturday one of 20lb. On the Cairnton section Captain Mayne killed two salmon on Monday weighing 18 and 27lb.; and on the same day — Biddolph, Esq., had likewise two weighing 17 and 19lb.; and the same gentleman had one of 19½lb. on Tuesday. On Wednesday, on this water, Colonel Sturt caught a salmon of 10lb., and on Thursday one of 26½lb. — Farley, Esq., had one salmon on the same water on Friday. On the Culter House water on Monday Captain Boyce landed two salmon of 10 and 11lb.; and on Tuesday one of 11lb., and on Thursday two, weighing 7 and 15lb. A. J. Fortescue, Esq., landed one salmon of 28lb. at Kingcausie on Tuesday. On the Blairs section six salmon have been taken ranging from 14 to 25lb. A report from the North Esk River informs us that good sport has been got there. Mr. Penn and Mr. Stokes had seven fish weighing on an average 20½lb. each. Colonel the Hon. R. A. Ramsay killed four salmon, weighing from 15 to 24lb., on the Morphie section of this river. During the past week Colonel Ramsay has killed 50 fish with his own rod. While fishing at Cambus o' May on Thursday a salmon of 21½lb. was killed by—W. M.

### The Earn (Perthshire).

The weather is good, fish are numerous, and considering the low state into which the Earn has again fallen, good sport is being got. On Thursday Mr. P. M'Ewen had two salmon, and Mr. Broadley one. On Saturday Mr. Broadley had one 22lb.; Mr. Cameron, three; Mr. Christie, one; and Mr. Stewart, Lawers, one. On Monday Mr. A. Stewart had one of 30lb., and one of 7lb. Mr. W. Cameron secured one, Mr. Hamilton two, and Mr. Cochrane one. On Saturday Mr. David Hunter killed four salmon weighing 18lb. each, and hooked several others. One of those hooked was a very large fish, and did not break away until after it had run for some time. Mr. T. Brady had two fish; Mr. J. P. Whaldon, London, one, 30lb.; Mr. Thomas, Manchester, three fish; Major Doncaster, one, 20lb.; Mr. A. B. Syme, one fish of 9lb.; Mr. A. Cook, one grilse of 8lb.; Mr. Glynn, three fish. On Monday Mr. J. Rutherford killed a grilse of 7lb.; and on Tuesday Mr. Heathcote, one, 17lb. Mr. J. Macdonald and Mr. W. Wilson, Perth, fished Lindores Loch, near Newburgh-on-Tay, and killed 47 pike, all in beautiful condition. Tuesday Oct. 28th: Mr. M'Intosh to-day captured a beauty, scaling 22lb., and in splendid condition; Messrs. Ross, Whyte, and Roy had 36lb. of sea trout. The heavy rain which fell at the beginning of the week has again put the river in flood, and a large number of anglers were out to-day. Friday, Oct. 31: The angling season on the Earn closes to-night. From the opening of the season until within the last month salmon and trout were reported to be plentiful, and good sport was enjoyed; but nothing demanding particular notice took place during that period. About a month ago the river, which had previously been running very low, rose sufficiently to allow the salmon to proceed up the river, and large numbers of anglers began to arrive daily in the locality. Since then, very extensive catches of good-sized salmon have been reported daily. Among the numerous anglers who have secured good catches recently were Mr. Henry Curr, of Pitkellony, factor to the Baroness Willoughby D'Eresby; Mr. Graham Stirling, of Strowan; Mr. Stewart, of Lawes; and General Briggs.—P. M. G.

### Eden (Carlisle).

In my report a fortnight ago I spoke despondingly of sport until we had another fresh to move up some more fish, and so it turned out, though a few fish were killed in the upper reaches of the river. Mr. H. Hodgson got to the blind side of two; Mr. R. Archbold killed one of 16lb.; George Leach had one at Lyke Fort; Mr. Lawson one at same place; and the keeper at Norwich Hall a 14 pounder. On the 25th ult. three fish were brought up from Grimsdale. On that day and the night before we had a fine rain, which raised the river a couple of feet; but it was accompanied by such a strong gale that the river was literally covered with leaves. Still I have no doubt that many good fish will be killed this week, though I have not as yet heard of any.—Silver Grey.

### The Exe and Canal (Exeter).

To-morrow closes our season for salmon fishing with rods, and it is, and will be, unfortunately chronicled as the most unsuccessful for many years, owing to the scarcity of water. Some nice perch have been taken at the Limekilns; also a few near Exwick, and at the latter place the dace have been sporting well, and captured with gentle and paste. The leaves are coming down in showers and blown into the culverts and bank corners, give the float a small chance of ducking unless something substantial communicates with the bait below. Autumn tints on trees and hedgerows add a lustre and beauty to our scenery which must be seen to be appreciated.—J. A. Kelley.

### Ilfracombe.

Sea fishing. Thursday last was a good day with the rod and line fishers, each of those out having good catches. From the flat rock, off the Parade, some fine conger were caught: Mr. W. Robbins, conger 26lb.; Mr. S. Rudd, one 24lb.; Mr. T. Brooks, 14lb.; and Mr. W. Burgess, 7lb. On Friday, Mr. Brede, fishing from the jetty, caught a nice cod 9lb. There were also some good catches from the boats, principally whiting pout, conger, and ling. Saturday, several fine conger and some nice strings of whiting pout taken; hering fishing slack. Monday, a stiff breeze blowing, consequently no fish; hope the ground sea will send the herrings to the surface. Wednesday evening, wind moderated a little, several boats out drifting. The largest quantity of herrings brought in was 1½ maize. Weather still squally.—E. Comer.

### Lea (Tottenham).

The colder weather of the last fortnight sharpened the appetites of the jack, and brought them well on the feed. Most of the anglers who have gone in for jack fishing have been rewarded with one or more. Mr. Bell killed three one afternoon, the lot weighing 13lb.; Mr. Goddard, two, 7lb. and 4¼lb.; Mr. Dod, one, 4¾lb.; Mr. Dequarete, one 4½lb.; Mr. Beresford, one 3lb., and two smaller ones, and last, but not least by a long way, comes the take of Mr. Culfe, who has again been successful in capturing one of the big fish for which this water is noted, viz., a handsome pike, scaling 17lb. 13½oz. It is only two or three weeks ago that he captured one of 14lb., which was duly reported at the time. They are both gone to the taxidermist to be set up, and, when finished will be on view (for a time) in the bar of the proprietors of the fishery, the Messrs. Day, of Ye Old Ferry Boat. Mr. Mills got four good barbel from the "barbel hole" at the top of the water, and a gentleman, perch fishing, captured a good one of 1lb. 9oz. The roach fishers, as a rule, have fared badly until the last two or three days, the fish being off feed; but on Wednesday afternoon I saw that A. Williams, baiting with paste, was getting a "knock" pretty well every swim, and when they come "knocking" at A. W.'s bait, it means the last "knock" for a very large proportion of those who do so. Mr. Bennett has been down (whipping) several times, his best days being two dozen and seven dace and one chub, and one dozen and seven dace. The best killing flies just now are small olive duns. The change of Nature from her habit of joyful green for a robe of sombre russet, and the silence of the songsters—save the cheerful robin—warns the fly fisher for coarse fish that the season for him is nearly finished. When the end, so near, does come, I know that the verdict of more than one wielder of the hickory will be—"It has been the best (especially for roach) I have ever had."—Hackles Red.

### Leicester.

Angling has not been so vigorously pursued as is usually the case during the past few days. The dry weather caused the waters to become low, and this had a prejudicial effect on the fishing. The Leicester Society's preserves at Aylestone have received the greatest amount of attention, and the fishing indulged in has been principally for pike, perch, and chub. Although a few nice takes were shown, nothing worthy of being recorded has been weighed in at the club houses. Just at this period of the year some good pike should be caught if properly angled for, as there are plenty in the waters. Mr. H. Hurst got his line broken last Saturday by a large fish whilst angling in the home waters near St. Mary's Mills, and a fair quantity of good sized pike were caught by Messrs. F. G. Walker and a popular Leicester publican named C. Baugh, at some private waters near Great Glean. The members of the No. 4 branch of the Leicester Jolly Anglers Club had a very pleasant gathering at the Lion and Lamb, Lee-street, on Monday; Mr. W. Holmes occupied the chair, and Mr. L. Butt the vice-chair. After the cloth had been drawn the prizes were distributed as follows:—Perch, 1st, W. Holmes, 2nd, G. Smith; roach, 1st, L. Bute, 2nd, G. Gilmore; dace, 1st, F. Notine; chub, 1st, G. Horton, 2nd, W. Rawlins; bream nil; whiting, 1st, W. Kems, 2nd, G. Pentrill, 3rd, Brown and Mitchell (both of the same weight). Reports from the outlying district show angling matters to be somewhat quiet. On Tuesday morning we experienced a very violent storm of wind and rain, which lasted for several hours, and in many instances caused an amount of damage in the locality. More rain, however, is much needed.—Alert.

### Lugg and Arrow (Leominster).

Both these streams are now in capital order for fishermen, still keeping clear. The late frosts have made the grayling sport freely at the fly, and some very good lots have been taken with the willow and whirling blue. Good dishes of fish have been taken with the grasshopper. A gentleman visited the Lugg on Friday, and with the willow landed a fine lot of grayling. Some capital sport was had the same day in the Arrow. A gentleman tried the water with the whirling blue, and took a nice dish of fine fish. In the Arrow near Stanley, on Saturday, a gentleman, with the grasshopper, landed a capital lot of grayling averaging ½lb. each; four trout were brought to land, but were returned to the watter immediately. A few very good fish were taken in the Lugg, near Bodenham, with the willow. A gentleman visited the Arrow near Eardisland, on Monday, and with the fly took a good dish of fine grayling, weighing 4lb the lot. In the Lugg, near Aymestry, a gentleman, with the grasshopper, landed a fine lot of fish. Some capital sport has been had in the Lugg, near Ford's Bridge, with the willow, and some good fish have been taken. On Tuesday a gentleman tried the water near Kingsland with the grasshopper, and landed a splendid dish of fine fish. A good lot of grayling were taken in the Arrow with the whirling blue. Fishing in the Monkland district is quiet. Some good fish have been taken in the water near Ivington. The Pinsley is in good angling order; the fish are sporting well at the fly. A nice lot of fish were taken on Friday with the willow.—GWYNNE.

### Medway (Tunbridge).

The water is still low and bright as gin, and I have not heard of many good catches, as anglers are waiting for a flood to make things at all lively. Several good jack have, however, been taken from Ballast Pit, where local society think of putting a stock of trout if only funds can be raised to secure them.—YE MEDWAY WATER RAT.

### Ouse and Ivel (Blunham).

Although these rivers are still very clear, some good sport has been had. On Tuesday afternoon six nice pike were taken by Mr. Triplow.—S. E.

### The Ouse (Huntingdon).

The water is in fair condition, and the weather very favourable for jack; but a good rain would make it better, for the jack have not been feeding very freely. A few small ones have been taken, but nothing to boast of. The frost has cut the weeds in various parts of the river, which have been the cover for them. A few more frosts and a flush of water is wanting to bring them on the feed. Dace and bright roach have been the bait used, but dace are the best killing bait.—H. ROUT.

### The Spey.

Anglers for the past ten days have had capital sport, with the river in good size and colour. Some heavy baskets were got in the Aberlour House Water. On the 15th ult., Mr. J. Duff killed a fish weighing 8lb. On the Arkenway Water, on the 15th, Captain Haynes killed a salmon and 12 yellow trout, the heaviest of which weighed 2½lb. On the Wester Elchies Water, on the 8th. Mr. Walter Gordon Cumming killed a salmon weighing 25lb., and John Cruickshank, a salmon weighing 22lb. On the 9th Mr. Gordon, West Park, Elgin, secured a fish 17lb. weight, and on the 13th, one weighing 7½lb. The same water yielded a grilse weighing 7lb. to Captain McLennan. Mr. Cruickshank killed a salmon 9½lb. weight; on the 14th Captain McLennan, two salmon 7lb. and 12lb.; Captain Grant, Glen Grant, a salmon 12lb.; Captain McGowan, Aberlour, five finnocks. On the section opposite the village of Aberlour, Sergt. Jamieson killed a salmon 21½lb. weight; Mr. T. Morrison, a grilse, 5lb.; Mr. James Wilson, Edinburgh, five finnocks, and two sea trout. On the Fiddoch, on the 10th, Mr. John Kelman, Dufftown, secured three grilse weighing 3lb., 3¼lb., 3½lb. On the 11th, Mr. James Proctor, a sea trout 2¼lb.; Mr. Wm. Thomson, a sea trout 3lb. On the 13th, Mr. John Kelman three grilse, 3lb. 4lb., 4½lb; Mr. John Cruickshank, a fish 6lb.; Mr. John Davidson, a grilse 5½lb.; Mr. W. Hood, a grilse 6lb.; Mr. Walker, a grilse 3½lb.; and Mr. Geo. Nutchell a sea trout 3½lb.

[Received too late for last week.]

### Teme (Ludlow).

The latter end of this month (October) promises to be more favourable to the angler than the beginning. We have been blessed for some days past with splendid autumnal weather, and anglers have been generally lucky "in the sport which they court by the gentle riverside." Nearly all the streams around this district have received a fair number of visits from gentlemen anxious to avail themselves of the fine weather before the autumn closes, for I see the next number of the FISHING GAZETTE will bear the impress of Nov. 1st, so that we are almost face to face with winter. But winter or no winter, there are fishermen in Ludlow who visit the riverside weekly grayling fishing all through the winter months. I have seen them return of an evening when the ground has been covered a foot deep in snow. The recent frosty nights and the wind of Saturday night has so far stripped the trees of their leaves that in some parts the Teme has been almost choked up, and nearly impeded the working of the turbine connected with the Ludlow Waterworks. For top-fishing, the best flies in use have been the pale blue, the willow, and the silver dun, all these have proved themselves pretty good killers, and they have been used alternately during the week. The willow did most execution on Saturday. Mr. Cartwright caught eight brace of grayling with it, and sundry small fish, in the Park waters. Down towards Barrett's Mill some good fish were caught with the pale blue and silver dun by a gentleman from Worcestershire. He managed to land eight grayling, four perch, and six roach, the lot weighed 6½lb. The Corve is in good order, and has been fairly top and bottom fished. Some averaged sized grayling caught with the maggot on Monday. The Clun and the Oney are in better order and are improving.—S. LUDLOW.

### Teme (Tenbury).

There is but little difference in the state of this stream, it still remaining clear and in splendid condition for the angler. The grayling are now well on the feed, and are sporting freely at the fly. Some sharp showers of rain fell in this district on Saturday night, but made but little difference to the colour of the water. Some splendid grayling have been taken with the grasshopper. The best killing flies are the whirling blue willow and green insect; and good baskets have been taken with them. On Friday, a gentleman visited the water near the town, and with the grasshopper landed a splendid basket of fine grayling, averaging ½lb. each. A gentleman tried the water in the Little Hereford district the same day, and took a good dish of fine fish with the willow. The water near Berrington was fished on Saturday, and a nice lot of fish were landed with the whirling blue. In the water near to Eastham, a gentleman with the fly took a fine lot of grayling, scaling 6lb. the lot. On Monday, a gentleman visited the water with the maggot, and landed a nice lot of perch and a few grayling. The water near the bridge was fished the same day, and a capital lot of grayling were landed with the willow and whirling blue. The weather being in splendid order for the angler on Tuesday, a gentleman tried the water near Corn Brook, and with the green insect landed a good dish of fine fish averaging 10oz. each. A good lot of grayling were taken in the water near Rochford with the willow. Some very good fish have been taken in the Association waters. Little doing in the Ledwyche. The Kyre and Rea are in good order; but fishing quiet.—WORCESTER.

### Taw (N. Devon).

Peel are running up—a gentleman took four on the 30th ult. and ran more. The rivers have only just begun to rise, and not very much now; if we could get only a foot rise it would do. I heard a gentleman say he had caught with the minnow some few peel in the Lynn. The Board of Conservators are compelled through the scarcity of peel and salmon to increase the size of the mesh of the nets. The destruction was something very wonderful these nets have done lately, and fish are very much less in numbers and size, and a peel of ½lb. could not pass through, and fourteen or fifteen of these nets swept the whole river. The rod fishing closes on Nov. 15, so not very much can be expected this season.—RUSTY GAME.

### Trent (Alrewas).

During the past week the river has been much higher and slightly coloured, but in excellent condition for fishing. A fine barbel, weighing 7lb. 9oz., was landed after twenty-five minutes' hard fighting. Fine roach tackle and cockspur worm was used upon this occasion. Another member, fishing with perch worms, landed in one and a half hours five barbel, weighing respectively 7½lb., 7lb., 5½lb., 3lb. 5oz., and 2¾lb. The Rev. — Webb, rector of Alrewas, landed a pike, 3lb., after a good fight, whilst fly-fishing at the mill.—ANON.

### The Trent (Nottingham).

The river here remains in splendid condition for bottom fishing, a rise of between eight and ten inches coming down on Wednesday. There was a nice tinge of colour in the water, and our anglers were not slow to avail themselves of the change. In the lower waters, Mr. Jukes, of Radford, and Mr. A. Smith, of Nottingham. enjoyed some capital sport amongst the chub, two of which were weighed in at the Alexandra Association (Mr. R. Whalley's) in Carrington-street. There has probably been less doing at Shardlow, Weston, and Willington, and the wielders of the salmon-rod in these noted parts, as, in fact, all others on the Trent, will be compelled, after to-day, to lay aside their tackle until the opening of the spring season. This last summer's returns eclipse everything previously attempted, either with rod or line or nets on the river; and we are well within the bounds of probability when we state that at the three places named above 200 fish have, since February last, fallen a prey to the anglers' skill. This week, Mr. J. Stanley, taxidermist, Trent-street, has received for preservation a monster fish of 38lb. It was caught with the fly on single gut by Mr. Unsworth, of Manchester, who has the reputation of being one of the most expert salmon anglers in the North. Mr. Unsworth played his splendid prize an hour and a quarter, and a more symmetrical fish it has seldom been my lot to see.—THE MAN AT THE CLUBS.

### Trent (Newark).

During the early part of this week the weather was so very rough, blowing, in fact, a gale, that it was difficult to keep a safe footing on the bank. A friend of mine started off in his boat for a bit of pike-fishing, and in consequence of the severity of the gale very nearly suffered shipwreck, so gave it up for that day. yesterday (Wednesday) the weather was much nicer, and the water came on about 18in., and those anglers who were fortunate enough to get to a suitable place on the rising water succeeded in landing some very nice dace. A friend of mine got a few, and among them were two dace weighing over 9oz. each. To-day (Thursday) the water has gone down some eight inches or so. I went for an hour or two this afternoon; but I ought to have gone yesterday in a rising water, instead of to-day in a falling water. I found the water in not very bad trim, a trifle of colour in it, and dropping down fast, so I had to be content with eight good dace, taken with cockspur worms, which, by the bye, I might add was the lure my friend used the day before. This bait will be found the best now for roach and dace, and if water clears down chub should come at pith and brains. I have not heard of any sensational catches being had this last fortnight, except some of the Muskham Fishery members, who got among the bream one day; but I don't care to report imaginary catches. I prefer to mention things as I find them, and not for the sake of writing a glowing report, will I be tempted to report anything but what I know to be a fact: Mr. Levich's statement to the contrary notwithstanding.—THE TRENT OTTER.

### Tweed.

The weather during the past week has, on the whole, been pretty favourable for angling, and the following are the takes that have been got. October 22:—On the Mertoun water the Hon. H. Brougham had fair sport, two of his fish weighing 16 and 18lb. On Thursday, on Sprouston Dub, Mr. Bidder, Q.C., got four fish weighing 7, 17, 18, and 20lb. On the Floors Castle upper water, Major Houston Boswall had two grilse. On Saturday, on the Ednam House water Mr. James Gibson had one of 20lb. On Sprouston water, Mr. Brunlees had one of 9lb.; and on the Dub, Mr. Whatman, London, got four weighing 8, 16, 28, and 30lb.; on the Hendersyde water Captain Waldie Griffith had splendid sport, killing ten salmon of the aggregate weight of 176lb., the heaviest being 28lb; at Birgham, Mr. Denison had three, 16, 17, and 14lb.; and on Floors upper water the hon. C. Barrington had four salmon. On Monday, on the Sprouston water, Mr. Brunlees got two grilse; on the Ednam House water Mr. Drummond killed one salmon of 17lb.; on the Hendersyde water Sir Geo. Waldie Griffith had five, the heaviest being 21½lb.; on the same water Captain Bridges had one of 18½lb; on Sprouston water, Mr. Bidder, Q.C., had three, 18, 18, and 20lb. On Tuesday, on the Ednam House water Mr. Drummond got four weighing 10, 17½, 19, and 20lb.; on the Sprouston water Mr. Brunlees got two, one 30lb. and one 18lb.; on the Hendersyde water, Captain Griffith killed eight salmon, the largest of which weighed 31½lb.; Mr. Barrington had two on Floors lower water. On Wednesday, on Sprouston water, Mr. Brunlees had three salmon; and Mr. Bidder one of 10lb.; on Carham water, Mr. Hay Gordon had one of 22lb.; at Sprouston, Messrs. Whatman and Balfour, London, had splendid sport; they had no fewer than seventeen salmon, four weighing 30lb. each, six 26lb. each, four 22lb. each, the remainder being smaller; on the Hendersyde water, Sir G. W. Griffith had eight salmon, the heaviest 24lb.: and Captain W. Griffith had four—heaviest 22lb. On the Pavilion water, in the Melrose district, on Monday last week, General Dean had three salmon. On Tuesday, Captain Erskine had two, 17lb. and 15lb.; General Henry three, the heaviest being 19lb.; and General Dean three, weighing 17lb., 17lb., and 21lb. On Thursday, General Dean got one of 15lb., and a couple of bull trout. On Saturday, on Boldside water, Mr. Middlemass had two, 9lb. and 11lb.; Mr. John Lang, Broadmeadows, after a fine run of two hours, landed a salmon 31lb.; Mr. Grahame had one of 21lb.; and Mr. Hood one of 19lb.; Mr. W. Pratt, Horncliffe, had two grilse and a salmon of 30lb.; Mr. J. Riddell, of St. Ninian's, Wooler, had one of 19lb. and a grilse of 9lb., on the Lennel Haugh water; on the Boat House water, Norham, Mr. R. Smith, Leith, killed a regular beauty of 28lb.—MAX WHEEL.

P.S.—Since writing the above I have just received the following information:—On October 28th, on Birgham water, Mr. A. Denison killed three fish—20lb., 16lb., and 18lb. On the 29th, on the same water, Mr Denison killed seven salmon, weighing respectively 10lb., 16lb., 18lb., 20lb., 21lb., 21lb., and 23lb. On the Lower Carham water, the same day, Mr. Vansittart killed 11 salmon, the weights of which, however, we were unable to ascertain. October 30th.—On the Sprouston water Mr. Bidder, Q.C., London, had killed five fish up to one o'clock.

### Waveney (Beccles).

Angling generally has been very slow this week. We have had some very high tides the last few days, and there will now be a very good chance for the pike fisherman, as the high tides generally drive the fish nearer town. Mark Mills, out with two gentlemen on the 23rd on the Broad, landed two pike, 5½lb. and 3½lb. respectively. Several other pike anglers were out the same day, but did nothing. Captain James, on Tuesday, two pike, 4lb. and 2½lb. Weather and water now both in good trim.—A WAVENEY ANGLER.

### Wharfe (Yorkshire).

The long-wished-for rain has come at last, and to-day (Wednesday) the Wharfe is in full flood. It is the first heavy water that we have had in this district since March, so that there is little wonder that the present has been the worst season that we have experienced for many years. The bottom of the river has become one mass of slime and weed which the present flood will no doubt clear away, much to the delight of grayling fishers. I expect some good dishes will be made when the water subsides. The anglers' dinner, held at the Queen's Hotel, Leeds, on Tuesday evening, was an unqualified success, and will no doubt become an annual institution. Particulars will be found in another part of the paper. A correspondent writes me to-night that the Yore will be in grand order for grayling fishing by Friday or Saturday.—FRANCIS M. WALBRAN.

### Wye and Derwent.

We have had a high water on the Derwent ever since last Monday, from the heavy rains which fell up in the woodlands. There has been little or no fly fishing; only on the higher lengths, from Rowsley to Ambergate, the bottom fishers, fishing with both worms and maggots, have killed a fair quantity of both grayling, chub, roach, dace, and a few perch. The fish have fed the best in the swims close to the rough streams, and in water from 2ft. to 3½ft. deep. Pike have fed very badly during the week. There ought to be some first-class grayling fishing next week with both fly and bottom, as these flushes have swept away many of the leaves, which were very troublesome to the angler. Fly fishing on the Wye ought to be good next week. Furnace, ash dun, lean, and bumble flies will be found killers when the fish are rising.—GEO. JAS. EATON.

### The Yare (Norwich).

The take of jack on this river during the three last days of the past week was remarkable. Professor Day had good sport each day, catching, I believe, from seven to eleven each day; whilst on Friday, a member of the Champion Club brought home thirteen, and I am informed he returned five to the water. He was down again on the next day, and had excellent luck. Several other friends were equally fortunate. I may add that these were caught spinning in the reaches above and below Buckenham Ferry. Altogether, there were upwards of forty pike hooked and secured in the three days; but after this encouraging state of affairs came the gale of Sunday last, which had the effect of sending the water up to an unusual height. And also I am sorry to say the salts reached as high up the stream as Brundall, with the result that many fish of all kinds down the river have been killed. It was mentioned at the annual dinner of the Norwich Angling Club, on Tuesday last (particulars of which I will forward for next issue) that several bream of large size had been picked up, killed by the salt water; some as heavy as 5lb. were mentioned. This unfortunate occurrence quite put a stop to sport during the early part of this week; but to-day (Thursday) I notice the waters have gone down to their normal condition, and good luck ought to reward those who try the upper reaches, as near Norwich as they please. We ought to hear now of some jack being caught in the vicinity of Thorpe Broad. Some good roach were caught the latter part of last week at several stations. The prospects are now again favourable, and the weather is all that can be desired—slight frosts early each morning, followed by bright warm days.—ROBERT MOLL.

### Yore (Hawes).

Several very nice baskets of grayling have fallen to the "palmers," red and black. The red palmer, dressed with a peacock herl body (the moon of the peacock is the best), the black palmer ribbed with silver tinsel. I was out myself on Saturday, but only succeeded in killing a single fish with a grey partridge fly bodied with peacock herls. The day was most unsuitable. I rose many fish, but they came very short. Other anglers experienced the same thing. The water is now in first-rate trim for fly-fishing. I have never tried the grasshopper, as I cannot obtain the necessary adjuncts (maggots), but I dare say it would kill well here as the streams are most suitable for fishing in. Grayling are very numerous, and seem to be of a good size, as several of over a pound have fallen victims to the green insect and the palmers mentioned above.—JAS. CORRY.

## TURNING TROUT INTO THE TIDEWAY.

SOME time since the Richmond Piscatorial Society arranged to turn into the tideway 50 young trout, with the object of still further improving the fishing in that portion of the river.

Mr. Andrews, of Guildford, from whom the trout were purchased, wrote last week to say 25 of the fish were ready, and it was accordingly arranged that as many members as could attend the ceremony should be present. The hon. secretary, Mr. G. H. Hester, met the fish at Clapham Junction and brought them on to Twickenham, thence to the White Swan at the river side. They were kept there till 4.30, by which time the flood tide water had run off. The chairman, Mr. A. Stikle; the vice-chairman, Mr. H. Dickinson; Messrs. G. H. Hester, Scantlebury, Bingley, Gaunt, Gaynor, Johnson, Matthews Matthews, Marjason, Wright, and others, had by this time assembled, and accompanied the boat in conveying the fish up stream. The point selected was about half a mile below Teddington lock, and above the influence of the mud from below river, and the trout were turned in with many expressions of hope for their prosperity and increase.

It was admitted on all sides that the fish were of splendid quality and size, ranging from 8in. to upwards of 12in. in length, and just suitable for the purpose, as they had never been artificially fed, and consequently well able to take care of themselves.

The river-keepers happened to be passing at the time, and witnessed the affair. This action of the Richmond Piscatorial Society is a very practical mode of assisting the Thames Angling Preservation Society in their efforts to stock and preserve Old Father Thames, to which society they also contribute five guineas annually.

[Came too late for last week.—ED.]

CONSERVATION OF NORFOLK FISHERIES.—We have pleasure in noting that Mr. W. Oldham-Chambers, of South Kensington and Lowestoft, has been appointed by the Justices of the County one of the Conservators under the Norfolk and Suffolk Fisheries Act, in recognition of the valuable services this gentleman has rendered in the preservation and improvement of the fisheries of this district for so many years past. We congratulate our friend Mr. Oldham-Chambers on this honour.

THERE has been in previous years so much sameness about Christmas Numbers, that it is almost startling to hear of such a coming novelty as a Christmas Number which will derive the greater part of its letterpress from the pens of the Earl of Carnarvon and the Earl of Lytton. This, however, is what we are promised by the editor of *St. Stephen's Review*. The Christmas Number in question will be called *St. Stephen's Saturnalia*, and will travel completely out of the beaten track. Lord Lytton's contribution is entitled "Bernardo, a Study of Sentiment," and is illustrated by Mr. Cruikshank. Another novel feature of the *Saturnalia* will be a grand Christmas pantomime, "The Forty Thieves," dealing with the Liberal Party, and illustrated by Phil. May. Henry Furniss will do the principal picture; and among other notable artists engaged are Wallis Mackay and Tom Merry.

THE WATER WAGTAIL.—The wagtail derives its name from the constant habit of elevating its tail with a quick, jerky motion, as though desirous of keeping the plumage clean and dry. It runs very quickly, and flies with an alternate rising and falling in the air. This peculiar flight is one of its most observable characteristics, and the bird may readily be distinguished by it from almost all others. Although so closely associated with water, the wagtail is unable to swim, but the ease and confidence with which it moves over the floating leaves of water-plants renders this accomplishment quite superfluous. Besides its partiality for the water-side, this little bird may frequently be seen on lawns, in meadows, farmyards, roadways, and fields where ploughing is being carried on; indeed, this last is a favourite resort, and the wagtail may be commonly noticed following closely on the heels of the ploughman, and searching for food amongst the newly-turned furrows with great activity and perseverance. In the selection of localities for building their nests, these birds are somewhat erratic, and do not appear to have any particular partiality; sometimes they build in the stonework of some old bridge or in the hollow of a tree, whilst the sides of railway cuttings, the banks of streams, low mud or stone walls, and faggot stacks are very frequently made use of. The nest is built of stems of grass, leaves, small roots, and moss, and is lined with wool, hair, feathers, or any convenient soft substance.—From *Familiar Wild Birds* for October.

# CLUB REPORTS.

### ACTON PISCATORIAL SOCIETY.

Another of those piscatorial contests for which the Acton Society has become famous took place on Thursday, the 23rd ult., when the Hammersmith United Society met in friendly rivalry with the members of the Acton Club. The success of the last contest between these societies was so close, and with so productive and friendly feeling, that it was resolved to try again, and this time to entertain the Hammersmith fishermen at Acton. Six men were chosen on each side, and taking train for Twickenham, the contest commenced in the Thames from punts, at nine a.m., being continued until five in the evening. The first part of the day was foggy, but towards noon the mist lifted, and though well into October, the air was not such as to render the spot unpleasant. On the contrary, the fishermen thoroughly enjoyed the outing, and succeeded in securing good bags. At six o'clock most of the fishermen took train for Acton, and, repairing to the George and Dragon Hotel, the club-house of the Acton Society, the task of weighing in commenced. There were some fine fish among the catches, one roach weighing 1lb. 3oz., caught by Mr. W. Eydmann, being especially admired. There were also some fine dace, but not much in the barbel line. The weighing took a considerable time, but eventually the figures were announced as follows:—*Hammersmith United.*—Mr. Penny, 8lb. 9oz.; Green, 6lb. 13½oz.; Bacchus, 6lb. 10oz.; Hobden, 15lb. 6oz.; Smith, 5lb. 9½oz.; Inman, 3lb. 12oz.—Total, 46lb. 12oz. *Acton Piscatorial.*—E. Eydmann, 3lb. 15oz.; W. Eydmann, 7lb. 11oz.; F. West, 7lb. 8oz.; W. Cook, 11lb. 5½oz.; J. Pike, 7lb. 12oz.; W. Howell, 5lb. 12oz.—Total, 44lb. 9½oz. Hammersmith thus won by 2lb. 2½oz. At seven o'clock the fishermen sat down to dinner, which was well served by Mr. Brooks and his assistants. The chair was occupied by Mr. Bocking, and the vice-chair by Mr. Smith, of Hammersmith. There were also present—Messrs. Hobden, Inman, Penny, Green, Bacchus, W. and E. Eydmann, W., G., and J. Howell, F. A. West, Richardson, Townsend, Newark, J. Pike, W. Cook, Clarke, Brooks, Gibson and Hubble. The cloth having been cleared, the chairman read the result of the competition as given above, and proceeded to remark that at the last competition the Hammersmith Society were beaten by only half an ounce; and having, therefore, won one and lost one contest, he hoped there would be a final trial of skill before the close of the fishing season. Mr. Penny returned thanks for Hammersmith. The vice-chairman then proposed "Success to the Acton Piscatorial Society," coupling with the toast the name of Mr. Cooke. Mr. Cooke acknowledged the compliment. Mr. Bacchus next proposed "The Health of Messrs. W. and E. Eydmann," members of a family he had known for 40 years, and who were both excellent anglers. It had given him great pleasure to fish with them that day, and he would ask the company to drink to their health. Mr. W. Eydmann, in returning thanks, said as far as he was concerned these periodical outings were among the most enjoyable days of his life, and he was convinced that if more men would take to angling it would not only conduce to their health, but would cause such a friendly feeling to spring up between neighbours that it must certainly benefit their fellow-creatures. He trusted this contest would not be their last, and that the Hammersmith and Acton Societies would meet on many future occasions and enjoy a few hours together. The chairman next proposed "Success to the London Anglers' Association." Mr. W. Eydmann, in returning thanks, said there was no doubt that the London Association was one of the most useful in existence. If they referred to the FISHING GAZETTE at any time during the year they would find that the Association was doing a grand work for anglers. What would become of the public fishing waters in this part of the country he did not know if this and other angling societies did not look after their interests. Mr. Hobden also returned thanks, and called attention to the Thames Rights Defence Association. The chairman next proposed "The Health of the Visitors," coupling with the toast the name of Mr. Smith, of Hammersmith, who suitably returned thanks. "The Health of the Host" having been drank, the company separated, a most pleasant evening having been spent. During the evening songs were sung by Messrs. Bacchus, Hubbie, Penny, Clark, Green, Newark, and W. Howell, Mr. Bocking presiding at the piano.

### AMICABLE BROTHERS ANGLING SOCIETY.

On the 26th ult. twenty-eight of the members competed for the fourteen prizes, but owing to the bad state of the weather only seven got fish. Mr. Binks, 1st; Mr. Harding, 2nd; Mr. Soy, 3rd; Mr. Arnold, 4th; Mr. Partrick, 5th; Mr. F. Plumstead, 6th; Mr. Squires, 7th. After the match the members adjourned to Mr. Coomes, the Five Horseshoes, Hoddesdon, where a most substantial tea was provided. Twenty-three sat down, and did ample justice to the good cheer placed before them. The remaining seven prizes will be fished for in the same water, on Nov. 2nd, all to go down in the same manner as regards fishing and trains.—J. WORLEDGE, sec.

### ANGLERS' BENEVOLENT SOCIETY.

The next meeting of the committee will be held on Friday, Nov. 14th, at the Foresters' Hall, at 9 o'clock, when members will oblige by their attendance on important business.—R. GHURNEY, sec.

### THE ANGLERS' ASSOCIATION.

The monthly meeting of the commitee will be held on Monday evening next, Nov. 3rd, at the Foresters' Hall. Chair taken at 9 o'clock. The next delegate meeting will take place on Monday evening, Nov. 17th, at 9 o'clock.—R. GHURNEY, sec.

### BATTERSEA FRIENDLY ANGLING CLUB.

The members of this society fished a pegged-down match at Windsor on the 26th ult., for a prize of the value of two guineas, presented by Mr. W. Burgess, which was won after a good contest by Mr. W. Stockman. Mr. Moore, of the Independent Brothers, kindly presented a prize for the largest roach taken during the season over 1lb. At our meeting on Tuesday Mr. F. Newton kindly presented a prize to be fished for by the members. Mr. King also presented one for the largest jack taken during the season. A meeting is called for Tuesday next to fix the junior contest for four prizes. All members are requested to attend. Members are requested to attend on this (Saturday) evening, Nov. 1st, at 9 o'clock, for special business.—GEO. MUMFORD, president.

### BOSTONIAN ANGLING SOCIETY.

The members of the above society have had some good sport, Mr. Taylor weighing over 40lb. of barbel and jack from the Thames; Mr. Jennings over 50lb. of roach and dace; Mr. Jamieson and Mr. Brothers have weighed some good jack from the canal; Messrs. Elton, Goodge, Mann, and Cooper have had some good bream and roach. On the 26th ult., we fished for four prizes at Bourne End. The takes were very poor, Mr. Cooper winning the first prize with three roach, weighing 13oz.; Messrs. Brothers and Jamieson, a tie for second and third prize; Mr. Goodge winning the fourth prize. Mr. Elton, one roach, 3oz.; Mr. Jennings weighed two jack, 9lb., from Bourne End.—J. J.

### BROMPTON ANGLING SOCIETY.

The members of the above fished for a supper at Bourne End on the 26th ult, 20 members showing up. After choosing sides, each one went to his favourite swim, and at the close of the day only five succeeded in getting fish, the weather being so rough. Independent of the supper, some valuable prizes were given, by Mr. Herbert, Mr. Brown, and Mr. Ray. The following members weighed in fish:—Mr. Antis, first prize, perch and dace, largest perch 1lb. 4oz.; Mr. Sparrow second, with roach and dace; Mr. Sparkes, third, with roach; Messrs. Saunders and Brown, roach and dace.—W. DUTTON, sec.

### THE CLAPTON.

The usual meeting was held at the Swan Hotel, on Monday last, Mr. R. A. Chillingworth in the chair. After the minutes of the last meeting had been read and signed, the ordinary business was proceeded with; the confirmation of the new members elected last week was ratified. Mr. J. Wood weighed in 9lb. of very handsome roach, averaging from 1lb. to 1½lb. each. Several members reported having been out, but with poor results. The secretary reported having sent out 87 circulars to the members, inviting their special attendance at this meeting, as he had had some very kind offers of capital musical assistance, and he was truly glad to see so large a company present, especially as he recognised so many good anglers and representatives of several important societies. He regretted that it was somewhat unfortunate that the public meeting at the Town Hall, Hackney, called respecting the river Lea pollution, was also held that evening, and as he had been asked by anglers, boatingmen, and others, to protest on their behalf against the continued pollution of the river, he had done the best he could, as in place of being present in *propria persona*, he had written a report to the chairman of the meeting, a copy of which he would read to them. The members expressed their entire approval with what Mr. Howse had written. Several members and other gentlemen came up to the meeting after leaving the meeting at the Town Hall. They described that meeting as being very largely attended, and that several excellent resolutions had been passed. Mr. Howse's letter was read at the meeting, and was approved. The usual hot supper provided by the landlord was done ample justice to; and Mr. Winterbottom then, in answer to the request of the chairman, opened the musical part of the evening with an admirable selection from "Lohengrin" on the pianoforte. Mr. Walters then gave an exceedingly comic song, in character, with a banjo accompaniment, "Funny Little Nigger." Later in the evening this gentleman convulsed the audience with a stump speech, and being encored, gave, in a most laughable manner, "Mary had a Little Lamb." Mr. Bokenham sang splendidly "Good Night Beloved," "Belle Mahone," and other songs during the evening. Mr. Harry Prenton gave the "Little Hero"—his rich voice was very much admired; the brothers Austin sang several songs very nicely. Mr. Beck was loudly applauded in "Philip the Falconer," and kindly responded to an encore. Mr. Parker (Gresham) was, as usual, very funny on his magic flute. The chairman gave, in a truly artistic manner, "The Englishman." Mr. Taylor's rendering of "The Italian Image Boy" was a masterpiece, and, in response to an encore, gave "My Pretty Jane," in his usual brilliant manner. Mr. J. Ellis gave a most humorous comic song, and his "Sham, dan, dah" rang in the ears of the members, as did the burst of laughter which this very funny song evoked. Capt. Harris was loudly applauded for his capital song, "The Sea"; Mr. Wood was, as usual, very amusing with the funny song from the "Ticket of Leave"; "Tom Bowling" was very well sung by Mr. H. Short; Mr. Kidd gave a capital comic song; Mr. Binks sang "The Gallant Twenty-fourth" in his usual capital style; and Mr. Hendy was very comic with an Irish song. A vote of thanks to the visitors, proposed by Mr. Tibbatts, was carried most heartily, and was responded to by Mr. Parker, of the Gresham, in a very neat little speech. That gentleman highly complimented the Clapton on all that he had heard of them, and now that he had seen for himself their splendid club-room and its appointments, also the gentlemen whom he had the pleasure of being amongst that night, he was assured of his former conviction, that the Clapton was a first-class angling society, in which "harmony" in its truest acceptation existed amongst its jovial members. A cordial vote of thanks to the chairman closed the proceedings.—HENRY HOWSE, hon. sec.

### CLAPHAM JUNCTION ANGLING SOCIETY.

The result of the contest on the 26th ult. was W. Maslin, 1st; Mr. Favell, 2nd; Mr. Jones, 3rd. The weighing in caused considerable excitement, as the takes were so near. A jack (4lb.) contained about ½lb. of well-developed ova; is not this unusual at this time of year? Two hon. members are to be proposed on Thursday next. Mr. Withers has been most successful at Cookham, having had heavy takes each day. He sent to the club two handsome cases, one containing a jack 16lb., the other two chub about 9lb., which addition makes our club-room quite a museum of fish. We shall always welcome any brother of the angle who may be desirous of an inpection. A further prize was given by Mr. Withers for the heaviest take of jack (one day) during the season.—W. MASLIN, sec.

[It is rather unusual; but sometimes fish cannot spawn for some reason, and retain the ova a long time, long after it is dead. Disease may cause an obstruction of the egg-bag. Some seasons the eggs begin to develope much earlier than others.—ED.]

### CENTRAL ASSOCIATION OF LONDON ANGLING SOCIETIES.

The special delegate meeting will take place on Friday, Nov. 7th, at nine o'clock.—J. A. FITCH, sec.

### CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 26th ult.:—Mr. Chambers, roach, dace, and bream from Amberley, 3lb. 9oz.; Mr. Castell, roach and dace from the Mole; and Mr. Nitz, a small jack from Pulborough.—CAS.

### EASTERN COUNTIES ANGLING SOCIETY, GREAT YARMOUTH.

The usual meeting of this society was held at the Duke's Head Hotel, Quay, on Tuesday evening, the 28th ult., Dr. Mitchell, the president occupying the chair. The result of the audit was not read to the meeting, as had been previously arranged, it being impossible for the audit to be satisfactorily made owing to several of the bills against the society not being forthcoming. The acting secretary, Mr. Seaman, was therefore instructed to have all tradesmen's bills called in and paid before next meeting night. According to instructions given him, Mr. John Lee, the honorary secretary, wrote to Henry E. Buxton, Esq., Fritton Hall, with a view to knowing whether that gentleman would become an honorary member of the society. In reply to his letter, the following satisfactory communication was received by him:—

"Bank, Great Yarmouth, 24th October, 1884.

"DEAR SIR,—I have pleasure in enclosing 10s. 6d. as my entrance fee to your society.

"I am, yours sincerely,

"(Signed) "HENRY E. BUXTON.

"Mr. John Lee."

A proposition made by the president, and seconded by the vice-president—"That Mr. George Archard, jeweller, King-street, be appointed engraver to the society," was carried unanimously. Judges of such matters prognosticate some excellent pike fishing this season; we suppose this due to the fact that an early and severe winter is anticipated. "It is an ill wind that blows nobody any good."—A. M.

### GLOBE ANGLING SOCIETY.

A good number of our members were out on the 26th ult., but only a few succeeded in bringing any fish to scale, and those that did had but very light bags. The following weighed in:—H. Lake, roach, dace, and gudgeon, 1lb. 2oz.; S. Howell, roach, 1lb. 12oz.; G. Brown, two small jack, 4lb.; one gudgeon, 2oz.; dace, 4oz.; G. Jeffries, dace, 6oz.; F. Lawrence, roach, 6oz.; and your humble servant, roach, 4lb. 7oz.—J. J. HOLMES, sec.

### GOOD INTENT ANGLING SOCIETY.

The members of this club, to the number of forty-four, fished a pegged-down match at Harlow, on the 26th ult., for eleven prizes. The following were the winners:—Mr. Granger 1st, Mr. Newton 2nd, D. Sims 3rd, Mr. Hellens 4th, Mr. G. Hughes 5th, Mr. King 6th, Mr. Sampson 7th, A. Sims 8th, Mr. J. Smith 9th, E. Pinckrose 10th, and Mr. Gadbury 11th. The following members also weighed in:—Mr. W. Solloman, Mr. Hallam, R. Murphy, Mr. W. Snook, J. T. Murphy, with some nice chub. On the 25th ult., there was a fair attendance of members, and some important business gone through; two new members enrolled and three propositions taken.—R. MURPHY.

### GRANGE ANGLING SOCIETY.

On the 21st October, 18 members of this society competed for four prizes at Egham. Although the weather was everything that could be desired, the report was anything but good. The first prize was taken by Mr. S. Jones, jun., second by Mr. J. Bailey, and third by Mr. Tagg. The fourth prize was not won; but same is to be fished for on a subsequent occasion, together with a cup presented by Hockley. During the course of the day Mr. Geo. Gibbons, one of the members, caught a very fine trout, which was immediately returned to the river. Mr. S. Jones, jun., weighed in on Tuesday, the 28th ult., four pike, which scaled 24lb. 12oz.—W. K.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

On Oct. 19th, Mr. J. K. Fitch, 8lb. 9oz. roach and dace, several dace over 8oz. each; Mr. Hambidge, 2lb. 4oz.; E. Smith, 1lb. 5oz.; Mr. S. Baker, 6lb.; Mr. J. Dingley, 4lb. 8oz., one roach 1lb. 3oz.; Mr. Martinelli, jack 2lb. 3oz.; Messrs. Theobald, G. and C. Watling also had roach. On Oct. 26th, Mr. Theobald, roach and dace 4lb. 3oz., one dace 9¼oz.; Mr. G. Watling, 13lb. 4oz. from Amberley; Mr. J. Dingley, one roach 1lb. 4¼oz.; Mr. Baker, 2lb. 5oz.; Mr. Cowper, perch. We shall endeavour to have a show of fish on Thursday evenings in future. Mr. C. Watling, sen., tried a good roach water on Thursday, 23rd ult.; but owing to the rough weather only took six roach, weight 4lb. 12oz. Several members are going out on Thursday next, when we hope to have a good show.—J. S. FITCH, sec.

### GREENWICH ANGLING SOCIETY.

The first monthly smoking concert of this society held at the Prince Albert Hotel, Royal Hill, Greenwich, on Thursday, the 16th October, attracted a large number of members and friends, and was quite a success. The following songs were excellently sung—viz., "The Little Hero" and "For Ever and For Ever" by Mr. G. Young (chairman); "The Slave Chase" and "Welcome, Ever Welcome, Friends," by Mr. H. Ware; "Stay, Johnnie, Stay," by Mr. G. Allen; "Dream Faces" and "Sweet Violets," by J. Ware (secretary); "Jeremiah, Blow the Fire," by Mr. H. Long; and "When We were Boys Together," by Mr. J. Megrath. During the intervals the accompanyist, Mr. C. Howett, played some operatic selections with great taste. The meeting closed with a hearty vote of thanks to the chairman.—J. WARE, Hon. sec.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening at the Mason's Hall Tavern, Mason's-avenue, Basinghall-street, Dr. Defriez in the chair. The minutes of the last meeting were read and confirmed. A letter was read from Mr. Chambers proposing Mr. T. Thornton Green as a member of the society. This was seconded by Captain Alfred, and the ballot fixed for the 4th proximo. It was decided to have a musical evening on Tuesday next. The secretary was instructed to send notice to each member, and to make all necessary arrangements. Dr. Defriez having to leave, the remainder of a very pleasant evening was presided over by Mr. Bentley. Votes of thanks to each of the chairmen were unanimously passed and suitably acknowledged.—H.

### HIGHBURY ANGLING SOCIETY.

A very large muster of our members competed for a series of prizes in the Thames on the 12th ult., but owing to the brightness of the water and other circumstances which operate against sport, only two were won, Mr. S. Howell taking first honours, and Mr. Robert Wright second. The remainder of the prizes will be fished for on the 30th inst. On the 26th ult. Mr. C. Lewis brought up some nice jack, as also Mr. Higley and Mr. Devonshire, supplemented by Mr. Anthony, with 10lb. 8oz. of capital roach, and Mr. S. Howell and the secretary with dace.—J. E. WHEATLEY, sec.

### HOXTON BROTHERS ANGLING SOCIETY.

Very few members out on the 26th ult. J. Osborn had another splendid show of roach, weighing over 34lb. J. Morgan had two jack weighing nearly 7lb. Members are hereby informed that a resolution has been passed that prizes may be selected on any Thursday evening to be fished for on the following Sunday without further notice. This ought to bring the members together to look to their own interests.—R. GHURNEY, sec.

### IZAAK WALTON ANGLING SOCIETY.

The shows of fish have been very poor during the past week. Messrs. G. Bliss, B. Crook, and H. Butt weighed in roach. Mr. J. K. Charters will give a handsome carved chair for the heaviest weight of roach taken on Nov. 9th, 16th, and 23rd. Nov. 2nd is the last day members can weigh in for Mr. T. Ward's prize.—H. B.

### LIVERPOOL ANGLING ASSOCIATION.

The winding-up contest of the year, which ends on the 31st October, was brought off in the Vyrnwy on the 23rd ult., and for the third time this season the river was found clear and low, and against the angler. The weather turned out all that could be desired, but the grayling would not come. I had two weighing "just a pun," which were taken with the "green insect," with "red floss silk tag," and I lost several good fish after having them on for some little time, principally through their turning sulky, and the hold breaking in my efforts to move them. The above were the best brace taken in the contest, though both Messrs. W. Francis and Ellinger weighed in some. Messrs. Sargenson and Bloomfield weighed in the takes with the following result:—Grayling: Mr. R. Woolfall 1, Mr. W. Francis 2, Mr. Ellinger 3. Other fish: Mr. R. Wilson 1, Mr. R. Roberts 2, Mr. T. Coulson 3. In a previous report I announced Mr. Ellinger as the winner this year of the "Challenge Cup." I did this under the impression that there would be no more competitions this season where trout or grayling (the two kinds of fish which rank for said cup) could be taken, but it was afterwards resolved by the members to have the contest brought off on the 23rd Oct. As on this occasion I won, the cup now becomes, by its conditions, my absolute property, as I have been successful last year and this, *twice in succession*.—RD. WOOLFALL, hon. sec.

### NORFOLK ANGLING SOCIETY.

The second monthly supper took place on the 22nd ult., and was fairly attended by members and friends. The host, with his usual liberality, supplied everything of the best in abundance. After the cloth was cleared the remainder of the evening was devoted to harmony, Mr. Woolbridge and Munday coming well to the front. Great pleasure was afforded by the attendance of the three physicians, whose experience added greatly to the digestion of the viands. Mr. Taylor, through a severe cold, was obliged to be one of the audience, instead of supplying us liberally from his well-filled portfolio. Mr. Wharton's "Two Barrels" was given in fine style, and unless he attends a few more suppers he will be able to go through one of the bung-holes. Great disappointment was felt at the slight attack of rheumatism of Mr. Holloway, as he had promised the Highland Fling in costume. From good experience he can give it in fine style. The musical accompaniment of Mr. Symons was very grand. The next supper will take place early next month, of which due notice will be given.—NIP.

### NORTH-EASTERN ANGLING SOCIETY.

The annual dinner of the above was held at the club house on the 27th ult., when there was a goodly muster of members and friends, who sat down to an excellent repast served up in first-rate style by mine host, Mr. Murdoch, whose viands had full justice done them, all being well on. Amongst the visitors who honoured us with their presence were Messrs. Clout, Bennett, Cook, Taylor, Clarke, Sidney, Wright, Warren, Ghurney, Edwards, Coglin, and others. After the cloth was removed the toast of "The Queen and Royal Family" was given and duly honoured; the chairman started the harmony, which was carried on unflaggingly during the rest of the evening between the various toasts of "The Angling Societies of London," "The Visitors," "The North-Eastern Angling Society," "The Press," "The Chairman," "The Vice-chair," "The Host and Hostess," &c. Amongst those gentlemen who enlivened the company with their songs and recitations must be noted Messrs. Lowe, Cook, Roberts, Rook, T. Clarke, jun., Melbourne, Savage, Edwards, Corner, &c. I have to thank, on behalf of the society, those generous donors for their valuable presents to our prize list, which I don't think I did adequately on the occasion. Mr. Clout, in the course of his address in response to his health, very impressively remarked that it was the first time any public notice or recognition had been taken of his services in respect of the Pulborough and Amberley excursions by any body of anglers: and as Mr. Clout is about to retire from business in consequence of failing health, I think some suitable presentation should be subscribed for by the anglers of London and their friends, as some sort of appreciation for the labour attending the courtesy and kindness ever shown by him to all availing themselves of his excursions, by which he has been the means of thousands enjoying many pleasant and happy days in beautiful, sunny Sussex. Should this be the feeling of other societies, I am open in conjunction with their secretaries to do anything in furtherance of this object.—G. T. Fletcher, sec., 122, London Wall.

### PECKHAM BROTHERS ANGLING SOCIETY.

On the 18th ult. Mr. F. Griffiths and Mr. Mackintosh had a fine show of jack; Mr. W. Page, on the 26th ult., had the best show of dace this season, 9lb., besides a fine lot of live gudgeon from Teddington. He and friend also had a visit from Mr. Spreckley, the president of the T.A.P.S., who was out looking after the interest of anglers, even on such a boisterous day. A club match will be fished on the 2nd inst., open match. Members may leave town on Saturday night. Annual dinner on Monday, the 3rd inst. Ticket holders will please muster at 7.45. We shall also be pleased to welcome visitors at 9 o'clock, when I hope we shall spend a pleasant evening.—Gadfly.

### THE PISCATORIAL SOCIETY.

The usual weekly meeting of this society took place on Monday last at Ashley's Hotel, Covent Garden. Amongst those present were Messrs. Gray, Robinson, Pattisson, Gillatt, Perelli Rocco, Fennings, Jesse, Brown, Lemann, Sachs, Foreman, Huggett, Harden, Bennett, Blundell, Booker, Goodger, Lander (hon. sec.), Meyer, Walker, Dr. Brunton, Rev. G. Sumner, &c. Mr. Sachs was voted to the chair. The minutes of the previous meetings were read and duly confirmed. Mr. Thomas Dawson has made another present to this society on this occasion—a set of trays for the use of the members. Mr. Huggett proposed, and Mr. Fennings seconded, that a vote of thanks be accorded to Mr. Dawson for the same. Carried unanimously. Mr. Fennings stated that the ball committee had met for the first time that day, and that everything, as far as he could see, looked promising for a successful evening. He invited a few more members to join the committee. It is expected the attendance at the ball will number between 200 and 300. The hon. sec. read a letter from Mr. Wheeldon, who is salmon fishing at Crieff; he desired to be remembered to all the members of the society. The waters there were too low at the present for great success with the fly. Everyone is looking forward hopefully to a heavy rainfall, when sport would no doubt improve greatly. The hon. sec. read a letter from the Great Yarmouth Piscatorial Society *re* the Heigham Sounds case, and there was also a balance-sheet accompanying, which was passed round for inspection. Dr. Brunton moved that as a sum of £57 as shown by the balance-sheet was still in hand, and as the case had fallen through, application should be made for our proportionate share of same. Mr. Pattisson pointed out in his opinion the best way of making the application, which the Dr. assented to, and Mr. Pattisson thereupon seconded Dr. Brunton's motion, which was carried unanimously. There were two trays of fish on the table—a fine tray of roach and one chub by Mr. Fennings, a tray of chub by Mr. Huggett. The chairman proposed the healths of these two gentlemen as the successful anglers. They duly replied, thanking the members for their kind wishes. The chairman announced that the perch competition takes place on Monday next, 3rd Nov. Our first smoking concert takes place on Monday, 10th Nov. It is hoped we shall see Mr. Thomas amongst our vocal visitors. "The Continued Success of the Piscatorial Society" was next carried with acclamation. Mr. Huggett proposed "The Health of Mr. Sachs," our chairman of the evening, and thanked him for the way in which he had carried out the duties of the chair. Mr. Sachs had always a stock of good old stories with which to amuse the members. Mr. Sachs briefly replied, and the meeting was brought to a close. T. H.

[We quite agree with the suggestion that any balance over from the fund subscribed should be returned to the subscribers. Mr. Lark's letter, which we publish this week, seems to indicate that the solicitors have been paid the balance.—Ed.]

### RICHMOND PISCATORIAL SOCIETY.

There was a large gathering of members and their friends on Wednesday at the meeting at the Station Hotel, under the chairmanship of Mr. A. J. Little, Mr. H. Dickinson in the vice-chair. Twenty-five members had entered for the roach competition in the Thames, and some handsome trays of fish were weighed in, the size being raised to 8in., the three prizes being eventually won in the tideway. The first prize was won by Mr. J. H. Gaunt, the second by Mr. Bingley, and the third by Mr. Margason. The largest fish, 1lb. 2oz., was captured by Mr. Margason, and Mr. Wotton's tray of fish was much admired. Most of the competitors had excellent sport, the day being remarkably fine. Mr. H. Dickinson kindly officiated as judge. The chairman, in handing the certificates, congratulated the winners upon their success, and proposed their healths, which was duly responded to. It was thought advisable by some members in a future competition to combine roach and dace, keeping the standard high as heretofore. The chairman, in proposing "The Health of the Visitors, coupled with the name of Mr. R. B. Marston, of the Fishing Gazette," said the society were always glad to see visitors at their meetings, particularly anglers so well known as Mr. Marston. Mr. Marston, in response, said he was always glad to attend meetings of anglers when possible, and it was his endeavour to do what he could in the way of furthering the cause of fishing, and to take an unbiassed course in conducting the Fishing Gazette. Mr. Davey gave a capital recitation, and the usual musical contributions were much appreciated.

### RODNEY PISCATORIALS.

On the 26th, Messrs. R. Chantry, R. Smith, Dodd, Pyne, Grant and son, Marsh, Bastock, and Hotham visited Datchet to compete for three prizes, and the following is the result:—1st, Mr. Grant, jun.; 2nd, Mr. R. Chantry; and Mr. R. Smith 3rd The takes were small, and the above-named think themselves lucky to get what they did considering how the wind blew, and having to leave off at four o'clock, just as the wind went down and the fish began to feed. They might have continued fishing till dark; but if they had done so they would have had to wait until nine o'clock before they could have got a train to London. It is a great pity there is no train from there between five and nine in the evening. Prizes are offered by Messrs. T. Hughes and G. Dodd for the first and second gross weight taken during the month of November. The November monthly competition will take place on the 30th, the where and how to be decided. Members are informed that the next South London United visit will go to the Angler's Pride, White Hart, Old Kent-road, near The Swan, on the 5th inst. All members that can make it convenient to attend are requested to do so.—Pixie.

### ROYAL GEORGE ANGLING SOCIETY.

A number of the members of the above society went out on October 26th to fish for a couple of prizes, one from our late secretary, Mr. Millard, another from Mr. Hughes. The former was won by Mr. Sinclair with some of the largest dace I have seen this season. The latter is still in the club-room, and will be fished for on November 2nd, as will also Mr. Carter's cup, at Uxbridge. All members wishing to compete must be at Paddington by 8.30. Our first smoking concert of the season will take place on November 11th. Members are requested to bring friends.—W. H. Rider.

### SOUTH-EASTERN ANGLING SOCIETY.

A few of the members were out on the 26th ult., but none turned up to weigh, the catches being so indifferent. At our meeting on the 28th ult., it was confirmed that our outing for prizes on Nov. 2nd be at Ware, all to meet at Liverpool-street Station not later than 7.55 a.m.; start fishing soon as possible after arrival, finish at 5.0 p.m., return by the 7.0 p.m. train. A roving commission within a radius of 100 yards either side of Lock and Bridge. For conveyance to Liverpool-street Station several members will meet at Mr. Keeble's, Brunswick Arms, Brunswick-street, Blackfriars, at 7.30 a.m.; others can join if they desire to do so. Some good prizes to be fished for. Any further information of Host at club house.—T. H. H. Weston, sec.

### WALWORTH PISCATORIALS.

Several members were out on the 26th ult. to compete for the prizes offered by Messrs. Holland and Piolaine for that date, it being an open competition. Members were allowed to go where they like in public waters. The following is the result:—1st, Mr. J. Bedford; 2nd, Mr. Hibble; 3rd, Mr. Griffin. The next competition will take place on Thursday, the 13th day of November, for prizes given by Messrs. Dangini and Piolaine, the where and how to be decided at the meeting previous to the outing. Mr. A. Brodie visited Tring during the past week. He has recovered his bait kettle; it travelled to Rugby and back.—Pixie.

### WELLINGTON.

Our members have had remarkably bad sport this week, the total of half a dozen weighings in on the 26th ult. not exceeding 6lb., all roach and dace. Our next competition has been arranged for the 16th November at Tunbridge, a roving match between 1st and 4th locks for three prizes. On Wednesday Mr. William Walker and Mr. F. G. Howard were elected members. Mr. Isaac Jackson was also proposed and seconded, and will be balloted for next Wednesday.—W. W. Alexander, sec.

### WESTBOURNE PARK PISCATORIAL SOCIETY.

The weekly meeting of this society took place as usual on Tuesday evening at the Pelican Hotel, Westbourne Park, Mr. G. Evans occupying the chair. After settling the recent sweepstake by payment to Mr. Harrison of first prize, and Mr. H. C. Beatley second prize, a further competition of a similar nature was arranged to take place in the Thames only on the 16th November, and several names were immediately entered. The fish lately weighed in have not been exceedingly large or numerous, Mr. Bowen being credited so far with the largest this month—a tench of 3½lb. Mr. Bonvoisin and several other visitors were present during the greater part of the evening.

### WEST GREEN ANGLING SOCIETY.

Mr. Orridge's monthly prize was won by J. Guyver, with roach and perch. Mr. Wilsher's prize of one sovereign, for November, in any public or subscription water, all fish to weigh, commences on Nov. 2nd.—J. Guyver, sec.

## THE STAINES ANGLING CLUB.

We are glad to see that the angling club recently formed at Staines, promises to become an important body—one which we hope will have a good effect in preserving and improving the fishing. Several matches have already been fished, and as many as 15lb. and 16lb. of roach taken by one rod. We shall be glad to publish reports of the doings of this new club.

## SCOTCH NOTES.—THE STOCKING OF LINLITHGOW LOCH.

The trout hatchery at Linlithgow Palace Loch, established by Mr. Anderson, Edinburgh, the lessee, has turned out a great success. The fry which were hatched last spring have been kept since that time in ponds, and have been regularly fed three times daily on horseflesh, boiled clams, and mussels. On Wednesday last, in order to make room for adult trout, there were turned into the Loch upwards of 300,000 fry, some of them measuring fully [illegible]in., and the most of them being over 3in. in length. There were no signs of disease among them, the whole family being strong and lively. The young salmon hatched from eggs taken from a dead diseased fish (some of which were shown at the Salmon Ladder in the Forestry Exhibition) have also thriven very well; and, although they have not attained the same size as the trout fry, they are very strong and vigorous. Mr. Anderson also commenced on Wednesday to net Cobbinshaw Loch, for the purpose of getting adult trout for the Linlithgow hatchery. In this he was very successful, landing 41 magnificent trout, the smallest of which weighed fully 2lb., and several were over 4½lb. All of them were despatched to Linlithgow in tanks by the afternoon train. Upwards of 200 pike were also landed. In the stomachs of several were quantities of trout fry, no less than 21 being found in one pike. Should the weather continue fresh the netting of Cobbinshaw for trout will be continued for the next month.

THE
GREAT REMEDY
For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. ## A Wonderful Medicine.

BEECHAM'S PILLS

BEECHAM'S PATENT PILLS. ST. HELENS LANCASHIRE

Are admitted by thousands to be worth a Guinea a Box for bilious and nervous disorders, such as wind and pain in the stomach, sick headache, giddiness, fulness, and swelling after meals, dizziness and drowsiness, cold chills, flushings of heat, loss of appetite, shortness of breath, costiveness, scurvy, blotches on the skin, disturbed sleep, frightful dreams, and all nervous and trembling sensations, &c. The first dose will give relief in twenty minutes. This is no fiction, for they have done it in thousands of cases. Every sufferer is earnestly invited to try one box of these Pills, and they will be acknowledged to be

### WORTH A GUINEA A BOX.

For females of all ages those Pills are invaluable, as a few doses of them carry off all gross humours, open all obstructions, and bring about all that is required. No female should be without them. There is no medicine to be found to equal BEECHAM'S PILLS for removing any obstruction or irregularity of the system. If taken according to the directions given with each box they will soon restore females of all ages to sound and robust health.

For a weak stomach, impaired digestion, and all disorders of the liver, they act like "MAGIC," and a few doses will be found to work wonders upon the most important organs of the human machine. They strengthen the whole muscular system, restore the long-lost complexion, bring back the keen edge of appetite, and arouse into action with the ROSEBUD of health the whole physical energy of the human frame. These are "FACTS" admitted by thousands embracing all classes of society; and one of the best guarantees to the nervous and debilitated is, Beecham's Pills have the largest sale of any patent medicine in the world.

### BEECHAM'S MAGIC COUGH PILLS.

As a remedy for Coughs in general, Asthma, Difficulty in Breathing, Shortness of Breath, Tightness and Oppression of the Chest, Wheezing, &c., these Pills stand unrivalled. They speedily remove that sense of oppression and difficulty of breathing which nightly deprive the patient of rest. Let any person give BEECHAM'S COUGH PILLS a trial, and the most violent cough will in a short time be removed.

CAUTION.—The public are requested to notice that the words "BEECHAM'S PILLS, St. Helens," are on the Government Stamp affixed to each box of the Pills. If not on, they are a forgery.

Prepared only and sold wholesale and retail by the proprietor, T. Beecham, Chemist, St. Helens, Lancashire, in boxes at 1s. 1½d. and 2s. 9d. each. Sent post free from the proprietor for 15 or 36 stamps.—Sold by all Druggists and Patent Medicine Dealers in the Kingdom.

N.B.—Full directions are given with each box.

## KING'S Fish Preservative.

For the Preservation with all their Sheen and Brightness, and Improvement, of Minnows, Dace, Roach and other Natural Baits, and for general use in the Piscatorial Museum.

Highly recommended by the Editor of the FISHING GAZETTE, "A.R.I.E.L.," and other leading Anglers.

**In Packets, 6d. and 1s. each; by post, 8 and 16 Stamps.**

## King's Natural Bait.

Acknowledged to be the most successful known for all bottom fish, seldom failing to ensure a heavy creel.

Anglers are respectfully cautioned to avoid imitations of this Bait, as it is a notorious fact that no sooner has an article proved itself of sterling value, than a host of imitators are ready with "something as good, or even better," by which they entrap the unwary.

Certainly this may be "the sincerest form of flattery," but it is not one that commends itself to the fair-dealing man, nor does it pay the inventor of the genuine article.

### THE NATURAL BAIT

Is now Sold by all Tackle Dealers

**In Packets, 3d., 6d., and 1s. each;**

AND BY

**Wm. KING,**

1, NEW ROAD, COMMERCIAL ROAD, LONDON, E.

Wholesale by ALLCOCK and Co., REDDITCH.

THE ODOR OF THE FOREST, THE SPARKLE OF THE STREAM.

## FOREST and STREAM.

The American Journal of Angling and Shooting.

THE FOREST AND STREAM has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

| | |
|---|---|
| The Sportsman Tourist. | Natural History. |
| Sea and River Fishing. | Fishculture. |
| Game Bag and Gun. | The Kennel. |
| Yachting and Canoeing. | The Rifle. |

The angling department is in the charge of Mr. Fred Mather, the well-known angler and fishculturist.

The weekly numbers of the FOREST AND STREAM annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the FOREST AND STREAM PUBLISHING COMPANY, 37, Park-road, New York, U.S.

Subscription Agents for Great Britain:
Messrs. SAMPSON LOW, MARSTON, SEARLE, and RIVINGTON, Crown Buildings, 88, Fleet Street, London, who can supply specimen copies.

## ODDS AND ENDS IN SALMON FISHING.

### BY GEO. M. KELSON.—No. 4.

I HAVE heard it said that "a good repast sharpens wit," and we are told that the one English custom which raises us immeasurably above all other races and types of humanity is that of sitting over our claret after dinner. The faculty of conversation is that which denotes the superiority of man over brutes, and it seems to me that it is not only advisable, but almost compulsory, for anglers to devote a certain part of the day to talk ; then in what other portion of the twenty-four hours have they time, or even inclination, for their debates ?

Fishermen work hard while they are at it, and delight to have all their talk out just in the very moment of their lives when it is physically, intellectually, and morally most beneficial to them.

Indeed, there is much gratification in accounting in pleasant parlance for our daily exploits, and discussing our pros and cons ; not only that the satisfaction and repose which follow a full meal tend to check a disposition to splenetic argument, or too much zeal in supporting an opinion, while the free and easy intercourse which is thus kept up is often eminently conducive to our good, and not unfrequently leads to the solution of piscatorial problems of considerable import.

Yes—certain it is that in the evening, when we are up to concert pitch, we grow more sensible of our defects, ventilate our ideas, surmount or provide for obstacles, not only to guide, but to hearten us in unforeseen difficulties and future conflicts.

I hope I am not running too far from our subject, and that I am keeping well within bounds of "Odds and Ends" ; at any rate, there is no doing away with the fact that at such times we learn a good deal one from another.

In approaching other topics, let me preface my remarks by reminding you that to see a fisherman lose a fish is perhaps sometimes, though not always, a demonstrative proof of his weakness ; however, a little recent incident may be worth mentioning, as no doubt there are some who will draw profit, myself for one.

"Well, what have you done ?" I was asked the other day.

"Lost a fish, smashed my rod, and had a ducking !" I replied.

I need not relate all that passed, but in the course of conversation after dinner the same evening my friends catechised me, and inquired whether my adventure had taught me anything.

"What would you do," said one, "were you in the same plight again ?"

Now, whenever was past experience deterrent enough ? But how dangerous it is, strictly speaking, for young anglers to step down into a rapid. The older ones, to whom this privilege is granted, may know to a nicety just what water they dare wade, yet with all that you see they sometimes overshoot the mark and "get taken in." Well, I remember saying, "Had I placed sufficient coils of line in my hand it would never have happened."

Just so ; the water was not deep, but tremendously fast, and three yards from the bank there appeared to be a sound and safe footing ; once upon that huge boulder showing well up, with the water no more than trickling over it, and you were safe to all intents and purposes. Retracing one's steps was—in fishermen phraseology—a "ticklish triviality," for there was no chance of "throwing out a feeler," or groping one's way at starting, and there are times when to step off a stone into a rapid is the devil to pay.

However, with a gaudy grub—my third fly over from the boulder—up went the rod, as usual under such circumstances, and down went the fish with about five-and-twenty yards of the line, no more. It meant three-quarters of an hour's work to remain where I was, perhaps longer ; therefore I waited for a favourable opportunity and made for the shore. Just at the critical moment, splash, dash—that spirit-stirring sight and sound—the salmon shot up and across the river (then would have been the time to have given the coils of line which I speak of their freedom), and checked me to such an extent that my foot missed its aim, and in I went.

Ah, well, the fisherman's life would not be worth living but for its trials and difficulties. We set ourselves down to the contest as if with a determination of enjoyment, and the more heavily we are handicapped the more heartily we proceed. Our learning is one of those pleasures we can never exhaust ; the very practice of our vocation gives us strength to dare and to endure, and most of us are of that nature even to mask disappointment with an iron strength. It is true we are not all constituted alike ; some with the utmost ease arrive at attainments which are generally the results of arduous study, and occasionally the greatest craftiness can be traced back to the poorest beginnings—the most imperfect impressions. Somehow, I have often thought—perhaps because I have known the feeling myself—we are like infants fresh from non-existence, and as often led by Fate over the track and scene of our destined calling—here to barren catches only overflowing with poverty ;—there to our "seat of war" to find fish feeding or even fighting ;—here to the "rapids," an enticement to the many avoided by the few ; and perhaps with luck at last to that delightful haunt where passion pants with satiety and success !

But we are drifting away again, and in returning let us peep into the particulars of testing the temper of salmon hooks for a minute or so, and say a word or two about flies skirting.

As for the hooks, my plan is to put the point of one into a piece of soft wood—white deal, for instance ; and in pulling away by the shank, if, after you bend the hook, it does not spring back and recover its shape, it is useless. Sometimes they snap asunder like glass ; then they are too hard. To heat them in a wax taper and immerse them immediately in water softens them ; but the game is not worth the candle, as the French have it.

I never used to make a fly upon single hooks without trying them first, some way or another, and I do not think I have ever made a cast before ascertaining whether the fly fishes well.

Then as to a skirting fly, that does more mischief than merely make deep duck trails upon the surface, and for the most part it is one *which induces and leaves in its wake a line of light as it passes through the water.*

Widely different, if not diametrically opposite, views are certain to prevail on plenty of points in salmon fishing, but for the benefit of the uniniated, although I feel like laying down the law—but no matter, as of this, I believe it will be tacitly received—let me emphatically declare that we must not only never use flies that *do* skirt, but that we should never begin to fish without being absolutely certain that they *do not.* Now, a wobbling fly will for a time skirt the water. I say "for a time" advisedly, because if it is mounted unskilfully a few casts may bring it into trim.

A small fly—say, No. 4—if looped on, however well it may be dressed, is pretty sure to play zigzag fashion, even if it does not wobble. A bottle-shouldered fly is sure to come the same game where the water flows fast. And all flies on medium-sized hooks—say, No. 1.—that are unevenly balanced with coarse and reversed feathers in the wing can never fish well.

What, therefore, is the difference between wobbling and skirting ? None, practically speaking, and you may rest assured that if a fly wobbles it will skirt. There are perhaps as many wrinkles in making salmon flies as there are secrets in using them ; perseverance is the watchword, and we cannot do better than keep the whole subject constantly before us, and wait patiently till the dawnings quicken into vitality, registering their own records as they grow upon us to expand and mantle the mind. Then if we are careful, not only in drawing our conclusions, but in tacking them to our memory—the acts being entirely subordinate to the glow of reason—we should always find them ready to inspirit and improve us, and never to mystify nor mislead.

Yes, and with all that, whatever pains and pleasure we may take in the pursuit, we can never exult in the possession of certainty ; for, indeed, there is much of which we must rest contented to be ignorant.

I speak from what I have met, and it is not, after all, so very surprising that anyone having been master of the water all his life could, if he chose, lead the whole village astray with very little persuasion.

"Season after season novices and strangers come and take my favourite flat, a sure catch." And, "I have taken thirty fish, though in odd corners, more than they have there," would I venture to say, although in an after-dinner speech, have been sufficient "negative evidence" for me in my schooldays.

"What would you advise me to do ?" said a young stranger, as he laid the case one day before me.

My first impulse was to invite him to share a private pool with me ; my next, to send him to drop half-a-crown into the hand of a certain old coachman, at the same time asking, "Where ordered for the morrow ?"

And that did it.

On my return in the evening my young parson was in the pantry weighing three fish. He had followed my suggestion, and was up before daybreak. You can guess the rest, of course ; at any rate, the old gentleman's catch was rushed.

I refer to this by desire and for the benefit of others, and it only shows that all such sad selfishness—there, such a mossgrown antiquarian of an artificial age, should never be allowed to reign. In drawing the veil over this affair, and having offered this hint to the other young staff there, I can only trust that their future be not a coming present.

A word or two about the "East Pool," where I was fishing, may not come amiss.

At eight sharp that morning I wended my way along the blackberry path under the shadows of the bold blue mountains, some with snowy peaks, which, hot as the weather was, indistinctly rose against the azure of the skies ; ten to fifteen minutes' walk brought me to my destination. The pool, with its frothy, foaming flakes rolling downwards from the west, looked "angry and awful." I saw at a glance there would be little or no chance just then, for the fog was fearful, and fishing under these conditions would be waste of time ; almost as bad too when it lifted, for every few minutes told me that a bright day was in store for us.

Sometimes I have caught salmon when the sun has been on either side of them, and frequently when at their tails ; but only once when it has been shining straight down stream—that is to say, in front of the fish. On this occasion my hope rested in the possibility of a cloudy afternoon. Not knowing the pool, and the weather being so warm, about 11 o'clock I undressed and took an excursion on a voyage of discovery.

Quite at the top where fish never take, but are, I was told, often seen, was an enormous rock rooted on the opposite side and extending gradually up and across to ours ; it formed a considerable eddy, giddy, but not swirling, and this I fancied was a moral certainly.

After putting two and two together, I decided to fish from the opposite side.

"That," said the keeper, who had just saluted me, "is impossible ; wading is out of the question, and we have no means of holding the boat there."

The head or entrance to the pool was narrow, shallow, and a romping rapid.

With much ado and with the keeper's aid I succeeded in driving in a stake some 15 yards higher up, close to the edge of the river; to that we tied a thick rope long enough to reach down to the place where I meant to wade. Fastening it round my waist, the keeper making it off at the other end, "I tried my luck," as fishermen say, soon found it was all right, and returned for my rod.

Then, with a little care, I buffeted the waves, and walked in far enough to cast the fly left and play it the right, which was impossible from our bank, and having plenty of split shot wheedled it behind the rock deep enough—I suppose, for that was my aim—to be in the shade, and it was seized at once.

* * * * * * * *

In salmon fishing, I am obliged to believe there are a variety of little things as necessary to the whole as basting is to the stitching of a garment. Surely, every new achievement of matured principle smooths the way for more of a like kind. And odd as it may seem, I think also that anglers always know when they are acting wrongly—why not ? for the law of conscience is undoubtedly written in indelible ink, that we all know, and it is very—very easily understood.

To secure then a position of vantage from which nothing can dislodge, let the acts of anglers be at the bidding of conscience ; let them resolutely "bid away" the suggestions from bad habits, which will weaken from want of exercise, will not only gradually decline to intrude and disturb them, but will drop away unseen, by dull decay.

Then would they quickly realise that they have been no more than creeping and crawling along with only a sort of wormy ambition, and so set their brains to find out—which they could if they liked—what connection there is in each link of the chain, whereby the extremes are held together.

Then would they find a fresh feeling never to grow gloomy; then would they find no leisure to lament, unless in anxiety to aid; and then would they revel and delight in their new and coveted friend—Contentment.

## FLY-FISHING FOR SALMON, TROUT, AND GRAYLING.*

By Edward Hamilton, M.D.

Sir,—Some—nay, I hope many—of your readers have not quite forgotten the series of letters which recently appeared in the Fishing Gazette under the heading of "An Amateur Angler's Days in Dovedale." These letters have since been collected and issued in a small volume, with some slight alterations and additions, and remembering that they were originally written without the remotest thought of separate publication in book form, I confess I have been as much surprised as I have been gratified at the kind and generous way in which the little book has everywhere been received, not only by the press (as your advertisement column will testify), but by many men of the highest literary standing who have done me the honour of writing very pleasant and complimentary letters respecting it. In presence of this unexpected kindness my only regret is that I did not take more pains to make it less unworthy of this kind reception. My object in calling attention to it now is only to present it as a curious contrast to the work of Dr. Hamilton which is now being issued from the same press. The object of the one writer was to exhibit in as light and amusing a manner as he could the angling experiences of one who, for forty years and more "in city pent," had had no experience of, and knew nothing about, the gentle art; instruction from such a source certainly could not be looked for. The object of the other writer has been to present the experiences of one who for forty years and more has been a "fly fisher," at one time wandering on the banks of our southern streams, intent on "trouts bedropped wi' crimson hail"; at another casting a line over the deep pools and glorious rapids of our northern rivers to lure the "stately sawmont" or dashing sea trout, or revelling in the beautiful valleys and streams where that 'lady of the stream,' the thyme-smelling grayling, loves to dwell." Such has been the object of Dr. Hamilton, and the above quotation from his preface furnishes a pleasant foretaste of the delightful style in which he has performed his task.

Surely to anglers there is no literature so fascinating as that which records the experiences of a veteran of the craft, and when that veteran is an educated gentleman as well as a genial enthusiast they will not be disappointed in their expectation of finding in his volume not merely amusing episodes and remarkable personal adventures, but valuable hints and scientific instruction. The plan of the work is simple in the extreme. The first four chapters give us (1) Experiences on Fly-Fishing for Salmon. (2) How to Fish for Salmon. (3) Where to Fish for Salmon. (4) The Natural History of the Salmon. The next two chapters are devoted in the same way to sea trout. Then there are four chapters devoted to trout (*Salmo fario*), and two to grayling, thus completing the little volume in thirteen chapters. To me, who am but an "amateur," the book seems to be quite delightful. I cannot pretend to criticise it as one to the manner born (and an angler, like a poet, must—as my Dovedale experience has taught me—"be born so"), I therefore accept every page of the book as gospel; I have nothing to say about the best method of hooking and landing a salmon or trout, or the various ways of making flies and hooks, or the natural history of a sea trout. I accept all that Dr. Hamilton tells me, and I leave to others the task of disputing with him. I should like to quote some of the many amusing adventures he records just to induce your readers to want more, but for these they must go to the book itself. The following extracts will suffice to show the true Waltonian spirit which animates him :—

"The river side has other charms besides the pleasure and excitement of the sport. It brings the angler in communion with those delightful accompaniments of nature from which his art has been designated, 'the contemplative man's recreation.' Alive to all he sees as he wends his way through the water-meadows, resplendent with culthas and kingcups, he listens with unalloyed delight to the cuckoo's cheerful note, a voice 'at once far off and near,' the jug-jug of the nightingale, the deep, mellow crush of the wood-pigeon's note, which

'Made music that sweetened the calm,'

the mellow song of the ousel-cock 'with orange, tawney bill,' or the warning voice of the waterhen—that bird-ventriloquist; and whilst preparing his tackle his eye is suddenly attracted by that speck of azure blue, 'the timid halcyon's vivid dyes,' as it shoots by in rapid flight."

And again :

"What pleasant associations cross my mind as I recall to memory days gone by—red-letter days in the calendar of life, when forgetting all the cares of a busy and anxious profession, and accompanied by a brother angler, I have sped away to some well-known river, revelling in the bright spring morning, rejoicing in the sun's exhilarating rays, and luring with the lightest of tackle and the smallest of flies the wily trout. And such hours snatched from toil, few and far between though they be, reinvigorate the whole man, dispel his vapours, and are worth a king's ransom."

I shall be very much surprised if this delightful book does not find its way into every angler's library, and take rank with the best books to be found there. Dr. Hamilton is not only an angler, he is an accomplished artist, and the little volume is adorned by four very charming woodcuts from his own sketches. There is also a lovely mezzotint as a frontispiece, by his friend Seymour Haden, who may be regarded almost as the father of modern etching. This picture represents a salmon pool on a dark and cloudy evening, and is quite remarkable for its weird and lurid vigour. One of the doctor's drawings has a peculiar attraction for me. It is quite fifty years since, as a little boy, I sat and fished for minnows on that old bridge over the Teme which he has admirably sketched, and I never saw it again till once a few years since. "Ah! what a river it is," says the doctor, "and in what beautiful scenery"—and so say I. And then he quotes Sir Humphrey Davy, whom I will also quote: "I have been for some time reposing on the banks and admiring the scene below. How fine are these woods, how beautiful these banks! The hills in the distance approach to the character of mountains; and the precipitous cliff, which forms the summit of that distant elevation, looks like a diluvian monument, and as if it had been razed and torn by a deluge which it had stemmed." I have no idea when Sir Humphrey Davy fished the *Teme;* we might have fished it together! I, a little boy of nine years old, for pinks and minnows, and he for the shadowy grayling. I only remember that I spent a few days in that neighbourhood about the year 1834,* and I never saw the old bridge again for more than forty years; but the memory of it, and the lovely scenery with which it is surrounded, has never left me.

I beg you to note, Mr. Editor, that I have not offered these remarks as a review of Dr. Hamilton's book; that I leave to more competent hands. You will doubtless find occasion to refer to it and to him again and again as a competent authority on all matters connected with "Fly-fishing." I will only add that I have read the book through with lively interest, and I felt constrained to take this' perhaps, unusual means of recommending it to your readers—they will not be disappointed.—I am, &c., The Amateur Angler.

## THE THIRD AMERICAN ANGLERS' TOURNAMENT.

Mr. Fred. Mather, sec. of the American National Rod and Reel Association kindly sends us an official Score-Book of the Tournament held at Harlem Mere, Central Park, New York, on the 22nd and 23rd of October. The following extracts from the rules will be useful in studying the results.

Rule 2.—"No one shall be permitted to enter an amateur contest who has ever fished for a living; who has ever been a guide, or has been engaged in either the manufacture or sale of fishing-tackle." In the tournaments which have been held in this country fishing-tackle makers and dealers have been allowed to enter as amateurs, and for our part we must say we do not see any reason to exclude them—that is, if they only fish for amusement, and not as professionals, or for money.

Rule 3.—"No trout rod to exceed 11½ft., and to be used with one hand only."

Rule 5.—"No allowance for distance shall be made for difference in lengths of rods."

Rule 7.—"Five minutes allowed for distance, and five for delicacy and accuracy."

Rule 8.—"Distance to be measured by a line with marked buoys stretched on the water."

Rule 9.—"The stretcher-fly must remain at the end of the casting-line in all casts. The others are not deemed so important. A competitor may claim time for repairs."

Rule 13.—"Black Bass Casting.—No rod shall be less than 8ft. nor more than 10ft., nor less than 7oz. nor more than 10oz. Any black bass multiplying reel may be used; but clicks, drags, or any device to control the delivery of the line, except the thumb, will not be allowed. The weight of the sinker to be 1½oz. Casting to be underhand, and with one hand only. Each competitor shall be allowed five casts, the longest to count, and then will be allowed five minutes to cast for style and accuracy. The scale to be as in the fly-casting—viz., distance, the longest cast in feet; style and accuracy, 25 points each.

"Heavy Bass Casting.—Rods not to exceed 9ft. in length. The casts to be made with sinkers weighing 2½oz. The casts to be made in a lane formed by the buoy line and a line parallel to it, and distant 35ft. Each competitor to be allowed five casts. His casts within the lines only shall be measured, added and divided by five, and the result to constitute the score.

"Light Bass Casting.—The sinker to be 1½oz."

"The opening day," says the *American Angler*, which has just come to hand, "was cloudy, and a strong breeze ruffled the Mere, snarling and twisting into knots the leaders of the competitors. Many well-known anglers were present; the attendance was about two hundred." From this it would appear that it is as difficult to get anglers to attend in large numbers in America as it is here. The platform was 1ft. above the water.

### FIRST DAY.

### SINGLE-HANDED FLY-CASTING. CLASS A (AMATEUR).

For Prizes value £20. There were six competitors.

| | |
|---|---|
| 1st prize, C. A. Rauch | 35 yards 1 foot. |
| 2nd prize, C. G. Levison | 32 yards 2 feet. |

In this competition, Wallace Blackford, age 13, son of E. G. Blackford, and a pupil of Mr. Mather's, cast 25 yards 1 foot.

### SINGLE-HANDED FLY-CASTING. CLASS B (AMATEUR).

For Prizes value £15. Five competitors.

| | |
|---|---|
| 1st prize, Ed. Eggert | 34 yards 1 foot. |
| 2nd prize, S. Polhemus | 32 yards 1 foot. |

### SALMON CASTING.

For Prizes value £19. Open to all. Seven competitors.

| | |
|---|---|
| 1st prize, H. W. Hawes | 43 yards 2 feet. |
| 2nd prize, R. C. Leonard | 43 yards. |

(All the rods used were 18ft. split-cane, weighing between 32oz. and 37oz.)

### SINGLE-HANDED FLY-CASTING. CLASS D (PROFESSIONAL).

For Prizes value £13. Eight competitors.

| | |
|---|---|
| 1st prize, H. W. Hawes<br>(With 10ft. 3in. split-cane rod, weight 5oz.) | 25 yards 1 foot. |
| 2nd prize, R. C. Leonard<br>(With 9ft. split-cane rod, weight 5oz.) | 26 yards. |

In delicacy and accuracy, Mr. Hawes got 42 points as against Mr. Leonard's 30.

### SECOND DAY.

### MINNOW CASTING FOR BLACK BASS.

For Prizes value £36. Open to all. Weight 1½oz. Six competitors.

| | |
|---|---|
| 1st prize, Professor A. M. Mayer | 32 yards 1 foot. |
| 2nd prize, H. W. Hawes | 31 yards 2 feet. |

(The rods used were all between 8ft. and 9ft. in length, and between 7½oz. and 8½oz.)

### HEAVY BASS CASTING. Weight 2½oz.

We do not quite understand the Score-Book record in this case; but the longest cast made was 75 yards 2 feet by Mr. W. H. Wood, whose average would also have been best but for a wide in his second cast. Mr. J. A. Roosevelt made best average, his best cast being 72 yards 1 foot. The prizes valued £15, and there were seven or eight competitors. We are not quite clear whether the weight is cast from the reel, as in the Nottingham style, or first coiled on the ground, as in the Thames style. Will Mr. Mather kindly say? We have little doubt it is in the Thames style.

### LIGHT BASS CASTING.

For Prizes value £10. Weight 1½oz. Casts made on land.

| | |
|---|---|
| 1st prize, H. W. Hawes (best cast) | 49 yards 1 foot. |
| 2nd prize, R. Leonard (best cast—also best average) | 47 yards 1 foot. |

---

* "Fly-fishing for Salmon, Trout, and Grayling." By Edward Hamilton, M.D. Crown 8vo, pp. 202. (London: Sampson Low, Marston, Searle, and Rivington.)

* On reference I find that Sir Humphrey died in 1829—so he was there before me.

Single-Handed Fly-Casting. Cass E (Professional).

For Prizes value £13. Nine Competitors.

| | |
|---|---|
| 1st prize, R. C. Leonard | 27 yards 2 feet. |
| 2nd prize, Mr. E. Hawes | 26 yards 2 feet. |

In the above record we have only given the actual distance cast, with no allowance for delicacy or accuracy, as except in the one case mentioned, those who made the longest cast also made the best average. In comparing this with previous American tournaments, it appears that previous records have only been beaten in the salmon casting and black bass casting. Doubtless the weather had a good deal to do with this.

We have little patience with those anglers who affect to see no good in these tournaments, and say that they afford no test as to whether a man is a skilful angler or not. No one pretends that they do; for a man may be able to cast a splendid line, and yet not know how to catch fish. The way they do good—and very great good—is this: they bring amateurs, professionals, and tackle-makers together for the purpose of seeing the best results that can be attained with the best rods, reels, and tackle in the market. This creates competition, and leads to improvements by which the whole angling community benefits, just as shooting matches benefit all who shoot from the improvement the rivalry they cause creates in the manufacture of guns. Apart from this, these tournaments bring anglers from different districts together to see practical demonstrations of methods of fishing which may prove, and do prove, invaluable.

## SOME NOTES ON WORMS, &c., FROM BEST'S "ART OF ANGLING."

### Tenth Edition, 1814.

"How to Raise Worms."—Under this heading we recently published a little account of how some German confectioner had accidentally discovered that the water in which green walnut-shells have been washed will, when thrown on the ground, cause the worms to come up. In looking over Best's "Art of Angling" the other evening, we find he recommends this plan in his chapter on 'Baits."

*The Lob-Worm, Dew-Worm, Garden-Worm, Twatchel, or Treachet.*—Found in a garden or churchyard (!) late on a summer's evening with a lanthorn; when the summer proves a very dry one, they may be forced out of their holes with the liquor produced by bruising walnut-tree leaves in water. The best are those who have a red head, a streak down the back, and a broad tail, from which they derive the name of *squirrel tails.*

*Brandlings, Gilt-tails, and Red Worms.*—The best are those to be met with in tanner's bark after it is thrown by.

*How to Scour and Preserve Worms.*—Get a quantity of moss—the best is that which is soft and white and grows on heaths, but as this is scarce to be had in some parts, in lieu of it any kind that is fresh and sweet—rinse it well from the earth that hangs about, and then wring it (not too dry). Put it into an earthen pot and squeeze it down hard; then strew the worms upon it, and those that are not bruised will soon creep into the moss; those that lay at the top you must pick off. Cover it close that they do not crawl away, and set it in a cool place in summer, and in winter in a warm one, which will prevent the frost from killing them; change the moss every fourth day in summer and once a week in winter, or at least let the old moss be taken from them, washed, squeezed pretty dry, and put it to them again. If you want them to be quickly scoured, a little *bole armoniac* put to them will accomplish your desire; or you may put them in water for three or four hours, and they will soon be scoured, yet be very weak; but, being put to good moss, they will speedily recover. When the knot near the middle of the *brandling* begins to swell he is sick and should be thrown away. Never keep your worms in moss to scour them above ten days, in which time they will be perfectly fit to use.

There is another way of cleansing and preserving worms, recommended by many anglers, and is a very good one for every kind of them except the lob worm. Take a piece of very coarse cloth which has never been shrunk in the fulling mill, wash it very clean and let it dry; then soak it in the liquor in which a fat piece of fresh beef has been boiled and wring it out, but not so hard as to press out all the liquor. Then lay it in a deep earthen pan that has a large bottom, and put your worms thereon that they may crawl in and out and so scour themselves. When they have remained there twenty-four hours, wash out your cloth as before, but do not dry it; then wet it again with some of the same liquor, and, having placed your worms thereon, keep them in a close cellar. Repeat this every other day during the heat of the summer, and you will not only preserve your worms alive for three weeks or a month, but make them *very red, clear, and tough.* When you take them out for angling put them into moss that has been well washed and not wrung dry; and when you come home at night put them again into the pan, by which they will recover and gather fresh strength. Take care that there is no salt in the beef liquor, for, if there is, your worms will purge themselves to death.

[Our angling forefathers took a great deal more care to secure "very red, clear, and tough" worms than the majority of us do nowadays, but there is not the least doubt a great deal of the success of some of our best anglers is due to the care they bestow on preparing their baits. There is our friend, Mr. Alfred Mackrill, for instance, one of the most successful of living Thames anglers: he considers the worm is *the* bait for nearly all Thames fish, and spares no pains in thoroughly scouring them himself. But most London anglers are content to buy their worms the day they intend to use them, and when they get to the water they often enough have a dozen or two dead or half-dead worms at the bottom of a lot of stale mould.—Ed.]

*Bobs*—Found in sandy and mellow ground, and got by following the plough in autumn—are worms as big as two maggots, havered heads, and their bodies full of guts. Put them in a tub with some of the mould you gather them in, keep them in a warm place, and they are an excellent bait from the first of November till the middle of April. You may boil them the morning you intend angling in milk and water for two minutes, which will make them tough, and put them in a box in which gum of ivy* has been rubbed.

*Flag-Worms or Dock-Worms*—Found among flags, in old pits or ponds, in little husks among the strings or fibres of the roots—are small worms, pale, yellow, or white as a gentle; these are very good baits for grayling, tench, bream, carp, roach, and dace.

*Gentles: to breed and preserve.*—Take a piece of beast's liver, scotch it with a knife and hang it up in the shade. When you see it flyblown sufficiently take it down and put it in a large pipkin or small barrel; then, when you see the gentles have attained their proper size, put some oatmeal and bran to them, and in two days they will be scoured and fit for use; thus, gentles may be created till after Michaelmas. But, if you desire to keep gentles all the year, then get a dead cat, or kite, and let it be flyblown, and when the gentles begin to be alive and stir, then bury it and them in moist, soft earth, but as free from frost as you can, and these you may dig up at any time when you want to use them. These will last till March, and about that time turn into flies.

[Our correspondent, "Mark Antony," recommends gentles obtained from dead fish as being large and very white.—Ed.]

## MY FIRST TROUT.

It seems rather a worn-out title, "My First Trout," and yet it is one which must always bring a pleasing remembrance to the mind of every piscator who has followed this—to my idea—most charming branch of the piscatorial art. The first trout may have been some smutty little specimen from a Highland burn, a dainty diminutive Devonshire "speckled one," or some lordly *ferox* from a Scotch or Irish lake; yet, after all, it is the first one which brings such pleasing recollections to the captor as having served to introduce him to a new experience in the capture of his finny prey.

My introduction to the genus *Salmo* was to what seemed to me at the time a veritable monster—namely, a three-pounder.

I was stopping at a little riverside village, and amusing myself principally with angling for roach in a large pond I had permission to fish in. It was situated in a large valley, and was as pretty and romantic-looking a spot as could possibly be found. At one end a small stream entered the pool, escaping through a hatch in a dam which ran across the opposite end, consequently a gentle current flowed throughout. I had no idea that the place contained anything but roach until one day an old fellow, who had been watching and seemingly taking a great interest in the sport I was having, suggested my trying for some of the trout which, according to his account, abounded there. I eagerly followed up the suggestion, and it finally ended in my arranging that my informant should bring down a supply of minnows the following evening and give me some instruction in "spinnin'." The next day, true to time, my tutor arrived at the appointed place, and I was initiated into the mystery of baiting a flight so as to make it spin well and form an attractive-looking morsel to the prey we were in search of. The whole of that evening was devoted to a lesson in casting; it is needless to say that I managed to send my line into every place but the water. Every tyro in the art of spinning knows with what persistency a bait will, instead of shooting out in the desired direction, come curving round, selecting the most awkward place in one's body to fix itself into, or getting hung up in every convenient (or rather inconvenient) bough. However, by the time the darkening shadows necessitated our winding-up for the night, I had succeeded in throwing a short line with some certainty of its reaching the water, if not the exact point aimed at. The next day I determined to try my own hand, and with the remainder of the bait from the previous night started for the pool. Arriving there, the point I decided on trying was the dam, for the the water was deep and the place was easy to cast from. Accordingly, I made my first throw, and was drawing the bait along the side of the wall when I saw a trout come with a rush at the minnow, and, in my excitement, struck before he had touched it, with the result of frightening the fish and landing my trace into a thick bush behind me. The next half-hour was spent in getting my flight clear, and smoking a pipe, so as to give the trout time to recover from his fright; then, having made strong resolutions to control my excitement, I essayed another cast, and rose his lordship at the same place as before—this time, however, with the result of firmly hooking him. How I should have fared unless my tutor had most opportunely appeared at that moment I am at a loss to say; but under his direction I managed to land my capture on a shelving bank, from which he was quickly transferred to the grassy sward, and proved to be an exquisitely-shaped fish of about 3lb. weight. My delight was great at having such luck the first time I had tried my hand at spinning; but though from that time roach fishing was consigned to oblivion, and I assiduously pursued my new art, I never, amongst the many trout I captured from the pool, caught another that at all approached either in shape or size "My First Trout."

H. D. B.

## EXCITING CAPTURE OF A POACHER WITH RABBITS AND NETS ON THE SEVERN AT SHREWSBURY.

During the agitation, which has ended in the riparian owners within the borough of Shrewsbury issuing a notice to all net and night line fishers, warning them against using any of the above instruments opposite their respective lands, I have many times mentioned the fact that these men, of whom there exist more than half a dozen in the neighbourhood, use fishing as a cloak for the more remunerative business of land poaching. It has for a long time been known that more game was brought into Shrewsbury in coracles than many people would imagine; but until Sunday last the police have been unable to find out a clear case, and would not then have done so but that the man made a mistake of a few minutes in the time, it being his intention to land near the Welsh bridge at 6 o'clock, which is the time of the police relief. However, on Sunday, the 26th ult., as T. C. Lloyd was going off duty, on passing over the Welsh bridge he saw something coming down the river. He went down to the Frankwell side, but before he could get down to the river he heard a scuffle and saw a man named Bryan pushing off to the middle of the river in a coracle. Witness ran into the water up to his middle and seized hold of the coracle; but the prisoner jumped out. He (the police-constable), however, caught hold of him and brought him back. He then examined the coracle and found 30 rabbits quite warm, and two nets which had evidently been lately used. He told Bryan he should report him Prisoner said, "All right; but you will give me one for my dinner before I go?" He was then taken to the station. Prisoner is a very old offender, having three times been fined £5 and costs for poaching on previous occasions. He was now mulcted in a similar penalty, or in default two months' imprisonment.

The chairman said they must compliment the constable on his courage and bravery, and they were only sorry they could not grant him some reward. However, they would send a recommendation to the watch committee, and to a society that took up such matters.

---

* "Gum of Ivy," says Best in another chapter, "is a tear which exudes from the body of large ivy-trees, being wounded, and is of a yellowish red colour, of a strong scent and sharp taste; that which is sold in the shops is counterfeit and good for nothing. Therefore, to get gum-ivy about Michaelmas or in the spring, drive several great nails into large ivy-stalks, wriggling the same until they become very loose, and let them remain, and the gum will issue thereout. Rub the inside of a small box made of oak with the gum, and when you angle, put three or four worms into it; they must not remain there long, for if they do it will kill them. Then take them out and fish with them, putting more in their places as you want them out of your worm bag." Nearly all the old angling writers recommend this plan, so, doubtless, there is something in it, for certainly fishes have the sense of smell. We have never tried it, but have often felt inclined to do so.—Ed.

### ANSWERS TO CORRESPONDENTS.

G. N. J.—We will endeavour to get you the information you want.

An Angler, Oxford.—We do not remember any correspondent advising the use of less ground-bait for roach in winter than in the summer. It should be used sparingly at any time, unless you know there are great numbers of roach in the water. The roach will be getting into the deeper swims now.

G. H. Wright and Others.—Many thanks for the address of the Thames Punt Rod-maker we asked for. George Hone, of Walton, will soon have plenty of his rods to supply, price 10s. 6d. each.

## CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### STRAIGHT NEEDLE-EYES v. TURNED-UP.

Sir,—In my letter of October 25th, I stated that I knew no objection whatever to the present form of eye either in size or shape, and to this opinion I adhere. I should hardly deem it necessary to reply to Mr. Pennell's last letter if he had not attributed to me ideas and statements which are now quite new to me, and, as I believe, not to be found in any literal, natural interpretation of my words.

First, he says that my turned-up eye is conspicuous—that is, "unfly like." Surely this is a somewhat free translation of the word *conspicuous*, to say the least of it. I used the word in its most literal sense. I never attempted for one moment to convince anyone that the turned-up eye I advocate was a good *imitation* of a natural fly's head. I cannot find anything in my letter to justify such a supposition. Nor did I speak of any resemblance between the eyes of a natural fly and the eyes of my hooks. It seems to me, therefore, that the proposition Mr. Pennell has enunciated in his italicised paragraph is somewhat far-fetched, and if his reconsideration of the idea propounded by him is to be postponed until I have demonstrated this proposition, we shall have our patience exercised to its utmost limit. All I said was that a natural fly had a large head and prominent eyes—not meaning to make any actual comparison between the eye of the hook and the eye of the fly, but merely to bring certain very noticeable and prominent features to the minds of any of my readers who have been in the habit of examining aquatic insects, and to ask whether, in imitating nature, it was worth while for us to endeavour to reduce to the smallest possible dimensions that which is one of the most prominent and remarkable features in every natural fly. As for the angle at which the head is inclined to the body, I cannot understand how such an item comes into our considerations at all. Until the trout begin to calculate these things with mathematical accuracy, we may safely leave them alone, and content ourselves with the practical utility of our hooks.

As to point number two, I said, "If I understand Mr. Pennell's suggestion about a straight eye, there is nothing to prevent the gut from slipping round it till it stands at right angles to the shank." Apparently I did *not* understand his suggestion, and I don't now see that the rigidity of his knot can ever be so secure as that in the knot I advocate. I am open to conviction, and I may alter my opinion after seeing his knot properly tied; but I am sceptical enough to doubt whether, for hard work and security, it can ever come up to the "extremely simple in-and-out" process.

And this brings me to point number three—about rapid and easy tying of the knot. Mr. Pennell thinks it difficult, and without any advantage in the case of small flies. I think if he fished a season with the finest-drawn gut, and hooks rarely larger than 00, and fished with a dry fly almost exclusively, he would soon alter his opinion. As I understand Mr. Pennell's last letter, he thinks six of his knots could be tied while one of mine was laboriously executed. I should very much like to have the opportunity of testing mine against his, knot for knot—say for a dozen flies. It would be interesting and amusing, and I fancy the result would astonish Mr. Pennell not a little. I have frequently experimented with a friend—he taking his gut cast, well soaked, and a fly from his book ready to be attached by the ordinary slide-knot, and I taking the fine end of my cast to fasten to an eyed-hook, and the result has generally, if not always, been in my favour. I have taught the knot to dozens of anglers, and the difficulty is by no means insuperable to a beginner, as Mr. Pennell thinks. But there are other good knots where the gut embraces the shank; one in particular, much used on the Test, which I have shown to Mr. Pennell, and which also, in my opinion, is preferable to his method, as being more lasting, and more likely to stand the constant flicking necessary in using a dry fly. And this is a point which cannot be settled by Mr. Pennell's tumbler of water and dining-room table. I have answered Mr. Pennell's letter because I fancied that a reply would be expected of me; but, to be perfectly candid, I have not the smallest interest in the question of needle-eyes. All that has been said about them seems to me to be far more theoretical than practical; and my opinions, which are based on actual experience of both straight and turned-up eyes, have not been shaken in the least. It is easy to sit in one's study armchair, and to theorise about the advantages of a fine needle-eye, its simplicity, neatness, the ease and rapidity with which the gut can be attached, and so forth; but as I am *entirely satisfied* with the turned-up eye and the knot I have now used for four years, I am inclined to "leave well alone," and I look upon the needle-eyed question as one which may interest those who are only now taking up eyed-hooks for the first time, but never likely to interest me much, even after years of practical experience. And this is my chief reason: I kill nine-tenths of my fish on 00 hooks, and the remaining tenth on 000 and 0, and the fine wire of these hooks will never admit of being drilled with a needle-eye large enough for the gut to go through.

Mr. Pennell and I must agree to differ on the hook question as we do upon artificial flies. If he takes up the needle-eyes he will, doubtless, have a strong following among those who are not yet satisfied. If, after extensive trial, the needle-eyes are conclusively proved to have the advantages claimed for them, and any real objection (I know of none as yet) can be brought against the present eyed-hook and its mode of use, then I wish them the success they deserve and I shall not be slow to recognise the debt anglers owe to Mr. Pennell. For the present, I am so utterly weary of correspondence and controversy about these hooks, so much valuable time has been spent, and more important matters so often interfered with thereby, that I take leave of the question by saying once more, that as far as the shape, size, and position of the eyes are concerned, I am perfectly satisfied with the hooks as they are, and I wish for no better, easier knot than the one I am used to.—I am, &c.,

November 1st. H. S. Hall.

P.S.—Has it occurred to Mr. Pennell that a large number of persons find it very difficult to thread a needle? To all such the difficulty of fastening the gut to a tiny needle-eyed hook by river side in a rough wind will be a serious matter, "an obstacle well-nigh insuperable," to quote Mr. Pennell's view of my knot.

[We must confess that Mr. Pennell has not shaken our faith in Mr. Hall's eyed-hook in the least. We pointed out some years ago that the eyed-hook was more natural than the ordinary hook, as the prominent head of most flies was well represented by the "eye." Again, in the needle-eye, the sharp edge made in stamping *must* be far more likely to cut the gut than the round wire loop.—Ed.]

### A NOTE FROM MATLOCK BANK.

Sir,—Mr. G. N. Else, Mr. Sam Walker, and I had a day on the Derwent on Friday week, between Watstandwell and Ambergate, on A. F. Hurt, Esq.'s, estate. We started about 10.30, and finished at 4.30, and caught 3½ brace of grayling, all above 1lb., 1½ brace of chub, 4lb. in all, and several dace, with maggots. No fish were killed in the deeps, but on the shallows on the edges of the rapids. There were no fish rising all day. I hooked a trout, about 3lb., in poor condition, and returned it again to its native element,—I am, &c.,

Charles Smith.

### ROACH BITES AND HINTS THEREON.

Sir,—I think the following will prove interesting to your readers. The main portion of it has appeared before, but it will bear repetition, and I particularly wish to draw your attention, Mr. Editor, to the subject, because you laughed at me on a former occasion for saying the same thing as your clever contributor. You thought I was joking, but I was not joking. You will find the following in a back number of the Fishing Gazette, a *long* time after my remarks appeared. Your correspondent said—"Don't let the amateur accept the notion that the roach is a silly fish, easily to be lured at the will of the angler.

"This may apply to small roach, not worth the room in your basket, and which have not learned to hold their scales on; but roach above a quarter of a pound and upwards are as 'cute as Yankees or as cunning as Yorkshiremen.

"You have only to *watch* these patriarchs amidst a shoal of comparative fry, and see how *meditatively* they look at the bait—how *quietly* they sail by it, and, with a knowing cock-o'-the-eye, *they give it a fillip with their tail* in passing—often rewarded, if the bait is *paste*, by its disengagement from the hook, and then the intelligence of Mr. Roach is most *conspicuous*, for the released pellet is then acted upon without artificial restriction of hair or gut, and is down the throat of the clever *Cyprinus rutilus*, to the astonishment of his juniors, who, if they are left to live long enough, will most assuredly profit by so practical a lesson."

And yet, when I related this to "Philo," he said, "Bosh! You must be mad."

I say, can anything be plainer? There are two things of importance, which should be taken into consideration before doubting such a statement.

Firstly, how can you possibly tell that the roach, which *has been seen* indulging in this habit (displaying, as it does, such remarkable intelligence), is only acting from past *painful* experiences? Who can tell what dangers it has escaped, what pitfalls avoided, by exercising the instinct with which Nature has endowed it?

Secondly, almost every angler knows that fish, and more especially roach and barbel, are sometimes most fantastic and finikin in taking their food, and often, to use a vulgar phrase, "mess it about" most confoundedly, and hesitate in taking it.

Here is the hint. If they are in the habit of doing this with food on the ground, are they not more likely to play the same capers with food *dangling* some little distance from the bottom?

The mere fact of a piece of paste hanging one or two inches (perhaps three) from the bottom, supported apparently by nothing, is enough to awaken suspicion in the mind of the roach. I say *mind*, because I call instinct nothing more nor less than mind in animals. What else is it? Oh, very well, we will not quarrel on that subject. I say it is enough to make the roach believe there is *something* wrong. Why? Because a pellet thus dangling is in an unnatural position; but that on the *ground* is in a natural position. Therefore fish on the bottom when you can.

Many old anglers fish for roach with the bait on the bottom on this account: it takes the roach off his guard. Why? He sees the bottom dotted with ground-bait, and it is more difficult to detect the lure. When it is in a dangling position there is a certain doubt comes across the mind of the roach that all is not right; and I quite believe it is this doubt that—as Charlie South said in a back number of the Fishing Gazette—makes the roach *butt the bait*, and that in such a manner, as he truly said, "there is not the shadow of a chance to hook them."

Every angler is *agreed* about the craft and intelligence displayed by oldish carp; you can catch baby carp as easily as gudgeon—this fact is admitted on all hands. Why is it? It is the wisdom they reap with age. But I believe that a pound-and-a-half roach often displays as much prudence and cunning as a carp *the same weight*, and if a roach lived to the same age as the carp they would be quite as difficult to catch. But when persons talk about the artfulness and cunning of a carp, let us say of 10lb., they little think the years it has lived before getting to such a weight. —I am, &c.,

Mark Antony.

### SALMON FISHING AT NOTTINGHAM.

Sir,—My report for the past week is better than I expected considering the unfavourable weather at the beginning of the week. Two salmon were taken on Monday, about 12lb. each; on Tuesday, Mr. Wilkinson, of Derby, and a Birmingham gentleman got three fish; on Wednesday, Mr. Newton killed one, 26½lb.; on Thursday, Mr. Stanley, of Nottingham, the celebrated taxidermist, got two very nice fish, 14½lb. and 16½lb.; on Friday, Mr. Wood, one of 14lb., and lost one they guessed to be 30lb.; on Saturday, a Nottingham gentleman took three more—all caught in the Shardlow and Weston water, thus finishing one of the most successful seasons for salmon fishing on the Trent that has ever been known.

If some of your correspondents would kindly inform us Nottingham anglers what sort of fly to use, and how to use them, for salmon fishing, I have no doubt another season we could kill fish the same as they do in other rivers; such a thing as fly-fishing for salmon we never see on the Trent.

A few pike were taken in the backwaters at Cavendish Bridge on Friday, a friend of mine getting a nice lot of roach and dace. Mr. Baker has been among the pike again, getting nine fish at Hickling. Very little doing at Colwick. I tried chub fishing on Friday with pith for bait, and never caught a fish. We want some colder weather to bring this fish on the feed.—I am, &c.,

A. W.

[Will "A. W." kindly send us a sample of the tackle used in killing these salmon, and a bit of the reel line?—Ed.]

### BRANDY AND PIKE BAITS.

Sir,—If, through the medium of your esteemed Fishing Gazette, I may be allowed to thank Mr. W. O. Chambers for his splendid hint as to brandy being administered to bait before being used for pike fishing, I shall feel much obliged to you; and, thanking Mr. Chambers, beg leave to state, at the same time, how I went to work, and with what result. I started last Thursday week, about 1 o'clock, in search of my favourite sport, and reaching the spot where I intended to commence business, I took from my bait-can a nice bait, and gave it two or three drops of brandy, which seemed to have a remarkable effect on its nerves, and made it very lively whilst out of the water; but in this case I had no opportunity of seeing what the after-effects were, as, as soon as I threw it into the water, it was instantaneously taken by a nice pike of 6½lb., which I landed successfully. No. 2 bait was also treated with a drop or two of something warm, and was thrown in; this time I had more chance to see how he worked. By Jove! sir, he went about like a small steam-engine under water, backwards and forwards, round and round with amazing rapidity for about ten minutes, then under went my float, and I soon landed another nice fish of 5lb. No. 3 bait now coming on the scene, was treated in like manner to his companions, and worked with much more vigour than No. 2 had done. He was allowed to swim about for about fifteen minutes, and away went my float again; this fellow, however, I am sorry to say, got me hung up in the roots of a tree, so I lost him (for the present). No. 4 bait came next, and he also had some grog (cold), and was allowed only a few minutes to enjoy himself, and a 3lb. fish was the result of that bait. No. 5 bait, and the last I had, after taking a parting drink, was soon swimming about well, and seemed to be in a great state of excitement, which proved fatal to him, as he was very soon attacked by a very hungry-looking long fish, measuring 2ft. 7in., and weighing 7½lb.; this fellow gave me some capital sport, and after rather more than half an hour's good play he was lying with the other finny tribe of his own species on the grass. Thus, four pike I caught in about two hours, 7½lb., 6½lb., 5lb., and 3lb., making a total of 22lb., which is rather an extraordinary take in these waters, and I firmly believe the greater part of my success was due to following Mr. W. O. Chambers's valuable hint in your Gazette, Oct. 25th—viz., "Give your bait a little brandy before using them." I wonder if the smell of brandy attracts pike at all. Do you think it possible? Or do you account for it in consequence of the extra liveliness of the bait through the dose of brandy? Apologising for taking up your valuable space,—I am, &c.,

A. S. Isaac.

Maldon.

## THE RELATIVE MERITS OF SNAP AND GORGE TACKLE.

Sir,—I should feel much obliged if you could find space in your valuable columns for a few queries on the above. In the first place, might I ask if there is *really* such a thing as any gorge tackle, or, more strictly speaking, any tackle with which it is necessary to let a jack gorge (or nearly so) the bait otherwise than a single hook through the lip? With this it is necessary to give the fish a certain time to turn the bait in his mouth. I am aware it is the habit in fishing with the ordinary double-threaded hook to give the fish about ten minutes, but is this necessary? A double hook, when threaded on the top of the back, should surely be snap tackle. Another question is, "What are the merits (if there are any at all) of gorge tackle as *versus* snap tackle." Fishing last week I very nearly lost a fine fish with the dead gorge; he sailed away with 60 yards of my best line, and only through the precaution of having another 60 yards of line on did I have a chance with him at all. When I struck him he had taken all but about 10 yards off the reel, so that makes him having out nearly 110 yards. Now if that fish had rushed *away* from me instead of coming towards me nothing could have held him; but luckily he did not, and in a week I hope to see him comfortably installed over the mantelpiece, in a glass case; he weighed close on 15lb. Of course, in a river or canal one would not experience the necessity of having such a length of line; but in a large lake, a quarter of a mile in breadth, what is to prevent a fish from taking the bait right to the opposite side? When one is fishing with the dead gorge there is always a small risk; but then the fish is generally enticed out of his bed of weeds, where a live-bait could never be worked, so that the risk in this case is reduced to a minimum. But in live-bait fishing the case is totally altered: the bait is thrown out about 30 yards from the shore, and then most of the fish that are caught are rovers in search of food, and some a long way from their haunts. In such a case snap tackle is, in my mind, absolutely necessary. The objection to the ordinary snap tackle, *i.e.*, one single hook and a triangle below it, is, I find, that with two or three casts the single hook, hooked through the back fin, becomes loosened and comes unhooked, though the back seldom gives, it being one of the strongest parts of the fish. This is easily rectified by threading the gimp crossways, the same as you would put the hook, and then drawing the hook close up to the back; nothing then except the breaking away of the fish's flesh can make it come off, and the only difference to the fish is that he has a piece of gimp through his back fin besides the hook, which makes very little difference. Another way that I have often done is to fasten on a second small hook on another piece of gimp, about ¾in. in length, above the other hook, allowing it to hang exactly level with the fixed single hook, and then having a small ring loose on the whole concern. The way I bait it is by passing one hook one way and the other the other way crosswise through the back, and then sliding the ring down over both shanks. This does not do with small bait though, as it is more liable to kill the live-bait than the single hook. Threading the gimp in this way will not answer with a single triangle, consisting of two large hooks and one smaller one joined together, as the larger stick into the fish. If some of your readers would kindly give me their opinions I should feel much obliged.

I should also like to know, *re* the late experiments on reviving fish with spirits, what is the proper quantity of brandy to give a dace, as, though I have tried it several times, I cannot say it has resulted satisfactorily? Perhaps I made them slightly intoxicated.—I am, &c., H. G. Rolt.

30, Fitzroy-square, W.

[We think that Mr. Jardine's live-bait snap and paternoster snap are all that are required for live-bait fishing for pike. You can work the weeds with the "pater." quite as well as with the dead gorge. The comparatively small hooks on Mr. J.'s tackle intended for holding the bait are inserted at the base of the back fin and the pectoral fin, care being taken to avoid all injury to the spine. We are glad to know the "gorge" system is going out of fashion. A fish hooked in the mouth (as is usual in snap fishing) fights far better than one whose entrails are being pulled out. You can let a pike under size go without hurting him if he is hooked by snap, but the "gorge" kills all. We prefer spinning for pike from the reel far and away better than any other plan; but in many pike waters spinning is out of the question.—Ed.]

## THAMES FISHING RIGHTS ABOVE GODSTOW.

Sir,—Your Oxford correspondent, the "Cherwell Otter," whose interesting River Report I always read with a considerable amount of pleasure, has, in his report in your last issue, made certain complaints against the Earl of Abingdon, who, it would appear, is the owner of a considerable portion of the Thames above Godstow Lock. I refer to the following extract from his report:—"The present Lord Abingdon, according to all accounts, is a worthy successor to his predecessor, the late earl. Not content with excluding the public from fishing between Godstow and Eynsham Lock, he is now endeavouring to prevent people fishing on the river."

It is greatly to be regretted that statements such as these should be placed before the public—statements which, so far as they refer to the fishing, are absolutely incorrect, inasmuch as any person can fish with rod and line the whole of the water owned by Lord Abingdon, from Cassington Lock (below Eynsham bridge), up to Pink Hill Lock, and thence up to Bablock Hythe, a distance of six miles, on payment of the small sum of 5s. for a season ticket, or of 1s. for a day's fishing. It would appear that, so far from desiring to exclude the public, his lordship is but too pleased to assist them so far as fishing is concerned, for I believe I am correct in stating that he actually rents from Mr. Harcourt certain fishing rights over the river from Pink Hill up to Bablock Hythe, on purpose to increase the extent of fishing he throws open to the public. Certainly he has the right to prevent the issue of tickets to objectionable persons; but his own words, as reported in the minutes of evidence taken before the select committee on the Thames River Preservation are these, "I merely let the fishing to him (referring to one of his tenants) in order that he may preserve the fishing. Anybody can have a ticket for 5s. for the whole year."

I do not presume herein to call into question the exclusive right of Lord Abingdon to this portion of the river; but for the purposes of this letter it will be sufficient to assume such right does exist, therefore, we ought to be much pleased that, having such right, he is content to share them with such of the public as choose to avail themselves of the boon offered them. Would it not, Mr. Editor, be a grand thing if owners of other fisheries near London were to copy his lordship's example, and grant us the privilege of taking a day's fishing on their preserves? But is it to be expected they will do so when, to use an Americanism, "ink is slung about" in such a manner as has been done by your correspondent, the "Cherwell Otter"? It will never serve the purposes of the anglers if every writer, when he suddenly finds out that he has no right at all in what he had long considered as his right, proceeds to make ambiguous and derogatory observations.

This portion of the river Thames I know well, and have for the last four years regularly fished it. The person who rents it of Lord Abingdon is Mr. R. Treadwell, who is also the keeper of the weir at Eynsham, and in the pay of the Thames Conservancy, and of him the tickets are to be obtained.

During the last three years the number of persons fishing, or pretending to fish, has much increased, many of them coming up the river in boats, accompanied with dogs and guns, and many absolutely refusing to recognise the keeper in any way, and behaving somewhat after the manner of the "river rough" of nearer town. It is these people to whom objection is made, and very properly, too. Their right to use the river for the purposes of navigation cannot be, and is not, questioned; and it would also appear they have some sort of a right to shoot on the river (which right is more often abused than used); in other respects they are on private property, as much so as is the visitor inside the British Museum. He has a right to be there for a special purpose, and there his right ends. From the statements made by the various owners who gave evidence before the committee herein referred to, there seems to be every wish on their part to allow all well-disposed people the use and privilege not only of the river, but in very many cases of their grounds; and certainly, any remarks on the actions of such gentlemen made by us should be made in such a form as not to annoy. It is only of recent years that the great increase of pleasure traffic and the greater increase of angling has occurred, and with it there has also grown up certain abuses, and it is in most cases to protect themselves against these abuses that owners are advancing their claims. From the published report of the Thames River Committee we obtain their opinion that the fisheries are more or less exclusively owned by the various riparians, and if such is the case, would it not be far better if, instead of disputing such claims, we could induce the owners to follow the example of the Earl of Abingdon, and either do as he has done, or else let their right to any existing society on similar conditions?—I am, &c.,

23, Blomfield-road, W. Robt. W. Hobden.

[Mr. Hobden will pardon our pointing out that although it would be a gracious act of a riparian to permit fishing on the conditions mentioned, if he had proved his right to impose those conditions, it is quite another matter when no proof is given. The opinion of the Committee of the House of Commons is nothing more than an opinion, and it is disputed by those well acquainted with the legal aspect of the question. The Committee have conferred no rights, and can confer none, or confirm them either.—Ed.]

## OVA FROM LARGE THAMES TROUT.

Sir,—Can you tell me how I can get some ova from large Thames trout? My friend, the Rev. F. Wethered, tells me I cannot get any, and I think you may be able to assist me.—I am, &c., Chas. M. Foottit, Hon. Sec. Marlow T.P.A.

Marlow.

[We wish we knew how you could get them. It could only be done by the T.A.P.S.; and only done then with big nets, and by keeping the fish in stews as they were caught and waiting till they were ready to spawn.—Ed.]

## HAMPSHIRE TROUT.

Sir,—In your issue of Oct. 25, you, in a foot-note to "Trout for the Thames Tideway at Teddington," state that "Hampshire trout are the best to put into the Thames. . . They are the fish which stocked the New Zealand trout streams—superb trout, unsurpassed in sporting or eating qualities, or in beauty of appearance," &c.

Have you not, for the moment, overlooked the fact that Mr. Francis Francis supplied High Wycombe trout, as well as the ova from some Alton trout, which I fancy came from the river Wey, whereas the late Mr. F. Buckland supplied the Hampshire trout from Admiral Keppel's, on the Itchen methinks? I only write from memory, as, worse luck, I am unable to refer to my books or papers as I should like to do.

If, after you have had the coachman (Teme dressing), green insect, and rutting stag copied from the Richmond "Amateur Fly-tyer's" patterns, and do not want these dressings, I should be much obliged for them, as it was through my query that the "Amateur Fly-tyer" dressed the above.—I am, &c., J. B. J.

Hull.

P.S.—Thanks for your prompt insertion of my queries *re* silver Wickham and coachman dressed without the usual white wings. The silver tag or ribbing on the latter fly makes it a good deal like "the Hudson," a great Wandle fly, used wet, and which, again, is very like one dressing of the Alder fly.

[Our correspondent is quite right—we ought to have included the Wey trout. We will send the flies he wants.—Ed.]

## EXTRA LONG GUT.

Sir,—In an article in the Fishing Gazette, October 4, 1878, I find the following:—"Another worm of the same genus, *Atticus Prometheus*, which feeds on the spice bush and sassafras, has an equally good reputation, according to Dr. T. Garlick, the well-known writer on fish culture. The doctor says that gut, to the length of three to four feet, can be obtained from this worm, 'and strong enough for salmon fishing.' It appears the moth is very plentiful in the United States. The *Chicago Field* recently saw three hundred cocoons in the shop of a taxidermist this last spring, all gathered by one man, who is making a life-size picture of Washington on horseback of the moths. The insect measures about 4½in. across the wings, which have eye spots upon them, and the body is stout and hairy, of a reddish colour, with a row of white spots. The prevailing tints are reds and rich browns."

Has anything more been heard of this discovery? I am afraid it did not prove a success, or we should have seen some of the gut at the "Fisheries."—I am, &c.,

E. Gosling.

## FLY-TYING SILKS.

Sir,—"R. A." can obtain silk of the very finest quality specially made for fly-tying purposes from most of the Leek silk manufacturers, amongst whom I may note Messrs. J. J. Brough, Nicholson and Co., T. and V. Myatt, Wm. Milner and Sons, Wm. Broster and Co., F. Hammersley and Co., &c.

Fast and unfading dyes are dyed best by Wm. Hammersley and Co., of Leek, who make this class of work a speciality, I believe.—I am, &c., Fisherman.

## THE ERSKINE ROD.

Sir,—We have an inquiry for an "Erskine" rod. We should be greatly obliged to you if you can give us any information about this rod, as to what kind of rod it is, or inform us where we could get one for our customer.—We are, &c.,

Redditch. S. Allcock & Co.

[We do not know it.—Ed.]

## THE NATASHQUAN WICKHAM.

Sir,—I beg to apologise for troubling you, but some of my customers have called upon me for the purpose of seeing and purchasing "Natashquan Wickhams," and have expressed astonishment when they found it an ordinary salmon fly at a moderate price. Possibly Mr. Bankart's letter may account for this. I inclose my dressing of the fly:—

Tag: Gold cord and red silk.

Tail: A topping and two rather large Indian crow feathers (roofed or gabled).

Butt: Peacock's herl.

Body: In three joints; gold tinsel over a foundation of red silk; at each joint a red cock's hackle.

Wings: Indian bustard tail, with white points, and dun tar covered with sandy mallard.

Cheeks: Summer duck and jungle cock; a topping over with horns of red macaw.

Head: Peacock herl.

I found so many of the hackles were broken by the tinsel and the teeth of the fish, it became expedient to find some method of preventing the damage thus done, and the jointed body supplied it. The smaller neck hackles, wound close into the joint on the silk only, certainly stood more wear and tear than the saddle wound all over the tinsel, and the fish, whatever may have been the "prime attraction," seemed to like the one quite as well as the other.

In reply to Mr. Bankart's lines, commencing "Besides, what with the cost of 'toppings,' &c., &c.," I can assure him that professional fly-dressers, especially those who are practical fishermen, are quite as keen to obtain "flies of efficiency when made," regardless of cost, as are those gentlemen who dress their own.—I am, &c.,

George Currell.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices; Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE,
SALMON AND TROUT FLIES, SUITABLE FOR
ALL PARTS OF THE WORLD.
**Mahseer Tackle in Great Variety.**
**Makers of Split Cane Rods.**
**Improved Folding Trout Landing Nets**
(Very Light).
**New Patent Lever Salmon Winch**
(Can be regulated to any stiffness at will).
**PENNELL'S TACKLE KEPT IN STOCK.**

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 " | Putney. |
| | 45 " | Hammersmith. |
| | 50 " | Barnes. |
| | 55 " | Kew. |
| | 75 " | Richmond. |
| | 80 " | Twickenham. |
| | 85 " | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | Morning. | Afternoon. |
|---|---|---|---|
| Saturday, | November 8 | 5.3 | 5.29 |
| Sunday, | " 9 | 5.56 | 6.23 |
| Monday, | " 10 | 6.53 | 7.26 |
| Tuesday, | " 11 | 8.3 | 8.41 |
| Wednesday, | " 12 | 9.23 | 9.59 |
| Thursday, | " 13 | 10.34 | 11.10 |
| Friday, | " 14 | 11.38 | 12.0 |

New Moon Nov. 17.

## UPPER THAMES.

The river is rising and slightly colouring in consequence of heavy rain, which has been falling persistently for some two days all up the valley of the Thames. The frosty nights have lowered the weeds, and good sport may safely now be looked for amid the perch and jack. Roach also will have to give up their vegetarian diet, and take to that of worms and other delectable luxuries. At Bray Mr. Foster has had one or two pretty takes of roach and perch, and at Maidenhead chub have come to punt or bank in grand style. The Maidenhead Angling Association has recently held its half-yearly meeting, and the report seems favourable in every way—funds being in hand, a grand stock of trout and other fish in the association water, &c., &c. H. Wilder, the bailiff, reported that, to his knowledge alone, 175 trout had been taken in the waters—best fish scaling 10¼lb., and many seven and eight-pounders. From Cookham, that excellent and civil fisherman, W. James, tells me that, out with Mr. T. Worboys, he has lately had some fine roach, and one jack going 6lb. 10oz. At Henley, Messrs. Fitch and Thompson, fishing those comfortable angling quarters, The East Arms, have done well with roach, and Mr. Corneby, with "The Boy," in two hours had a pretty sample of the same class of beauties. Thursday evening.—River hourly improving for all-round winter fishing. Jack, so far as I can glean from correspondents and interrogatories addressed to fishy-looking individuals, are not as yet madly on the war-path ; but their biteability, I am sure, will be enhanced by this improving water and the decadence of weeds. The frosty nights are inducing the perch to herd, at least, so I heard ; so I should advise an application of minnows, the dose to be repeated after each meal. Roach are now well out of the weeds, and will take gentles ; but, if the water colours a bit, there is nothing to beat tail of lob to "fetch" the sogdollagers. Wind west, and barometer quietly rising to the occasion.—Marlow Buzz.

### Thames (Datchet).

Sport has been very good in the neighbourhood the past week, and barbel fishing seems up to the mark. J. Hoare has been doing well with them, his largest fish going about 9lb., and a bream of 5lb. A patron with me on the 2nd had seven barbel and three chub. To-day nine barbel, going 30lb. good fish, and a few dace. The jack seem to move now and then. Mr. Manning, on the 3rd, got one 8lb. Mr. Manning and Mr. Stevenson, on the 4th, five fish—largest 5lb. One of them was determined to commit suicide, for he collared both their baits, the one live gorge and the other snap. They had the misfortune to lose a monster by breaking a new line. Prospect charming.—G. Lumsden.

### Thames (Goring).

Water in very good order for jack and perch. Jack coming on better, too. Jack taken at Hart's Lock Wood—one 8lb., and one 6lb. My best day, four dozen of perch.—F. Rush.

### Thames (Oxford).

On the higher reaches of the Thames it is difficult to find a swim unless it is in the deepest holes, and these, from want of current, are sluggish, and, at their best, wearying to the temper. On Thursday Mr. English, between Wolvercott and Eynsham, had a chub of 2lb., and a perch of ½lb. with live gudgeon ; Mr. Corbett, in the Canal, six chub, the largest 3lb. On Sunday Mr. Boscott, at Wolvercott, grassed two splendid perch, weight 3lb. the brace. On Monday Sergt. Cooper took a nice jack of 7¾lb. On Wednesday, at Bolscott Bridge, Mr. Marsh caught a nice little jack, going 3lb. 1oz., besides losing a larger specimen. To-day (Thursday) Mr. Corbett, by a strange coincidence, had six more chub, which weighed the same as his preceding catch, save that the largest went 3lb. 1oz.—Cherwell Otter.

### Ancholme District.

The weeds are now rotting fast, and some good sport amongst the pike and perch may soon be anticipated. The weather has been very fine and mild all through the week—in fact, more like September than November, consequently more anglers have been out than during the previous week. We had a little rain on Sunday ; but the ground is so dry with the long drought that the watercourses were not affected thereby. It has been the driest season on record in this neighbourhood, and springs which were never before known to fail have in many cases ceased running.—Thomas Ford, Caistor.

### Chichester.

The water in this locality still remains much too bright for successful angling. Spinning can now be indulged in, the weeds having cleared materially. Mr. Young has during the week been busy among the perch, Mr. Terry landing a nice fish weighing over 1lb. A good pike was lost paternostering through biting the gut in the lower reach. At Selham not much has been doing, a few roach being all I hear of. Pike are reported numerous, a flush of water being all that is necessary to insure success.—George F. Salter.

### Coquet (Weldon Bridge).

The Coquet in grand trim ; a big flood here to-day. Bull trout running by hundreds, up to 15lb. weight.—Frederick Brown.

### Dee and Don (Aberdeenshire).

The angling season just ended may, without exception, be regarded as the least productive ever experienced in the North. Few of the fish got can be said to have been of first-class quality, notwithstanding the fact that disease was almost entirely absent. Had poaching, to a greater or less degree, not been practised in some of our best salmon rivers, there would still have been a great scarcity of autumn fish. Up to Friday last there did not appear to be, in the Dee, Deveron, Don, Ugie, and Ythan, one autumn fish for every twelve these rivers contained at the close of the rod season of 1883. On many hands anglers, not aware of the proper state of matters, were heard to complain that the fish were not rising freely ; but our own impression is that they rose just as freely as ever they did before—that is to say, in proportion to their number. We feel altogether at a loss to account for the scarcity of fish. In autumn the lower and middle reaches of our rivers usually teem with large fish that have ascended to spawn. These, this year, have either been very much scarcer than usual, or else, after having settled about the mouths of the rivers waiting for a sufficient volume of water to take them to the spawning grounds, and not finding it at the proper time, they have moved off the coast and taken to the Awe, or some other river high enough, in all conscience, at any time, for angling as well as for fish ascending. Though we are quite cognisant of the uselessness of prating about the insufficient protection from poaching with the net and practising the "sink and draw" which the rivers hereabouts receive, we cannot refrain from adverting to the subject. We throw no reflection on anyone in particular—if they think so, they are mistaken. Lessees of fishings may judge for themselves how matters have been managed, and fit the cap at discretion upon those deserving it. Though river-watchers, aye, even head water-bailiffs, grumble at our remarks, and say we have no business to interfere, we care not a straw. Our contention is simply this, that the staff of watchers is ridiculously insufficient to thwart poaching effectually. If, as a lessee remarked to us the other day, the bailiffs are all well-known by the poacher gangs, and every move they make is closely watched, how can poaching be prevented? Are the lessors, notwithstanding the enormous rents they receive, still to remain niggard in their allowance for the purpose of strengthening the watching staff? When proprietors receive very high rents for their fishings, they ought certainly, if their is anything of the sportsman in them at all, to do everything in their power to secure good sport for their tenants. We are afraid, however, that extreme neglect on this score is sadly prevalent. The autumn fishing, it is safe to say, has proved even a greater failure in the Dee than the spring fishing proved a success. In spring, the fishings at Glen Tana, Cambus o'May, Ballater, and Braemar were splendid. On Glentana some of the keepers had as many as 200 fish each before the end of May. Mr. Broadhurst, on the Cambus o'May water, had considerably over a ton weight of fish during his two months of angling. The Invercauld Arms Hotel water, at Ballater, produced an average of seven fish daily for three months. Mr. J. C. Wordie had some splendid takes on the Invercauld private water at Braemar, occasionally as many as 16 fish a day falling to his party's rods. The Fife Arms and the Invercauld Arms Dee fishings were likewise fully stocked with fish, and good sport obtained on them. The fine open weather prior to the commencement of the rod season tended to make the salmon run in great numbers, and by the opening day the river was splendidly stocked, with the result that in March, April, and May very fine sport on the whole was experienced between Banchory and the Linn of Dee. Very early in the season, when the weather was cold and the water pretty high, large Gordons and Whitewings, from 2½in. to 5in., were used with goodresults. Later on, as the day advanced and the river decreased in volume, Small Gordons, Blue Charms, Jock Scotts, Logies, and Jeannies were the favourites. Late in the spring, and during the early summer, disease manifested itself in the upper and middle reaches of the river rather decidedly. This year's spring fish averaged fully 9lb. in weight. If the fish, like the fisherman at the various places we visited during our angling peregrinations this autumn, had shown the same partiality for certain flies and colours, the vast pile of information we were vouchsafed ought to have stood us a good stead. "Try on the Thunder and Lightning, sir, it's the best fly here," was the advice at one place. "Put on a Jockie," was S——n's theme at Ballater. "A fly with plenty of blue about it" was a *sine quâ non* at the Cambus o'May. "If ye dinna get him wi' the Gordon ye needna' try onything else here, sir," was the assurance of our gillie at Glentana. "Gae them a look o' a guid grey heron," is what we were told at the Commonty ; and for killing on the middle Durris water, the best fisherman informed us that "a 'Butcher' or a 'Gardener' was the proper dunt." During the autumn the best killing flies generally were : Jock Scott, Gordon, Blue Charm, Butcher, Gardener, and the real Grey Heron. Some of the finest Dee flies, such as the Peacock, Rintoul, Akroyd, and Glentanar Glede were rather at a discount—more, we should say, through want of being used than anything else. Up to within a fortnight of the end of the autumn fishing, the flies used throughout were smallish, probably averaging not much over an inch in length, except, indeed, when the river rose to any extent. During the last fortnight the water rose and fell too frequently, and was altogether out of good fishing order ; pretty large flies were then used, 2in. to 4in. Very high rents were paid for the two months of autumn fishing. Some idea of the facts may be obtained when we remark that £500 was paid for less than a score of fish, £220 for about 40, £330 for less than 50, £100 for about a dozen, and £50 for three or four. The Cairnton, Blackhall, Crathes and Kineskie, Inchmarlo, Durris and Park sections—the very cream of the autumn water—afforded little sport. Park produced the largest fish, 45lb., and a total of 15 as against 90 last year; Durris 50, to 160 last year; Crathes and Kineskie 44, to 138 last year; Inchmarlo 12, to about 80 last year; Cairnton about 20, to over 100 last year; Blackhall 12, to over 120 last year; Woodend very poor sport. Duncan Davidson, Esq., on Sluie, had the second largest fish, 39lb., and another 35lb. The average weight of the fish landed this autumn would turn the scales at 21lb. As against 500 or 600 grilse got last year, we should say not more than 30 were caught in the Dee during the past summer. The run was a poor one at the best, and the nets, owing to the lowness of the water, intercepted nearly all that sought to push up the river. A gentleman angling in the Banchory district during the summer was so satisfied that illegal netting was being practised that he offered a pretty handsome reward for the apprehension of those engaged in it. Ever since the beginning of September fish in great numbers, owing to the smallness of the river, have lain about the mouth of the river and in the tidal waters, and to this fact we attribute the dark discolouration most of those got recently with the rod exhibited. Few silvery fish were got, and equally few heavy red ones. Messrs. Blacklaws and Son, Kincardine o'Neil, in sending us their last report for the season, remark of it that it is "a poor end to the worst autumn fishing we have yet seen." Norton House water: Wm. Lamond, Esq., two fish, 6½lb. and 8½lb.; Wm. Blacklaws, Esq., two fish, 18½lb. and 30lb. Borrowstone: Walter Evans, Esq., three fish, 16lb., 17lb., and 22lb.; S. W. Smurthwaite, Esq., one fish, 21lb. Carlogie: Captain Michell, one fish, 20lb.; G. Campbell, Esq., one fish, 10lb. On Crathes and Kineskie, General Keane and another had five fish, 16lb. to 23lb. On Durris, W. Knowles, Esq., and party had one grilse, 8lb., and six salmon, 18½lb. to 28lb. On Park, Mr. Potter and party had five fish, 14lb. to 26lb. On Blackhall, Cairnton, Lower Durris, Drum, Culter, and Kingcausie a few fish were got; R. C. Menzies, Esq., had three. The Deveron, Don, Ythan, and Ugie have all done very badly, the Deveron and Don especially having been worse in proportion than the Dee. The silting up of the former at its embouchure and the dykes in the latter prevented any run of fish. The Ythan, though its salmon fishing was almost a blank, afforded particularly good sea trout fishing near its mouth during the last two months of the season. The same remark applies to the Ugie. The netting on all the rivers mentioned has been up to an average. We cannot conclude this summary without expressing our thanks to all and sundry who have assisted us with our reports throughout the season; and now that we dry our pen we do so in the conviction that we have not sought to perform in a slipshod manner the duties the Editor of the GAZETTE intrusted us with.—W. M.

### The Dove.

There has been a good deal of rain in our district this week; but sport has not greatly improved. A few fair dishes of grayling are reported, and that is about all. The Uttoxeter length of water has turned out as good samples as any. This stretch is fishable to the general public on payment of half a crown a day, which is a reasonable charge considering how well the water is stocked with fish. The best flies have proved to be the red tag and olive dun. A lot of chub have been killed since my last with cow's brains and maggots on the river's lower lengths. The deep holes are the places where the fish chiefly congregate about this time of the year, and they should be there angled for and nowhere else. I am afraid the presence of so many chub in the river does a great deal of harm to the spawn and fry of trout and grayling.—THE SPLODGER.

### Eden (Carlisle).

In spite of the quantity of leaves in the river, there has been some very fair salmon fishing during the last ten days. On Oct. 25, Mr. Alfred Brisco had one, the two Bones two, below Grimdale. After this we had a fine fresh supply of both water and fish; and on the 29th ult. the river was in good order. Sergt. Fox killed two, T. Parkins one 18lb. These all in association water. On the same day, Mr. E. L. Hough, the Carlisle, Mr. Kelson landed four, 28lb., 25lb., 21lb., 18lb., at Crosby; and there was also a grand fish of 36lb. taken in the Rickerby water, which no one seems inclined to own. The Rickerby keeper, Major Riley, and a boy had a hand in it; but why they are so shy about relating the whole adventure nobody knows, and perhaps nobody cares. But I am such an inquisitive beggar in all fishing matters, I have my own suspicions, for I know they had salt with them, and the boy is a capital diver. Other fish were caught to which I cannot attach dates. Mr. Butler killed a good fish in the Crosby water, and Major Riley two, and Mr. Berkeley one in the Rickerby water; Sergt. Fox two more, 29lb. and 22lb.; Mr. Stratton one, 22lb. On Monday in this week, Mr. E. L. Hough began the week with three, weighing 25lb., 21lb., 18lb.; Dick Routledge landed a heavy fish; and "Champion" Stubbs had three. I hear he looked a bigger man when he returned than he started. Mr. Berkeley killed one in the Rickerby water, and the Priest of Houghton got one out of the Crosby water. The Archdeacon of Carlisle has landed a few good fish in the water the Dean and Chapter reserve for themselves. They don't care to fish in the part let to Mr. Behrens, and which is fished by Dick, Tom, and Harry. I am speaking about the piece about Syke Foot. The river was in fine water yesterday (Tuesday), but I think the heavy rain with wind will raise it again, in which case we may fairly hope for a clearance of leaves, and a good closing week.—SILVER GREY.

### Elstree Reservoir.

J. Amies, fishing here last Saturday, caught fine jack spinning, weighing 14lb. On the 2nd inst., W. Aldis, ten jack, weighing 20lb.; C. Smith, six jack, weighing 15lb.; F. Rollington seven, weighing 16lb.; Mr. Cross, one jack, weighing 3½lb.

### Exe (Tiverton).

On Friday week the salmon fishing ended for the season in this river. The anglers all round have had a most unprofitable time of it from the cause that has effected most rivers—want of water. Nothing could be more promising than the prospect of sport early in the year. High water had brought up a good supply of fish, and for a few days they gave capital fun, as many as five fresh-run fish averaging 11lb. each falling in one day to one rod. After that fishing was a more precarious affair; the river rapidly fell, and became little more than a dry channel, studded with stagnant pools crammed with slimy weed, so that even trout were sickened and would not look at the fly, and so matters remained till the end of August, when a slight rise partially whetted the appetite of the smaller fish, but, of course, did nothing for salmon. As September and October passed away one or two very slight freshets occurred, mostly towards the end of the latter month, and anglers met with better encouragement, one of them getting three fish one day, weighing collectively nearly 40lb., and being "broken" by a big one; these were all taken on small flies. Other anglers got an occasional fish; but most of the fish were discoloured, and bore marks of their lengthened sojourn in fresh water. These catches were made in the waters below Tiverton. Above the town the salmon fishing has been almost a blank.—R. A.

### Ilfracombe.

Sea fishing: Our town has presented a very busy appearance this past week, the fishing having been good; the lovers of rod and line have had some good sport. Friday: Mr. E. German, fishing from the jetty, caught a pollack 3½lb., and a conger 14lb. Monday: A large cod and several conger caught from the jetty and rocks. R. Souch, fishing from a boat, in a few hours caught 190lb. of conger, and three cod weighing 45lb. The herring fishing has been very regular, Friday averaging 1 maize per boat; Saturday from 2 maize down to a few herrings; Monday morning, largest catch, 3½ maize. In the evening there was a splendid moon shining, and the boats all had good catches, the largest being S. Ley, 10¾ maize; C. Buckingham, 7½; J. Comer, 5, and others 3 and 4 maize each. Several fine hake have been caught in the nets. Tuesday and Wednesday blowing strong, with a heavy ground sea; weather still unsettled.—E. COMER.

### Lea (Tottenham).

The weather, the last two or three days, has not been particularly inviting, thus preventing many anglers who, under more favourable circumstances, would have been found at the river side doing their best to "circumvent" some of the finny tribe. Mr. C. Rita killed a nice little jack of 5½lb. on the 2nd inst.; Mr. Bell, the same day, got two a little over 2lb. each; A. Williams and one or two others have been getting a few dozen roach and dace, baiting with paste, and fishing from the island. The bright weather on Monday tempted one or two fly-fishers down to try their luck, they succeeded in getting a few dace. No change to report in the state of the river.—HACKLES RED.

### Leicester.

A change in the weather has tended to improve the sport in this county, a large quantity of rain having fallen since my last report appeared in your columns, which has not only benefitted fishermen, but the whole of the community. It is a noteworthy fact that the two large reservoirs that supply Leicester with water have never previously been so low as has been the case during the past few weeks. In the home waters a fair number of anglers have been bottom fishing, with satisfactory results. Roach, perch, and dace have bitten well. The best sport was had amongst perch, several excellent lots being shown. Mr. T. Hardy weighed in a good basket on Tuesday, the largest fish being over 1lb. 12oz.; and among other lots were several scaling over 1lb. Good lots of dace have also fallen to the share of a few members. Pike fishing shows an improvement, a great many being landed, although none very large, the average being from 4lb. to 6lb. each. Items of news from Narborough, Barrow-on-Sea, and The Wreak, show piscatorial matters to be rather quiet. A few good fish were taken at the last-mentioned place. On Thursday the weather still continued of an unsettled character, sharp showers succeeding each other frequently. Water in fair order.—ALERT.

### Lugg and Arrow (Leominster).

These streams are now in capital fishing condition. Rain has been had in heavy showers in the beginning of the week, which has made scarcely any difference to either of the streams, and has made the fish sport well at the fly. The best flies are the claret body, whirling blue, and red tag, and good sport has been had in both streams with them. Some very good lots of fish have been taken with the grasshopper. On Friday some capital sport was had in the Lugg, near Fingsland, a gentleman with the red tag landing a capital basket of grayling averaging 10oz. each. In the Arrow, near Ivington, a good lot of fine fish were taken by a gentleman who was fishing with the grasshopper. The Arrow was tried on Saturday with the whirling blue, and some very fine grayling were landed, the lot scaling 5lb. In the Lugg a good dish of fish was taken with the claret body the same day. In the Arrow, near Stanton, on Monday, a gentleman tried the water with the maggot, and took a capital lot of fish. A gentleman fished the Lugg, near Aymestry, and with the grasshopper landed a very good basket of fine grayling, averaging ¾lb. each. On Tuesday some very fine fish were landed by a gentleman in the Lugg, near Ford's Bridge, with the red tag, The Arrow, at Eardisland, was tried the same day, and a capital dish of grayling was taken by a gentleman with the whirling blue and claret body. Some nice fish have been taken in the waters near Bodenham with the fly. Little doing in the Monkland water this week. The Pinsley is in capital angling order. The fish are rising well. A few nice fish were landed with the fly this week.—GWYNNE.

### Medway (Tunbridge).

Although we have had a few showers, the water is still low and clear, and there have been but few anglers out. A few baskets of bream and roach have been taken, and if I had the time I would try by well baiting a good swim for some bottom fish. A few good jack have been caught, but they do not hang on well, owing, no doubt, to the clearness of the water. What is wanted is a good shower to make a run.—YE MEDWAY WATER RAT.

### North and South Esks.

CLOSE OF THE ROD FISHING.—The rod fishing on the North and South Esks closed on Friday. The season has generally been most unsuccessful. The fish that have been caught have mostly been salmon, and generally of large weights, ranging from 20lb. to 46lb. Want of a spate has been the cause of the failure, as the fish are very abundant, lying in hundreds in many of the pools. Captain Kennedy killed four fish on Wednesday, weighing 21lb., 16lb., and two of 9lb. A spate came away on Friday, and a run of clean spring fish entered the rivers. One fish was caught on the Knab by William Crow, of 13lb. weight. Several others were seen, but none hooked. The most successful rod during the season was Colonel the Honourable Robert A. Ramsay. There has been some unsportsmanlike fishing, but in some pools it was quite an impossibility to avoid cross hooking. At times several so taken were returned to the river. The disease was not nearly so bad as last year, but it has been gradually increasing. There was no disease in the North Esk at the end of the net season, unless at that nursery of disease—the Burn, and gradually it has come down. The smolt were affected during the summer months, and it is to be hoped the disease will disappear. The newly-altered goil at Craigs Dyke has turned out satisfactorily, the salmon going through it freely, and if the fish have a clear run up from the loups of the Burn into the upper waters they would find plenty of room, and the river would be universally benefitted. It is understood the proprietors are determined that a good pass shall be eventually put there.

### The Ouse (Huntingdon).

Water still in fair condition for jack, and they have been on the feed this week. I took two weighing 9¼lb. W. Woodward has been amongst them, taking fourteen, the largest two going 6lb. each, and there is a good prospect for the next week. Dace and roach are the bait used now, for they will take roach as well as dace. The wind has been very boisterous, which has been the cause of not many of our fishermen going out. I was out on the 5th, and had to turn it up, for I found I could do no good, but it is very favourable now, and plenty of jack are in the river. F. D. Veasey, Esq., took three one day, two going 5½lb. each.—H. ROUT.

### Pickering.

Continued dry weather has got streams around here lower than ever; angling has therefore been very poor. The flood of 12th August put a fresh into Pickering Beck, and gave it a good scouring, consequently, grayling have fed better there than in many surrounding waters, to which that flood did not extend. Some anglers have had good sport; one local fisherman basketed 115 in one week, all with worm. In other waters the grayling have not risen well, nor have they taken worm or other baits at all kindly. The best basket we have heard of in preserved waters was twenty-two, taken by a party of three anglers in one day, all by worm. These were heavy fish, several of them being from 2lb. to 2¾lb. each. Such fish as these soon let you know where the basket strap is. On the Yorkshire Esk, the salmon season just closed has been the worst for about fifty years past. The small run of fish that got over the lower dams the day or two after the 12th August flood lay in the river between Sleights and Egton until about the middle of October, when there came a little rain, and a few inches rise, which set the fish off to the higher parts of the river above Egton; but very few fresh fish got over the lower drains, so the best lengths of the river were almost bare of stock. At a guess, we should say that not 100 fish have been killed by the rod this season, instead of from 300 to 450. Very large numbers are now waiting in the tideway for the long-looked-for freshet. The netting season in the Esk district has been an uncommonly good one.—NORTH EAST.

### Teme (Tenbury).

This stream still keeps in capital order for fishing, and has greatly improved since the rain which was had in this district on Saturday night and Sunday. The rain has made but little difference to the colour of the water, which still keeps clear. The fish are sporting freely at the whirling blue, green insect, and red tag, and some very fine grayling have been taken with them. The grayling are biting freely at the grasshopper. The water has been visited freely by the anglers this week; but great complaints are made about the leaves getting on the flies when fishing. A gentleman visiting this district tried the water near Rochford on Friday, and with the red tag and green insect landed a fine basket of grayling, scaling 6½lb. the lot. In the water near Easton Court a nice dish of four grayling and three perch were taken with the grasshopper. On Saturday the water near Corn Brook was fished with the fly, and some good-sized fish were landed. The water near the town was tried the same day, and a gentleman with the whirling blue took a capital lot of grayling in good condition. A gentleman visited the water near to Berrington Court on Monday, and with the grasshopper landed a nice lot of grayling ½lb. each. The water near the Bridge was tried the same day, and a few nice-sized grayling were landed with the maggot. On Tuesday a gentleman visited the water, and with the grasshopper took a splendid lot of fish, weighing 5lb. the lot. Some very good fish have been taken with the whirling blue and green insect in the water near Little Hereford. The Kyre, Rea, and Ledwyche are in good angling order, but low, and very little fishing has been had this week.—Worcester.

### Teme (Ludlow).

The fishing this week has fallen off to a certain extent, but good fish have been landed from the Teme and most of the tributaries. On the 1st and 2nd inst. a steady rain fell, improving the streams considerably. One or two of the tributaries are very low; in fact, I don't recollect some of the waters remaining so low for such a length of time for a number of years. The best time for grayling is from mid-day until half-past two o'clock, and on very bright days until towards sunset. The best flies for killing are (and I have Mr. Thomas Hodges, the well-known maker's, word for it—and if he don't know, who does, for that wily gentleman can land a grayling with as much ease as he can make a fly ?) the whirling blue, the silver twisted blue, the red tag, green insect, and claret body. Good fish have been taken with all these flies. Leaves still continue to accumulate and rest at the bottom of the water till they decay; a sharp flush would carry them all away down into the Severn. We saw a pike 3½lb. in a fish shop window on Saturday, caught by Mr. W. Jones (a well-known expert) the previous day. A gentleman caught on Saturday, in the Teme in the Saltmoor district, seven nice perch weighing nearly half a pound each, three fair-sized grayling, and six roach. Most of the fish were caught with the maggot and the remainder with the claret body. A gentleman up beyond the Burway waters had nine nice grayling with the red tag and silver twisted blue; when placed in the scale they weighed altogether 5½lb., all fine fish, caught in less than three hours. Up the Ony, on Friday, a veteran fisherman caught eight brace of grayling, all fair fish. The Clun is very low, and not so much improved as might have been expected.—S. Ludlow.

### Taw (N. Devon).

Salmon running up in thousands. A rise of water has taken place, and on Saturday they were leaping all over the river, and I heard of one 30lb. leaping into a boat and was captured. Good fishing with the minnow; flies no use—too many leaves. I have heard of many caught during the last few days.—Rusty Game.

### Trent (Newark).

Since sending off my last week's report, the water dropped down very rapidly, and by Saturday afternoon was again running very low; but sport, taking things on the whole, was a little better. A few very nice catches, principally of dace, were had. I tried myself on Saturday for an hour or two, and got eleven very good dace, several of the fish going from 7oz. to 8½oz. each. I also heard of another fairish bag or two of those fish being had in this locality. I also saw a pike angler or two out, but could not get to see whether they were having any sport or not. Roach, I understand, up to nearly 1¾lb. each have been weighed in at the local clubs—also a chub going 3¾lb.; so by this we may infer that sport has not been amiss this week. At the time of writing, Thursday night, the water has come on again some 12in. or 14in., but there has not any colour come down with it to speak of, although, as is natural with this time of year, when, owing to heavy winds, there are a lot of dead leaves floating down, the water is a sort of a dully peaty colour. But still, I think fish can be taken now, as the weather is so very open and mild. Maggots and cockspurs have been the most successful bait this last week among the roach and dace; and the angler cannot do better than stick to those baits for another week or two under the present circumstances, as this last little fresh or two down the river has slightly improved matters piscatorial. Thursday night, water about 12in. or 14in. higher than it was last Saturday, not in very bad condition though; but on Tuesday night it rained very heavily, so probably we may have a little more extra water before Saturday.—The Trent Otter.

P.S.—A fortnight ago Mr. Levick wrote a letter to the Fishing Gazette accusing me of not doing my duty as reporter. I had thought of replying to that letter; but, on second thoughts, fancy it will be best to take no notice. For over seven years, Mr. Editor, have I tried to do my duty to myself, my readers, and the Fishing Gazette, and will only say, in answer to Mr. Levick, that the next time he essays the rôle of reporter I hope he will be accurate in even small things, for one of the members of his association tells me, that if he had accurately reported the catches, instead of the tremendous haul he makes one member have, he should have written 9lb. after his name.—T. T. O.

### The Trent (Nottingham).

The weather has favoured angling operations during the week, but there does not appear to have been quite so many anglers out as usual. Maggots have been employed with success amongst the roach and dace at Shardlow, and so mild was the weather on Thursday that several barbel were seen to "pick" in what is known as the "Long Swim." Salmon are still running up to the Dove in considerable numbers, and a busy spawning time is expected by the water-bailiffs, who have received strict orders to keep a watchful eye on the spawning beds, especially in the neighbourhood of Tutbury. On the concluding day but one of the season Mr. J. Stanley, of Nottingham, whilst endeavouring to take a farewell fish, hooked and landed a grand chub of nearly 4½lb. Apart from the river, excellent accounts reach me of the doings amongst the pike in the lakes and canals of the district, one of the number turning the scales at 18¼lb.—The Man at the Clubs.

The salmon season in this district closed on Saturday last. The season opened well, but since Easter very little good has been none; in fact, very few anglers have tried for salmon since Whitsuntide, owing to the fish being off the "bite," which is attributable to the very low state of the river (there having been no real "fresh" since February) and the large quantity of matter which gets into the river from Burton. I have made careful inquiry, and find about 100 salmon have been caught with the rod and line in this district during the season. Several salmon were taken just before the season closed, but they were not in very good condition, and it really does seem a pity to take them whon they are so near spawning. Very little good has been done at Willington this year, which is owing to the low state of the river and the fish being unable to get up. Anglers experience much difficulty owing to the large quantity of "flannel" weed and other rubbish they have to contend with, and unless there comes some heavy rains I am afraid there will not be many good takes. The Eggington sewage farm is almost completed, and the Burton sewage will soon be conveyed there, and anglers will be much pleased when they see the last of the gelatine matter which has troubled them for several years, it not only covering the bait, but the fish, no doubt, feed on it.—Spinning Bait.

### Trent (Newark).

Since I last wrote you a fortnight ago, there has not been quite so much fishing done. Mr. Allcock had 10 barbel on Thursday, Oct. 23rd, but could only raise one on Friday, and another on Saturday. I think we may now bid adieu to these fish until another season. On Friday, a friend of Mr. Butler's had a nice bag of chub about 35lb., best fish not over 3lb. On Saturday, I met the same gentleman, and though we tried some of our best chub swims, could not get a fish. I believe all that was done on that day was Mr. Bragg, one chub. After chub fishing, I tried the jack, and just at dusk I hooked a fish; but after a few moment's game at see-saw round a post we parted, the fish taking the hooks with him. None of our members managed to get out and catch the water at its best last week; but on Saturday Mr. Hickson got eight splendid roach in a very short time: they weighed 9lb., the best, a grand fish, 1lb. 11oz. Several others were out, but no one did anything that I heard of. Monday, Mr. Dale, 4 dozen dace; but nothing above 8oz. I had two friends pike fishing; but they don't seem to get hold right yet; Mr. Chatterton, one small one, and Mr. Lane, another. Yesterday, Mr. Edlington, six small bream. This about finishes my list at this end of the town. These, as well as the catches, particulars of which I sent you a fortnight ago, are not "imaginary catches." I have not the time to go through the last twelve numbers, Newark reports, or I could point out to your correspondent several things which were anything but facts; but as he promises not "to be tempted to report anything but what he knows to be a fact," we shall accept this as a good omen for the future.—F. T. L.

### Waveney (Beccles).

Weather during past week has been all that the angler could wish for, and those who have taken advantage of it have been well rewarded. Mr. Cowles, of Stratford, has again been after the pike, and landed several, two turning the scale at 6lb. and 4lb. respectively. Several roach fishermen were out on Saturday last. Mr. W. Oldham brought a dozen for my inspection, which weighed upwards of 5lb., one close on 1lb. Wind and weather now in good condition for all-round angling.—A Waveney Angler.

### Wye and Derwent.

The past week has been a very bad one for fishing, with the exception of to-day (Thursday), owing to the wind being so rough and boisterous, and lots of rain falling. The Derwent has a beautiful porter-coloured water on it to-day, a good killing water for either fly or bottom, and some good size baskets of grayling and coarse fish have been killed with maggots and cockspur worms. Mr. William Smith killed 4½ brace of large grayling with worm close to Matlock Bridge, the largest fish being 1lb. 2oz. D. P. Pearson, Esq., of Tottingham, got 5 brace of beauties, and several others have had similar baskets. There has been a fair quantity of anglers out on different parts of the Wye, and their takes, as a rule, have been very bad. They complain very much about the scarcity of grayling in the Wye. No doubt the fungus disease has something to do with it. Angling prospects are looking A1 for next week for either top or bottom; that is, if weather holds fine.—P.S. Since writing I hear that Mr. William Crowder, sen., Matlock Bank, has killed something like five brace of large grayling to-day, with maggots for baits.—G. J. Eaton, Nov. 6.

### The Yare (Norwich).

From all accounts the fish are up stream, and this seems to be proved by the fact that two Norwich anglers were successful at a spot known as the "Alder Carr," which is very close to Norwich. They caught between them 176, all roach except two dace; and, although they tried, they could not tempt a bream. A fair number have been out during the past week, and varied fortune has attended their efforts. The weather is extremely mild and bright (green peas are being gathered in Norwich), so that, if unsuccessful in sport, the angler has the enjoyment of splendid weather. The accounts with respect to jack fishing have not been good; they evidently have not been on the feed. The water has been very low and clear, still some success has been met with on Thorpe Broad, one man recently catching six and another two fish of about 3lb each. Some good catches have been had on private waters this week and last, 9½lb being the heaviest that I have heard of; that, of course, we Norfolk anglers consider only a medium fish, and I trust before long to hear of some three times that weight. Prospects good.—Robert Moll.

### Yore (Hawes).

Water in splendid trim for any kind of grayling fishing. The fish are somewhat shy of feeding, but one or two very nice catches have been made. On Saturday last I was out the whole of the day, but it was no use, I could not get a fish with the fly. Tommy Sproats was out the same day, and took one with the fly; and about four o'clock he took it into his head to try the worm, and he was successful in landing four and a half brace from one stream. A few nice fish fell victims to "gardenia" yesterday.—Jos. Corry.

## DEATH OF THE POSTMASTER-GENERAL.

Every angler will hear with deep regret of the almost sudden death of Mr. Henry Fawcett, an enthusiastic angler in spite of his blindness. Mr. Fawcett's name will always be remembered by men of all parties with respect and admiration.

## CLOSE OF THE FISHING ON THE EARN.

The rod-fishing on the Earn closed on Friday with a heavy flood, which put a stop to successful angling. A great many anglers were out, but had to give up fishing. Most of them went to the dykes to see the fish passing up, everyone stating it had been a wretched season. The flood coming three weeks too late, the higher reaches were very poorly stocked for want of water to take the fish up, and it was very tantalising to see the fish running up in hundreds the last day, when there would be no chance of catching them. Numbers of the fish were perfect beauties, newly from the sea. The lower part of the river has done splendidly, but the upper has almost been a failure. On Thursday, Mr. George Pople, on Kinkell water, landed a fish of 30lb.; and Mr. Hunter, a grilse. Drummond Castle water, which is let to anglers by the day, week, or month, has fished very badly. During the last three days a great many anglers were out, and the captures were :—Wednesday, two grilse (Mr. Blair, Dundee, one 6lb.; Thursday, Major Hoskins, two, 18lb. and 7lb.; Mr. P. D. Malloch, three, of 20lb., 10lb., and 9lb.; and Major Hanna, one, 17lb. Sea trout and yellow trout are spawning in great numbers in almost every stream. We have not heard of any diseased fish being seen or caught. So far as the Dupplin Water is concerned, there was not much done worth mentioning till October, but after the first few days of that month the sport was excellent; in fact, it never was better. The Earl of Hardwicke has had fine sport, killing in sixteen days fifty-five salmon, weighing 1038½lb., and ten grilse, weighing 74lb. One of his Lordship's best days was nine fish and a grilse, and on several days he had eight fish and grilse. He had also twenty-nine sea trout, mostly whittling, all the whittling being clean run. Col. Hardy had pretty fair sport. In five days he killed eleven salmon, weighing 199lb., and three grilse weighing 22lb. Mr. Montgomery also killed in five days five salmon, weighing 81½lb., and six grilse, weighing 44lb. The Hon. E. Villers had pretty fair sport, killing in six days nine salmon, weighing 149lb., and ten grilse, weighing 73lb., and 41 trout. Mr. Villers killed one or two of his fish (with worm) in September, when the river was very small. Lord Langford killed three fish of 50lb. in two days. Lord Stanhope killed in one day two grilse of 14lb. Viscount Ednam on one day, in a few hours, had three salmon of 55lb., and one grilse of 8lb. The Earl of Dudley killed one grilse of 8lb. one afternoon in about half-an-hour. Col. Montague had also excellent sport, killing in four days thirty-one salmon, weighing 521½lb., and sixteen grilse, weighing 123lb. Mr. Montague's best day was twelve salmon and six grilse, some of the fish weighing 27lb. Another day he killed twelve salmon and one grilse, mostly all out of two pools. He also killed five sea trout. Lord Ruthven likewise had good sport. He killed in three days, twelve salmon of 215½lb., and five grilse of 42½lb., and five sea-trout. His Lordship's best day was six salmon and two grilse. Col. Curtiss killed a fish of 28lb. on the 30th ult., and Mr. Hadow, the same afternoon, killed a fine fish of 34lb., which finished the season. The river came out on 31st, and was not fished. Several other gentlemen had a fish or two during the season. Since the nets were taken off on the 20th August, there have been killed on the Dupplin water by the several parties, 133 salmon, weighing 2,400lb., 57 grilse, weighing 432½lb., and 82 sea-trout, 1lb. each. This has been a good rod-fishing season. During the last three weeks of October the river was swarming with salmon and trout.

## CLUB REPORTS.

### AMICABLE BROTHERS ANGLING SOCIETY.

The result of the roaming match was as follows (five out of the seven prizes only won):—Mr. Medcalf, first; Mr. Robinson, jun., second; Mr. Pedley, third; Mr. Chevalier, fourth; Mr. A. Plumstead, fifth. The remaining prizes are to be fished for in the same water and under the same regulations on Nov. 9th. Members are requested to note that quarterly night is on Nov. 19th.—J. Worledge, sec.

### ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of 2s. 6d. donation from H. A. Vincent, Watford Piscators, and 10s. from the donation box of the West Green Angling Society. The next meeting will take place on Friday, November 14th, at 9 o'clock, when members of the committee will oblige by their attendance.—R. Ghurney, sec.

### BIRKENHEAD ANGLERS' ASSOCIATION.

The first annual meeting of this association was held on the 29th ult., and was very fairly attended. In the absence of the president (Mr. O. Jones) the chair was ably filled by Mr. W. H. Hughes. After the minutes of the proceedings of the last meeting were read and approved, the treasurer submitted his annual statement of receipts and expenditure, which showed a flattering balance to our credit in the bank, and which goes without the saying was much approved of. The report of the hon. secretary was next submitted, and from which it appeared that the progress made during the year was such as to be proud of, less the fact that some of the members had not devoted that attention which is necessary to insure complete success. Special attention was drawn to the want of success in procuring a concession in the charges for travelling, but, thanks to the true spirit of angling, such drawback counted for nought. The prizes offered for specimen fish were won by the following gentlemen—viz., perch, grayling, roach, and dace, the hon. sec.; bream, R. Higginson; tench, J. H. Rogers. Private prizes for the heaviest baskets of tench, peach, and rudd were won by J. Holliday (tench), and J. H. Rogers, perch and rudd. The association's prize for the heaviest basket of fish was won by R. Higginson, and those for the best results in match fishing were accorded to Messrs. Poole, Robinson, Rogers, the hon. sec., and Baxter, in the order named for value. A challenge cup, kindly presented by a member, Mr. Robinson, for the greatest number of "wins" in match fishing, resulted in a tie between Messrs. Rogers and Poole, who have to arrange for the "tug of war" shortly. Many members offered prizes for competition in matches, and amongst others may be named Messrs. G. A. P. Brady, C. Petersen, O. Jones, L. Robinson, C. Durie, J. H. Rogers, E. T. Turpin, W. Godsell, R. Higginson, R. Ellis, Mr. A. Hodge, fishing tackle manufacturer, and the hon. sec. The late treasurer (Mr. R. Higginson) having removed to Nottingham, presented a prize, as a sample of the industries of that town, which was won by a non-Benedict, Mr. Poole. The prizes were presented by Mr. Councillor Simms in most felicitous terms, he at the same time observing that those who did not compete must be thankful in seeing others reap the rewards of their persistent angling. The officers having been accorded a vote of thanks for the able and courteous manner in which they had severally performed the duties of their respective offices, the meeting proceeded to elect the officers for the ensuing year, with the following result:—President, Mr. Councillor Simms; vice-president, Mr. W. H. Hughes; treasurer, Mr. J. H. Rogers; auditors, Messrs. Godsell and Robinson; hon. sec., Mr. Robert Edwards. Votes of thanks having been accorded Mr. Simms and Mr. Hughes for their offices for the evening the meeting dispersed.—Robt. Edwards, hon. sec.

### CITY OF LONDON ANGLING SOCIETY.

Our show of fish on the 2nd inst. was very small: Mr. Nitz, a jack from Pulborough 4lb. 2½oz.; Mr. Castell, dace, chub, and gudgeon from Harlow; and Mr. Chambers, gudgeon from the Thames.—Cas.

### CLAPHAM JUNCTION ANGLING SOCIETY.

Several members were out on the 2nd inst., but not much fish was got. Mr. Boisseau had a jack 5lb. 2oz.; and other takes of about 2lb. or 3lb. came to the scales. A match will be fished on the 9th inst., at Twickenham, between four members, two in a punt—Mr. Wilson (or "Speed") and Mr. Boisseau against Mr. Favell and Mr. Maslin. Hope to see a good number witness the "weighing-in." A remarkable incident occurred to me at Weybridge on the 2nd inst. Not getting any "knocks" in the swim I had selected, I placed my rod on the bank and went to see how my friends were getting on; on returning I found that a robin had taken the gentle left on the hook. The poor little thing was in a terrible flutter on being handled, but by using the wire disgorger (which, by the way, I think quite supersedes the bone), I managed to remove the hook from its stomach without the slightest injury, and with a "twit, twit, twit," it disappeared in the opposite bushes.—W. Maslin, sec.

### THE CLAPTON.

The usual weekly meeting was held on Monday last, Mr. C. B. Parry in the chair. The minutes of the preceding meeting were read, approved, and signed. The secretary reported that those members who had arranged for a trip to Suffolk with him were prevented from so doing, only he and one member going down by the first train on Saturday, and returning by the first train on Monday. The secretary gave an account of the trip, which he and his friend enjoyed thoroughly. The private lake which they had the privilege to fish being a grand fishing spot, one jack, some bream, and an innumerable quantity of roach being taken. Much amusement was caused by the description of the "fisherman" who accompanied them in a sort of man-of-war boat. He numbered 80 years of age, 40 of which he had been keeper for "the reverend," the owner of the lake and surrounding lands. He, with pride, referred to bream of 9lb., perch of 5lb., roach of 3lb., and pike of 26lb., taken by him in that lake. His tackle comprised a rod, the bottom joint of an old jack rod, a long stick, and the top joint, the rib of an umbrella, line quite as crude, and fishing at a depth of 20ft., necessitated the rod being thrown back over the shoulder and then jerked forward, the result being the line going into the water like a small rope, and the top of the rod also bobbing in and out of the water. The butt of the rod was then fastened under a piece of string across the seat of the boat, and then the "fisherman" settled down to his work of watching the float, and smoking furiously. You may fancy our wonder at gazing on such a man and tackle capturing the splendid specimens before referred to. By inquiry, we found his statements to be thoroughly correct. We fished the river next day, and got about a dozen jack, but some were very small and had to be returned, much to the regret of the fisherman, who expressed himself thus: "Darn the critters," "I always kills 'em," "The river's too full of 'em," "They eats up too many of the other fish," "Don't'e throw that one back, Sir," &c., &c. This was my third visit to this water. I can report it as full of fish, and I can further report a really good, clean, comfortable (to the letter) old hostelry, with as obliging and attentive a landlord as I ever came across; an exceptionally good caterer, and a very reasonable tariff. Anyone wanting good jack or perch fishing let him go to Bures, in Suffolk. Prior to so doing write to Mr. Cousins, the Queen's Head, where he will get permission for angling, and I can promise good sport and thorough enjoyment. Mr. Graham Bennett had two small jack from Day's water, and Mr. Kidd roach and dace from the same place. A splendid jack of 17½lb. was taken there last week. A vote of thanks to the chairman closed the proceedings.—Henry Howse, hon. sec.

### COBDEN ANGLING SOCIETY.

A peg-down match took place in the running-pound at Uxbridge, on Nov. 2nd. There was a very good muster of members; between 20 and 30 started at a given signal, and left off fishing at 5 p.m. They had very poor sport, but still, the prizes were all taken, the result being as follows—namely, Messrs. Simmons, 1st; Sharland, 2nd; G. Jenkins, 3rd; Green, 4th; Baker, 5th.—C. Reeves, sec.

### EASTERN COUNTIES' ANGLING SOCIETY, GREAT YARMOUTH.

A meeting of this society was held at the Duke's Head Hotel, on Tuesday evening, the 4th inst.; the president, Dr. Mitchell, being in the chair. In accordance with instructions given them at the last meeting, the auditors and secretaries went over the accounts. The result of their audit proves highly satisfactory to the society, which now, although but four months old, numbers over 100 members, many of whom being the most representative gentlemen in the district. After paying all expenses, we find there is the considerable sum of £10 9s. 3d. left in the hands of the treasurer, Mr. Brasnett. We think no better proof could be adduced of the want felt in our neighbourhood of such a society as this, properly conducted by gentlemen interested in piscatorial matters, than the advance made and success achieved by it in the few months it has been established, and it is hoped that by the inducements offered in the shape of prizes, &c., that greater numbers will still join. All gentlemen wishing to become members will, by sending their names to either of the secretaries: Mr. John Lee, 9, Kent-place, or Mr. Seaman, Duke's Head Hotel, be proposed and elected according to the rules of the society; and anyone joining on or before Monday evening, the 10th inst., will be competent to compete at the next contest. It was proposed by Dr. Mitchell, and seconded by Mr. Freeman, and carried, that, in addition to the prizes already offered, the society, out of its funds, should give a fourth, to the value of £2 2s. A special meeting, to which all members are earnestly invited to attend, will be held on Monday evening, the 10th inst., to make arrangements as to time, place, &c., and to enter names for the next angling tournament, for pike and perch only, which is to be fished on Thursday, the 13th inst.; as we anticipate a large and influential contest, intended competitors will please enter their names early. By the way, touching matters piscatorial, Mr. Lowne, Fuller's-hill, naturalist to the society, will next week have on show in his window, a large collection of beautifully stuffed specimen fish. The time occupied in viewing his display will be most profitably spent, as such a sight has never been seen in Yarmouth. Amongst other fish, there is a pike which scaled over 25lb., and several large perch, bream, tench, rudd, and roach. The greatest credit is due to Mr. Lowne for the amount of perseverance and energy he has applied to the study of the beautiful profession he has chosen.—A. M.

### GLOBE ANGLING SOCIETY.

On the 2nd inst. the following members weighed in:—Mr. S. Howell, roach and dace, 6lb. 1oz.; Mr. J. J. Holmes, roach and dace, 3lb.; Mr. G. Jeffries, one small jack, 2lb. 2oz.; Mr. H. Lake, roach, 1lb.; Mr. J. Lawrence, roach, 1lb.; and Messrs. A. Harris and G. Brown, roach and jack, too late to weigh in.—J. J. Holmes, sec.

### GOLDEN BARBEL.

On the 26th ult., the members of the above competed for several prizes at Windsor; the following is the result: First, J. Roach, with dace, perch, and gudgeon; second, G. Bigsby, roach; third, J. Jones, roach. Messrs. Chapman, Kemp, Crowe, and Stanton exhibited roach, perch, dace, and gudgeon. On the 30th Messrs. F. Kemp and Drury fished in the tidal water, and managed to get 26lb. of nice roach and dace in a short time; five of the roach turned the scale at 5lb. On the 2nd inst., Mr. Harper had roach and dace from the Thames. Messrs. Chapman, Bigsby, Hall, J. Jones, Shore, succeeded in getting a very nice show of roach and perch from the Grand Junction Canal. Messrs. J. Green and J. Stanton added roach and dace from the Upper Thomes to the exhibits of the evening.—Pixie.

### GOOD INTENT ANGLING SOCIETY.

There was a capital show of fish at our club on the 2nd inst., Mr. W. Snook with handsome roach and dace, Mr. J. Bell capital roach, Mr. Devon roach, Mr. Maybury roach, Mr. Haines roach, Mr. Hewett perch, Mr. W. Wheeler good dace, Mr. Gadbury jack, Mr. Pullham jack, and Mr. Philpott jack. The members will fish a pegged-down match for ten prizes, at Ware, on the 16th inst.—R. Murphy.

### GRANGE ANGLING SOCIETY.

On the 31st ult. Messrs. S. Jones and W. Kayes weighed in a fine show of fish, mainly consisting of rudd, with the exception of a couple of tench which had been caught by Mr. Jones, and although the whole of his catch had been carelessly thrown into his basket and carried a distance of thirty miles, it was found on arrival at the clubhouse, some five hours after, that the tench still showed signs of life. Mr. J. H. Rich (one of the members) noticing this, determined he would try if possible to bring them into full life. He, therefore, gave them a little brandy and a few breadcrumbs and put them into water for a few minutes, with the result that they began rapidly to revive. Mr. Rich then took them out of the water and gave them a little more brandy, finally placing them in his aquarium, where they are now in full health.—W. Kayes, hon. sec.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening at the Masons' Hall Tavern, Masons-avenue, Basinghall-street. Mr. Crumplen presided, and the society's large hall was completely filled with members and friends. Being a special musical night, the business of the evening was quickly despatched; the minutes having been read and confirmed. Captain Alfred proposed, and Mr. Bentley seconded, Mr. G. Fitzhardinge Rose as a member of the society. The ballot for this gentleman will take place in accordance with the society's rules on the 18th inst. Mr. Rose, as an earnest of what is to be expected of him in the future, weighed in a magnificent pike, in splendid condition, and weighing 26lb. Captain Alfred informed the meeting that Mr. Rose was willing to present this excellent specimen to the society, an offer which was readily accepted with the best of thanks. It will be set-up, and added to the society's already numerous collection. The Chairman reminded the meeting that Tuesday next was the day fixed for the pike competition; two good prizes are offered, the first a valuable bull-pup, given by Mr. Ellis; and the second, a jack rod, by Mr. Bentley. Very keen competition is expected, as a great number of members have signified their intention of taking part in the contest. The business having been concluded, the lighter portion of the evening was opened by an excellent pianoforte solo by Mr. Winterbottom, who, with Mr. Brown, ably managed the accompaniments during the evening. Both of these gentlemen sang several songs, which were very well received. The honours of the evening, however, fell to Mr. Wheeldon, whose musical contributions, and humorous as well as interesting account of his recent visit to the North, called forth the highest encomiums. Dr. Defriez gave two very nice songs; and other *morceaux*, all of equal excellence, were contributed by Messrs. Lake, Sheen, Beck, Salmon, Harris, King, and Belfont. Mr. Warren gave an excellent rendering of one of Mr. G. R. Sims' pathetic effusions, and violin solos and duets were executed in a manner which astonished the hearers by the youthful Masters Wellsted. Especial mention must be made of Messrs. Marsh and Nicholls, whose pianoforte duets added greatly to the pleasure of the evening. The meeting was brought to a happy termination by votes of thanks to the chairman and gentlemen who had done so much towards the success of the evening, both vocally and instrumentally. The toast of "The Visitors" met with cordial reception, and was most happily responded to.—H.

### GREAT YARMOUTH PISCATORIAL SOCIETY.

Much satisfaction was shown on Tuesday at the meeting of the society when Mr. Pretty was presented with the prize awarded him by the referee on Thursday's competition, more especially when he could have claimed it on a previous occasion when no weight was stipulated, only sizeable fish; and it would be well in future to make certain restrictions as to weight, as well as length. So the bottom-fishing is ended for the time being; but thanks to the generosity of both president and vice, we shall have a jack contest next week, the first being a cup from Mr. D. S. Bayfield, who, by the way, has just been elected at the head of the poll to the honour of councilman, representing Regent Ward in this centre of fresh and salt water fisheries town; the second prize is from Captain Blake, Vice-Commodore N. and S.Y. Club, to be used by the winner in purchasing fishing tackle, and it will be decided on Tuesday which of the remaining prizes will be used for 3rd or 4th. Should the weather hold fine I may have the pleasure of sending you the report of some good catches.—J. Lark.

### HIGHBURY ANGLING SOCIETY.

Several of our members have had some excellent sport this week, the result showing a weighing of nearly 50lb. of jack, barbel, chub, roach, and dace, the principal contributors being Messrs. H. Temple, White, Shipley, Devonshire, C. Lewis, Anthony, and Highley.—J. E. Wheatley, sec.

### HOXTON BROTHERS ANGLING SOCIETY.

A good show of fish in the club-room on the 2nd inst., and a fair attendance of members. Mr. J. Osborne had 38lb. of splendid perch, and a friend (not a member) who accompanied him, had about 16lb. of roach; Mr. A. Dean, 9¾lb. of roach; Messrs. Hattemore and W. Midson also had roach; H. Steadman, chub; E. Harris, jack, 6lb. 2½oz.; J. Morgan, jack, 9lb. 9½oz.—R. Ghurney.

### LINCOLN ANGLING SOCIETY.

Our members went out on the 2nd inst. to fish for two prizes. A splendid show of roach, dace, bream, and jack was brought in. Mr. Embleton won the first prize, and Mr. Ulph the second, both of whom brought in heavy shows. Mr. Shee brought in from Weybridge a fine show of roach and one jack, weighing 2lb. 7oz.; Mr. H. Blyth, one jack, 2lb. 5oz., and a good show of roach from Bourne End; Mr. Pearce, dace and roach from Richmond; Mr. Johnson, dace only.—H. Bingle, sec.

### NORTH-EASTERN ANGLING SOCIETY.

Only two or three members out on the 2nd inst.; sport meagre. Mr. Savage had a singular roach from the Lea, with an enormously extended stomach; size of fish, 13¼in. long; 11¼in. in girth; weight, 1lb. 11oz. Gone to Cooper's; will be on view at the club when finished.—G. T. Fletcher.

### PECKHAM BROTHERS ANGLING SOCIETY.

The following gentlemen were the winners of the club prizes on the 2nd inst.:—Messrs. Parsons, Gafney, and Stidolph. A match for the cup on the 16th, at St. Margaret's, usual conditions. Our dinner on the 3rd inst. was a grand success, and the members of the P.B.A.S. desire to return their thanks to those gentlemen that favoured them with their company—"good old Second Surrey"; also to Mr. R. Rayment for his kindness in lending such a handsome lot of flowers and ferns for the room, and also the staircase. An abler pen than mine will report the speeches, &c.—Gadfly.

### THE PISCATORIAL SOCIETY.

The perch competition and the usual weekly meeting of this society took place on Monday evening last at Ashley's Hotel, Covent Garden, there being a very numerous attendance of members present. Mr. D. Goodger was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed. The chairman reminded the members that he had some fine photographic albums belonging to the society, and asked those members who had not already forwarded their portraits to do so for insertion in same. The hon. sec. announced there would be no returns of any monies subscribed *re* the Heigham Sounds case, as the greater portion had been expended, and the balance handed over to those legally claiming it. Our first smoking concert takes place on Monday next; the programme will commence at 8.30 precisely. Mr. Harrisson has consented to take the chair, and will not wait! The following candidates for admission to this society were now balloted for:—Mr. J. Hollams, jun., proposed by the hon. sec., seconded by the hon. treasurer; Mr. Thomas Aldridge, proposed by Mr. Arter, seconded by the hon. treasurer; Mr. George Watson, proposed by Mr. Arter, seconded by Mr. Phillips. The chairman announced that all these gentlemen had been unanimously elected, an announcement which was received with loud cheers, and the healths of the new members drank with enthusiasm. There was a splendid show of fish, our tables being literally covered. About 11 o'clock the competitors had all returned, and the following fish were shown:—Mr. G. Robinson, 14lb. 4oz. perch; Mr. Wright, 10lb. perch; and these gentlemen were respectively declared winners of the first and second prizes of the competition. Several of our members tried the Thames; but although they could take plenty of perch, failed to get them large enough to be shown on our tables, nothing under ½lb. being eligible. The following fish were also on the tables:—A tray containing a fine show of roach, about 20lb., by Mr. Fennings, and one pike and three chub by the same gentleman; a fine tray of eight Thames chub by Mr. Lemann, the largest between 3lb. and 4lb.; a tray with 27lb. of pike by Mr. Robinson; a large tray of roach over 30lb. by Messrs. Wright and Robinson. The above gentlemen were all toasted as successful anglers, and each gave suitable replies, the utmost cordiality and good feeling existing throughout the proceedings. Our friend, Wheeldon, fresh back from his salmon fishing, was again amongst us, and gave a most amusing and graphic description of his fishing at Crieff. Sport was not good—he took two fish 10lb. and 13lb., and hooked another, which he saw, and which was at least 30lb. in weight, and nearly killed the fish; the gillie unfortunately gaffed the fish upwards, broke the gaff, and the fish ultimately escaped. Mr. Hodson related his experiences of a week's fishing at Killaloe, which were listened to with deserved attention. He engaged a professional fisherman for the week, and succeeded in taking 140 trout and two salmon. Mr. Sachs gave some reminiscences of a lost diamond; but several of the members did not seem inclined to give entire attention, as the remarks were not of piscatorial interest. The chairman proposed "The Continued Success of the Piscatorial Society," which was responded to in the usual manner. "The Health of Mr. Goodger," who had carried out the duties of the chairman in a thoroughly efficient manner, was next proposed, and with a few suitable remarks the last of our competitions for 1884 and the usual business of the evening was brought to a close.—T. H.

### RICHMOND PISCATORIAL SOCIETY.

This society held its weekly meeting at the Station Hotel on Wednesday, Mr. A. J. Little in the chair, Mr. H. Dickinson in the vice chair. Mr. E. H. Smith weighed in a large number of barbel, the largest a very handsome fish of 7¾lb. in good condition. The chairman congratulated Mr. Smith upon his success, and requested him to state where the fish were captured. Mr. Smith said they were all caught at Datchet, fishing with J. Hoare (a fisherman he could speak of very highly, with whom he always fished). In three days he had caught over a hundredweight of barbel, the swims being baited by Hoare with worms from the neighbourhood, for which no extra charge was made. Mr. Smith concluded by highly eulogising the up river fishing in preference to the tideways. This, of course, raised many dissentient voices, tideway enthusiasts contending that as good roach, barbel, carp, and better dace fishing could be obtained in the tideway than in the upper reaches of the river. The chairman remarked that the only test was to fish on the same day for the same class of fish; that although Mr. Smith had been very successful with the barbel, no one had been recently baiting in the tideway, and as to the sizes of fish, he reminded the members that Coxen had taken two, with his patrons, over 8lb.; and Mr. Temple, spinning at Teddington Weir, during the close season, had caught two barbel, 13lb. and 10lb. respectively, not forgetting Mr. Blamey's eighty-eight fish in one day. These observations immediately induced Mr. Smith to contribute one guinea to a roach competition, to be fished on the Thames, on December 10. No roach less than 8in. to weigh. Other subscriptions followed, and several members entered, the entrance fees, 2s. 6d., going to the prize fund, and a portion to the funds of the society. The chairman reported the capture of several pike in the deeps at Twickenham, and reminded members that the smoking concert would take place on Wednesday, punctually at 8.15, as there was a very long programme.

### RODNEY PISCATORIALS.

On the 3nd inst., several of the members weighed in their first show for the gross weight for November. Mr. C. A. Grant came first, with roach and perch; Mr. R. Smith, second, with bream; third, Mr. Bastock, with perch from the Lea. Messrs. Dodd, Chantry, and Co., visited the Thames, but their takes were small. Members wishing to visit Tunbridge on the 16th at the reduced fare are requested to send in their names as early as possible before the 12th. All members are requested to attend on Wednesday evening next, November 12th, to consider a charge made against a member of this society.—Pixie.

### ROYAL GEORGE ANGLING SOCIETY.

A considerable number of the members of the above society went out on the 2nd inst., to fish for a cup given by Mr. Carter, for the gross weight of roach from the bank. It was won by Mr. Palmer, as was also a prize given by Mr. Hughes for the largest roach. Mr. Holden followed him very close with 5lb. 2oz. of very handsome roach. Mr. Sinclair and others had some nice fish. Mr. Hewitt had a nice show of roach and dace, something over 12lb. from the Lower Thames on Tuesday. Members are requested to be early in attendance at the concert next Tuesday night, also to bring friends with them, when they will be welcomed by—W. H. Rider.

### SOUTH LONDON UNITED.

The members of this society mustered rather stronger than was anticipated at the Angler's Pride, held at Mr. Bates's, White Hart, Old Kent-road, on the 5th inst. The musical abilities of the members were well displayed as long as the time would permit. Among those who contributed were Messrs. Austin, Grant, Smith, Tyler, Richardson, &c. A gentleman sang "The Shoeblack Boy," which called forth much applause. Previous to the roll being called, Mr. Allen stated that he was happy to say these visits had proved a great success, and he hoped that they always would do. He wished secretaries to bear in mind that to insure a visit that it was necessary for their respective societies to be represented at the visit previous to their own. Societies not doing so will lose their visit, which will go to the next society on the list. Societies that have not received the new list of societies enrolled on the visiting list of the South London United, are requested to communicate with Mr. Allen, Trothy-road, Bermondsey, who will forward a list to all societies entitled to receive them. The next visit will go to the Excelsior, the Hope, Bird-street, Kennington, the date of which will be given shortly. In consequence of the South Eastern having lost their visit, it was suggested that a complimentary visit be paid to them, as it was not entirely their fault that they did not receive a notice as to the date of the Wellington visit. This met with the approval of all members present, and it now only remains for Mr. Weston to state the date when it will be convenient for the South London United to pay a visit to the South Eastern, held at Mr. J. Frith's, the George, George-street, Blackfriars.—Pixie.

### SOUTH-EASTERN ANGLING SOCIETY.

Some fourteen of our members were out on the 2nd inst. at Ware, to fish for the three remaining prizes from the last contest at Pangbourne a month since, and the winners were as follows:—Mr. F. Allard, 1st; Mr. Sherman, 2nd; Mr. Westoby, 3rd. Some others weighing in, but the catches being small, owing to little water and its brightness. Our meeting on Tuesday the 4th was fairly attended, but at a late hour. I do hope our members will please attend more punctually to time. The challenge from the Busy B's was discussed, but owing to the absence of Mr. Keeble could not be thoroughly gone into. Should he not accept, our friend, Mr. Barrett, can be otherwise accommodated, I have no doubt, on behalf of others.—T. H. H. Weston, sec.

### STAINES ANGLING CLUB.

The members of the above club, numbering twelve, fished a match on the 2nd inst. for a prize, Mr. A. Palmer being the successful candidate by a fine bream.—F. Sykes, sec.

### STANLEY ANGLERS SOCIETY.

I beg to forward you the weights of fish taken by members of this society during the last fortnight. Mr. Ellis, thirty-one roach, 13lb. 10½oz.; Mr. D. M. Humby, two roach, 1lb. 11oz., one fish 1lb. 4¾oz; Mr. W. R. Humby, twenty-four roach, 10lb. 6oz.; twelve dace, 3lb. 11¾oz.; nine roach, 3lb. 9½oz.; two dace, 8¼oz.; Mr. C. Scull, twelve roach, 6lb. 5¼oz., one fish, 1lb. 14oz.; four dace, 1lb. 1½oz., twenty-six roach, 12lb. 15¼oz.; one fish, 1lb. 7½oz.; fourteen dace, 4lb. 13¼oz.; one fish, 8¾oz., and two ditto 8oz. each; Mr. C. P. Wheatstone, eight perch, 2lb. 15oz.; thirteen roach, 5lb. 4¼oz.; one perch, 1lb. 6oz.; Mr. A. F. Wrightson, thirty-three roach, 21lb. 7½oz.; two perch, 1lb. 6oz.; one jack, 2lb. ½oz.; two jack, 9lb. 11oz.; five perch, 3lb. 13oz.; one roach, 10¾oz.; four perch, 3lb. 9¼oz.: four roach, 2lb. 3½oz.; two perch, 1lb. 9¾oz.; three tench, 11lb. 9½oz.; four rudd, 6lb.; one fish, 1lb. 14½oz.; one fish, 1lb. 13½oz.; one tench, 4lb. 13½oz.; five roach, 8lb. 12oz.; one fish, 2lb.; one ditto, 1lb. 12½oz.; one ditto, 1lb. 12oz.; one ditto, 1lb. 10½oz,; one ditto, 1lb. 8¼oz. The society is to be congratulated upon possessing among their members two such energetic men as Mr. Scull and Mr. Wrightson, the latter gentleman's perseverance having been rewarded by some splendid specimen fish. We have at last received our diploma from Fisheries Exhibition, and certainly the document was well worth waiting for, as all the members who have seen it are highly gratified with it.—G. E. W.

### UNITED BROTHERS, DEPTFORD.

Not many of our members have been out lately; but I expect to see some out on the 9th inst. On October 26th, Mr. J. Payne, bream and roach; and on November 2nd, bream.—H. Tyler.

### WELLINGTON.

On the 31st October Mr. Hopkins weighed in roach 1lb. 13½oz., and barbel 6lb. 13½oz.; total, 8lb. 11oz., thus at the last moment winning the first barbel prize for August, September, and October (presented by Mr. George Mayo) with 18lb. 9¼oz. Mr. Charles Newbury will take the second prize (presented by Mr. Frank Keene) with 16lb. 12oz. On the 2nd inst. we had a very poor show, only four members weighing in a few roach. On Wednesday evening Mr. Isaac Jackson was balloted for and duly elected, and two new members were proposed and seconded. Donors who have not yet sent their prizes in will oblige by letting them be in the hands of the society not later than Wednesday, the 3rd December.—W. W. Alexander, sec.

### WESTBOURNE PARK PISCATORIAL SOCIETY.

The weekly meeting of this society took place as usual on Tuesday evening at the Pelican Hotel, Westbourne Park, Mr. R. F. Lines occupying the chair. After confirmation of the previous minutes, the secretary read out the fish captured and weighed in during the week, notably a pike, by Mr. T. Oatley, of 10½lb., in addition to a handsome show of roach up to 1lb. each in weight. Mr. H. Thompson also had a good take of roach, eight of the best fish weighing 7lb. Mr. Adeane had an afternoon at Godfrey's Water, West Drayton, and was a very short time securing eight pretty perch of ½lb. each. The Thames competition of this society will take place on the 16th inst., so that members intending to compete should enter their names with the secretary at the next meeting (Tuesday).

## ANNUAL DINNER OF THE NORWICH ANGLING CLUB.

Among the many angling societies that Norwich boasts, the Norwich Angling Club takes high rank; in fact, it has become one of the institutions of the city, thanks to the admirable management of Mr. R. Moll, the secretary and local piscatorial historian, aided by an influential committee. The annual dinner of the club was celebrated on Tuesday evening, October 28th, at headquarters, Mr. E. H. Corbyn's, the Walnut Shades, Market-place, and a goodly number of members sat down to a first-class repast, capitally served by the worthy host. The chair was again occupied by the president, Mr. G. Diggens, with his accustomed geniality, and the company included Councillors J. S. Offord and S. Matthews, Messrs. I. O. H. Taylor, F.R.H.S., J. B. Pearce, A. L. Littleboy, G. Daniels, J. J. Hunt, C. Fendick, T. E. Gunn, F.L.S., G. G. Whincop, E. E. Southall, O. E. Winter, A. E. Bunnett, C. J. Campling, F. Ellingham, C. Daniels, S. F. Howitt, J. W. Wilkins, J. L'Estrange, A. Bush, M. J. Bailey, W. Burrage, B. Beatley, J. D. Beeston, H. Wilkinson, E. H. Corbyn, R. Moll (hon. sec.), W. Mace, &c. Mr. C. J. Greene occupied the vice-chair. The room was nicely adorned by Mr. T. E. Gunn with a choice selection of cases of preserved specimens of fish-eating birds.

A liberal dessert was placed upon the table by the president, and while this was being partaken of the president proposed the loyal toasts, which were received very heartily.

The Vice-President (Mr. Greene) proposed "The Health of the President," and said that those who knew him most respected him the best, and those who were not acquainted with him certainly ought to know him. For several years he had been their president, and he (Mr. Greene) hoped he would long remain in that position, for he not only contributed to the enjoyment of their annual gatherings, but he offered handsome prizes for competition. (Cheers and musical honours, Mr. Beeston afterwards singing an original song composed by himself in praise of pike fishing.)

The President, in responding, said he was amply repaid if in his office he had gained the approval of the members of the club. He had been president for a number of years, and he had always met with the greatest kindness from all with whom he came in contact, and he was always happy to promote their enjoyment as much as possible. (Hear, hear.) Before he resumed his seat he should like to give "The Health of the Vice-President," without whose ready assistance there would, he believed, have been no Norwich Angling Club. If any members wanted advice as to the best bait to use or the best waters to fish in he was sure Mr. Greene was ready to render them every information. (Cheers and musical honours.)

The Vice-President, in reply, said if he was the father of the Norwich Angling Club he was very proud of his children, and he was always pleased when in competitions they beat an old fisherman like himself. (Hear, hear.) The club was rightly, he thought, confined to thirty members, and there were no vacancies, or he believed they might enlist twenty anglers in the space of a week. (Cheers.)

Mr. I. O. H. Taylor proposed "The Norwich Angling Club," and said he took a great interest in the prosperity of angling, although he was not able to go out upon the water himself. The city owed societies like this a debt of gratitude for enabling men to gather together to enjoy legitimate sport. The work of the Yare Preservation Society had been a grand one in preserving the fish in our magnificent waters so as to enable sportsmen from a distance to come here and gratify their inclination. (Hear, hear.) Norfolk and Norwich men might well be proud of their broads and rivers, from which not only good sport was obtained, but about which most delightful scenery was to be found. (Hear, hear.) The pursuit of angling brought men together in one bond of good fellowship, and it was this social feeling that ought to be more cultivated in the city of Norwich. (Hear, hear.) With the toast he coupled the name of Mr. Moll, the indefatigable hon. secretary, who worked well and had contributed greatly not merely to the success of that club, but to the promotion of the innocent and healthful science of angling. (Applause.)

Mr. Moll, in response, said this was the ninth occasion on which he had had to acknowledge this toast, and traced the progress of the club upwards from the time when they could only offer £4 15s. in prizes to the present, when they gave £26. (Applause.) The deaths of members had been very few, and nearly all the withdrawals that had taken place were owing to the fact that gentlemen had removed from the city. He alluded with satisfaction to the circumstance that the club had adopted the suggestion of Mr. Pearce that no fish should be taken by the members that were under six inches in length, and said that though at their last competition they caught 11 stone weight, not one of them was below that size. (Applause.) During the winter season some interesting papers would be read by various members, and the first would be supplied by Mr. Beeston on the first Tuesday in December. (Cheers.)

Mr. Beeston offered the toast of "The Yare Preservation Society and Local Angling Clubs," and fully acknowledged the great service the former had rendered in securing good sport for sportsmen. (Hear, hear.)

The Vice-President, as secretary of the Y.P.S., responded, and said he should like to see every anglers' club in Norwich follow the example of that which he was now addressing and give an annual subscription to the Y.P.S. funds. (Hear, hear.)

Mr. G. G. Whincop (secretary of the Champion Angling Club) also responded, and alluded to the great loss his society had sustained by the death of Mr. Chettleburgh. (Hear, hear.) His club, like the Norwich Angling, subscribed to the Y.P.S., and since he had taken the secretaryship he should endeavour to keep it in its present satisfactory condition. Having alluded to the destruction of fish that was caused lately by the salt water coming up as far as Brundall, he said that no steps could be taken to avert this, but it was a matter of regret nevertheless. (Hear, hear).

Mr. C. Daniels (President of the Norwich Piscatorial Society) also replied, and said the work done by the N.A.C. was duly appreciated. (Hear, hear.) He then gave the health of "The Visitors," who were always welcome at their meetings, and coupled with the toast the names of Mr. I. O. H. Taylor, who was a man of large heart, keen wit, and wide sympathies, and Mr. C. J. Campling, who was always ready to contribute to the harmony of their gatherings. (Cheers.)

Mr. Taylor responded, and in the course of his remarks alluded humorously to the successful experiments made by Mr. Oldham Chambers in restoring fish to liveliness by the administration of a few drops of brandy. (Laughter and applause.)

Mr. Campling and Mr. Councillor Offord also replied, and

Mr. T. E. Gunn proposed "The Host and Hostess," for whom Mr. E. H. Corbyn responded.

Mr. R. Moll gave "The Press," which was acknowledged by Mr. E. J. Lord (*Norwich Argus*); and the last toast, "The Ladies," was given by Mr. M. J. Bailey, Mr. Beatley and Mr. D. Fendick responding.

During the evening Mr. A. E. Bunnett contributed some pleasing pianoforte selections, and there was some good singing by Messrs. Bush, Campling, Offord, and others.

THE
GREAT REMEDY
For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. KING'S
Fish Preservative.
For the Preservation with all their Sheen and Brightness, and Improvement, of Minnows, Dace, Roach and other Natural Baits, and for general use in the Piscatorial Museum.
Highly recommended by the Editor of the Fishing Gazette, "A.R.I.E.L.," and other leading Anglers.
**In Packets, 6d. and 1s. each; by post, 8 and 16 Stamps.**

King's Natural Bait.
Acknowledged to be the most successful known for all bottom fish, seldom failing to ensure a heavy creel.
Anglers are respectfully cautioned to avoid imitations of this Bait, as it is a notorious fact that no sooner has an article proved itself of sterling value, than a host of imitators are ready with "something as good, or even better," by which they entrap the unwary.
Certainly this may be "the sincerest form of flattery," but it is not one that commends itself to the fair-dealing man, nor does it pay the inventor of the genuine article.
THE NATURAL BAIT
Is now Sold by all Tackle Dealers
**In Packets, 3d., 6d., and 1s. each;**
AND BY
**Wm. KING,**

NOW READY, and may be had at all Railway Stalls and Booksellers.

## *AN AMATEUR ANGLER'S*

# DAYS in DOVEDALE.

Imperial 32mo. Printed by Whittingham, Chiswick Press. Fancy Boards, 1s. ; Limp Leather, Cloth Gilt Edges, 1s. 6d. ⁂ Also a LARGE-PAPER EDITION, printed on hand-made paper, parchment binding (100 only printed), 5s. Very few of this 5s. edition remain.

### SHORT EXTRACTS FROM REVIEWS.

**The Athenæum** says :—"This is an amusing little book, written with much brightness and considerable literary skill."

**The Daily News** says :—"Herein is the charm of the book. . . . For an amateur, he certainly saturates you thoroughly with true Dovedale flavour."

**The Field** says :—"Anyhow the result of the Dovedale holidays is a delightful pocket companion. The principal charm of the little work is that it will be equaly interesting to anglers and non-anglers."

**The World** says :—"Not merely by brethren of the rod, but by all who appreciate Nature in her prettiest haunts it will be found pleasant reading."

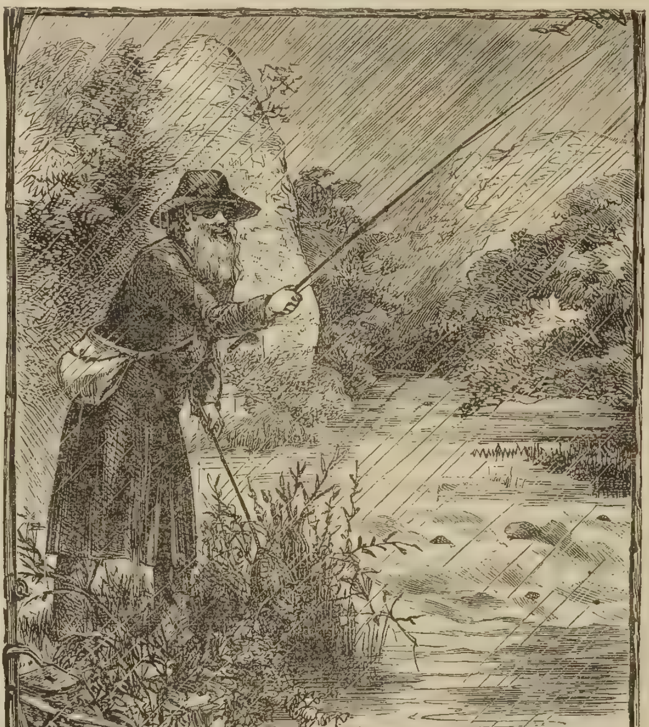
**The Graphic** says :—"Written in a charming spirit, with plenty of quiet humour in it."

**The St. James's Gazette** :—"Every page of it is good—a bright little volume. Worthy of gracious acceptances from all sorts and conditions of readers."

**The Pall Mall Gazette** :—"This is a pleasant book to read 'now that the fields are dank and ways are mire.'"

**The Whitehall Review** :—"This is one of the most charming little books we have met with for some time."

**The St. Stephen's Review** :—"No more charming little work than this has been published for many a day."



**The Illustrated News** says :—"This charming bit of personal narrative. . . will certainly be preserved on many a shelf where Izaak Walton and Charles Cotton hold the most honoured place."

**The Bookseller** :—"A dainty little volume. . . . . The author tells in a most charmingly simple style. . . . There is much quiet humour in the book. . . The dedication is a little gem in its way."

**The Sunday Times** says :—One of those charming little *quasi-extempore* books . . . We have enjoyed a very pleasant hour in reading."

**Army and Navy Gazette** :—"A very pleasant little book."

**Daily Chronicle** :—"An entertaining little book."

**Civil Service Gazette** :—"This charming and interesting little book."

**The Literary World** :—"Others besides anglers will read with interest this pleasant record of a holiday."

**Lloyd's Weekly** :—"A genial, pleasant little book, written in the happiest vein."

**The Publishers' Circular** :—"All lovers of this picturesque scenery will welcome this fresh and natural tribute to its merits."

**The Derby Mercury** says :—"We have read no pleasanter book of its kind. . . Always genial, sometimes humorous, sometimes thoughtful, sometimes playful, and invariably readable, displaying, though without parade, the signs of considerable culture."

**Exeter and Plymouth Gazette** :—"This is not the sort of bookmaker that the critic impales upon his hook. We hail him as the pleasant companion whose pleasant chat and merry companionship will beguile," &c.

**Our Solitary Sour Critic** : — "After tediously wading through the eighty odd pages. . . . one fully appreciates the author's apology for having wearied the reader. . . . We fail to find anything new, anything interesting, informing, or amusing."—*Bristol Mercury*.

*Either edition will be sent post paid on receipt of the price named above.*

# Hoge's Horehound Honey.

WHAT is known as the "Bee Belt" of Southern California is one continuous bed of honey-bloom, one sweet bee-garden throughout its entire length ; but there is one part of it which the plough has not yet invaded, that is the region where the Horehound plant flourishes in one glorious blaze of purple and gold. The tropical luxuriance of these plants is so profuse that they brush against the feet at every step, and close over them as if you were wading in liquid gold. The air is sweet with its fragrance, and tuneful with the humming wings of the bees gathering this precious panacea ; this honey-full horehound is a great favourite with the bees, and is one perpetual feast for them. They revel in its bloom long after the flowers of other countries have withered and gone to seed. A single plant will, at times, be visited by a whole hive of bees at once ; the grand hum of such a multitude of wings impresses the listener with the fact that the winning of more than ordinary honey is going on. The product of a dozen or two of these plants is sufficient for the wants of a whole hive. In this perfect paradise for bees the petals of the continuous sheet of blooms drink in the vital sunbeams, and the bees hug this favourite flower with profound cordiality, and push their blunt, polleny faces against them, like babies on their mother's bosom ; and fondly too, with eternal love, does Mother Nature clasp her small bee babies and suckle them, multitudes at once, on her warm Californian breast. The Horehound Honey so gathered by these little almoners of Nature is put up in bottles, and retailed by all Chemists, &c., at 1s. 1½d. each.

W. L. Bright, Esq., son of the Right Hon. John Bright, M.P., says :—"Hoge's Horehound Honey cured his father of a bad cough."

## FISHING RODS—AND TACKLE.

### BULMER'S "FISHING GAZETTE" GOSSAMER GUT LINES,

Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—FISHING GAZETTE Notice, September 18, 1883.

See also notices in the FISHING GAZETTE for Dec. 17, 1881 ; June 28th, 1882 ; July 1, 1882 ; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d. FISHING GAZETTE Gossamer Gut, Tapered, 8d each ; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d. and 1s. 6d. ; prepared ditto, 20 yards, 1s. ; stout, 1d. a yard ; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d. ; Gossamer Gut, 12in., 3s. 6d. ; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz. ; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal, 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen ; Treble ditto, 2d. each. Pennel Snaps, 2½d. ; Jardine, 3½d. each ; Gut or Gimp Spinning Flights, 6d. each ; Spoon Baits (Jack's size), 9d. each ; Gut and Gimp Traces, 6d. each, FISHING GAZETTE Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d. ; ditto Twisted Gut, stout or fine, 1s. each ; 3in. Jack Float, 6d.

WINCHES. — Nottingham, from 6d. ; Brass, from 8d.

HEATON'S PATENT REELS, "Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ¾in., 1s. 6d.

Rods made to order or fitted with screw-joint ferrules.

Price List free on application.

Postage extra on all orders, and all must be accompanied by a remittance.

All goods marked in plain figures.

**A. BULMER, 62, WANDSWORTH ROAD, S.W.,**

Corner of Nine Elms Lane.
Three minutes' walk from Vauxhall Station.

## LIVE GOLD AND SILVER FISH.

Agents wanted to Sell to Fishmongers, Florists, Naturalists, China and Glass Dealers. Easy sale, no opposition, good profit, never pushed before. Send 7s. for seven fine sample cold-water fish, including new fish kettle, and wholesale prices. References nearly every aquariam and dealer in the Kingdom.—GENERAL IMPORT CO., 3, Featherstone-buildings, W.C. Golden Tench, Golden Orfe, &c. Interesting, amusing, and attractive to every shop window.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.
Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.
Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.
THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.
The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d
To any part of Europe, the United States, and Canada, the Annual Subscription, including postage s 12s. 6d.

ADVERTISEMENTS.
All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.
Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.
N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

The Fishing Gazette.

SATURDAY, NOVEMBER 15, 1884.

## TROUTING IN NORMANDY.

By Cotswold Isys.

You will remember, Mr. Editor, that before starting for my autumn holiday, I asked you if you could give me any information respecting the trout streams of Normandy. With your usual courtesy towards the lovers of your favourite sport, you wrote to your French correspondent ; but he could give no information respecting that part of France to which I was going. I had, consequently, to proceed in the dark on a voyage of discovery, and I have thought that some little account of my experience in that search might be interesting and possibly useful to some of your many readers, both at home and abroad.

My place of sojourn, then, was Dieppe ; but it would be beside the purpose which your journal has in view to occupy your space with any description of that interesting watering-place and its ways. I confine myself strictly to angling matters. No holiday is now worth anything to me unless I can get some fishing, and so I had not been at Dieppe more than two days before I was scouring its neighbourhood in the search for brook or river. I could see by the map that the river Arques emptied itself into the sea at Dieppe ; but whether the Arques contained fish worth catching—still more whether it contained trout—or whether it were at all fishable, all this I had to discover for myself. One morning, therefore, I walked up the valley through which it flowed, but with very chequered hopes, since the lower part of the river looked far too mariny to excite my sanguine anticipations as an angler. It had a muddy shore much too like Wapping to be pleasant to my eye as a fly-fisherman, while its tidal character and the hulls of old broken-up fishing smacks and the skeletons of new ones being builded to replace them, made me fear that all hope of trout must certainly be abandoned. However, I walked on and on until I arrived at Arques, glancing constantly at the narrowing river in the hope of seeing a rise of some sort or other on such a fine day—all the more eagerly since the river began to look clear, and, beyond the weir and floodgates, decidedly fishable. But, alas ! for my hopes. The flow of the river was unbroken by a splash, and unwrinkled by a ring. Not a sign of a fish of any sort could I see ; yet if ever I saw a likely-looking trout stream, it was that same Arques near the village of that name. Nay, more : at said village I discovered that the river had three branches which spread out on either hand at very wide distances, and, on walking along the banks of one of these branches, I saw a rise—actually a rise—nay, more, actually a fish leap out of the water, and, oh, "auspicious hope !" certainly a trout. "That will do," said I. The presence of one trout was proof demonstrative that there were more about ; so, with that happy knowledge, I wended back to the Hotel des Etrangers (my quarters, and exceedingly comfortable quarters, take note, all whom it may concern, especially of the fact that it has a first-rate *chef*), and put my rod and tackle in order that very night with no little longing for the morrow.

The morrow morning came, and, rod in hand, I was off in that mood of mind which I have expressed elsewhere,* in lines which I hope I may be pardoned for here quoting, as I cannot so well express my feelings in prose :—

> "Hope in my heart, health in the air—
> The freshness of morning everywhere ;
> Pleasure before, and care behind,
> I tramp to the river with gleesome mind,
> And with brotherly love to all mankind !
> And the tramp of my eager feet doth say :
> 'I wonder, I wonder, what luck to-day !'"

But, alas ! my luck was bad after all. I got to Arques, and of the three streams, of course, as a stranger to the locality, I hit upon that which was decidedly the worst—viz., that which I afterwards discovered was named the Eaulne. (Note, in passing, that the names of the three streams here are the Bethune, the Eaulne, and the Arques.) Well, it was very strange, but I could not get a rise ; nay, more, I did not to-day see a fish, and yet I had on one of the daintiest little quill gnats that could possibly be set before even an epicure of a French trout. What could be the reason ? Did these French trout expect me to dress my fly in garlic or tomato sauce before they would look at it ? For that trout *must* be in such a stream—so clear, so sparkling, so flowing, so curvy, so watercressy—was as clear as that the Republic is a dreadful come-down from the Empire. Anyway, they would not look at the quill gnat nor at the alder, nor at the red palmer, for I tried them all. And when I returned to my *cara sposa* with an empty creel in the afternoon—well, I could hardly face her, and you know what *that* feeling is, for Mrs. Editor has a little pleasant banter in her, and I believe *you* have sometimes gone home with an empty creel, at least once in your married life. But I bore her jeers (as patiently as you did on that one occasion), and, to tell you the truth, I think she was a little disappointed to see that she did *not* put me out of conceit with my superior self, for I only sang to her another of my angling ditties :—

> "If we find disappointment, yet spirits like ours.
> So tutored to patience [*Aside :* as I am by you, Madame !], may laugh
> as it lours ;
> We have always this solace to comfort our pain :
> That in seeking we find, and in losing we gain."

Angling brother, always sing to your wife when she teazes you : *that* will cure her, and considerably add to your domestic bliss.

But I confess that though, in order to promote *my* domestic bliss, I thought it policy "to assume a virtue, if I had it not," I was not in the best of spirits as to my prospects after my day's experience ; and it was with somewhat chastened steps and slow that I went riverwards next day. I walked along the river, and it looked so sluggish, ringless, and lifeless, that I hardly thought it worth while to put the rod together, and I put it down beside me while I lay down myself on the bank near a weir, and gave myself up to "miscellaneous impulses." Presently, to my diversion, there trudged on to the bridge over it an old spectacled Frenchman—wondrously like Shylock—with a rod under his arm, which he immediately began to put together ; and as, with no sign of a rise, fly-fishing seemed hopeless, I thought I would spend an hour or so in watching results. What a rod, and what a line to fish with for anything, much less trout ! And I soon had proof that he was indeed fishing for trout. Fancy, fishing for trout with no reel, and a taut line that could not give an inch, save what is got from the play of a long stiff rod. Yet that was the apparatus, and the bait was Dr. Brunton's *gardenia* fly—*i.e.*, a worm. I wonder if he will possibly catch anything. I think I'll just wait and see. An hour passes, and the float curls round and round the eddies of the weir without any apparent intention of ever sinking, and I begin to think that Frenchmen and Jews have patience as great as Englishmen and Christians. But, look ! What is Shylock about ? He bends with excitement, and is lifting his rod hard. Surely he has got into a great weed ! No, indeed ; it really is a trout that comes up, and a good one, too—at least 1½lb. Ah, Shylock, I say to myself, as he tugs and the fish wobbles, why don't you keep him in the water ? In half a minute you will certainly lose him ! I had hardly thought the thought, when flop went the fine fish into the water, and up went the long bent rod, and back in consternation went Shylock ! I felt for the poor old boy ; but what could he expect would be the result of trying to lift a big and lively trout up 20ft. on a taut line ? Angling in France is evidently quite a century behind the condition of the art in England. I had, subsequently, other opportunities of witnessing it, both in the form of worm and fly fishing, and was obliged to come to that conclusion. I have seen a worm-angler in a boat jerk a trout clean over the boat into the river at his back ; and I saw another man, when fly fishing, jerk a trout right over his head into a streamlet at his back, into which the trout escaped. I often marvelled what the texture of the mouth of a French trout can be like, that it ever could endure such jerking, especially from such tackle. I put by one of their flies to bring home to you to put into your museum of curiosities ; but, unfortunately, I lost it. The gut, Sir, would have held a conger eel.

But to proceed. After Shylock had given up fishing (for he had brought no other cast than the one the big trout had gone off with), and gone home a sadder but, I hope, a wiser man, I took a turn up the river, and lay down on another part of its bank to drink in the beauty of the scene. Watching the water beside a large pool, I fancied I saw a feeble rise at its edges, and presently another and another. But the rings were so faint and small, that I concluded they must be dace. So I put my rod together, thinking that a little dace fishing was better than nothing, and that I might as well see whether they cared for English flies. Ere long, to my joy, I got a rise ; but it was very undecided, and nothing came of it. Presently, I saw a more decided rise, and away I went for it, and was immediately into something that, if a dace, must be a very fine one. Up he leaps, and, there is no mistake about it, it is a trout, and a good one, too. I had no landing net with me, for I came out without any hope of fish, and hardly of fishing ; and this was an exceedingly awkward circumstance, for I was on a high bank fringed with tall reeds, and how to get my fish up there without repeating Shylock's folly was a problem. This difficulty was weakening the hold in the fish's mouth, and just as I drew him to the edge of the bank at the foot of the weeds, the hook gave way. But there he was, wriggling on the mud—a good three-quarter of a pound fish. Fearing to lose him, and without thinking of the consequences, I laid down my rod, and leapt down through the flags on to the shore, when the mud yielded, and I went up to my knees in the water with my hand on the fish, and my body on the bottom joint of my rod, which snapped beneath my fall like a carrot. I, too, had lost my fish, like Shylock, but not, like him, through want of skill in handling him, but purely through accident. However, this was my consolation : there were certainly trout here, and good ones, and, moreover, they would rise to a fly. So I looked disconsolately at the fragments of my butt-end, and considered whether it was possible to fish any more. While considering, I saw another rise or two. That settled it. I must do something. So I took my reel off the lower fragment and tied it on to its upper broken limb with some string, and made as good a job of it as I could, and began to cast. When, lo ! I learnt that "there is a soul of goodness in things evil," and that what seem very adverse trials often turn out blessings in disguise. So it was with my unlucky *contretemps ;* for I found, to my delight, that the rod was a far better rod thus shortened, and that I could cast even better with it than before its amputation ; and I resolved never to have a twelve-foot rod with a heavy butt for trout fishing again, and during the remainder of my fishing found the shorter and lither rod far less tiring and far more pleasant to wield. But now it remains to be seen whether I can land a trout with it. And here comes an opportunity to test it ; for, see, there is another nice curling rise under the flags. Away goes the quill gnat (one of Holroyd's dainty ones). But, ah, this breeze ! Why has it sprung up just now ? and why is it blowing right from the opposite shore ? (Did it ever blow from any other quarter when there was a specially good rise ?) And why does it blow my fly into the flags and fasten it there, so that I am bound to go down to it to disentangle it, and, of course, to frighten the fish ? But so it is. Wait awhile—he may come back. Ah, there he is ! Now ! Doesn't he quite like it ? Try again, then. He *does* like it, but not quite, else why that frantic leap ? But he cannot get rid of it, and I *can* land a fish with my broken little rod, and he is not an ounce less than a pound. I flatter myself that is not bad, with such a rod, in such a place, and with no landing net. So cheerily I set to work again, and ere long got another of three-quarters, and, as the shades of eve were falling fast, went home with this fine brace to gladden the eyes of my wife.

I need hardly inform the reader that, having now found at last where trout were, I visited the same pool the next day with hope. But what was my chagrin when I came to it to find two young *gamins* in a boat, which they had moored right in the midst of the pool, and close to the flags. And there they were, playing at rock the cradle with the boat, and frightening every fish in the neighbourhood away. It mattered not that I put together my rod, hinting that I wished to fish there. Still they kept on, and that out of pure *diablerie.* I felt inclined to offer them half a franc to go; but I felt that that was the best of all plans to make them resort to the same profitable practice to-morrow; and there was nothing for it but to lie on the bank until they were tired out and went home to tea. Happily, tea-time, or *café* time, came, and they did go. And presently, quiet being restored, the big fish out of the pool began to creep toward the sedges, as was evidently their wont, for their evening repast on the flies that should drop from them; and I felt, you may be sure, exceedingly happy to set meat before them. Nor did they all disdain it, for, though it was now getting late, owing to my spoilt afternoon, I got another fine brace wherewith to gladden my wife's eyes again.

---

* "An Angler's Strange Experiences," page 76.

Not to be too prolix, let me add that I visited the same pool each day for a week, and only on one occasion returned with an empty creel, and all I took were large trout, ranging from ½lb. to 2lb. Yet, if ever there was fishing under adverse circumstances, mine was that fishing during that week. In the first place, it was a boat station, and the boat boys were nearly always there larking, as idle boys will do, and disturbing the water by cradle-rocking, stone throwing, and worm fishing from their boats just near the place where the fish chiefly fed. Then the river shot all its rubbish, in the shape of weeds, just at the edges of that pool, and round and round great patches of them were nearly always sailing in concentric rings about the backwater, where I had chiefly to cast, and constantly, when a nice rise would occur, over would come a great mat of weeds to spoil it. Furthermore, a report of the success of Monsieur L'Anglais had been spread around, and drew some worm fishers to come and try their luck, sometimes over my favourite bank, and sometimes moored in boats in the pool, and often I had to lie for hours on the bank without a chance of a rise, waiting till they had packed off. Said fishers rarely caught a fish; indeed, I only saw two caught with worm all the time. But one of the boat boys, to my horror, was one day seized with an ambition to imitate my success by trying a fly, and I could have fainted one morning, when I came to the pool, to see him, armed with a hazel twig and a line of string, and a kind of artificial house-fly at the end of it, whipping away for very life right over my dear sedge bank. Poor Jeshimon!—(for that was his strange name). All the good he did was to cause me to lie down on the bank in patient waiting until he got tired, and Despair should do her work on him. But I can hardly wonder that he was so ambitious, since he helped me to land two fish one afternoon. I wished him at Rouen for attempting to do it, but he would not be restrained. Directly he saw that I hooked a fish, when he happened to be in his boat, he would excitedly ply his scull towards it, and it was in vain that I intimated to him that I would much rather he let it alone. In regard to one I was particularly anxious, since he was evidently a big fish; but Jeshimon sculled towards him in a passion of energy, and I trembled lest he should touch the line. He would do it, however, and I had to submit with the best grace I could; so I shouted: "Doucement, Jeshimon; très doucement!" and that had the effect of making him carefully lift the fish into his boat. "Deux livres! monsieur, deux livres!" he shouted admiringly, and then drew his boat to my bank, handing me out the fine fish. When I walked home that evening, I found that the officer at the Octroi had been told of my proceedings, and he came out of his box, and said, "Vous avez un poisson de deux livres, n'est ce pas, monsieur?" "Oui, monsieur," I replied; and he then informed me that I should have to pay a tax on it. "Combien?" "Dix centimes." I paid it cheerfully, and he gave me a receipt in full, with my name and the particulars duly inserted. He said nothing about my other fish, so I naturally inferred that in France fish over two pounds are taxable, but not under.

There were other difficulties about the place, one being that the river was tidal, and I found that the fish never rose save when the water was descending. It seemed useless to fish at any other time; and I concluded that the fish came out of the depths of the pool to look for the flies that the falling water would leave on the sedges that overhung my favourite bank. Thus, it was only at certain intervals that, under the most favourable circumstances, I could fish at all. Yet I never had a week of pleasanter or more successful sport, since skill had to be pitted against such a host of adverse circumstances. Many of my Norman friends enjoyed my trout, one of whom was no less a personage than the Dean of St. Jacques, whom my friend invited to dinner to partake of some. I was longer than a week in the neighbourhood; but *mauvais temps* and other circumstances confined my fishing to little more than that time. I should imagine the village of Arques would be a first-rate place for the angler in the spring. My fishing was all confined—another unfavourable circumstance—to the last days of September and two or three in October. I should mention that the portion of the Arques I fished in was free, and exposed to the open depredations of netters. I have seen the netters cast in the very pool I mention while I, myself, have been fishing. That was another great help to the fly-fisher, was it not? But what streams those of Normandy must be for trout, if, under such circumstances, one can get such fish as I did. Parts of them are preserved; but if only their whole lengths were so, what a paradise for a trout-fisher would that valley be in which Henri Quatre fought his great battle, and over which his castle, built by the uncle of our William the Conqueror, towers so grandly even in its ruins.

I close by just mentioning one other peculiar fact relative to this memorable week's sport, and it certainly is creditable to the nature of English tackle, while I hope it also proves that I am not a bungler—and that is, that I caught four large fish with the same quill gnat* one day—not the same kind, but with the same identical fly; and that I only used one single collar the whole time, which was one of Carter's (of Pentonville), than which I never found stronger ones, considering their fineness. And, last of all, that I did not lose a single fish that I fairly hooked, though I never used a landing net the whole time, and had to fish with a broken rod.

## ODDS AND ENDS IN SALMON FISHING.

By Geo. M. Kelson.—No. 5.

In all matters connected with the subject of salmon fishing, whether in making up our tackle, or in using it, or even in writing about it, error—with any of us, certainly with myself—is pretty sure, now and again, to creep in; however, in our hunt for the truth, it had far better go first than come last.

If in the overhand cast, with 30 yards of line out, we do not give time for the line to run its course and nearly reach the same distance behind us, we whip off the fly or "snap the single."

If we get foul and lug away at the rod or line, standing where we are, and do not move up or down as the case may be—that is to say, unless we get into the proper position which I have explained before—we are wrong again.

In fact, there is no end to the "Ifs"—they may continue to the end of the chapter, to the end of the book. Let us remember that "a stitch in time saves nine," for when we fishermen are on the inclined road to error we are off down-hill at a fearful pace, and no insensibility is much more obstinate than that which fastens on us in our rapid descent.

May I take, then, without delay a faulty leaf—"such as our nature's frailty may excuse"—from my own book, for my letter on "Odds and Ends" as it appeared in print last week reads oddly enough; indeed, a little too odd to remain.

The "old gentleman" who kept everything to himself and led the youngsters astray was introduced—by the accidental omission of a preceding paragraph—hurriedly and unceremoniously; and our "new friend"—Contentment—was very tottery, and did not come upon the scene exactly as I wished. Then again, by the absence of a line my meaning was entirely reversed, for in testing the temper of salmon hooks, when immersed in water after heating them, makes them harder, *not softer*.

If one wished to soften them they should be allowed to get cold gradually; but, as I observed, it would not be worth the trouble.

I offer these remarks as the Fishing Gazette has become an authentic and cumulative book of reference, its store of sound information is increasing with spirit, dignity, and common sense, and the Editor very properly allows no errors to remain uncontradicted. Indeed, as the only paper exclusively devoted to angling, it would be a pity if any exception could be taken to the unanimous verdict that it is complete.

And now let us peep at the items for discussion this week.

I was just thinking, What is a salmon fisherman's experience after all, be he never so well up on the subject? Why? May not his very next pool forge fetters where he would very likely be defeated from absolute want of knowledge? Certainly; for a pool may be perfectly free from danger, and a thunderstorm change it into a maze of mischief; and this is one of those certainties—or, rather, uncertainties—rarely, if ever, provided for. Yes, snags of every description, donkey-carts, and even dead donkeys, are borne down by the surging torrent, and they waylay and defeat us.

The top catch in the "Binding" is one of the best in the Duke of Beaufort's preserves at Usk, and hitherto unchristened; but it may henceforward be known as the "Donkey Catch," though I do not suppose the bones of the poor brute that were there will be left lying long to tell why and wherefore.

There are plenty of places in many rivers where it is possible, by means of a strong rope, to guide roots, dead stumps of trees, and such like, aside. Some thirty years since, high up in the Tweed, I assisted in keeping a favourite catch clear during a flood with very little difficulty.

The plan adopted was to fix the end of a rope to a tree on the deep side of the river, the other end being some fifty yards down on the opposite bank, and at about the same angle as an experienced fisherman makes his cast. Then when any lumber came bobbing along and became entangled in the rope, the end fastened to the tree was let loose, and a small grappling-iron hooked on, which came easily over the sandy bed of the river as it was carefully hauled in. Each time we successfully towed something or other in and on to the shelving bank, which, as the flood lowered, was left high and dry.

For resetting the rope, we used a boat; but where the water is not too wide, a bored bullet, with fine twine attached—during the daytime, at any rate—could be thrown across for the purpose, and that would be better done from above, so that the rope could come with the stream.

In small rivers especially, heavy floods are liable, and have been known to spoil a whole stretch of good "hunting ground," or rather water. The rope work, however, is all very well in daylight, and the exercise is not objectionable; but at night it goes against the grain. Still, we can always find a couple of trustworthy men.

Wherever I have had a voice in the matter, the water-bailiffs, instead of doing nothing in flood time, are always engaged in similar duties. They select their suitable spots, and throw the grappling-iron over approaching cargoes of litter from a boat.

The work comes much easier to them than to us, and they are far less liable to accident, which is, or ought to be, a consideration.

But of that, is it not an indubitably significant and happy circumstance that accidents to fishermen ending fatally are few and far between? In wading, for instance, considering the voluminous water of an enraged fall in the river speeding with railway velocity towards us, is it not a wonder our casualties are not more frequent and terrible?

I have had my share, I think, of mishaps, though, perhaps, no more than my deserts, for I was absurdly rash in my younger days. Once I remember being bitten by an adder; fortunately, however, I had some iodine *(tinct. iodidi)* handy, and I found it a capital cure. I never heard of it as an antidote; but I always carried it, and do so now in the wasp season, as it stops all their mischief instantaneously, and the bite of an adder is pretty much the same sort of thing as the sting of a hornet.

The adder, says Mr. Wood in his excellent essay on "Natural History," is the only British reptile that we need fear. It is sometimes seen on the banks of salmon rivers, and is much more common than is generally thought; but it keeps itself well out of sight, and seldom emerges from its shelter, except to catch prey or bask in the sun.

The latter propensity often leads to its destruction, for the viper is perforce obliged to find an exposed spot in order to enjoy the sunbeams, and so allows itself to be seen. Moreover, it is so occupied with the grateful warmth that it may be approached quite closely without being alarmed.

Now let us see how to detect a poisonous viper from a harmless ringed snake.

It is, we know, a small reptile; it wants the conspicuous yellow patches on the head, and it has a chain of black marks running along the spine. This last characteristic is invariable. They differ greatly in colour. Some are grey, some brick-red, some brown, and others yellow; but all have the black chain distinct enough, even in the very dark species called black vipers. And, as a further means of identification, there is a large, black V-mark on the top of the head. Chain and V together and you cannot be mistaken, as no other English reptile has them. That its venom is dangerous there can be no question, and to those not in the best of condition and health it might be deadly poisonous. But I have never heard that it has been fatal to any fisherman; though I believe in other cases it has proved so.

In these articles, here and there, I have said something or other of the care we ought to take when wading, and I propose to deal with the subject more thoroughly in my next. Much may depend upon our brogues and how they are nailed. The usual little round-headed nails are a mistake; they are all very well in some easy-going rivers—the Test, for example; but they are next to useless on slanting rocks. For years I have used the largest hob nails in soles ¾in. thick, and carry an "iron foot" to slip the shoes over to knock them in or out. That useful and staple commodity is sold at Moody's, Queen-street, Ramsgate.

But there is a much better nail than that, to which I may call Mr. Heaton's attention. It is made of steel, square-headed, filed on the face crossways, leaving the four corners almost pointed, somewhat after the fashion of an ice nail, and to screw in the boot with nearly ½in. projecting.

---

* The flies I found most successful were the quill gnat and the Wickham fancy on sunny days, and the alder and small red hackle on duller ones.

A spanner with a gimlet, making one tool, and a couple of dozen of these nails in a small box, would find a ready sale.

And so the reader already sees perhaps, especially if he goes in for all the odds and ends in salmon fishing, that we have a deal to interest and to occupy us.

Indeed, the question of what one knows may all very well be directed even to the oldest angler; for again, where is he who can decide when the fish are really "gone off," or even make sure of their "coming on"?

Has it not happened to you all of a sudden—and to you, in point of fact, to all who traipse up and down a salmon stream—to be startled by that well-known tug when least expected, when all hope, as it were, had been dead within you, and in one flash of horrible comprehension while the thoughts are wandering, see—or rather feel—that it is too late to strike, and likewise know that you are wrong as surely as the night succeeds the day?

Truly, a burst of prosperity in the dawn of your career will not only be a sure stimulant to urge you on, but will almost force you to persevere and make you thorough fishermen. Then—and then only, let me persuade you—will you be eligible, and very readily acquire a fisherman's disposition—a disposition money cannot buy, a disposition which imparts sympathetic activity to your new associates—aye, one never to clog the wheels in forming fresh friendships.

## ANSWERS TO CORRESPONDENTS.

H. Jones, Grimsby.—Tench bite best in warm weather, but we have taken them in Christmas week; they do not seem to be so much affected by cold as carp. Yes, we have published articles on sea fishing at the Isle of Man some years ago.

J. F W., of Oldham, writes, "Will you kindly answer the following queries?":—

1. What kind of a reel do you use for spinning for pike? *Answer.*—Slater's combination Nottingham reel; but it appears likely that the new patent casting reel, made by Mr. Malloch, of Perth, will be very popular, as you do not have to control the reel in any way when casting. We shall describe it fully when we have given it a fair trial.

2. Do you fish up or down stream when fly-fishing? *Answer.*—Up stream is our rule, but it depends on circumstances.

3. Have you ever tried Pennell's typical trout flies?—if so, what do you think of them? *Answer.*—We have tried Mr. Pennell's three flies, but not with encouraging results; and as we have said before, fly fishing would lose its greatest charm if it were reduced to a "rule of three."

4. When spinning for trout do you spin in the same way as for pike—viz., the Nottingham style? *Answer.*—No, simply because we have never been able to get a reel that would revolve with light minnow spinning tackle, but we hope Mr. Malloch's new reel will overcome this difficulty.

## ON STRIKING A SALMON, &c.

Sir,—In the Fishing Gazette of the 25th ult., "Vincens," in his article on "Notes on Salmon Fishing," asks me whether I would temporarily adopt the plan of striking a salmon under the circumstances he mentions. If he will kindly refer to my letter written on the subject, he will find that I said that there were certain occasions when it might be advisable to do so; but that I would rather run the risk of not hooking my fish than get into what I considered a bad habit, and to that opinion I still adhere, and should not, under the circumstances he mentions, strike, but simply raise the point of my rod when I felt the fish, and am of opinion that whether it was a 28lb. salmon, or a 4lb. peal or grilse, the fish could hook himself in either case by his own weight. The flies used for grilse are so very small, and the flesh of their mouth so tender, that a very slight strain is required to fix the barb of the hook.

I may be wrong, but I should say that it would be unadvisable to strike at a shy fish, if by this is meant a fish that comes slowly and warily at the fly; and I should rather be inclined to lower the point of the rod, and let the fly meet the fish, as it were, then run the risk of snatching it away from him by striking. "Vincens" advocates casting a fly straight across stream, instead of down and across, alleging that by adopting this method many more fish are risen. Here, again, I differ with him, and maintain that more fish are caught by throwing down and across stream, even though more fish should be risen by adopting the other plan. By throwing down or across stream the fly will work slowly and steadily across the stream; the fish will have every opportunity of discerning its colour, and if he rises at it will have a far better chance of being hooked. The fly will, moreover, be seen to its greatest advantage, and will assume a more natural appearance. On the other hand, if the fly is dragged rapidly down, as it must be by the belly of the line that is necessarily caused when casting across stream, the fish will only get a momentary glimpse of the fly, its feathers will be put out of gear by the side action of the stream, and the chances are that if a fish rises, by the time he has reached the surface of the water the fly would be a foot or more behind him, and the disappointment thus caused might disincline him to rise a second time. He may follow the fly and rise at it two or three times before the cast is completed, but the chances are he would not get hooked. A great many fishermen adopt this plan, and if the stream is running very slack, I should not so much object to it; but if the stream is a rapid one, I certainly am of opinion that the down and across plan is the most deadly. Almost every fisherman has his own ideas as to the correct mode of salmon fishing, and for this reason the more the subject is discussed and ventilated the better chance there will be of arriving at a right conclusion. I think this question of how to cast is as important as any other connected with salmon fishing.

There was a misprint in my letter on the subject of striking a salmon in the Gazette of the 25th ult. In the 4th paragraph, line 4, instead of the word "would" should be substituted the word "might."

Junior United Service Club, Nov. 3rd. John P. Traherne.

P.S.—Since writing the above I have read "X. Y. Z.'s" letter in this week's Gazette, in which he draws attention to words I used in a former letter on the subject of striking, as follows:—"I did not strike from the winch, which, perhaps, will account for my want of success," and on referring to my letter I find that "X. Y. Z." is correct, and that I cannot take exception to the construction he has put upon this sentence. Holding, however, the opinions I do on this question, and which I have often expressed in the Gazette, I certainly did not intend to convey such an impression, which would imply that I was a convert to striking from the winch. What I intended to say was that it was possible my want of success was attributable to my not having struck from the winch, although my opinion was to the contrary, and it is my desire that the words I used shall be interpreted in this sense. If the word "may" had been used in the place of the word "will," it would have more correctly described my meaning. With regard to what "X. Y. Z." says about striking a salmon when lake fishing, I may be again wrong, but I should no more think of doing so than if I was fishing in a stream. I have caught hundreds of salmon lake fishing, and I cannot remember losing one by not striking; but I always took care never to cast a long line, or to let it get slack. J. P. T.

Sir,—After many years' practical experience, both of salmon and trout fishing (I caught my first trout when I was twelve, my first salmon when fifteen, and I am now—but I was just letting you into a secret, Mr. Editor), I have long since come to the conclusion that it is impossible to lay down a hard-and-fast rule on striking.

The art of striking, for it *is* an art, is just one of those things that you cannot teach. Nothing but *experience* can give it; without this, accompanied by a light hand and quick eye, you are nowhere, and this is what you cannot teach. You can teach a boy how to sit on a horse, but you cannot give him "hands." I know one man who has been fishing (I won't say a fisherman) for years, and he will remain a bungler to the end of his days. On the other hand, I know a lad of 14 who strikes at every fish he rises, and hardly ever misses his chance. Then, again, you have not only to learn *how* to strike, but *when* to strike. To strike a salmon that rises opposite to you requires a very different method from striking one that rises below you or down stream. Indeed, to my mind, it is very doubtful if you should ever strike at a fish at all that rises "down stream." I remember when, a year or two since, I was fishing in Ireland, my companion, Lord D——, rose a good fish in a rather rapid stream, that ran from one lake to another. The fish rose like a porpoise some 20 yards below him, and, in his anxiety, he struck—*of course*, too soon. This happened twice, and any ordinary fish, after being treated so, would have sulked at the bottom for the remainder of the day. This would have been *my* luck. Being, however, well on the feed, to my astonishment he rose a third time, and Lord D——, acting on my advice to let him "help himself," did so, and landed a nice 18-pounder. Had Lord D—— adopted his first tactics, the fish would have undoubtedly been lost. As a rule, in fishing rather rapid streams, fish will hook themselves; but it is very different when fishing "still" water—to me the essence of all fishing. I would rather rise and hook one fish in "still" water, than catch a dozen in a rapid. Here the art of striking is required, and without it a fisherman is nowhere. The question then arises—"To strike or not to strike?" To a beginner I should say, "Try and learn the art by all means"; but there are some who can never learn, and to those I should say, "Do not attempt it." There are more fish lost by *bad* striking than are ever caught by good; but the man that knows *how* and *when* to strike has, undoubtedly, a ten-to-one chance over the one that cannot.—I am, &c., Jacien.

Bruges.

## EYED-HOOKS—THE WICKHAM—STRIKING A SALMON.

Sir,—For a long time illness has unfitted me to work, much less write you regarding many subjects of interest which have lately appeared in your columns. Like the grayling, however, the cold weather has brought me round, and you will see from the inclosed specimens that Mr. Kelson's splendid articles have caused me to make a fly which neither fish nor fisher ever saw.

I am much interested also in the eyed-hook; paradoxical like, I am in favour of them and I am not in favour of them. With feathers they do well, provided the fly is hackled outside the wing as Mr. Hall directs; but with the hackle as usually placed, they are certainly not so good as a round, bent iron. With my own flies, with pike scales, I can, as you know, make a much more natural-looking fly on them, wings more erect—perfectly erect if required; and yet this very natural position of the wing causes the eyed-hook to be utterly useless. I could not understand what was wrong, seeing that I could not rise a fish, and discovered that the upright wing causes the pike scale fly to spin, the wings acting like the jaws of a phantom; but the eye, if small, like those made by Mr. Court, cannot in the slightest deteriorate the value of the eyed-hook.

One day this last summer I ran short of hooks when angling with natural stone fly, and having plenty of eyed flies enabled me to strip a fly and make a stone fly hook in an instant. However, for my own part, I still will prefer the small round bend for flies. I had an extraordinary proof one evening in July last of the good qualities of the Wickham fancy, dressed with a landrail wing. I saw a number of fine fish feeding on the opposite side of the river in a back water. My tail-fly was a "Marston," and that procured me the first fish at the first cast. The second fly was a Wickham, and in 14 successive throws I brought to my own side 13 fish, all taken by the Wickham fancy. I have not had an angel's visit like it for several years. This river, of course, is considered destitute of salmon, as the Falls of Tummel is thought to keep them back. Many of your readers know different, and I know some have seen me bring them to bank. As a general rule, however, trout are the fish angled for, and large flies at the end of the season are required. During the last 20 years, I, perhaps, have risen 40 salmon with trout flies, and, of course, struck as I always do when trouting, the result being that I only hooked one salmon of those I saw *come at the fly;* but hooked several fishing with a long line and the fly under the water, and did the striking by the feel.

When a salmon rises, if the fly is too close to the surface the fish comes short, or if it does touch you will merely feel a slight nip. Salmon never take the fly as they come up. They come up, get over the fly, and seize it as they go down again, and I consider Major Traherne's description of how to strike perfect. I believe you will find my ideas in a paper you have, where I think I advise the trout fisher who tries his hand at salmon to use a more pliant rod than his trout one, and a Limerick bend to help him not to strike too quick. I cannot describe it better than saying, "Give a long, steady, hard pull first *after you feel the fish* with the hand *on* the line, and as the fish steadies himself for his first rush, give a quick drag to make sure, at the same instant taking the fingers or hand from the line."—I am, &c.,

Bohally, Pitlochry, N.B. James Macnee.

[The salmon fly Mr. Macnee sends is certainly a "braw chiel." Pike scales are cut oval, and fastened by one end down the body of the fly in rows; when wet and limp they work in a lively manner in the water.—Ed.]

## A NOTE FROM DURHAM—EYED-HOOKS.

Sir,—As a few of your readers sometimes have a day on the Derwent (Durham), and no doubt would like to hear of anything that is interesting about it, I send you a few lines.

The last season has been a good one considering the small quantity of rain that we have had, some of our best anglers having got some grand baskets. Our association rules state that no fish under 6in. must be killed. The highest number killed by one angler is over 700; others have killed 400 and 500. These are the totals for the year. Our fish are not so large as fish in the South; but we have some good ones. The Association has suffered a great loss this year, scores of fish having been picked up dead at the close of the season owing to impurities that had entered the river from either paper mills or gas works. I picked up one, on the morning of Nov. 9th, measuring 15in. and weighing 1¼lb. that had died. If the fish were found before they were quite dead, and carried into pure water, it was almost impossible to bring them round again. For more than a week fish over a foot long could be seen making to the shallow water and dying there. This pollution only affects a part of our water; but unfortunately it contains the largest fish.

I have fished a great deal this season with eyed-hooks (small), and have always killed best with them when made to imitate orange and yellow duns. I have been surprised that when made to imitate other flies they have not done so well, which I partly account for on the turned-up eye resembling the heads of the duns, better than heads made on a straight shanked hook. I prefer these hooks for the duns, because the eye is turned up.—I am, &c.,

Westwood, Lintz-green. W. P.

## A NOTE FROM NOTTINGHAM—BURTON SEWAGE.

Sir,—Since my last letter there has been a rise of about a foot, but not sufficient to clear the bottom or bring the fish well on the feed. A few pike have been taken at Weston, but they run small, the weather not being severe enough to bring the fish into the back waters yet, a Derby fisherman getting 80 dace on Wednesday with maggot, in the Shardlow length, and 60 more on Saturday.

A friend of mine got a few bream at Colwick, the largest 4lb. A member of our club got several nice bream on Friday, weighing one in 4½lb. I am glad to hear the Burton sewage will soon be stopped running into the Trent. I tried for half a day on Saturday, and could not keep my bait free from it, only killing two perch, many other anglers giving it up.—I am, &c., A. West.

P.S.—You will find inclosed a sample tackle for worm-fishing for salmon, the same as an old Derby angler uses who has killed hundreds in his time, sometimes using one worm, and occasionally putting two on, fishing with a very large float that will carry another weight as large as a pike lead, run on the line at the top of your tackle; fish well on the bottom. The other bait we use is the Devon bait and the Derby killer, which have both proved very killing baits.

You will see I have spliced the gut, which I think far better than tying a knot in salmon gut, as if it does break, it generally is at a knot. I lost a 20lb. fish last year through a knot breaking.

The bit of reel line inclosed is part of one I have used all the season, bought from S. Staples, fishing-tackle manufacturer, Nottingham, 100 yards for 2s. 6d.

[We are much obliged to Mr. West. The hook is a No. 3° round bend, rather stout in the wire, about 1½in. long from end of shank to middle of bend; a bit of gut is bound in at the end of the shank, so that ¼in. projects, and helps to keep the worm up. Mr. West's splice is made by binding two ends of gut for ½in. together. Each end has a single knot in it. A better plan would be to make the ordinary water knot and then splice for ½in. or less before pulling tight. The line is a very strong, undressed, silk twist, about No. 4. Fancy 100 yards for 2s. 6d.!—Ed.]

## EYED HOOKS—"NEEDLE" EYES v. "TURNED" EYES.

Sir,—In reply to Mr. Pennell's letter of Nov. 1st, I thought it might be interesting to try some practical experiments to ascertain what advantages or disadvantages there might be in his proposal, and, with your permission, I will state how I succeeded.

I understood his proposition to be: to adopt hooks with eyes made like sewing needles, for the sake of neatness, in preference to the *conspicuous* turned eye, as now made. I applied for patterns to the only makers of such hooks I am aware of—Messrs. Milward and Sons—and the smallest hooks sent me were No. 8, Redditch scale (equal to No. 6 of the eyed-hook scale). These hooks are very much too large for any trout flies, except large loch and sea-trout flies, and I had, therefore, to turn to sewing needles for material, in the form of *fine wires* in any way approaching small "eyed" trout hooks. I obtained a complete set of needles, from the finest made up to the size used by tailors, and my first experiment was to try through which eye of the *smallest available needle* I could thread a strand of *fine drawn gut*, such as I would select for small flies of 0 or 00 dimensions. Rather to my surprise, I found it was possible (by cutting the gut to a point) to thread it through the eye of the smallest but one—a No. 9 needle—so I selected, for experiment, that and the next one larger, No. 8, through which the gut passed easily. I softened, in a flame, half of each needle from the point inwards, carefully guarding the eye end from injury by a cold pair of pliers. I turned the softened ends round the shanks into a loop, making the needle assume the form of a very minute tennis racket. (The inclosed diagram will explain the mode of testing). The loop of needle (or bend of hook) was passed over a copper-wire S-hook, fixed loosely to the edge of a table by a screw. This gut (well softened) was tied to the needle eye by two hitches round the gut, and a loop made at the other end was looped to a piece of salmon line, which passed over a pulley screwed to the table edge, at a distance of about 2½ft. from the S-hook. A small fancy wicker basket (weighing 3oz.) was fastened to the other end of the salmon line, into which weights, from half a pound upwards, were placed to give a dead pull *to any amount required to reach the breaking strain.* This rather rude and simple apparatus answered every purpose, and is, I think, better than the uncertain strain given by a spring balance, and is more easily registered. Now, at starting, and before experimenting with the apparatus, a practical point arises, which, I think, completely upsets Mr. Pennell's theory. It is admitted that the most useful hooks for small flies are 0 and 00, occasionally smaller, but Nos. 1 and 2 are to be considered large hooks. On comparison of the thickness between hooks and the needle wires, No. 9 needle was found to be *equal in substance to a No. 3 hook*, and the *No.* 8 *needle to a No.* 5 *or* 6 *hook.* The deduction from this fact is that a No. 9 needle being the thinnest wire containing an eye through which a thread of fine "drawn" gut can be passed, if it is desired to do the same with a needle-eyed hook, *such hook cannot be smaller than No.* 3. Ergo: *You cannot have hooks of Nos.* 1, 0, *and* 00 *with needle eyes through which fine gut can be passed.*

Needle makers *can*, no doubt, *make* the smallest hook with needle eyes; but if you cannot thread them where is the use of them? And I argue, that as the wire containing the smallest eye I could thread with a fine "drawn" gut was equal to a No. 3 eyed-hook, it is impossible to have hooks of 1, 0, and 00 wire *with practicable needle eyes* for use as trout flies, and I think this settles the question, and makes it imperative that "eyed-hooks" of these sizes *must have turned* eyes, however small you may desire the eyes to be made for the sake of neatness.

I next experimented as to the comparative breaking strain of the gut with "needle eyes" and "eyed-hooks" by placing weights in the little basket, and *gradually increasing the weight to breaking point.* I used fine "drawn" gut in the No. 9 needle, and fine "natural" gut in the No. 8 needle, and also the *same strands of gut* tied to the "eyed-hooks" by the "in-and-out" knot. Here, again, I was surprised at the result, as I expected that the "natural" gut would stand a much heavier strain than the "drawn," as it was somewhat stouter, but the difference was comparatively small, 2¼lb. was about the average breaking strain of the "drawn," and 3lb. to 3¼lb. that of the *fine* "natural" gut, but the result as to the effect of the "eyes" on the gut was very marked. With the "needle" eyes the gut *always broke at the eye*, with the "eyed-hooks" and the "in-and-out" knot it *never broke at the eye*, but always either through the strand itself or at the loop connecting it with the salmon line, and the difficulty I experienced in getting *the loop* to stand a strain great enough to break the gut at the eye upset my series of experiments. I tried both knotting and wrapping to form the loop, but it always broke there or in the strand itself, in preference to the knot at the eye of the hook. These trials being made with new gut, not in the least frayed by action of fishing, how much more marked would have been the result if the different hooks had been flicked about for a quarter of an hour in casting with the rod before the strain was put on them?

I deduce the following results from the experiments:—(A) That it is *not to be expected* that any hooks *smaller than No.* 3 (eyed-hooks), or, at any rate, No. 2, can be made with "needle" eyes of sufficient size to admit fine drawn gut. (B) That, supposing they are obtainable, the chafing and cutting effect of the needle eye on the gut would be so severe as to render the life of the flies very small indeed, as compared with similar flies made on "turned" eyed-hooks and knotted by the "in-and-out" process.

The eyes of the two needles used were examined with a small microscope, and found to be very smooth and free from rough cutting edges, which would act detrimentally on the gut.

Mr. Pennell objects to the present turned-up eye because it is not a close copy of the *position of the head* of the natural fly. If it pleases him, this can soon be remedied. A glance at any good illustrations of natural flies, like those in Francis' "Book on Angling," or Ronalds' "Entomology," will show that the *inclination* of the head is a *downward slope*, at about a corresponding angle to the present upward slope of the eyed-hook. All that is necessary to obtain a very close imitation is to bend the steel eye of the hook *downwards instead of upwards*, and reverse the "in-and-out" knot: the effect of the pull on the point will be almost exactly the same; the only objection would be that in very small hooks the downward slope of the eye would somewhat interfere with the space between the shank and point in the matter of *hooking fish*, and that, I consider, a decided disadvantage.

The objection to the turned-up eye appears to me frivolous, because the slope of the steel eye is very slight, and the *knot of the gut*, coming underneath, *fills it up*, so that only the knot itself is visible to the fish, and if that is neatly made, and of a suitable shade of colour, the *knot* practically *forms the head of the fly*, and not the steel eye, and that is a point strongly in favour of the "in-and-out" knot, as compared with any other made behind the eye.

I have shown pretty conclusively that if "eyed-hooks" are to be used in the smallest sizes of 0, 00, and 000, no other form of eye is practicable than the present "turned" eye, whether it be sloped upward or downward, and I think the hooks we have got (or are expecting to get very shortly) are as nearly perfect as we are likely to have them, provided they are well shaped and carefully tempered, and, like Mr. Hall, I am perfectly satisfied with them; I would not use "needle-eyed" hooks on any consideration.—I am, &c., George Bankart.

Leceister.

[Anglers ought to be much obliged to Mr. Bankart for his interesting and most useful experiment. The results as regards the different shapes are just what we should anticipate. Another objection to the needle eye is that it would not be nearly so comfortable to press the finger against when getting a small hook out of a trout or grayling's mouth as the round eye. One would require a thimble, pretty much as the ladies do.—Ed.]

## AN EYED-HOOK CONVERT.

Sir,—I have to acknowledge the great courtesy of Mr. Hall and Mr. Bankart in sending me samples of their eyed-hooks.

I had previously purchased, some years ago (after meeting Mr. Hall on the Tummel), some of Mr. Hall's hooks from Hutchinson and Sons, and I had them dressed by a well-known man in Scotland.

To begin with, I thought the hooks too heavy in the *wire*, and when they came home from the dresser I found large, well-varnished heads, and a note to say, "My dresser found them very troublesome to tie." I used them but little, as they thus possessed a *double head*—one of steel, one of silk and varnish. By mere chance I stumbled across the Fishing Gazette a few months ago, and this may show you that your journal is not so well advertised as it deserves to be.

Well, sir, I stumbled across a letter by Mr. Hall, and I wrote, recommending eyed fly hooks, the idea only occurring to me at the time. I afterwards wrote direct to Mr. Hall; but before this Mr. Bankart most kindly had sent me samples of his hooks—"Mr. Aldam's" patterns—which, when I saw, I was inclined to give the preference to *at first sight*—that is, so far as the fineness of the steel goes; but when Mr. Hall sent, as he did lately, *his* latest improvements, I am no longer in any doubt, and I cordially agree that here we have as good an eyed-hook as any man may desire.

Mr. Bankart's smallest size I liked, for the thinness of the wire was no objection in the smallest sizes, and the snecky point in this case was moderate. But in his largest sizes I found fault with two important details: first, I thought that "13 long shank, medium," and "11 long shank, largest," are both too weak for the size of the hook; and to add to this inherent weakness, the point is turned over *so much* that if the point rested on a bone in a large fish's mouth, the side strain would either bend the wire so far out as to unhook the fish, if it did not break off short.

I am entirely and strenuously opposed to a point so much turned over as these for any sort of fishing, but particularly for big fish. Who would use a salmon hook on this principle, and expect no broken wires or lost fish?

Now, Mr. Hall, recognising this, has had just enough sneck or twist to hook cleverly and no more; and his wires are fine, but not weak.

Again, Mr. Bankart's hooks are *black.* This I have ever held to be a fatal objection, for, hold such a wire to the sky, and it stands out in bold relief.

Now, Mr. Hall has here again showed his wisdom, and his bronzed hooks, and even his pale steel, are infinitely superior to any black hook ever made for fine work, in my judgment. This has been my principle for long years, so much so that I have always barred japanned hooks, if tied by the finest dresser in the world. I simply *hate them* as I do gut stained *black* instead of transparent, clear, natural gut.

I advocated the eyed-hook for salmon flies and even for sea trout flies; but I am now assured that for the smaller sizes it would prove a failure, and I readily withdraw my hastily-written remarks thereon.

Messrs. Allcock and Co., of the Standard Works, Redditch, make a capital hook for *salmon flies*, the best I have seen; and this has a needle eye, and is a well-formed hook all round for its purpose. It is easy to see how the smallest sizes are less fitted for this style of eye.

Mr. Hall has very kindly sent me some flies dressed by Holland, and here the double head is conspicuous *by its absence;* and I am enabled to add that these flies for dry fly-fishing look *perfect.*

He also sent me some plain spider flies dressed on eyed-hooks, and I was surprised how little the eye showed; but of all the flies he sent, I most admired those which he had used, and probably dressed himself, and which were, as to dressing for my fishing (which is mostly with the wet fly), excellent.

It sufficed to convince me that eyed-hooks *can* be successfully dressed, as killing flies, by a man who knows how. But it is quite necessary to tie them in a special manner in order to attain anything like perfection.—I am, &c., E. M. Tod.

## ANGLING RIGHTS IN THE UPPER THAMES.

Sir,—I am much obliged for your insertion of my letter *re* the fishing at Eynsham. Your footnote represents the gist of my letter, which is written on the assumption of "if such is the case." I cannot quite agree with the light view you take of the opinion of the committee, because it was not given before they had fully investigated all claims, and I would respectfully point out to you that it is not so much for the riparians to prove their rights as it is for us to show they have none to prove. I would never give my aid to bolster up a claim; but think most certainly that when a riparian tries to meet us we should not hold out the red rag, for after all there is no question but what we can be turned off their land, and what is the use of being able to fish in any water if we have no right near it, other than in a boat?

I wrote my letter to cause discussion on the matter, and therefore leave it to your discretion whether you publish this reply to your footnote.—I am, &c.,

1, Doughty-street, W.C. Robt. W. Hobden.

[We think we are not wrong in saying that it is for the riparian owner claiming a right to prevent fishing in the Thames to prove that he has the right; he must produce evidence. It is not for the public to prove its right. If A. claims a stretch of the Thames, and B. disputes the claim, and the matter comes into court, who will have to produce proof? Manifestly, the one making the claim. Charters, and deeds, and leases are not made to prove other people have not a right, but to prove that some particular person has the right, and the law requires those claiming rights to produce tangible proof. If the onus of proof lay on the public, as Mr. Hobden suggests, there would soon not be an acre of free land or water left in the country.—Ed.]

## THE FROG AND THE PIKE.

Sir,—I hope I may not be intrusive in writing this letter, as I think it may possibly be interesting to our fellow anglers. Some four years ago, about the middle of April, while sauntering by the side of a large pond, I espied, not far off, and drifting towards me, a frog, seated on what I at first supposed to be a piece of rail. On a nearer approach I found that, instead of a piece of rail, froggie was composedly squatted on the back part of the head of a 5lb. or 6lb. pike. The fish leisurely swimming on the top of the water passed within three yards of the spot where I was standing. I never witnessed a similar circumstance before or since.

In the "Complete Angler," our old friend Walton quotes a passage from a book written by Dubravius, a Bishop of Bohemia, in which Dubravius and a companion who was with him witnessed a frog leap upon a pike's head, the frog then attacked the pike's eyes the fish vainly endeavouring to rid himself of his enemy; the frog after a time leaped off and returned to his secret hole. "The Bishop that had beheld the battle called his fishermen to fetch his nets, and by all means to get the pike, that they might declare what had happened, and the pike was drawn forth, and both his eyes eaten out; at which, when they began to wonder, the fisherman wished them to forbear, and assured them he was certain that pikes were often so served." As to the eating of the eyes, I am rather sceptical on that point; but that frogs occasionally locate themselves on the heads of pike there can be no doubt; but the question is, what takes them there? Can it be that in spring some pike are afflicted with a fungus or parasite on their heads and backs, and that the said parasite is so appetising a morsel for the frog that he braves all dangers in order to obtain the coveted *bonne bouche*, and that the pike (at this particular season), out of gratitude, spares the frog's life?—a mutual understanding having taken place between them, after the manner of Herodotus' story of the trochilus and the crocodile, wherein he relates that "the crocodile, when he gets out of the water on land, open his jaws, and then the trochilus enters his mouth and swallows the leeches. The crocodile is so well pleased with this service that he never hurts the little bird."

Perhaps some of your readers will favour us with their opinions on the subject.—I am, &c.,

Thorpe Arnold, Nov. 8th. J. S. S.

P.S.—Since reading the above, I have just read the following in "Curiosities of Natural History," the author (late F. T. Buckland), says "Mr. Quickett tells me that he has seen a stickleback come up to a newt in a vivarium, and the newt has eaten off the fungus, the fish remaining quiet all the time."

[Our German contemporary, the *Deutsche Fischerei Zeitung*, some time ago, went into this subject very carefully, and the outcome of the inquiry was that frogs, which were found on the heads of pike and carp, as described by Walton and others, did not feed on the fish in any way, and that the sexual instinct so strongly developed in the frog in the spring was the true explanation of the whole matter. ED.]

### FISHING RIGHTS AT GODSTOW.

SIR,—I am afraid Mr. Hobden's attempt to vindicate the Earl of Abingdon's supposititious rights to the Godstow *cum* Bablock Hythe Fisheries is somewhat on a footing with Don Quixote's ludicrously valiant onslaught on the windmills, for if he persists in fighting public opinion by championing a course so unjust, he will inevitably incur the reprobation of every angler interested in the question of preserving the liberties of the people on the great waterway of England. His reasoning may be logical; but try as I will, I cannot see on what premises he bases his argument. Commencing with a fallacy, he assumes for his own purposes such a right does exist: beyond that he does not adduce one single iota of proof in support of his surmise; but by a *reductio ad absurdum*, takes it for granted.

I am of opinion that three-fourths of the so-called private fisheries in the Thames have been appropriated by a similar easy assumption on the parts of the various riparian owners, only requiring the crucial test of a law-court to prove them "mere coinages of the brain." In support of my contention, we have four very striking examples which can be taken as a fair example of what *will* follow—viz., Lewis *v.* Layard, Sir Roger Palmer *v.* a Bailiff of the Maidenhead Association, Mr. Layard's challenge to Mr. Grayham Davies, and Abingdon *v.* Wall. In the latter case, Mr. Philip Geen stated in open court that if his lordship or his agent would fix a day, they would again fish the same water; but needless to relate, the serpent has remained deaf to the voice of the charmer. Mr. Hobden is apparently oblivious of the fact that Lord Abingdon is not the owner of a several fishery, unless he holds supreme rights on the narrow water lying between Godstow and King's Weir, and, therefore, he cannot exclude the public from fishing on the river.

If my legal rendering is a correct one, he must have land on both sides of the stream; but Lord Abingdon goes to the extent of claiming water which touches no part of his property.

Unless I am misinformed, in none of the cases brought into court by the Abingdon family have they produced any supporting documentary evidence, and in their last prosecution against Mr. Wall, of Eynsham, Greenwood, the head keeper, had the cool consummate impudence to apply to the bench for a week's remand, alleging as an excuse, that he wished to bring further evidence. This the magistrates very properly refused, and granted to defendant his costs.

I distinctly assert again that the Thames, from Godstow to Eynsham, is closed against the public, not only as regards fishing from the banks, but also from boats. If Mr. Hobden or anyone else wishes for a verification of my words, let them try to fish without a ticket, and the result will be the loss of their tackle, or the issue of a summons to Witney or Abingdon. Perhaps it may interest Mr. Hobden to learn that a case is likely to be brought against one of the under keepers for stealing a rod from the boat of an Oxford angler whilst he was pulling over the rollers at King's Weir. The man being off his lordship's grounds, a glance at the consolidated Larceny Act may possibly demonstrate what the keeper will get if he is prosecuted. As no definite legal decision has yet been given by the judges of a superior court, I fail to perceive why we are to be so much pleased and so very thankful to his lordship for so kindly giving us permission to enjoy ourselves at a slight outlay in and on a piece of river to which it is doubtful if he is able to produce any tangible proofs of ownership.

My experience of this part of the Thames dates back a period of twenty years, and it is, comparatively speaking, only recently that any steps have been taken to prevent the public angling there. Mr. Hobden, on commenting on the river rough, observes, "it would appear they have some sort of right to shoot there." I am not a lawyer, therefore, I look at it from a commonsense point of view—I say commonsense advisedly, because law and commonsense are not always the same, and I should imagine if Lord Abingdon held these exclusive proprietary rights, he would also have a like control over the shooting. This, I opine, conclusively proves the weakness of his argument more clearly than his assumption of such a right for the purpose of his letter.—I am, &c., CHERWELL OTTER.

### LIVE-BAIT HUMANE TACKLE FOR PIKE OR JACK FISHING.

SIR,—I have to-day forwarded to you a specimen tackle made by Mr. W. Martin, of this town, for preserving live-baits when pike fishing.

You will see the fish is secured by placing the noose round its head and tail, and the cord is made fastened underneath very easily by the small piece which projects in the shape of a diamond.

I think the tackle will be very useful to anglers, as there is no fear of throwing the bait off, and the fish work much better when secured in this way, as it stands to reason that one or two hooks in a fish must interfere with its working after it has been on a little time; besides, one bait will last a whole day with the new tackle, in case the angler does not get a run.

Mr. Martin has recently set up a tackle shop in the London-road, he having been in the Midland Railway Co. service upwards of twenty years.

He is a thorough fisherman, and deserves to get on, and if you can kindly see your way to put a few lines in your next issue concerning the tackle I shall be exceedingly obliged.—I am, &c.,

Derby. T. WHYMAN.

[The sample is to hand, and we will give it a trial. Many similar dodges have been tried, but none of them answer, except in theory. A bit of wood as a model of a fish can be fastened up easily and neatly; but it is quite a different matter when a lively, limp, and slippery dace has to be put into harness.—ED.]

### BRANDY AND PIKE BAITS.—A PROTEST.

SIR,—It appears to me that all your correspondents on this subject have forgotten one important fact, or don't care to mention it, and that is, the fish are simply intoxicated. There was an old man (I knew him well) in our parts who used to amuse his friends by performing on some fish in a private pond, and the antics those poor fish went through was a sight to see—in fact *horrible*. Making them drunk was accomplished with the juice of a certain berry, which I am not at liberty to mention, because, if known, you could soon clear a place or "a pick me up." Depend upon it, what is a "restoration" to your half-dead fish, is *downright drunkenness* to a fish in a *healthy* state—nothing more nor less. Therefore, I say, desist from adopting such a course. Your correspondent, A. S. Izaak, Esq., hits it exactly. No. 2 had something *warm*. "He went about like a *steam-engine* under water, backwards and forwards, *round* and *round*, with *amazing* rapidity." Drunk — drunk! No. 3 "worked with much more vigour." What a state it must have been in. No. 5 seemed to be in a great state of excitement—no doubt. I don't wonder at it.

Let us hope *all* your readers and anglers generally, when they actually *realise* the facts of the case, will desist from indulging in this *unfair* and unsportsmanlike practice. For my part, I think it is downright cruelty, and only because the cause is *not known*. Therefore, I say, don't give your baits brandy. If you cannot catch a jack without doing this, go without.—I am, &c., MARK ANTONY.

[Unless "Mark Antony" can prove that brandy causes pain to the fish, we are inclined to think it is humane to make the bait "jolly." We all know how lively a bait gets when a jack is about to make his rush. This is undoubtedly fear, and an inebriated dace would have no fears.—ED.]

### FLY-TYING SILKS.

SIR,—Noticing that my name has been mentioned in the FISHING GAZETTE as to the above silks, I have to say that I know nothing whatever about their manufacture, but am utterly dependent upon my friend and old correspondent of 50 years, Geo. Davenport, Esq., of Leek, a first-rate fly fisher and accomplished fly-tyer, who has courteously supplied me with these requisite silks *gratis*, and, as he says, as a return for my coaching him up with flies. When, however, I published "The Quaint Treatise," and had to give samples, of every silk used therein for flies described, I would not accept silks gratuitously, knowing the great trouble and time he had bestowed in getting the exact shades required, and he kindly acceded to my request in charging for them. By his kindness, I have been able to serve a lot of friends with these silks, unattainable at shops, for the colours are all fast, and allowance made for their being wetted, and the fineness and strength unbeatable. No big firms as those alluded to in the FISHING GAZETTE of Nov. 8 would care to be troubled in so small a matter, where ounces only, instead of hundreds of pounds, would be required.

In writing the above, I do not wish outsiders to trouble my friend Davenport, who has had sufficient bother with me and my requirements for many years, and which he has so successfully carried out.—I am, &c., W. H. ALDAM.

Chilcomb, November 11th.

### STAMP DUTY.

SIR,—The attention of house agents, builders, and the public generally is called to the law regulating the stamp duty on agreements for letting lands and unfurnished houses.

Such agreements are chargeable, not, as is often supposed, with the uniform duty of 6d. applicable to ordinary agreements under hand, but with the same rates of duty as if they were actual leases for the term and consideration mentioned, according to the following scale:—

| | £ | s. | d. |
|---|---|---|---|
| Not exceeding £5 per annum | 0 | 0 | 6 |
| Exceeding— | | | |
| £5 and not exceeding £10 | 0 | 1 | 0 |
| £10 " " £15 | 0 | 1 | 6 |
| £15 " " £20 | 0 | 2 | 0 |
| £20 " " £25 | 0 | 2 | 6 |
| £25 " " £50 | 0 | 5 | 0 |
| £50 " " £75 | 0 | 7 | 6 |
| £75 " " £100 | 0 | 10 | 0 |
| £100 | | | |
| For every full sum of £50, and also for any fractional part of £50 thereof | 0 | 5 | 0 |

Such agreements, if not drawn upon stamped paper, must be presented for stamping within two months after the date of the first execution thereof. After that time a penalty of £10 may be imposed. *An unstamped or insufficiently stamped agreement cannot be enforced in any Court of Justice*, or before any arbitrator or other competent authority.

A lease made subsequently to, and in conformity with, an agreement duly stamped is chargeable with the duty of 6d. only.

Postage stamps cannot be used for stamping agreements for letting lands and unfurnished houses (other than dwelling houses, or any part thereof, for any *definite term* less than a year, where the rent does not exceed £10), but such agreements must either be brought to this office to be stamped with the proper impressed stamp, or be left for that purpose at the office of a Distributor, or Sub-Distributor of Stamps, or of a postmaster.

By order of the
Commissioners of Inland Revenue.
November 11th. W. H. COUSINS, secretary.
Somerset House, London, W.C.

### RICHMOND PISCATORIAL SOCIETY.

The smoking concert held by this society at their room at the Station Hotel, on Wednesday, was a great success, the attendance of members and their friends, upwards of 130, being very large. Mr. A. J. Little was in the chair; Mr. H. Dickinson in the vice-chair. The clubroom was very effectively fitted up with the society's show of specimen fish, which had been returned from the National Fish Culture division of the International Health Exhibition. Herr Louis Honig had kindly lent one of the famous Imperial pianos by Franz Seiler, of Berlin, for the occasion, at which Mr. J. Dellew Johnson officiated. The concert commenced at 8.20, and was continued till close upon midnight. The following interesting programme was carried out with much success. When all sustained their parts so effectually it would be invidious to select any gentleman for special commendation:—Herr Louis Honig, piano solos, *a* "Harmonious Blacksmith," *b* "Caprice Hongrois"; Mr. H. W. Little, "I arise from dreams of thee"; Mr. Griffiths, "Flying Dutchman"; Mr. James, "Where'er you walk"; Mr. H. Powell, "The Old Boy"; Mr. Evans, "The Wolf"; Mr. McCall Chambers, "What a bit of luck"; Mr. Harding, recitation, "Alexander's Feast"; Professor Millar, trombone solo, "Fantasie Brillante"; Mr. Sparkes, "The Vicar of Bray"; Mr. Grimsdick, "My Queen"; Mr. McCall Chambers, "The Fishing Match"; Herr Louis Honig, piano solo, "In the gloaming"; Mr. Sparkes, "The Powder Monkey"; Mr. Grimsdick, "Dora"; Mr. Evans, "Hybrias the Cretan"; Mr. McCall Chambers, "Only One"; Mr. Harding, recitation (in character), "Daniel *v.* Dishclout"; Professor Millar, trombone solo, "The Death of Nelson"; Mr. H. W. Little, "The Storm Fiend"; Mr. James, "The Distant Shore"; Mr. Griffiths, "The Cavalier"; Mr. H. Powell, "Sprung a Leak"; Professor Millar, trombone solo, "The Village Blacksmith." The chairman, on behalf of the society, proposed a vote of thanks to those gentlemen who had so kindly volunteered their services, and had contributed to the successful entertainment; he also referred to Mr. Plant, who had undertaken the management of the concert, and upon submitting the vote it was enthusiastically received. The chairman also submitted the toasts of "Prosperity to the Richmond Piscatorial Society," "The Vice-Chairman," "The Visitors," and to "Mr. Johnson" for presiding at the piano; and the vice-chairman having proposed "The Health of the Chairman," a very pleasant evening was brought to a close.

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE,
SALMON AND TROUT FLIES, SUITABLE FOR
ALL PARTS OF THE WORLD.
**Mahseer Tackle in Great Variety.**
**Makers of Split Cane Rods.**
**Improved Folding Trout Landing Nets**
(Very Light).
**New Patent Lever Salmon Winch**
(Can be regulated to any stiffness at will).

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add
30 minutes for Chelsea.
40 „ Putney.
45 „ Hammersmith.
50 „ Barnes.
55 „ Kew.
75 „ Richmond.
80 „ Twickenham.
85 „ Teddington.

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | November | 15 | 12.6 | 12.27 |
| Sunday, | „ | 16 | 12.50 | 1.11 |
| Monday, | „ | 17 | 1.29 | 1.48 |
| Tuesday, | „ | 18 | 2.5 | 2.21 |
| Wednesday, | „ | 19 | 2.38 | 2.54 |
| Thursday, | „ | 20 | 3.9 | 3.28 |
| Friday, | „ | 21 | 3.45 | 4.1 |

New Moon Nov. 17.

## THE LOWER THAMES.

### General Remarks.

In the neighbourhood of Chertsey there was a little rise in the water, but it has gone down again to its low and bright condition. For some time there has been a dearth of news from this district, and, if fairly patronised, it ought to be one of the best; there is every inducement for anglers to go there and fish; there is a first-rate piscatorial host at the Bridge Hotel; it has always been memorable for large supplies of jack, perch, barbel, and bream. Amongst the barbel John Poulter has had one large take this season, and it is not many years ago when James Haslett, in one day, got 147lb. weight of bream; and the fishermen are fully up to the average. It will be seen from the Walton report that Mr. Alfred Mackrill is again to the front in the matter of bream, and no angler is more deserving of the results he has so well achieved. The large barbel are showing themselves at Teddington Weir, as one of 10lb. has been taken this week. There has been lately some good accounts of jack at Twickenham Deep, and there ought to be plenty in that neighbourhood. In the "Blue Book" of 1864 there is an account of about 500 jack being caught in the previous season in the deep at Teddington. Mr. Alfred Little, the chairman of the Richmond Piscatorial Society, is heartily to be congratulated on having caught in the Old River at Windsor a very handsome specimen pike weighing 17lb. In several portions of the river above the locks a quantity of good jack have been taken. In one district there is a report of one of the fishermen saying he has taken more jack this season than he has done for years, but he will not state what he has done. It is difficult to conceive why fishermen should be desirous of keeping the public in the dark as to results, inasmuch as the publicity would increase the attendance of anglers, and so benefit the other fishermen and themselves too. In the tidal district the water is reported to be in just the same condition.

### Angling Results.

**Richmond.**—Job Brain, in four days, has taken 58lb. of roach and dace. Henry Howard, in six days, credits himself with 80lb. Henry Platt, in five days, fifty-five dozen. Henry Wheeler, in one day, 22lb. Christopher Brown, in a couple of days, 19lb.; and F. Brown, in the same time, 22lb. and the only barbel of the week. The bank anglers on their favourite day weighed in 17lb. of roach and dace.

**Twickenham.**—Richard Coxen, in two days, got twenty dozen of roach and dace, and in one other day 18½lb. James Coxen, in three days, forty-eight dozen. George Coxen, in four days, forty dozen. Pert Hammerton, in four days, 70lb. and one perch. John Spong, in six days, forty-seven dozen, six barbel, and a jack of 3½lb. J. Dobbin, in three days, 46lb. W. Spong, in two days, thirteen and a half dozen. Edward Finch, in three days, 40lb., and Samuel Cole has had some good takes.

**Teddington.**—Alexander Kemp, in one day, three barbel—the largest 10lb.—and in two other days four brace of jack. Joseph Baldwin, in two days, seventeen dozen of roach, a couple of barbel, and a jack of 3lb. C. Baldwin, in two days, twelve dozen of roach and dace and a couple of barbel.

**Kingston.**—John Johnson, sen., writes:—"I have only been out twice this week The first time I got about three dozen of fine roach, some over 1lb. each, and the next time eighteen dozen of good gudgeons. This is all I have done; but John has. been out once, and got about two and a half dozen of roach and dace. There was one day a fine lot of dace taken at the Surbiton Sewer, and some at the railway bridge. In other respects the bank anglers have not done much all round. I caught a nice flounder which weighed very little short of a pound."

**Long Ditton.**—H. Buttery, in one day, three jack—the largest 5lb. The bank fishers have done fairly well amongst the roach, dace, and gudgeon.

**Hampton Court.**—John Smith has had a good take of jack—the largest 5lb. W. Milbourne, in one day, a jack of 6lb. and four and a half brace of perch. Thomas Wheeler, in a couple of days, three jack, the largest 6lb. G. Martin, in one day, five dozen of roach and dace. Mr. G. Woods, of East Moulsey, have taken during the week, five jack, the largest 5lb. At Tagg's Island Fishery there has been some good takes of roach and dace and a few perch.

**Sunbury.**—Edward Clarke, jun., in three days, took nine brace of perch, ten dozen of gudgeon, and a jack of 2½lb. Henry Clarke, in one day, one brace of jack, the largest fish 6lb. The bank anglers have been getting some very fine fish in good condition, consisting of barbel, chub, perch, roach, dace, and gudgeon.

**Walton.**—Mr. Alfred Mackrill, in one day, with the veteran George Hone, caught fifteen bream weighing 30lb., and another day, eleven bream, the largest 4½lb., a jack of 3lb., and a few roach. John Hone, one day, a dozen of fine roach, the largest 1lb. 10oz. R. Watford, one day, four barbel and one jack; another day, five barbel and one bream; another day, one dozen of roach, two chub, and one perch; and another day, a barbel of 5lb., two bream, one perch, and a trout of 5lb., the latter being returned to the river. A gentleman fishing from the bank one day got four jack, and another day three more.

**Shepperton.**—W. House, one day, four dozen of roach and dace; another day, a jack of 5lb.; and another day, four brace of perch and one brace of jack, the latter weighing 7lb. James Haslett, in one day, five barbel, the largest 5lb., one bream, and two chub. A gentleman fishing by himself in a punt got one brace of jack.

**Staines.**—George Osman, in two days, one brace of jack, three barbel, one chub, and one dozen of roach; and another day, four barbel and one chub. F. Collyer is credited with the capture of a nice jack of 8¼lb.

## UPPER THAMES.

The river is now in prime all-round winter angling trim; the weeds have gone the way of all weeds, and are no longer *intimidads* to the feeding propensities of jack, perch, roach, and chub. A nice little flush of water would now still further improve the chance of sport, by washing out the *débris* from likely holes and corners. and make the bed of the river sweet and clean, and smell, like the sheets in Izaak's hostelry, of lavender. Perch are biting well, some twelve dozen being had by one rod in the Medmenham and Hambledon district in five days. The fish, I am told, however, ran very small, more than half having to be returned. In the Hurley waters on the 9th inst., Messrs. Parry and Kidd, of the South Hornsey, out with "the boy," and locating themselves at that comfortable inn, the East Arms, got a pretty sample of some 16lb. of roach, mostly had two hours before dark. Anglers also staying at the Bell, Hurley, did very fairly amid the roach. Mr. Troup, in the Hurley waters, also on the 9th inst., nobbled two jack, one going 7lb. and the other 2lb. (returned). Mr. T. was fishing from a small canoe when he caught the seven pounder, near a weed bed, and for some time, I understand, it was a moot point whether jack was not as good as his master, for they alternately towed one another about; but eventually the master prevailed. I am glad of this, as I gave the gentleman the only bait I had in my punt with which to do the deed. Marlow and Maidenhead punts have been particularly busy, I hear, and roach and perch had in galore. Thursday Evening.—Water in fair trim and of nice height, but unfortunately (there is always some but, even to a rod), the frosts are bringing the leaves into the river by the ton, and this, I fear, for a few days will have a deterrent effect on the appetite of the fish; but by your leave, my masters, when this "sad falling off" is not there, stand not upon the order of your coming, but come at once and interview old Father Thames and—Marlow Buzz.

## Thames (Datchet).

The water still as low as ever, and sport the past week has not been so good as expected. Mr. Little had the good fortune to hook a large jack last Saturday in the Fleet, and successfully landed him, going something over 20lb., and one or two smaller ones. J. Hoare has had a few barbel; but nothing to mention. H. Hoare, to-day, two jack 4lb. each. Some of my patrons have taken a great many chub this week, ledgering with lob worms, and a few barbel, and a very few fine roach. We really must have a little more water to make the fish bite better.—G. Lumsden.

## Thames (Goring).

Water good for jack, perch, and chub. Jack have been well on. There have been some good jack taking; my best day eight jack, going 30lb., to largest jack going 14lb.—J. Rush.

## Thames (Oxford).

It begins to look like winter. Since last week there has been a marked and remarkable change in fishing prospects. Throughout the returns are good, and everyone appears to be contented, and I think that when three anglers out of four are unable to raise a decent grumble, then there is not so very much to complain of. No very remarkable catches have come to my ears; but there seems to have been an equal distribution of piscine property, and like the foolish ideal dream of the social democrat, it does not amount so very much, individually. Jack are well on the move, one greedy specimen I saw to-day gasping his last on the grass, had evidently tried conclusions with a perch fisherman, for when taken the second time a piece of a stout salmon gut bottom was hanging out of his jaws. Roach affect paste, worms, and gentles with equal impartiality, and chub in the canal exhibit a *penchant* for a bunch of gentles strung on a No. 4 hook, and I am of opinion that a few bits of pork fat would also answer. I have not been able as yet to get up the Cherwell with pith and brains, but I should think both at that or lob worms the chevins would go well. As regards the former bait, it is as well to take out a good supply, for as Bendigo, of pious and pugilistic memory, used to remark, "You do eat such a lot of it." Some fifteen years ago I essayed my 'prentice hand with pith. "Well," said the governor on my return, "What did you do?" "Um! not much; had all the lot for lunch." On the 9th inst., Mr. T. Boscott, in the Cherwell, had a nice little bag, comprising three jack, running 1½lb., 1½lb., and 2lb. respectively, together with three good perch and five roach. On Tuesday, at Tumbling Bathe, a nice little jack of 3lb. was taken by an angler, and, lower down, Mr. Shirley had a fine perch of 1lb. 7oz. On Wednesday one of the most workmanlike anglers I have come across had five jack at the Sheepwash—roughly guessing, they went from 1½lb. to 2½lb. each. To-day, Mr. Carter at Medley Pool, landed two jack, going 4½lb. and 3½lb. At Wolvercott Mr. Watts had a jack of 1½lb. as the whole of his day's take; and Mr. Corbett, in the canal, obtained 7lb. of chub and roach. The best chub went 2¾lb., and three of the roach made up 5lb.—Cherwell Otter.

P.S.—I omitted to mention (and I knew I had forgotten something) that on Saturday Mr. J. Bosson, in the Post Meadow Stream, bagged a fine jack of 9lb.

### Ancholme District.

The weather remains very fine and dry, and the leaf nuisance is abating. Few visitors now go to the water-side, but local fishermen still continue to ply their craft, though in considerably diminished numbers. The large sixteen-acre pond in Sudbrooke Park is being run off this week, and we are expecting some men from the National Fish Culture Association on Friday to fetch away some fish. It will be a grand sight to see the cartloads of fish as the water recedes. Trout culture has been highly successful at Sudbrooke. They have literally bushels of yearlings, or rather two-year-old fish, to let down when the pond is cleared out. This job will give occupation to a gang of labourers all through the winter. The fish, which have done so well, were obtained from the Manor Fishery, Caistor; but they owe their fine growth to the ceaseless attention and judicious feeding of the head gardener, Mr. Gray.—Thomas Ford.

### The Bure (Norwich).

Our old friend, Mr. C. J. Greene, has started the ball on water connected with this river (known locally as "the other side of Jordan") by the capture of a splendid specimen of the river shark, weighing upwards of 19lb. I had the pleasure of seeing the fish, and can bear witness to its exceptional beauty; its length from extreme ends was 38in., girth 18in. This is a good beginning for our veteran. Several others have had good luck during the past few days on this river, records of four to six being the best I have heard of, and some fair fish running 6lb. to 9lb. are reported. Spinning on the river now ought to pay well, as no account of the salts having affected the Bure has reached me. From Coltishall, all the way down past Wroxham, Horning Ferry, Ranworth, to Thurne Mouth is all excellent water for pike, as on either hand you have a series of broads which supply the river. Prospects good.—Robert Moll.

### Chichester.

Want of water is still the cry here, both among anglers and agriculturists, and until we get some heavy rains anglers must rest content with light baskets. Mr. Young has, as usual, taken some good perch with brandling, one fish scaling close upon 2lb. A pike of between 4lb. and 5lb. was taken last Thursday afternoon by Mr. Canaway; but, with seven or eight rods in the basin, pike have not much space without a bait being invitingly held out for their notice, the deep water being the principal resort at present. From Selham or the Ouse no news has reached me, so must infer that sport is quiet in these waters.—George F. Salter.

### The Dove.

Sport on this river has been better during the last few days than I was able to report in my previous communication. A good number of grayling have been killed, the most destructive lures having been the grasshopper and the bumble. Particularly on the tributaries, Blythe and Churnet, has sport been remunerative, for both are capital grayling streams. It cannot be said that the weather has been favourable, as, in the words of the poet, "It has been everything by turns and nothing long." What we want is some sharp, bright days. Then our rodsters would come out in force, and, as grayling never bite better than in sharp frost, everything would become rosy. The grayling dishes this week have averaged about five brace per rod. Pike are not stirring freely yet. I hear of a couple having been caught on the lower waters, but this is about all. They were killed with the live minnow. The best bait for chub just now is cow's brains.—The Splodger.

### Eden (Carlisle).

Now we come to the last week in the season, which closes next Saturday, 15th and it seems likely to make a very good ending to a very bad beginning. I can only give you such returns as I have had of the water near Carlisle, much of it belonging to the Association; but of course, numbers of fish have been landed in the upper reaches. On Saturday last it was scarcely in order after the flood. Still, three fish were killed near Crosby, Mr. Beaufort having one of 19lb., the "Priest o' Houghton" one, and a "great card," who reserves his name, another. As you can imagine, this was a "wee fish." The river rose on Sunday, and was just fishable on Monday, when Sergeant Fox got a nice fish. The "Demon," Mr. E. L. Hough, kill two, 14lb. and 25lb. Mr. Wilson, of Head's Nook, got one 8lb., and Mrs. Brooks killed a fish out of a boat at Crosby on Tuesday. Mr. Waters had a small one at Rickerby Rocks; Mr. Wilson, of Head's Nook, had a twenty-pounder; John Barrett, Esq., killed a fish of 18lb. with a well-known fly, "The Sweep"; and Mr. W. Routledge, after trying many flies and baits of sorts, in desperation tied two huge angel minnows tail-and-tail together, and succeeded in landing a beautiful fish of 30lb. Certainly, fish are strange beasts. I expect a lot of fish will flatten the grass before Saturday evening, and then it will be "hands off" till February 16th next. The season cannot be called a good one on the whole. The spring fishing, both for salmon and trout, was poor, and the autumn fishing for sea-trout and whiting the worst known for many years; but the last six weeks have been pretty productive to salmon fishers, and will afford subjects for many a good yarn over the fireside during the winter. The fish that were landed will be killed over again, but the big ones lost will last till the season comes round again. On Tuesday, 11th, Mr. Beaufort killed four fish at Crosby weighing 29, 21, 20, 20, and in all 90lb., and a novice, a farmer's son, had four also. Wednesday, Dr. Foster, of Huddersfield, landed three fish, and R. Routledge three heavy fish; in the Warwick Hall water, Mr. Phelps one, and Mr. E. L. Hough one of 20lb. at Crosby. Near Carlisle, R. Archbold killed a twenty-pounder. F. Davidson one, and two other gentlemen one each in the Association water.—Silver Grey.

### Ilfracombe.

Sea-fishing. The sport from the rocks and jetty for rod and line fishers has not been so good this week. Mr. Gratte caught a conger, 10lb., from the rocks; and some small whiting pout, conger, and thornback have been caught from the jetty. The herring fishing has been carried on with little variation—several boats bringing in four and five maize, while others only had a quarter. A few boats drifting by day has caught two and three maize each boat. Wednesday some large conger were caught, and a pollack 14lb. Thursday, the largest quantity of herrings brought in was—C. Buckingham 4¼ maize, price 21s. 6d. per maize. Weather moderate.—E. Comer.

### Leicester.

If we take into consideration the late period of the year, anglers have lately been fairly numerous at the river side, and in individual cases there has been fairly good success. The Leicester Society's water, both the canal and the brook at Aylestone, have afforded sport, some good pike having been taken from the canal during the week. Chub fishing has been lively in the Aylestone waters, and a number of good fish have been shown. The largest scaled 4lb. 3oz., and was taken by the well-known cricketer Rylott, who certainly loses no opportunity of securing a good basket, he being almost as clever with the rod and line as with the ball in the cricket field. Many other fine specimens of chub were weighed in, scaling between 2lb. and 3lb. Perch fishing has also been favourable in these waters, a lot of fish over 1lb. being taken. Sport in the district has not been very brisk, as with the exception of a very good roach, 1lb. 13oz., being weighed in at one of the clubs, but little seems to have been done. The weather is of a very unsettled character. Thursday was foggy, and a small rain fell the greater part of the day. There is plenty of water in the rivers and brooks.—Alert.

### Lugg and Arrow (Leominster).

Both these streams are in capital order for angling, but still keeping low. Rain has been had in this part, but has made scarcely any alteration in the colour of the water. The fish are biting well at the maggot and worm, and are sporting freely at the whirling blue, green insect, and red tag. Anglers have used the grasshopper freely this week, and some good baskets have been taken. Large quantities of leaves still accumulate in the water, and are a great nuisance to the angler. On Friday some capital sport was had in the Lugg, near Aymestry, and a very nice dish of fine grayling was taken with the maggot. A splendid lot of fish were landed in the Arrow near Eardisland, by a gentleman who was fishing with the grasshopper. The Lugg was tried on Saturday with the whirling blue, and a capital dish of grayling were taken, averaging 10oz. each; a few very nice ones were taken with the red worm. Some good grayling were landed in the Arrow near Ivington, with the grasshopper, weighing 4lb. the lot. A gentleman fished the Arrow on Monday, and with the red tag and green insect took a splendid dish of fine grayling. The Lugg, near to Kingsland, was tried with the maggot, and a very nice lot of grayling and a few rough fish were landed. On Tuesday a gentleman visited the water near Stanton, and landed a good basket of fish with the grasshopper. Some very good grayling have been landed in the Lugg, near Fords Bridge, with the fly this week. Little doing in the Bodenham district this week. Fishing quiet in the Monkland waters. The Pinsley is still in capital angling order, the fish are sporting well at the fly, and some good dishes have been taken. A fine lot of fish were taken on Monday with the grasshopper.—Gwynne.

### Medway (Tonbridge).

The state of water remains unchanged, as rain is sadly wanted, many of the side streams being all but dry. This does not tend to successful fishing. Some very good takes of pike are recorded all over the fishery, but everything in the way of angling would improve if we had a nice run of water.—Ye Medway Water Rat.

### Nene (Northampton).

Fishing in this district has been very tame since my last report. But during the last few days I have seen a nice sample of fish taken from the canals, including some nice roach, chub, and perch taken by Messrs. Bullock, Eyte, G. Johnson, and A. Cook, the latter killing a nice chub of 3lb. 2oz. On a tight hair line Mr. Pendered, of Wellingborough, killed a nice pike of 15lb. The members of the Northampton Nene Angling Club have been holding their annual prize fishing competition this week, result not at hand.—T. F.

### The Ouse (Huntingdon).

Although the water does not improve as regards colour, jack have been taken. Some of our local fishermen have been out and took about twenty, some going from 5lb. to 7lb. each. In the deep water, when it does not show the brightness, is the best to fish, for the water about six or eight feet the fish are very shy, and fly off in all directions. A flush of water would do a great deal of good, to carry off some of the weeds and to stir up the fish of all kinds. I saw about a dozen fine chub lying in a pool this morning (the 13th), and if any one was to try for them no doubt but what some might be taken.—H. Rout.

### Swale (Richmond, Yorks).

This has been a bad fishing season. Streams nearly dried up till lately, when floods have spoiled the fly-fishing for grayling.—G. R. Walton.

### Teme (Ludlow).

This stream, and most of the tributaries have resumed their ordinary level, but the waters are somewhat thick and muddy, nevertheless, fair angling has been had in most of the streams. The mild weather tempted many to visit the waters this week grayling fishing. With a good flush of water, we shall look for salmon ascending the Teme from the Severn, but we have not heard of anything being done to remove or improve the formidable barriers to their passage up the Teme, of which Ashford Weir is one of the worst. There are some rather awkward weirs close to Ludlow, six being within a short distance of each other, viz., Steventon, Paper Mills, Hockey's Mill, Ludford Bridge, Mill-street, and Collings's Mill, at New Bridge. This is no small number to ascend. If by any chance a salmon is left between these weirs, it is almost a dead certainty that he never ascends another; for, between river poachers and others, the capture of the fish is sure to be effected. Scarcely a year passes without some of the fish being captured. There have been a few grayling caught up Leintwardine way with the grasshopper, but the fish did not take the bait very eagerly, probably owing to the condition of the water. Sunday night was cold and frosty, bringing a fine and bright morning on Monday, which was, after the fog was cleared, a good day for top fishing, and the streams were fairly visited, and the maggot was used with great success. A fisherman on this side Barrett's Mill caught four brace of grayling with the maggot; the fish were fine fish, and averaged ½lb. each. A few fish have been caught in the Clun with the green insect. A fisherman on Monday started from the railway bridge and fished up the Corve with the silver-twisted blue and red tag. He caught some seven grayling; then trying the maggot he caught two more fish.—S. Ludlow.

### Teme (Tenbury).

This stream is now in splendid angling condition. Since our last report the water has slightly risen from the rain which we had in this part on Friday, and on Monday was a little coloured. The fish are sporting well at the fly, and are biting well at the maggot, and some good lots have been taken with the grasshopper. The best flies on the water are the red tag, claret body, and whirling blue. The water near the town was fished on Friday afternoon by a gentleman with the maggot, who landed a nice dish of five grayling and three perch, all in good condition. In the water near Little Hereford a fine lot of grayling were landed with the red tag the same day. On Saturday, a gentleman visited the water near to Eastham and landed a fine lot of grayling, averaging ½lb. each, with the whirling blue. A nice dish of fish were taken from the water near the bridge with the maggot. A gentleman tried the water near Easton Court on Monday, and with the red worm landed a capital dish of fine grayling, all in capital condition; and with the claret body a nice lot of fish were taken. Fishing, on Tuesday, in the water near Corn Brook, a gentleman with the grasshopper landed a splendid lot of grayling, scaling 6lb. the lot. The water near Berrington court was tried the same day by a gentleman who landed a very good lot of grayling and a few perch with the maggot. Some fine fish were taken in the water below the town with the whirling blue. The anglers of this district have been on the look-out for the salmon coming up the water; but none have been seen as yet, the water being too low for them to get up. The Kyre and Rea are in good angling order. A few good fish have been landed from the Kyre. Nothing doing in the Rea or Ledwyche this week.—Worcester.

### Trent (Newark).

I do not wish to occupy your space with any comment on what "T. T. O." says in your issue of last week, excepting when he throws (to put it mildly) doubt on my accuracy as to the report of one catch out of the many I gave you. It is one more instance of his giving you a hearsay report, as he might have had conclusive evidence that my weight was an under estimate rather than otherwise. For his information, will you allow me to say that the catch consisted of 17 bream (the largest 2¼lb. and the smallest ½lb.), and, that when his friend saw the fish, five of the best had been given away, and still 9lb. left, even according to the estimate of one who it is well known would not overdo it. Mr. Slater saw the fish, and would, I am sure, have borne me out. Possibly another time, when I am taken to task in such a way, "T. T. O." will specify the catch; though, as it happens, I have not had much trouble this time in making it out. So much for the "tremendous haul," i.e., 14lb. of bream, which "T. T. O." would have me reduce to 9lb. On Thursday Messrs. Slater and Dale were out, the former bringing home 12lb. of dace, six weighed 3lb.; this is second only to a catch made by Mr. Dale just twelve months since, when, out of a big bag, five dace weighed 46oz., about the best sample ever seen here. The latter, on Thursday, had over 9lb., but nothing very large. On Saturday several were out, myself among the rest. A friend took me to a private jack water, where I was to take some big bait. We had some fine fun, but only landed three fish, about 7lb.; we missed between us fully 20 runs; with two exceptions, all were small fish which could not take the large bait. I broke in a good fish, spinning, and my friend was snapped at, just lifting out the fish, taking bait and hooks with him. I shall look forward to another invitation, when Mr. Jack will not find me so badly supplied with tackle suitable to their requirements. Mr. Mead, hon. sec. to the Muskham, had three jack, and Mr. Morledge five. Several others tried, but met with little or no success, except an angler, whose name I do not know, had one fish 6lb., which he says ought to have been 10lb., also about 5lb. roach and dace. On Monday Mr. Sims had a good fish, and Sunman a nice lot of bream; our keeper says 2st., but I should not like to vouch for it. On Wednesday Mr. Dale had a jack of 8lb., in very poor trim; it measured 34in. in length. I don't know the rule, but fancy 12lb. would have been moderate for it. Mr. Curtis had one fish, and broke in a good one; from what I hear, it was the one which is answerable for several tackles during the past two seasons. There are some ugly rumours flying about just now, touching the fine fish weighed at several clubs last week; possibly more may come of it. P.S.—I see your note *re* Mark Antony and fish maggots. Many of our best anglers use them regularly, and consider them far before the liver-bred ones; but the Sheffield men, who use exclusively maggot fishes, swear by the latter, and are very particular that their baits should be "yellow as a guinea."—F. T. L.

[We also much prefer them yellow, and feel sure the fish do.—Ed.]

[ At the beginning of the week the water was running at a very fair height; but, as I stated in my last, not much colour came down with it. Since then it has been gradually going down, and, at the time of writing, it is about 6in. higher than it was a fortnight ago; but still it is in not very bad form for general fishing. I have not heard of anything much having been done this week. One or two of our anglers tried the chub, but nothing much came of it. A few jack have been killed spinning, and a few dace have been had with gentles and cockspurs for bait. Thursday night; water low and clear—pike, chub, roach, and dace, should be had; although I think we want a sharp frost or two to sharpen the appetite of the two former fish.—The Trent Otter.

### Waveney (Beccles).

Pike have been feeding fairly well during this week, and several have been taken, Capt. James, four, weighing 11lb., Mr. W. Balls one, weighing 4½lb., and Mr. Leman one of 3lb, taken with various kinds of baits, viz., spoon bait, snap tackle, and spinning with roach. As there are plenty of sprats now to be had, I would suggest that pike fishermen should give them a trial. They are very bright and showy, and from experience I have proved them to be a good bait. Weather just now is the right kind for anglers. Wind S.W., water good.—A Waveney Angler.

### Wharfe (Yorkshire).

There have been a few nice dishes of grayling killed since my last report, chiefly with the worm. Another angler and myself tried them for an hour or two last Saturday; he killed five nice fish, and I had six similar ones. The trout took hold in a most aggravating way; some of the ones that I landed were in excellent condition, and fought well. The river is now in first-rate order for fly-fishing, but I have noticed very few rising fish.—Francis M. Walbran.

### Wye and Derwent.

Both rivers still keep in excellent order for either fly or bottom fishing, and very good sport has been had on different parts of the Derwent with both fly and bottom fishing. The best feeding time at this season is from 11 a.m. to 3 p.m.; but you may kill fish up to 4 p.m. occasionally. The ash dun, along with the cowdung fly and small black are still to be seen on these rivers, in fact, these flies will be seen more or less through the winter, and grayling rising at them on the rather deep hill runs or glidings. The weather is very mild for this time of the year. Last week, up the Darley meadows, I saw crows making their nests, in fact, there were four pair of birds quite busy building. Small grayling, especially on the Derwent, are very numerous this year, and if they escape being made small fry of by other fish, next year they will well stock the rivers. The pike-fishers have killed a few fish, below Cromford, both by spinning and with trimmers, none of the fish running very large. Trout are nearly all up the brooks, and every caution is required to keep them safe from being taken.—G. J. Eaton.

### The Yare (Norwich).

I am sorry to say the good sport experienced about a fortnight ago makes the present want of luck seem all the harder. I refer more especially to jack fishing, as I am credibly informed some excellent catches of roach have been taken, both at Buckenham and at Brundall, but the spinning has been a complete failure. A friend and I tried the Yare last Saturday afternoon for an hour and a half, and we were lucky enough to have seven runs and landed four fish; but they were all small, about 2½lb. to 3lb. The present state of matters is accounted for to some extent by the unfortunate visit of the salts up our beautiful stream as high as Surlingham Ferry. It was mentioned by Professor Day at the annual dinner of the Champion Angling Club, held last Tuesday evening, that he had picked up about 40 dead pike in the vicinity of Buckenham; also a large number of fine bream; in one instance two of them weighed over 10lb. This is very sad, and is a thing we cannot guard against. Prospects: The water looks promising, and I intend to try my fortune again next Saturday, and hope to be able next week to send you a more cheering account.—Robert Moll.

## THAMES FISHING IN THE TIDAL WATERS.

Another period of anxiety to the preservers and protectors of the Thames Fishery has passed away without even the report of netting having taken place, and with the greatest satisfaction to those whose duty it has been to guard and watch the river night after night to find that the game of netting during that time has been about played out. The period to which I refer is when certain holiday's are on, and when there is a great demand for white or coarse fish. Fortunately for the Thames, independent of more united and faithful watchfulness, the gang of old poachers is about extinguished; names memorable in the past as associated with heavy fines and the destruction of valuable nets, and of incessant attempts at poaching, have gone to their final resting-place, and it is hoped and believed the rising generation will be an improvement on their forefathers, and be found law-servers instead of law-breakers.

It was only a week or two since I was informed of the death of another of the race of famous poachers, and there is only another link left in the once powerful chain. The records of days long past, when many of those interested in the river now knew little of it then, furnish sad and painful stories of struggles between river-keepers and poachers, the lives of the former in numerous instances being nearly sacrificed by the daring and determined opposition of the latter. The victorious results which invariably followed these attacks is accounted for in one year alone, when the fines realised a total amount of over £30, and the destruction of a number of valuable and costly nets; when Mr. Francis Francis and others raised special funds as rewards for the bravery and exertions of the river-keepers; when poaching was done by a large organised gang, and on a scale and system that has not been attempted in recent times. The leaders, as I have said before, are all about gone, and their inglorious and illegal deeds must be buried with them; but there was a time when I felt that, although netting might be greatly checked, it would, to some extent, still exist. Our thoughts and impressions are naturally subject to change, and if that change is brought about by substantial evidence to the contrary, then it ought to be right and natural for me to feel now, especially with the dying-out of the old and bold offenders, and the most reliable proof that during the last and previous fishing season no attempts have been made to net the river, that poaching is about stamped out.

Before the time of our valued and energetic president of the T.A.P.S., Mr. Thomas Spreckley, there was no active and personal leader like him in Thames Protection and Thames Preservation; the whole work of carrying out the duties then devolved upon myself, though I was always well supported by an intelligent and practical committee, and those duties were always faithfully performed. The result of the last few years prove how desirable it is to have a liberal and active leader, with an amount of responsibility about him, to make protection and preservation perfectly complete, and in whose leadership I have heartily and, I trust, effectively co-operated. Few have experienced, as I have done, the time, the labour, and the money which our worthy president has unselfishly applied to the great objects connected with Thames fishing, how devoted and earnest he has been to the work, and how, with a firm and heartfelt determination to do what was right, he has secured the confidence and esteem of all classes. These observations will, I think, lead up to what forms the heading of my remarks as to Thames fishing in the tidal waters, because I cannot but think the extraordinary results of angling this season are due to the good and wise government of Mr. Spreckley and to the valuable co-operation he has had from Mr. A. J. Little, of Twickenham, in that district; and it is safe to predict how much future seasons will be benefitted by the protection of the roach spawn, which was so successfully adopted in May last, and which is to be continued each year. In the River Reports which have appeared in the Fishing Gazette as connected with Richmond and Twickenham, the records have been of a marvellous character—instances from 30lb. to 40lb. weight of roach and dace in the day have frequently been given; and in the records of last week, which, from some inadvertence, did not appear, there were the united takes of four fishermen at Richmond, representing a total of 391lb. weight of roach and dace, supplemented with seven barbel and one bream, giving an average of over 20lb. weight of fish to each punt, one of the best takes being 35lb. Then, again, the great quantity of barbel that have been captured—the tidal waters may safely challenge any other portion of the upper districts for equal results. It is the generally-expressed opinion that recollection does not serve to prove the existence of any previous season with so much successful angling; and if the anglers will only support the work which has been so effectively done by the T.A.P.S. for their benefit, it will help to put forward greater efforts and, at the same time, evidence their appreciation of the past. B.

[The reports referred to never came to hand.—Ed.]

## SHARK FISHING.

By Colin.

It has been said that sharks always turn over to bite. This is not so. They do often, it is true; but I have seen them feed without turning over at all. Sometimes a side motion was observed on account of the mouth being set so low down below the nose; but they can calculate where to strike the object, if above them, by simply opening the jaws and rushing at it. Below the shark is the safest place, because it has to turn over to take an object below it.

Down in Panama the Englishmen who are fond of killing them do it on wagers. They get out on a buoy in the bay, and the huge man-eaters that come up to take a snap at their legs are despatched by a well-directed rifle bullet. One man killed over thirty in a day in this way. He was left with a couple of repeaters on a huge buoy, one strapped behind his back in case the other got out of order, and belt and pockets full of cartridges, by some friends in a sail-boat, who watched him from a distance. Sometimes, when two large white sharks came at him from opposite sides, it took the quickest kind of double shots to kill, while strapped to his bobbing and rocking seat.

The hammer-headed shark is one of the ugliest and most repulsive-looking fish that exist. Its head resembles that of a hammer, the eyes being at each end, and the mouth extending the whole length.

A good way to set a shark-bait is to anchor in some place a hook with a long rope, to the end of which is a barrel. When set, the barrel floats over it, and can be seen at quite a distance, bobbing under if a fish is caught. Haul this line in very slowly when you get to the cask in a boat, and shoot the fish with a heavy revolver bullet as soon as its head shows at the top of the water. One way of killing sharks that are troublesome, dangerous, or so numerous in a vicinity as to kill game-fish, is to set a dynamite cartridge in a chunk of fat pork, connecting it by a long wire to a pier or boat. As soon as the bait is taken and gorged, strike a battery connected with the wires, and the shark will be in a hundred pieces immediately. Sharks are cannibals, and the flesh of one is a taking bait for the others.

Sharks have been caught with immense rods, and in Florida sometimes with the fly. The outfit in this case consisted of a short thick bamboo rod with large rings, a winch almost resembling a ship's windlass in size, made of wood, holding several hundred yards of the best quarter-inch rope. The fly was a regular shark hook, lighter and smaller than usual, with a gull's wing on each side, and a squirrel's tail as the body. All this was ornamented and tied on with tinsel of the brightest colours. Casting must have been difficult with this cumbersome tackle, although throwing in the Nottingham style on the still waters of a bayou, a long distance might be traversed by the fly. Harpooning sharks is even more exciting than catching them with a hook. The harpoon has a wooden handle, detachable from the head, to which the end of a long cord, coiled up carefully in the boat, is fastened. A Barnegat sneak-box is the best boat to have, and early in the morning, when sharks are feeding in shallow water on crabs and small fish, is the time to start for them. Keep a sharp look-out ahead for dorsal fins, and when you see one, approach cautiously, cast the harpoon, haul up the centreboard, drop the sail, and wait until the line runs out, when you will have a ride, if the fish is big, such as perhaps you never had before. When the fish tires, approach close enough to shoot it. The harpoon can then be cut out, and the fish secured, if you desire one.

The River Almond.—The stock of trout in this celebrated Scotch stream has suffered an immense loss, in consequence of oil getting into the river from a railway truckload.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: **Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen.** Orders punctually attended to.—(Advt.)

# CLUB REPORTS.

### AMICABLE BROTHERS ANGLING SOCIETY.

The remaining prizes were won by Messrs. J. Dacey and J. Worledge. Members are requested to attend the club on Nov. 19th, to arrange supper and other business of importance.—J. Worledge.

### THE ANGLERS' ASSOCIATION.

The delegate meeting will take place on Monday, Nov. 17th, at Foresters' Hall. Chair taken at 9 o'clock. The district visiting lists will be shortly rearranged; societies wishing to be enrolled thereon will oblige by informing the secretary as early as possible. Since my last report, I beg to acknowledge with thanks the receipt of £1 10s. from the donation box of the Globe Angling Society; also 5s. donation from Mr. Franks, the treasurer; and 4s. 6d. from the donation box of the Kingsland Brothers Angling Society.—R. Ghurney, secretary.

### BATTERSEA FRIENDLY ANGLING SOCIETY.

On November 9th there was a very poor show, only three members weighing in. On November 23rd a match will be fished at Staines for three prizes, open to all members that have not taken a prize this season. The concert arranged for the benefit of Mr. H. Payne will take place at the Shaftesbury Hall on Nov. 24. Tickets can be had on application to any member of this society. On Wednesday, fishing at Twickenham, Mr. G. Edwards caught 6lb. 2½oz. of dace, and Mr. W. Birkett 6lb. of dace and roach.—A. T. Sampson, hon sec.

### BROMPTON ANGLING SOCIETY.

Some very good shows on the 9th. Messrs. Dutton and E. Saunders having roach and jack; Mr. Barton, roach; Messrs. Brown, Herbert, C. Saunders, and T. Bentley having roach; Mr. Burbidge, dace; Mr. Sparrow, some nice chub. On the 2nd, Mr. E. Saunders having some nice bream, some scaling 4lb. apiece; Mr. C. Saunders also having some good bream on the same day.—W. Dutton, sec.

### CITY OF LONDON ANGLING SOCIETY.

Only two of our members weighed in on the 9th inst., Mr. Chambers, dace and gudgeon from Pulborough; and Mr. Castell, roach from Sawbridgeworth.—Cas.

### CLAPHAM JUNCTION ANGLING SOCIETY.

The result of the match at Twickenham on the 9th inst., Messrs. Wilson and Boisseau *v.* Messrs. Favell and Maslin, was a very near affair, and the weights as follows:—Maslin, 9lb. 9½oz.; Favell, 2lb. 7oz.; Wilson, 9lb. 6½oz.; Boisseau, 2lb. 7½oz. (won by 2½oz. only). Mr. Withers had 14lb. barbel and perch from Cookham, other members having decent shows.—W. Maslin, sec.

### COBDEN ANGLING SOCIETY.

Several of our members were out on the 9th inst. They went to various places, some to the Thames, Uxbridge, and the Lea. Those that went to the Thames were the most successful, for Mr. Hayward weighed in a very nice show of roach and dace; likewise Messrs. Maples, Smith, and Laing some roach and dace. I may mention among the roach taken by Messrs. Maples and Smith, the former took one 1lb. 7oz. and the latter 1lb. 4oz. Messrs. Stead, Hammens, and Simmons some roach from Uxbridge; likewise Mr. Webley, from the Lea, some very nice perch and dace.—C. Reeves, sec.

### CLAPTON ANGLING SOCIETY.

The usual weekly meeting was held on Monday last, Mr. Geo. Colls in the chair. The minutes of the preceding meeting were read, approved, and other formal business carried out. A tray of small jack was shown by Mr. Binks. Mr. G. Short reported the singular incident of a goldfish, which he had used for live-baiting, being pouched by a jack of about 4lb. (he had unsuccessfully tried dace and other baits). On reaching home, about three hours after, on opening the jack, the bait was found to be alive, and, on taking the hook out, the fish swam about in a pail of water. The fact was substantiated by several witnesses. In reply to the question that had been asked of him by several members and others, "why" he had given the name of the "good shop" in last week's paper, Mr. Howse stated that there were so many miles of good fishing water that it could not, by fair angling, be deteriorated by any moderate number of anglers who, in consequence of his letter, might go to Bures. Further than that, the keepers and those from whom permission must be obtained, would look sharply after any *rush* that might be made at the waters. Again, the distance from London would be an obstacle with many, especially as, to get a good long day, it is necessary to go down over night, angle the following day, sleep there that night, returning to town the following morning. This, of course, is the *comfortable way*, and those not so fastidious could go down and return the same day. Mr. Howse further stated that it was a source of gratification to him to be able to put *brother anglers* on to a good spot. It was resolved to have a club outing on Saturday, the 6th of December next, and the secretary was desired to frame a circular to that effect, and send to each member, the, object being (as well as giving every member notice) to give members the opportunity of recommending any suitable water which they might know. Several places were suggested at the meeting; but it will not be finally settled until the last Monday meeting in this month. A cordial vote of thanks to the chairman closed the proceedings.—Henry Howse, hon. sec.

### CHAMPION ANGLING CLUB (NORWICH).

The annual dinner of the above club, which ranks high amongst the numerous clubs of Norwich, was held on Tuesday, the 11th inst. Host Stanley provided a really first-class spread, and the arrangements altogether reflect great credit upon his able management. Amongst those present were the president, Mr. J. Bagshaw; the vice-president, Mr. S. J. Hook; and Messrs. S. F. Howitt, G. Daniels, W. Vawel, J. E. Gunn, F.L.S.; G. G. Whincop, hon. sec.; J. Youngs, G. Jefferies, Edwards, Thompson, Watts, J. J. Hunt, N. Sidell, Day, Professor Day, J. J. Rice, W. G. Capon, R. Moll, &c. After the excellent dinner had been discussed the members retired for a few minutes, whilst another spread, in the shape of a choice dessert, was placed upon the tables. The meeting having resumed, the chairman gave the usual loyal and patriotic toasts, which were cordially responded to, Mr. Sidell returning thanks in an able manner for the "Army, Navy, and Reserve Forces." Mr. J. E. Gunn then gave the "Champion Angling Club," coupled with the name of the Hon. Sec.. Mr. Whincop. Mr. Whincop, in responding, assured the members that, having accepted the post of the late respected secretary (Mr. Chettleburg), it would be his endeavour in the future, as in the past, to do the utmost to advance the interest and prosperity of the club. He wished to mention that the president had promised a donation of £5 towards the Prize Fund. Mr. Moll next gave the "Health of the President," whom he was pleased to see amongst them again, looking as well as he did after his somewhat severe illness; he felt sure they had the right man in the right place. The president thanked Mr. Moll for the kind expressions, and the members and friends present for the warm welcome they had given the toast; he would promise to do his very level best for the benefit of the club. Mr. Youngs next proposed "The Health of the Vice-President and Treasurer, Mr. S. J. Hook," remarking that in that gentleman the club had an excellent and painstaking officer and friend. The vice-president thanked the club for the honour they had conferred upon him, and trusted no effort would be wanting on his part to show he appreciated it. Mr. S. F. Howitt proposed "The Secretary's Health," and in studied terms pointed out how fortunate the club were to secure the services of a gentleman so well and deservedly known and respected in the piscatorial world around Norwich; he trusted he might long occupy the position he so ably filled. Mr. Whincop thanked Mr. Howitt for his kindness and the members for their warm reception of the toast; but as he was no hand at speaking he would simply say he would do all in his power to advance the objects the club had in view. The toast of "The Committee" was given by Mr. Jefferies, and responded to by Mr. Vawel"; "The Yare Preservation and Kindred Societies" by Mr. G. Daniels, coupled with the names of Messrs. R. Moll, J. J. Rice, and W. G. Capon. "The Visitors," "The Host," "The Press," and lastly, "The Ladies," brought a very enjoyable evening to a close. Messrs. S. F. Howitt, J. Hunt, Edwards, Whincop, and R. Moll contributed songs, &c., which added to the harmony of the meeting.

### EDMONTON AND TOTTENHAM ANGLING SOCIETY.

The above society had a nice show of fish on the 9th inst., Mr. J. Collyer being top of the list with three jack from the Lea, weighing respectively 9lb., 5lb., and 4lb.; the smaller one was not in very good condition, being a very thin fish for its length; the other two have gone to be put up in one case. Messrs. Fowler and Clifton weighed in jack; Messrs. O. Wade and F. A. Gray, roach and dace from the Lea.—F. A. Gray, sec.

### GLOBE ANGLING SOCIETY.

The following members weighed in on the 9th inst:—Mr. H. Lake, 8lb. of very good roach and dace and one small chub; Mr. G. Jeffries, chub, 4lb., 6oz.; W. Brown, roach and perch, 2lb.; Mr. F. Lawrence, roach, 1lb. 11oz.; Mr. S. Howell, roach and dace, 2lb. 8oz. At our ordinary weekly meeting on Monday evening, the 10th inst., by request of the members of the above society, Mr. R. Ghurney and friend paid us a visit, the object being to receive the contents of the Angler's Benevolent Box. The next smoking concert in aid of the above will take place on Wednesday evening, 18th inst., upon which occasion we shall be pleased to see any brother angler.—J. J. Holmes, sec.

### GRESHAM ANGLING SOCIETY.

The usual weekly meeting of the above society was held on Tuesday evening at the Mason's Hall Tavern, Mason's-avenue, Basinghall-street. Dr. Cash presided, and there was a large attendance of members and visitors. The minutes of the previous meeting having been read and confirmed, Mr. T. Thornton Green was unanimously elected a member of the society. Several letters, including one from Mr. Massingham, with reference to a piece of water for the society, were read. The pike competition was postponed, as although several members had been out and some fair-sized fish were weighed in, the member to whom the prize would have fallen preferred that it should be again fished for, when he hoped something more worthy of its value would be shown. Capital accounts of their day's sport were given by Dr. Lloyd, Messrs. Crumplen, Godwin, Parker, and Young; and a vote of thanks having been passed to the chairman, the evening was brought to a close with some very nice musical selections.—H.

### GREAT NORTHERN BROTHERS ANGLING SOCIETY.

On November 2nd, the following members weighed fish:—Mr. Theobald, 3lb. 2oz.; Mr. E. Smith, 1lb. 14oz.; Mr. G. Watling, 5lb. 6oz.; Mr. J. Hambidge, 3lb. 8oz.; and Mr. F. Watling, 1lb. 5oz. On November 9th, Mr. J. K. Fitch showed a fine sample of roach and dace, weighing 19lb. 5oz.; Mr. Page, 1lb. 4oz., one dace 12oz.; Mr. G. Watling, 4lb. 3oz.; Mr. Cooper, jun., 4lb. 3oz.; Mr. Graves, 3lb. 12oz.; Mr. Theobald, 3lb. 2oz. Messrs. E. Smith and Hockham also weighed fish.—J. A. Fitch, sec.

### HAMMERSMITH UNITED ANGLING SOCIETY.

Our monthly meeting for transacting the business of the society took place last Thursday, November 6th, when there was a good attendance of members present. Our old brother member and vice-chairman, Mr. Lewis, having gone to Canada, it became necessary to elect a new vice-chairman, and to this post Mr. Alder was unanimously elected. The usual routine of business having been disposed of, the conditions for our next club match were decided upon; this match was fished on Nov. 9th and Nov. 13th, and the result will appear in the next report. It was then decided to commence the winter series of smoking concerts and readings on Thursday, Nov. 20th, at 9 o'clock, when we shall be most pleased to see any of our friends, and any members of other societies, if they will honour us by their presence on that evening. Due notice of all other concerts and readings will appear in the Gazette, and on any of these occasions visitors will be cordially welcome. We can promise all attending on Thursday, Nov. 20th, some good entertainment, as amongst those who have promised to sing are Messrs. Burgess, Turner, Catward, Penney, Reynolds, and others of our own society, who are well-known for their vocal powers. Mr. Alder weighed in roach and dace on Thursday, and on Saturday Mr. Hobden a fair take of chub and one jack, to whom the shining bit of fish proved a fatal lure. These fish were the result of an expedition to Eynsham of Mr. H., accompanied by Mr. Evans, of the Westbourne Park Society, and would have been a much larger take had there been any water to fish in, as the river there is almost empty, and hardly any current.—H.

### HOXTON BROTHERS ANGLING SOCIETY.

We had a good attendance of members and friends on the 9th inst. Capital shows of fish. Mr. Pledger, 32½lb. splendid roach; J. Osborne, 18¼lb. roach; Tom (a non-member), about 14lb. roach; A. Dean, 4lb. roach; J. Morgan, 20½lb. of jack—largest 9lb. 14oz.; E. Harris, over 8lb. of jack. The first outing for special prizes will take place on the 23rd inst.; place not yet selected.—R. Ghurney, sec.

### HULME (MANCHESTER) ELLESMERE ANGLING SOCIETY.

The members of the above society held their annual dinner on Saturday, Nov. 8th, at the club-house, Grey Parrot, Bedford-street, Hulme, when an excellent muster of the members partook of a capital dinner provided by the host, Mr. Taylor. I need only say that everyone appeared to be in ample trim, and justice was done to the repast. After the cloth had been removed, the president of the society, Mr. Bradley, took the chair, supported by Mr. Hampson as vice-chairman. After the usual loyal toasts had been proposed, the chairman proposed the toast of the evening, "Success to the Hulme Ellesmere Angling Society, and Long and Continued Prosperity to its Members." The secretary, in responding to the toast, said it gave him pleasure to make a few observations on the working of the society during the past year, special reference being made on the increased activity and desire on the part of the members to excel themselves in all previous efforts to secure greater catches of fish. considering the great disadvantage we in this part of the country have to contend against, both in our means of railway travelling and fishing waters, the past will bear favourable comparison to any previous year. Reference here was made to the absence of one of the members who through sickness was unable to be amongst us, it only having just come to our knowledge that he was in needy circumstances. The appeal which was made on his behalf, I may say, was very handsomely responded to. The toast, "Manchester and Districts Amalgamated Anglers' Association and the Local Angling Clubs," coupled with the names of Mr. Ridgway, general secretary, and Mr. Hulmes, district secretary, was proposed by Mr. Procter in a very appropriate manner, and responded to by Mr. Bailey, president of the association, and Mr. Hulmes, who spoke in very feeling terms to the services Mr. Ridgway had rendered to the cause of anglers in this district. The toast, "Prize Winners" was very humorously proposed by Mr. Rathbone, and briefly replied to by Mr. Heywood. The rest of the evening was devoted to harmony, and to single any member out for special mention would be entirely out of my province. All the old faces were to the fore: Messrs. Hulmes and Brookes, recitations; Messrs. Bradley, J. Taylor, Brothers Hampson, Rathbone, Bailey, Purslow, Whittaker, Frost, and McDermott, not forgetting our old Pilling, by their rendering of the several songs, made the evening thoroughly enjoyable. Time now being on the wing, the usual votes of thanks to the host, Mr. Taylor. and his good lady, and to the chairman for his able services, were briefly responded to, and a most successful evening was brought to a close.—T. R., sec.

### INDEPENDENT JOVIAL ANGLING SOCIETY.

Several of our members out on the 2nd and 9th inst., Mr. H. Cann, Mr. W. Smart, Mr. D. Keep, and Mr. C. Smart, all having some good sport with the roach and dace; Mr. J. Conroy, roach, chub, and two barbel. Mr. T. Pratt, of the above society, out on the 8th inst., had a good take of roach and dace, weighing over 25lb.—C. SMART, sec.

### NORTH-EASTERN ANGLING SOCIETY.

Several members of the above were out on the 9th inst. to fish for two prizes, and had a goodly show of fish from the Thames, consisting of chub, roach, dace, and a few fine gudgeon, Messrs. King and Savage proving the victors. Members will please note that another match is arranged for the 23rd inst.—G. T. FLETCHER, sec.

### NORTH-WESTERN ANGLING SOCIETY.

We had a nice lot of fish on the trays of this society on the 9th inst. Mr. Hill, roach from the Lea; Mr. Billings, roach; Mr. Greenwood, roaeh; Mr. Aldis was again in it with the jack, four fish, largest 6lb. 3oz.; Mr. Plumpton, sen., had a very pretty jack.—W. HILLIER, sec.

### THE NOTTS ANGLING CLUBS.

As illustrating the deep interest taken by Nottingham anglers in angling pursuits, we have pleasure in publishing a list of clubs, whose members enjoy the privileges conceded by the Midland and Great Northern Railway Companies in the matter of cheap travelling fares for the winter season, which has just recently opened:—The Wellington Association, Wellington Hotel, Station-street, Nottingham (65 members); St. George's Association, St. George's Hall, Chapel-bar, Nottingham (30 members); Alexandria Association, Carrington-street, Nottingham (30 members); Rose and Thistle, East-street, Nottingham (30 members); Lenton Liberal Club, Lenton (24 members); Red Lion Inn, Manvers-street, Swinton (50 members); Cremorne Inn, Wilford-road, Nottingham (25 members); Star Inn, New Basford (30 members); Sinkermakers' Arms Inn, Carter-gate, Nottingham (40 members); Tradesman's Rest Inn, Bellar-gate, Nottingham (30 members); Old Rose Revived Inn, Bellar-gate, Nottingham (24 members); Horne's Castle Inn, Hollow Stone, Nottingham (30 members); Crown and Anchor Inn, London-road, Nottingham (25 members); Temperance Association, St. James-street, Nottingham (25 members); Cross Keys Inn, St. Mary's-gate, Nottingham (24 members); Trip to Jerusalem, Brew House-yard, Nottingham (30 members); Elephant and Castle, Hounds-gate, Nottingham (25 members); Sycamore Inn, Sycamore-road, Nottingham (30 members); Park Tavern Inn, Elliott-street, Radford (50 members); Larkdale Tavern Inn, Oliver-street, Radford (30 members); Millers' Arms Inn, Agnes-street, Nottingham (20 members); Sir Francis Burdett, Mount-street, Nottingham (18 members); Black's Head Inn, Lenton (20 members); St. Mary's Institute, Nottingham (16 members); Dog and Pheasant Inn, Keswick-street, Swinton (40 members); Fisherman's Rest Inn, Alfreton-road, Nottingham (30 members); Cooper's Arms Inn, Platt-street, Nottingham (36 members); Admiral Duncan Inn, Coalpit-lane, Nottingham (40 members); Victoria Inn, Highhurst-street (40 members); Rose Inn, Mount-street, Nottingham (20 members); Woodlark Inn, Convent-street, Nottingham (36 members); King's Arms Inn, Woolpack-lane, Nottingham (60 members); Working Men's Institute, Radford (40 members); Cricket Players' Inn, Hyson-green (30 members); Old General Inn, Wellington-street, Nottingham (20 members); Chase Tavern Inn, St. Ann's Well-road, Nottingham (50 members); Sir Thomas White Inn, Carter-gate, Nottingham (40 members); Balaclava Hero, Denman-street, Radford (25 members); Victory Inn, Great Alfred-street, Nottingham (30 members); Working Men's Institute, Hyson-green (12 members); Old Arm Chair Inn, Bridlesmith-gate, Nottingham (30 members); Old Grey Horse Inn, Kelley-street, Swinton (30 members); Three Tuns Inn, Old Radford (40 members); Robin Hood Inn, Hockley, Nottingham (50 members); George Inn, George-street, Radford (30 members); Portland Arms, Coalpit-lane, Nottingham (42 members); Chesterfield Arms, Chesterfield-street, Nottingham (12 members); Seven Stars, Barker-gate, Nottingham (25 members); Gardener's Rest, Peas Hill Rise, Nottingham (36 members); Marquis of Waterford, Citizen-street, Radford (30 members); Sir Robert Peel Inn, St. James's-street, Nottingham (46 members); Reindeer Inn, Wheeler-gate, Nottingham (40 members); Leopard Inn, Water-lane, Nottingham (25 members); Minstrel Tavern Inn, St. Mark's-street, Nottingham (24 members); Duke of York, York-street, Nottingham (36 members); Lord Belper, Robin Hood-street, Nottingham (30 members); Barleycorn Inn, Raleigh-street, Nottingham (36 members); Red Hart Inn, Finkill-street, Nottingham (30 members); and Earl of Lincoln Arms, Woodborough-road, Nottingham (18 members). It is sincerely to be hoped that members of the various clubs will not abuse the privileges granted by the Companies in question.

### PECKHAM BROTHERS ANGLING SOCIETY.

Messrs. Artis, Capel and Co. have very kindly contributed to the prize fund of this society; also Mr. Thompson and Mrs. Reed. Mr. Stidolph, with Mr. Brodie, at Tring, on the 5th, had the pleasure of landing five tench weighing 14lb., one roach 1lb. 14¾oz., one perch 1lb. 7½oz., and two rudd 2lb. 6oz. Mr. Brodie also had a splendid rudd 2lb. 6oz. Most of the fish have been sent for preservation. Mr. Page, in company with Mr. Davis, out with W. Messenger, one of H.M. waterman at Teddington, on the 9th, had a fine lot of dace, ten dozen, besides a few roach and dace. A match at St. Margaret's on the 16th. Members will leave by the 8 o'clock train from Liverpool-street. All members are requested to attend on Tuesday next, when business of an important nature will be brought forward.—GADFLY.

### THE PISCATORIAL SOCIETY.

The first smoking concert of the season by the members and friends of this society took place on Monday evening last at Ashley's Hotel, Covent-garden. Mr. Norman Harrisson presided, the vice-chair being occupied by Mr. Lemann. Being Lord Mayor's Day, the attendance early in the evening was not up to the mark, but this was compensated for later on, when the room was comfortably filled. At 8.30 precisely, the chairman called upon Mr. Kendal, the accompanyist, who played a pianoforte solo, "Torchlight Dance" (Mullen). The following programme was carried out in a most efficient manner, to the satisfaction of all present:—Mr. W. Harrison, song, "Vanity"; Mr. Jesse, song, "O Fair Dove, O Fond Dove"; Mr. Rickatson, comic recitation, "Smith's Watch Dog"; Mr. Kendal, comic song, "Dame Pearce's Mare"; Mr. Norman Harrisson, anecdote, "How to Fish Preserved Waters"; Mr. Duncan, song, "Those Girls at the School"; Mr. N. Harrisson, song, "Kitty Green"; Rev. G. Sumner, an Irish ballad; Mr. Wheeldon, "The Good St. Antony"; Mr. Fennings, violoncello solo; Mr. Rickatson, recitation, "Phil Blood's Leap": Mr. Jesse, song, "In Cellar Cool"; Mr. Munday, comic song, "The Fishing Match"; Mr. Adlington, song, "Powder Monkey"; Mr. H. H. Brown, flute solo; Mr. N. Harrisson, comic song, "The Gay Photographer"; Mr. W. Harrison, song, "He Went to a Party"; Mr. Adlington, comic song, "The Three Anglers"; Mr. Fenning, violoncello solo; Mr. Kendal, song; Mr. Jesse, song, "The Village Blacksmith"; Mr. H. H. Brown, flute solo, "The Pilgrim of Love," with variations; Mr. Adlington, song, "Sailing"; Mr. Walter Harrisson, song; Dr. Brunton, Scotch ballad, "Annie Laurie"; Mr. Adlington, song, "Drink, Puppy, Drink." Where everything was so well done and applauded it is unnecessary to particularise, but special mention must be made of Mr. H. H. Brown's flute solos, which were played with exceeding taste. This gentleman has often attended our concerts, and his musical ability has never been known; henceforth he is a marked man. At intervals during the evening the following events took place: The chairman announced the safe receipt of two diplomas from the International Fisheries Exhibition, which were examined and much admired. Soon after 11 p.m., Mr. Sachs proposed "The Health of Our Chairman," Mr. N. Harrisson, with musical honours. This gentleman, in a few happily-chosen sentences, returned his thanks to those present for their kind wishes. He proposed "The Continued Prosperity of the Piscatorial Society," which was carried by acclamation. He had to leave now in order to catch his train, and he appointed Mr. Huggett, who had kindly consented to carry on the duties of the chair. The vice-chairman proposed a vote of thanks, which was carried with acclamation, to those gentlemen who had taken part in the entertainment. Our next smoking concert will take place on December 15th. Soon after 12 p.m. Dr. Brunton was called on for "Auld Lang Syne," the company all joining hands in the conventional manner. Then followed the "National Anthem," and our first smoking concert was brought to a close.—T. H.

### PRIDE OF DERBY ANGLING CLUB (DERBY).

The fortnightly meeting of this club, which musters over ninety members, was held at the Old English Gentlemen Inn on Monday night last, when about half the members attended. The chair was taken by Mr. J. Cadman, and, after the club business was concluded, the question of giving brandy to dace was discussed, and several fish experimented on. No. 1 fish was laid on the table for sixteen minutes, when it appeared almost dead; but after two drops of brandy it came round. No. 2 fish was held in the hand of one of the members for eight minutes, and was apparently lifeless; but after administering three drops of brandy it recovered. Two fish were then taken out of the can simultaneously, and were held in the warm hand eleven minutes, and they then appeared almost dead; two drops of brandy were given them, and after being restored to the can one of them came round immediately; the other at first appeared to be very bad, but after being placed under the tap for a little time came thoroughly round. The whole of them appeared to be in good health, in fact, they seemed more lively than when first brought into the room. The experiments were very satisfactory. Several capital songs were afterwards rendered by Messrs. Beardsley, Bland, Saxton. Tomlinson, and Peach, and the company, after singing the National Anthem, dispersed highly pleased.—T. WHYMAN, hon. sec.

### RODNEY PISCATORIALS.

On the 9th inst. Messrs. C. A. Grant, C. Grant, and R. Smith visited the Thames, and managed to get among the roach, dace, and gudgeon. At the meeting on the 12th it was decided that a competition take place on the 30th for prizes given by Messrs. Diggins and R. Chantry. Members allowed to go where they like and fish how they like from the bank, in accordance with the society's rules. They can also start away on Saturday afternoon should they think fit. Members and their friends wishing to avail themselves of the cheap return trip to Wateringbury on the 16th (Fare 3s. 2d.) with Mr. Alexander and the Wellingtonians, are requested to be at the South Eastern Railway, London Bridge, by 7.45 in the morning. Mr. C. Grant will represent the society in conjunction with Mr. Alexander.—PIXIE.

### ROYAL GEORGE ANGLING SOCIETY.

I am pleased to be able to state that the smoking concert that I announced in your last number took place last Tuesday night, and proved a great success. Mr. Hallam appeared in his old place (at the piano), and commenced with an overture. Mr. Brewer sang "My Sweetheart when a Boy"; then Mr. Hallam gave us a song that is always a favourite with the members of the Royal George, "Out with my Rod in the Morning." Mr. Healey, who is equally as good by the piano as at the bank of the river, sang "Tom Bowling," and Mr. Holden obliged us with one of his old favourites. Mr. Harris sang "The Little Hero" in a very masterly manner. He was followed by Mr. Henderson, who gave us "Let Me Like a Soldier Fall," but I am quite sure he would rather fall by the side of the river, rod in hand. Then our late "Sec.," Mr. Millard, gave us "The Four Jolly Smiths," which, I am sure, pleased at least thirty "jolly anglers." Mr. Palmer then sang a song, in which he advised (he is very good at giving advice gratis) "Each Man to Learn to Know Himself." Mr. Carter sang a very popular song in a very able manner, so much so that he was encored. Mr. Harris then gave his encore song, "She Wore a Wreath of Roses." After a song from Mr. Beales, the chairman sang "One More Glass Before We Go," and I think, if I remember rightly, they all followed the advice. A vote of thanks was accorded Mr. Hallam for his kindness in presiding at the piano, after which he sang "Auld Lang Syne." I think I can safely say when it came to "good night," most of the members were very sorry that the evening was at an end; at any rate, that was the opinion of—W. H. RIDER.

### STAINES ANGLING CLUB.

A good number of our members were out on the 9th inst., but only a few succeeded in bringing fish to scale. Mr. A. Palmer a splendid catch of dace, turning the scales at 6lb.; Mr. F. Palmer dace and roach, 17½oz.; Mr. H. Cope a small jack; and several members had fine takes, but not in time to scale in. The members of this club will fish a match for jack only on the 23rd inst., when I hope to be able to send you a good report.—F. SYKES, sec.

### UNITED BROTHERS, DEPTFORD.

Members of the above society fished a match on the 9th, but rather poor sport. Mr. J. Payne, 1st prize; Mr. Lawes, 2nd prize; Mr. W. Tyler, 3rd prize. Messrs. H. Tyler, Belton, Redman, Penton, and Currans weighed in.—H. TYLER.

### WALWORTH PISCATORIALS.

On the 5th and 6th a grand take of rudd, tench, perch, roach, barbel, and jack was exhibited by Messrs. Grigg, Edwards, Brodie, Gilbert, Delhaye, sen., and Beckett, the gross weight going over 77lb. Messrs. Grigg, Edwards, and A. Brodie have sent 16 or 18 nice specimens of rudd, tench, and roach to Mr. J. Lancaster, at Camden Town, to be preserved. Rudd, roach, and perch, weighing over 2lb., are not taken every day, to say nothing about tench, over 3½lb. being taken in November. Messrs Bansback and J. Howard visited Huntingdon on the 11th and returned on the 12th. The first named weighed in 9lb. 13oz. of jack. The other gentleman did not weigh in. The result of the competition for Messrs. Dangini and Piolane's prizes on the 13th, is as follows:—1st, Mr. Beckett, with 12lb. 11¾oz. roach, dace, and barbel from Richmond; 2nd, Mr. F. Grigg, 11lb. 6¾oz. chub and jack from Windsor; 3rd, Mr. Hibble, 10lb. 11oz. nice roach from Windsor; 4th, Mr. Crisp, 5lb. 9oz. roach from Richmond. Messrs Boalch, Grimmett, and a friend had a nice show of roach, dace, and barbel also from Richmond. Mr. A. Brodie had a nice plump perch nearly 2lb., and Mr. Edwards had two jack from Tring. The gross weight for the day amounted to 54lb. The next competition will take place on the 23rd for prizes given by Messrs. Sutcliffe and Mawbey, the where and how to be decided at the meeting of members previous to the above date.—PIXIE.

### WEST GREEN ANGLING SOCIETY.

Mr. Coleman, sen., gives a prize for the heaviest jack this month. Mr. Hoy weighed in some nice roach and dace (4½lb), on the 9th inst; Mr. Firkins, roach; and J. Guyver, roach and dace.—J. GUYVER, sec.

A 10LB. PIKE CAUGHT ON ROACH TACKLE.—On Saturday, Clifford Guise, son of Mr. W. Guise, while fishing with a worm for roach in the Lodge Pool, hooked a large pike. After some twenty minutes' careful "playing" the fish was brought within reach, gaffed in the shoulder, and landed. It was found to weigh a few ounces over 10lb., and measure 37in. in length. The singular part of the story is that it was caught with a small 9's roach hook attached to what is called a half-drawn gut, being little thicker than a human hair. An investigation showed that the fish was hooked in the cartilage of the mouth, and consequently felt no pain, and by judicious and patient handling was at length brought within reach of the "gaff."

THE LOCK ON THE THAMES BELOW TEDDINGTON.—There is to be no lock on the Thames below Teddington.

## THE SEDGY LEA (LOWER WATERS).

I.

As by thy marge I wandered,
And on thy deeps oft pondered—
Old, sedgy Lea ;
Many a line I cast
In the days long past—
Clear, sedgy Lea !

II.

Now with my rod I roam
Far, far away from home—
Black, sedgy Lea ;
Where sparkling waters bright
The angler's eyes delight—
Not *dirty* Lea !

III.

By modern *Sewage Board*
Thy stream is foully stored—
Sedgy Lea ;
And thy gudgeon, roach, and dace
Now degenerate apace—
Oh, *sewery* Lea !

Canonbury, Nov. 8. OLD ANGLER.

FISHING AT TRING.—Mr. Walter Fawcett, a member of the Marlborough Angling Society, Marmont-road, Peckham, and Mr. Charles Fell, a member of the Bermondsey Brothers Angling Society, Alcot Arms, Bermondsey, had a great haul on Saturday last, at one of the Tring reservoirs, of about 40lb. of fish in a little over two hours, consisting of thirteen rudd, weighing about 28lb. ; three roach, weighing 6lb. 1oz. ; one perch, weighing 2lb. 3oz. ; and two small jack. Mr. Fell is having some of his preserved, viz., six rudd, weighing 11lb., for one case ; two roach, weighing 4lb. for another ; and one perch, weighing 2¼lb., for the third.

THE
GREAT REMEDY

For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. Prevents and Quickly Relieves or Cures the worst form of TYPHUS, SCARLET, JUNGLE, and other FEVERS, PRICKLY HEAT, SMALL POX, MEASLES, ERUPTIVE or SKIN COMPLAINTS, and various other altered CONDITIONS of the BLOOD.

"It
'SAVED MY LIFE,'

for the Fever had obtained a strong hold on me. In a few days I was quite well."—Extract from letter of C. Fitzgerald, Esq., formerly Correspondent of the MANCHESTER GUARDIAN in Albania, referring to

LAMPLOUGH'S
PYRETIC SALINE.

H. LAMPLOUGH, 113, HOLBORN, LONDON, E.C.

Freeman's Chlorodyne.

THE ORIGINAL AND ONLY TRUE.

TRADE MARK

IT IS THE GREATEST MEDICAL DISCOVERY OF THE PRESENT CENTURY.

It is the best known remedy for Coughs, Consumption, Whooping Cough, Bronchitis and Asthma.

It effectually checks and arrests those too often fatal effects of Diseases, Diphtheria, Diabetes, Fever, Croup, Ague, &c.

It acts like a charm in Diarrhœa, and is the only known Specific in Cholera and Dysentery.

It effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, Convulsions and Spasms.

It is the only palliative in Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

It rapidly relieves pain, from whatever cause, allays the irritation of Fever, soothes and strengthens the system under exhausting diseases, restores the deranged functions, stimulates healthy action of the secretions of the body, and gives quiet and refreshing sleep, and marvellously prolongs life.

It may be taken by old and young at all hours and times.

It is extensively used by Medical Men in their official and private practice at home and abroad, who have given numerous written testimonials of its wonderful efficacy.

Sold by Chemists and Patent Medicine Dealers all over the world in bottles, 1s. 1½d., 2oz. 2s. 9d., 4oz. 4s. 6d., half-pints 11s., and pints 20s. each, and by the Inventor, RICHARD FREEMAN, 70, Kennington Park-road, London, S.E. Free by Post.

Purchasers are CAUTIONED not to have palmed upon them any substitute. See that the Trade Mark, "THE ELEPHANT," is on the wrapper, &c., and the words "FREEMAN'S ORIGINAL CHLORODYNE" are engraved on the Government Stamp—which is the only TRUE CHLORODYNE.

NOW READY, and may be had at all Railway Stalls and Booksellers.

## AN AMATEUR ANGLER'S

# DAYS in DOVEDALE.

Imperial 32mo. Printed by Whittingham, Chiswick Press. Fancy Boards, 1s. ; Limp Leather, Cloth Gilt Edges, 1s. 6d. ⁂ Also a LARGE-PAPER EDITION, printed on hand-made paper, parchment binding (100 only printed), 5s. Very few of this 5s. edition remain.

## SHORT EXTRACTS FROM REVIEWS.

**The Athenæum** says :—" This is an amusing little book, written with much brightness and considerable literary skill."

**The Daily News** says :—" Herein is the charm of the book. . . . For an amateur, he certainly saturates you thoroughly with true Dovedale flavour."

**The Field** says :—" Anyhow the result of the Dovedale holidays is a delightful pocket companion. The principal charm of the little work is that it will be equaly interesting to anglers and non-anglers."

**The World** says :—" Not merely by brethren of the rod, but by all who appreciate Nature in her prettiest haunts it will be found pleasant reading."

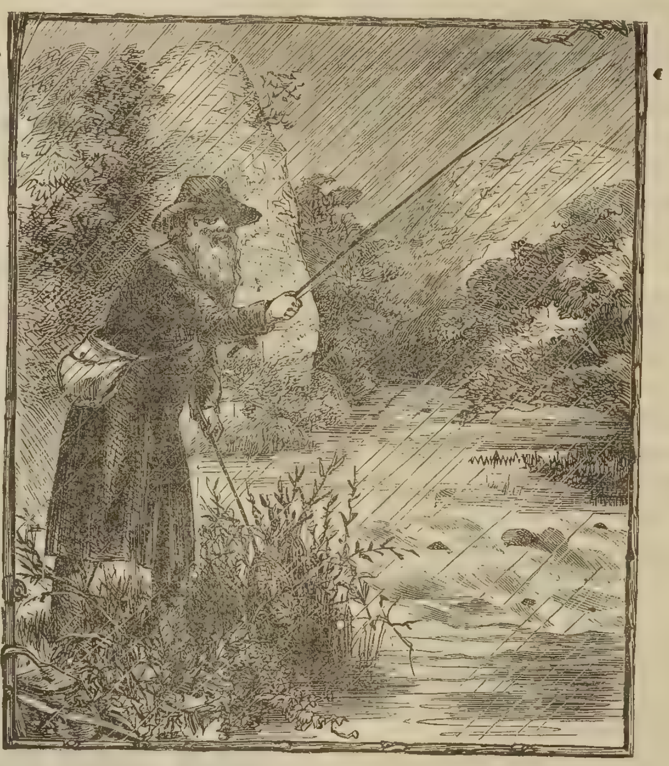
**The Graphic** says :—" Written in a charming spirit, with plenty of quiet humour in it."

**The St. James's Gazette** :—" Every page of it is good—a bright little volume. Worthy of gracious acceptances from all sorts and conditions of readers.''

**The Pall Mall Gazette** :—" This is a pleasant book to read 'now that the fields are dank and ways are mire.' "

**The Whitehall Review** :—" This is one of the most charming little books we have met with for some time."

**The St. Stephen's Review** :—" No more charming little work than this has been published for many a day."



**The Illustrated News** says :—" This charming bit of personal narrative. . . . will certainly be preserved on many a shelf where Izaak Walton and Charles Cotton hold the most honoured place."

**The Bookseller** :—" A dainty little volume. . . . The author tells in a most charmingly simple style. . . . There is much quiet humour in the book. . . The dedication is a little gem in its way."

**The Sunday Times** says :—One of those charming little *quasi-extempore* books . . . We have enjoyed a very pleasant hour in reading."

**Army and Navy Gazette** :—" A very pleasant little book."

**Daily Chronicle** :—" An entertaining little book."

**Civil Service Gazette** :—" This charming and interesting little book."

**The Literary World** :—" Others besides anglers will read with interest this pleasant record of a holiday."

**Lloyd's Weekly** :—" A genial, pleasant little book, written in the happiest vein."

**The Publishers' Circular** :—" All lovers of this picturesque scenery will welcome this fresh and natural tribute to its merits."

**The Derby Mercury** says :—" We have read no pleasanter book of its kind. . . Always genial, sometimes humorous, sometimes thoughtful, sometimes playful, and invariably readable, displaying, though without parade, the signs of considerable culture."

**Exeter and Plymouth Gazette** :—" This is not the sort of bookmaker that the critic impales upon his hook. We hail him as the pleasant companion whose pleasant chat and merry companionship will beguile," &c.

**Our Solitary Sour Critic** : — " After tediously wading through the eighty odd pages. . . . one fully appreciates the author's apology for having wearied the reader. . . . We fail to find anything new, anything interesting, informing, or amusing."—*Bristol Mercury*.

*Either edition will be sent post paid on receipt of the price named above.*

# Hoge's Horehound Honey.

WHAT is known as the "Bee Belt" of Southern California is one continuous bed of honey-bloom, one sweet bee-garden throughout its entire length ; but there is one part of it which the plough has not yet invaded, that is the region where the Horehound plant flourishes in one glorious blaze of purple and gold. The tropical luxuriance of these plants is so profuse that they brush against the feet at every step, and close over them as if you were wading in liquid gold. The air is sweet with its fragrance, and tuneful with the humming wings of the bees gathering this precious panacea ; this honey-full horehound is a great favourite with the bees, and is one perpetual feast for them. They revel in its bloom long after the flowers of other countries have withered and gone to seed. A single plant will, at times, be visited by a whole hive of bees at once ; the grand hum of such a multitude of wings impresses the listener with the fact that the winning of more than ordinary honey is going on. The product of a dozen or two of these plants is sufficient for the wants of a whole hive. In this perfect paradise for bees the petals of the continuous sheet of blooms drink in the vital sunbeams, and the bees hug this favourite flower with profound cordiality, and push their blunt, polleny faces against them, like babies on their mother's bosom ; and fondly too, with eternal love, does Mother Nature clasp her small bee babies and suckle them, multitudes at once, on her warm Californian breast. The Horehound Honey so gathered by these little almoners of Nature is put up in bottles, and retailed by all Chemists, &c., at 1s. 1½d. each.

W. L. Bright, Esq., son of the Right Hon. John Bright, M.P., says :—" Hoge's Horehound Honey cured his father of a bad cough."

---

## FISHING RODS—AND TACKLE.

BULMER'S "FISHING GAZETTE"
GOSSAMER GUT LINES,

Three yards, 8d. each.

" We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—FISHING GAZETTE Notice, September 18, 1883.

See also notices in the FISHING GAZETTE for Dec. 17, 1881 ; June 28th, 1882 ; July 1, 1882 ; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d. FISHING GAZETTE Gossamer Gut, Tapered, 8d each ; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d. and 1s. 6d. ; prepared ditto, 20 yards, 1s. ; stout, 1d. a yard ; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d. ; Gossamer Gut, 12in., 3s. 6d. ; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz. ; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal, 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen ; Treble ditto, 2d. each. Pennel Snaps, 2½d. ; Jardine, 3½d. each ; Gut or Gimp Spinning Flights, 6d. each ; Spoon Baits (Jack's size), 9d. each ; Gut and Gimp Traces, 6d. each, FISHING GAZETTE Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d. ; ditto Twisted Gut, stout or fine, 1s. each ; 3in. Jack Float, 6d.

WINCHES. — Nottingham, from 6d. ; Brass, from 8d.

HEATON'S PATENT REELS, " Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ¾in., 1s. 6d.

Rods made to order or fitted with screw-joint ferrules.

Price List free on application.

Postage extra on all orders, and all must be accompanied by a remittance.

All goods marked in plain figures.

**A. BULMER, 62, WANDSWORTH ROAD, S.W.,**
Corner of Nine Elms Lane.
Three minutes' walk from Vauxhall Station.

Prizes awarded in 1851 and 1862 for Rods, Flies, and Tackle of unequalled excellence.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d To any part of Europe, the United States, and Canada, the Annual Subscription, including postage s 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and Co., the Proprietors, 188, Fleet Street, E.C.

## THE TROUT STREAMS OF ABERDEENSHIRE.

### THE FEUGH.

Down to the Dee this water steers—
How merrily it goes!
'Twill murmur on a thousand years,
And flow as now it flows.

THE Feugh, though geographically speaking a Kincardineshire stream, has more in common with the upland valley or glen streams of Aberdeenshire than those of its own county. The principal approaches to its waters—the easiest and most direct—are chiefly from the northern side: to the upper portion from Aboyne, to the middle from Potarch and Kincardine O'Neil, and to the lower from Banchory.

The Feugh takes its rise in the hills to the extreme south-west of Mount Battock, and for three miles or so, till it receives a tributary stream of nearly equal size from the hills of Birse, its course is almost due north. Thereafter it zigzags along in an easterly direction for eleven or twelve miles, receiving on its way the Aan, the Dye, and a few streamlets of little importance. When nearing the small village of Strachan it again inclines northward, and this direction, though rounding and doubling about, it keeps in the main for three and a half miles, or thereby, and falls into the Dee at Riverston, Banchory. At this point a grand panoramic view can be obtained—the woodland green of the westward landscape mingling with the blue of the distant hills. Around the falls, too, at the Bridge of Feugh, some three hundred yards distant, the rugged and the sylvan harmoniously blending produce a wonderful scenic effect.

The Feugh, we may now observe, is a nice little river, a pleasant one to fish, and though not regarded as well fed, it frequently affords the skilful angler excellent sport indeed. Along its banks there are few trees so close as to interfere with casting, except within a mile or two of its debouchment into the Dee. From either side all the best pools (even those requiring the longest casts) can be thoroughly fished with a 16ft. rod, without wading. This length we recommend for grilse or salmon fishing, and a 12ft. or 14ft. rod for whitling and brook trout.

In no part does the stream appear to have been diverted from its original channel, yet in the way of aquatic vegetation it has little or nothing, and no sheltering banks for its trout. Near to the point where its first tributary is received there are some first-class casts, while not far off are a few houses, patches of cultivation, and the ruins of an old castle. The scenery, however, soon changes, and the Feugh, in its subsequent course through the famous forest of Birse (famous all the more that the name is a virtual misnomer from the fact that, save the birches in the mountain corries, only a scraggy-like pine growth outlined against the sky is here and there seen), possesses all the characteristics of a typical highland stream, cascade, and deep rocky pool, jagged and precipitous banks, and bright, shallow, pebbly reaches extending a considerable distance down.

Resigned, as by Nature willed, to sheep, deer, and muir fowl, there is little here to distract the attention of the angler, excepting these, a shepherd and his dog, or an occasional countryman carting peat.

In May and June, with fly or worm, according to the state of the water, a good fisher may basket five to six dozen per day, averaging six to the pound; and in July and August have fair results, with the chance of a grilse or sea trout in addition. Larger baskets than that indicated are sometimes got.

For fishing in the Forest of Birse, winged flies are almost useless; but hackles of various shades, with tinselled bodies, are very deadly in a fair-sized water. Worm suits best when the water is muddy. As the trout are extremely wary, the fly fisher will find that the finer and longer the cast line, and the more out of sight he can keep, the greater will be his chances of success. Within the reach described, large trout are scarce, any exceeding one pound in weight being seldom got. Sometimes, however, with fly, under favourable auspices, a goodly-sized couple are brought to bank together. In the dark pools dark-coloured trout are invariably found, and *vice versâ*.

Once clear of the forest proper, the stream alters in character, and the country around likewise. A number of pleasantly-situated farms, in a well-wooded scene, extending for a mile or more, now brighten up the prospect. Farther down, the vale extends in width, and cultivation becomes more general. On the north the Blackhall range of hills, and on the south Clochnaben, limit the view. Inclining a little to the south side, the Feugh winds its sinuous course down the valley. The stream, as it proceeds, becomes less rapid and irregular, the pools much longer, as a rule, and the bottom consistency is either pebbly or sandy. In this quarter, insect life is abundant in summer and early autumn; but so poor and light is the soil, as to be almost void of the *vermis* variety of life.

We note that the action of the water rarely cuts the banks, and supposing it did, there would still be an absence of bottom food or animalculæ. Hence it is, as we remarked before, that the Feugh is not a well-fed stream; and in support of this statement, we need only refer to the average smallness of its trout. Good takes on the lower reaches are quite exceptional—exceptional, because there is little to feed on, as smolts in April and May, and parr all the season, are very numerous. Occasionally, when the water is muddy, some large fry-fed old trout are caught.

Along the four or five miles of river nearest the Feugh's confluence with the Dee, the best salmon, grilse, and sea trout fishing is got. No salmon ascend in the spring season. With the autumn spates, however, they swarm up, as also do a great many back-lying sea trout and whitling.

To fish the Feugh, and meet with success, the best time to choose is from the 20th of June to the end of July. If favoured with occasional spates, particularly during the first four weeks of the period indicated, the angler may obtain surprising results. Grilse and sea trout are numerous about this season, and whenever the Feugh, in proportion to its size, is larger than the Dee, they ascend in greater numbers than at any other time. At the Bridge of Feugh pool, immediately below the falls, as many as sixty fish have been caught in a single day with the large lob or dewy worm. In a filling water, up to a certain size, and again after the water has fallen a certain extent, the best sport is got; but got only for a short time, say six or eight hours, as after that the water gets so brown, and keeps so for a day or two, that fish, strange though it may seem, will not partake of any bottom food. In this particular condition of water they are always bent on pushing up stream, and for days on end in a favourable season they can be seen from the bridge clearing the falls. Farther up, for a few miles, good takes of grilse and sea trout are got in a fair volume of water.

The best flies are the silver doctor, bumble-bee, dusty miller, wasp, Irishman, Childers, and grey heron—the Childers particularly for a brownish water, and the grey heron for evening use. For fishing in August in a small clear water, the black palmer (silver bodied), and a fly with dark teal wings, red hackle, and a purple body ribbed with silver tinsel, are the deadliest. In a range of the best killing trout flies to extend over the whole season we would include the March brown, hare lug, partridge ruff, professor, black spider, priest, red hackle, and olive dun—the first three for the earlier months, and the rest to use later on. Minnows—natural or artificial—are rarely used.

The Feugh is fast deteriorating as a sport-affording stream—a result primarily accounted for by excessive hill drainage. With reference to hill drainage, it may further be remarked that the violent action of the water often displaces sand and shingle, and thereby renders a good pool the one year utterly worthless the next.

A spate is never of any continuance. It comes down with great impetuosity, and exhausts itself in a very short time. Hence, to enjoy good sport, it is almost necessary to watch the water, and be ready to start at the proper time.

The chief riparian proprietors are the Marquis of Huntly, Sir Thomas Gladstone, Bart., of Fasque, Dr. Farquharson, of Finzean, M.P., J. T. Hay, Esq., of Blackhall, and T. Burnett Ramsay, Esq., of Banchory Lodge.

A considerable portion of the river is let to sportsmen. These, as well as the proprietors, readily grant permission to fish for trout, and sometimes allow a day's angling for salmon and grilse. From Whitestone Inn upwards, all the reaches are practically open to the public, except during the shooting season. By staying in the neighbourhood of Finzean, the angler can best command the upper reaches. Whitestone Inn is convenient for the middle waters, and Banchory for the lower. Best route: by rail from Aberdeen to Banchory, thence walk, or hire. Rod season, February 11th to October 31st. W. M.

## "EPHEMERA" ON "HOOKING A SALMON."

AN Irish correspondent reminds us that there are some interesting remarks on when and how to strike in salmon fishing in "Ephemera's" "Book of the Salmon," published in 1850, a work long out of print, but one which every salmon angler should obtain if possible, as, although of course somewhat behind the times, it contains much and valuable information.

"*Hooking a Salmon.*—Striking at and hooking a fish are nearly synonymous. To strike and hook a fish requires self-possession and very little more—that little is, *not to attempt it too quickly and too rudely.* If you are fluttered at the rise of a fish you will either strike too soon or too strongly, or not at all, like a fowler startled at the noise made by a pheasant flushed from a hedge-row. My general rule is not to strike at a salmon until I feel him—until I feel 'a bite,' if I may be allowed to apply to the royal sport salmon fishing that ignoble word. When I feel the slight 'tug'—aye, that's the right word—I allow a second or two to elapse, and then, lifting the point of my rod, I make a short, smart, jerking motion with the wrists, and I generally find that I have hooked my aquatic quarry. Every man almost at the beginning of the season is nervous, and I will ask the oldest salmon-fisher if he does not then lose many a fish by his precipitation in striking? He becomes steady in a day or two, his eye and hand become ready, and he manages the latter with veteran coolness and delicacy. The general rule laid down by others is as follows: Salmon do not jump at a fly like trout, but rise up and take it under water; in doing so they cause a break in the surface, and having taken the fly they turn round to descend to the bottom with it, and this motion causes the break on the water's surface to contract. The moment the contraction takes place is the time for striking, for then the fish is supposed to have the fly fairly withinside its lips. I have no objection to this rule, except that it is not easy for the beginner to observe and practice it; as for myself I confess that I frequently strike at and hook fish without, as far as I can conceive, any premeditation or calculation, but almost by instinct. Something, I cannot say what, tells me that a fish is 'at' me, and consequently I am promptly at him in the sly way he has come at me.

"Let us inquire why I recommend gentle and somewhat slow striking.

"I am of opinion that in the majority of rises a salmon half hooks itself. Consider what a very sharp thing the point of a good hook is, and how easily it is inserted into moderately soft substances by very slight resistance. Now, consider the weight of a descending salmon with this sharply-pointed thing in its mouth, and consider also the resistance offered by a taut line, which the salmon's descent is tightening more and more, and you will not deem it all surprising that the fish should half hook itself. If you concede me so much, you will then concede that nothing more than a *gentle stroke or short, sharpish pull* on my part is necessary to insert in some part of the fish's mouth the hook beyond the barb. Again, another reason why I favour *gentle striking.* If I miss my fish it is done with such gentleness that it causes no serious alarm, and you may, therefore, reasonably hope for a second rise. A third reason for *gentle striking* is, that by making use of it you give the fish full and fair time to close its mouth on the fly, and are not, consequently, liable to snatch it from jaws half open. A fourth reason: a fish gently struck and hooked scarcely feels the operation, and is less inclined to dart off in the water or out of it instantly, and give you furious battle with unimpaired vigour. On this point I find in my 'Handbook of Angling' the following words: 'The critical fish-stroke is made by a quick but very gentle wrist motion by which the hand is canted upwards, being displaced about two inches only. Such a stroke made instantly the fish actually reaches the fly at the moment he has closed his mouth on it, and before he has had time to throw it out again, is sure to secure the entrance of the hook within the substance of the mouth without causing great alarm to the fish by any unnecessary violence, for it cannot have escaped the observant angler that, when a fish has been harshly tugged in striking, he commences at once a more determined resistance than when the stroke has been less violent and his alarm less sudden. Neither can we wonder that his efforts should be extreme when he is made sensible of his situation by a stab and a drag which have half pulled him out of the water.' Though this was written respecting trout, it is perfectly applicable to salmon-fishing. Mr. Scrope, an excellent and experienced salmon angler, writing on this subject, says : 'It is best to strike a little sideways that the hook may fasten in the fleshy part of the mouth, whereas, if you pull straight up, you are apt to encounter the upper or bony part ; or, if the fish has not closed his jaws and fairly turned off you may pull the fly from him too soon, to the disappointment of both parties. Sometimes, however, when a salmon is clean run and in high glee, you can scarcely miss him, strike which way you will. In low water you must be somewhat dilatory in striking ; you you often see the heave of the water and a break before the fish has actually seized your fly. Give him time to turn his head in his way back to his seat to which a salmon returns after rising at the fly.'

"Having spoken in praise of *gentle striking*, I shall now speak in dispraise of striking rapidly and rudely. This is teaching by contrast, a favourite method of instruction with me. This very year (1849) I have witnessed several fish missed by quick striking, and in one instance saw a gut casting-line—which, if fairly used, would have killed a hundred fish—lost by the bad method I am censuring. Some of the parties fishing being of elevated rank or strangers, I durst not offer corrective advice to them. To one party I could, and he took it, but not before I convinced him by proof. The party I allude to was an adolescent, who accompanied me as a guide and angling assistant. He had the eye of a hawk, and whilst I fished he invariably watched the fly ; the river was not wide, and when he was a little elevated above me he could see the rising fish and what it did far better than I could do. The moment he saw a salmon or grilse take the fly, he would say, 'She' (he was a young Highlander) 'has it, sir ; strike her !' I would answer, 'All right—wait a bit,' and, to his astonishment, I would wait a couple of seconds after those words were uttered before I struck. He was still more surprised to observe that I rarely failed in my object. He was a better angler than myself—at least, he threw a straighter and longer line ; *but he had the bad habit of striking strongly*, and it was he who lost for me in the act of hooking a fish the casting-line alluded to, and one of my most killing flies. When tired myself I would give him the rod, and whether it was that my presence rendered him nervous or not, or that he had conceived a bad habit to be a good one, he was continually missing rises, or 'scratching' fish by his 'rough and ready' way of striking. I was determined to cure him. We came to a pool where we always killed fish, and where, from an impending rock, I could always plainly see the fly. I gave the young man my rod, and desired him not to strike until I gave him the word. He soon had a rise. I saw the fish and said, 'Steady !' When I saw the fish take the fly—and he took it well—and turn with it to descend, I said, very quietly, '*Now then ; strike gently*.' He did as he was bade, and hooked the fish, saying, when he had done so, 'If I kill her, I'll nae strike fiercely again.' I was confident, from the movement of the fish, that it was well hooked, and told him to play his prey boldly. He very easily killed it, though it was a 'black' grilse—that is, not a fresh-run one—of very large size, and on examination we found it hooked through and through beyond the hard cartilage at the angle of the mouth. He was then convinced, and that he might be thoroughly so, I allowed him during the day to kill a couple more salmon, which he did by *gentle and somewhat slow striking*. This lesson to the lad was of use to myself, for I saw demonstrated the folly of striking roughly by the success in other hands attendant on adopting the contrary method."

In the above extract the italics are ours ; it seems quite clear to us that "Ephemera," although he speaks of striking—and even jerking—recommends the gentle pull which Major Traherne advocates so strongly. His advice as to "playing a salmon" and how to cast for him contains many valuable hints, and if any of our salmon fishing readers desire it we will give some further extracts from his work.

## SHORE FISHING.—No. IV.

By E. G.

EVERY year salt-water fly fishing comes more into favour, and is generally carried on from a boat. However, in some places sport may be had from the shore ; projecting rocks and headlands, mouths of rivers, and creeks are the best places. As a rule, the summer and autumn are the best times—say, from June to the end of October, though in some places bass play well in the spring.

The principal fish taken with the fly are bass, pollack, coal-fish, and in certain situations mackerel and gurnards. The best rod for the purpose is a salmon rod 17 or 18ft. in length, and rather stiff. A single-handed trout rod may be used when the fish run small, but I do not recommend anyone to use a rod of any value, as it would soon be spoilt. There are plenty of rather heavy salmon rods to be picked up secondhand at a reasonable price, and if frequently varnished will last for years. Several friends have obtained serviceable weapons through the *Bazaar*. As fine casting is not required, even if a rod is slightly warped it is of but little consequence. The line may be of flax or cotton, and is best dressed, but if not it should be well tanned with a strong solution of catechu. In length it ought not to be less than 80 yards ; the thickness will, of course, depend on the rod. The wooden reel as recommended for float fishing will do ; but a leather or pork skin washer should be put on the spindle to keep the reel from running too fast. Of course, a brass reel is the best, and if you have an old one by you, or can pick one up cheaply, use it by all means, but do not run the risk of ruining a good salmon reel with the salt water.

The casting line should be double gut at the top and single below ; or if the fish run very heavy, treble and double. In calm weather and clear water have three yards altogether ; in rough and stormy weather 6ft., or even less, will be long enough, as you can cast better in a wind with a short casting line. In places where fish run small three flies may be used. I, however, seldom put on more than two, and when there is any weed about—as is generally the case at the mouths of rivers—only one. I have frequently hooked two bass in a strong tideway from the shore, and if of any size have seldom succeeded in getting both. I was once successful in saving too very large ones, but I had plenty of help ; had I been alone a smash must have resulted. With regard to flies, the fisherman may let his fancy run riot.

Goose, swan, gull, turkey, pheasant, gallina, and—last not least—peacock feathers are best for wings, and Berlin wools and crewels for bodies. There are, however, two flies which will kill anywhere ; these are the Shaldon Slimer (for the dressing of which see Wilcocks' "Sea Fisherman") and the Alexandra—this latter should be dressed with plenty of scarlet in the wing, and if the hackle is scarlet it is a great improvement. The Alexandra is an easy fly to tie, and is also more durable than any fly made with a wool body. These lose their colour in a very short time ; in fact, some dyes go after a few minutes' immersion in salt water. There is another advantage in using the Shaldon Slimer or Alexandra you may sometimes get a sea trout at rivers' mouths with them. I generally get a few every season. Limerick hooks are the best for sea flies, but the ordinary tinned, round bend, or the Harwich bend hooks answer very well. The size of the fly must depend on the size of the fish and colour of the water—that is, from the size of an ordinary chub fly to large salmon size. They should be tied with double gut loops.

A very simple winged fly may be made as follows :—Suppose you want to tie one with, say, scarlet body, purple tail and legs, and white wing, first tie your double gut loop on to the hook with waxed thread (whitey-brown flax thread is best, or a fine machine thread of a green colour used in the shoe trade—there is no advantage in using silk, and cotton is not strong enough) ; then take a piece of purple Berlin wool or crewel 3in. long, double it, and lay it on the back of the shank of the hook, allowing as much to project over the bend as you require for the tail ; then take a turn with your thread and a half-hitch over it at the place where you mean to make the body begin ; then take about 4in. of scarlet wool, double it, and tie it in on the fastening of the purple, cutting the end of the wool off close to the fastening, which may be a half-hitch ; then carry the thread and purple wool straight up to within ⅛th of an inch of the end of the shank, and make the wool fast with a turn and half-hitch, so that the two ends will hang below the hook for legs ; then wind the scarlet round the shank till it has gone one turn past the legs ; then take a half-hitch with the thread, and cut the end of the wool off close ; then cut off from the large feather of a goose or swan a piece of the plume about 3-16ths of an inch wide and longer than the wing you intend to make by about ⅛th of an inch, double it lengthways, and place it on the back of the shahk with the end you cut towards the bend of the hook ; then take a turn and a half-hitch over it with your thread, and cut the end of the feather off close to the knot. The wing now is exactly reversed from the position it should occupy. To finish, double it back towards the bend of the hook, take a turn or two over it, and finish off with a whipmaker's fastening, or two or three half-hitches if you do not know how to make the other.

I should say that the finishing turns over the wing should be taken at about a 16th of an inch from the end of the hook, and then you have a white head made by the doubled feather ; then cut the legs and tail to what you consider to be the proper length, and the fly is made. It is not necessary to have the wings divided or standing up ; they are best lying flat on the back of the hook. I don't know whether I have succeeded in making myself understood, but trust such is the case. Those who understand fly-making will perhaps ask why I recommend a round turn and a half-hitch every time there is any pause in the work. Now, the reason is as follows :—I expect most beginners have found when, for example, they have tried to tie in the tail and the body wool at the same time, that the tail will keep getting into all sorts of positions except the right, and when he has got that straight the body wool is wrong, and so a sort of see-saw goes on, which disheartens him, and perhaps causes him to give up the job in disgust. As thickness of body is of no consequence the knots are not observed.

After a little practice he may try to put hackle for legs, and silver or gold twist on the body. By the way, as the life of a sea fly is but short, the best and cheapest tinsel to use is what is sold to decorate fire grates in summer. Both silver and gold (*alias* Dutch metal) is sold in sixpenny packets, each of which contains enough to last for years. For the Alexandras and Shaldon Slimers good silver tinsel may be used, as if they are washed in fresh water after use and then dried they will not tarnish very quickly ; but in the case of the wool bodies, once using will take all the colour out, and therefore the cheap tinsel is good enough for them.

## DINNER TO THE THAMES NETSMEN.

IN recognition of the service which some of these men have given in the introduction of flounders in the portions of river above Teddington Lock, and of the good feeling which now exists amongst them, they were invited by Mr. Thomas Spreckley, President of the Thames Angling Preservation Society, to a substantial dinner at the Star and Garter Hotel, Kew-bridge, on Friday evening, November 14th ; and the men did full justice to the excellent spread which Mr. Brill, the proprietor of that well-known hostelry, had prepared for them, consisting of cod-fish and oyster sauce, boiled leg of mutton, rump-steak and kidney pudding, roast veal and ham, a good supply of vegetables, sweets, cheese, &c., which were admirably served. Mr. Thos. Spreckley occupied the chair, and Mr. G. J. Rough, head river-keeper to the Thames Conservancy, the vice. There were present Mr. W. H. Brougham (secretary) and Mr. Alfred Thompson (head keeper) of the T.A.P.S. Messrs. H. Parsfield, James Gibson, John Brown, T. Brown, J. Odell, J. Odell, jun., George Pearce, Charles Pearce, D. Pearce, H. Pearce, Barlow Pearce, John Hoskins, T. Hoskins, W. Cuff, J. Parkins, T. Parkins, and Barker. After a thorough enjoyment of the repast, Mr. Thomas Spreckley, in a practical and kindly address, referred to the period four years ago when he first invited the netsmen to meet him when there was nothing but discord and disunion, and then contrasted it with the present gathering when all were so united and happy. He assured them it was very gratifying to him, and made him feel that his constant visits amongst them had brought about an amount of civilisation which, in so short a time, he could hardly have expected. He was prepared to stand by them in every way that was right—his desire was to do them good, and in respect to the flounders, he was most desirous of improving their industry ; but they must always bear in mind that in any case of violating the law they would have to be punished. In conclusion, he told them that not only did they possess his support, but that of the Thames Conservators also, so long as they worked happily together and legally acted up to the by-laws of the fishery. It was not intended to have any toasts ; but the men were not satisfied without drinking the healths of Mr. Spreckley and Mr. Brougham, and after that the chairman gave the health of Mr. Rough, who so well and ably discharged his duties amongst them as the Conservancy river-keeper, and with so much satisfaction to them all. It was a great thing to say that whilst vindicating the law in all cases where it was necessary, they all possessed a kindly feeling to him. The remainder of the evening was devoted to harmony, the first song being given by the popular chairman. The characteristic singing of the men afforded much enjoyment, and time flowed merrily on until half-past nine, when Mr. Spreckley announced the closing hour, much to the regret of the men ; but he remarked, "He who fights and runs away lives to fight another day," and hoped they would have other occasions like the present one. The netsmen then rose and gave a hearty round of applause to their good friend and chairman, whose hospitality they had so thoroughly enjoyed.

## AN INNOCENT ABROAD.

A YANKEE who recently invented a fishing-rod which automatically registers the exact weight and number of the fish caught on it, cannot understand why nobody will buy it.

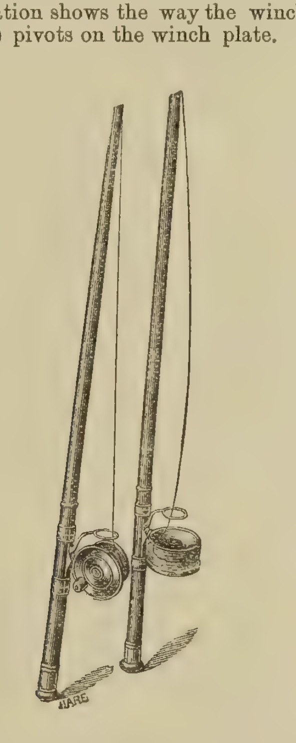
## MALLOCH'S NEW PATENT CASTING REEL.

By R. B. Marston.

I HAVE once or twice referred to a new reel for casting from, which has been brought out by Mr. Malloch, of Perth, and said that after giving it a fair trial, I would describe it in the GAZETTE.

I have tried it recently on two occasions, and on the first occasion confess a prejudice against it, derived from what little I had previously seen of it, was strengthened. A second trial has convinced me that the new winch is a *perfect success.* As it will doubtless happen that others who may try it will at first meet with difficulties, it may be well to describe my experience. I first used a small size winch with very fine dressed line, which did not fill the barrel of the winch sufficiently, and about every third or fourth cast the line got kinked, and hung up. Having explained this to Mr. Malloch, he told me to use a No. 4 undressed Nottingham plaited line, and fill the winch well up to the rim. This I did, and have just come in to write these lines after an hour's trial (spinning), half of the time being almost in the dark. I found I could cast as quickly, as easily, and as far from this winch as from my ordinary Nottingham reel, and every cast was clean and without kink or hitch of any kind.

The accompanying illustration shows the way the winch is used. The body of the winch (it is all metal) pivots on the winch plate. It is provided with a very ingenious check, made silent or otherwise, as desired. To make a cast you wind up in the usual way; then turn the winch until it stands at a right angle with the rod (see illustration); then you hold the line near the winch, make the usual swing, and release the line when the bait has got full weigh on it, and it flies off in any direction you like, and pretty well as far as you like (Mr. Malloch has cast 70 yards). The winch does not revolve, the line uncoils just as a sailor coils a rope up, only one coil comes off after another instead of being coiled on. The side of the winch opposite the handle side is concave, so there is little resistance to the uncoiling of the line. Directly the bait touches the water you turn the winch back to its ordinary position and wind up, and are ready for another cast.



I do not think anyone who has mastered the Nottingham winch is likely to use this one; but it will prove an invaluable boon to all those who cannot manage the ordinary Nottingham winch, and their name is legion. Anyone who can cast a bait at all can cast from this winch: there is nothing to control; you have only to see that you wind up evenly and tightly, and do not release the line until you have got the bait swung out well in the direction you wish it to go—in fact, just as in casting in the Thames style.

When I say that such first-rate anglers as Major Traherne, as well as Mr. A. J. Little and Mr. E. V. Powell, our two best exponents of the Nottingham and Thames styles of casting, have all tried, and think most highly of this winch, I am sure I need say no more about it. Hundreds of them are now in use by salmon anglers in Scotland, and they are equally good for spinning, live-bait casting, or ledger casting. As is usual in Mr. Malloch's winches, the workmanship is perfection.

"A SHIPFUL OF CHILDREN" is the title of the *Little Folks Annual* for 1885, price 6d. It is certain to be a great favourite in many thousands of households this coming Christmas, being well laden with capital stories and illustrations depicting the doings of the merry crew. The illustrations to "Battle Garden," by Mr. Geo. Manville Fenn, are quite a charming little series.

CHRISTMAS CARDS.—Messrs. A. F. Schwenckert and W. G. Wallis, 112, Fleet-street, the London agents for Messrs. Meissner and Bach, of Leipzic, send us a packet of charming cards for Christmas and New Year. They have evidently been produced without restriction of the number of colours to be employed in order to produce exact copies of the original very graceful drawings. They consist chiefly of groups of flowers and landscapes, with sensible and appropriate letterpress prose and poetical good wishes.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### BRANDY AND PIKE BAITS, &c.

SIR,—Please allow me a few last words. In your footnote you say, "Unless 'M. A.' can prove that brandy causes pain, we are inclined to think it is humane, &c." I thought no proof was required.

In nine cases out of ten *all intoxication* gives pain. I once felt it myself; in fact, I may say twice. But never again, Mr. Editor, never again!

A friend of mine went to a supper last week, and he only took *one glass* more than usual. Result—he was in bed for two days.

This is what they call the reaction. Then they have a "pick-me-up." He kept saying, "Oh! my head"; and if your dace could speak it would probably say, "Oh! my heart."

The brandy, stimulating the action of the heart and irritating the whole nervous system to a *terrible* degree, the result of which is the rapid rotation of the fish, presently a fearful reaction sets in, leaving your bait in a far worse plight than it was before; in fact, leaving them so miserably weak and helpless that, as the "old gentleman" told me, after some time you could catch the fish with your hands. I presume you could these pike baits, if they were free. You may term it making the bait "jolly"; but it is a jollity that does not last, and unless I am very much mistaken, ere long your bait would go "all to pieces."

However, *whether it would or not*, I cannot agree with you, Mr. Editor. In fact, I cannot understand any one deliberately making a bait "jolly" before being devoured. You say an *intoxicated* dace has no fears; but is the one moment of fear a dace no doubt suffers when a jack approaches in sight to be compared with the lingering, wretched suffering of the animal going madly "round and round like a steam-engine with amazing rapidity." Certainly not. The fact is, the fish being unaccustomed to this brandy business, the spirit sends it mad, and then it no doubt suffers great pain, just the same as an infant the first time it tastes gin, &c., and the actions of the two are very similar, the babe madly "straining" to get from the glass, and the fish rushing about hoping to destroy *the effects* of the brandy. If this is not the reason, what on earth is?

*Re* liver and fish gentles, all I *know* is I have caught dace, &c., in a *slightly* discoloured water with gentles from fish, when they would not look at liver gentles. Strange, but nevertheless it is true—true as gospel.

For a clear water I should decidedly give the *preference* to liver gentles.

But the Surrey Canal is not a "clear" water. I was referring to a dusky or peaty water, not to any water and all waters. Of course liver gentles are yellow, or should be; but those from fish are much whiter. Lastly, will you kindly inform me about what a jack ought to weigh *37in.* long if it were in good condition? Should like to know. Would the difference range from 10lb. to 28½lb.? Please say.—I am, &c.,

MARK ANTONY.

[Our "Noble Roman'' gets so mixed up sometimes that he will excuse our declining to believe that he belongs to the order of Good Templars, as might be inferred from the vehemence of his denunciations. It would be very wrong indeed to bring up babies on gin, or dace on brandy; but we can assure "M. A." from personal experience that to administer a few drops of brandy to a baby is often the only way to get over those painful ailments connected with dentition, which render the unfortunate infant a nuisance to itself, and the nightmare of the household generally. If "M. A." were about to be impaled on a hook preparatory to being projected through the air into the open jaws of an expectant crocodile, we feel sure he would be very glad to have a glass of brandy—we should. He is poking his fun at us in his last query. We have never seen him, but he may be 6ft. high and weigh eight stone, or he may be 5ft. and weigh 16 stone.—ED.]

SIR,—It appears to me that some unnecessary cruelty may be caused in connection with this angling detail, through sheer thoughtlessness, and with no such intention on the part of anglers adopting the method of dosing pike baits with brandy or other spirit to make them lively, or, as the Editor puts it, "jolly."

It is a well-known fact that *alcohol coagulates albumen in much the same way that boiling water does*, and it is only necessary to drop a dead minnow or gudgeon into strong brandy, whiskey, or methylated spirit (for the sake of preservation as baits) to notice *the immediate whitening effect produced on the skin of the fish*, which, with its protecting mucous or slime, is largely albuminous in its nature, and it is only a reasonable supposition (apart from scientific research) that the *exceedingly delicate* portions of any fish's *gills* are of *the same character, and would be acted upon in the same way by contact with strong spirit.*

I argue, therefore, that it is neither more nor less than "scalding" or "cauterising" the delicate fibres of the gill breathing apparatus of any fish to pour drops of brandy or any spirit down a bait's mouth before committing it to the tender mercies of "Mr. Jack," and that the greatly increased liveliness of the bait after such treatment has nothing whatever to do with "jollity" or "drunkenness," but *is the effect of acute pain in the sensitive tissues of the gill fibres*, from which the fish finds relief by active motion through its natural element, and by the passage through the mouth and gills of cold water.

As a pike fisher, I have had considerable experience in "baiting" pike tackle, both for "live snap" and "spinning," and though I do not pretend to be squeamish about such matters, it is obvious to every pike fisher that sufficient pain to a live bait must unavoidably be caused; but I think we need hardly make such a gratuitous addition to it as to scald the delicate gill fibres with strong spirit, merely to make it temporarily more attractive to the pike, and yet this is exactly what many anglers may be induced to do by the publication of the letter by your late correspondent.

Some persons may say: "Oh! if you go to the extent of sticking hooks into living fish for their use upon 'live-snap' tackle, what does it matter about the slight additional pain of a little brandy in its mouth so long as it acts better as a lure for pike?"

To such an (supposititious) argument I have only one reply: "Do it if you care to, *after knowing that it causes acute pain*"; but as it is *not necessary* to sport, I hope that all humane anglers will agree that it need not, and ought not, to be practised.

Perhaps some of your medical readers who are anglers will kindly give us their practical opinion on the point I have advanced, so as to make it clear from a scientific basis.

The first intimation we had of the use of spirituous liquor upon fish was in the form of *a reviver from apparent death*, and was applied in the form of a moderate dose of spirit in a large quantity of water, in which the fish could swim about as they revived, and this was highly interesting, as a fact that fish which had been apparently dead for some hours could be restored to life and activity by such a stimulant, and there can be no reasonable objection to its use in such a diluted form, as it may be found a valuable means of keeping fish alive and active during transit, or restoring to animation those which would be otherwise lost; but I hope you will agree with me that, if my statement of the action of the spirit on the fish is corroborated, it becomes inexcusable to use it in a concentrated form in the way indicated by your correspondents.—I am, &c.,

GEORGE BANKART.

Leicester.

[We should be very sorry to advocate anything in the shape of cruelty, and Mr. Bankart makes out a very strong case against the use of raw spirits for enlivening fish. We think the new Derby live-bait harness will render any stimulant unnecessary, as the bait is not injured, and consequently weakened, by having hooks put in it.—ED.]

SIR,—In your last issue, "Mark Antony," in his letter on the above-named subject entitled "A Protest," was "down" mighty sharp on the use, or (as he evidently considers it) the abuse, of brandy, as administered to live bait, but I fail to see that he has made out a case against this practice. According to him, the increased activity of a fish thus "dosed" is due to "downright drunkenness," and he then proceeds to call the practice "unfair," "unsportsmanlike," and "downright cruelty." Now, sir, allowing that a "brandied" bait is *drunk*—an assertion that I receive *cum grano salis*—where does the cruelty lie?

To intoxicate fish in a private pond merely for the amusement of one's friends is as reprehensible a practice as that of intoxicating a man to make fun of his actions while inebriated; but with a bait about to be impaled on a hook the case appears to me very different.

The cruelty (if any) lies, surely, rather in fixing the bait on the hook, and in subjecting it to torture and exhaustion in the water.

To reduce such a bait to a state of "downright drunkenness" must have the effect of deadening its sensibility to pain, thereby lessening the *cruelty*. Anyway, a fish so dosed will, by its increased activity, be a more attractive bait, and will the quicker be put out of its misery by the pike's teeth. So far, then, from seeing any *cruelty* in giving the bait "a drop from the flask," it seems to me to be a downright humane idea, and if it is thereby rendered more lively and attractive, so much the better for the angler and his poor little bait, and if the practice is "unfair," it is only toward the *pike*, who, by Mr. Izaak's account, have the most right to grumble at the introduction of "drunk and disorderly" fish to the river. Until a "live-bait humane tackle" can be made to answer, there must always be a certain (or perhaps I should say an *uncertain*) amount of cruelty in live-bait fishing; therefore, by all means adopt a plan that is known for diminishing it, and therefore find an additional reason for never leaving behind so useful a weapon as a "pocket pistol." As you say, sir, "all know how a bait will dash about in fear when a jack is about to attack it," I have had them jump clean out of the water when the pike made his rush, whereas an intoxicated bait would, I imagine, rove about in a rollicking, "devil-may-care" manner, in blissful indifference to its impending doom. Of course, if the *brandy* causes pain, its use may be styled "downright cruelty"; but even then one would be "cruel only to be kind," if by reason of its greater attractiveness the bait more quickly receives its *coup de grace*.

In conclusion, sir,

"When next upon the bank I pause,
Produce my flask, and drink to 'sport,'
I'll not forget to treat my bait
To just a 'drop of something short.'

"Good health to anglers, death to fish,
And for my bait, with addled brain,
A wish that it may quickly find
A happy issue out of pain."

—I am, &c., A Coggeshall Volunteer.

---

Sir,—I do not think I deserve to have my letter, which appeared in the Gazette on the 8th inst., denounced in such a strong manner as by Mr. "Mark Antony" on the 15th inst. He must remember that I am not the originator of this method, but merely one who followed Mr. Chambers's idea with success, and, as the Editor of the Gazette had put a note in his paper asking anyone to give an account of his experience when having tried it, I accordingly did so, and then to be accused of cruelty I think is rather rough on me. But still I do not agree at all on that score with "Mark Antony," and I therefore wish to ask him a question on the matter of cruelty. Does he think to inebriate a bait is worse than using a bait either on live gorge-tackle or snap-tackle? If he does, I don't; and I wonder he can go fishing at all. Fancy threading gentles on a hook, three or four together—how cruel! Or worse—a poor worm; see how it wriggles, and what frightful agony it must be in; or, again, even in using paste, in striking, the hook penetrates the poor victim fish—awful to think of according to his mind, but not to mine. I do not believe these little fish can have very much feeling, for if so, they could not live so long on our hooks as they do, and sometimes I have had occasion to take a bait home and use it a second time. And I think as hooking our baits through the back is a necessary evil, to give it then a little spirit—as "Mark Antony" says, to make it "intoxicated"—is rather a kindness than otherwise, as it would, in my opinion, somewhat allay the pain (if any) by being rendered semi-conscious; and until "Mark Antony" or some one else proves to me the excessive cruelty of using brandy to a bait, I shall continue to use it.—I am, &c., A. S. Isaac.

---

### TINCT. IODI.

Sir,—Mr. Geo. M. Kelson is anxious to correct a slight error in his interesting papers when he finds it out himself. So I presume he will not feel offended if I ask him, through your columns, where he got his "tinct. iodidi," and what iodidi (of a metal or otherwise) his tincture is made from? Perhaps he means the "tinctura iodi" of the British Pharmacopœia, which is sometimes called "tinctura iodinii"? I have used the latter for the stings of wasps and bees; but find a weak solution of ammonia better. I have not had an opportunity of treating a viper's bite; Saint Patrick (as the song says) having banished those "varmin" from the green island.—I am, &c.,

Coole Abbey, Fermoy, Ireland. H. W. Peard, M.B.

---

### OBESITY IN ROACH.

Sir,—In your issue of the 8th inst. you report the capture of a singular roach from the Lea with an enormously extended stomach. Size of fish, 13¾in. long, 11¼in. in girth, weight 1lb. 11oz. A similar instance was recorded by the Windsor correspondent of *Bell's Life* in August last, who states: "A curious case of what I should call dropsy in fish came under my notice this week. It was a roach picked up alive by the Windsor ferryman, A. Hill, which I measured; its extreme length was 13in. and girth 11½in., weight, 2lb. 1oz. Under ordinary circumstances I do not think the fish would have weighed more than 1lb., if that."

These instances remind me that about 18 years since, amongst a large take of roach and bream from the Surrey Commercial Docks, two small specimens of the former and one of the latter species was distorted fully to the extent of those quoted above. It struck me as being very singular that three cases of this disease, or whatever it is, should come to light in one day's fishing, and never before or since. I think I am right in saying that a similar experience occurred during the present season to your occasional correspondent, "A Coggeshall Volunteer."—I am, &c.,

Giant.

[We have not seen a roach distended in this way; but it is not a very uncommon thing in some parts to find sea fish of aldermanic proportions. Sometimes it is caused by an internal parasite which increases in size or number to such an extent as to give the fish a dropsical appearance. Sticklebacks are affected in this way sometimes.—Ed.]

---

### NOTES ON WORMS.

Sir,—The "Notes on Worms" in the Fishing Gazette of the 8th inst. led me to refer to some works of earlier date than Best's "Art of Angling," with the view of ascertaining whether or not he was the first to recommend pouring a decoction of walnut tree leaves on the ground as a means of bringing worms to the surface in dry weather.

I find that the effect of walnut-leaf water on worms was known at least a hundred years before Best wrote. Chetham, in "The Angler's Vade Mecum" (2nd edition, 1689), says: "In great droughts pound walnut leaves, and put the juice thereof, mixt with a little water, into their holes, and it drives them out of the ground."

"R. H.," in "The Angler's Sure Guide" (1706), treats on the subject at still greater length: "There are divers other ways of getting these worms, as by bruising green hemp, or walnut tree leaves, or the green husks, the blades of leeks or onions, and laying them to soak, or boiling them in water, and after they have been soaked twelve or fourteen hours, or boiled an hour or two, pour the water on the ground in places where you see many worm-castings, or into the worm-holes; or by mixing soot and water, or salt and water, and throwing it on such places, &c. But I use none of these last ways, but only in case of necessity, because it hurts the worms, and makes them sick and many of them to die."—I am, &c.,

Edinburgh, 14th Nov. Alexander D. Campbell.

---

### FISHING RIGHTS ABOVE GODSTOW.

Sir,—If the "Cherwell Otter" had more carefully read my letter he possibly would not have been under the necessity of exercising his mind to find the simile with which he commences his reply—a simile as much out of place as it is (may I say?) ancient.

Don Quixote, of whom many people besides the "Cherwell Otter" have read, attacked certain windmills, thinking them to be giants; but it appears to me I have attacked nothing and nobody. I therefore fail to see why the threat of the "reprobation of every angler" should be held out to me, inasmuch as my chief desire is to preserve to them certain privileges which they now enjoy, but which are certainly jeopardised by the incautious and impolitic words and actions of some of us. The "Cherwell Otter" cannot find any arguments in favour of Lord Abingdon's claims; neither can I, nor do I pretend to, nor is it my business to. Allow me to point out to the "Cherwell Otter" and your readers generally that I am not "championing" (do not champion) any course of Lord Abingdon's, unjust or otherwise, and certainly not the former until it is proved to be so. According to the "Cherwell Otter's" own words, "no definite legal decision has yet been given," and "it is doubtful if he is able to produce any tangible proofs of ownership." Therefore, as it is doubtful, he has no grounds for imputing to me those Quixotic actions to which his ill-applied simile refers. The complete purport of my letter, and the gist of its contention is this: *If those claiming have the right*, if "such is the case," and to enlighten the obscurity of his comprehension in this particular, allow me to inform the "Cherwell Otter" that these are the premises on which I base my argument. That being so, I am under no obligation to adduce any proof of what I have assumed for the purposes of my proposition—viz., that anglers should cordially accept a certain privilege offered provided those offering it have it to offer.

Either Lord Abingdon has this right or he has it not. In the former case, the fishing is none the less open, and perhaps more free, because it can be had on payment of a merely nominal fee; and in the latter case, when it is proved, it is doubtful if anglers will be so well off if Lord Abingdon withdraws the privilege of permitting them to go on his land to fish. In other respects I am gratified that a gentleman of the long experience of the "Cherwell Otter," and possibly of attainments vastly superior to those possessed by the present writer, is pleased to agree with me that the fishing is absolutely open to the public on payment, and not, as he formerly asserted, closed to the public; and also, that it is only of recent years that it has been found necessary to take steps to regulate the angling. The "Cherwell Otter" may perhaps take exception to the way I put it; but is it a fair way of argument for him to persist in saying the fishing is closed to the public, and that the public are prevented angling there, when he admits that a ticket issued to all respectable persons on application gives them the right to fish on payment?

Again, I would point out that my letter refers only to the fishing from Cassington (about a mile below Eynsham bridge) to Bablock Hythe; I know nothing of the fishing below Cassington, and my former letter does not refer to it. In reply to the "Cherwell Otter's" suggestion, I am, of course, sorry to learn that one of the craft has been victimised to the extent of having had his rods "stolen"; but as a matter of interest, I should be more gratified, and so, no doubt, would be the victim, to learn that the "thief" had got his deserts.

In conclusion, allow me to say that the "Cherwell Otter" has slightly misquoted me. I did not write, "It would appear they had some sort of right to shoot *there*"; my words are "to shoot *on the river*," meaning the river generally, and not, as the word "*there*" infers, this particular portion of it. The reason they have this right, if they really have it at all, is, I believe, that the river, although a public way, is not within the provisions of the Highway Act, and, therefore, persons holding the requisite licenses can shoot certain wild birds without fear of police interference. It is almost unnecessary to state that this right (if it is one) is frequently abused, more especially in the locality of the preserves of the riparian owners, and I will venture to suggest they do not like it.

In reference to those successful cases quoted in his letter by the "Cherwell Otter," my gratification at the results was not less than his own, or, I make bold to say, than that of any other angler. In the latter case, however, that of Adingdon *v.* Wall, that the victory was won—unfortunately, by a fluke, if I may be permitted to use the word—is proved by the fact just come to my knowledge, that two anglers fishing in the same portion of the river as did Mr. Wall were last Monday convicted at Abingdon and fined. Mr. Wall was summoned at Witney (Oxfordshire), for an alleged offence committed in another county (Berkshire). I feel sure my zeal in the interests of anglers and angling is not surpassed by that of the "Cherwell Otter," although there may be perhaps a slight divergence of views as to the best methods of promoting them; therefore I respectfully offer him my co-operation with that view, and as my favourite fishing is in his locality, hope I may some time have the pleasure of a meeting.—I am, &c.,

23, Blomfield-road. Robt. W. Hobden.

P.S.—In reply to your footnote to my letter, allow me to explain my opinion "that it is not so much for the riparians to prove their rights as it is for us to show they have none to prove," for I rather fancy you misunderstand my contention, which is this: that it would be very undesirable, and in many cases disastrous, to our interests to make a riparian show his rights. If a riparian chooses to prosecute anyone for infringing what he claims as his rights, then he must show such rights before a conviction can be obtained; but if we can successfully resist such a prosecution (on the question of legal rights pure and simple), then I maintain we have clearly shown that he has no rights to prove, and we have then gained that point to obtain which is so much to be desired, and on this we are all agreed. My reasoning may perhaps be called making a distinction without a difference, and possibly it is so as to ultimate results, but I think it will show that I do not suggest that the onus of proof lay on the public.—R. W. H.

---

### NEEDLE-EYED HOOKS.

Sir,—Allow me to apologise for my apparent neglect in not replying to the letter of your distinguished correspondent, Mr. Hall, which appeared in your impression of the week before last. That as regards Mr. Bankart's very interesting letter of the 15th, I am obliged to make a similar apology, and to pass by this issue of the Fishing Gazette without the literary courtesy of a reply is due to the circumstance that, before replying to the letters of these gentlemen, I am awaiting the result of communications with a well-known firm of hook makers, in order to ascertain, firstly, whether there are really any mechanical difficulties in making "needle-eyed hooks" of the smallest sizes; and, secondly, with a view to having some samples actually made embodying the ideas which I have suggested in your columns.—I am, &c., H. Cholmondeley-Pennell.

---

Sir,—Allow me to explain to Mr. Tod that he has formed a very mistaken notion about the hooks I sent him as patterns—per favour of the Editor.

On Oct. 11 he wrote advocating eyes of "the smallest possible dimensions," and, in reply, I sent him patterns of the first lots of hooks made by Mr. Aldam's maker in 1877, thinking he might perhaps like them, and intimating that if so he would be welcome to what I had in stock.

These patterns of fine-wired black japanned hooks were the same hooks which Mr. Hall and I had condemned and thrown aside in 1878, before we applied to Messrs. Hutchinson and Sons; but Mr. Tod's whole letter reads as if he thinks these obsolete hooks are what I now recommend as what eyed-hooks should be, whereas the flies which have converted him, tied by Mr. Holland, are probably dressed on the modern eyed-hooks, which have been in general use since 1880, and which (though serviceable hooks) I criticised somewhat sharply in the FISHING GAZETTE of Sept. 27 as open to still further improvement.

Mr. Tod's whole letter is so misleading in the attribution of the black japanned hooks (which he so hates) to me, and the bronzed hooks to Mr. Hall, that I wish to explain to him that the hooks he repeatedly calls "Mr. Bankart's hooks," are not mine in any sense; and that the hooks I have used since 1879 are identical with those he praises on which the Holland flies are dressed. Mr. Hall's flies may possibly be tied on some improved hooks of which we hope to hear more anon.

The black japanned hooks have been obsolete for seven years, and Mr. Tod's mention of them as "Mr. Aldam's patterns," shows that they were not intended to represent the present eyed-hook, but only special fine-wired small eyed-hooks I thought he might like. The Nos. 11 and 13 long-shanks were special hooks made for "drakes," "alders," "sedges," and such flies; not for "duns" or small flies.

I recommend Mr. Tod and others to wait awhile before getting eyed-hooks, as, if present prospects are realised, it is probable that greatly-improved eyed-hooks may be in the market from one, if not two, new sources before the trout-fishing season comes round, and which, when ready, will no doubt be noticed by the Editor of the FISHING GAZETTE.—I am, &c., GEORGE BANKART.

SIR,—Some time ago I wrote to you relative to the difficulty of getting double salmon hooks with eyes, except of a most clumsy make. In your next issue I saw a letter from Messrs. J. Warner and Son, of Redditch, saying that they could supply them. I wrote to this firm, asking them to send me samples, which they most kindly did, and I can now most unhesitatingly state that the eyed double hooks manufactured by them (on an entirely new principle) are as near perfection as can be imagined. The hooks are of very good shape, and penetrate well, and the eye is neat, and being without any sharp edge, I do not think that the gut would be at all liable to cut. Salmon flies on eyed-hooks are practically indestructible, and if there is any danger of the gut chafing, this is easily guarded against by shifting the link whenever it appears necessary (a much easier job than with a gut loop).

I only think it fair, both to Messrs. J. Warner and Son and to your readers, to give my experience, such as it is.—I am, &c., GREEN WREN.

P.S.—Would Mr. Kelson kindly let me know if the inclosed feather is kingfisher or blue chatterer?

## EYED-HOOKS, BRONZE v. BLUE.

SIR,—I was glad to see from Mr. Tod's letter last Saturday that he has no longer any prejudice against the present make of eyed-hooks. A short time ago he sent me some of the hooks he bought in 1881, and I am not surprised that he thought them clumsy. They were patterns *we had discarded some time before*, and not to be named in the same day with those I was using when I met Mr. Tod on the Tummel. Then, again, the flies tied on these hooks were nearly half head, and, as I said in my letter of Oct. 25th, this is just what I expected. It has happened frequently—a clumsy fly on an eyed-hook has prejudiced scores of anglers.

But my main object in now writing is to correct an impression of Mr. Tod's, to the effect that the colour he so much likes is due to me. He also appears to think that his pet aversion, a japanned hook, is advocated by Mr. Bankart; whereas the bronze colour was originally introduced by Mr. Bankart and not by me. This I have stated in the GAZETTE more than once. There are many anglers in favour of the lighter colour; but there are others, very skilful too, on hard-fished streams, who won't have the bronze hooks at any prize. Opinions are divided, and for my own part I like to have both sorts in stock. But I cannot help thinking that on a a bright, sunny August day, the light steel glitters far more than the blue, and I am almost certain that under such conditions, the bright glittering steel scares the fish far more than the blue hook. If ever the eye is "conspicuous," in Mr. Pennell's sense, it is when it is of a glittering bronze colour. What we want, whether in blue or bronze, is to have the hooks duller in shade. I have seen some here and there at odd times, quite well tempered and free from rust, but of a dull hue throughout, not so pretty to look at but far more workmanlike. I hope the hookmakers may be able to hit the happy mean in colour, and bear in mind that if we are to "take the shine" out of wary trout, it is of the first importance to take the shine out of the hooks.—I am, &c., H. S. HALL.

## KNOTS FOR THE FLY CAST.

SIR,—Feeling rather interested in the subject of knotting as applied to fly-fishing, I was pleased to observe the diagrams published in your GAZETTE of a few weeks since. As fine tackle and educated trout now appear to be the order of the day, I am of opinion that he who can contribute a suggestion as to the neatest method of making knots for fastening gut or attaching flies to the cast is doing a good service to his brother anglers; therefore, Mr. Editor, following your good example, I beg to inclose a specimen knot suitable for droppers made from an idea of my own—at least, so far as I know, I have neither seen it used nor described in any work on angling. It is simple, being quickly and easily made; safe, because it cannot possibly slip; strong, because *fine* gut so tied, after being properly soaked, is not more liable to break at the knot than any other part; and, moreover, it is the smallest knot that can be used for the purpose. With these recommendations, I beg to submit it for the favour of your opinion. The application is as follows—viz., at the part of the cast where it is intended to place the dropper a common knot is made, the proper name of which is "the thumb or overhand knot," and the knotted dropper is then inserted in the opening, and the knot is drawn quite tight, the knot at the extreme end of the dropper being brought close to the knot made in the casting line. I think the foregoing explanation might be understood without a sketch of the *modus operandi*.—I am, &c., PORTSMOUTH WALTONIAN.

[The knot is similar to the one we illustrated recently, only not, we think, so secure, for the simple reason that single knot in the gut of the dropper is not made to include the gut of the casting-line as we suggested and illustrated.—ED.]

## BLUE CHATTERER.

SIR,—The feather you sent on from your correspondent is undoubtedly blue chatterer. This is easily known by wetting it. If it had been kingfisher it would have turned to a dirty brown, whereas the feather sent retains its colour.—I am, &c., JOHN P. TRAHERNE.

## A NOTE FROM NOTTINGHAM.—THE "FISHING GAZETTE," &c.

SIR,—Angling this week has been nearly a blank; many anglers that I know have been out and could not kill a fish of any description. A few chub have been caught in the vicinity of Nottingham with minnow. A friend of mine, fishing below Cavendish Bridge the other day, saw a gentleman take a very fine chub, 4lb., while trolling with spoon bait. I have known them to take a natural bait when spinning. Mr. Baker caught a few nice perch at Colwick on Saturday, and was unfortunate enough to lose a very large pike, which took his float, tackle, and part of his line, without as much as saying "by your leave." A few pike have been taken in the Sawley water, but nothing of any size.

I see in your issue of the 15th you have a list of the different fishing clubs of Nottingham and district; I don't think there is one in a hundred of the anglers know anything about your valuable and interesting paper. I have shown my copy to many, and they wondered where I got it from, never having heard of the paper before. A copy sent to every club, I have no doubt, would increase the circulation in Nottingham, as all true lovers of angling cannot help but read with pleasure the many interesting articles on angling by some of your clever correspondents. In this week's paper, "Trouting in Normandy," by Cotswold Isys, one cannot help but admire the angler's patience under difficulties, and the very racy style of his narrative. Then there is G. M. Kelson's very flowing style, which, if it does take us novices out of our depth sometimes, we cannot help but admire and appreciate him as an enthusiastic angler.—I am, &c., A. W.

Nottingham, Nov. 17.

[A copy was sent to each of them last week; in fact, we are always glad to have the addresses of anglers who do not know the paper.—ED.]

## THE POISONING OF THE ALLAN.

SIR,—In your last issue you mention that the river *Almond* has been poisoned by the upsetting of an oil tank. I, being a native of Edinburgh, was surprised to hear the river Almond spoken of as "this celebrated Scotch stream." The inclosed from yesterday's *Daily News* is evidently the fact, as *Dunblane* is not near the Almond. It is true that I have only a dim remembrance of fishing the Almond; but I never heard it was famous for sport, and *I* never did anything worth speaking of in my young days *there*. It is within very easy reach of Edinburgh by rail.

The Allan I have never fished, but I regret, all the same, the sad accident, which will fall like a blow on many and many a humble, but keen, village "fisher" residing on its banks.—I am, &c., E. M. TOD.

[It should have been Allan, not Almond.—ED.]

## TORCROSS LEY, NEAR KINGSBRIDGE.

SIR,—The fishing at the adjacent Slapton Ley closed on the 31st ult., but this ley remains open, although the water is very low, in consequence of the recent "droughty" summer. I have had some good sport here last week, having taken three pike, weighing respectively 10lb., 13lb., and 15lb., besides losing two heavy fish in consequence of their biting through the gimp. Altogether I am of opinion that this ley is improving rapidly, and likely, before long, to take the position of the best fishing water for coarse fish in the west of England. Mr. Vickery's hotel is most comfortable, and his attention to his guests is everything that can be desired.—I am, &c., L. P. ALLEN.

Chislehurst.

## PENNELL'S THREE FLIES—NOTTINGHAM REELS, &c.

SIR,—I see in your "Answers to Correspondents," Nov. 15th, you say: "We have tried Mr. Pennell's three flies, but not with encouraging results." This is my experience. During the past trout season I have used them in many Irish waters, as well as in Wilts, Devon, and Dorset, and never rose a fish with either of the typical flies. As regards the Nottingham reel for trout spinning, I have had good sport using one of Mr. Wells' (of Nottingham) fast reels, and one of Mr. Jeffry's (Plymouth) plated minnows, which are *weighted*, a leaded trace not being necessary. I find I take larger trout with the minnow than I ever took with a fly; it is also certain death to sea trout. I am looking with interest for your report on Mr. Malloch's Perth reel.—I am, &c., PIKE.

## DON DAM('D) DYKES.

(LINES ADDRESSED TO THE EDITOR OF THE "FISHING GAZETTE.")

DEAR SIR, I'll ever humbly pray
That you may live for many a day.
I find your papers quite a treat,
They often cheer my lone retreat.
Thank Heaven! the rain has come at last,
And Don is rising very fast.
That river, once so fair to fame,
Has lost its all, except the name;
That every honest fisher knows—
At least, so far as fishing goes.
Each blast of wind and plash of rain
I hear upon the window-pane,
Resemble voices sent from Heaven
Proclaiming "All our sins forgiven."
I'm sure this storm delights your heart,
For well ye lo'e the "gentle art,"
And like to see that "witching boil,"
(Supreme delight of fisher's toil),
And get a "tug" a "rush," a "splash,"
A "steady pull," a "jig," a "dash,"
A "quiver," "whirr," and then a "spring,"
Clear up like bird upon the wing.
An inward "run," an outward "dart,"
Straight down, slant up, again athwart,
Head down, tail up, wriggle, shake,
(Canny my man, or else you'll break;
Back now a little, keep below,
Hold tight, belly up, so so—ho!)
He gives a "flop-flop," then a splatter,*
And's gently drawn to shallow water;
A breathless moment, then a laugh
Hurrah!—he's safe upon the "gaff."
Ah! twenty pounds, a "dandy" fish
As ever graced a royal dish.
Not twenty minutes from the "rise"
Till all is o'er, and there he lies.
Such is the game we used to play,
When cares were light, and hearts were gay;
Before we knew the "wiles" of mammon,
Our greatest "glee" was "wiling salmon."
But now the cares of life are those
That keeps the "grindstone at our nose"
For fully fifty weeks a year,
And e'en when holidays appear.
There's not a salmon to be got
Unless you "snigger" "Sauchy-pot,"†
And that's a job would mak' ye "speu,"
Lord bless you, sir, that's no' like you.
Fuach! na, leave that to poacher brutes,
Who think no shame to "net" 'for trouts,
They'd "brimstone" pheasants, "strangle" hares,
And "ferret" rabbits in their "lairs,"
"Nick" a rooster, steal a purse,
And "crack" a keeper's croon like curse.
Such are the men who "snigger" salmon,
And look on honest sport as gammon.
I beg your pardon, I'm digressing,
And not my grievance clear expressing:
I meant to say how well I'd like
To see a slap in every dyke—
A slap as big as would allow
The passage of a "breeding sow"
Down to the channel of the stream,
Right through the first foundation beam;
Then fish could "run" in any water,
High or low, it would not matter.
Such was the law in days gone by,
When fishing rents were not so high,
And fish were always got in plenty—
For one got *now*, folks *then* got twenty.
In days of yore, no man would dream
Of mills requiring all the stream,
And leave the river channel dry
When fish most want a good supply,
To let them have a clear ascent,
And anglers something for their rent.
I know you hardly would believe
The reason anglers have to grieve;
In ten miles upward may be seen
Ten dykes with not a mile between.
But one is worse than all the rest—
Has over ninety feet of "breast,"
And there's a "lead" outstrips them all,
Could well supply a Suez Canal; ‡
'Tis nine feet deep at every side,
And measures five-and-twenty wide.
No river in this "northern land"
Could such an awful drain withstand.
No wonder during summer weather,
The channel's dry for months together.
Ye gods! the men were surely mad,
Who ever framed a law so bad,
If such a law was ever made?
But faith, I do not feel afraid
If lawyers would the matter 'sist;
They'd find no statute does exist
By which a man, without dispute,
Could claim the river absolute.
But what need I bemoan and preach,
When "lairds" permit so gross a breach
Upon their lawful rights and treasures,
Fishing rents and tenants' pleasures?
Anglers may with zeal protest,
While Justice holds her hands to rest,
And shuts her eyes to what is just,
Or blinds herself with "golden dust."
While fishery boards or clerks have stakes
In mills and nets and cruives and haiks,
Millowners can afford to laugh
And flaunt aloft their "golden calf";
And anglers all may curse or pray,
Fume and threat and "thrash" away;
Their backs may ache, their heads may reel,
They'll fish long ere they fill the creel.
The only way to clear the query
Is by accepting Darwin's theory:
*Then* the problem will be solved
*When salmon get their feet evolved.*
Till then the reds can not have spawn
From which the future fish are drawn;
And nets, and cruives, and dykes, and dams,
Make upper fishings perfect shams.
So anglers' only sport will be
To pay their rent or "lawyer's fee";
Or look abroad for "pastures new."
I've said my say—dear sir, adieu.
AULD GLENTAKIT.

---

* Water is often pronounced "watter" in the North.

† A pool, shaped like half a saucer, is situated at the foot of a dyke which measures ninety-five feet from bottom to top, having an angle of about 45 degrees. Here the fish are imprisoned in hundreds, and are "sniggered" without mercy *by savages*.

‡ Suez is pronounced Swez by the Arabs.

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE,

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add 30 minutes for Chelsea.
40 „ Putney.
45 „ Hammersmith.
50 „ Barnes.
55 „ Kew.
75 „ Richmond.
80 „ Twickenham.
85 „ Teddington.

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | Morning. | Afternoon. |
|---|---|---|---|
| Saturday, November | 22 | 4.18 | 4.34 |
| Sunday, „ | 23 | 4.51 | 5.9 |
| Monday, „ | 24 | 5.28 | 5.49 |
| Tuesday, „ | 25 | 6.12 | 6.37 |
| Wednesday, „ | 26 | 7.3 | 7.32 |
| Thursday, „ | 27 | 8.5 | 8.41 |
| Friday, „ | 28 | 9.21 | 9.55 |

## THE LOWER THAMES.

### General Remarks.

At this period of the general angling season roach fishing in the tidal waters is regarded at its best, and this is the practical experience of some years. That species of fish appear to congregate together more, and some of the finest specimens invariably come to grief. There is a pretty general belief that if angling stations were made considerably below the Richmond district, the anglers would not only get some good sport, but there would be employment for additional professional fishermen to obtain a fair livelihood. At one of the roach competitions of the Richmond Piscatorial Society, the successful competitor obtained his first prize with good roach taken below Kew Bridge. The fish, as has repeatedly been remarked, do not now go to the head of the tide, when, in the palmy days of Teddington, the takes were much in advance of those even in the present day. They are now more scattered about, and the state of water in the river this season has greatly favoured the neighbourhoods of Richmond and Twickenham. The cold weather, which appears to have set in, will, doubtless, make great changes in the fishing, and if there was only more water above the locks there would be some good jack and perch fishing. In every portion of the river below Staines there is some fine jack water ; but, with the dredging that has been going on of late years, it is more difficult to find the abode of the perch. There used to be a splendid perch swim, which was known as the "White Pile Swim," at Sunbury ; but both the white pile and the swim have collapsed in consequence of the dredging. The lower part of Penton Hook, was, at one time, famous for perch, and it is worth trying again now. The Borough Head swim, at Laleham, has always been good for both jack and perch—it was at the latter place where Mr. James Forbes, in a couple of hours, got over fifty brace of perch, the fish averaging 1lb. each. Anglers for jack in the present day are more anxious to obtain access to "private waters," and they seem to neglect old Father Thames, who in days gone by has given them such good sport. They imagine the Thames everywhere is fished out for jack, and, therefore, the best of the jack anglers have "gone to pastures fresh and green." They are not satisfied with ordinary takes. Let them come back to the grand old river, and fish as they used to do, and they will have their reward.

### Angling Results.

**Richmond.**—Mr. Fleming, in a couple of days' fishing with C. Claridge, caught eighteen fish weighing 10½lb., a barbel of 3½lb., and a roach of 1½lb. Henry Mansell, in six days, 100lb. of roach and dace. Henry Wheeler, in four days, 70lb. Henry Howard, in four days, 60lb. Christopher Brown, in two days, 13lb. Job Brain, in days, 90lb. ; and Henry Platt, in three days, sixteen dozen.

**Twickenham.**—John Spong, one day with Mr. Spreckley, eight dozen of roach and dace ; and in three other days, eighteen dozen. W. Spong, in two days and one half day, 40lb. Edward Finch, in four days, 80lb., six of the roach weighing 7lb. George Coxen, in four days, forty dozen. Richard Coxen, during the week, ten dozen and a jack of 4lb. ; and J. Dobbin, in one day, 20lb.

**Teddington.**—Benjamin Stevens, in three days, thirty-three and a half dozen of fine roach and dace, and a jack of 5lb. Charles Baldwins, in two days, sixteen dozen of good roach and dace, and a couple of barbel ; Alexander Kemp, in two days, five jack, the largest 6lb.

**Kingston.**—John Johnson, sen., in two days, eleven dozen fine dace, the largest measuring 11½in., and eight dozen of gudgeon. John Johnson, jun., in three days, four dozen of roach and dace, three chub—the heaviest 3½lb., and seven dozen of gudgeon ; and Joseph Wilks, in one day, two dozen of roach and a jack of 5¼lb. The bank anglers at Kingston and Surbiton have been getting some perch, roach, dace, chub, and gudgeon.

**Hampton Court.**—John Smith, in one day, a brace of jack, the largest fish weighing 8lb. ; and Mr. George Woods, of East Moulsey, another brace, his best fish weighing 7½lb. At Tagg's Island Fishery : The anglers have been getting some good roach, dace, and gudgeon. At Hampton Court and Hampton, the bank anglers have done well amongst the roach, dace, perch, and gudgeon.

**Sunbury.**—Edward Clarke, jun., in four days, has taken sixty brace of perch, some of them weighing 1lb. each, and fourteen dozen of roach and dace. The bank anglers have had some good sport. The success of Mr. Edward Clarke amongst the perch should tempt the perch fishers to visit Sunbury.

**Walton.**—Mr. Alderson, with George Hone, in one day, four bream and four roach. John Hone, in the same time, three dozen of good roach. Two gentlemen fishing from the banks have taken three jack.

**Shepperton.**—Henry Purdue, in one day, twelve brace of perch ; and James Haslett, in the same time, one brace of jack.

**Staines.**—Mr. Peachy, fishing with F. Collyer, in one day, four brace of perch, the best fish weighing 1½lb., and three dozen of roach and dace, the best roach weighing 1¼lb.

## UPPER THAMES.

As I write rain is falling fast ; this will wash away the nasty tint which has lately been given to the water by the leaves which the frosty nights have imported into the river by the ton. Roach, perch, and jack have been well on until within two or three days ; however, I think the wind (N.W.) and rain will make them "return to their muttons." At Sonning and Wargrave excellent bags of roach and chub have been had, more especially by bankers, two takes going respectively 18½lb. and 15½lb. At Hambledon and Medmenham Mr. Askew and Mr. Sturgees have been busy, the former getting some three fair jack, and the latter jack of 10lb., 6lb., and 5lb., and two lesser beauties. In the Hurley waters Mr. Englefield has been busy amid perch, and Messrs. Tasker and Corneby have had a turn out for roach and jack ; but, beyond a turn out, which veritably occurred (fortunately without serious results) not a run—except home, dripping wet—occurred to add zest to a chill November day. At Marlow Mr. Bastick, with Tom Barnes, has had grand sport with the jack, and Rockwell has been well to the fore with perch and roach. My Marlow correspondent ends his note to me by stating "All anglers who have been out appear to return satisfied for once and away." For my part, with good sport, I should like it for more than once and not go away. Cookham, Bourne End, and Maidenhead are all fairly good, more particularly with regard to roach ; but, begging the Bishop's pardon, I fear the lawns-leaves would be best washed out. Thursday evening.—Rain still falling, and likely to continue. Let it fall ; it will do good all round for angling work. Wind : N.W.—Marlow Buzz.

### Thames (Bray).

Mr. J. H. Humphreys, of Chelsea, was out with George Winn between Maidenhead Bridge and Bray, and caught four nice jack weighing 18lb., the largest scaled 6lb. The fish were caught with roach as live bait.—K.

### Thames (Goring).

Water in good order for jack ; my best day five jack, going 10lb.—J. Rush.

### Thames (Oxford).

From all parts of the district the returns are above the usual average, and anglers would indeed be a difficult body to please if they could desire any improvement on the commencement of the winter season. Jack are feeding well, and roach, perch, and chub are rapidly succumbing to the allurements of a dose of well-scoured lobs. A case of great interest, involving the right of the public to fish on or in the river between Eynsham and Pinkhill Pool was brought before the Eynsham bench (the Rev. Robinson and Major Morland sitting), on Monday last, at the instance of the Right Hon. the Earl of Abingdon. From the opening statements of Mr. Walsh, the solicitor for the prosecution, it would appear that there was an idea prevalent in the minds of the public that they had a right to fish in this part of the Thames ; but he should produce documentary evidence dating from 1535 and 1639, which would conclusively prove his Lordship's sole right to the whole of the fishery, irrespective of the fact that he only held land on the Berkshire side of the river. Albert Wall and Henry Buckingham, of Eynsham, labourers, were then charged : In that they did unlawfully and wilfully take fish by angling in certain waters in which the Earl of Abingdon had a private right of fishery. Defendants pleaded not guilty. Mr. F. Franklin deposed he was agent to his lordship. He had known the fishery since 1869 ; his father had collected the rents for 50 years, and he himself had received no objection to the ownership or any notice of ejectment. Mr. Walsh then produced two conveyances, one dated 1535, from the Abbot of Abingdon to Mr. Worth, and the other from the same source dated 1539, to the Duke of Suffolk. Richard Tredwell deposed he and his father had rented the fishery for 40 years. Mr. Dudley contended the defendents had received permission from Mr. Sheldon, the owner of the land on which they were fishing, and he must apply for an adjournment on the ground that his learned friend had had a month in which to get up his case, whilst he had only been given three days. The objection was overruled by the Rev. Robinson, who appeared to act as bench and chairman combined, and the defendants were fined 5s. and costs. *Sic transit libertas populi.* On Thursday, Messrs. Twining and Roberts had fifteen fair perch. In the Evenlode at Hanbro Mill, Mr. Phillip Geen, Mr. Geen, jun., and Mr. How, of Eynsham, had a good all round bag of chub and perch ; the total catch weighed 20lb., amongst the best fish being two roach, which went 2½lb., and four others going 1lb. each. On Friday, at Ashford Mill, Mr. Geen with Mr. How, had another good take of about 15lb. of mixed fish. On Saturday, Mr. Geen, at Hanbro Mill, commenced with a perch of 2lb., and although Mr. How was unable to get the exact weight, he says it was a splendid take. On Tuesday, Mr. Bowles, at Wolvercott Bridge, landed a nice jack of 7½lb., and in the Cherwell Mr. Staymaker had another of 7lb. On Monday, in one of the affluents, but I am discreetly reticent as to the exact whereabouts of the water, two gentlemen of my acquaintance caught five jack, weighing 10½lb., 4½lb., 3lb., 3lb., and 3lb. respectively. To-day, Thursday, Mr. Corbett, from the Cherwell, whipping with gentles, had a well made chub just over 2¾lb.—Cherwell Otter.

## Sonning.

Once more the jack fishing in this part of the river is improving. I hear of several being taken. Clark had one over 10lb., and Parrett, from Henley, out with a party, got one 20lb., and over—a very nice fish. If we get some rain, so that the water will rise two feet, there would be some good fishing, as you can see them move about as you go down the river.—W. Hull.

## Ancholme District.

But little has been done during the past week amongst the coarse fish, owing to inclement weather. The large pond at Sudbrooke Park has been run off, and a large number of fish have been sent to South Kensington for the National Fish Culture Association. The consignment consisted of about thirty pike, and a fine lot of miscellaneous fish, including bream, tench, rudd, roach, and perch. They were taken in a special van, and in six large carriers, under the attendance of Mr. Garner, an experienced Lowestoft fisherman. I have every reason to believe they arrived safely. The thanks of the society are due to Messrs. C. C. and M. U. Sidthorpe for this handsome presentation. The two largest pike, one of 18¼lb., and another of 16½lb. have gone to be stuffed. There were literally cartloads of fish, including bream up to 5lb., and perch up to 2½lb.—Thomas Ford, Caistor.

## Chichester.

The weather has at last changed, rain falling fast this (Thursday) evening. The water the past week has not been largely patronised, those anglers who almost live by the Canal side meeting with but little success. A few small pike have been taken with shiners, the larger baits meeting with no response. Some fine perch have been landed, a brace taken near Donnington scaling 3½lb. From Selham and the Ouse I have no letter, so conclude nothing worth recording has been done.—George F. Salter.

## The Dove.

Matters have been extremely quiet on this river since I last wrote. The weather has not been sufficiently favourable to encourage anglers to visit the water, for it has been very rainy and foggy nearly every day. However, there have been a few rods out, principally bottom fishers, some of whom, the water being in excellent order and the fish being inclined to feed, have met with fair remuneration. Several capital dishes of chub have been secured, the best killing bait having been the maggot and cow's brains. Roach and dace seem to have preferred the cockspur worm. Grayling have not been rising with any great degree of freedom, nor are they likely to do so whilst the present "muggy" weather continues. The general piscatorial desire is for frost, and the sooner it comes the better for those on grayling fishing bent. I hear of an accident having happened to a party of gentlemen who were visiting on Monday last the trout hatchery, near Idridghay, belonging to Mr. Peach. This will no doubt be reported by your Matlock correspondent. However, I may mention that while driving to the hatchery the vehicle was overturned and its occupants thrown out and several of them injured.—The Splodger.

## Exe (Exeter).

Nothing worthy of mention has come under my notice this week; the wind being N.E. the hopes of anglers are down. Next week I hope we may have a change and be up and doing.—J. A. Kelley.

## Ilfracombe.

Sea-fishing.—This week, the wind blowing strong from the eastward, has prevented the boats from getting a good drift, so that very few herrings have been caught. Tuesday, some conger and a large cod were caught; fishing from the rocks and jetty very slack. Wednesday, Mr. E. German caught a conger 10lb., that being the only fish reported from the jetty for the week. Weather still very unsettled.—E. Comer.

## Lea (Tottenham).

Since my last report the water has greatly improved; this applies more especially to the Copper Mill stream. Very few anglers have been down, but those that have have not found their visits fruitless. Mr. Beresford has been down two days, killing three jack each day, weighing respectively 4½lb., 3½lb., 3½lb., 3lb., 2½lb., and 2lb. A gentleman fishing the upper water (Ford's) killed three jack, weighing as follows: 6¾lb., 5¼lb., and 3¼lb. One of the subscribers to the same water got three good chub, one weighing 3½lb., and the others over 2lb. each. A. Williams and one or two others have been getting some roach and dace with paste, fishing from the island; and Mr. E. Dee, legering with worm, got some good roach from the lower pool, several of them going over ¾lb.—Hackles Red.

Chub, jack, and roach appear to be well on feed, as some very nice baskets of each were made on the 16th inst. The recent rain will put the water in good condition for next week.—T. A. Ward.

## Leicester.

Piscatorial notes in this neighbourhood at present are somewhat scarce; cold north-easterly winds and rain have had the effect of preventing anglers visiting the waters in anything like large numbers, only the most ardent fishermen caring to face the keen winds. A few pike and chub continue to be landed from the waters at Aylestone, and some good lots of dace have also been shown. A few days since, a fine young dog-otter was taken from a drain beside the river Soar, near Sileby. He appears to be about a month old, and is doing well. A very large perch has also recently been taken from the waters near the last-mentioned village. The fish weighed 4lb., and measured 19in. Both the otter and perch can be seen at the Bell-ringer's Arms, Sileby. A few anglers have been visiting the district resorts for pike. The best takes that came under my notice were those of Messrs. Richards and Olorenshaw. Mr. Pocklington and a friend showed five and a half brace of fair-sized fish on Wednesday. Thursday: Very few were out; the weather was very cold, with N.E. winds and frequent falls of rain during the day.—Alert.

## Lugg and Arrow (Leominster).

These streams still keep in capital order for fishing, both remaining clear but low. The grayling are now well on the feed, and some good baskets have been taken with the whirling blue and red tag. Some splendid-sized fish have been landed with the grasshopper; a few nice grayling were landed with the maggot in the Lugg, and a nice dish of grayling was taken in the Arrow, near Stanton, with the fly. Good fish have been landed in the Lugg, near Ford's Bridge, and some very good fish have been taken in the Arrow at Eardisland. Capital sport has also been had near Aymestry. Fishing in the Pinsley is quiet.—Gwynne.

## The Ouse (Huntingdon).

The water is still in fair condition, and jack are feeding in different parts. Several have been taken going up to 7lb., and there is a good prospect, for the weather is good. Most have been taken with spinning bait with roach. I was out on the 20th, and had a run with a fine one. From what I could judge he was about 18lb. He took the bait, and struck into the weeds after I had him in hand, and there he stuck not to be moved, and after a deal of trouble he broke away; but I am in hopes of getting him, for I will have a fair go at him when the weeds get away.—H. Rous.

## Severn and Stour (Kidderminster).

Since my last report, we have had a splendid downpour of rain, filling the Severn to the level of the banks, clearing the stream of all dead leaves for the present, and washing the snow-water out of the river. The fish have begun to feed again. Six anglers of ours were out this week, and succeeded in taking nearly 60lb. of chub with bullock's brains for bait; three of the fish weighed 10lb., and not one of the lot was less than 1lb.—a splendid sample of fish, and all in prime condition. Other anglers have been out and done well with paste for bait; one fisherman, in a little time, took nine roach which scaled 6¼lb.; other dishes, ranging from 5lb. to 7lb. each were caught. Frank Millington has taken 17lb. of roach and dace from the Stour, with the gilt-tail worm; I suspect this bait is the same as the Derbyshire cockspur, a capital bait in any river. If the weather keeps up fine we shall soon be able to put the fly on the water again. I do not think there are many grayling in the Severn, I can seldom take any or hear of any being taken—perhaps a brace amongst other fish may fall to a rod in a hard day's work; I have filled my creel many a time, but the grayling were always scarce. If there had been many in the Severn, surely they would have been found by some at least out of the many that frequent this stream—that is, in larger quantities. There are no grayling in the Stour, the bottom of the river is not suitable for them—consisting of mud in places, and sand in places, just suiting the class of fish that are in it.—E. Earp, hon. sec.

## Teme (Tenbury).

This stream is in splendid condition for fishing, still keeping clear. The fish are sporting well at the fly, and some good baskets of grayling have been landed. Capital sport has been had with the grasshopper and maggot. The best flies are the green insect and whirling blue. On Friday the water near Berrington was fished, and some very good grayling were landed with the grasshopper. In the water near Corn Brook some capital sport has been had, and some fine fish have been landed with the whirling blue. A few grayling were landed with the maggot. Good sport has been had in the Little Hereford district this week with the grasshopper. A very nice dish of grayling were taken in the water near Eastham with the green insect. Good fish have been landed in the association waters. The Kyre, Rea, and Ledwyche are in good order, but fishing quiet.—Worcester.

## Teme (Ludlow).

The Teme is in capital order, and the tributaries are the same. The grayling fishing has been about the average. A fine pike, weighing 8lb., was caught in the Teme the other day by Mr. W. Jones; it was very full in flesh He caught the fish with a live minnow. Below Ashford Weir seventeen grayling were caught on Monday by two gentlemen; they also caught some twenty "rough" fish. There have been good catches of grayling up Lord Windsor's water with the grasshopper and maggot. A few fish landed from the Leintwardine waters. The Clun has again reached its ordinary level, and has again been visited. Good grayling landed from the Corve, and also the Ony, both of which are in good order.—S. Ludlow.

## Trent (Alrewas).

The river is now in excellent condition for all kinds of fishing. Grayling have been rising very freely in the middle of the day; but there have been no members out, on account of the north-east wind.

## Trent (Newark).

The river has been running very low all this week, and has been in fairish trim for pike and chub fishing; but the wind has been shifting about a good deal, and as a natural consequence sport has only been of a moderate character. A friend of mine got six very nice chub one day, with pith and brains for bait, out of the Collingham Waters; another angler down at Winthorp managed to secure about a dozen chub, roach, and dace; but none of them ran very large. Another angler had a very nice jack, taken spinning, going some 6lb. or 7lb.; and my friend who got the chub told me that an angler was spinning all day down below Collingham (same day that he was chubbing) but only managed to grass two going about 4½lb. apiece. Some extraordinary roach have been weighed in this week at our local angling club, one weighing 2¼lb., and another 2lb. 1oz. I tried to get a peep at these giant roach, but failed. A bream also was weighed in going nearly 5lb., I believe; but there are again some "ugly rumours" afloat as to the method of capture of these specimen fish. I have not heard of any very sensational bags having been had this week, and so I must conclude that the sport has only been moderate if we accept the big roach and bream just named; but there seems to be grave doubts on the subject as to whether they were killed by fair angling with rod and line. Thursday night.—River below the locks very low and clear. Prospects only fair. Chub may be tried with pith and brains; pike, spinning or livebaiting; while roach, dace, and bream might be tempted with gentles or cockspurs.—The Trent Otter.

There is but little in the way of legitimate angling to report this week. On Friday afternoon several were out after jack, but met with very little success. Mr. Dale, one fish; Mr. Curtis, one; Mr. James Chatterton, two; Mr. W. Lane, one. A fine chub took this gentleman's live bait, but missed the hook, and only left hold when the bait was quite broken in halves. On Saturday there was a cold, east wind blowing; a few of us faced it. I only heard of two fish being taken:—Mr. Wildsmith, a well-fed one, exactly 5lb.; myself spinning a small one, under 3lb. Messrs. Mountney and Hessay, in private water had five fish, but none very large. Since Saturday I dont hear of a single fish being taken, though I know three or four have been trying. The wind has now changed, and with the water low we ought to do better among chub; the jack want a rise of water to put them in the slacks. Some extraordinary fish have been weighed in at the two other clubs in the town. Bream over 4lb., chub 4lb., roach 2lb. 1oz. and 2lb. 3¾oz.; the most peculiar part of the matter is that a man was at the Midland Station on the same day with eight stones, mostly specimen fish, taken, I believe, at Dunham, no doubt with nets, and offering them for sale to some anglers I know; as they preferred catching their own, doubtless others had a chance of buying. Besides the fish named I saw three others, up to 1½lb. (roach); the owners seemed disappointed to find them of no use. I have not the slightest hesitation in saying that more coarse fish have been taken in nets near here during the past three weeks than have been caught by the whole of the Trent anglers in the season. It is no wonder old anglers talk of their great catches a few years ago as compared with our now. Would that we had such an interest taken in our Trent as you have in the Thames; it would not take long to make it equal to it. Last week your printer made me say "Mead" for "Neal," "Morledge" for "Norledge," and "the Sheffield men who use exclusively maggot fishes," instead of "who are exclusively maggot fishers."—F. T. L.

[We also hear from private sources that netting is rife in the neighbourhood of Newark, one of the chief reasons being that in some of the clubs prizes are offered for anything and everything. In fact, it is quite clear that the genuine anglers in Newark will have to pull themselves together, and make a vigorous effort to stop underhand doings if they want to see their sport respected by anglers generally. —Ed.]

## Trent (Nottingham).

Last week, being away from home, I was unable to supply you with my usual weekly report. This week the river has been running at a surprisingly low ebb for the time of the year, and but for cold and boisterous wind prevailing I have no doubt the fish would have come freely to the bait. From Shardlow I learn that some dace have been caught with maggots, which are now difficult to obtain. Mr. T. Wood and friend were busy pike fishing below King's Mills weirs on Tuesday, and took five or six very nice fish. On the same day Messrs. E. Bull and W. Dupe, of this town, got about 40lb.; and some fairly good fish are reported from Thrumpton, which reach is very strictly preserved. Salmon are still abundant in the Weston length below the mills named, and unless a rise speedily comes it is to be feared they will "kipper." A few lots of roach have been secured with the cockspur worm at Wilford, and chub anglers ought now to begin to turn their attention to the use of pith and brains. Last Friday evening there was a general meeting of the members of the Nottingham Wellington Association for the purpose of filling vacancies in the society.—The Man at the Clubs.

## Trent (Swarkestone and Shardlow District).

The river keeps low, in consequence of which the sport continues very poor. regret to say that large quantities of rubbish from Burton is still coming down the river, and on Monday last it was so bad that every time the bait was thrown in it was immediately covered with the gelatine matter. As previously reported, unless we have some heavy rains, very little good will be done. The weather during the last few days has been very raw and cold, and to-night it looks very much like rain. I have not heard of anything of note having been taken.—Spinning Bait.

### Wharfe (Yorkshire).

Grayling fishing continues in a most unsatisfactory state, and until there is a real good sharp frost there will be nothing out of the ordinary way to chronicle. On Saturday last I had nine good fish, but I had to work very hard for them. On Tuesday morning a party of three of us set off to Burnsall, which is considered one of the best lengths of water for grayling in the country. We found upon our arrival that "Watchet" had arrived on the previous day, and had scored a blank. This was highly pleasing intelligence, as I knew full well that if this angler could not "nail" them it was a poor look out for any one else, and so the result proved. "Watchet," however, succeeded in landing a couple of real beauties—in fact, the largest that I have ever seen taken from either Yore or Wharfe; one of them scaled 1¾lb., and the other 1½lb. These gentlemen are going to be enshrined in a glass case, and in days to come will grace the walls of your humble servant instead of sailing about in the crystal depths of the Wharfe. I have no time to add more to-day, but hope to give you a few more details of our trip before long. I hooked a couple of "patriarch" grayling myself, but was unfortunate enough to lose them both.—Francis M. Walbran.

### Wye and Derwent.

Both the Wye and Derwent are in beautiful condition for either fly or bottom fishing; but I am sorry to say that grayling are not feeding well at either top or bottom; only two and three brace per rod are daily made. If we could get some good, sharp white frosty nights, no doubt grayling would then feed well. The weather is charming for November, and most of the leaves are off the trees, which makes it much better for grayling fishing. Coarse fish have been biting nicely at both maggots and worms; so have pike been running well. The Matlock Bath Angling Association's keeper, Collinson, has been killing a very nice lot of pike lately, both on his trimmers and by live bait fishing with small dace. One morning he had four pike that weighed 17lb. the lot; in fact, fish up to nearly 7lb. each have been killed on the Derwent below Cromford. Weather to-night (Thursday) squally.—George James Eaton.

### The Yare (Norwich).

The reports are very meagre this week, especially with regard to this river. On private water some good sport has again been had. Our friend Greene is again to the front. One day last week he landed sixteen pike, eleven of which he brought home, weighing between 60lb. and 70lb., and also four good perch, one weighing nearly 3lb. Some small takes are reported from the actual river; but nothing worth recording. Last Saturday, two friends and myself had four hours on water connected with the Yare, and were fortunate enough to have about fifteen runs, and succeeded in landing eleven nice fish, weighing, in the aggregate, upwards of 44lb., which, considering they were not caught on a "Broad," is a very good average. It is surprising that with this beautiful weather more jack fishermen have not been out; but I suppose they consider there is plenty of time between this and February next. Prospects good.—Robert Moll.

## SCOTCH FISHING NOTES.

Tweed and Teviot.—These rivers have been in excellent fishing condition during the past week, and excellent sport has rewarded the operations of salmon anglers. On Thursday last, on Floors Castle upper water, Mr. A. F. Thistlethwaite captured four salmon, the weight of which were 24lb., 18lb., 18lb., and 16lb. On the Sprouston water, Mr. W. A. Sommerville secured one fish of 21lb., and a bull-trout of 8lb. On Sprouston Dub, Mr. John Wood killed two salmon of 16lb. and 10lb. respectively. Her Grace the Duchess of Roxburghe caught three salmon while angling on the Floors lower water. At the junction of Tweed and Teviot, Mr. A. Steel, Kelso, landed one salmon, and was broken by another fish of greater weight which he had run for some time. On the Carham water, Mr. Sommerville killed four salmon, which weighed 22lb., 22lb., and 21lb. respectively, besides a grilse of 4lb. Colonel Biden, on the Upper Cornhill casts, caught a 16lb. salmon and a grilse of 9lb. Mr. Croall, on Ednam House lower water, landed a salmon of 18lb. On Friday, Mr. Drummond, who fished the Junction, had three fish, the respective weights of which were 14lb., 9lb., and 8lb. On the Birgham water, the Earl of Home had seven fish, which weighed, individually, 29lb., 21lb., 20lb., 16½lb., 16lb., 15½lb., and 9lb.; and on the same water, Mr. Denison had a like number to his credit, the weights being 38lb., 24lb., 22lb., 20lb., 19lb., 10lb., and 10lb. The Hendersyde yielded Mr. M'Donald a salmon of 22lb., Mr. Waldie-Griffith two salmon and a grilse, and Sir George Waldie-Griffith a trio of salmon, two of which scaled 26lb. each. On the Floors upper water, Mr. A. F. Thistlethwaite and Lieutenant F. H. Thistlethwaite had eight fish between them. On the Sprouston upper water, Mr. J. Wood, London, got three salmon, 24½lb., 20lb., and 18lb. On the Dub, Mr. Whymper had also three weighing 24½lb., 14lb., and 19lb.; and on the lower water Mr. Sommerville had one fish of 23lb. and 16lb. On the Carham water, Mr. J. R. Hay-Gordon killed five salmon which scaled 17lb., 18lb., 21lb., the other two being lighter; and on the same casts, Mr. Sommerville had one salmon to his rod. On Cornhill upper water, Col. Biden obtained a grilse. On Saturday, on the Rutherford water, Colonel Vivian killed three salmon, while the Hon. H. Brougham secured six—all good weights. On the Upper Hendersyde water, Mr. M'Donald had one of 11½lb. On Sprouston Dub, Mr. Wood caught ten salmon, the heaviest pair weighing 32lb. and 31lb. On the Sprouston under water, Mr. G. W. Sommerville, Lasswade, caught a fish of 21lb.; and on the upper water Mr. Wymper had a grilse of 9lb. Mr. Drummond, on the Ednam House casts, landed a 12lb. salmon. On the Floors upper water, Mr. A. F. and Lieut. A. H. Thistlethwaite had five—21lb., 19lb., 18lb., 17lb., and 9lb. On the Hendersyde water, Mr. T. Taylor, Chipchase Castle, Northumberland, captured three salmon; and Mr. Waldie-Griffith also got one of 10lb. Mr. W. A. Sommerville brought two fish to bank on the Carham water. Angling in the river Teviot, Mr. Adam Lamb, Kelso, was successful in getting a 17lb. salmon. On the Tweed, at Cornhill, Col. Biden killed two fish weighing 17lb. and 9lb. respectively. On Ednam House lower water, Mr. Croall had also two—18lb. and 9lb. On Monday, Mr. A. F. and Lieut. A. H. Thistlethwaite, who occupied the Floors upper water, killed eight salmon, whose weights were 23lb., 19lb., 18lb., 18lb., 17lb., 16lb., 10lb., and 9lb. On the Sprouston water, Mr. Wood landed two fish, weighing respectively 22lb. and 19lb. Two salmon of 24lb. and 21lb., were caught by Mr. A. A. Hay-Gordon and Mr. Tennant, jun., of the Glen, on the Carham water. On the Ednam House water Mr. Drummond killed an 18lb. salmon. On the Sprouston water Mr. Main, fishing-tackle manufacturer, Jermyn-street, London, had a fish of 7lb. On Wednesday (yesterday) Mr. W. A. Sommerville had one 24lb, on Sprouston water, and on the Floors water Mr. A. F. Thistlethwaite had 3lb., 23lb., 19lb., and 10lb. Mr. Drummond, on Ednam House water, had two, 13lb. and 13lb.; and on the Sprouston water, Mr. Main, London, had one of 20lb. Mr. Taylor had one on Hendersyde water, and Sir Geo. Waldier Griffiths had six. Mr. Jas. Moffat, on Floors lower water, one fish.—Max Wheel, Kelso, Nov. 20.

Closing of the Fishing Season on the Coquet.—A correspondent of the *Newcastle Journal* writes:—The rod fishing in this famous Northumbrian stream closed on Friday. Since the beginning of the month splendid sport has been obtained upon the upper reaches, at Rothbury and Hepple. The banks of the river have swarmed with lovers of the gentle craft; from the Thrum Mill to Thropton from 20 to 50 rods could have been counted in a day. Marvellous sport has been obtained. The Salmo ferox swimming the streams have risen readily at the fly, and enormous takes have been the result. One celebrated fisher upon the Little Tosson streams landed 34 fish on Saturday week, varying in weight from 4lb. to 16lb.; 55 were captured in the stream adjoining the Rothbury Mart, and scores have been taken above the bridge, on the casts running round the Haugh. Never in the memory of man has there been such sport obtained, and many exciting scenes are recorded. The fish being in fine condition, gamely fought for liberty. The most gaudy flies, red and yellow bodies, dressed with lead tinsel, have been found the most killing.

## THE TROUT FLY-ROD MR. MALLOCH USED AT THE TOURNAMENT.

Several English and American friends having asked us to give particulars of the rod with which Mr. Malloch cast thirty yards and won so many prizes at the Tournament, Mr. Malloch informs us that the rod was made of greenheart in three pieces, measured 11ft. 9in., and weighed 11oz.; the butt above the hand, ½ and 1-10in.; the first ferrule, ½in.; the second, ¼in.; the top tapered to a little less than ⅛in. outside measurement. The price of these rods, with two tops, is from 30s. to 40s.

## AN ADVENTURE WITH A STURGEON.

Last week, as Mr. Baly, of London, was fishing in the Channel between Emsworth and Chichester Harbour, he hooked a large fish. Being fortunately provided with a very stout rod and plenty of strong running line he was able to resist the efforts of the monster to escape, and after playing him for nearly five hours he succeeded in landing a sturgeon, which weighed 123½lb. The royal fish was at once despatched as a present to Her Majesty. The bait used was a bright spinning minnow.—*Court Journal*, August 23, 1884.

[Was he not foul hooked?—Ed.]

## MELANCHOLY ACCIDENT TO A SALMON FISHER.

### A RETIRED NAVAL OFFICER DROWNED.

The close of the salmon fishing on the Eden was marked by a melancholy fatality, resulting in the death of Mr. T. T. Murray, a retired chief inspector of machinery in the Navy. The deceased had been staying at No. 3, Chiswick-street, Carlisle, since February last, and on Friday morning, accompanied by a friend named Mr. Littlewood, who had been staying with him for the last three weeks for the fishing, they proceeded to Cotehill in the morning. Mr. Murray settled down to fish in the stream at Sykefoot, and was last seen alive about two o'clock by Mr. Littlewood, who observed him sitting on a stone dyke at the Cumwhitton side of the river partaking of lunch. He had promised Mr. Littlewood, who had gone to fish the Boathouse pool, that he would follow him shortly, but failing to turn up, Mr. Littlewood went down the river to look for him. Not finding his whereabouts, he proceeded to Mr. Ellwood's, of the Fish Garth Inn, and got his and his family's assistance to go in search of him. They observed his bag hanging on a tree at about the foot of Doctor's Flat, but could find no other traces of the missing angler. It was then suspected that he had fallen into the river, and search was made all Saturday for his body, but without success. The fishing-rod which the deceased carried was picked up by Mr. Robert Lawson, Graham Lodge, at the foot of Sykefoot stream, and his gaff by Mr. Wilson, Heads Nook, near where he had been last seen. The angel minnow was caught in a rock, and all the line run off the reel, giving rise to the supposition that he had hooked a fish and in following it in the river had lost his footing. The river, however, is very dangerous at this spot, and, as the water was heavy on Friday, there was a stronger current running than usual. The bed of the stream, too, is very dangerous, being covered with large cobbles and full of deep pots, so that it is probable that the deceased, who had on a pair of wading trousers, must have gone into the water, stumbled over one of these boulders, and fallen. Although he was an excellent swimmer, he would have had little chance of saving his life when once under water, the wading trousers being exceedingly dangerous when water gets in at the top of them. Inspector Nicholson and the police of the district were engaged all day on Sunday in dragging the river for the body of the deceased, but without success, and yesterday their labours were resumed when his body was found about half-past one o'clock at the foot of Sykefoot stream in 18ft. of water. His hat was, curiously enough, still on his head when the body was taken to the surface, and there were no bruises about him, while his face was calm and composed. His watch was stopped at two minutes to three o'clock. Mr. Murray had fished the waters and killed a good many salmon in that neighbourhood during the spring, and was quite aware of the dangers of the river. Mr. Murray was a Scotchman by birth, but had been residing mostly about Plymouth. During his naval career he had seen some active service, having been in action with the Riff pirates at Cape Tres-Forcas, in the *Prometheus* in 1854, and was engaged on the *Basilisk* in the Baltic during the Russian War in 1855, for which he held the Baltic medal. He was an authority on machinery, and was much respected in the Navy. Saturday being the last day of the rod fishing on the Eden, he had made arrangements to leave for London yesterday, proceeding afterwards to Plymouth, and had packed up his trunks and everything preparatory to departure. It may be mentioned that it is four and a half years since a salmon fisher was drowned in the lower waters of the Eden, Mr. Joseph Routledge being drowned near Wetheral in March, 1880.

Abuse of Railway Privilege Tickets.—In consequence of its having come to the knowledge of Prince Bismarck that German members of Parliament are given to abusing the privilege they have enjoyed of travelling, when on Parliamentary duty, free on the railways, he has ordered that in future the tickets are only to be available between Berlin and the place at which the member resides. People who would scorn to steal a halfpenny seem to consider it no wrong to cheat a railway company.

Inspector Isaac Hall, late Superintendent of the Trent Fishery District in Derbyshire and Staffordshire, having retired from the service of the Trent Commissioners, has been made head keeper at Levens Hall, Westmoreland, the seat of Capt. Josceline Bagot, brother to Mr. Alan Bagot. The position entailing the care of a salmon river, grouse moor, and deer park, it need hardly be said that Mr. Hall has given satisfaction, and those who have profited by his care of the fish will be pleased at hearing of his appointment. The Trent Commissioners do not forget good and trusty servants such as Mr. Hall has proved. He is succeeded at Derby by Inspector Bradley.

Recollections of Nelson.—There is still living at Merton, in possession of all his faculties, a hale and hearty man, named Hudson, over ninety years old, who well remembers Lord Nelson as a visitor here, and who stood by the door of the postchaise in which, early on the morning of September 13th, 1805, the gallant admiral—so soon afterwards doomed to fall at Tralfalgar—drove off from Sir William Hamilton's gates. He states that, as a boy, he used often to see Nelson fishing in the Wandle, near the Abbey Mill, and sauntering with Sir William and Lady Hamilton about their pretty grounds, which extended on both sides of the high road. The admiral would often stop and speak kindly to the boys who were at play in the street, and who regarded his weather-beaten form and features possibly with all the more reverence because of the fruit and the pence which he would bestow on the youngsters. Two cottages at the bottom of the Abbey Lane, he says, were built by Lord Nelson for his coachman and gardener—so entirely had a community of goods been carried out by this affectionate trio; in one of these he and his wife, a daughter of Cribb, Nelson's gardener, have lived for upwards of half a century. This cottage is marked by a mulberry tree, which Nelson desired to be planted there. Over the mantelpiece of this little dwelling is a mirror in a gilt frame, which once formed part of the ornaments of Nelson's room in Sir William Hamilton's house, and this he and his wife treasure as their only relic of the admiral.—*Greater London.*

## UNDRESSED *VERSUS* DRESSED LINES.—RECIPE FOR DRESSING THEM.

By Major Traherne.

[As several correspondents have asked for a good dressing for lines, we think we cannot do better than repeat Major Traherne's useful instructions on the subject. If the line, after being dressed, is stretched and rubbed with a flannel on which powdered talc has been sprinkled, a very smooth surface is secured.—Ed.]

"I promised I would write a letter for insertion in the Fishing Gazette about salmon lines, and why dressed lines become, in so many cases, rotten after being a short time in use. There are few salmon fishers who have not experienced the disappointment and annoyance caused by the loss of a good fish owing to using what has turned out to be rotten tackle that was considered quite sound only a very short time previously. To those as well as the angling public the subject must be of some interest, and as I think it well deserves to be ventilated, I venture to give my opinion. I think the rotting of dressed lines is caused by their not being allowed to remain long enough in the dressing that is used for them to get thoroughly saturated with it. Gold size, or other drying solution, is mixed with the dressing, and the object being to get the thing done as quickly as possible, the lines do not get fair play. Let any one take a line that has never been used and cut off the end of it with a sharp scissors—in nine cases out of ten he will find that it is hollow, and that the dressing has not penetrated to the interior; therefore, it stands to reason that if there should be a flaw in any part of it that gets immersed in the water when in use (which is often caused by its being accidentally trodden on or bruised by coming into contact with stones, bushes, stumps of trees, &c., on the river bank when casting) the water will make its way through the flaw and gradually fill up the hollow; and as it would in such a case be impossible to dry the line in consequence of the outside of it being waterproof, it must soon become rotten. The same would apply to a solid plaited line; but it would not be so easy to detect the imperfection in the dressing. Doubtless lines get rotten from various other causes; but I am of opinion that the one I have mentioned lies at the root of the evil. This, however, I will venture to say, may be avoided, if the following directions are attended to:—

"In dressing a line, I would allow it to remain in the solution that is used for at least a fortnight or three weeks, so as to allow it to be thoroughly saturated, and the dressing to become, when dried, as it were, part and parcel of the line. This I hold to be absolutely necessary; and a line so treated would be impervious to wet, and should last for years. July and August are the best months for the drying process. I would, therefore, commence operations by putting the line or lines to soak in the dressing early in June, so as to have the full benefit of the drying in those months when the temperature is the highest during the year. In drying (which will take a long time), the line, when taken out of the dressing, should be fastened at both ends at full length about 5ft. from the ground, to two poles placed horizontally in the ground in a garden or field where it cannot be meddled with. Remove all superfluous dressing by passing the hand gently two or three times down the line from end to end. Then, as there will be always a certain amount of accumulation of the dressing at the centre of the bend which will run down from both ends, finish off by removing this with a sponge or flannel. When it is tolerably dry, dip it again in the solution for a few hours, and repeat the process of removing the superfluous dressing. The longer it is left to dry the better. Take every opportunity, when weather permits, of putting it out in the open air, and when in the house, hang it up in a dry place in large coils. The most perfect specimens of dressed lines I ever saw were those that were exhibited by Mr. W. Wells Ridley at the International Fisheries Exhibition last year; but such excellence can only be attained by the aid of a glazing machine.

"For my own use I prefer a 40-yard solid plait silk line tapered at both ends, undressed, attached to a back line of about eighty yards. I find that it is as pleasant to fish with as a dressed line, and will last much longer, and I have not the trouble of dressing it. If any of my brother anglers should feel inclined to try one, I will engage they will not be disappointed.

"I find that I have written at much greater length than I at first intended. However, if you think the matter of sufficient interest, you are welcome to insert my letter."

## THE DERBY LIVE-BAIT HARNESS.

In a letter we published last week, Mr. T. Whyman, of Derby, described what he calls a live-bait humane tackle for pike, which has been invented by Mr. W. Martin, fishing-tackle maker, 3, London-road, Derby. In a footnote we said we would give it a trial and report on it, at the same time pointing out that many tackles of this nature had been tried and found useless. We have given it a good trial, and find that it answers admirably, and with a few improvements ought to have a large sale. It is very easily put on, in the way described by Mr. Whyman. We cast the same bait dozens of times thirty or forty yards, from a Nottingham reel, and at the end of three hours it was as lively as ever, and then taken by a jack, which had both double hooks in him, after only ten seconds' grace before tightening on him. Another bait was on nearly as long as the first, and when released swam away at once as lively as when taken out of the bait can. The advantages of this tackle are:

1. No hook is inserted in the live bait; it is not injured in any way, and consequently lives and remains lively.
2. You can make repeated long casts with it without fear of its flying off.
3. Two double hooks being secured to the harness (one on each side the bait), there is less chance of a pike which has seized the bait getting off without being hooked.

The only improvements we can suggest to Mr. Martin are, that in place of the thin cord, he should use a bit of fine flat braid less than ⅛in. wide, and make the ends of the catch, or "cleat," under the belly-plate which supports the fish, a trifle longer. A bit of flattened metal tube ½in. long to pass the double gimp through would sit closer to the fish's back, and not work up like the loose ring. It would be better still if he could make this sliding tube double in one piece, like the double barrel of a gun, and only just large enough to take the gimp. The gimp being double, should be only half the size of that in the sample sent, and five or six inches is quite long enough between the bait and the point where the double gimp ends are fastened together. A spring swivel (like that on a watch-chain) put on at this point is a great convenience, as you can then use your stained stout gut trace for spinning if you want to change. The secret of the success of this tackle is the slightly concave belly-plate which supports the whole fish, the cord merely preventing the fish slipping out in front or behind. It is merely a thin bit of tin or white metal which harmonises well with the colour of the bait. We confess to having always considered the having to put a hook into a live bait as an unpleasant necessity, and are, therefore, really glad to recommend Mr. Martin's very simple, effective, and cheap little invention to anglers. An angling friend who was with us when we tried it was equally convinced that it really is a good snare to the fish, and not merely a delusion to the angler. The old dodge of carrying a little bag of bran in which to dip the live bait after taking it out of the bait-can is a very good one, as it gives you a good hold when baiting—like sand on a lob-worm.

P.S.—Mr. Martin informs us he will certainly make the improvements we have suggested, and also use German silver for the belly plate.

## IMPORTANT DECISION AFFECTING ANGLERS.

### Alleged Salmon Poaching in Aberdeen.

At a sitting of the High Court of Justiciary, held in Edinburgh on Thursday, the 13th inst., the Lord Justice-Clerk, Lord Young, and Lord Craighill on the Bench, Thomas Wilsone, solicitor, Aberdeen, clerk to the District Board of the River Dee, appealed, at the instance of the Marquis of Huntly and others, the members of that Board, against a judgment given in the Sheriff Court of Aberdeen, under the Salmon Fisheries Act, in which John Harvey, labourer or salmon fisher, Thornton-place, Guestrow; George Ritchie, Gardener's-lane, Justice-street, and George Watt Taylor, West North-street, Aberdeen, were charged with a contravention of the 21st section of the Act. The particular charge brought against the respondents was that on the 9th September last, in or near Langstane-place, Aberdeen, they had in their possession eighty-five salmon, sea trout, or other fish of the salmon kind, taken within the limits of the Act between the commencement of the latest and the termination of the earliest annual close time in force at the time for the district. In the Aberdeen Court the Sheriff found it proved that on the day in question Taylor and the other two were in Langstane-place; that on his seeing an inspector of fishings watching them Taylor ran off, and while being pursued he dropped a bag with the fish in it; and that in the possession of the other respondents there was found a net of an illegal mesh, with which he entertained no doubt that the fish had been caught. It was not, however, proved by the complainer when or in what district they had been taken. His Lordship found that it was lawful under the Act to fish for and take salmon with rod and line between 26th August, the end of the net fishing season, and 31st October, the close of the rod fishing, and therefore assolised them, and found them entitled to 12s. 6d. expenses.

In the Justiciary Appeal Court, Sheriff Thomson appeared for the appellant, and argued that the Aberdeen Sheriff's judgment was not a good one within the meaning of the Act.

Lord Young said if a salmon could be lawfully caught at that time in Scotland there could have been no offence. Even though it was close time within the district, if it was open time 100 or 150 miles off there was no offence.

In answer to the Lord Justice-Clerk, Sheriff Comrie Thomson said he thought the words "close time" were used with reference to the whole period during which the nets were prohibited.

The Lord Justice-Clerk said the whole question here was whether the words "close time" meant close time for nets alone.

After a considerable amount of discussion, the Lord Justice-Clerk said this was a case of very great importance. It was quite certain that the 21st clause of the Act of 1868 could only take effect where the salmon was found in possession at a period when it could not lawfully be obtained from any of the streams in Scotland; otherwise, the close time would be unworkable.

Lord Young thought the clause applied to the latest period of close time, not only with reference to the space or territory of Scotland, but also to the mode of taking it. That was his individual opinion. No doubt these were salmon poachers, and ought not to be mercifully dealt with. The same legal considerations would have applied exactly to any gentleman in Aberdeen who had a salmon in his larder at the time.

Lord Craighill concurred with the observations of the others.

The appeal was dismissed with five guineas costs.

[As salmon poaching on our northern rivers is getting far too prevalent nowadays a much larger staff of watchers is obviously required if the Fishery Boards would secure the poachers "in the act," and have them properly punished, and not "let off," as is too often the case.—Ed.]

## DR. HAMILTON'S WORK ON FLY FISHING FOR SALMON, TROUT, AND GRAYLING.

The whole of the 10s. large-paper edition of this new work having been exhausted, and the demand still continuing, the publishers—Sampson Low, Marston, Searle, and Rivington, 188, Fleet-street, London—will give 12s. for any copies returned to them at once, clean and uncut.

## "DEATH IN THE POT."

A friend, who owns a capital bit of water on the Wandle, called on us the other day, and in course of conversation mentioned the following very curious incident:—He was watching a lot of trout in a mill tail and observed a dead fish. A closer inspection showed that it had its head buried in a tin pot. He procured a pole with a hook at the end, and fished it out, and found that the fish had got its head beyond the gills, which were much rubbed from the fish's endeavours to escape, stuck fast in an old meat tin, the lid of which had been bent inwards. On examining the tin he found in the bottom a lot of water shrimps. The fish had doubtless seen the shrimps, and in his endeavour to get them out had got caught and killed in this curious way. A pretty little addition to "Æsop's Fables," with the attendant moral, might be made out of this fact.

## A FISHERY BOARD FOR THE ISLE OF ELY.

### Freshwater Fisheries Act, 1884.

Mr. Pell gave notice that at the next Adjourned Quarter Sessions he would move "That all the rivers lying wholly or partly in this Isle be formed into a fishery district." He put this notice on the agenda on the the proposition of Dr. Cooper, President of the Cambridge and Ely Angling Association, and Mr. Hicks. The same thing had been done with regard to the rivers in the county of Cambridge. If the proposition was adopted they would have to appoint a Board which would have power to specify the size of the meshes of nets and make necessary rules for the preservation of small fish. If they would consent to a joint Board for the Isle of Ely and county of Cambridge, the same Act as was in force for the county would apply to them. He thought it would commend itself to the Court as tending to the preservation of the fish, and might also be a source of profit.

# CLUB REPORTS.

## THE ANGLERS' ASSOCIATION.

A meeting of the above was held at the Foresters' Hall on Monday, Nov. 17th. The usual preliminaries disposed of, the question of the privileges on the North-Western Railway cropped up. The president informed the meeting that at a meeting held with the North-Western authorities, Mr. Neale acknowledged that no case of abuse of privilege-tickets had occurred on that line so far as London anglers were concerned, with whom he expressed his sympathy, and the matter might probably be reconsidered as to regranting the privileges, at least to such stations as were situated near waters rented by the association. It was resolved to ask the South-Western to grant the privilege-tickets from Putney, and the Great Eastern from Park. A case of an old ticket having been presented at Liverpool-street was brought forward. Inquiry was resolved on. A case as to the abuse of the privilege-ticket on the South-Western Railway was then gone into, and the ticket was declared to be forfeited. Among other business it was resolved to arrange a visiting list. It was also mentioned that this association alone had contributed towards the reward to the honorary bailiffs who effected the capture of the poachers and net on the Lea recently. The meeting was somewhat uncomfortably crowded, forty clubs answering to the roll call, several having left before the call. It would, perhaps, be as well, instead of calling the roll for each delegate, to write his name and the name of his club on a card and give it in. If calling the roll could be done away with, much time would be saved.

## ANGLERS' BENEVOLENT SOCIETY.

Since my last report, I beg to acknowledge, with thanks, the receipt of 15s. 8d. from the donation box of the Hand-in-Hand Angling Society. The next meeting will take place on Friday, Nov. 28th, when the gentleman of the committee will oblige by their attendance to arrange for the concert, which is to take place on Monday, Dec. 1st, at the Foresters' Hall in aid of the funds of the Anglers' Benevolent Society.—R. GHURNEY, Sec.

## ACTON PISCATORIAL SOCIETY.

After transacting their ordinary business on Tuesday evening at their club-house, the George and Dragon, at which two new members were made, and the takes of fish read over by the newly-appointed secretary, Mr. Williams, from which it appeared that Mr. E. Eydmann caught some jack at Shepperton, and Mr. Pike and W. Howell some perch, roach, and dace from Uxbridge, the members and their friends, about 30 in number, adjourned to the large room of this famous old hotel, and held a smoking concert. Some excellent songs were well rendered by Mr. Hubble, E. Richardson, E. Churchill, W. H. Smith, F. H. West, Clark, Archdeacon, Gordon, W. Cook, W. Howell, and his three brothers. Mr. J. Blake, a newly-elected member, presided at the piano, assisted by Mr. Gordon. This concert is the first of an intended series, as the club have resolved to have one every Tuesday evening at 9 o'clock, when all our piscatorial friends are welcome.—W. E.

## AMICABLE BROTHERS ANGLING SOCIETY.

Mr. Taylor saved the club from a blank by weighing in two jack. The annual supper will take place on Monday, December 1st, instead of November 24th, as stated by the rule. General meeting night, November 27th.—J. WOOLEDGE.

## THE BERESFORD ANGLING SOCIETY.

The ordinary weekly meeting of the above was held on Thursday, Nov. 13th, at Grove Tavern, Camberwell. The chair being taken by Mr. W. R. Burgess, the business of the evening was the election of secretary in place of Mr. J. J. Frei, who was compelled to resign the post in consequence of the increasing pressure of his business, which prevented him from fulfilling the duties of the club in the able manner which he had hitherto done. A hearty vote of thanks was given to Mr. Frei, who still remains a full member. Mr. H. T. Barrett was then duly elected to the office of secretary in accordance with the rules of the club. It was also decided to increase the number of members, and to fill up one or two vacancies that have occurred during the year. As this is a club of some high standing, a favourable opportunity occurs to anglers wishing to join this society. Application to be made on Thursday evenings at 9 o'clock to the secretary, Grove Tavern, Camberwell-grove.

## BROMPTON ANGLING SOCIETY.

The members of the above spent a very enjoyable evening last Wednesday, the day appointed for the supper fished for on the 26th October at Bourne-end, the stewards (Messrs. Brown, Burbidge, and Roach) providing a very substantial and plentiful spread satisfactory to all parties, as was well shown by the hearty vote of thanks given them, and ably responded to by Mr. Brown on his behalf. The toast of the visitors being drunk with musical honours, Mr. Hobden, of the Hammersmith United, responding in a very effective manner, the rest of the evening being devoted to harmony, Mr. C. Brown, chairman, Mr. E. Saunders, vice-chairman, Mr. Peckam presiding at the piano. The following members and friends contributed to a very pleasant evening :—Mr. Herbert, "Powder Monkey," given with good effect ; Mr. Moodie "The Midship Mite" ; Mr. Mansell, "The Village Blacksmith," encored with "Thy Voice," &c. ; and Mr. Kirton, "Never Round on a Pal," and a solo on the banjo ; Mr. Cecil, "Paddy Stole the Rope," encored with "Far Away," in his usual style ; Mr. T. Bently with a good chorus, "Sweet Singing Birds" ; Mr. Cobb, a solo on the banjo and the "Ignoramus Nigger," in good form ; Mr. Marsten, "The Hungry Lodger," accompanying himself on the banjo ; Master H. Brown, "The Harp that Once through Tara's Halls" ; Master E. Brown, "Tom Bowline," with great success, giving good promise for the future ; Mr. E. Saunders, in his usual telling style, "The Little Hero" ; Mr. Alexander, a few steps ; Mr. Sparrow, "Jack's Yarn," with good effect ; Mr. Peckam, in good comic style, "The Speaker's Eye" ; finishing up with "Auld Lang Syne," and "All Smiling Faces on Sunday." Mr. Dutton, roach and dace, and Mr. Roach, a good show of whiting.—W. DUTTON.

## THE CLAPTON.

The ordinary weekly meeting was held on Monday last, Mr. George Colls in the chair. The minutes of the preceding were read, approved, and signed ; the ordinary business was also carried through. Catches reported were : Mr. H. Graddon, a nice little jack of 4½lb., from Ponder's End ; Mr. Binks, a tray of jack from the Lea ; Mr. G. Colls, a good take of jack from Crawley ; Mr. Tidbury, some good perch from Day's water ; there were also other minor catches reported. We had a small muster owing to many of our members actively interesting themselves in the Election. The outing settled for the 6th December was again considered, and the secretary stated that in a few days he should send a full notice to each member. On Monday next we have a vocal and instrumental concert (smoking) after business, when I hope to see a large muster. Anglers from other societies are invited ; I can guarantee a cordial welcome and an enjoyable evening.—HENRY HOWSE, hon. sec.

## COBDEN ANGLING SOCIETY.

The majority of our members took the Thames for it on November 16th. As a few of the members went there on November 9th, and had some very good takes of fish, it was rather enticing for others to follow ; but they were not so successful as on November 9th. But we had a few fish brought home by the following members : Messrs. Howland, Maples, Tucker, and Stead.—C. REEVES, sec.

## GOOD INTENT ANGLING SOCIETY.

The members of this club fished at Ware on the 16th for ten prizes. The fish being dead off, only two of the prizes were taken, and those by Mr. J. Bell and Mr. George Fortiscue. The remainder will be fished for on the 23rd, to go where you please.—R. MURPHY.

## GREAT YARMOUTH PISCATORIAL SOCIETY.

The meeting of this society was held as usual on Tuesday, the chair being occupied by the president, Mr. D. S. Bayfield, faced by Mr. C. K. Lamb. Disappointment has been felt by all the Yarmouth anglers, as Thursday, the day appointed for great catches of jack, ended in a blank, only illustrating that one may rule a match but not the weather. Mr. Bunn, one of the members, exhibited some specimens of the cork winged wrass caught by him at Ventnor, in May ; and by his accounts good sport is afforded by angling in the rocky gullies, where they may be seen around the seaweed as the tide ebbs. They take small shrimp readily, and, Mr. Bunn informs us, boys easily catch fifty a day, about six inches in length. I only wish we had some near Yarmouth, as whatever may be the reports of the great catches made in these waters, our society really wants some practical sport ; and I am also of opinion that others require it also. A London angler informed us that he read in one journal that Thurne Mouth was splendidly free from salt water. This seems incredible, as the person catching eels with his net miles further on took a whiting out of his eel net ; so really there can be but poor and uncertain sport at present. Experiments have been made on fish covered over with fungus that all in the aquariums suffer from ; and having removed it from specimens of roach and dace foreign to these waters with good effect, the fish now are alive, and to all appearances healthy, only minus some parts of either fin or tail that have been eaten away by this so-called disease. I shall feel great pleasure in sending you particulars of the treatment that I only trust will enable us to keep alive the occupants of our aquariums without the aid of spirits or spirit power. I shall give them two weeks, which, I think, will fairly decide if the remedy is a good one or not, believing the temptation would be too strong for others beside me if we had to administer spirits, such as the dew of Ben Nevis on a December morning ; so, should my remedy fail, I would rather throw up the diploma than give way to temptation where principle would be involved. So until then, Mr. Marston, I will patiently watch and wait. By the way, I saw Mr. Green, of Norwich, on Thursday, with a good 3lb. perch, and some ten jack, weighing about 60lb. gross from three rods ; but they come from the other side of Jordan, the water being like what the excisemen are looking for in some of our outlandish spots—viz., private still.—J. LARK, sec.

## GRESHAM ANGLING SOCIETY.

The usual weekly meeting of the above society was held on Tuesday evening at the Mason's Hall Tavern, Mason's Avenue, Basinghall-street, the Rev. J. Walker, M.A., in the chair. The minutes of the preceding meeting were read and confirmed. Mr. J. Fitzhardinge Rose was unanimously elected a member of the society. The chairman announced that an entertainment would be given on the 9th December, which would comprise dissolving views of the Upper Thames, illustrated by a powerful oxyhydrogen lantern. The description of the various views would be given by Mr. Parker, and a selection of music would be performed on the same evening. A vote of thanks having been passed to the chairman, the meeting was brought to a conclusion in the usual manner.—H.

## HAMMERSMITH UNITED ANGLING SOCIETY.

Very few of our members fished for the prizes in the last club match, owing, I believe, to the prevalence of coughs, colds, headaches, and business. The result was that on the 16th inst. the third prize only was won, and that by Mr. Penney ; and on the Thursday the first prize was taken by a very pretty show of roach and barbel from Datchet. The other prizes were not taken. They will, therefore revert to the funds of the society.—H.

## HOXTON BROTHERS ANGLING SOCIETY.

On the 16th we had a fair show of fish, J. Osborne having 14½lb. of handsome roach ; H. Steadman, 5¼lb. of chub ; A. Dean, roach ; J. Morgan, 2¾lb. jack ; and M. Norman, jack 4½lb. The members will have their first outing for prizes this season. The river Stort has been selected, from Roydon Lock to Harlow Lock. To leave London by the first train on the morning of the 23rd inst ; to alight at Burnt Mill Station ; to count fish at the Greyhound Weir, Burnt Mill station at 5 o'clock. The fish to be weighed in the club-room at 10 o'clock.—R. GHURNEY, sec.

## IZAAK WALTON ANGLING SOCIETY.

During the past week only two members have weighed in : they were Mr. A. C. Critchfield, who had 39lb. 8oz. of jack, and Mr. J. W. Morgan, who had 21lb. 6lb. of the same kind. The half-yearly distribution of special prizes will take place on Wednesday next, the 26th inst., on which occasion the members will have a supper. Those members who intend being present at the supper will kindly inform the secretary not later than the 23rd inst.—H. B.

## THE KING'S LYNN ANGLING ASSOCIATION.

The King's Lynn Angling Association held their second smoking concert at the club-room, Crown Hotel, 13th Nov., the chair being occupied by F. Ludby, Esq. A very pleasant evening was spent.—PISTOL.

## LIVERPOOL CENTRAL ANGLING ASSOCIATION.

The members of the above association held their second annual dinner on Monday evening last, at their club-room, 120, Dale-street. Dinner was on table at 8 o'clock prompt, when there was a capital muster to partake of the catering of host and hostess Armitage, who supplied the usual courses in rare style for the occasion. On entering the room it was a perfect scene for an angler's eye. An aquarium at each end of the table stocked with a choice collection of the finny tribe, the table was also decked with ferns, and in the centre was a pyramid of ivy adorned with bullrushes, moss, berries, and flowers of various kinds. Dinner being over we had the usual toast to "H. M. the Queen and Royal Family," followed by a selection of operatic airs by Mr. Liddington on a powerful dulcimer, the rest of the toasts intervening with the various songs given by the following gentlemen : Messrs. R. Poston, J. Poston, R. McQueen, G. Price, D. Brooks, C. Rimmer, and G. Smith. Among the songs of the last-mentioned gentleman was the "Blue-tail Fly," which suited the occasion immensely, and was the cause of an extra amount of applause. As it is now drawing near the small hours of the morning we conclude our programme with an essay on our last match, by Mr. B. Lukes, entitled "A Day in North Wales, and the Angler's Resorts on the Journey." Refilling and lighting the angler's companion we button up, as the night air is rather chilly, and disperse with hopes of good sport and plenty of it in the coming season.—R. S. MCQUEEN, hon. sec.

## NORTH-EASTERN ANGLING SOCIETY.

Only three members of the above out on the 16th inst., two of whom weighed in fish—Fletcher, barbel from Twickenham, and Mr. Goll, jack from Cookham.—G. T. FLETCHER, sec.

## OTAGO (NEW ZEALAND) ANGLERS ASSOCIATION.

The annual meeting of the above society was held on September 16th in the Douglas Hotel, when there were about a dozen members in attendance. The president (Mr. P. F. Stoddart) occupied the chair, and the following report was read and adopted :—"Your Committee have to report that the season 1883-84 has been a good fishing season so far as sport was concerned, but the association has been very poorly supported, and, therefore, the matches were not up to former years. The funds would not allow of any expense for prizes, and it is to be regretted that out of such a large number of licenseholders so few took an interest in this association, which is expressly formed to protect anglers." The following is the list of matches held during the past season :—November 9, 1883.—Spring competition : First prize, Mr. G. M. Marshall, 19 fish, weight 19lb. (Shag River) ; second prize, Mr. W. D. Smith, 8 fish, weight 11lb. 15½oz. (Shag River) ; third prize, Mr. R. A. Johnston, 28 fish, weight 10lb. 13oz. (Waitati). December 7, 1883.—Summer competition : First prize, Mr. G. M. Marshall, weight of fish 21lb. 1oz. ; second prize, Mr. W. D. Smith, weight of fish 20lb. 6oz. Match for gold medal presented by the Otago Acclimatisation Society (for fly fishing only) held on March 7, 1884.—First prize, Mr. James Wilkie, 12 fish, 6lb. 8oz.; second prize, Mr. S. Thompson, 9 fish, 6lb. 7½oz. March 21, 1882.—Autumn competition: First prize, Mr. W. D. Smith, 14 fish, 18lb. 4oz.; second prize, Mr. G. M. Marshall, 17 fish, 12lb. 2oz. Total weights of the two highest competitors for the season, Mr. G. M. Marshall, 52lb. 4oz. (society's gold medal); Mr. W. D. Smith, 50lb. 9½oz. As regards fishing generally, the Shag River was greatly run upon by our members last season, and with excellent results. The baskets obtained by some of our crack anglers were exceptionally heavy. Messrs. Chisholm, Wilkie, Marshall, W. D. Smith. S. Thompson, and Connell have all a splendid record of the season. Mr. Marshall on one occasion caught, in two days, 77lb. of trout, which is our best record for this river. Mr. Chisholm, in a day and a half, caught over 50lb. This shows conclusively what expert anglers can do on this stream. This season we propose remodelling our Association on entirely new lines, which will be explained at this meeting. One of our oldest members has promised to undertake the secretaryship, and we have no doubt that under his management the Otago Anglers' Association will in the future be as prosperous a society as the anglers of Dunedin would wish. Mr. Wilkie has presented the Association with an American split-cane rod, to be competed for during the season, valued at £6 6s. It is purposed to have regular correspondents at the various fishing centres, who will furnish the secretary with information concerning the various streams in their immediate neighbourhood. The secretary will also visit personally the most accessible streams from Dunedin, and will combine his experience of such with that received from correspondents in the form of periodical report, weekly or fortnightly as he may see fit, which will be issued free to members of this Association, and to non-members for a fee of 1s. 6d. each report. The report will describe state of various rivers, baits, means of access, accommodation obtainable, charges weight of baskets lately obtained, and all other matters interesting to anglers. All that is required of the anglers of Dunedin is their hearty co-operation to make this, the pioneer Angling Club of New Zealand, a lasting success.—Pringle F. Stoddart, Chairman of Committee. *Office Bearers.*—The following gentlemen were elected office bearers for the ensuing season:—President, Mr. P. F. Stoddard; vice-presidents, Mr. R. S. Smith and Mr. R. Chisholm; auditor, Mr. T. Peake; treasurer, Mr. W. D. Smith; secretary, Mr. G. M. Marshall; committee, Messrs. G. Munro, J. Wilkie, S. Thompson, C. Duncan, J. M'Callum, A. Boot, R. A. Johnston, and J. C. Short. *Prizes.*—The first competition for the gold medal given by the society was fixed for October 24, and there will be three competitions before the medal is finally awarded. Prizes will also be given, in addition to the medal, for the first competition—viz., for heaviest basket of fish, for second heaviest ditto, and for heaviest half-dozen fish. A series of competitions will also take place for an American-built cane rod, of the value of £6 6s., presented by Mr. James Wilkie; and a number of other prizes are promised, of which the conditions of winning will be advertised. *New Members.*—Some 30 new members were proposed and seconded, and hopes were expressed that the ensuing season would prove a noteworthy one in the matter of large baskets of fish.

## THE PISCATORIAL SOCIETY.

The ordinary weekly meeting of this society took place at Ashley's Hotel, Covent-garden, on Monday evening last. Amongst those present were Hessrs. Gray, Fennings, Foreman, Blamey, Arter, Gillatt, Robinson, Sachs, Pattisson, Lemaine, Harden, Meyer, Blundell, Bath, H. H. Brown, H. B. Brown, Jesse, Aldridge, Booker, Walker, Goodger, J. Lander (hon. sec.), T. Huggett, C. C. Blundell, Rev. G. Sumner, &c. Mr. Ghant was a visitor. Mr. R. C. Blundell was unanimously voted to the chair. The minutes of the two previous meetings were read and confirmed. Mr. Lemaine called the attention the members to a concert in aid of the Anglers' Benevolent Society, to be held in the Foresters' Hall on 1st Dec. next, under the patronage of Messrs. Spreckley, Geen, Murray, Marston, &c. Mr. Lemaine regretted to see the small amount of support the Anglers' Benevolent Society received from those whom it was intended to benefit—viz., the poorer class of anglers. He and many others had steadily subscribed ever since the formation of the society. He trusted the concert would be a success and the funds augmented thereby. Tickets could be had of the hon. sec. Mr. Sachs coincided with the remarks made by Mr. Lemaine; he was also an annual subscriber, and wished it better times. It was well worthy of the support of the great number of anglers in the metropolis. The hon. sec. announced the next smoking concert to take place on Dec. 15th. A very cordial and friendly letter was read from our hon. member Mr. Brougham. This gentleman is the able secretary of the T.A.P.S. He congratulated us on the increase of our influence, and the great vitality existing at the present time in our society. He had the pleasure of reporting our meetings in several of the daily newspapers. The reading of this letter was followed by loud cheers. Mr. Kennings officially announced that the Piscatorial Society's ball will take place at Willis's rooms on Jan. 28th. From the large number of tickets already applied for, it is anticipated the ball will be a great success. He trusted so great that it would become an annual affair. A list of stewards will shortly be issued, so gentlemen wishing to act in that capacity will kindly intimate their intention forthwith. The hon. sec. passed round for inspection a new spring-slip triangle which could be attached to a line at any point without the trouble of whipping on—a very serviceable hook which can be obtained in all sizes. There being a very fine show of fish on the table, the chairman rose and proposed the healths of the successful anglers Mr. Huggett and Mr. Fennings. He was proud to occupy the position of chairman with such a splendid show before him. The weights were as follows:—Mr. Huggett showed four trays of pike weighing 105lb., the four largest fish weighing nearly 40lb. Mr. Fennings a nice tray of roach and chub. The healths having been enthusiastically drunk, Mr. Fennings rose and explained that he turned out early in the morning; the weather was very cold, and on the river side a local wit asked him if he would not like to have a fire. He tried the roach with paste—no good; then the chub with cheese—same result; he then tried the tail end of the lob, and captured the tray of fish shown. There was no angler there besides himself, except a solitary hern who was doing well until a large hawk disturbed him, which also disturbed many other birds in the neighbourhood. The Welland was notoriously netted, and the river thereby almost denuded of fish; the worst part of all that the fish so poached were sold for a mere trifle, so that the locality was deprived of the pleasure of sport, and no one profited thereby. Mr. Huggett, who was cheered on rising, thanked the gentlemen for their kind expressions. He certainly was proud of the show of pike on the table. The result of his experience on this occasion was that snap-fishing was sometimes more efficient than spinning. The friend who accompanied him persistently fished the water spinning; he took less in number and smaller fish than Mr. H. captured with the snap. The pike at the present were well out in the stream, and not occupying the usual winter quarters—viz., the lay-byes. They were all taken with single triangle-tackle, specimens of which he handed round for inspection. Rev. G. Sumner (who is an enthusiastic trout-salmon angler) congratulated Mr. Huggett upon his fine take. He was happy in many ways to see so many pike upon the table. He hoped Mr. H. would continue to take as many as possible out of all rivers, especially trout and salmon ones. He regretted the present low state of the rivers, as the poachers had had such a chance. The splendid river Dove had almost been ruined by them, the grayling especially falling victims. He had seen some villainous nets on the end of very long poles, and in times of flood or thick water these were used, and the results were positively dreadful. He trusted societies like our own would do all in their power to prevent such depredations. Mr. Sachs and Mr. Foreman also complimented Mr. Huggett. Mr. Foreman said it would put other members on their mettle. He for one would try and beat the show on the table that evening. The Chairman proposed the "Continued Success of the Piscatorial Society," which was heartily responded to. The health of "The Chairman" was next proposed, and he was thanked very cordially for the way in which he had carried out the duties of the chair. Mr. Blundell responded, and the meeting terminated.—T. H.

## STANLEY ANGLERS SOCIETY.

Since my last report we have had some very good trays of fish shown by members of this society, and the following are the weights of the various takes:—Mr. T. Godsell, nine roach 3lb. 41¼b.; Mr. W. R. Humby, 28 roach 16lb. 8oz., and 28 roach 17lb. 9½oz. (five of these fish were over 1lb., the heaviest weighing 1lb. 9½oz.) also one perch 7oz.; Mr. Nokes, two roach 1lb. 8oz.; Mr. T. A. Sanders, one pike 7lb. 5oz.; Mr. C. Scull, one roach 1lb. 2½oz., 22 ditto 13lb. 2oz., one dace 4¼oz., one perch 6½oz., two rudd 1lb. 6½oz., 11 gudgeon 3¾oz.; Mr. C. P. Wheatstone, seven pike 19lb. 11oz.; Mr. A. F. Wrightson, four perch 3lb. 3¼oz., one ditto 8¾oz., two ditto 1lb. 4oz., one ditto 13¾oz., three tench 10lb. 8¾oz., the two largest scaling respectively 3lb. 15¾oz. and 3lb. 15¼oz.—G. E. W.

## STOKE-ON-TRENT ANGLING SOCIETY.

The third contest of the season in connection with the above society took place on Monday, Nov. 10th. The party, 19 in number, started from Stoke in saloon carriage, kindly provided by the North Stafford Railway Company, about 8.15 a.m., a dense fog prevailing, but by the time the party reached the rendezvous the sun had broken through and quite dispersed the obnoxious vapour. After leaving the train, a walk of about 20 minutes brought the party to the waterside, which quickly presented a very lively appearance, one and all seemingly bent on going in for a day's roaching, and in a very few minutes several brace of those fish were bagged, which told very plainly that roach were on the feed. The sport was good until about 2 o'clock, when the fish seemed to get very shy, and the angler had to do all he knew to induce them to take his dainty lure. One angler, mixing his bait "paste," with a small quantity of whiskey from his flask, succeeded in capturing a very nice dish of fish. Shortly after 4 o'clock the party adjourned to the hotel at ——, when the inner man was refreshed, and at 6.5 p.m. started on their homeward journey, arriving at Stoke about 8 o'clock. The weighing in took place at the club house, the Roebuck Hotel, and on the creels being emptied showed some very nice catches had been made. For the six prizes offered the results were as follows:—1st, Mr. M. Hodgkinson, 6lb. 14½oz.; 2nd, Mr. W. Hassall, 4lb. 15½oz.; 3rd and 4th, Mr. J. Baily and Mr. E. Cocker tied with 4lb. 5oz. each; 5th, Mr. J. Fenn, 4lb. 3oz.; 6th, Mr. J. Morgan, 3lb. 12½oz. There were many other baskets from 2lb. to 3lb. made, and every competitor succeeded in catching fish. The day was beautiful and fine, and all were unanimous in declaring it to be one of the pleasantest that had taken place in connection with the society. During the evening Messrs. Hodgkinson, Baily, and Hassall sang some capital songs, which were much appreciated.—J. Hollins, hon. sec.

## UNITED LONDON FISHERIES SOCIETY.

I beg to inform the members holding privilege tickets from the Anglers' Association and the Central Association that the agreement for the Springwell Fishery, Harefields, having terminated, we have *no longer the right* of angling in that water. The members *have the right of fishing* in the following waters until further notice, as described on the instruction cards. No. 1.—The Pike and Anchor Fishery, Ponder's End, Great Eastern Railway. 2.—Old River Wey, from Weybridge Lock to Pyford Lock, London and South-Western Railway. 4.—Uxbridge Canal, from Bottle Bridge to Slough, Great Western Railway. 5.—Grand Junction Canal, from Batchworth Lock (No. 81), to Springwell Lock (No. 83), North-Western Railway. 6.—Grand Junction Canal, from Cheddington-road Bridge (No. 126), to Leighton and Lensdale-road Bridge (No. 114), North-Western Railway. 7.—The Smaller Lea, from High-road, Waltham-Lane, to Enfield Lock, Great Eastern Railway.—R. Ghurney, sec.

## WALTONIANS.

November 16: Mr. A. Putnam, roach, 7lb. 1½oz.; Mr. T. Watkins, roach, 10lb. 14½oz., also one fish, a jack, 6lb. 10½oz.; Mr. R. Dodge, roach, 6oz.—A. J. Marriott.

## WELLINGTON.

Twelve of our members fished for three prizes on the 16th inst. at Wateringbury, but only one was taken by Mr. Phillips, with one small roach. I have to thank those members of the Rodney, Anglers' Pride, St. Alban's, Deptford Brothers, and Dalston who made up our party, and am sorry there was not better sport; for, with the exception of Mr. Phillips, Mr. George Mayo, of the Dalston (a ½lb. roach), and a member of the Anglers' Pride (a couple of perch), the day was a blank, although 26 anglers tried all they knew. Mr. Walker weighed in some roach from the Thames. The other two prizes will be fished for on the 23rd inst. at Shepperton. The half-yearly meeting will be held on Wednesday, Dec. 3rd, by which date all prizes not yet sent in must be in the hahds of the society, and all subscriptions cleared up. A full attendance of members is particularly requested. On Wednesday two new members were proposed and seconded, and will be balloted for on the 26th. —W. W. Alexander, sec.

## WESTBOURNE PARK PISCATORIAL SOCIETY.

Several members of this society fished a competition in the Thames, on the 16th inst., with a result that upwards of 50lb. of good barbel were weighed in during the evening, and proved also to satisfaction that a frost overnight does not altogether deprive them of their appetite. The two prizes offered were secured by Mr. H. Hulbert, 1st, with 31lb.; and Mr. T. Oatley, 2nd, with 11lb.—the best fish weighing 3¾lb. Mr. H. Thompson, Mr. Evans, and Mr. Harrison also contributed. During the week some good bream have been taken by Mr. Buttery, two of them weighing 9lb.

**Charge of Laying Night Lines.**—On Wednesday, at the Purslow Petty Sessions, before Messrs. Rocke, Whittaker, and Green, Benjamin Cox, Knighton, was charged by Mr. Edward Bromwell, water bailiff, Ludlow, with illegally laying night lines in the Teme, near Knighton, on Sept. 18th. Mr. G. Hawley Edwards, Shrewsbury, appeared for the Severn Board of Conservators. Edward Bromwell, water bailiff, Ludlow, said, from inquiries made by him, he went to Knighton and found that night lines had been laid in the Teme by the defendant in the parish of Llanvairwaterdine. Three lines were laid, and one trout had been killed. Defendant admitted laying the lines, and was fined 15s., including costs, it being the first case of the sort in that district.

"It
'SAVED MY LIFE,'
for the Fever had obtained a strong hold on me. In a few days I was quite well."—Extract from letter of C. Fitzgerald, Esq., formerly Correspondent of the MANCHESTER GUARDIAN in Albania, referring to
LAMPLOUGH'S
PYRETIC SALINE.

## Freeman's Chlorodyne.

**THE ORIGINAL AND ONLY TRUE.**

TRADE MARK.

IT IS THE GREATEST MEDICAL DISCOVERY OF THE PRESENT CENTURY.

It is the best known remedy for Coughs, Consumption, Whooping Cough, Bronchitis and Asthma.

It effectually checks and arrests those too often fatal effects of Diseases, Diphtheria, Diabetes, Fever, Croup, Ague, &c.

It acts like a charm in Diarrhœa, and is the only known Specific in Cholera and Dysentery.

It effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, Convulsions and Spasms.

It is the only palliative in Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

It rapidly relieves pain, from whatever cause, allays the irritation of Fever, soothes and strengthens the system under exhausting diseases, restores the deranged functions, stimulates healthy action of the secretions of the body, and gives quiet and refreshing sleep, and marvellously prolongs life.

It may be taken by old and young at all hours and times.

It is extensively used by Medical Men in their official and private practice at home and abroad, who have given numerous written testimonials of its wonderful efficacy.

Sold by Chemists and Patent Medicine Dealers all over the world in bottles, 1s. 1½d., 2oz. 2s. 9d., 4oz. 4s. 6d., half-pints 11s., and pints 20s. each, and by the Inventor, RICHARD FREEMAN, 70, Kennington Park-road, London, S.E. Free by Post.

Purchasers are CAUTIONED not to have palmed upon them any substitute. See that the Trade Mark, "THE ELEPHANT," is on the wrapper, &c., and the words "FREEMAN'S ORIGINAL CHLORODYNE" are engraved on the Government Stamp—which is the only TRUE CHLORODYNE.

THE ODOR OF THE FOREST, THE SPARKLE OF THE STREAM.

## FOREST and STREAM.

The American Journal of Angling and Shooting.

THE FOREST AND STREAM has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

| | |
|---|---|
| The Sportsman Tourist. | Natural History. |
| Sea and River Fishing. | Fishculture. |
| Game Bag and Gun. | The Kennel. |
| Yachting and Canoeing. | The Rifle. |

The angling department is in the charge of Mr. Fred Mather, the well-known angler and fishculturist.

The weekly numbers of the FOREST AND STREAM annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the FOREST AND STREAM PUBLISHING COMPANY, 37, Park-road, New York, U.S.

Subscription Agents for Great Britain:
Messrs. SAMPSON LOW, MARSTON, SEARLE, and RIVINGTON,

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

### ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d To any part of Europe, the United States, and Canada, the Annual Subscription, including postage s 12s. 6d.

### ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. J. G. Gray (Henderson's Agency), 49, York Place, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and CO., the Proprietors, 188, Fleet Street, E.C.

# The Fishing Gazette.

SATURDAY, NOVEMBER 29, 1884.

## THE PISCATORIAL SOCIETY'S BALL AT WILLIS'S ROOMS.

WE hear that the applications for tickets for this ball are very numerous indeed, and there is every probability of the affair being a great success. We trust the Committee will remember that an overcrowded ballroom is about as uncomfortable a place as a law-court when some great case is on.

## MAJOR TRAHERNE'S DRESSING FOR FLIES.

MAJOR TRAHERNE writes : "I have only just seen the article about dressing lines you have quoted from a former number of the GAZETTE. I see that the recipe for dressing is omitted. Perhaps you may like to give in your next. It is as follows : Mix a pint of linseed oil (not boiled oil) and a pint of copal varnish ; boil till it singes a feather. (This operation must be carried on in the open air, owing to the inflammable nature of the solution.) When cold it is ready for use."

## THE CONCERT IN AID OF THE ANGLERS' BENEVOLENT SOCIETY.

THE concert which is to be held in aid of the funds of the above Society at Foresters' Hall, Clerkenwell-road, on Monday evening next (December 1), promises to be very successful. Tickets, price 2s., 1s., and 6d. each, can be had of the Secretary, Mr. R. Ghurney, 10, Baches-street, Charles-square, Hoxton, N. Mr. Thomas Spreckley, the President of the Society, will be present. Among the artistes who have kindly volunteered their services are : Miss Kate Turner, Miss Edith Jones, Mrs. Lonsdale and Miss R. Lonsdale, Mr. B. Palmer, Mr. A. Bignell, Mr. G. Middleditch, Mr. E. Clarke, and Mr. J. Pitts ; solo pianoforte, Mrs. G. Clarke ; solo violoncello, Mr. F. Griffiths ; accompanist, Mr. C. Scrivener ; the whole under the direction of Mr. W. H. Page. We trust anglers will heartily support the promoters by attending in large numbers, and thus materially benefitting the good cause of the Anglers' Benevolent Society.

## DEATH OF DR. LLEWELYN THOMAS.

IT is with much regret we learn that Dr. Llewelyn Thomas died on the 26th inst. at his house in Weymouth-street, after three days' illness, at the early age of thirty-six. He was surgeon to the Central London Throat and Ear Hospital, aurist to the Jews' Deaf and Dumb School, Physician to the Royal Academy of Music, Guildhall School of Music, and to Trinity College, London. Dr. Thomas, who was a clever and enthusiastic angler, especially with fly for trout, was well known in the best angling circles in London. He took great interest in the attempt to introduce grayling into the Colne at Delaford Park, and his last letter to the GAZETTE was a description of the experiment. He will be deeply regretted by a wide circle of friends. He was one of the most talented and promising of the rising men in the medical profession.

## WELLS'S NOTTINGHAM REELS.

MR. W. WELLS, 1, Sussex-street, Nottingham, sends us one of his reels which was so highly spoken of by Major-General Clay in our columns recently. We are very much pleased with it, and if most Nottingham anglers use reels which run as freely and truly as this, we do not wonder at the great proficiency they attain in casting from the reel, which we are more than ever convinced is, as Dr. Brunton called it many years ago in our columns, the "poetry of spinning." You can get quite as much variety of action out of the bait as with the Thames style—from a brilliant steady spin to a slow wobble, or series of short, jerky spins. The winch sent works on a centre ; but Mr. Wells has also a wood reel with check, which works on a very fine steel spindle instead of on the centre. We have never tried it, but are inclined to think one revolves about as easily as the other.

## WORMS, AND THE PREPARATION OF WORMS FOR ANGLING.

By ALFRED MACKRILL, T.A.P.S.

AFTER reading your very graphic and interesting account of our day's fishing, I shall be pleased to explain the way in which I collect and prepare worms for angling purposes. I am quite sure that many a brother angler would meet with success where often he has a blank if he would study the bait part of the business.

A well-scoured lob or brandling is the very best bait a Thames angler can have all through the fishing season, with this exception—during July, if he is fishing for roach ; then I have always found a single gentle on a No. 12 round bent, bound on the finest drawn gut, the best bait for all-round fishing.

The worms I use consist of the lob or lawn worm, the blood, and the brandling. The lob can be obtained at night from any lawn or meadow, where the grass is very closely cropped, by the aid of a lantern. Great care must be used in catching them ; if injured they die, and if broken they are useless. If you take the worm just below the head between the soft part of your forefinger and thumb, you can with very little force pull the worm out of the ground.

The following is the way in which I keep the worms after I have caught them :—I have six tubs in the garden about 2ft. each in diameter and about 4ft. deep. These I sink into the ground 15in., and then fill them up with garden mould about 20in., and as I collect the worms I place them on the top of the mould in tub No. 1 until I have 2,500, and then the other tubs until full.

The worms will live in tubs so arranged for months ; no trouble need be taken. The worms will work down into the mould. A cover must be placed on the top of each tub to keep the birds and rain out, the cover to be slightly raised for ventilation. I look at the tubs once a week, and if I find any dead ones at the top I immediately remove them.

The worms can only be taken on a warm, damp, moonless night, and on these favourable evenings I catch my supply. During the close season I manage to get nearly 20,000 lobs, and have plenty during the hot summer months when worming is out of the question.

Now, for the blood-worms and brandling. These I have to breed. The blood-worm will be found in rotten, decayed leaves in abundance. The brandling I breed in the following mixture : stable dung, garden mould, vegetable matter of all kinds, the refuse of the kitchen, watered continually with the cook's pot liquor. A heap of this made up 12ft. square and 2ft. deep will supply millions of worms. Now comes the most important part—the preparation of the worm for the hook. I take two flower-pots large enough to hold two quarts of water, well plug the hole at bottom with a cork, fill them three-parts full with fresh moss washed very clean ; the moss must be wet, but not very wet. Pick out the brightest and pinkest-locking worms—say, one hundred—place them carefully on the top of the moss, cover the pot over to prevent the worms crawling out, place the pot in a shady corner, leave it for twenty-four hours, then take your other pot and place the worms very carefully one by one in that ; repeat this for six days, taking care that the moss is fresh and well washed each time. At the end of the sixth day you will have a worm clean, transparent, and full of life. The worm will then be ready for your bait-box, which should be nearly full of fresh moss, well washed, and be wet, but not too wet.

The worms for the ground-bait I clean in moss for two days only, you want the fish to select ; and if you have the choice morsel on your hook there is every probability that on the hook will be taken. The brandling and blood-worms for ground-bait, I simply take as many as I want out of a stock pot. They will be found in a compact mass at the bottom, and do not require cleaning for ground-bait. Place these in clean washed moss in a small box, and all is ready. A bag of boiled rice (2lb.) and the same quantity of soaked bread completes the ground-bait, with a bag of bran to mix with the whole. Never throw a dead worm in with your ground-bait ; one stinking worm will drive all the fish out of your swim. Fish are a very great deal more particular than many anglers are aware of. I close my remarks with the following : One may be a very skilful angler, but, as old George Hone says, if the fish won't bite, "nobody can ketch 'em." If you want the fish to bite study the bait.

[By blood-worm, we take it Mr. Mackrill means the little red or cockspur worm.—ED.]

## DEEP-SEA FISHING IN THE ORKNEYS.

THE murderous practice of snatching fish appears to prevail in the Orkney Islands as well as elsewhere. Mr. Menzies Ferguson, M.A., tells us in his "Rambles in the Far North," Flintown, in the parish of Firth, is a picturesque and pleasant village that takes the fancy of the traveller at once. It lies nestling at the foot of undulating hills, and looks out upon the bay of Firth, known in the old Norse days as *Aurridafiordr* (salmon trout Firth), as it gleams in the bright sunlight, studded with green holms and passing boats. We need not wonder that it is a favourite resort with Kirkwallians, who delight to spend a part of the summer here. The Manse was our destination, and we were pleased to find it one of the most beautiful residences in Orkney.

There are some good oyster beds in the Bay, and as much as £2,000 has been drawn from them in one season. The disciple of Izaak Walton may capture a few sea trout at Renebuster, Finstown, or Isbister.

Further on we passed the lochs of Stenness and Harray, which is embosomed amongst the surrounding hills. The lower loch, that of Stenness, communicates with the sea, and is of irregular shape, being about four miles by two. It abounds in trout, coal fish (*Merlangus carbonarius*), cod, skate, flounders, and sometimes herring. Many a good basket of trout has been obtained upon this loch, and many a breakfast-table has borne witness to the excellence of such a dish. The loch of Harray, which is about four miles and a half by three-quarters of a mile or more, is full of fine brown trout. Nets, line, and "otters" were once in universal use on these lochs, but, of course, such gear is now illegal, though we could not say that the otter is at the present time unseen. Keen anglers here may obtain as good sport and as good takes as can be had anywhere in Scotland.

In Orkney, as elsewhere, there still exists much of the superstitious feeling once so prevalent. It is quite a common practice amongst the Zetland fishermen, when out at *haaf* or deep-sea fishing, to stick the blade of their knives into the mast to bring luck. Another plan is to spit in the mouth of the last caught cod, and the consequence, they say, is that it will be followed by a fish equally large or larger. Before bidding farewell to the North Sea we shall describe some of our fishing exploits, which were very enjoyable in those summer months. One evening we formed the resolution to go cod fishing the following morning. We retired early to bed, that the morrow might find us fully prepared to make an early start. Relieved, as it was, with visions of monstrous fish being pulled aboard by our eager hands, the night passed quickly enough. The knocking of our landlord soon dispelled those bright anticipations, and having thrown on our clothes, we partook of a hasty meal and set out for the beach. Our two fishing guides were there already, hauling down the boat to the water's edge, and putting all the fishing gear into proper trim. In forty minutes we were out on the open sea, close to the eastern entrance of the Pentland Firth, and in a favourite spot to begin operations. Rigging ourselves out in oilskin suits, we prepared to shoot our lines and catch what fish we could. The line consisted of a circular hoop of iron, with a pretty heavy lead weight in the middle. From each end of the hoop a fathom's length of line was suspended, having a bright hook attached, and from the weight between ran the main line. The hooks were baited with limpets or cockles, or other shellfish, and sometimes with pieces of red herring. Having shot over our lines from the side of the boat, we allowed them to touch the bottom; then, pulling them up for a fathom and a half, we continued drawing the lines up and down until we felt a bite, when the line would be hauled up as quickly as possible. Whenever the glistening of a cod was seen through the water we began to get excited, and pulled away with fresh energy until we got the fish to the surface, from which we hastily filliped him aboard. It sometimes happened that as we were on the point of landing our fish he would quietly drop off the hook, and, with a waggish flop, disappear to the bottom. Such fishing was very pleasant. By changing our ground we managed, with two lines, to haul aboard about three score goodly-sized cod and a few ling before the sun had reached the zenith. By this time the pangs of hunger began to make themselves felt. A supply of oat cakes and fresh milk was produced, and our natural craving quieted. Another hour or two brought a few more fish; but after that our luck changed. Considering we had got enough for one day, we shipped our lines, hoisted our main and jib sails, and steered for the shore before a brisk breeze. The sea air and the healthy exercise had given us a good appetite, and when we landed ample justice was done to our substantial dinner.

In fine weather such excursions were our great delight, and brought their own peculiar rewards of fresh fish and fresh experience. There is a method of catching deep-sea cod other than that referred to. It is by means of an instrument called a "murderer"—not a very euphonious name!—consisting of a long bar of polished lead, measuring about 18in., with numerous hooks attached, and suspended at the end of a long string line. This instrument is towed at the stern of the fishing boat, and by its means many a large cod bids farewell to the Pentland Firth. It seems, however, that many escape with torn gills and other misfortunes. Such a method of cod fishing does not seem altogether fair—at least, to the foolish fish. They expect something more substantial than cold lead and a baitless hook. But I suppose invention is justified of her children.

Saith fishing is, perhaps, more interesting. These large, black fish are caught with rods and white fly hooks, generally in great numbers. The most suitable time for them is shortly before the gloaming until dusk. One very favourite spot for these fish is the north-east point of the little island of Switha, half-way betwixt South Walls and South Ronaldshay. There many a summer evening, as the sun was gently sinking behind the hills of Hoy, and casting its slanting rays across the Sounds, some fifty boats would be seen busily engaged in fishing for the strong coal fish. As the dusk crept on the air would become melodious with the songs and the cries of the merry fishermen, and, like the sea, ripple with their hearty laughter. One small boat would many a time come ashore with over five score of grey fish.

About midsummer, 1882, a most extraordinary take of these fish was obtained. For upwards of a week they came down in shoals from the northern islands in pursuit of the small sand eels, and literally made the sea appear a moving mass in many places. At this time the usual method was abandoned, and the eager fishermen pulled the great majority of the fish aboard with clips—large hooks fixed on rods. As the multitude of grey fish swam hither and thither in pursuit of their favourite "sea breed," the fishing boats followed as fast, and renewed the wholesale slaughter. On shore the scene was as remarkable, for as each boat came in with its load the scaly denizens of the deep were piled in heaps upon the beach, until the wives and fishing girls carried them away. One week of such sport was sufficient to drive the most of this remarkable shoal further south, where they met a similar fate. For more than a quarter of a century the like had never been experienced. Part of the same multitude of saithe was surprised off the coast of Peterhead some weeks later, when some ingenious son of science blew them up with dynamite, and strewed the surface of the sea with their lifeless bodies! Such a method of destruction seems far more objectionable than the simple process of gaffing them from small boats.

During the spring season herring fishing is carried on in a peculiar manner. Four ordinary stocking wires are suspended horizontally upon a line at intervals of about 18in.; at the end of each wire a small bright hook is attached with about 6in. of small cord, and the end of the line is weighted by a piece of lead. No bait whatever is put upon the hooks, and the line is sunk to the bottom from the side of the boat, and kept in constant motion up and down. The herrings appear to be attracted by the bright hooks, for three and four at a time are usually hauled on board. The time best suited to this kind of fishing is between sunset and dusk.

CREEL.

## A DAY'S FISHING IN PRIVATE WATERS.

HAVING most fortunately been favoured, through the kind interest of an influential friend, with permission to fish in one of the finest preserves in England, your readers may be interested in some account of our sport.

Soon after we arrived at the station we procured a trap at the hotel to convey us and our goods to the seat of war. The country all the way was charming, and on each side were splendid turnip fields, affording good cover for partridges, which the driver informed me were full of game of all sorts. At last, through the trees, I espied the water, where it was a case of "to be or not to be?" The "question" was very soon answered by the keeper, who informed us that the roach were well on the feed, and that a favourite spot of his had been well ground-baited for two days previously. We were well provided in the way of baits, having wasp grubs, gentles, red worms, brandlings, marsh worms, and two or three different kind of pastes, amongst which was "King's Natural Bait." It has always been a wonder to me that this bait is not more generally used, as, when mixed with cold water, it makes a most beautiful paste, white, and very stiff, which, when carefully put on the smallest triple hook, very seldom comes off. I have always found it a most killing bait for roach and dace. The keeper had also provided lob-worms and live-bait. We found the punt already moored close to the side, and very soon had the rods up, when, after having guessed the depth—not, plumbing it, for fear of disturbing the fish—we set to work. My friend's line was scarcely in the water—in fact, the float had not had time to cock—when up it went, the next moment disappearing clean out of sight, and before he could strike there was such a pull at his rod that strained to the utmost his "patent gut" trace; but after about two minutes' careful play a fine roach, nearly 1lb. in weight, was safely landed and deposited in the well of the punt. By this time I was fast on to a fish that pulled tremendously, and which on landing proved to be a fine rudd of over 1lb. weight. The keeper in the meantime had baited a three-hooked paternoster with lob-worms, and very soon was adding his share to the well. It was hardly my idea of sport, though, as it merely consisted of putting your line in the water, and a bite almost immediately ensuing, the average size of the fish being a little over 1lb. Shortly after the keeper proposed having a live-bait out in the shape of a gudgeon for jack, which we agreed to, and a gudgeon was fished out of the can—but such a one! the largest and finest specimen I ever saw; but beautiful to look at as he was, and no doubt would have been equally so to eat, the jack were evidently not of the same opinion, for although he was swimming about in the most lively manner all day, never a run did we get. At the end of the day, in fact, it was just as lively as when we put him in, and I have no doubt is alive and well at the present moment. The roach appeared to be as hungry as ever, and kept on affording us excellent sport; nor did we appear to be the only ones who were enjoying themselves, as a certain Mrs. Grebe with her two children appeared to be on the most intimate terms of acquaintance with the roach, Mrs. Grebe doing all the catching while the two Miss Grebes did all the eating part of the programme. At last W—— proposed lunch, and getting the grub out we turned round to partake thereof, but scarcely had we done so when his float was off. I, being nearest, tackled the rod, the fish immediately going for the tackle, and before I could stop it ran right across my own line just as that float was disappearing; so reaching out with the other hand I got hold of that rod also, having then two fish, one on each rod, pulling like anything at either arm, and to make matters worse, before my friend could get up to render me any assistance the paternoster line was sailing about, and, somehow, just as W—— got hold of the rod, there was a general foul — the whole lot being all mixed up together. Luckily, at this moment, the keeper came up, after a short absence, and, with the aid of a large net, managed to bag the lot, which consisted of two fine roach on the paternoster line and a rudd on each of the rods. As my readers may imagine, the tackle was in an awful state. After luncheon I thought it would be as well to go in for higher game, so started off with my spinning rod (one by which I lay great store, made by Mr. Aldred, of Oxford-street, a 3-piece glued-up triangular rod, and which for spring and suppleness I am sure is not to be surpassed) in search of any wily jack that was likely to be deceived by my glittering imitation baits, of which I had a good assortment. To give my readers an idea as to what a lot of fish there must have been, as I went along the bank shoals and shoals of fish, from about ¼lb. to ½lb., sailed away into deeper water; but, though I spun right round the lake not a run did I get, though likely spots were abounding, the bank being lined with rushes and reeds of all kinds which were alive with wildfowl of almost every description, amongst which were some peculiar specimens of duck and lots of grebe. As I was spinning along the lee side of the lake the keeper told me of a very peculiar incident that occurred there a few years ago: Whilst a gentleman was spinning parallel to the bank, which on this side was a very gradual slope, a jack of 10lb. rushed at his bait, just missing it, and with such velocity that, before it could stop itself, it was deposited high and dry on the bank, several feet from the water's edge. Not getting any sport in this lake, the keeper proposed trying the other one, which we did, he rowing whilst I spun, trying in turn every bait I had in the artificial line, as well as gudgeon, roach, and dace; but, though I carefully fished the lake all over, they were not to be had that journey, notwithstanding the keeper informing me that the place was abounding with jack, amongst which were some monsters, one particular one he remembered when he was a boy, and which had a hump on its back. But, alas! no jack, nor even a solitary hump, was to be tempted, and so we went back to the roach and rudd, which had been biting well all the time. As we arrived my friend's little boy had just taken a rod, after being duly cautioned to strike gently, as he was in the habit of jerking fish about 1lb. weight clean out of the water, without the least pity for its feelings, or the slightest regard for rod or tackle; but, when the float did disappear, he struck so lightly that, naturally, after a few seconds, the fish was off. Explaining to him that he ought to fasten the hook well in him, he tried again, and this time as the float began to bob a look of deep determination came over his sweet, innocent little face, and, grasping with both hands the 20ft. rod, he struck with all his might, and out came, about a dozen yards behind him, a magnificent specimen of a perch about three inches. It was one of the funniest things I ever saw. As it was beginning to get dark, we thought we had better pack up, which took us a good time to accomplish. After this came the fun of emptying the well of the fish which it contained: two large canvas bags besides our creels were filled, and still there were a lot left. I should think we had close on ½cwt. in the bags, besides what was left behind. The trap turning up at this moment, we bade farewell to our field of glory, and started for the hotel and a well-deserved supper. On arriving there a certain individual belonging to the establishment—namely, the cat—very soon discovered that we had not come home empty-handed, and would not go until we had paid our footing in the shape of a ½lb. roach. Having demolished a capital supper we started for the station, and, in about half-an-hour arrived at the London terminus, before we parted coming to the conclusion that, though we had certainly had as good a day before, we never had passed such a pleasant time of it. And, as my order extends through the whole season, I hope to be able to give my readers a further account of our doings.

MCWALTON.

## ON THE DESCRIPTION OF SALMON FLIES.

By MR. GEO. M. KELSON.

### MAJOR TRAHERNE'S PATTERNS *(Continued)*.

### NO. 17.—"EVANGELINE."

BEFORE proceeding to comment further upon the subject of wings, let us just look through our list of implements for fly dressing, which revision perhaps comes better late than not at all.

In the first place, then, are our old fly-maker's scissors worthy the name? No. Rather an inelegant and abrupt summing-up that, but the word comes in pat for the purpose.

"Use is second nature," we know; but let me tell you that those "old friends," however much we may become accustomed to them, are nothing like so handy and so appropriate as embroidery scissors. Yes, with these we are far more accurate; they get where others won't go, and are directed so much more easily. Their points should be ground very fine above and below to admit of our cutting the stump of wings to what we like—that is, to a perfectly true taper; and, later on, I will note what we gain in reference to this. Then, to my mind, where do we see a proper pair of tweezers? The "catch" is always too bulky, not in width or length, but in thickness, and only bites at the mouth, especially those made of steel. "Where else should they bite?" it may be inquired. All along the nipping part, I fancy, which is that space alluded to as the catch.

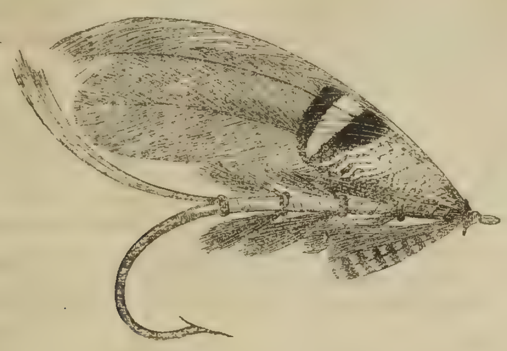
Then would they "hold on"; "rotten hackles" be an expression of the past; and we should never be unpleasantly reminded of a favourite corn, and find no occasion to mutter unbecoming adjectives, which some people set down as curses.

The objection may appear slight; I merely desire to notice the disadvantage. The remedy is to untrim them, for the spring to lose its control, and when so opened, to file the jaws thinner; but the brass sort can be bent and regulated with a pair of pliers, to shut truly, and need no filing at all.

The vice question, I am told, has been ventilated in the GAZETTE. I did not see the controversy; at any rate (speaking of myself again, which I always seem to be doing), I cannot work *precisely* with a vice, and so never use mine, even for the smallest trout flies. Of course professionals do, because they can progress more rapidly; but whether in such diminutive flies their work is up to our standard is entirely another question. That it is very serviceable to dressers who work elaborate bodies of salmon flies from the head end of the hook there can be no two opinions.

Of the stiletto I have spoken previously. The ordinary bull-necked stumpy sort are still to be seen with mother-o'-pearl handles in "ladies' companions," but they are not so suited to us as those sold by Wilcox and Gibbs, which, in dimension, shape, and temper, exactly answer every purpose. To use an ordinary needle for picking out bodies is unquestionably a dangerous business—it penetrates too easily, and it frequently detaches and liberates fur spun round and round the tying silk, and consequently loosens the tinsel forming the ribs.

The strokes of our stiletto should be pretty much after that of an artist's pen in shading, and should begin at the head end of the fly, the operation being directed towards the barb of the hook. The light and rapid movements "draw down" rather than "pick out" the accumulation, which should incline, as nearly as possible, in the line of march, as the fibres of the hackle. But it may be observed that the performance is not to be thought of until the fly is completed; in fact, it is the finishing touch.



And let me repeat how very useful this little article is from the beginning to the end of the work, and how frequently it is put into requisition when we are fishing.

Neither should we be without spirits of wine, for the least touch of floss silk bodies with a damp hand soils them. With that, or even a little eau de cologne, to moisten the corner of a towel to clean the fingers, and one will be more at home with a somewhat ungovernable inconvenience; but when the symptom returns, which is sure to happen at the most delicate moment, drop the work and use the towel again.

The next item can be ticked off, I hope, without hesitation; however, in my estimation, cobbler's wax is the best of all. We should only use it when fresh; it is apt to deteriorate, and it loses much of its consistency when dissolved, which, in no single instance, is desirable for fly work.

Nor will the next item detain us long. Files we must have, and we cannot get them too fine or too sharp.

And now what about our feathers? How important it is—let me say in preface—to collect them at the proper season of the year. I cannot hold to the cruel and unnecessary practice of plucking birds, neither need we torture them, although it is an absolute advantage to rob them of their winter jackets. A little extra protection from the piercing winter winds may be easily provided in the fowl house after any free use of the scissors; but really the few feathers or hackles we generally take are never missed at all. I have seen necks of roosters, grisly, shrivelled up, and otherwise spoilt from constant pulling, so much so that the birds are only fit for breeding purposes—nothing more.

Coch-y-bonddus and Knee-caps are the most useful natural hackles, and the most difficult to find. I believe Farlow and Co. are the only people in this country who can provide the true knee-cap; some day, I think, we shall hear a good deal more of this valuable feather.

Perhaps there are no necks that change so much between winter and summer months as "blue duns"; the best time to be after them is at Christmas, when the birds have quite recovered from moulting. I can only call to mind teal and golden pheasants as exceptions. The latter completes its annual and new outfit here long before other birds show signs of casting off their seedy summer garb and we never see a really good speckled teal feather till the middle or end of February.

Another most useful bird to all fishermen is the mallard—the brown mottled flank feather. But I had better leave that now, and refer to our illustration, as "time flies"! So it does, fast—very fast; it strides on—it wears on, yet is it ever new, and, but for that simple reason, it would remind one of the barque that never sets an anchor—rolling forward, ever on its way.

However, I have heard people say, "if we use him well we can get from the hand of Time more than he will take from ours," which seems good reasoning, too. Be that as it may, I can vouch for this much, that he will always repay the labours of our minute industry. Indeed, any forgotten information—of how to hold this feather, or prepare that—could be restored by very little study if we could just get him to leave a series of successive events in our memory as he passes, in such a manner, too, that they could be called into remembrance as future occasions require.

And now, what of Miss Evangeline? Whether she be "Miss" or "Mrs." heaven only knows. At least, arrayed in all her charms, she is a very "taking" young lady. If she has not "taken"—as a fisherman says—it may be that she has never been tried;

> "But, if in nuptial union she should last,
> 'Twill be th' 'Goss'mer silk' that holds her fast."

That she, however, will unite to angling society, and be always confined to perpetual admiration, is, in my opinion, beyond the shadow of doubt.

It may be assumed, from my intimation, then, that Evangeline is "fresh from non-existence"; in other words, the anniversary of her first birthday in the ordinary course of things will take place in 1885, and therefore I may be excused from jumping at further conclusions of her inherent capability. But that she will not be destitute of friends in the opening of the season is my firm and sure conviction.

There is, perhaps, no living fisherman who has more faith in a fly than myself; yet I can but reflect—even with all these beautiful and modern specimens—that could we dive deeper into the vast ocean of Thought our reward would be the discovery of numberless resources, which are waiting for us, and as yet undreamt of "in our" (piscatorial) "philosophy." There, and there only, could we permeate our work with any close and loving observation of nature.

Foresight, we do know, as well as firmness, proves a successful combination to the salmon angler; then let us take special care of our stock of flies just now; let us put plenty of naphthaline crystal in our packets, and let them be put away in coy recesses now—now while winter's gathering dirge comes whispering in.

Evangeline may be described as follows:—

Tag: Silver twist and golden topping coloured silk.
Tail: Topping.
Butt: Black herl.
Body: In four equal divisions—the first two of silver tinsel, butted as before, with two blue chatterer feathers (in each) top and bottom, as illustrated; the third and fourth, floss silk and butted, the former being the colour of the "tips" of the four red crow's feathers, which are placed as shown, the other red claret silk, the crows being repeated. Both of these sections are;
Ribbed: Silver tinsel.
Throat: Two jay's—one on either side.
Wings: Two yellow feathers from the blue macaw.
Cheeks: Summer duck, with golden topping over.
Horns: Red macaw.
Head: Black herl.

N.B.—It should always be understood, when reading "the sections are butted," that the head "butts" the final one.

## THE CRAFTINESS OF CARP—OUR "LAKE."

"NEITHER I, nor anyone else, can tell you how to catch satisfactorily with the angle the *paterfamilias* of the carp: he is so sly, and nibbles in such a namby-pamby way, that he strips the hook of its bait mouse-like. The angler that can catch *large* carp, Captain Williamson says, 'must possess several qualifications extremely valuable to the angler, and bids fair, by general practice, to be, according to the old saying, able to teach his master.' All I can tell you is, that you must fish for the carp proper with as fine tackle as you use for the roach, and at the same time it must be stronger, for carp grow to salmon size. The baits are worms, larvæ, grains, pastes, green gentles, and green peas. A sweet paste is perhaps the best. . . . A Huntingdonshire correspondent once wrote to me that he had a pond well stored with very large carp, and that after seven years' patience with line, rod, and hook, he could not catch one of them. He asked my advice. I told him that it lay in a net."—From Ephemera's "Handbook of Angling."

[We also possess a piece of water which holds some carp—perfect patriarchs, some of them. In the hot weather they roam about near the surface, and in the spawning season roll about in the weeds like pigs. We have fished the water almost every week for two summers, and have taken numbers of bream between two and six pounds, and many tench, roach, and rudd; but we have never got hold of a carp. And yet we have used the finest tackle, drawn gut and hair, tried every kind of sweet paste, worms, gentles, potatoes, blackberries (bream like blackberries), figs, bananas, a bit of crumb of bread just under or on the surface; in fact, there is not a bait recommended for carp fishing we have not tried, both with float and with ledger. Others who have fished the same water have had no better success with these carp. In other waters not so much fished we have taken them with small red worms and paste. We confess we have never tried for them "from daybreak to five o'clock," which is said by some to be the magic time, but have often wondered that when fishing late—from sunset to midnight—for eels, the carp have never touched the baits, though tench have, long after dark. Of course, we have tried ground-baits of all kinds. Potatoes mashed up with bread and pollard we have found bring the bream on best, and we should be obliged if any of our readers can suggest some plan which they find successful under similar circumstances. The roach and rudd in the same water are also getting uncommonly 'cute. At first we could catch a dozen or fifteen, from ½lb. to 1lb. and over, in a very short time; now you may roach fish all day and hardly get a nibble, except on certain days when they "come on" pretty freely, and yet there are thousands in the water. We often watch them on a bright day going about in shoals with the pike sneaking after them behind the weeds, and every now and then making them fly out in all directions. We put a hundred one and two-year-old trout in the water, and they throve wonderfully, rising freely to the artificial fly, as long as they lasted, which was only a month or two, for the pike soon cleared them out. A score and a half of black bass, from 2oz. to 1lb., shared the same fate. A friend who was fishing recently caught a jack of 4lb., and when landing it noticed it was followed by three larger fish right up to the edge of the water, one of them making a dash at the float. He thinks it was a "relief party" attempting to save their comrade from the police. The same friend left his roach rod on the bank with a bit of paste on the hook, and when he got back was astonished to find his line in the water and fast in some weeds. On pulling it out, a moorhen was found firmly hooked in the tongue. One day a moorhen was paddling about on some sunken boughs of a willow close to where we were fishing, when a pike seized her by the legs, and it was only after a tremendous amount of flapping and fluttering that she got free, and for half an hour afterwards used as bad language as it is possible for such a respectable and intelligent bird as a moorhen to use. She was close to her nest, but for a long time dare not approach it. That moorhens are intelligent no one will deny. For a long time we could not imagine who stole our worms and paste while we went in to lunch; but one day the mystery was explained: there was Mrs. Moorhen with her head deep in our worm bag, and every bit of a good lump of paste had vanished. Now, we always leave our unused bait on the bank after fishing for the benefit of these charming thieves. It is very pleasant when the fish won't bite—or when they will, for that matter—to watch the moorhens at work, or perhaps we get a visit from a couple of "rainbow-coloured halcyons," as the poets call them—in plain English, kingfishers. You see a flash of blue steel disappear in the willow overhanging the water. If you watch for a short time you will see a plash on the surface of the water, and then the bird is back at its place on the bough. Dozens of times will they dive in this way, doubtless each time getting some small fry of roach, or bream, or rudd. But these are welcome strangers, and if they could catch the wary old carp which so complacently sail under our rod as we sit quietly smoking and angling for them, they would be welcome. We confess there is, to us, an endless delight in watching the habits of the fish, bird, and insect life in our pond of two acres or so—lake, we prefer to call it; sounds better. But we might write all night on this subject; in fact, our better half tells us we think a great deal more about it than we do of the blessed olive branches, who are "sure to get drowned in it." Heaven forbid!—Ed.]

## HOW TO DRY AND COLOUR WEEDS, GRASS, &c., FOR FISH CASES.

A correspondent asked us recently if we could instruct him how to dry and colour grasses for the ornamentation of a case of fish. On referring to Mr. Montagu Browne's most valuable work on "Practical Taxidermy" (published at the *Bazaar* Office, Strand), although the subject is referred to in the index as being treated in Chapter XII., it is in Chapter XIII. that the following notes occur:—"Paper used in the drying of botanical specimens is sold; but being too expensive for this particular purpose, a supply of large sheets of common grey paper used by ironmongers and grocers, or even brown paper will suffice. The objects should, directly they are gathered, be laid out straight on a board, or on a floor, and covered with paper; then more ferns, grasses, &c.; again a layer of paper, and so on. A board weighted with bricks should be placed over all, and suffered to remain for a few days; the ferns, &c., are then to be turned, the paper dried, and the process repeated. When thoroughly dry, they may be coloured with oil paint thinned with turps and varnish, sufficient to give lustre without shininess. Here and there break the green colour with red, blue, and yellow, in a manner which will occur to anyone having artistic ability. Ferns and grasses treated in this manner soon dry, and retain their colour for an indefinite period—the only thing to be said against them being their rather unnatural flatness, due to pressure. This, however, may be counteracted by a little judgment during the drying, one plan being the regulation of pressure at certain points, aided also by clean *dry* sand.

"Many grasses (not the flowers, but the leaves or blades) dry well. Amongst the best of these is the "wire-grass" found in woods, growing especially over runnels in those localities. The flower, also, of this plant is most valuable as a decorative agent. The wood melick is another elegant and suitable plant.

"The sedges (*carex*) dry and colour well, as also several of the water rushes, reeds, and flags. The 'toad rush' (*Juncus bufonius*), and its allies, found in damp places, by roads, by canals, and in pasture or cornfields, dry and colour excellently.

"Mosses of various sorts growing in woods, on trees—lichens, gold and grey, moss or lichen-covered twigs, sprigs of heather, furze, sea-lavender, all dry well, and come in usefully.

"Many persons like their moss and grasses dyed. This is, perhaps, allowable in some cases for common work. To those who desire to dye their grasses, I recommend Judson's powder dyes as the readiest medium, the directions for manipulating which are given with them. Any rough grass in flower does for dyeing, and a visit to the fields just before haymaking will supply the amateur with all he wants for this.

"Teazles, thistles, and the umbels (seed-heads) of various plants will be found of service; but everything must be thoroughly dried before being coloured, or before being introduced into shades or cases. Nothing must be coloured with water-colours or gums, as some writers contend, or mould will inevitably follow. A few drops of creosote, or the black carbolic acid of commerce, poured into the case or shade just before closing up, is a very good thing to prevent mildew, though if everything be thoroughly dried, and only oil colours are used, no danger from this cause need be apprehended."

Mr. Browne kindly supplements this information, in answer to an inquiry we sent him, with the following formula:

"Take a little Prussian blue ground in oil, *lemon* chrome in dry colour, finely powdered (this your correspondent can do himself); mix the two to the tint required, thinning with turpentine (three parts) and paper-varnish (one part). This may be varied for grasses, as for ferns, by broken tints of red, white, &c., &c."

We take this opportunity of again advising our readers who take an interest in setting up fish and other animals, &c., to obtain Mr. Browne's work.

## ROACH IN THE TIDEWAY—A GOOD GROUND-BAIT FOR ROACH.

By Captain Williamson.

When the roach lie in the tideway, you must only expect them to bite best when the flood comes in, especially at the first of it, when they commonly are very keen. If there are fish in the water, they will generally bite during the latter part of the ebb. At such times they lie chiefly on the flat gravel sands on the sides of streams, especially below bridges.

Bait the place where you fish with oatmeal a little browned over the fire, and then make up into balls with a small quantity of treacle. This draws them together far better than any other ground-bait I ever heard of. Throw a piece of it about the size of a marble, now and then, where your hook lies. It will gradually be dissolved, and attract numbers.

## CONVICTION FOR SELLING TROUT DURING THE CLOSE SEASON.—CAUTION TO BUYERS.

At the Newtown (Montgomeryshire) Petty Sessions on Friday, before E. Jones, L. Lewis, and R. Lloyd, Esqs., and Captains Adams and Johns, William Bowen Jones, of Newtown, was summoned by Alfred George, agent to the Severn Fishery Board, for selling trout during the closed season. Mr. George said he was aware that defendant had been selling trout, but had not an opportunity to prosecute before. Morgan Morris, builder, said: On the 28th of October I bought 2lb. of trout from the defendant at 8d. per pound. I have bought fish from him many times. I have never seen any other person buy trout from him. Defendant, in reply to the Bench, said he had been in the habit of selling fish for five years. Witness (by the Bench): There were twelve or fourteen. They were very small ones. Defendant was fined 10s. and 10s. costs. The Bench told defendant they could fine him £1 for each fish. The Chairman wished it to be known it was just as much an offence to buy the fish as to sell them.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

## BRANDY AND PIKE BAITS.

Sir,—I am constrained to say a few more words. If it is true what Geo. Bankart, Esq., says in your last issue, that giving brandy to pike baits "is neither more nor less than *scalding* or cauterising the delicate fibres of the gill breathing apparatus," then the cruelty must indeed be of the most painful description, and fully accounts for the increased activity of the fish. I thought it was *very bad*, but let us hope it is not so bad as that. From this it would appear that I am wrong; but I can scarcely agree with this portion of his capital letter, because I should think that the spirit would not touch the gills of the fish if it were *poured* down its throat, and shall still maintain that the increased activity of the bait would be caused entirely by partial intoxication. I say partial because there are so many phases of drunkenness.

What "A Coggeshall Volunteer" and A. S. Isaac, Esq., say is very good banter, but foreign to the argument.

One more quotation from the excellent letter by Geo. Bankart, Esq., and with which, I need not tell you, I do agree: "As it is *not necessary* to sport, I hope that all *humane* anglers will agree that it need not, and *ought not*, to be practised." Good, very. The whole question is in a nutshell.

If pike are "on" brandy is *not necessary*; they will take a dead bait, for I have caught several jack with a dead bait on live-bait tackle. If they are "not on," I am of opinion giving baits brandy will not make them "on."

You, Mr. Editor, in a foot note to a letter of mine the other day said something to this effect, referring to pike: "You may *rub his nose* with the bait and yet he will refuse to take it." You are quite right, for I have experienced the same thing with jack myself—once at Stoke Newington, in the New River.

To my mind, pouring brandy down the throat of a fish, in the manner described by your correspondents, is, to say the least of it, most *unnatural*, not to say repulsive. I have an idea that a few remarks from Dr. Günther on this subject would rather astonish these gentlemen, and bring before their notice a species of cruelty they seem to have entirely lost sight of.

Up to the present, I have seen positively nothing to make me alter my opinion; in fact, I consider most of the arguments of those opposing me are more in my favour than otherwise. You might just as well operate on a worm to get the bream "on."

I have tried for bream where there have been *tons* of them and could not take a fish, and nothing would enable me to catch one. It is the same with pike, and yet some of your correspondents would try and make us believe indulging in this practice is doing the fish a kindness. Is it? Then all I can say is, I am simply surprised that any human being should show his sympathy for the dumb creation in a manner so peculiar.

Sir Thomas More says: "The world is undone by looking at things at a distance." This is precisely the state of your correspondents. Let them examine the subject more closely, and it may be the means of altering their opinions.—I am, &c.,

Mark Antony.

P.S.—1. If "A Coggeshall Volunteer" thinks I am wrong, and the increased action of the fish does not arise from drunkenness, will he kindly inform me what it does arise from? Because if it does not arise from drunkenness I am convinced the agony must be most intense, *and makes the matter all the worse.*

2. What proof have your correspondents that administering brandy to animals quite unused to it does not make them intoxicated almost immediately?

3. Surely neither of your correspondents can honestly believe that a fish "going round and round like a steam-engine, with *amazing* rapidity," is *enjoying* itself? This is a little too much. In fact, you might have knocked me down with the proverbial feather when I read it, and that is a fact.

4. I think A. S. Isaac, Esq., is *very* rough on me, for I merely repeated what he himself published. I saw no harm in *that*. If there is, then I must beg his pardon, for I have no wish to quarrel with any man.

Lastly. *You*, Mr. Editor, seem very fond—seem to take a particular pleasure—in giving me a rib roaster; but in your paper, only week before last, I saw an account of a pike *37 inches* long weighing 10lb. I have seen pike *much shorter* weighing 28½lb., as stated. I asked you the question—and asked it in all sincerity—because the 10lb. pike, your account said, was in *good condition*. Great Scot! Now this, Mr. Editor, I must repeat once more, is a little too much, and is one of those things I cannot understand. I thought it was a misprint, and, as usual, asked for information.

[We do not remember seeing the report about the pike, but if it appeared it was manifestly a printer's error, and we should have thought that "M. A.," if he referred to it at all, would refer to it as a printer's error. We can assure "M. A." we have no desire to "roast him"; he often makes some sensible observations. Since writing this, we have seen the "copy" from which our note was taken and find it is not stated the fish was in "good condition." Neither did we say so in our note. Mr. Guise will perhaps say if the length given was not a mistake.—Ed.]

## OBESITY IN ROACH.

Sir,—Referring to instances of above, mentioned by "Giant," in your last issue, I find, in C. Pennell's "Modern Practical Angler," page 273, referring to carp, that "old carp are very bad breeders, and frequently retain their eggs for years, presenting occasionally the appearance of an immense tumour in the region of the abdomen."

Probably the curious enlargements in the specimens under notice may be traced to this origin. If carp, why not roach and bream, as they belong to the same family?—I am, &c.,

Leuciscus Rutilus.

## A NOTE FROM NOTTINGHAM—CHUB FISHING, &c.

Sir,—This week it is the general complaint among the anglers that there is nothing doing, with the exception of a bit of pike fishing, Mr. Hopewell getting four good fish on Monday, in the Holme Peirpoint water, three of them weighing over 30lb., the largest fish 16lb. Some very good pike have been taken in the Weston water; in the different lakes and private ponds some very large pike have been caught—in one near Mansfield I hear of one being got over 20lb.

A few chub have been caught in the Shardlow length. This fish does not seem to be well on the feed yet. Some of your correspondents advise the use of pith and brains. Now an old friend of mine, and, I should think, one of the best chub fishermen on the Trent, always uses cockspur and brandling for winter fishing, using a No. 5 hook, and threading four or five worms on; we have both fished the same length of water the same day many times, and he has invariably beat me, I fishing with pith and brains. In fact, I don't care for brains as a bait; I think a bit of roasted potato far preferable for your ground-bait, as it gets down better, and the fish like it as well. If brains are used, a little potato should be mixed with it, as it is so light that it is more likely to take the fish from you.

I hear that quite a shoal of salmon have been seen in the Derwent near to Wilne Mills, getting ready to spawn. I hope the water bailiffs will look after them.—I am, &c.,

A. W.

## WORM TACKLE FOR SALMON, &c.

Sir,—Any further extracts from "Ephemera's" book upon salmon fishing would, I am sure, be welcome to many of your readers. If you can spare the space in the Gazette, may I beg for a description of the "worm tackle for salmon" mentioned by a Mr. West in your last number but one? Any hints as to how to use the worm, how deep to fish, &c., &c., would much oblige. I have occasionally used a worm when the water was rather too thick for the fly, but never yet had a bite from a salmon.—I am, &c.,

Angler.

Godalming.

[We hope to give the information wanted; but at present have no space to spare.—Ed.]

## SHORE FISHING.

Sir,—I should feel much obliged if "E. G.," whose interesting article (No. 4) I have been reading, would kindly inform us the best places to seek such salt-water fly fishing as he describes, and the best time of the year to select for the purpose? I, like many others, take great delight in river fly fishing, and would like very much to go in for this shore fishing with the fly, which should yield both health and recreation.—I am, &c., Castleconnel.

Nov. 25.

## WATERPROOF SILK v. SILK AND HAIR LINES.

Sir,—Can you tell me why the waterproof salmon and trout lines are now so generally preferred to the old silk and hair that, at many tackle makers, the latter can only be obtained to order? Although I am an old-fashioned fisher, and learned my art with the old lines, I am unprejudiced; but after trying the waterproof I have gone back to the silk and hair, convinced that I, at least, could do better with them. They are certainly more elastic, hence the risk of breaking is less. The weight of a waterproof line does not vary, wet or dry; whereas the silk and hair, when wet, is heavier to throw—an advantage in my opinion, but is little or no heavier in the water. Save for dry fly fishing, I can see no advantage in the waterproof line. I usually kill, in my fishing season, from 170 to 230 salmon and grilse. For the last two years I have compared notes with a friend who has fished the same water with me, and who invariably uses a stiffish rod and waterproof line, as opposed to my supple rod and silk and hair line. In the first place, although he is a far more painstaking and slower fisher than I, he kills at least 40 per cent. less fish than I do, and yet we use the same flies. He probably takes from five to ten minutes less time to kill a large fish than I do. But the most startling difference lies in our respective consumption of tackle. I may say that I never break my gut, whilst he does so continually. This season, to kill 194 fish, I only used two single gut collars, with an occasional new strand by way of repairs. It is true that I always make my own gut collars, and know what they are made of. My friend must have used more than a dozen during the same time. I never lost a fly, and he lost many. Whether he or I missed more fish it is, of course, impossible to tell; we can only go by results, and not by might-have-beens. I never dry my line. It always lasts me at least two seasons, and with that I am content. It would not pay me to take the trouble of drying after each day's fishing to insure another year's wear. Considering what we do spend, ungrudgingly, on salmon fishing, does it really matter whether, in one item, we make an expenditure of 30s. or 40s. last over 2 years or 3?

I have been much interested in the letters and extracts which have appeared in your pages on the subject of striking. Referring to the quotation from "Ephemera," in my experience the term *tug* is almost as inapplicable as *bite* to the action of a salmon in taking the fly. The feeling to me has always been more that of a dull resistance. To the best of my belief, I *never* strike, but offer a similar dull resistance for a second or two before raising the point of my rod.

What do you think is a fair average of hooked fish to lose? A good scotch salmon fisher told me, some time ago, that the proportion of fish lost was one in three. My own experience shows something more like one in seven.—I am, &c., M. B.

London, Nov. 23.

[This is one of those questions which have often been dealt with in years past in our columns. The advocates of silk and hair could not convert the advocates of dressed silk lines, and *vice versâ*. For several years we always used silk and hair fly casting lines, then for a time undressed silk lines, but for the last ten years have used only dressed silk lines, preferring them to all others. Several friends, good anglers, use silk and hair lines, and they certainly do cast more lightly than a waterproof line, and do not sink so rapidly. But we find that for all practical purposes a tapered dressed line, which has three yards of fine drawn gut on the end of it, is *light enough;* you can cast better against a wind with it, and in a heavy wind it is not blown out of the water and blown about, as is a light undressed line—at least, not to the same extent. The silk and hair line very soon rots, and it often comes off the reel in annoying curls, especially if the line has been allowed to dry on the reel. If you put on a spinning bait for a change, the hair and silk line kinks badly, far more so than a dressed silk line. Finally, you can cast at least 25 per cent. further with it; size for size it is 50 per cent. stronger. There are advantages and disadvantages in both lines; but in our opinion, and after trying both, we feel certain the dressed silk is the most generally useful to the fly fisher. We fear that "M. B." will think that, having asked us to bless the silk and hair line, like Baalam, we have done the reverse. As regards his last query, we should say it is a most difficult matter to arrive at a fair average. You go out one day and kill fish after fish, and put it down to your own skill; another day, with same rod, flies, &c., in the same water, you lose fish after fish, and put the fault down to the fish or your liver. In fly fishing for salmon or trout, or, indeed, in any kind of fishing, we should imagine that the average depends entirely on the nature of the water; a rough, rocky, difficult river is, of course, far more in favour of a fish than the quiet river free from obstructions, or a lake. We should say that to lose two out of three fish in the former case would be less disgraceful than to lose two out of ten in an easy water.—Ed.]

## TINCT. IODI.

Sir,—There is a small error in letter "Tinct. Iodi," page 252, third line: for "and what iodidi," read "and what iodide."—I am, &c., H. W. Peard.

## MR. PENNELL'S THREE FLIES.

Sir,—With reference to the letter of your correspondent, "Pike," in regard to Mr. Pennell's three typical flies, I observe that Mr. Pennell says, in the prefatory note to the fourth edition of his "Modern Practical Angler": "As regards the three 'typical trout flies' I advocate, and their representations, experience has shown that neither lithographers nor professional fly-tyers can be relied upon; and of flies made at the tackle shops, and sold as my patterns, I can frankly say that ninety-nine out of a hundred would probably be quite useless in 'fine' waters, and very indifferent performers anywhere. I fear, therefore, that those who would give my system of flies and fly-tying a real trial will have to learn to tie the flies for themselves."—I am, &c., Trout.

Nov. 26.

[Are not these remarks of Mr. Pennell's tantamount to throwing up his brief?—Ed.]

## STRENGTH OF TROUT LINES.

Sir,—I should be glad if some of your numerous readers would give us their experience as to what should be the minimum strength of a trout line.

It is often said that silkworm gut will stand a pull of so many pounds before breaking, and yet the same size of gut, when tried on a dynamometer, breaks at a much less strain.—I am, &c., F. W.

## LARGE GUDGEON.

Sir,—Visiting the United Brothers on the 22nd, I was shown a gudgeon that, when caught, weighed 4oz.; it was caught by a member while fishing the Ravensbourne. Can any brother reader inform me if there is a gudgeon of that weight among the various public or private collections around London? A friend informed me that he caught one about that weight some years ago up the Thames, and a gentleman astonished him by giving him 5s. for it. At that time money was of more value to him than a fish about 7½in. long, considering he had some bream in his bag at the same time going between 3lb. and 4lb. He was willing to give the lot for that sum. He thought that the gentleman had "gone wrong" when he would only have the gudgeon. I should like to know where that gudgeon went to, now that I know more about fish?"—I am, &c., Pixie.

## AN ENORMOUS SALMON.

Sir,—I send you the measurement of what I believe to be the largest salmon ever netted in Britain. It was landed by the fishermen, while fishing for ova, on the Tay at Almond Mouth, on the 18th. It measured 4ft. 11½in. in length, and 2ft. 5in. in girth; it was a male, in splendid condition, being a spring fish new from the sea. Being the close season, it had to be returned to the river. It is a pity the exact weight was not taken; the fishermen believed it to be about 80lb.; it must have been heavier than the 70lb. one taken on the Tay, which you have seen a cast of in the South Kensington Museum; this one was 6½in. longer than that. It is to be hoped some angler will get hold of him when the fishing opens. During six days, 272 salmon and grilse were landed. Amongst them were five clean fish, averaging about 22lb. About 25,000 ova were taken from those ready to spawn. It has been a very good spawning season, so far as it has gone. At every suitable place great numbers of fish can be seen on the reds. Looking over Perth Bridge, hundreds can be seen, some of them very large fish.—I am, &c., P. D. Malloch.

Perth.

## SHORE FISHING.—No. V.

### By E. G.

There is no doubt that, for casting, flies with hackle for legs are the best; but when towed behind a boat, the wool legs are just as good.

In bright water I have found a very good fly to be: body blue wool, ribbed with dark green crewell, hackle black, wing green peacock herl; also, olive-green body, ribbed with blue, hackle black, wing a single blue-tipped feather from a cock pheasant's neck tied flat on the back. There is a cream-coloured feather on the pheasant which makes a very taking wing. Fishing from a boat on April 9, this year, I took twenty very fine pollack with it—the body scarlet, ribbed with silver. Pheasant's feathers have a peculiar gloss on them which seems to be very attractive to sea fish. Peacock herl—either the green or bronze—is very good for bodies or wings. A good fly for clear water is: body dark green, ribbed with pale blue crewell, tail small bunch of green peacock herl, legs any dark hackle, wing copper-coloured peacock herl and a single small blue feather from the neck lying flat on the top. In thick water use plenty of colour. Body scarlet, ribbed with silver and white wings, shows well. At dusk use light flies—a white body, ribbed with silver, legs white hackle, white wing, or a silver body, white hackle and wing. I advise a little more care and finish to flies used at the mouths of rivers or in the pools just inside, because, as before remarked, sea trout may occasionally be met with, and even salmon at low water when the fresh water is in them.

I have frequently had the latter follow up the fly in salt water, but have never had the luck to hook one.

On looking over some old numbers of the Fishing Gazette, I found a letter on August 24, 1877, from Capt. A. Clark Kennedy, in which he describes the capture of a salmon in the sea.

He says: "On one of the hottest days in July, I was fishing a pool about two hundred yards above low water mark, where the river Bush in County Antrim falls into the sea. A great many fish had entered into the pool with the previous tide, and they rose very freely at the fly. They did not seem very particular in the choice of flies as to colour, but would look at nothing but small patterns. During the afternoon I had thirty-two salmon and grilse in play, and should be sorry to say how many rises I had besides. Of these thirty-two, however, only the comparatively small number of eleven were landed, owing to the fact that the fish, when hooked, made for the open sea, and when in the strong stream at the mouth of the river the hold gave, in most instances, only two fish, however, taking flies away with them. When the tide came in towards evening, I could see a great many fish leaping in the waves as they approached the entrance of the river, so that as the fish had left off rising in the pool, I went down to the shore and had a few casts among the waves. I had not fished more than five minutes, when a capital rise and a run of about thirty yards of line told me that a good fish was on. This was in the open sea some way from the river's mouth, and in pure salt water, among breakers, also, of some three feet or more in height. The fish gave good sport for about five minutes, and more than once ran out nearly 80 yards of line, and, having played him in the Atlantic, he was gaffed by my man up to his waist in the sea, the big rollers almost carrying his legs from under him before the fish was safe on the beach. It was a good grilse, about 7lb. in weight, and, luckily, was well hooked by the tongue; had this not been so it would probably have been knocked off the fly by the strength of the waves. Grilse and white trout have, I am aware, been often caught in tidal waters; but I think it is very seldom a salmon takes a fly in the open sea."

This is rather a long extract, but it is the only instance I have met with of a salmon being taken with fly in the sea. Mr. Wilcocks once told me he knew a very large fish to have been caught in Torbay on a pollack line, and I have heard of cases of their being taken with living sand eel on the west coast of Ireland.

In certain places grey mullet are taken with a fly at night. I have some, but have not yet done much with them. These are dressed about the same size as a white moth, hackle and wing white, body silver. A wash-leather tail is recommended by some. Go to the shore of a harbour, or any place that mullet frequent, after dark; you will hear them splashing, then throw in the direction of the sound. There is one thing about this fly—if the mullet do not take it, the sea and brown trout will. I have had several good ones with it this season.

But to return to bass, pollack, and coal fish. Should you be fishing from a rock or projecting head, and there is a strong tide stream running away from you, it is a good plan to put one of Brooks's "baby spinners" on the gut above the tail fly. Throw down the stream, and bring it back to you sometimes steadily, sometimes with a tremulous motion. If this does not prove effective, throw out and keep letting line from the reel about a foot or two at a time, occasionally pausing and working the flies. When you have got out, say, 40 to 50 yards, wind in again steadily, occasionally pausing and giving the rod a jerk. To do this a strong, stiff rod must be used, and great care taken not to smash it if you rise a fish. The best plan—if your standing-place admits of it—is to step sharply back, and do not raise the rod more than an angle of 45 deg.—I am assuming you have it pretty low when the fish takes.

It is, however, useless to try this plan of letting out line with a weak rod, as the weight of the heavy line alone, even without a fish, would soon ruin it.

It is, I think, in sea fishing best to work the fly as is generally done in salmon fishing. The lure is no doubt taken for a small fry, cephalopod, or some crustacean, and the latter two—which undoubtedly form the staple food of fish—have a decidedly jerky mode of progression.

A gaff is the most convenient thing to use, and I consider Mr. Kelson's plan of carrying it to be the best and safest I have seen, and intend to adopt it.

In conclusion, have plenty of big hobnails in your boots, or you may peradventure take a sensation header; and when you land a bass take care of your fingers—he has a plentiful supply of prickles and cutting blades, and knows well how to use them.

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE,
SALMON AND TROUT FLIES, SUITABLE FOR
ALL PARTS OF THE WORLD.
**Mahseer Tackle in Great Variety.**
**Makers of Split Cane Rods.**
**Improved Folding Trout Landing Nets**
(Very Light).
**New Patent Lever Salmon Winch**
(Can be regulated to any stiffness at will).
**PENNELL'S TACKLE KEPT IN STOCK.**

CATALOGUES GRATIS. PRIZE MEDALS. IMPORTERS OF SILKWORM GUT.

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 „ | Putney. |
| | 45 „ | Hammersmith. |
| | 50 „ | Barnes. |
| | 55 „ | Kew. |
| | 75 „ | Richmond. |
| | 80 „ | Twickenham. |
| | 85 „ | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | Morning. | Afternoon. |
|---|---|---|
| Saturday, November 29 ... ... | 10.29 ... ... | 10.59 |
| Sunday, „ 30 ... ... | 11.30 ... ... | 11.59 |
| Monday, December 1 ... ... | 12.0 ... ... | 12.24 |
| Tuesday, „ 2 ... ... | 12.48 ... ... | 1.12 |
| Wednesday, „ 3 ... ... | 1.37 ... ... | 2.2 |

| Friday, „ 5 ... ... | 3.14 ... ... | 3.40 |

High Tides December 2, 3, and 4.

## THE LOWER THAMES.

### General Remarks.

According to anticipation, the large roach are being taken in the tidal waters, and the examples are most encouraging. It will be seen from the Twickenham returns that there are a couple of takes of 28lb. each, besides other good results. In the case of Mr. Johnson and friend, some of the fish were sent up to Mr. Spreckley, whose description of them was, "They were great beauties." The principal event of the week has, however, been Mr. Bull's great take of large barbel at Teddington, as will be found recorded below, and, as evidence of the weight of the fish, they were all weighed at the Richmond Piscatorial Society, the ten fish weighing 82¼lb., or an average of over 8lb. each. At one time Teddington was famous for the capture of very large barbel, but the take now reported for one day's fishing has never been exceeded on the Thames for fish of that size. Mr. Bull is deserving of great praise, after enjoying the sport and sport and giving accurate weights of the fish, in returning all except one to the river again. The angling altogether in the tideway has been satisfactory, and in roach and dace-fishing barbel have been taken up to 8½lb. The cold, frosty weather will make some change for a time, but, where anglers are disposed to face the chilly air, there is little doubt some good jack would be brought to grief, as they appear now to be taken of a nice size. The effort of the Richmond Piscatorial Society, which entirely originated by Mr. H. Dickenson, the respected vice-chairman, of placing some young trout in the tidal waters, has again been repeated this week, with some beautiful specimens from the famous nursery of Mr. Andrews, of Guildford. The expense of this movement has been defrayed by a special subscription raised by Mr. Dickinson ; and that gentleman has also succeeded amongst his friends at Kingston in obtaining a sufficient amount for the purchase of 100 good-sized trout to be turned into the river at Kingston. There can be no doubt Mr. Dickinson is doing the right thing, and his work is deserving of thorough appreciation. The fishermen generally say if they had more customers they could find plenty of fish. The returns above Teddington are very limited, but it is mainly owing to the absence of anglers.

### Angling Results.

**Richmond.**—Job Brain, in three days, 40lb. of roach and dace, and a barbel of 8½lb. Henry Howard, in a couple of days, twenty-four dozen. Henry Mansell, in one day, ten dozen. Henry Wheeler, in four days, 60lb., and Christopher Brown, in one day and half a day, 26lb. of good roach.

**Twickenham.**—John Spong, one day with Mr. W. Johnson and friend, 28lb. of good roach ; another day with Mr. Hilton, thirty-seven roach weighing 17lb. ; and another day, 16lb. of good roach. Henry Spiers, in one day, 28lb. of fine roach. Edward Finch, during the week, has had some good takes of roach. George Coxon, in two days, 28lb. of roach and dace, and in single days John Coxon, jun., has taken 13lb., Samuel Mesley eight dozen, William Spong six dozen, and Joseph Dobbin five dozen.

**Teddington.**—Mr. Bull, fishing at Teddington with Frank Kemp, in one day got ten barbel, weighing 82¼lb., the respective weights of the fish being 9½lb., 9lb., 9lb., 8¾lb., 8¾lb., 8¾lb., 8lb., 7lb., 7lb., and 6½lb. Charles Baldwin, in three days, nineteen dozen of good dace and a couple of barbel.

**Kingston.**—John Johnson, sen., in one day, nine dozen of fine dace. One gentleman, fishing by himself, has caught three jack, the largest 5¼lb. The bank fishers here and at Surbiton have had some good takes of roach and dace, and some good perch and chub.

**Hampton Court.**—Mr. G. Woods, of East Moulsey, has taken three jack, the largest 4lb., and George Martin, in a couple of days, has taken ten brace of very fine perch and a jack of 6lb. The anglers at "Tagg's Island Fishery" have been getting some roach and dace, and anglers on the banks of the river have got roach, dace, gudgeon, and perch.

**Hampton.**—Mr. Hammond has caught a jack of 4lb., and another gentleman one of 8lb. There ought to be some good jack fishing in the deep at the present time, for it has always been famous for size and quantity. The bank fishers have been amongst the roach, dace, gudgeon, and perch.

**Sunbury.**—Edward Clarke, jun., in two days, twelve brace of perch, and over two dozen of gudgeon. Bank fishing has been fairly good amongst the same fish as at other places.

**Walton.**—George Hone, in one day, two jack, the largest 5lb.

**Staines.**—Charles Hone, in one day, three jack, the largest 5½lb.

## UPPER THAMES.

River still very bright, and all kinds of fish most difficult to approach. Perch are shy, but can be had early and late with a minnow. Mem.—Do not use more than one bait on the paternoster at a time. It is less troublesome and more effective. Roach seem very difficult to get to feed in any form. Two or three fish may be taken in a swim, and then all is over. This I believe is because jack are now on the roam seeking what they may devour, and a *posse* of roach must be "nuts" for the now hungry and weed-roofless beggars. Chub should now be "seen to," and for baits permit me to advise cheese paste or pith and brain, or, in the absence of these luxuries, scalded greaves or my old favourite tail of lob. At Windsor a fine jack of 17lb. has been taken by Mr. Little, of Twickenham ; and two anglers in the same district have had a 34lb. basket of barbel, and a Mr. A. Harbard a single barbel scaling 5¾lb. The Maidenhead, Cookham, Bourne End, and Marlow waters seem to be very quiet, with the exception of large takes of small perch. Where do all the big Thames perch migrate to? At Harley Messrs. Vico, Berger, Gherkie, and Sykes have been busy—the latter gentleman showing on the evening of the 23rd inst. chub of 3½lb., 2¼lb., and 2lb. respectively. R. Shaw, in the Hurley waters, with a patron, has had 20lb. of jack lately, the best fish scaling 7lb. Thursday evening.—Strong gale blowing from the west and south, with every indication of the storm culminating in rain. Twenty-four or more hours of heavy downpour would greatly improve the angling qualities of the river, and would wash away the leaf tea which now permeates it, and sickens fish and fishermen, and also—Marlow Buzz.

### Thames (Datchet).

The water as low as ever, and a most discouraging state of things exists ; but we shall not be long without some rain if appearance of the sky is anything to go by. Nothing whatever to mention save a jack or two. A gentleman with me got two jack about 3lb. each. Last week, Keene took three jack in a very short time, largest fish 7lb. There was a strong force here yesterday jack fishing ; but I have not been able to learn results.—G. Lumsden.

### Thames (Eynsham).

I have not heard of any angling having been done near here this last week. In the Thames, on Saturday last, I had four chub in the Evenlode, weight 9¼lb ; heaviest 2¾lb. Yesterday (Wednesday) Mr. Geen caught thirteen chub, weight 23½lb., in the Evenlode, and to-day, in the Windrush, he took twelve chub, weighing 21½lb., all caught with pith and brains. The water is low and bright. Perch and roach are not feeding well now.—W. B. Howe.

### Thames (Goring).

Water in prime order for jack, perch, and chub fishing. I have had six days' fishing this last six weeks, and took 50lb. of jack, two largest going 16lb. My best day for jack this week, two going 10lb.—J. Rush.

### Thames (Oxford).

According to all accounts, there is a really large jack in the Postmeadow stretch. At the commencement of the week he broke away from one angler, and to-day he served another in precisely the same fashion. Since I last wrote the weather has set in bitterly cold, and very few anglers have cared to face the piercing north and north-west winds and their concomitant discomforts. The river is lower than it has been at any period of the year. At the University Paper Mill the wheel power is reduced to almost a minimum, and in several places in the vicinity of the city the water has sunk into a mere thread. Sport has consequently been very unsatisfactory, the takes small, and the size of the fish proportionate.—The Cherwell Otter.

### Ancholme District.

Winter has set in early this season, and in full force. Sheets of water are now covered with ice of about an inch in thickness : as a consequence we are thinking more about skates than fishing-rods.—Thomas Ford.

### Chichester.

Very little has been done here the past week. The early mornings have been ushered in by white frosts, the canal in parts being coated with ice. A few perch and one small pike are all I hear of. Selham and the Ouse have proved unremunerative. One can but notice when strolling down the Chichester Canal the number of unattended pike-rods. A fine perch was found dead a few days since with a double gorge hook imbedded. It is a pity this wholesale pot-hunting cannot be stopped ; it does not give the legitimate anglers a chance.—George F. Salter.

### The Dee, Don, &c. (Aberdeenshire).

For a few days prior to, and ever since the termination of, the angling season in this quarter, the rivers have been more or less flooded, the result partly of rain and partly of the melting of snow on the hills. We have had boisterous weather, cold weather—in the low-lying districts a considerable rainfall, and on the hills a good deal of snow. Just now the Dee shows less body of water than it has done at any time since the close of the rod season. What was anticipated has not been realised, as down to date no ascent of fish to the spawning grounds at all worth speaking about has taken place. It is true that about the last days of the fishing, and when all too late to enable the angler to secure a fair record, a good many heavy fish moved up the river, but further than that there has been no run. Consequently, in the lower and middle waters there are comparatively few fish on the reds, but from Aboyne upwards they are closely covered principally with small salmon. Indeed, in the remoter reaches of the river spawning is now well advanced, and a good many fish are turning seaward. Seldom with so many fish far up the river has so little destruction amongst them been committed or such a good and early spawning season been experienced. The result is highly gratifying to anglers in that there will, therefore, be something like adequate compensation for the scarcity of fish in the lower sections. In the rivers keeping low till so far through the season one good end has been served, and that is, that fish in any great number have not ascended the smaller streams as they would otherwise have done had there been plenty of water early enough. The result is that the fish have kept more to the main streams, where the chances for "water burning" are more risky, and the operator's success proportionately less on account of the far greater body of water. Doubtless a good many fish took to the Clunie, which, more that any other affluent of the Dee, runs high whenever there is rain, on account of its situation among the higher hills. But then that stream is very closely watched in general. Spawning in it may be said to be farther advanced than even in the very farthest up reaches of the Dee itself. The Corgarffers and Ballaterians have had very little temptation to raid on the Gairn this autumn. We have heard of great havoc in bygone times being committed among the salmon in that small stream by organised bands of sturdy Hielanmen. This "back end," if the same reprehensible proclivity is still latent in them, they might have saved themselves the trouble of swooping down from the hills for all the results they would have likely obtained. The Huick, though a considerable stream, is not a natal one, and it's only a straggler that ascends it ; hence, the votaries of *the long iron* have no inducement to visit it. The Tarland burn, up which a fair quantity of fish proceed every fall, is denied their acquaintance this time, and it's well ! The Tanar is well looked after, thanks to the watchfulness it receives at the instance of one of the most generous and sport-encouraging lessees of Dee fisheries. The Cannie and the Sheoch are so far down the river that the spates come on too late for to encourage fish ascending them. A few sea trout and whitling may have got up these streams, though there were certainly no signs of them when the fishing closed, and there's no great harm there were none. And what about the Feugh? Well, fewer fish are up that stream this year than usual. Heavy fish cannot get up it, and so few in number were the back-lying fish, and so meagre the run of small ones the autumn spates encouraged, that it is safe to say there is not one in ten in the Feugh at present, compared with the number at a corresponding period at an ordinary season. Mr. Young, H.M.'s Inspector of Fisheries, recommends the destruction of the rocks at the Fall, in order to allow fish an easy ascent. That is all very good in its way ; but does it not occur to anyone who knows the temptation to poaching, which vast numbers of spawning fish in a small stream afford, that the more fish in the water, the greater the necessity for close watching and a large staff of watchers? How then would it accord with the highly economical (shall we call it spirited ?) policy of the Fishery Board if they had to send up seven or eight bailiffs to promenade the Forest of Birse Valley, of Strachan, and the Glen of Dye for a few months every year? There are numerous first-class spawning beds in the Feugh and Dye, and were it not that we have heard that leistering is regarded by the inhabitants thereabouts as highly laudable in its way and "capital fun," we should say the more fish up these streams the better. We may remark here that owing to the low waters scarcely any fish went up in summer, and that, therefore, in our opinion, there has been little kippering in the glen dwellings this autumn. We are very strongly of opinion that all small streams up which grilse and salmon run most in June and July ought to be more closely watched between the first of September and the middle of November, than during the "dead" of winter. Fish in such streams mostly spawn very early, and it is therefore of infinitely greater moment that they should be well protected during the period we have indicated than later on. Relatively the Spring fishing was as great a success as the Autumn fishing was a failure. The Summer fishing need not be spoken of, so bad indeed did it prove. The Don has done poorly. No water and no access upward all summer. If Mr. Young had recommended a Special Act of Parliament for the removal of the Don Dykes, the recommendation would have been one of the best he has yet made. "Auld Glentakit's" contribution in verse on the evils of these dykes made many wince. To him we would say, in the words of Nick Bottom, the weaver.—"*We* shall desire of you more acquaintance, good '*Auld Glentakit!*'" Disease is apparent amongst the fish in the Don—that we regret. Some poachers recently got what they had evidently not calculated on—their net (not filled with salmon—oh, no !) caught on hooks sunk for the purpose by one of *your* (Mr. Editor) Don acquaintances up the river a bit Suppose they had been loath to leave it, which perforce they were obliged to do.—W. M.

### The Dove.

Matters have been rather quiet on this river since my last. The weather and water have been all right, but anglers have been comparatively few and far between. The temperature has fallen greatly, and a hard white frost has prevailed every morning. This ought to bring the grayling on the feed—indeed, it has done, as on Tuesday and Wednesday they were rising much more freely than they had done for several days previously. The expert rods found no difficulty in securing sport, but as we have said, only a limited number of them have been out. We always have a kind of lull amongst our anglers before Christmas, and, I suppose, the usual slackness may now be said to have set in. Bottom fishers are doing better with the worm than the maggot, which rarely kills well on the Dove in a low temperature of the water.—THE SPLODGER.

### Exe (Exeter).

A few perch have been taken in the canal with live minnows and brandlings, but beyond this, there has been nothing doing, the wind having been northerly or westerly during the week. An unknown friend yesterday sent me "Foster's Scientific Angler," and it is a masterpiece on angling, and for bottom fishermen and fly anglers is a perfect *vade mecum.* I hope to send a more favourable report next week.—J. A. KELLEY.

### Ilfracombe.

Sea fishing.—During the past week boats drifting for herrings have had very poor success, the most caught at a haul being a half maize. They fear the east wind has taken the herrings from our coast, but boats fishing with ground lines have had good sport. Over three tons of fish have been caught, consisting of cod, conger (some weighing over 40lb.), ling, and skate, while rod and hand line fishers have come in for a share. Saturday : Mr. German, a conger, Mr. Slocombe, cod, 17lb. Monday : Mr. German, conger, 17½lb., Mr. Slocombe, cod, 16lb. Tuesday : Mr. Ellis a cod. Wednesday : A gentleman, a large cod. These were all caught from the jetty. Thursday, an immense porpoise. Weather very squally.—E. COMER.

### Leicester.

Since my last report we have had a sharp taste of proper winter weather. Frosts have covered the brooks with a fairly thick coating of ice on several nights, thus preventing anglers from following the sport except in sharp running waters. On Friday and Saturday last week, in spite of the inclement weather, a good number of anglers were fishing the home waters, and, upon the whole, with a fair amount of success, both pike and chub biting well. Several good brace of pike were caught, averaging between 4lb. and 6lb. Chub anglers were numerous, and a good number of this species have been shown during the week at the club house. Lately pith has been, and continues to be, the most killing bait for the chub. Sport in the outlying districts has been of a quiet character ; in no instance have heavy bags been reported. To-night (Thursday) there would seem to be a change in the weather, it being slightly warmer, and small rain has fallen during the greater part of the day. The waters in this locality are in fairly good condition, and moderately high.—ALERT.

### Lugg and Arrow (Leominster).

Both streams are in good fishing order, but keep very low and remain clear. Snow fell in this part the beginning of the week, but made no difference to the water. There has been good sport had in both streams with the grasshopper and maggot, and a few good fish have been taken with the fly. Very good sport has been had near Ivington with the maggot, and some good fish have been taken. In the Aymestry district some very fine grayling have been landed with the grasshopper. The water near Eardisland was fished on Monday, and a nice lot of grayling were taken with the maggot. There has been some very good grayling taken in the Stanton water this week with the grasshopper. The Pinsley is in good fishing order ; the fish are biting freely. A good dish of fish was taken on Friday, and a good basket on Tuesday with the fly. Fishing in the Bodenham and Monkland waters very quiet.—GWYNNE.

### Medway (Tonbridge).

Twenty-four hours' constant rain is wanted before the Medway will have even a drizzle, let alone a good run. With the main river as low as possible, and many of the side streams almost dry, it is impossible to have anything like a successful day's fishing ; yet, notwithstanding this, a few pike were taken as well as some large chub with live bait, and the bottom fishers have been rewarded with occasional bags of roach. Otters are again having a gay time of it, and, the ground being as hard as a brick, it is next to useless to try and trap for them. Only let the weather break, and some of these gentlemen—and ladies, too, I hope—will have their death recorded by—YE MEDWAY WATER RAT

### The Ouse (Huntingdon).

The water is in good condition, and weather very favourable. Jack are on the feed. Some decent ones have been taken. On the 24th, I took one fine fish going 10lb. 3oz. ; on the 25th, four going 8½lb. 7¾lb., and two 4½lb. each ; on the 26th, one 3½lb., making a total 38lb. 15oz., and having five more runs, but missed the fish, so it shows they have been on. Boach and dace are the bait used, but they will take either.—H. ROUT.

### Teme (Ludlow).

There was some good fishing Saturday and Monday, and some nice grayling were caught with the maggot, the fly on those days being almost worthless. Mr. Parker caught some fine grayling in the Ashford waters on Monday, and eleven fine perch, averaging ½lb. each, were caught down by Saltmoor on the evening of Monday. The Leintwardine club waters have had scarcely any visitors, and things in that direction are remarkably quiet. Eighteen grayling were caught up the Clun, maggot fishing on Monday. The Corve and Ony have been fairly fished. A very sharp frost on Monday night, and a heavy fall of snow on Tuesday morning, suspended fishing operations for a time. Snow covered all the fields and roads, until Wednesday's sun melted it.—S. LUDLOW.

### Teme (Tenbury).

This stream still keeps in good order for fishing, still keeping clear, but low. A fall of snow was had in this part on Tuesday. Good sport has been had with the maggot, and some very fine fish have been taken with the grasshopper. There have been but few anglers out with the flies this week. In the water near the Teme bridge a very good lot of grayling were landed with the maggot. Some good sport has been had in the Eastham district. On Saturday a capital dish of grayling were landed with the maggot in the water near Little Hereford. A gentleman tried the water near Corn Brook, and with the grasshopper took a good basket of fine fish, averaging ½lb. each. The Kyre, Rea, and Ledwyche are in good fishing order, but low. A few good fish have been taken in the Kyre ; but little fishing in the Rea and Ledwyche.—WORCESTER.

### Trent (Alrewas).

There have been no reports to hand respecting the take of fish during the past week. The river is low and clear, and in good fishing order. The small quantity of snow that fell has had no detrimental effect upon the water.—ANON.

### Trent (Newark).

The water has been very low and clear all this week, and in pretty good condition for chub and pike fishing, but I have not heard of any very big catches having been had. Taking the week on the whole, it has been very uncomfortable for fishing, that is, as far as the weather was concerned, for it has been very raw and cold. We had some very sharp frosts three or four nights, with the wind in the N.E. ; but yesterday morning I noticed the wind had changed to the N.W., and there has not been much frost to speak of since. To-day (Thursday) there has been a heavy wind blowing—a pike day, without doubt, if the anglers were bold enough to venture out, and could succeed in keeping a firm foothold on the banks. These sharp frosts this week should drive the jack out of the streams into the deep holes in slack corners and eddies ; and they also should have the effect of rousing up the chub, and making them take kindly to pith and brains. I should say, under the present circumstances, these two fish will be the safest venture just now ; pike, livebaiting, or spinning, and chub, with pith and brains. Water now very low and clear ; in fairish form for the fish just named.—THE TRENT OTTER.

This week has been a blank to all our members. I thought Saturday a grand day, and with Mr. Slater as companion fancied myself in for a good thing ; but as it proved, my usual bad luck overweighted his usual good. We tried live bait, snap and gorge spinning, and dead gorge, but all of no use. There were eight members I know out, and every one had same tale to tell; the fish were there, for we saw more than one ; but they would not be tempted. Messrs. W. Lane and Chatterton tried the river on Monday. The former lost a grand fish ; he was never struck, but simply took the bait and went away with float and tackle. I know there was a fish in the same place last year, which would prove good exercise carrying home on a cold day. On Tuesday, Messrs. Dale and Chatterton tried a noted water lower down the Trent, but still no result. We shall not do any good now until we have a flush of water. No doubt the best game until then will be to try the chub. Any one wishing to see good samples of coarse fish may do so in our market any Wednesday or Saturday.—I have made no reference to the doings of the two other clubs.

### Trent (Nottingham).

News of sport this week has been very scarce. The river continues very low and clear ; clearer, in fact, than it has been for weeks past. A few chub and pike anglers have visited the lower waters, and at Fiskerton a good basket of the former was caught with bullock's pith and brains. The reserved reaches have been tried for pike, but these fish do not seem so numerous in the Trent as previously. So far they seem to prefer the streams to the backwaters. On Thursday night there was a slight downpour of rain, and the weather generally was boisterous and cold. Rain —or a sufficient quantity to produce a rise—is greatly required, and, until a rise comes, I am afraid sport will fall off in character. Last (Friday) evening there was a special general meeting of the North Wellington Association for a ballot of members. Apart from the river favourable reports of pike fishing reach me from the preserved lakes and reservoirs of the district.—THE MAN AT THE CLUBS.

### Wye and Derwent.

The weather has at last changed, for we have had some very sharp, frosty nights which has caused the grayling to feed much better, both at top and bottom, and several baskets of good-sized grayling have been landed, chiefly off the Chatsworth club water and the Darley Dale waters, both above and below Darley bridge. The best baskets have been made by D. P. Pearson, Esq., Sneinton, Nottingham, and several other anglers have been having fair catches, mostly with bottom fishing with maggots and worms. Cockspurs maggots are very scarce in this district now. Both chub, roach, and dace have been feeding very nicely lately ; pike have not fed so well during the past week. The dirty water which comes into the Derwent every day above Darley bridge completely takes the fish off the feed for about three hours, for fish will neither rise nor bite while this mine water is running into the river. Why do not the "Trent Board Men" see to these pollutions and get them stopped ? On Monday week there were seven of our members of the Matlock Bath Angling Association took a waggonette and a pair of horses to inspect Mr. Stephen Peach's (of Hulland Hall, near Shottle) trout hatchery ; on their return home, the waggonette was overturned, and several of them slightly injured ; Mr. Buxton and Mr. S. Smith being the most hurt. Weather to-day (Thursday) is very rough and boisterous ; rain expected. I have seen several grayling lately that have been quite full of spawn. Where could I get a quantity of good maggots, and what would the cost be ?—George James Eaton.

### The Wharfe (Yorkshire).

The frost has come at last, much to the delight of the grayling fishers, who have been anxiously looking for it weeks ago. "Watchet" was the first angler who availed himself of the change in the weather, so far as I am aware ; he went out last Monday upon the Otley Club water, and was rewarded by the capture of a nice dish of grayling, numbering six brace. Didn't the party who went to Burnsall last week wish that they had postponed their trip just six days, when, no doubt, the result would have been very different from what it was ? But angling, like many other mundane affairs, is composed largely of "ifs," and regrets do not in the slightest degree alter circumstances that *have* been. The weather is wonderfully fine for the time of year ; in fact, one can hardly imagine that the usually thick, murky month of November is now almost past and gone.—Francis M. Walbran.

## OF BAITS, AND WHERE TO FIND THEM.

Observing the interesting letter from Mr. A. D. Campbell on the above subject in your issue of 22nd inst., and having in my possession Brooke's "Art of Angling ; Rock and Sea Fishing, with the Natural History of River, Pond, and Sea Fish," 1740, I thought perhaps the following extracts on the subject might interest many of your readers :—

"Of Baits, and Where to Find Them.

"Of natural baits the worm is not the least considerable ; there are several sorts, but the largest is :—

"The lob-worm or dew worm. This is a proper bait for salmon, trout, chub, barbel and eels of the largest size. It is to be found in gardens and churchyards by the help of a lanthorn late on a summer's evening. In great droughts, when they do not appear, pour the juice of walnut-tree leaves mixt with a little water and salt into their holes, and it will drive them out of the ground.

"The brandling, gilt tail, and red worm are all found in old dunghills or the rotten earth near them ; but the best are found in tanners' yards under the heaps of bark which they throw out after they have done with it. The brandling is most readily met with in hog dung. These are good bait for trout, grayling, salmon, smelts, gudgeon, perch, tench, and bream.

"The marsh worm is got out of marsh ground on the banks of rivers, and is of a bluish color. It is a likely bait for salmon, smelts, gudgeon, grayling, trout, perch, bream, and flounder in March, April, and September, though they use it from Candlemas till Michaelmas preferable to any other.

"The tag-tail is of a pale, flesh-colour, with a yellow tag on his tail almost half an inch long ; they are found in *marled ldnd* or meadows after a shower of rain, and are a good bait for a trout if you angle for them after the water is discoloured with rain. And here you must observe that all worms should be well scour'd in moss that has been well wash'd and cleaned from all dirt and filth ; after it is wrung very dry, both the moss and worms should be put into an earthen pot, close stop'd, that they may not crawl out. This pot should stand cool in summer, and the moss should be changed every fourth day ; but in winter it should stand warm, and if you change the moss once a week it will be sufficient.

"Besides these worms that are to be found in the earth there are others which breed upon different herbs and trees which afterwards become flies. The principal of these are the palmer worm, the oak worm, the crab-tree worm, and the caterpillar. These are to be kept in little boxes with holes to let in the air, and they must be fed with leaves of the same tree on which they were found. These are good baits for trout, chub, grayling, roach, and dace.

"The earth-bob or white-grub is a worm with a red head as big as two maggots, and is soft and full of whitish guts ; it is found in a sandy light soil, and may be gathered after the plough, when the land is first broken up after grazing. You may know in what ground to find them by the crows, for they will follow the plough very close where these animals are to be met with. This is chiefly a winter bait, from the beginning of November to the middle of April, and is proper for chub, roach, dace, bream, tench, carp, trout, and salmon smelts. They are to be kept in a vessel closed stop'd, with a sufficient quantity of the earth they were bred in, and they will be ready for use all the winter.

"The clap bait is found under cowdung, and is like a gentle, but bigger. You must seek for it only on such land as is light and sandy, for it is much of the same nature as the earth-bob, and may be kept in wet moss for two or three days. It is an excellent bait for trout, but almost every other fish will take it.

"The cob bait, caddis-worm, and straw-worm are only different names for the same bait. They are found in pits, ponds, brooks, and ditches, and are covered with husks of sticks, straws, or rushes. They are very good bait for trout, grayling, carp, tench, bream, chub, roach, dace, salmon smelts, and bleak. The green sort are found in March, the yellow in May, and a third sort in August.

"The flag-worm or dock-worm are found in the roots of flags that grow on the brink of an old pond. When you have pull'd up the roots you will find among the fibres of it reddish or yellowish cases ; these you must open with a pin, and you will find a small worm longer and slenderer than a gentle, with a red head, a palish body, and rows of feet all down the belly. This is an exceeding good bait for grayling, tench, bream, carp, roach, and dace.

"The ash grub is a milk-white worm, with a red head, and may be had at any time from Michaelmas till June. It is to be found under the bark of an oak, ash, alder, or birch, if they lie a year after they have been cut down. You may likewise find it in the body of a rotten alder if you break it up with an ax ; as also under the bark of a decay'd stump of a tree. It is a good bait for a grayling, chub, roach, and dace."

The above concludes the author's remarks about worms, and is followed by all sorts of suggestions, from "hard sheep's blood dry'd upon a board and cut in pieces fit for the hook" down to "periwinkles taken out of the shell are good baits for roach in the river Thames, as are likewise shrimps uncased for the pike and chub."

Robert Moll,
Hon. sec. Norwich Angling Club.

## FISH CULTURE.

The secretary of the Howietoun Fishery states that upwards of ninety thousand yearling trout were delivered last season to all parts of Great Britain and Ireland, and that two consignments of trout ova and one of salmon ova from the fishery were forwarded to New Zealand successfully. He goes on to say :—

"Trout require careful preparation before they can be transported with safety, the time necessary varying from three or four days in the case of yearlings to as many weeks for large trout.

"The hatchery has proved most successful, and upwards of ten millions of trout ova are now annually incubated at the Fishery.

"All eggs are eyed on glass grilles, experience having shown the strongest embryos and healthiest fry are obtained by this method.

"The introduction of partially eyed ova into the market has proved of immense importance in economically stocking large tracts of water. So soon as the embryo is sufficiently formed, the ova should be laid down in gravel redds, contiguous to some small stream falling into the rivers or locks to be stocked. As all unimpregnated eggs are removed before despatch, no loss can occur from byssus, and all the expense and trouble of artificial hatching is avoided.

"Full information as to the situation and formation of redds will be forwarded on application.

"When streams, either from the quantity of sediment in the water, or from their liability to flood, are unsuited for partially eyed ova, they may yet be successfully stocked with fry ; but as in most natural waters the mortality at this age is very great, large numbers are required.

"Yearlings are, *par excellence*, the size for general purposes. They are strong enough to find their own food, thus avoiding the principal cause of mortality among fry, namely, starvation ; they are easily carried, and stand the journey well ; they accommodate themselves with the greatest facility to new water ; and they thrive so fast in ponds, that they will be found a very profitable investment.

"Two-year-olds are recommended where coarse fish or large trout already exist in the water, or where expense is no object and sport in the shortest possible time is required.

"The difficulty of conveying trout increases with the number of hours occupied on the journey. Intending purchasers are requested to state their nearest railway station, and the exact distance from it to their water. From the experience of previous years, it has been found that although there is no difficulty in carrying trout in iced water for any journey not exceeding twenty hours, unless the water which is to be stocked is of a similar temperature some loss will arise from inflammation of the gills. Trout will, therefore, only be forwarded in cold weather. The fish are sent by express passenger trains in tanks of two sizes : 40 gallons, weighing between 5cwt. and 6cwt. ; and 18 gallons, weighing about 1½cwt. It is particularly requested that a lorry or other suitable cart be sent to meet the fish on arrival.

"Yearlings vary from 2½in. to 5in. from November to June, and two-year-olds from 5in. to 8in.

"For long journeys, especially to the South of England, trout should be ordered early in the winter, as they can then be transported at less expense.

"All communications to be addressed to

"J. R. Guy, Secretary,
"Howietoun Fishery, Stirling."

[We can recommend the Loch Leven trout for English streams. Last season we caught several in the Darenth ; they were very handsome fish, fought well, and had grown rapidly. We advise our readers to have nothing to do with American *Fontinalis* ; they are useless for English rivers—do pretty well in small ponds when food is abundant, but will not breed.—Ed.]

## CARP FISHING.

"R. A. B.," in his recent note on "Carp Fishing," has shown how such should *not* be done. Perhaps the following contrast may be of sufficient interest to make it as pleasing to your correspondent as it undoubtedly was to myself :—

A few weeks since I was favoured with permission to fish a private pond well stocked with large carp. The owner of it thought it a waste of precious angler's time to attempt to hoax so capricious a feeder, and so cunning a biter, the more so as many adepts at the art had been previously disappointed. The day of my adventure was rough, though warm. The wind at times was almost sufficiently strong to blow a man out of his hat ; but towards evening it lulled, and the carp began to move, jumping clear of the water in their well-known vigorous, if not graceful, manner.

I was fishing in about 4ft. of water, with two rods resting on pegs, as for bream. I had ground-baited with soaked bran and ordinary gentles, and had placed on each hook two or three wasp grubs. These I always find appreciated by the crafty *Cyprinus carpio*. To complete the sweet-toothed dainty, I took a small box of honey, and, without touching the bait with my fingers, thrust it into the box, and coated it with the manipulated nectar. I waited and watched with the superabundant, or rather superhuman, patience necessary on such occasions, and had almost concluded that my patron's prognostications were about to be fulfilled, when my upper or left-hand float, lying flat on the water, began to glide along the surface in a very suggestive and gratifying manner.

I struck, not "ile," as the Yankee would say, but a game fish, which rushed upward and onward as if eager to cut my acquaintance. I had hardly felt the grip of my first fish when float No. 2, lying at length on the right, began to move in the opposite direction to the struggling captive, which already questioned my right of deprivation. "A bird in hand is worth two in the bush," and a fish on the hook is worth two in the water. I resolved at once to let my second bold epicure take his hook and his chance. The rod was firm, the line was good, and soon 60 yards of it formed a miniature cable between the fish and the shore. My quarry was evidently steeled to the encounter, and soon disappeared round a bend in the bank.

"Frailty, thy name is woman !" My first-hooked carp pursued the uneven tenour of his way, and showed signs of exhaustion. I looked down at my companion reel and saw that but few yards remained of the rapidly-running line. I had given it the previous day to a fair enthusiast to place on the winch, and the idea that perhaps it had not been properly fastened, and the fear of losing it altogether, aroused me to a sense of danger and change of action. Seizing the line with the right hand, while holding my bending rod with my left, I placed it between my teeth, and held on with a nodding grip of desperation whilst I successfully grassed my first hooked and now defeated opponent. I then brought his roaming companion nearer home, and in a few minutes he joined his mate on terra firma. Their well-balanced figures showed their fraternal judgment—the one weighing nearly, and the other just over, 6lb.

F. Miller.

# CLUB REPORTS.

## ACT ON THE SQUARE SOCIETY.

The members of this society, which is, I believe, the only society in this end of London which does not weigh in on Sundays, has removed its quarters from Ye Old Ferrie Boat, at Tottenham (after three years and a half), to the Duke of Norfolk, Norfolk-street, Globe-road, Mile End, where they will be glad to meet brothers of the angle on any Thursday evening. In justice to our late host, Mr. H. Day, it is only fair to state that he did all that lay in his power for us without receiving anything for his trouble, but it was found that the distance was too far from London for most of our members either to weigh in fish or attend the meetings; consequently it was resolved to remove and see if we could not have better meetings, and also try to infuse new blood, to rouse some of the old members from that state of lethargy into which they have fallen of late. We fish our next match to-day (Saturday), from Carthagena Weir to the Fish and Eels, for a prize presented by our respected chairman, Mr. H. Chapman.—A. George.

## THE ANGLERS' ASSOCIATION.

Special Notice.—In consequence of the concert in aid of the funds of the Anglers' Benevolent Society being fixed for Monday, Dec. 1st, the usual monthly meeting of the committee will be postponed to Wednesday, Dec. 3rd, at 9 p.m.—R. Ghurney, sec.

## AMICABLE BROTHERS ANGLING SOCIETY.

The following members weighed in fish:—Mr. Medcalf, one jack; Mr. Harding, roach. The annual supper will take place in the club-room on Monday. Dec. 1st, at nine o'clock sharp. The annual distribution of prizes will take place on Monday, Dec, 8th.—J. Worledge, sec.

## BERESFORD ANGLING SOCIETY.

The usual weekly meeting of the above society was held at the club room, Grove Tavern, Camberwell, on Thursday, the 20th inst. Chair taken by Mr. W. R. Burgess. Minutes of the last meeting were read and confirmed; after which it was decided to call a special attendance for the following week to consider the adjourned prize list, and other important business.—H. W. Barrett, sec.

## CENTRAL ASSOCIATION OF LONDON ANGLING SOCIETIES.

The next delegate meeting will take place on Friday, December 5th, at 9 o'clock.—J. A. Fitch, sec.

## CITY OF LONDON ANGLING SOCIETY.

On the 16th Mr. Castell weighed in roach from the Roding, just saving the club from a blank. On the 23rd we had three members out, and we were again saved from a blank by Mr. Nitz weighing in a small jack from Pulborough.—Cas.

## THE CLAPTON.

The usual weekly meeting was held at the Swan Hotel on Monday last, a committee meeting being held at seven o'clock, prior to the general meeting at eight. It being the monthly smoking concert night, there was a capital muster of members and their friends. Mr. G. H. Field in the chair. The secretary reported having sent out about a hundred circulars to members, &c., apprising them of the outing fixed for the 6th prox. He had received some letters in reply; but he hoped that members present had some suitable water to recommend. The Bures, Chelmsford, and other waters proposed were considered too far away, so it was decided to fish the Lea on the towpath from the Rye House to Ware, making Mr. Longmale's, the Red Lion Hotel, St. Margaret's, the headquarters, leaving Liverpool-street Station at 8.8 a.m., calling at Hackney Downs 8.19, Clapton 8.22, reaching St. Margaret's at 9.12; cease fishing 4 p.m.; one rod each; go where you please within above limit. A handsome prize for heaviest jack, roach, and perch. A circular giving full particulars will be sent to each member. Mr. Short weighed in chub from Angel-road. Other angling matters were discussed, and so closed the business of the evening. The concert then followed, which Mr. H. J. Tibbatts opened most excellently with "Nil Desperandum." Prominently noticeable was the very artistic singing of several members of the Clissold Smoking Concert Club, viz., Mr. Irwin, "Drinking"; Mr. Chapman, "Come into the Garden, Maud," deservedly encored and kindly responded to with "The Anchor's Weighed." Later in the evening, this gentleman, by special request, delighted his hearers with "Then You'll Remember Me." Mr. Ibbetson sang very effectively, "True, True, till Death," and for an encore substituted a thoroughly well-rendered recitation. Mr. Colyer (hon. sec. of the Clissold) was very funny in the topical comic song, "Fishing for Truth in a Well," and later in the evening gave another equally funny song. Mr. Bendon caused roars of laughter by a very comic lecture on "Hey-diddle-diddle." Mr. Shean sang "The Boatswain" with good effect. Mr. Parker, jun., delighted the members with "Village Chimes" on the fairy bells, and in response to an enthusiastic demand for an encore later in the evening gave "Variations on Scotch Airs" on the same instrument, which was highly appreciated. Mr. Ghurney sang capitally "Jolly Nose"; and Mr. Meade was very funny with "Rheumatics," accompanying himself on the piano. Mr. Tregenza sang two very good comic songs with great success. Mr. Parker, sen., gave a humorous recitation, "The Yorkshireman." Mr. Pratt, who possesses a very fine and powerful voice, was much applauded in his song, Mr. Kidd was deservedly encored in the funny song, "I knew a Nice Old Maid." Mr. Robinson much pleased the company with "Give me the Man with Honest Heart"; and Mr. Beck's "Old Simon the Cellarer" was rendered in his usual pleasing manner. The "Health of the Visitors" was tendered in a neat little speech, responded to by Mr. Colyer. The "Health of Mr. Winterbottom" for his kindness and ability in presiding at the pianoforte, was warmly responded to; and a very hearty vote of thanks to the chairman, followed by the "National Anthem," brought a most enjoyable evening to a satisfactory close. —Henry Howse, hon. sec.

## DORSET ANGLERS SOCIETY, MANCHESTER.

The members of the above society held their annual dinner at their new club, house, the Radnor Hotel, Radnor-street, Hulme, on Wednesday, Nov. 12. Dinner was on the table at eight o'clock, when there was a capital muster of members and friends to partake of the excellent catering of Host and Hostess Newsham, who supplied the courses in rare style for the occasion. On entering we were most agreeably surprised to see the manner in which our host had decorated the large room for the occasion, the walls being covered with banners and Union Jacks, also a few specimen-cases of our members' angling skill; the table being stocked with choice flowers, evergreens, and gold fish. After doing full justice to the dinner and dessert, we commenced the evening's harmony, with Mr. Rathbone, president, in the chair, Mr. Foster, vice-chairman (in the absence of Mr. Goss, vice:president), with the usual toast of "The Queen and the Royal Family," followed by a choice selection of overtures and operatic airs by Mr. Watson (violin) and Miss Watson (piano), interspersed with songs by members and friends. As it was now among the small hours of the morning we concluded with the toast of "Our Host and Hostess," with musical honours. After thanking the Chairman and Vice-Chairman for their kind services during the evening, we dispersed to our homes well-satisfied with everybody.—W. Hand, hon. sec.

## GLOBE ANGLING SOCIETY.

Only a few fish have been weighed in during the last fortnight by the members of the above society, which were as follows:—Mr. H. Lake, roach 1lb. 5½oz., dace 9oz., one small jack 3lb.; Mr. L. Harrington, roach 2lb. 1oz.; Mr. F. Lawrence, roach 8oz. The usual monthly concert, in aid of the funds of the Anglers' Benevolent Society, was held at the headquarters on Weduesday evening, the 19th inst., and proved very successful. The chair was ably filled by Mr. L. Harrington, faced by Mr. H. Woolner, who were well supported by a host of talent, both vocal and instrumental. Mr. Grace presided at the harmonic flutina, and Messrs. White and Abbott on the violin. Special mention may be made of Mr. Medson, who sang in splendid style "She Wore a Wreath of Roses" and "Hark, the Drum." Mr. Frank Ottoway, the inimitable bone player, also gave a surprising performance on the bones, which was unanimously declared by the company to be very clever. Mr. W. Brown, in his usual easy manner, gave the "Big Ben Tower"; Mr. Vaughan, "Our Jack's Come Home To-day"; Mr. G. Brown, "As Onward we Travel"; Mr. H. Mills, a very amusing comic song entitled, "Crouch End Hill," and on being encored gave "The Dear Old Times Over Again"; Mr. Yewell, "I Have Been and Got Married To-day," in good style; Mr. Frankham gave "The Frenchman"; Mr. Wade, "The Black-Eyed Gaffer," a very comic negro entertainment, and a solo on the banjo; Mr. H. Woolner sang "Ehren on the Rhine," in excellent style; Mr. L. Harrington, a comic recitation, and many others keeping it up till 12.15 a.m. A few remarks from the secretary in support of the Anglers' Benevolent Fund, and a vote of thanks to the chairman and vice-chairman, terminated a very comfortable evening.—J. J. Holmes, sec.

## GOLDEN BARBEL.

On the 2nd inst. Messrs. Harper, Chapman, Bigsby, Hall, Stanton, J. Green, and J. Jones had a nice show of roach, dace, and perch from the Thames and the Colne. On the 9th inst. Messrs. J. Jones, Bigsby, J. Roach, Harper, Hall, W. Roach, Crow, J. Stanton, and J. Green exhibited roach, dace, perch, and jack from Windsor and the Grand Junction Canal. On the 16th inst. J. Green, roach and dace; J. Roach, dace and roach; Hall, roach; Bigsby, roach and dace. On the 18th inst. Mr. F. Kemp visited Richmond, and succeeded in getting 14lb. of nice roach and dace. On the 23rd inst. J. Roach had roach and dace; Chapman, roach; E. Hall, roach; T. Bigsby, roach and dace; and J. Stanton roach from the Thames and the canal. "Our boys," by the above, are getting back to their old form, and now the cold weather has set in I hope they will have some good sport from some of the old shops.—Pixie.

## GOOD INTENT ANGLING SOCIETY.

The members of this club fished for the remaining prizes on the 23rd inst., go where you please, the result being all the prizes taken. Mr. Snook, 1st; Mr. Maybury, 2nd; Mr. Solomon, 3rd, &c. There was a good attendanee of members on the 25th, and it was decided to fish for our Christmas prizes at Broxbourne, pegged-down, on December 14th. Our prize list will be very heavy, and will be thrown open to all members, honorary included.—R. Murphy.

## GREAT NORTHERN BROTHERS ANGLING SOCIETY.

On Nov. 23rd Mr. G. Watling weighed in 9lb. 1oz. roach and dace; Mr. E. Smith, dace; Mr. Parrett, jack, 2lb. 5lb.; Mr. King, roach; Mr. J. A. Fitch, perch.—J. A. Fitch, sec.

## GREAT YARMOUTH PISCATORIAL SOCIETY.

The only business to record this week at the meeting on Tuesday was—the secretary reported that J. Priske, Esq., of London, caught, whilst fishing for roach at Surlingham Ferry, a nice trout of ½lb., clearly showing that trout will thrive in the waters near here, as no mention has been made of any trout being put in these waters for two years, when some were tried as an experiment. The meeting in respect of endeavouring to get the same privileges extended to provincial societies in the Eastern Counties the same as the metropolitan will be attended by the secretary, as representing the Yarmouth Piscatorials, and it is to be hoped good results will follow.—J. Lark.

## GRESHAM ANGLING SOCIETY.

The usual weekly meeting of the above society was held on Tuesday evening at the Mason's Hall Tavern, Mason's Avenue, Basinghall-street, Mr. Bentley in the chair The minutes of the last meeting were read and confirmed. The secretary laid before the meeting the diploma awarded to the society at the International Fisheries Exhibition. Mr. Parker proposed and Captain Alfred seconded Mr. Thomas H. Sowerbutts as a member of the society. The ballot for this gentleman will be taken on the 9th prox. In the report of the last meeting it should have been stated that Mr. Lake exhibited a very fine take of perch, and that his friend, Mr. Goddard, had a very fine specimen of an 8lb. jack. The arrangements for the entertainment to take place on the 9th December are being rapidly proceeded with by the sub-committee appointed to carry them out—viz., Mr. Parker and Captain Alfred. Notices will be sent to the members of the society, and a goodly attendance of members and friends is confidently expected. The chairman, having brought this and other matters to the notice of the meeting, was awarded a hearty vote of thanks, and the business of a very pleasant evening brought to a close.—H.

## HAMMERSMITH UNITED ANGLING SOCIETY.

On Thursday, Nov. 20th, we held our first smoking concert, and a most successful one it was, both in point of numbers present and in the talent displayed. Too much praise cannot be given to our hon. secretary, Mr. H. G. Penney, for the care and trouble he was at to bring about this success. The usual business having been disposed of, Mr. Vincent commenced the evening's entertainment with some well-executed operatic selections on the piano, for which he was justly applauded. Singing was then commenced by Mr. Reynolds with "The Old Sacristan," and was well sustained during the evening by Messrs. Elms, Peachey, Penney, Toms, and others of our own society; and by Messrs. Turner and Burgess, visitors, the former gentleman being greatly applauded for his excellent rendering of "Come into the Garden, Maud," and "My Sweetheart when a Boy," and the latter-named gentleman for his comic songs, including a new one entitled, "Most Decidedly Not"; but more especially was his rendering of that fine patriotic song, "Balaclava," cheered to the echo in the most enthusiastic manner, as the recit[illegible] of such heroic deeds by our own gallant countrymen ever will be. Banjo duets were given by Mr. Cobb and Mr. Marstin, of the Brompton Club; and by the former gentleman, "The Ignoramus Nigger," which caused much laughter; songs by Mr. Cecil and Mr. Moody, also of the Brompton, and by Mr. Dobell, of the Cambridge Society; recitations by Mr. Peachey and Mr. Arnold, and a comical stump oration by Mr. Gower. Mr. Burbidge, of the Brompton, responded to a vote of thanks passed to our visitors for their presence and assistance, and from his remarks we gathered they were pleased with the evening's amusement, and will favour us by attending on a future occasion, and we most certainly shall return the compliment to those clubs who visited us whenever they desire to have visitors. Among the gentlemen present were Mr. Philip Geen, to see whom among us again we were all delighted. With him was Mr. Parker, of Handboro' Mill, near Oxford (this is the spot for big roach and dace and gigantic perch; but, oh! ye of "Phrygian Cap" tendencies, it is private, strictly so, and you have no right there; possibly an application to Lord Randolph Churchill's brother might decide your chances of a day's fishing there). We also had visitors from New Windsor, besides several of the inhabitants of this locality, to see whom at our concerts we are always pleased, as on these occasions the room is open to anyone caring to be present.—H.

## HIGHBURY ANGLING SOCIETY.

For the last two or three weeks our members have not met with their usual sport among the finny tribe, the weighings in being much below the average. I am happy to report, however, that on the 24th inst. Mr. Devonshire succeeded in landing a splendid jack of nearly 17lb. weight, which has been placed in the hands of the taxidermist for preservation.—J. E. Wheatley, sec.

## HOXTON BROTHERS ANGLING SOCIETY.

Twenty members visited the Stort on Nov. 23rd to fish for eight prizes, the boundary selected being from Roydon Lock to Harlow Lock. The takes were very small, five prizes only being taken, as follows :—Messrs. J. Morgan (jack), J. Osborne, J. Hayward, J. Huntley, and M. High with roach. A number of fish were taken, but had to be returned to the water. Mr. R. Ghurney had jack from the Lea. The Christmas prizes will be fished for on Dec. 14th.—R. Ghurney, sec.

### INDEPENDENT JOVIAL ANGLING SOCIETY.

The members of the above society fished at Richmond on the 22nd for six prizes, among them being one given by Mr. Marjason, and another by Mr. Bingley. Only four prizes were taken, the water being very low and bright. The following were the winners :—Mr. J. Brain, 1st ; Mr. C. Smart, 2nd ; Mr. H. Howard, 3rd ; Mr. H. Cann, 4th. The remaining prizes will be fished for, with others we have in hand, the when and where to be arranged at the next meeting.—C. Smart, sec.

### IZAAK WALTON ANGLING SOCIETY.

Mr. G. Bliss won Mr. J. K. Charter's prize. The half-yearly distribution of special prizes took place on Wednesday, the 26th inst., on which occasion the members indulged in a supper. The chair was occupied by Mr. G. Manning ; the vice-chair, Mr. J. Twohey. After the cloth was cleared, the chairman presented, in his usual genial manner, the various prizes to the different winners ; at the conclusion of which, several members gave specimens of their vocal powers, which brought a very pleasant evening to a close. Four special prizes, given by Messrs. W. Clarke, A. Turner, B. Crook, and G. Bliss, will be fished for on the 14th December, at Great Marlow : all kinds weigh.

### NORTHUMBERLAND ANGLING CLUB.

The members of the above club held a social and smoking concert in the Douglas Hotel, Newcastle-on-Tyne, on Friday evening, 21st inst. The chair was occupied by the president of the club, Mr. W. S. Vaughan, and the vice-chair (in the absence of the vice-president) was filled by the honorary secretary to the club, Mr. J. Harbottle. There was a good "beat up" of members and other angling friends. Mr. Atkinson, of Stocksfield, contributed a capital paper on "Salmon Angling in the Tyne," which found an acceptable place some time ago in the columns of the *Field*. The secretary's paper on the "Romance of Angling," and his original song for "The Speshul Occashun," met with an enthusiastic reception. The health of Mr. T. W. Wraith, the winner and holder of the president's challenge for the year, was drunk with all honours. Messrs. Hutchinson, Duncan, Beall, and Wraith rendered some capital songs, and Messrs. Capper and Parsons gave some angling episodes. Mr. A. Bell brought down the house with the favourite song, the "Fishin' Klub," and also in his singing of "The Dutchman." The president of the Newcastle Angling Club, Mr. Dendy, responded to the toast of "Our Guests" in a capital speech, and rendered with much feeling the recitation, "Victor Galbraith." Mr. J. J. Pace, secretary to the Newcastle Angling Club, contributed to the harmony of the evening by singing the song, "Simon the Cellarer." "Auld Lang Syne" and the president's health brought to a close one of the most enjoyable evenings ever held by the club.—J. H., hon. sec.

### PECKHAM BROTHERS ANGLING SOCIETY.

The members of the above fish a match for the cup on the 30th, at Walton ; train leaves Vauxhall at 8.50. On Dec. 7th, at Kingston, for seven prizes. Messrs. Page and Durant, out with Arthur Messenger at Teddington on the 23rd, had 12 dozen fine dace ; no other member weighed in. I hope all the members of this society will be present at the Foresters' Hall on Monday next. Our host gives his annual "beefsteak supper" on the 4th. Number of tickets limited.—Gadfly.

### THE PISCATORIAL SOCIETY.

The usual weekly meeting of this society took place on Monday last at Ashley's Hotel, Covent-garden. Amongst those present were Messrs. Pattisson, Meyer, Gray, Jesse, Brown, Huggett, Booker, C. C. Blundell, Fennings, Batt, Aldridge, Watson, Sparrow, Goodger, Bennett, Foreman, Adlington, Harden, Gillatt, J. Lander, hon. sec., &c. Mr. Batt was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed. Mr. Lecluse during the week weighed in a nice jack from the Thames, nearly 7lb. in weight. Some little time ago this gentleman weighed in one between 8 and 9lb., also from the Thames. Mr. Lecluse is to be congratulated, as these fish are few and far between. It was announced that a committee meeting will take place on Monday next, when the details of the next smoking concert will be arranged. The musical friends of members are specially invited, as on previous occasions. Mr. Jesse suggested that it should be a programme evening. The committee will consider this at their meeting. The chairman, Mr. Batt, rose and proposed the health of the successful anglers, coupled with the names of Mr. Huggett and Mr. Fennings, the members cordially joining in same. Mr. Huggett, in thanking the members for their kindness, thought that on the present occasion he deserved to be toasted as the unsuccessful angler rather than the successful one. His show was very small ; but then small shows of fish often required more taking than larger shows. The fish (chub) bit pretty well in the morning, but in the afternoon refused to move. The cheese fishing is over for the season on account of its becoming too hard when immersed in the cold water. He again thanked the gentlemen for their kind wishes. Mr. Fennings worked hard, but with poor success. It was the first time he had shown fish from private waters. He found it fearfully cold punting about by himself. Mr. Pattisson related some of his experiences in fishing the Hertford water. On one or two occasions lately he has taken 10lb. to 15lb. of roach and dace, some of the dace being remarkably fine. He also took two jack, one 3lb. and one 2½lb., with paste on fine roach tackle. Particulars of a show of jack by Mr. Foreman (who arrived late) will be given next week. Mr. Harden rose to propose a new member, who was duly seconded by Mr. H. B. Brown, viz., Mr. Neish, of 66, Watling-street. *On dit*, that this gentleman, if elected, will be a great acquisition, being a celebrated trout and salmon angler. The ball circulars are now issued. Tickets can be obtained of the various stewards, Messrs. Arter, Blamey, Blundell, Brown, Fennings, Foreman, Gray, Harden, Hatfield, Robinson, Perelli Rocco, Sachs, and Wheatstone. The chairman proposed "The Continued Prosperity of the Piscatorial Society," which, as usual, was most cordially responded to. Mr. Gray, in a few well-chosen words, proposed "The Health of the Chairman," who had carried out the duties in so efficient a manner. Mr. Batt briefly replied, and the business of the meeting was brought to a close.—T. H.

### PORTSMOUTH WALTONIAN ANGLING SOCIETY.

The season now being over for trout and salt water angling, the Waltonians have been visiting their old quarters at Chichester, but what with the lowness of the water and the cruel easterly winds of late, there has been no sport worthy of record. Thursday last was a red letter day in the annals of the club, Lord Henry Scott, of Beaulieu (Hants), having given them permission for a day's pike fishing in Sowley pond, an immense piece of water extending over 100 acres, situated on the Beaulieu Estate. Accordingly, about 30 of the members availed themselves of the opportunity, and left Portsmouth town station at early dawn for Lymington, where conveyances were ready to take them on to the scene of action ; punts were provided, and everything went off jolly. There was capital sport, and considering the shortness of the days at this time of the year, everyone was perfectly satisfied with the outing, arriving home at their club-room about a quarter past nine, when the victors were declared : Mr. Ritchie taking the largest pike, weighing 29½lb. ; Mr. Butler, jun., the second, 22½lb.; and Mr. Fulljames the third, 13lb. There was also a quantity of smaller pike, averaging from 2lb. to 8lb. The fish were in excellent condition, and the two largest have been sent on to Mr. Saunders, of London, to be set up, and will be hung in the club-room among its other trophies. Before the business of the club terminated, a vote of thanks was accorded to Lord Henry Scott for his kindness in granting the use of his pond, and also a similar compliment to Mr. A. L. Emanuel, the chairman of the society, for the genial and attentive manner he carried out all the day's arrangements.—Daggerwood.

### RODNEY PISCATORIALS.

On the 23rd inst. Mr. C. Grant weighed in roach from Shepperton ; Mr. C. A. Grant had perch from St. Margaret's ; Mr. R. Smith also had perch from the same water ; Mr. Flower had perch from Roydon. On the 30th inst. a competition will take place for prizes given by Messrs. R. Chantry and Diggins. This being a special competition, the members present during the last two weekly meetings have decided that all competitors meet on the Eton side of Windsor Bridge as soon as time will permit after the arrival of the first train from London on that date, and fish from Windsor Bridge to Surley Hall. The fish taken this day will also be entitled to compete for the gross weight prizes given by Messrs. Hughes and Dodd, for the month of November, in addition to the prizes given by the afore-mentioned gentlemen for this date. A special meeting is called for Wednesday next, the 3rd December, to consider certain propositions in reference to revising several rules of this society, and the election of officers. Members not present on that evening must be contented by the business done by those that are present. The decision to be final till the end of this season. Members having any complaint to lodge are requested to do so on this occasion, when all members are summoned to be present, and let those members present decide if such complaints are just or not. On this occasion business of the society will be the sole business of the evening.—Pixie.

### ROYAL GEORGE ANGLING SOCIETY.

Although the 23rd inst. was a very cold day, a number of our members had courage enough to be up early and at their work on the river. Messrs. Rider, Palmer, Hewett, Guynan, Carter, Sinclair, and Parsons all did fairly well, the takes varying from 7lb. to 2lb. roach and dace. Mr. Wood had a show of chub from the Upper Thames. To-morrow (30th) the members fish for a handsome prize, given by Mr. Csomor, roach only to weigh. On Dec. 7th we fish our Christmas sweepstakes, the conditions to be arranged on the next meeting night, when we hope to see a good muster in the room. Our next "smoking concert" will take place the Tuesday before Christmas, when the successful competitors will receive the prizes won by them in the sweepstakes.—W. H. Rider.

### STAINES ANGLING CLUB.

The members of the above club turned out on November 23rd to fish for jack, and only four succeeded in taking fish—Mr. H. Biddle, one jack 2lb. 3oz. ; Mr. F. Biddle, 1lb. 10oz. ; Mr. A. Palmer, one jack 1lb. 13oz. ; Mr. Edward Butterfield, three jack 5lb. 10oz. The prize not being taken, the members will continue the same on November 30th. I hereby give notice to our London anglers that we have altered our lodge night from Monday to Saturday evening, when we shall be most happy to meet any brother anglers at the Waterman's Arms, Church-street, Staines.—F. Sykes, sec.

### STOKE NEWINGTON ANGLING SOCIETY.

The members of the above will fish for three prizes at St. Margaret's on the 30th inst. ; one prize for the heaviest gross weight of jack, the other two for the heaviest gross weight of any kind of fish.—T. Gretton.

### WALWORTH PISCATORIALS.

Several of the members competed on the 23rd for the prizes offered for competition on that date by Messrs. Sutcliffe and Mawbey. This being an open competition in public waters, the competitors visited various parts of the country in hopes of getting fish. Those that travelled far from home fared worse than those who visited Father Thames near home ; and at 10.45, the time appointed to decide the winners, Mr. Delhaye, sen., who had passed the day with Finch at Twickenham, was declared the winner of the first prize with seven dozen nice roach weighing 20lb. 12½oz. ; Mr. J. Bedford came second with roach from the Lea, and Mr. Hibble third with roach from the Thames. The next competition will take place on December 11th for prizes offered by Messrs. Linstead and Mawbey, the conditions to be decided at the meeting held at headquarters on the Thursday previous to that date.—Pixie.

### WELLINGTON.

The two prizes not taken on the 16th were fished for at Shepperton on the 23rd inst., Mr. Hopkins winning the 2nd, and Mr. Wright the 3rd prize. Next Wednesday will be half-yearly night, when members are requested to attend early. The special prizes will be distributed on Wednesday, the 17th December. A supper has been arranged for this occasion at 7 o'clock punctually, for which I shall be glad to receive members' names as soon as possible.—W. W. Alexander, sec.

### WOOLWICH INVICTA ANGLING SOCIETY.

Mr. F. Latham and Mr. B. Cook of the above society, together with Mr. J. Shipston of the Woolwich Brothers Angling Society, fishing with H. Spiers at Twickenham on the 23rd inst, had a very handsome take of roach—Mr. Latham, weighing 12lb. ; Mr. Shipston, 9lb. ; and Mr. Cook, 5lb. The fish, though not very large in quantity, were a very nice average lot, going ½lb. to 1lb. each.—F. Latham, hon. sec.

Poachers in the Salvation Army.—The poachers of Barnard Castle are fruitful of expedient. If I confess that I have a friend among them who occasionally informs me of their proceedings, when such information is not likely to be detrimental to their interests, I hope my readers will not run away with the idea that I mix in bad company, and am generally a disreputable member of society. My connection with the Barnard Castle poachers is indeed of a shadowy description. Far from aiding or abetting them, I have a holy horror of the whole practice, and I should, therefore, make a capital county magistrate. Well, I'm told that a week ago a party of these individuals had been out fishing, and in ways well known to poachers, had obtained a fine lot of fish. These were stowed away variously, being tied round the bodies or suspended down the trousers legs of the gang. It was a Sunday morning, and several policemen were about, so that the poachers were somewhat dubious of running the gauntlet safely. It was almost certain that they would be challenged by some "active and intelligent" officer. While they were in the midst of the discussion, however, and when no plan of action yet presented itself, there came afar off sound of the drum and the fife—the modern accompaniments of religion. The gang were simultaneously inspired. They would join the Salvation Army, and putting on long faces, and singing lustily, they joined forthwith. Anyone paying particular attention would have seen that the most sanctimonious-looking of that army, walking stiffly and awkwardly, dropped out at various points on the march, and did not return. They were on a different errand entirely. They wished to conceal their ill-gotten spoil.—"Spectator" in the *Darlington Times*.

Although more than a million copies of *Cassell's Popular Educator* have been sold, this remarkable work is still as largely in demand as ever, and the publishers have made arrangements for re-issuing it in serial form during the present month. The secret of its ever-growing popularity seems to be that it is so framed as to meet the requirements of every class of learners. Testimonials from schoolmasters, mechanics, artisans, farm labourers, and persons in every position of life, speaking of what this unique work has done for them, are continually reaching the publishers. Mr. Thomas Burt, M.P., does not hesitate to acknowledge how much he owes to the *Popular Educator*, which has been recently characterised by a leading educational journal as "a School, an Academy, and a University in one." Part I. will be published on the 25th inst.

## THE SALMON FISHERY LAW.—IMPORTANT DECISION.

At the Bridge Hall, Barnstaple, before W. P. Hiern, Esq. (chairman), and Sir Arthur Chichester, Bart., Chas. Stribbling, Dan Moxon, Henry Skerry, and John Kempe, fishermen, were summoned for using a net in the close season, capable of catching salmon. Mr. Bosson appeared on behalf of the Conservators; Mr. J. Thorne (of the middle Temple) for the defendants. The case was brought to test the powers of the Conservators under the 36th section of the Salmon Fishery Act, 1865. The section provided that any person "using" a net or other instrument or device for "catching salmon" without having a proper license for the same, &c., shall be liable. The real question at issue was whether after the salmon close season the fishermen had a right to use their salmon nets, or any nets that would catch salmon, for any fishing purpose whatever, and if the Conservators succeeded in the case it would be ruled illegal to cast any net into the river after close season. Mr. Bosson pointed out that the license for the salmon net ended in September, and, therefore, if it was proved that the salmon net was used in October it was used without license. This was the first case taken under the section, and if the Conservators succeeded the fishermen would have themselves only to thank, for it was well known that since the close season tons upon tons of salmon had been taken from the Taw and Torridge. Mr. Thorne objected to this as being irrelevant. Mr. Bosson said that whatever decision the Bench came to there would, he believed, be an appeal. P. C. Bastard, water bailiff, stated that on the 29th October the defendants cast a net in his presence in Heanton parish, and drew two salmon and some other fish. The salmon were returned to the water. The season for catching salmon with the net had ended. After a few questions to the witness, Mr. Thorne very ably reviewed the law in favour of the defendants. He argued, in the first place, that the men were not trying to catch salmon, and that they were only doing what had been the custom within living memory. Secondly, they could not possibly do what they were doing with a proper license because no license was granted or was in existence giving permission of such thing. It would be a manifest absurdity to convict a person for fishing without a license when it was shown that it was impossible to get a license of any sort. The Act of Parliament did not intend the view taken by the prosecution. Prior to the Act of 1861 anyone could take fish of any sort without hindrance; the Act of 1861, with a view to protect salmon, divided the year into a close and an open season, and made it illegal to take salmon during the close. Anyone could prosecute, but it being the duty of all to see to this protection, no one in particular did so. The Act of 1865 provided machinery in the shape of Boards to see that the law was carried out, but funds were necessary, and the license was instituted with a view to raise funds. The Act of 1861 provided for proceedings and penalties for catching salmon in the close season, and the Act of 1865 gave no additional powers in this direction—it only forbade fishing in the open season without a license. The Conservators seemed to be under the impression that the Act of 1865 gave them extra powers extending to the close season, which, if they were given, would have been much more plainly stated by the Legislature. He quoted from Justice Blackburn, in the case Lyne and Leonard, to show the soundness of this position—that the license had no effect and gave no powers to the Conservators in the close season, beyond those in the Act of 1861. Justice Blackburn said —"The object of granting licenses was to obtain sums of money to carry into effect the Salmon Fishing Acts, and it is only fair that those who benefit by the protection should bear the expense of it." Another point was with regard to the penalty. The Act provided that a person found fishing without a license could be fined "double the price of the license." The license was to be the measure of the penalty, but no licenses were granted for the close season, and how could they apply the measure of the penalty in this instance? The Act of 1865 provided for the punishment of fishing without a license when a license could be got; the Act of 1861 provided for the punishment of taking or attempting to take salmon during the close season. The proceedings were under the Act of 1865, and no attempt had been made to show that the defendants, in the presence of the water bailiff, fished for salmon or attempted to break the law. Mr. Bosson replied to Mr. Thorne, after which the Chairman said the Bench saw no great difficulty in this matter, and they had decided to dismiss the information. It seemed to them that the Act of 1865 was to be read with, and according to, the tenour of the Act of 1861, and that being so the section in question did not apply to the case before them. The following section also seemed to help them:—A penalty was provided in case a license was not produced when asked for or "a reasonable excuse given." Surely it would be a reasonable excuse to reply—"I cannot show a license because none are granted." Mr. Bosson then applied for case, which was allowed.

In the December Part of *Cassell's Magazine*, which will form the First Part of a new volume, two new serial stories will be commenced, one entitled "Sweet Christabel," by Miss Arabella Hopkinson, and the other "A Diamond in the Rough," by the author of "Horace Maclean." A new feature, entitled "Our Reading Club," will be included, its object being to supply every information required for the formation and arrangement of reading clubs, suitable programmes for reading, &c.

## "FAR AWAY BIRDS HAVE FAIR FEATHERS."

(Written at Overskaig Inn, Loch Shin, Sutherlandshire.)

Rhiconich! Rhiconich! come hither, mail car,
And carry me off to new foe and new war.
My sulky opponents lie lazily here
In the depths of Loch Shin, and do seldom appear.
Their dark golden armour is hid in disgrace,
They are beaten and own it, and daren't show face.
But *Northward*—the word! to Rhiconich afar!
With new foe and stronger there wage we a war;
His bright silver side let him sport in the sun,
For bloody 'twill be ere the day is half done.
Rhiconich! Rhiconich! my heart, arm, and leg
Are braced up for combat at Loch Garbet Beg.
Farewell, then, Loch Shin, and Griam, his brother,
And Garvie that flows from the one to the other.
Farewell, thou wild Fôrrest, where roameth the deer,
Till the crack of the rifle shall startle his ear;
And thou Cock of the Walk, that so high towers o'er
The hills that surround thee, farewell, King Ben More!
Blow horn, and hark for'ard! Loch Shin in the rear,
Lochs Griam and Mertland, and *More*[*] each appear;
Where, at the north end, stands a lodge trim and fair,
Which looks like a miniature Grosvenor-square.
Then right down the Laxford, and so in a crack,
We are under the shadow of cloud-capped Ben Stack.
Ben Stack on our left lies, while far to the right
Ben Arkle glooms *darkly*, although the day's bright;
Whilst between them the lake's laughing waters do lie,
Like the dangerous glance of a fair maiden's eye,
Who seeth two rivals, each mad with her charms,
And eager to prove love by prowess of arms.

. . . . . .

But still down the river the rattle-trap sped,
To the right bank we cross, and Rhiconich's ahead!
Get a glimpse of the sea, here, as onward we spin,
And at length we alight at the door of the inn.
Oh, bold are the peaks, and wild is the scene!
But my thoughts were of salmon—no fisher so keen.
I order my dinner; my gillie is hired,
Trap to bring home the fish, sir, should Dugal be tired;
And so all is settled—at least, in my head—
'Twill be *murder* to-morrow, and *now* the word's *bed*.

. . . . . .

But after a week of hard flogging, I swore,
"If the trout in Loch Shin *sleep*, the salmon here *snore!*"
For the sun had been blazing, the heavens like brass—
"By the beard on my chin, am I man, sir, or ass?"
At last came some thunder, and down poured the rain,
And the very next day I was *counting the slain!*
So, Rhiconich! here's luck from the old whisky keg,
But in droughts, oh, preserve me, from Loch Garbet Beg!
—E. M. T.

A Four-Footed Angler.—A correspondent writes to the *Lewistown Journal* that he came suddenly upon a very large bear in a thick swamp, lying upon a large hollow log across a brook, fishing; and it was so much interested in its sport that it did not notice him until he had approached very near it, so that he could see exactly how it baited its hook and played its fish. The bear fished in this wise: There was a large hole through the log on which it lay, and it thrust its forearm through the hole and held its open paw in the water, and waited for the fish to gather round and into it; and when filled the bear clutched its fist and brought up a handful of fish, and sat and ate them with great gusto; then down went the paw again, and so on. The brook was fairly alive with little trout and red-sided suckers, and some black suckers. The bear did not eat their heads. There was quite a pile of them on the log. The oil in its paw attracted the fish and even better than a fly-hook; and its toe-nails were hooks, and sharp ones, too, and once grabbed, the fish were sure to stay. They also catch frogs in these forest brooks, and drink of the pure water in hot summer days, and love to lie and wallow in the muddy swamps like our pigs in the mire. They often cross narrow places in lakes by swimming, and also rivers, and seem to love to take a turn in the water. The same observer once saw one swimming from the mainland to the big island in Moosemaguntic Lake, with just a streak of its back out of water, looking like a dog moving along. Sometimes you see only their heads out of water; at other times half their bodies are to be seen. Scientists account for this difference by condition. If fat, the grease helps to buoy them up; if lean, they sink lower in the water.

---

Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—Fishing Gazette Notice, September 18, 1883.

See also notices in the Fishing Gazette for Dec. 17, 1881; June 28th, 1882; July 1, 1882; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d. Fishing Gazette Gossamer Gut, Tapered, 8d each; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d. and 1s. 6d.; prepared ditto, 20 yards, 1s.; stout, 1d. a yard; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d.; Gossamer Gut, 12in., 3s. 6d.; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz.; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal, 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen; Treble ditto, 2d. each. Pennel Snaps, 2½d.; Jardine, 3½d. each; Gut or Gimp Spinning Flights, 6d. each; Spoon Baits (Jack's size), 9d. each; Gut and Gimp Traces, 6d. each, Fishing Gazette Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d.; ditto Twisted Gut, stout or fine, 1s. each; 3in. Jack Float, 6d.

WINCHES. — Nottingham, from 6d.; Brass, from 8d.

HEATON'S PATENT REELS, "Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ¾in., 1s. 6d.

Rods made to order or fitted with screw-joint ferrules.

Price List free on application.

Postage extra on all orders, and all must be accompanied by a remittance.

All goods marked in plain figures.

**A. BULMER, 62, WANDSWORTH ROAD, S.W.,**
Corner of Nine Elms Lane.
Three minutes' walk from Vauxhall Station.

BRECONSHIRE. — LLANWYSK VILLA to be LET UNFURNISHED, with about a mile of Salmon and Trout fishing in the river Usk, together with 31 acres of land. It is situate about one mile from Crickhowell, and seven from Abergavenny Railway Station. The house contains good dining-room, large drawing-room, morning-room, library, thirteen bedrooms, and three dressing-rooms, hot and cold water laid on, with all necessary conveniences for a gentleman's family, together with laundry, brew-house, coach-house, three-stalled stable, loose box, and other buildings; also two good cottages for gardener and coachman, walled garden, ornamental grounds, vineries and orchard house. — Apply to Messrs. WOOD and MERRICK, Crickhowell.

**JONES & CO.,**

late of
111, JERMYN STREET, S.W.

Prizes awarded in 1851 and 1862 for Rods, Flies, and Tackle of unequalled excellence.

**Freeman's Chlorodyne.**
THE ORIGINAL AND ONLY TRUE.

IT IS THE GREATEST MEDICAL DISCOVERY OF THE PRESENT CENTURY.

It is the best known remedy for Coughs, Consumption, Whooping Cough, Bronchitis and Asthma.

It effectually checks and arrests those too often fatal effects of Diseases, Diphtheria, Diabetes, Fever, Croup, Ague, &c.

It acts like a charm in Diarrhœa, and is the only known Specific in Cholera and Dysentery.

It effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, Convulsions and Spasms.

It is the only palliative in Rheumatism, Gout, Cancer, Toothache, Meningitis, &c.

It rapidly relieves pain, from whatever cause, allays the irritation of Fever, soothes and strengthens the system under exhausting diseases, restores the deranged functions, stimulates healthy action of the secretions of the body, and gives quiet and refreshing sleep, and marvellously prolongs life.

It may be taken by old and young at all hours and times.

It is extensively used by Medical Men in their official and private practice at home and abroad, who have given numerous written testimonials of its wonderful efficacy.

Sold by Chemists and Patent Medicine Dealers all over the world in bottles, 1s. 1½d., 2oz. 2s. 9d., 4oz. 4s. 6d., half-pints 11s., and pints 20s. each, and by the Inventor, RICHARD FREEMAN, 70, Kennington Park-road, London, S.E. Free by Post.

Purchasers are Cautioned not to have palmed upon them any substitute. See that the Trade Mark, "The Elephant," is on the wrapper, &c., and the words "Freeman's Original Chlorodyne" are engraved on the Government Stamp—which is the only True Chlorodyne.

THE ODOR OF THE FOREST, THE SPARKLE OF THE STREAM.
**FOREST and STREAM.**
The American Journal of Angling and Shooting.

The Forest and Stream has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

| | |
|---|---|
| The Sportsman Tourist. | Natural History. |
| Sea and River Fishing. | Fishculture |
| Game Bag and Gun. | The Kennel. |
| Yachting and Canoeing. | The Rifle. |

The angling department is in the charge of Mr. Fred Mather, the well-known angler and fishculturist.

The weekly numbers of the Forest and Stream annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the Forest and Stream Publishing Company, 37, Park road, New York, U.S.
Subscription Agents for Great Britain:
Messrs. Sampson Low, Marston, Searle, and Rivington, Crown Buildings, 88, Fleet Street, London, who can supply specimen copies.

"The very best artificial bait ever yet invented."—Francis Francis, in "By Lake and River."

**BROWN'S PHANTOM MINNOWS**

Are made ONLY at the original address, 36, George Street, Aberdeen, and can be had of the principal dealers in London and the Provinces. None genuine unless stamped "W. B." on the spinner. Minnows mounted for Pike and Mahseer a speciality.

W. BROWN, Fishing Tackle Maker,
Inventor of the Phantom Minnow,
36, George Street, Aberdeen.

**J. BERNARD AND SON,**
Manufacturers of Salmon, Mahseer, Trout and all other kinds of Rods of the very best quality. A large Stock of Salmon and Trout Flies for all parts. Winches, Lines, Rods, and Tackle.
Salmon and Trout Flies dressed to order.
Kelson's Gaff.
Liberal Terms to Shippers.
5, CHURCH PLACE, PICCADILLY, LONDON.
(Agents for the MacNee Pike Scale Flies.)

**BLAIR'S GOUT PILLS.**

GOUT OR RHEUMATISM.
The excruciating pain is quickly relieved and cured in a few days by this celebrated Medicine.
Sold by all Chemists at 1s. 1½d. and 2s. 9d. per box.

ONE SHILLING.
**The New Pocket Timepiece,**

Size and Shape of Ordinary Watch, with New Patent Adjusting Swivel Ring for attaching to Watch Guard.

ONE SHILLING, Post Free 15 Stamps, two for 27 Stamps, the AMERICAN POCKET TIMEPIECE (Patented). Size of an Ordinary Watch; Electro-Silver Case, Steel Works, Balanced Action, Enamelled Dial, Glass Dome. Each denotes correct time, and is warranted for two years. To be procured only from the undersigned. All orders executed by return of post. J. B. PILLINGER 140, Blackfriars-road, London, S.E

## NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s. ; or post free, 10s. 6d

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage s 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. Geo. Stephen, 30, Clarence Street, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and CO., the Proprietors, 188, Fleet Street, E.C.

# The Fishing Gazette.

SATURDAY, DECEMBER 6, 1884.

## THE NATIONAL FISH CULTURE ASSOCIATION.

A COUNCIL meeting of the above Association was held on Thursday at their offices in the Exhibition Grounds, South Kensington. The President, the Marquis of Exeter, was in the chair, and among those present were Mr. Wm. Senior, Mr. T. J. Mann, Rev. J. J. Manley, Dr. Brunton, Mr. H. Ffennell, Mr. R. B. Marston, and the Secretary, Mr. W. Oldham Chambers. Some important business was transacted. The Chairman announced that Mr. Silk had got five hundred fine black bass across the Atlantic to the Irish coast, when a tremendous gale sprang up, and the steamer rolled for three days in the trough of the sea, and all but a few of the bass were killed. Some cat-fish and sun-fish brought at the same time stood the knocking about much better, as also did some carp which were sent as a present to the National Fish Culture Association from the United States Fish Commission. The parents of these fish were taken over to America from Germany a few years ago. They were only a dozen or two in number, but their progeny has been distributed over the whole of United States, and now thousands of waters have been stocked with carp. It will never pay to cultivate carp in this country, for the simple reason that sea fish of vastly superior quality can be bought in our most inland districts at a quarter the price. From an angling point of view, carp do not count for much.

## A NOVEL APPLICATION.

IT will be seen from our advertisement columns that the Secretary of the National Fish Culture Association is asking for tenders for the supply of worms to feed the fish in the Aquarium at South Kensington.

## WOODFIELD AND SONS' NEW EYED-HOOKS.

### BY H. S. HALL.

IN recent letters to the GAZETTE I have several times alluded to some new eyed-hooks which were being made under my instructions. Messrs. Woodfield and Sons, Easemore Works, Redditch, have taken immense pains to carry out all the minutest details, and they have now succeeded in producing some excellent hooks, which I am anxious to bring before the notice of the angling public.

Samples of different sizes have been forwarded to the Editor, and I hope he will be able by personal trial to endorse what I have to say in favour of Messrs. Woodfield's manufacture. The approved "side-twist," of which we have heard a good deal lately, will be found in these hooks, and, from my own experience in twisting hooks in the soft state, I think I may say that though these latest samples are not all quite theoretically perfect, they are about as good as they can practically be made. At all events, they avoid the absurdly exaggerated sneck which recent eyed-hooks had developed. As I have already stated in a recent number of the FISHING GAZETTE, I tried some of Messrs. Woodfield's first patterns, amongst heavy trout and grayling, in August and September, and I found them equal to anything in the shape of eyed-hooks that I have ever used. The present hooks are further refined and improved, and if, when made in bulk, they can be turned out as good as these first samples, anglers will next season bless Messrs. Woodfield for the care and trouble they have bestowed upon this most important item in the fly-fisher's gear. Messrs. Woodfield desire me to say that, as manufacturers, they cannot supply anglers direct, but that their hooks will be easily obtainable through any respectable tackle house.

[We quite agree with Mr. Hall that it is very unlikely we shall get any better samples of his eyed-hooks than these ; in fact, for all practical purposes they are perfect, and anglers are much indebted to Messrs. Woodfield for the courteous and careful manner in which they have carried out his wishes. Mr. Hall deserves our best thanks for the infinite pains he has taken in the matter. —ED.]

## THE GORDON FLY.

CAN any of our readers inform us if there is anywhere in England a place of the name of Haul, and in the event of their being so, if anything is known of a Mr. Gordon thereabouts who used to visit the Dee, Aberdeenshire, some 20 or 25 years ago?

The information is required with a view to elucidate some points connected with the origin of the Gordon fly.

## ODDS AND ENDS IN SALMON FISHING.

### BY GEO. M. KELSON.—No. 6.

IT is not an uncommon occurrence, I believe, for young anglers to picture to themselves and conjure up visions through the exercise of their fertile imagination things void of life, and invest them with more or less vitality. The tendency with them to do so, however much it may decline, is never entirely lost, neither does it altogether subside even in manhood.

Many a time have I had in my mind's eye an apparently distinct representation of the ideal salmon pool—the pool of all others where the most timid piscator could scarcely hesitate to wade.

Now, as far as the mere fact of wading is concerned—and this is the subject we agreed to introduce and enter into to-day—if we make allowances physically, take into consideration the immense superiority of the one in practice over the other who is not, and weigh carefully the advantage of the tall over the short, there is nothing much that a master in the art can do which the average angler, if he will only consent to take the necessary pains, cannot accomplish.

It is, however, manifestly improbable and practically impossible for any novice to follow in safety the footprints of others.

Take, for instance, your big, black-browed, lusty fisher-fellow, up to every move, and what chance have you? Not that they are in reality web-footed; but these sturdy dons, these amphibious professors spend the best part of their pleasant lives breast-high in water. Why, you have no chance at all. Nay, I may go further. I may positively contend that even a leviathan could not support himself as easily nor make such headway, as the weak-knee'd but practised dwarf—he, mind, being utterly ignorant of the business, and relying solely upon his strength.

What, then, are the exigencies of this all-important branch of our pursuit? Though as far as "means and appliances" have to do with it, there is little to add more than to remind you of the stress I laid upon being well appointed, with suitable nails in the brogues ; for to accurately estimate the profit we derive on that score is beyond calculation, and can only be credited by those who are in a position to speak from experience ; neither need I discuss here "the fortunes we inherit," by being able to wade ever so well.

"As to boots in preference to shoes?" Well, I am of opinion they give more support to the ankles.

"And thick soles?" Yes ; in rocky rivers they are unquestionably better than thin ; they prevent the feet from becoming tender ; it is then you know that we lose so much power.

In fording a rapid, let me tell you, a good strong stick properly used will be of much service. You may well insinuate that "this is an insignificant allusion" ; but I remember the time when I should have been only too glad of the hint. However, one cannot cross a river too slowly. There is no necessity to waste time ; but your steps, I mean, cannot be too short. The stick—down stream, of course—is firmly planted before each pace is taken, and directed every time only as far as you intend to move, though it must always be the least trifle in advance.

And now for a word or two of the dangers and accidents likely to accrue, and how to avoid them ; then I will, with your permission, leave the subject "to be continued in our next," perhaps, as I particularly desire to take this opportunity of touching other questions, which have been privately pointed out to me, and in the words of my friend, "clamour for attention."

In wading, not the least important among other objects is to keep ourselves dry ; it is an illusion, I think, about "the risks we run in getting drowned," for if we can swim, the mere fact of being in waders is not after all so "awful" as people imagine. I have had to swim for it more than once, and so has many a salmon fisherman ; but I never yet experienced the sensation they say of "our legs coming up and so keeping our heads down."

Once I remember I went through a romping rapid simply where I was taken. It seemed that I had no power other than presence of mind ; and a little of that at times is worth any amount of muscle. I need not relate any more ; still, it requires very little prophetic power to forewarn that "the quicker we get to our place of landing under such circumstances, the less time we are in the wet," though, generally speaking, we should find it less disheartening to swim further on than land on a mud bank.

But joking apart, I must not underrate the perilous position I should have been in had there been any rocks jutting out into the run, or had it been a "hedgehog pool"—in Shannon phraseology, "antler pool."

"We may, with luck, skim over all sharp, tusky-pointed rocks springing up from and lurking on the bed of the river—woe-betide us if we do not ; but in being swept by the torrent against scraggy side rocks that project, instinct would immediately induce us to protect our head with our arms, or we might strive to go feet first, time and opportunity permitting.

Happily such a buffeting as lies concealed in the picture rarely befalls any of us. At all events, we cannot do better than bear in mind when crossing any ordinary ford that the impetus of the water is constantly varying ; in one moment it may be pressing us hard, while in the next—yet in the same spot—it is comparatively easy to stand against.

In taking each step and before completing it "dig your foot in."

"It's all very well to say so, but it's not so precious easy to know what you mean," is the conventional reply.

Neither is it, perhaps, to make it exactly understood in writing ; but you have to press the foot firmly down (stamp it down if it will not stay), then without actually moving it and continuing to press it, you force it, as it were, backwards and forwards to "dig" the nails in while gradually leaning more and more towards and over their hold, which you will finally ascertain will not give way ; then, and not until then, do you raise the hind foot.

Always keep the legs pretty wide apart, it will give you a firmer footing ; and never by any consideration face or turn your back to the stream unless you are certain you can do so with impunity, otherwise, before you know where you are, you will be swept swiftly away. Go above or below boulders ; never tread on them if they can be avoided ; and look above you every now and again, particularly if the water is rising, in case of floating debris.

It would not take so very long to become proficient if one could but hoard up all past experience, so that "what *ought* to have been done" may be an actual reminiscence.

Perhaps the one great secret to remember is not to "lose our heads"—at any rate, our lives would be safer, we can quite depend upon that ; and another is that, however courageous we may be, there is no necessity whatever to be rash.

I have often thought that all danger in crossing rivers might be brought down to a minimum by fixing a couple of iron pegs on either side and attaching a light galvanised chain to rest across in the bed of the stream when not in use, for really in full water some of the places we have to face tries the most courageous, the most confident.

If any of these crossways are conflicting—if they are dark—the safe path can be picked out with no great difficulty; and the track will not be so hard to find lighted up with just a little reason.

However, in reviewing the sport in any way you will, you may safely take it that it is much shorter and much more simple to proceed from ignorance to knowledge than from error, for then there is nothing to unlearn or forget—I mean the bad habits which in our early days custom has in all likelihood established and wrought in us.

Accident rather than design is responsible for having brought to light one or two of those minor and "established truths in angling" that I used to talk about which even Progress in its persevering mood has not yet extinguished. Indeed, why should we set aside facts that hold on apparently without effort, though sometimes without reward? Nevertheless, some few ideas which years ago were seemingly substantial and well-founded can no more revive now than could a flowering plant scorched by the mid-day sun and then frozen by the night.

We will turn now to the more fashionable and favourite topic of

### Striking a Salmon.

I perused with interest the Irish correspondent's quotations from "Ephemera" in the Gazette on the 22nd ult., and *from the observations contained in the Editorial footnote*, it appears to me that "Ephemera," Major Traherne, and myself are all advising the same mode of procedure, only in different words.

"It seems quite clear to us," says our Editor, "that 'Ephemera,' although he speaks of striking, and even jerking, recommends the gentle pull which Major Traherne advocates so strongly." Being absent from town, I cannot refer to the expressions I used in the Gazette upon the subject; but I am convinced that Mr. Wm. Thomas read me exactly when he stated in his letter:—

"Mr. Kelson tells us he has fished all his life with single hooks, but finds that if the double hooks are understood and properly used they are far better. The pith of his argument *is* to strike from the winch with flies up to a certain size, and he gave us instances when the line ought to be held instead. 'The winch should be so constructed,' says Mr. Kelson, 'that in hitting a fish the hooks penetrate before the reel-plate revolves; but that it *will* revolve before the flesh is torn.'"

And he adds:—

"By following Mr. Kelson's instructions, I find it absolutely impossible to break the gut or line, or strike too hard."

My great reason for recommending striking from the winch is contained in that sentence; an excited tyro, you may understand, cannot hit his fish too hard, and by so doing miss him or break away.

Naturally, a finished professor may have his hand on the line or not, as he pleases, and never, or rarely, make a mistake. But any observations of mine, as I have constantly urged before, areaddressed to beginners, and as I still undoubtedly hold to the opinion that the "winch of the day" at Farlow's is so perfect for the purpose which I exhort, I have taken upon myself to refer again to the subject.

"Ephemera" was a favourite, practical, and thoroughly conscientious author, and none of us ever wished him to keep his commodity to himself when he came forward to offer us a piece of advice.

However, authors may view things differently, and so may anglers; they choose their own points of observation from visions which are wont to float before them—*from the means afforded.* But look what wonders time has worked with us; look at our modern resources and at the vast improvement in everything connected with salmon fishing in the last decade (gut excepted); therefore, in that sense, have we not far better "means" now whereby to approve such and such a course of action? As an angler—well, I have nothing to boast of, more than forty years' experience, during which time, I am glad to say, I learnt to make rods, lines, reels, &c. But I have taken it into my head lately to offer through these columns suggestions somewhat at variance with the general mode of angling, and the more I write the more I feel how utterly impossible it is to communicate from mind to mind that enthusiastic belief which is at the basis of all the meaning of our sport, unless I can speak out my whole heart, in the hope that what I may advance may be taken without reservation. No, I desire to keep nothing back; I trust in time to let "every secret that I have guessed" be known, and any suggestions that I may offer will be from opinions formed after trials and successful results from impressions which have arisen—from conceptions that would insist upon coming to birth by the river side.

Is it then so very extraordinary when I venture to suggest that angling works five-and-twenty years old can scarcely be consistent with all scientific theories which have only lately been practically proved to be correct?

Allow me to put it more forcibly. What would our ancient and beloved old friend Walton have to say, and have to submit to, were he to get a peep at a salmon angler on a railway bridge with one of Slater's reels (Nottingham fishing), and "hitting 'em" at the very least one hundred yards away!

Ah, well, a good free and honest discussion of our various systems brings forward a profusion of progressive means, concentrates designing wisdom, and always offers agreeable topics for contemplation. But as it now is with the past so will it some day or other be with the present; and the very article I am penning will be nothing but an old scawled scroll.

Pray let me point out before continuing that I have not the slightest disposition to notice what may or may not be considered defects nowadays, other than having all angling interests at heart—a feeling equally shared and always evinced by our Editor.

We will now refer to the quotations again which I spoke of above.

"Ephemera" is reported to have said, in the sixth line of "Hooking a Salmon":—

"My general rule is not to strike at a salmon until I feel him."

And so it is mine, with these three exceptions which I call to mind, and then we must not wait for even that: "when a fish makes a long rush at the fly and remains stationary"; "when he takes you on the edge of a sharp-running stream and just wriggles sideways into a side eddy"; "and when he seizes the fly and comes on with it towards you."

No. 1 happens in the spring of the year in low and bright water; No. 2 occurs frequently throughout the summer; and we may meet with No. 3 at any time if the fish is a very large one.

In each case it comes to downright skill in striking at the proper moment, for in the next the fish will be gone—not because he has broken you, for if you do not strike he will not have had that opportunity; but he will just shake his head, as if to say, "No, no," drop the hook, and so part company.

And a few lines on in the paragraph, I read:—"Every man almost at the beginning of the season is nervous, and I will ask the oldest salmon fisher if he does not then lose many a fish by his precipitation in striking?"

All these obstacles, in my opinion, sink into insignificance by striking from the winch; and on the contrary we should hook *more* fish in the spring of the year, comparatively speaking, because they are so much more eager and determined. But then you see "Ephemera" was talking when the old-fashioned reels were used and the line held, and under those considerations which presumably prompted him he was charmingly correct.

Next comes the most beautiful part of the short discourse, which long, laborious days by the river could have alone suggested.

"I frequently strike at and hook fish without, as far as I can conceive, any premeditation or calculation, but almost by instinct. Something—I cannot tell what—tells me that a fish is 'at' me, and consequently I am promptly at him in the sly way he has come at me."

How successfully was this put—what incontrovertible sense. In any debate, I fancy the greatest truths are wronged if not linked in the chain of reasoning with words which flow on like those—not wrapped up for any selfish enjoyment, but trimmed to win their own way, and arrayed in a style to defy misconception. Indeed, it is a pleasure for any angler to endeavour to write what he feels—not for the sake of emulation, for he may think well, ever so sincerely may he have the desire; nay, more, he may have the soul, and endow some of his readers with the spirit and capacity to collect and appreciate his sentiments; but how difficult to follow impulse with taste, and render honest intent to the pensive public so truthfully, as to stifle simulation, invite sympathy, and yet dispel all possible idea of sophistry!

## ACHILL BRIDGE OR VIADUCT (OFF WEST COAST OF IRELAND).

It is proposed to connect the large and important island of Achill, Co. Mayo, with the mainland of Ireland, by a swivel bridge across the Sound.

A meeting of gentlemen was held on Saturday, 29th ult., in room 111, at the Royal Courts of Justice, kindly lent by Mr. P. H. Smith, Master in Queen's Bench, to receive a deputation from Achill—Mr. Sheridan and Mr. Salt—and to take this scheme, which is already in an advanced state of development, into consideration.

The island contains 6,000 inhabitants, and is separated from the mainland by an arm of the sea only 310ft. wide at the point where the bridge is to be made.

The cost will be £6,000, of which £3,550 has been raised, leaving a balance of £2,450 required.

Well-known friends of Ireland have given their sanction and subscriptions to the proposed bridge. Among them may be mentioned the Duke of Bedford, the Earl of Cavan, Mr. W. H. Smith, M.P., Mr. Sydney Buxton, M.P., Mr. Buszard, M.P., Mr. W. Rathbone, M.P., Major Blake, M.P., Mr. F. W. Gibbs, C.B., Mr. Tuke, Mr. T. F. Brady, Fishery Inspector, Mr. J. G. V. Porter, J.P., &c.

When this great undertaking is completed, it will add more than 35,000 acres to Ireland. It will raise 6,000 people from poverty by the development of their fisheries and other resources; and it will encourage tourists to visit this romantic island, with its marine cliffs, its grand mountains, and its many other rare attractions.

Accounts have been opened at the Bank of Ireland, in Dublin, and Castlebar, for the receipt of subscriptions, which should be paid to the credit of Mr. J. G. V. Porter, J.P., of Belle-isle. Mr. O'Connor Power, M.P., 5, King's Bench Walk, Temple, and Mr. Sydney Buxton, M.P., 15, Eaton-place, Eaton-square, will also kindly receive subscriptions. Communications may be addressed to the Deputation at Lay's Hotel, Surrey-street, Strand.

The aid of all friends of Ireland is earnestly solicited.

## FISH CULTURE.

The following details furnish a striking example of how much may be done by artificial stocking on a very moderate scale, even in a wild upland loch, at an elevation of between 2,000 and 3,000ft. above the level of the sea, where the feeding in the loch is abundant and suitable for nourishing trout:—

Nine years ago, there were no trout on Loch Toll-an-Lochain, in Ross-shire. Ten small trout, taken from Loch Bhravin, were then put into it, and on the 2nd and 3rd of September last it was fished by two rods, there being a good fishing breeze on both days and a cloudy sky. The total number of trout caught was 17, and the total weight was 30lb. 13oz. The thirteen largest trout weighed 29lb., or an average of nearly 2¼lb. each. The largest trout of the lot weighed 5lb. 13oz., and was 23in. in length and 12⅝in. in girth; while the second largest was 5lb. 5oz. in weight, and measured 22in. in length and 12½in. in girth. The fish were carefully examined after being caught, and beetles, flies, freshwater shrimps, and various insects were found in their stomachs. Jelly-fish, shrimps, shell-fish (like winkles), and snails are said to be found in this loch, which must evidently be a splendid feeding ground for trout.—*Scotsman.*

## CHERTSEY BRIDGE HOTEL.

It will be seen from our advertising columns there has been a change in the proprietorship of this conveniently-situated hostelry, and that anglers and rowing men will be specially studied by moderate charges on a revised tariff. Mr. G. F. Spencer is an old Thames angler and President of the Larkhall Angling Society, which he worked with the greatest success. He is determined in his new venture to enlist the sympathy and support of the anglers, and to make the hotel generally attractive to all classes.

On Thursday evening in last week he inaugurated the formation of an "Albion Social Club," and from the large attendance there is every prospect of its being a conspicuous success. Mr. G. F. Spencer presided on the occasion, and an enjoyable evening was spent as a Smoking Concert with some first-rate metropolitan and local talent. In the course of the evening Mr. W. H. Brougham, speaking from many years' acquaintance with Mr. Spencer, assured those present they would find him "the right man in the right place"; and whilst studying, as he would do, their comfort and convenience, he sincerely hoped they would assist in making the Chertsey Bridge Hotel a very great success.

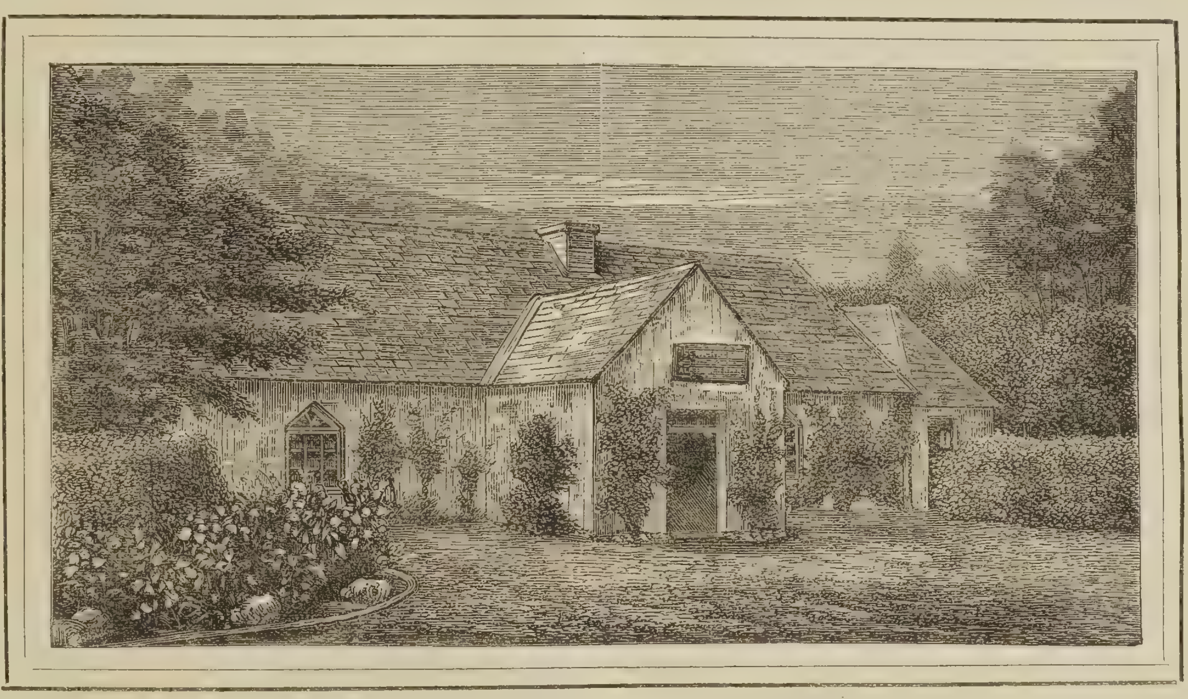
How a Wild Duck Saved Her Young.—Our river is so shallow that in some parts reeds grow in it, where wild ducks are very fond of building their nests. Once, shepherds who were with the cattle near that river, saw a wild duck with eighteen little ones swimming about, and as the little ducks were so small, they thought it would be very easy to catch them. So accordingly they got into the water, and were trying to catch the young ones, when they perceived that the old duck, instead of flying away as they expected she would do, was turning over in the water as if she were hurt. The shepherds seeing this, thought it would be well to catch her first, as it seemed a very easy thing to do, so they went over to where she was. Meanwhile the little ducks got safely hidden in the rushes, and the old one seeing that her children were out of their enemies' reach, flew into the air and left the shepherds standing with nothing.—From *Little Folks Magazine* for December.

## BRAITHWAITE'S ANGLING REMINISCENCES.*

Mr. Braithwaite's friends did well in recommending him to republish in book form these reminiscences, which originally appeared in the *Westmoreland Gazette.* Since Mr. Henderson's "My Life as an Angler," we have read no angling gossip with more interest than the little work under notice ; indeed, the books are very similar in style and nature, and both treat of those border counties which, from their natural beauties and romantic history, must ever possess the deepest interest to English and Scottish readers.

It would, indeed, be surprising if these reminiscences extending over sixty years of the life of an accomplished north country angler were not pleasant reading ; in addition to this, the author's remarks on the Salmonidæ of Westmoreland give it special value. We have marked a great many passages for quotation, but must content ourselves with a brief reference to some of them.

Some years ago, when fishing the Eden and Eamont, it was our intention to make an excursion to Ullswater, but we gave up the idea on learning from a local angler that the fishing was very poor. Mr. Braithwaite gives an excellent reason for this deterioration in the fish supply of what was formerly a noted water for numerous and fine trout. "The trout in the lower portion of Ullswater descended the Eamont in order to run up the Dacre and Lowther, two capital breeding streams. Some twenty years ago a weir was placed across the Eamont above its junction with the Lowther, for the purpose of supplying the town of Penrith with water. A fish-pass was appended thereto, but being accessible in the ascent to salmon only, the trout which go down are unable to return as formerly: a consequence of that is that the number of trout in Ullswater has rapidly decreased." We agree with our author in thinking that this is the main cause of the decrease ; because although, as he points out, poaching and the refuse of mines are doubtless answerable for much of the decrease, they were just as rife when the fish were plentiful. Doubtless a great deal of poaching still goes on. For instance, on the first two or three days we fished the lower part of the Eamont, the water was full of trout, and it was an easy matter to get a good basket. Revisiting the water a few days later, hardly a fish was to be seen, and the marks of nets round the edges of the pools told their own tale. What a pity it is the shallows are not staked and some old cart-wheels well tenter-hooked put in the deeper pools.



THE COTTAGE, ST. MARY'S LOCH.

In his remarks on salmon-spearing by torchlight, once so prevalent, Mr. Braithwaite mentions a

### CURIOUS CURE FOR CONSUMPTION.

"A well-known shepherd and poet, who combined with the above (poaching) qualifications the pastime of angler, was taken ill and gradually became worse ; at last he was confined to the house — the doctor was afraid of rapid consumption setting in. It was about Christmas time ; a slight fall of snow had whitened the hard ground ; a neighbour looked in, and, after usual inquiries, said—'Why, your brother is going after salmon!' 'Where is he going to?' 'Why, to such a place,' naming the locality. 'Well,' said the sick man, 'I have been in the house six weeks, and am no better. It's only half a mile. I'll put on my shoes and top coat and see what they are after.' He reached the riverside and watched them. By-and-by he thought they were making such a bungle of it he could stand it no longer, and into the water he went up to his knees for nearly half-an-hour, got the salmon, and on arriving at home his trowsers were frozen. His wife thought he had killed himself, but he mended rapidly from that time, and years after I had many pleasant fishing excursions with him."

As a contrast to this picture we may mention the case of a friend and valued contributor to this paper, who, already suffering from cough, waded in the icy cold water of the Eden one March and died from the effects the same spring.

### FISH CULTURE AND PROTECTION.

Our author's remarks on the Salmonidæ are the more valuable as being chiefly from personal observation and, as is generally the case when we get the opinion of one entitled from experience to give it, he is not dogmatic on questions of identity or difference in species. He writes most strongly in favour of the improvement of our inland fisheries by protection of the wild fish on the spawning beds, combined action on the part of fisheries proprietors, and artificial cultivation. He gives striking instances of the good that has already resulted from the proper observance of close times and the artificial breeding of fish. We are very glad indeed to see he states that char are increasing in consequence of the protection they have received. Fish culture judiciously carried out must succeed ; we say judiciously because much disappointment has arisen from cases like the following, which our author relates in referring to

### THE ENEMIES OF FISH OVA.

" . . . . . One gentleman caught a large trout on the spawning beds with 600 salmon ova in its stomach. . . . . . The larvæ of the stone fly and dragon fly are great devourers of the eggs. To give an instance: 70,000 ova were deposited in a beautifully clear stream well suited to the purpose, and when the time for hatching came not one fish turned out—every egg was eaten by the larvæ of the dragon fly."

### ANGLING VALUE OF THE ENGLISH LAKES MIGHT BE VASTLY IMPROVED.

Mr. Braithwaite makes some most valuable suggestions for the improvement of the fishing in our English lakes, and instances the splendid results which have followed judicious fish culture and careful protection in Loch Leven. A few years back that lake was, like the majority of our English lakes, fished and poached until it was not worth the angler's attention. Now it affords perhaps the best lake fishing in the British Isles ; certainly the best which is accessible to the public by payment.

### FISHING WATERS REFERRED TO BY OUR AUTHOR.

The following rivers and lakes are referred to at more or less length by Mr. Braithwaite :—The Lune, the Rothay, Windermere, Ullswater, Derwentwater, St. Mary's Loch, Loch Ericht, Laggan, Earnhead, Katrine, Lomond, Awe, and Tulla, &c.

### A "BROTHER" ANGLER.

"Joe Winn was an adept up the Mint in catching fish. All the 'smittal' places were well known to him, and it was said if he thought a brother angler was following him he stoned the special pools after having fished them."

### REMARKABLE EFFECT OF THE SONG OF A THRUSH.

"During our walk back to Howgill, my friend, William Best, related the following :—'When I was a young man I lived at Mealbank, and was always fond of fishing. Rain had fallen during the night, and on Sunday morning there was a splendid water, and the fish were rising. I could not resist the temptation, so went for my rod and started at the end of the old mill. I got first one and then another, and thought my pannier would soon be full, when suddenly I heard a thrush singing in a neighbouring tree. I always liked to hear the song of birds, but there was something queer about the song of this thrush. I listened, and to my astonishment heard it say, 'What, fishing! What, fishing! On a Sunday! On a Sunday! Go to hell! Go to hell!' I 'lapped' up my line, took my rod home, and never attempted to fish on Sunday again."

### SIZE OF LUNE TROUT.

We remember once, when chating with Mr. R. B. Lee, of Kendal, asking what size the fish ran, and he replied, "Small, the river is not a good feeder." This statement is borne out by Mr. Braithwaite, who says that during the forty-eight years he fished it he never got a trout over 1lb. in weight with the artificial fly, though, curiously enough, happening to lend a friend (no angler) his rod one day, the novice caught one of a pound and a half in the stream just below Chapel Beck Foot.

### ST. MARY'S LOCH.

Mr. Braithwaite, like all anglers who have visited it, is greatly in love with the "calmly beautiful" St. Mary's Loch, and devotes many pages to it. The loch takes it name from the ancient chapel of St. Mary, an offshoot from Melrose, and, like the latter, now a picturesque ruin.

"Many are the ballads and traditions extant respecting this interesting chapel, but I will content myself with quoting one stanza—

'St. Mary's Loch lies shimmering still,
But St. Mary's Kirk bell's lang dune ringing;
There's naething now but the grave stane hill
To tell o' a' their loud Psalm singing.'"

### ST. MARY'S COTTAGE (TIBBIE'S).

Through the courtesy of author and publishers we are able to give our readers the picture of St. Mary's Cottage, which forms the frontispiece to the work. The cottage, which is at the head of the loch, must ever be of interest to anglers as the place where James Hogg, the "Ettrick Shepherd," and "Christopher North" (Professor Wilson), and other congenial spirits of the "Noctes Ambrosianæ," passed many an angling holiday.

Scene 2 of "Noctes" 36.—North, Tickler, and Shepherd meet, after a fishing and shooting expedition at Tibbie's. Shepherd : "A cosy bield, sirs, this o' Tibbie's ; just like a bit wren's nest." Then follows an amusing discussion as to whether it is more like a wren's nest or an anthill. Mr. Braithwaite gives a very interesting account of Tibbie Shiels, the worthy hostess of St. Mary's Cottage, who, infirm with age, was still alive when he visited the place in 1873. She was then in her 93rd year.

### A TERRIBLE STORM.

Our author, after referring to several terrible storms, quotes the Ettrick Shepherd's description of one he witnessed in 1794, and thus describes :—"Between Crawford Muir and the Border no storm can be compared to that of January 24, 1794. Within the bounds described seventeen shepherds perished, and upwards of thirty were carried home insensible, who afterwards recovered ; but the number of sheep lost baffled calculation. 'I myself,' Hogg says, 'witnessed twelve score of excellent ewes all lying dead with their heads one way, as if a flock of sheep had dropped dead going from the washing.' In the Solway Firth there is a place called the Beds of Esk, where the tide throws out and leaves whatever is carried down by the rivers. When the flood after the storm had subsided, there lay on those and the adjacent banks 1,840 sheep, 9 black cattle, 3 horses, 2 men, 1 woman, 45 dogs, and 180 hares, besides smaller animals."

---

* The Salmonidæ of Westmoreland : Angling Reminiscences and Leaves from an Angler's Note-book. By George Foster Braithwaite. Kendal : Atkinson and Pollett. London : Hamilton, Adams, and Co.

What splendid materials this romantic district would afford the pen of the author of "Lorna Doone."

But we have outrun our space, and must conclude our notice of this most entertaining little book by heartily recommending it to our readers. It is full of that genial, gossipy kind of reading which is always interesting if well done, and Mr. Braithwaite may be congratulated on having made a worthy addition to the wide domain of "angling literature."

## ANSWERS TO CORRESPONDENTS.

Metz.—It is the same book ; there is no difference.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### THE ROWLAND HILL BENEVOLENT FUND.

Sir,—I desire, with your kind permission, to make a very special and earnest appeal to the public on behalf of the Rowland Hill Benevolent Fund, of which I am a trustee, and which has for its object the relief and assistance of Post-Office employés distressed from poverty, age, or infirmity, and of their widows and orphans throughout the United Kingdom. When it is remembered that the number of persons employed in the Post-Office is over 53,000, and that cases of distress are very frequent and pressing, the absolute need of some such organisation as this becomes apparent.

I venture to think that owing to the peculiar conditions incident to the daily work of most of the servants of the Post-Office, their exposure to inclement weather and consequent tendency to contract dangerous ailments, they have a special claim upon the sympathy of the public. Again, the very fact of employment in postal work betokens that the employés are persons of exceptionally high character and honesty, and fit to be intrusted with the delivery of those important communications so indispensable to the conduct of trade and commerce throughout the country, and to the requirements of family and public life.

The Rowland Hill Benevolent Fund has hitherto been so modestly conducted that perhaps its very existence, and, certainly, its needs and merits have not come prominently before the charitable public. Its annual income is only about £570, and the donations last year amounted to £100. From these sources temporary help was rendered to 74 applicants during the last 12 months, but the small amount at the disposal of the trustees unfortunately precluded them from dealing adequately with many distressing cases brought to their knowledge.

It is almost impossible to discuss any question bearing on the Post-Office Department, especially in reference to the welfare of its officers, without recurring to the great loss recently sustained by that department by the death of the late lamented Postmaster-General. The trustees of the Rowland Hill Fund have, therefore, resolved to associate his honoured memory with its object by setting apart a limited portion of it—to be called "The Fawcett Memorial Fund"—for the benefit of those employés or their widows or orphans who may be afflicted with blindness.

In all these circumstances, I have thought it right to open a special fund at the Mansion House, to enable the public to contribute to this very deserving charity ; and I earnestly commend it to the attention and sympathy of the country.—I am, &c., George S. Nottage, Lord Mayor.

The Mansion House, London, Dec. 3.

### A LIVELY SALMON.

Sir,—I inclose you copy of a letter from a friend with whom I spent two pleasant days this month on the Tweed and Ettrick. I think it might interest some of your readers, and if you think it worth a place in your columns I shall be pleased.—I am, &c.,

Liverpool. John Kinna.

Copy of Letter.

"Dear Kinna,—I had no time to call on Saturday last when in Liverpool. Well, the day after you went I fished the same water by myself. It commenced to rain heavy, so I expected a flood, and I decided to fish that pool first where you killed the two on Tuesday, so put on my fishing stockings, and my shoes in the basket, and laid it on the bank, and made a start, and after a few casts had a rise and hooked a fish which coolly surveyed all that deep water close to the bank, and very slowly too, for about 15 minutes. I then tried to weigh him so as to pull him up the bank as usual, but with no avail ; then he took a run right across to the other side, and ran up into the strongest of the stream, there he sulked for other 15 minutes. I then thought he was off, and my line caught on a rock ; however, he commenced to move after I had telephoned to him by rapping a big stone on the butt of the rod. He then ran right down stream ; keeping at the far side of the river. When he came to the head of the first rapid water, he went in earnest ! I had to run helter-skelter all I could, and let out line as well. He kept on—now slower, now faster—until I reached Brown's cottage, over two miles from where he started. Mrs. Brown came out and kindly held my rod until I got my wind, so I killed him in that pool where we saw the one landed, and to my great disappointment it was a salmon of only 20lb. I thought he towed me down the river towards the German Ocean with the strength of one 40lb., after a run of two miles, and expending 2h. 20m. in killing him. I need not tell you how hard I held him ; only once I let out line. I had to throw my rod past the rocks, and hang on by my hands, as I felt no bottom. The natives cannot understand however I got past two difficult places, as I cannot swim—nevertheless, I did. I was in over the top of waders often enough. Well, I had to go back for my basket, and when there thought I would have another cast, and about the middle of the pool got into another fish. It turned out to be a bull trout, 10lb., which I landed in the usual time, 4½ minutes. But that salmon I shall never forget. It was the strongest fish ever I had anything to do with. On Thursday I went to Selkirk, and was going to do a big stroke about two miles up, and had only started when I fell over a cobble stone, over head and ears, so had to make tracks for the train as fast as wading-stockings full of water would allow me. A hard frost set in, and I was soon a pillar of ice. Talk of whiskey being a bad thing, and that anglers should not take it ! All I can say is, this one would have been rubbed out that day if I had not got a drop on my way home. On arriving there I found two wires to be in London on Saturday morning, so rested on Friday and started at night. And now, my friend, farewell for a season to the banks of the famous Tweed, Ettrick, and Teviot. I shall long to again feel the breeze on Ettrick's banks.

"London. "W. H. P."

### THE DORSET WOBBLE.

Sir,—As regards spinning for pike, I should like to offer a few remarks, first stating I do not enter the lists as a rival of such experts as Mr. Jardine and other champions of the art, either in the Nottingham or Thames styles. Still all, I think, lay great stress on the advantage of an "accurate spin." I am "Thames raised"—not far from Wargrave, and in days long past was a pupil of old Woodly, and Vaughan, of Henley ; the last, I think, is still to the fore. A few years ago I settled in a south-western county, and enjoy the privilege of fishing in a well-preserved lake alive with fish of all kinds. My first day, the keeper did not seem impressed with my "Pennell flights," and proposed my using some tackle of his own—a simple triangle on a short length of gimp, passed with a needle from the vent, out at the mouth, with a somewhat smaller triangle on a loop just slipped over, and hanging below the mouth. A trace, with the usual lead and swivels, completed the arrangement. I objected that such a bait must "wobble." "In course it will," quoth the keeper, "and that's what I wants. The pike thinks he's hurted, and comes for him at once." I had a very good day, and have had many such since with the same tackle always using a small roach. Well, last winter a London friend came to me for a few days' sport, and brought a kettle of nice Thames dace. The next morning we went down, and my friend was soon at work with a Thames dace on a Pennell flight, and before I was baited *our* fashion he had a run and killed his pike, a little over 10½lb. I then began, and in the course of the day ran eight fish, killing five ; while my friend never had another run till late in the afternoon, when he changed his flight and dace for a roach on the "wobble tackle," as he called it, and killed one more fish. He maintained our style would never do for the Thames, and much wondered what the Hones, or Clarke, or Kemp would say to it. That I am not prepared to answer ; but that the "Dorset wobble" kills down here I think I have clearly shown.—I am, &c.,

Sherborne. Pike.

[Mr. Pennell's spinning flight is one of the best, if not the best we know—the S-shaped hook gives such a firm hold for the side twist of the tail. If a natural bait is used a wobble is often as attractive to pike as a clean spin ; but we prefer the latter, especially for artificial baits. The old dead gorge slides about in all directions when you let it go down after the draw ; it is very deadly, although it does not spin at all. Mr. Manley recommends a wobbling bait, if we are not mistaken, in his "Notes on Fish and Fishing."—Ed.]

### AN ADVENTURE WITH A STURGEON.

Sir,—In your number of November 22nd you inserted a paragraph from the *Court Journal* of the capture of a sturgeon by a Mr. Baly, of London. A friend of mine, who knows Mr. Baly well, told me he believed it was a genuine catch, and gave me that gentleman's address. I wrote a polite note congratulating him on his luck in hooking such a fish, and skill in landing same. I further invited Mr. Baly to visit the Piscatorial Society at Ashley's Hotel any Monday evening, where all anglers and their friends are welcome, and favour us with the particulars of this angling feat. I received the following "rather angry reply" :—

"Dear Sir,—In answer to yours, I beg to say that I have never caught a sturgeon. I always thought that they would not be caught with a bait, except foul-hooked. The paragraph in the paper *(C. J.)* is evidently a hoax, put in without my knowledge. I thought it too absurd to notice, and am surprised to find anyone having a knowledge of fishing could have been taken in with the report. I shall find out the writer and insist on a retraction.—Yours faithfully,

"Charles Baly."

My impression was supposing the report authentic, that an artificial spinning-bait might have foul-hooked the sucker of the sturgeon, and as the time of nearly five hours was given before the fish was landed, the tide would have receded and left the royal fish flopping on the mud, and then easily captured. We know that large barbel are frequently foul-hooked that way ; then why not a sturgeon ?—I am, &c.,

T. R. Sachs.

[We saw nothing impossible in the story. Given plenty of sea-room and strong tackle, a skilful angler would kill a shark in time ; but a sturgeon would not take a spinning-bait, and we therefore suggested it was foully-hooked.—Ed.]

### *RE* BRANDY AND PIKE BAITS.

Sir,—It is not my intention to prolong this discusion, save by a few remarks on "Mark Antony's" letter in your last issue, if you can afford me space for them in your columns.

He characterises what I said as "very good *banter*, but as foreign to the argument." Now, sir, I can assure you and him that I wrote in no *bantering* spirit whatever. I abhor cruelty in any shape or form ; indeed, so thin-skinned am I on the subject, that I have often been constrained to give up live-bait fishing on that account. I, therefore, wrote with the honest intention of advocating the use of any means likely to reduce the cruelty, unavoidably used (to some extent) in our sport. What *banter* is in that, sir ? If a bait, dosed with brandy, is *intoxicated* ("Mark Antony's" *argument*, as I understood it), then, I say, its sensibility to pain and fear is, in all probability, lessened ; and it is my firm conviction that a drugged and drunken fish would suffer less than one from which brandy had been withheld.

"M. A.'s" remarks appear to me to resolve themselves principally into a tirade into the evil of intoxicating a fish, as though *drunkenness* constituted the *cruelty ;* and as *such*, they form *no* argument, in my opinon, against the use of brandy. But, sir, there is another side of the question which undoubtedly *has* great weight.

If Mr. Bankart's assertions as to the *scalding* effect of the spirit are correct, then very great cruelty must attach to its use, and it behoves us to thoroughly investigate this matter before so treating our baits, as I trust no one, for the sake of a little extra sport, would wantonly inflict such agony on a bait. But again, sir, there is another side *yet* to this question. "M. A.," in his P.S., says, "If 'A Coggeshall Volunteer' thinks I am wrong, and the increased action of the fish does *not* arise from drunkenness, will he kindly inform me what it *does* arise from ? Because if it does not arise from drunkenness, I am convinced the agony must be most intense, and makes the matter all the worse." Now, can we not find a reason for the increased activity of a "brandied" bait without resorting to the two extremes of "drunkenness," or "intense agony" ? I thought so, sir, and under that impression I wrote as I did. There are frequent instances in which a moderate amount of spirit produces in its recipient the following results : Increased activity, extra power to sustain such activity, endurance under pain, courage to meet impending danger.

I have no doubt, sir, that, like myself, you have at times experienced such effects from a glass of brandy ; but to what did you attribute these effects ? Surely not to "drunkenness" or to "intense pain." May it, therefore, not be possible that the "increased activity," of a bait so treated may be due simply to the *stimulating* effect of the brandy ? And if it also produces partial indifference to fear and pain, I say it *is* "doing the fish a kindness."

"M. A." says that he is "simply surprised that any humane being should show his sympathy for the dumb creation in a manner so peculiar." I trust I can claim to be a *humane* as well as a human being, and all I wrote was done in the interests of humanity, and not as *banter*. If Mr. Bankart is right, then this practice is wrong and should be condemned ; but if "Mark Antony" is right, and the fish are simply *drunk*, and *not scalded*, or *cauterised*, I still contend that it *is* a *kindness.* I have not yet tried brandy on a bait, so if I have erred, it has been only in *sentiment*, not in *practice.* I only wish the pike about here were "on" to the extent of taking a "dead-bait on live-bait tackle," as they appear to be in "M. A's." neighbourhood ; but they are too "'cute" for that here, and the river is too narrow and weedy to admit of successful spinning, hence we resort to live-baiting as our only chance for a pike. Trusting that these expressions may not be regarded as *banter*, but that if I have exhibited great ignorance in making them, that you will further enlighten me on the subject,—I am, &c., A Coggeshall Volunteer.

---

Sir,—I have perused with much interest the various letters that have appeared in your paper lately from correspondents on the subject of my recent experiment in administering brandy to dying fish. The letter from Mr. Isaac fully establishes the views that I hold in relation to the effect noticed by him ; but some latitude must be given to the lively descriptive strain of this gentleman's letter. I disagree *in toto* with the sweeping assertions made by some of your correspondents as to the cruelty of the experiment in torturing the fish and inciting intoxication. One of your correspondents suggests that the brandy actually scorches or cauterises the delicate fibres of the fish, which, to my mind, is as fallacious as the preceding statement. I entirely agree that to advocate cruelty would be most reprehensible; but the administration of a small quantity of brandy, such as that employed in my experiment, could not possibly be the means of promoting inebriation or instigating cruelty. On the contrary, the experiment is perfectly harmless and of the greatest service to fish culture; and for the information of your readers, perhaps you will allow me to explain the nature of respiration amongst fishes, which will furnish an idea of the effect produced by the administration of spirits.

For the due performance of respiration in fishes it is essential that the circulation of blood should be carried on with sufficient velocity to allow of the interchange of gases to take place. This is effected by means of the muscles in connection with the pharyngeal passages driving the aërated water through the branchiæ. Owing to the position of the heart, the blood is propelled through the respiratory apparatus before it proceeds to the system at large. The physiology of respiration in fishes is not dissimilar to other vertebrata; since there must be nerve force to govern the respiratory movements, and control the supply of oxygen to the system, so also must there be a nerve centre, which is situated in the medulla oblongata, or that portion of the encephalon forming the junction between the brain and the spinal cord. When a fish is removed from the water death ensues from asphyxia, caused by carbonic acid poisoning due to the drying up of the membrane covering the gills. Therefore, the administration of brandy to a fish in this condition serves as a means of preserving vital energy and maintaining the action of the heart for a certain period, but does not re-establish respiration directly, as its action would be of little avail, the branchiæ being in the state already alluded to. If the fish be afterwards restored to water, the value of brandy as an *aqua vitæ* is at once apparent. The dormant energy becomes immediately awakened, the stimulant operates on the nerve centre, the water moistens the gill covers, the muscles are brought into play once more, and the organism which before was almost at the point of extinction manifests vital energy which we call "life."—I am, &c., W. OLDHAM CHAMBERS.

National Fish Culture Association, South Kensington, December 3rd.

[Mr. R. Cooper, secretary of the Prince of Hesse Angling Society, writes:—"Whilst fishing at Staines on Nov. 25, I caught a chub 1½lb. It was placed in a bag and hung against a wall for five hours; then taken out and put in another bag with other fish, when I packed up to go home. On arriving there, I sent it to a friend, who noticed a slight movement of the tail. I requested him to return it, and I would try the brandy experiment. I did so, and the fish almost immediately recovered and swam about, and is still alive and well." We think the chief value of the use of brandy will be in saving valuable fish which, after a long journey, often arrive in a dying state.—ED.]

## BRANDY AND PIKE BAITS.—FISHING LINES.

SIR,—With regard to the question of fish and brandy, it strikes me that some of your correspondents are arguing with the same fallacies that afflict rabid members of the Blue Ribbon persuasion. These latter having once got hold of the word "alcohol," can never afterwards get rid of it. They learn the result of the brutal experiments of foreign physiologists, who torture unfortunate animals by injecting alcohol and absinthe and such things into their veins, and from the effect of this make ridiculous and erroneous statements as to that of a wholesome glass of beer on the human subject. I hope and trust, in the first place, that fish have very little at all of what we call sensation. It is quite certain that, as we descend in the animal scale, that sensibility to pain diminishes very rapidly. Probably pure brandy placed on the gills of a fish would cause more or less pain; but I presume that nobody proposes to do this. Brandy is often a very useful medicine, even to young infants; but no medical man would think of giving it pure, any more than would any person ever think of drinking alcohol; and I suppose those who wish to administer this stimulant to fish by the mouth would dilute it with water. If given in this way, it should not, in the first place, pass over the gills, and even if it did, when we consider that brandy, diluted with only six parts of water, is a perfectly painless and pleasant application as an eyewash to the human eyeball, we may conclude, I think, that it would produce no pain to the fish.

### LINES.

There seems to be considerable difference of opinion with regard to the material of these. Major Traherne, in his penultimate paragraph, p. 257, says he finds a solid, flat, undressed silk line last *much longer* than the dressed line. You, Mr. Editor, in the present "F. G.," p. 265, say the silk and hair *rot so soon*. Have you the same opinion of the plaited silk undressed? I must say I think that any one who never dries his line can hardly expect any material to last. Major Traherne recommends 40 yards of line, tapered *at both ends*, to be attached to a back line. Is not this mechanically wrong, having this weak part between the two stronger portions of the line? "The strength of the whole is that of its weakest part," and I should also have imagined that the line would not cast so well.

There were some very nice-looking wading boots brought out, I believe, by Cording at the time of the Fishery Exhibition. A brown leather foot was attached to the ordinary wading stocking, instead of the heavy brogue which has to be put on over a thick sock. Will any of your readers who may have tried these kindly report on them? Do they last, and are they easily dried?—I am, &c.,

F. R. C. S.

[The undressed plain silk line does not rot like the hair in a mixed silk and hair line; we have had them to last for years. In the salmon line the strength of the back line is equal to all that is wanted of it, and the casting line is made stout to aid in casting. Some anglers say that when you cast from the taper you can get out a better line; but it is not often you want to pull off so much line as to use both tapered parts. The best leather boot we have ever seen for pulling over fishing stockings is the invention of our friend Mr. G. Yarde. He fishes nearly all the year, and the other night showed us a pair, still quite good, which he has used for *three years*. They are made to his order by T. Muller, 69, Lamb's Conduit-street, W.C. The screws in the sole were all intact—of course, a little worn; but the feature is the stiff tongue, which is not sewn to the upper, but a continuation of it, and never slips down. Mr. Yarde finds these boots protect the feet of his waders, so that they last three times as long as with any other brogues or boots he has tried.—ED.]

## THE POLLUTION OF WINDERMERE.

SIR,—The pollution of Lake Windermere has attracted much attention lately, owing to Lieut.-Col. Sandys, the chairman of the Westmoreland Conservators' Association, having declared that the lake was fast becoming "a gigantic cesspool." This has given some annoyance to the lakeists; but the colonel, not to be beaten, had the water carefully analysed, and the result is that Mr. W. H. Watson, F.C.S., F.G.S., declares it "unfit for drinking or household purposes." The colonel wishes to know if that be so, what it is fit for?—not for fish, he thinks.

All action in these matters is sure to provoke vested interests, whose policy is, "Give us peace in our time."

It is, therefore, all the more needful for public-spirited men to be courageous. In this case good is likely to ensue from the publicity given to the real state of affairs. The bad condition of the water does not cover the whole mischief, for "estimating the resident population of Windermere at 1,269, the analyst calculates that it contributes no less than 515 tons of matter—more or less polluting—to the lake per annum; and placing the summer population at 5,000, he estimates that there would be over 2,036 tons of excreta, or 127 tons of sewage solids, passed chiefly, if not entirely, into the lake each year from Windermere alone."

"The probable cost of efficient purification would," Mr. Watson adds, "be exceedingly small." The Local Boards concerned will, therefore, best consult their own credit and the welfare and reputation of the district by taking prompt and well-concerted measures to prevent the further pollution of the lake. At the outfall of the sewage of Ambleside there is a disgusting condition of affairs offensive to eye and nose. The river Rothay, which is the principal feeder of the lake, near Rothay Bridge, is covered with putrescent slime and all manner of refuse, which is partly washed and partly carted to the spot.

This is the sister river to the Brathay, which join their waters close by, and the streams up which trout and char used formerly to go in large numbers. Now the streams are gradually becoming more and more unfit for fish.

It is high time this stupid policy of *laissiz faire* in dealing with the fisheries (salt and fresh water alike) was knocked on the head, and a more enlightened method pursued; otherwise, what is the use of all our education and civilisation?

A society has been formed in London for the purpose of enforcing the Acts for the prevention of pollutions of rivers, lakes, streams, &c. Lieut.-Col. Sandys is one of the executive committee.

At Berwick-on-Tweed there is plenty of work of that kind wants doing; the local authorities are too lethargic to take action in most instances. At present the Tweed is being fouled in a shamefully stupid manner, but this I must leave for the present.—I am, &c., JOSEPH JOHN HILLS.

Berwick-on-Tweed.

[If owners of property in the neighbourhood of Windermere are wise, they will look into this matter.—ED.]

## ENORMOUS SALMON.

SIR,—Do you recollect, in "Land and Water," some years since, the rule given for finding the weight of fish from the dimensions?

It was: "Four-thirds of the length, multiplied by the square of the girth, divided by one thousand," giving the weight in pounds and decimals. I frequently tested this with the large salmon which from time to time were mentioned in "Land and Water," and generally found that it proved very correct.—I am, &c.,

Edgbaston. H. W. CROMPTON.

## SEA FISHING.

SIR,—I am much interested in the articles by "E. G." on sea fly-fishing, and will be glad to hear, with your correspondent, "Castleconnel," of the best places for that branch of the sport. I enjoyed some capital white bass fishing whilst staying at Westward Ho during the autumn of 1881. I used to arrange the previous evening with one of the fishermen of Appledore to meet me in time to embark just before the finish of the "ebb," so as to reach our operating grounds (just inside Barnstaple Bar, or opposite Braunton) before the flow commenced. The rod I used was a stiffish 11ft. hickory, about 40 yards of jack line on a strong click reel, about a couple of yards of treble or double twisted gut as "collar," to which two ordinary bass flies (white wings and red body) were attached as droppers, the extremity of the "collar" terminating in a "pearl," a fished-shaped piece of that material armed with a grilse hook (a "baby-spinner" would have no doubt been better). However, I frequently had each lure engaged at a single cast, but once only, as far as I can recollect, caught three fish at a time.

My "gillie" was well content with sharing "pot-luck" with me, and a square drink on coming ashore, to the health of ourselves and the finny tribe, as remuneration for his day's work.

I offer the above, Mr. Editor (although I am quite a comparative youngster at the "craft"), hoping it may meet the eyes of some to whom such facts may be useful.—I am, &c., RAY.

## MR. PENNELL'S THREE FLIES.

SIR,—The passage under the above heading, quoted by your correspondent, "Trout," is perfectly correct; but not by any means the editorial glossary appended to it. The quotation simply states, that as I find the lithographers colour my flies wrongly, and the tackle-makers make them wrongly, fly-fishers wishing to try them must learn to make them for themselves.

I fail to perceive in this simple statement of fact any "equivalent to throwing up my brief"; or in my admitting that the tackle shops sell one thing which is useless, an admission that another thing which they do *not* sell is so also.

To convince you that in my quoted strictures I do not speak without good warrant, I inclose nine different specimens of the flies purchased as my patterns, yesterday and to-day, at three different West-end London tackle shops.* You can judge for yourself, by the most superficial comparison with the "description" in my books, how far they correspond with the three flies recommended by me. In every single point they are as unlike as possible. The colours are wrong (and vary considerably); the hooks are wrong, only three out of the nine being even an apology for my bend; and the hackles are wrong also *in every case*, and owing to their being left entire at the bend instead of the stem being cut off to form the whisk, they nearly double the proper length of the flies, and make them more like miniature dragon flies than any insect which a decently brought up trout or grayling is accustomed to look at.

Under such circumstances it is not to be wondered at that I decline to be held responsible for these nondescript abortions, of which, as I truly said my prefatory note quoted, "99 out of 100 would probably be quite useless in fine waters, and very indifferent performers anywhere."

As, therefore, the professional tackle makers either cannot or will not tie the flies, I can only repeat that in case anyone wishes to give them a trial he must perforce learn to tie them for himself (they are tied on a radically different principle to ordinary flies), and for that purpose I would refer him to the complete instructions contained in my published writings—e.g., "The Modern Practical Angler," 4th edition, p. 87—93.—I am, &c., H. CHOLMONDELEY PENNELL.

P.S.—As I am frequently being applied to for patterns or samples of my flies, pike tackle, &c., which the calls upon my time have obliged me systematically to refuse, I am glad to take this opportunity of explaining the cause of my apparent discourtesy. The same reason obliges me to decline private correspondence, however interesting, in regard to these and other matters connected with fish and fishing.

[Mr. Pennell is certainly right in saying that there is not much resemblance between the various samples he sends us. What we meant was that if such firms, for instance, as Farlow, Bowness, Little, James Ogden, Williams and Co., and others who employ the best professional fly-makers in the kingdom, cannot, or will not, make these flies properly, from the extremely simple instructions Mr. Pennell gives, we do not see much hope for the amateur. If Mr. Pennell will kindly send us one sample of each of the three flies made properly we shall be happy to lend them to any professional or amateur who desires to give Mr. Pennell's system a really fair trial.—ED.]

## A NOTE FROM NOTTINGHAM.

SIR,—The severe weather the past week has kept many of the anglers at home; those that have been out have only met with moderate sport. A gentleman, fishing at King's Mills, on Thursday, caught a pike 12lb., and several more were caught in the Black Pool at Weston. On Saturday a Derby angler got two nice fish out of the same pool, one 10lb., another 4lb. Another angler, in the Shardlow water, one day got 14lb. of chub. Great numbers of salmon are to be seen trying to leap the Weir at King's Mills. The Trent is still running very low. We had a heavy snowstorm yesterday, which, I hope, will bring the long-desired fresh. Fishing for the next few days will be out of the question.—I am, &c., A. W.

Dec. 1.

P.S.—I see a correspondent would like a few hints on salmon fishing with worm. If he will send his address I will tell him all I know about it.

---

* The names are attached to each, but not for publication.

SALMON & TROUT-FISHING.

CHAS. FARLOW & Co.,
191, STRAND, London, W.C.,
MANUFACTURERS OF FIRST-CLASS RODS AND TACKLE,
SALMON AND TROUT FLIES, SUITABLE FOR
ALL PARTS OF THE WORLD.
Mahseer Tackle in Great Variety.
Makers of Split Cane Rods.
Improved Folding Trout Landing Nets
(Very Light).

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add
30 minutes for Chelsea.
40 „ Putney.
45 „ Hammersmith.
50 „ Barnes.
55 „ Kew.
75 „ Richmond.
80 „ Twickenham.
85 „ Teddington.

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

|---|---|---|---|---|
| Saturday, | December | 6 | 4.5 | 4.29 |
| Sunday, | „ | 7 | 4.54 | 5.19 |
| Monday, | „ | 8 | 5.44 | 6.12 |
| Tuesday, | „ | 9 | 6.37 | 7.5 |
| Wednesday, | „ | 10 | 7.33 | 8.3 |
| Thursday, | „ | 11 | 8.35 | 9.11 |
| Friday, | „ | 12 | 9.47 | 10.23 |

## THE LOWER THAMES.

### General Remarks.

The committee of the T.A.P.S. have succeeded in obtaining the co-operation of the police in respect to receiving information in regard to any attempt to net any portion of the river, the Commissioner of Police having issued instructions to all the river-side police stations to that effect, and the committee have issued a placard offering a reward of two guineas for any case where a conviction is obtained. At the committee meeting on Tuesday last, three new subscribers were enrolled as members, and Mr. J. C. Chubb, of Teddington and Queen Victoria-street, and Mr. John Lodge, of Hampton Court and Noble-street, have been elected members of the committee. The Teddington fishermen have done very little amongst the Lamperns at present, and it is not expected they will get any number until there has been a good push of water. A chub was picked up dead on Sunday last by one of the fishermen at Twickenham ; it weighed 6½lb., and its death is attributed to natural causes. In the present low and bright condition of the water good sized jack continue to be taken, and if the unsettled weather should end in a good fall of rain, those fish will be caught in goodly numbers, as there is abundant evidence as to their existence in large quantities in the river. Very fine roach continue to be taken in the tidal waters. The attendance of anglers has been diminished, but the angling has been far from unsatisfactory.

### Angling Results.

**Richmond.**—Christopher Brown, in one day with Mr. Beagle and friend, several roach weighing 28lb., and in two other half-days, 12lb. of roach. F. Brown in two days and one half-day, 65lb. of roach and dace, and one barbel. Henry Wheeler, in three days, 40lb. ; and Henry Mansell, in one day ten dozen of dace.

**Twickenham.**—Samuel Cole, in one day, four and a half dozen of good roach. Richard Coxen, in one day, eight dozen of roach and dace. F. Wiggins, in the same time, seven dozen. Edward Finch, in a couple of days, 30½lb. Henry Spiers, in one half-day, four and a half dozen. Charles Lee, in one day, six and a half dozen of good roach. John Spong, in two days, 28lb. of roach. George Coxen, in the same time, six dozen of good roach and dace ; and J. Dibbin, in one day, seven dozen.

**Teddington.**—Joseph Baldwin, in three days, thirteen dozen of roach and dace and a couple of barbel. Charles Baldwin, in one day, 25lb. and two barbel. J. Stevens, in one day, fifteen dozen. Benjamin Stevens, in four days, forty dozen ; and William Messenger, in one day, 27lb.

**Kingston.**—John Johnson, sen., writes :—"I have only been out twice this week in the tideway. I got ten dozen of dace one day and five dozen the other. I tried the perch yesterday at Kingston, but I only got one fish about a pound. My son has had one day in the tideway, and got about ten dozen of dace." It is reported the bank anglers at Kingston and Surbiton have had fair sport amongst the roach, dace, gudgeon, perch, and chub, some of the latter 3lb. each.

**Thames Ditton.**—Mr. J. Peters, in one day's chub fishing, got five fish, the largest weighing 2½lb. The bank anglers have been getting some chub in addition to roach, dace and gudgeon.

**Hampton Court.**—There is only one report, that of John Smith, getting three jack, the largest weighing 8lb. At Tagg's Island Fishery the anglers have been showing in at the hostelry some good roach and dace.

**Sunbury.**—Edward Clarke, jun., in one day, nine brace of perch. The bank anglers here during the week have done well amongst the perch, gudgeon, roach, dace, and chub.

**Walton.**—Mr. Mackrill, in two days, with George Hone, has taken fourteen brace of nice perch, the largest fish weighing 1½lb. ; and Mr. Hickley, another day, with the same fisherman, in a couple of hours, got one jack of 7lb., and another of 5lb. The bank anglers have been doing well in all-round fishing, and one of them got a nice brace of jack.

**Weybridge.**—Mr. Edward Street, in one day, caught three barbel, one brace of perch, and a chub of 2½lb.

**Chertsey.**—John Poulter, in one day, one brace of jack. This well-known fisherman is now attached to the Chertsey Bridge Hotel, at which address he will always be found.

**Staines.**—John Keene, jun., in a couple of days, two brace of jack.

## UPPER THAMES.

Since my last week's communication almost continuous rain has fallen all up the valley of the Thames, but as yet the river does in the least seem influenced by the downpour. The fact is, the land is too thirsty and the wells too dry to allow any moisture to find its way to Father Thames. The time will come, however, but not on this side of Christmas, to my thinking ; but every little fall is bound to do some good, however infinitesimal, for the benefit of winter anglers. Little has been attempted during the past week, but the braves who have ventured out have been rewarded with jack and perch, the two classes of fish which should be now specially sought for. At Marlow, I hear of 20lb. of jack by a London purveyor of sirloins ; and at Bourne End a piscator has a jack of 13½lb. At Hurley, Messrs. Gough and Corneby have had roach, perch, and gudgeon ; and Mr. Hockley, on one occasion, nine dozen perch, eighteen of which were only retainable. Thursday evening.—Water rising rapidly, and colouring. Sport on December 7th and ensuing week should be up to the last winter sort.—Marlow Buzz.

### Thames (Datchet).

Quite a change came over the scene since I wrote last, but not having had a turn at the fish this week, I am not able to say anything about them. With J. L. Meyer, Esq., on the 29th, chub fishing, caught three—largest about 4lb. Had a few more bites, and it was very cold. Richard Gray, with a patron, on the 30th, three jack—largest 6lb. James Gray, near Surly Hall, on the 1st, one of 11lb., with a 2lb. barbel in him. Want of bait has been quite a blessing to the jack, or no doubt there would have been more caught these cold days. The Windsor and Eton Preservation Society has turned in some more trout this week—80 good-sized fish, averaging a foot each. Water rising ; good prospect for coming week.—G. Lumsden.

The water is getting in better order. Not been out since Monday ; then took six chub, the largest 4lb. Now the weather is changed, I think there might be some barbel taken. Roach not on feed at present.—James Hoare.

### Thames (Goring).

We have got now a good water for all-round fishing. Jack and perch coming on better. My best day four dozen of perch and two jack.—J. Rush.

### Sonning.

There have not been many parties out lately, as the water is so bright and low. The rain we are having is making the water a nice colour for roach fishing. Mr. Huggett has been out chubbing, and got over twenty fish, and, by what I hear, there were some very large ones. If it keeps on raining for a few days, I hope to send you a report of some good takes shortly.—W. Hull.

---

### Ancholme District.

The river is now too full of snow broth for angling pursuits. When milder weather obtains the pike fishing should be very good, particularly in the upper reaches, where the fishing is only conducted on a moderate scale. Both trout and fontinalis are finding their way in increasing numbers to the main stream from the Manor Fishery, Caistor. I have heard of several being caught recently by anglers when bottom-fishing ; but I cannot learn that any of them were safely returned. The experience in catching these fish in the Ancholme is a new one, and the anglers are generally so enamoured of the speckled sides of these pretty fish that they go into the pannier double quick, despite their being now out of season. At the time of sending off this report, the snow is disappearing fast, accompanied by a steady downfall of rain, which will do something towards replenishing the dwindled springs in this neighbourhood. The fish-ponds at Barnetby junction were never so low, and I understand the natives are gathering up the perch in bucketsful. Weeds are now fairly gone, both at the river-head and on the Ancholme proper. So far as the river-head is concerned, it has been a bad season, the water being very moderately patronised.—Thomas Ford, Caistor.

### Chichester.

At the close of last week, winter paid us a passing visit. The frost on Saturday night being very sharp, pike fishers were on the *qui vive* ; Mr. Young, the following morning, taking three good pike from the canal, the largest a handsome fish of 5lb. Mr. Hammond has also secured a 5lb. fish. The rain of the past few days has benefitted the water, but kept many rodsters from the canal side. A couple of good pike were taken on the Ouse, above Isfield, the largest 6½lb. No news from the Rother; the change in the weather being so fleeting, our anglers did not risk the journey. Rain is still falling as I write. May we have plenty of it; it is badly wanted. Water in the neighbourhood is costing ½d., and, in some instances, 1d. the bucket.—George F. Salter.

### The Dove.

We have had very winterly weather all this week, and comparatively little has been done in the way of angling. On Sunday morning snow commenced falling heavily, and continued until the ground was covered to a depth of 4in. On Tuesday rain set in, which quickly made a great impression on the snow, and the river soon became charged with a vast quantity of snow-broth. It will be gathered, therefore, that angling has been, comparatively speaking, a dead letter. The weather, as I write, seems to be improving; but it will be several days before the snow-broth clears completely out of the water. Until then, rodsters must wait patiently.—The Splodger.

### Exe and Canal (Exeter).

Some roach have been taken in the Canal and the river with paste and bread for bait; also a few perch with worm and minnows. Beyond this nothing has come under my notice.—J. A. Kelley.

### Ilfracombe.

Sea fishing. The weather has been very boisterous here the greater part of the week, nevertheless, there have been some fine fish taken, our amateurs coming in for a share of the large fish. On Saturday, Mr. Slocombe, fishing from the jetty, caught a cod 16½lb., Mr. German, from Hele Stone, caught a large pollock, some whiting, and a conger 17lb., and on Monday, from the jetty, caught twenty whiting and a pollock 4½lb. The boats fishing with ground lines have had some good catches of cod, conger, pollock, whiting, &c. Herring fishing getting very slack, the largest haul for the week at one tide 3¼ maize. Thursday, blowing a gale from W. N.W., with a heavy sea.—E. Comer.

### Leicester.

Angling has been greatly interfered with by the weather the last few days; the cold, biting winds of Friday and Saturday were succeeded by a heavy fall of snow on Sunday. The weather, however, broke up again, and a thaw set in on Monday evening. Rain fell persistently throughout Tuesday, so that there was but little snow left by the following day. As may be expected, very few anglers found their way to the river side. The snow-broth in the water kept the fish from biting. On Thursday the prospects were a little brighter, and a fair number were fishing at the Leicester Society's preserves. With the exception of a few pike but few fish were caught. Rain fell heavily during Thursday evening; this will, doubtless, do an immense deal of good.—Alert.

### Lugg and Arrow (Leominster).

These streams have greatly improved since the downfall of snow on Sunday, which made but little alteration in the colour of the water, which still remains in capital angling order, having rose a little since last week. On Friday and Saturday the fish were sporting well at the maggot and red worm, and some good fish have been taken with the grasshopper. Near to Stanton, on Friday, a good dish of grayling was landed with the red worm. In the Lugg, near Ford's Bridge, a gentleman took a capital lot of fish with the maggot. A gentleman fished the Arrow, near Eardisland, and landed a capital dish of fine grayling with the grasshopper. On Saturday some good grayling were taken from the Lugg in the Aymestry district. Good sport was had in the Arrow the same day with the red worm. Fishing quiet in the Ivington waters. No fishing was had on Monday and Tuesday, the weather being very bad, the snow melting, and accompanied by a nasty cold mist which did not clear till dinner time on Tuesday. The Pinsley is in good fishing order, but fishing in it very quiet at present.—Gwynne.

### Ouse and Ivel (Blunham).

This week's rain has much improved the state of the above rivers, which are now in good fishing condition.—T. E.

### The Ouse (Huntingdon).

The recent rain has improved the condition of the water, which has made it more fishable; but nothing of importance has been done. I cannot hear of anyone being out except one day, when eight jack were taken weighing 24lb. I have only been out a few hours and took one 6½lb. The water being in better condition than it has been for a long time, there is every prospect of good sport, weather permitting.—H. Rout.

### Pickering.

Very little fishing being done around here during the last fortnight. Grayling have scarcely risen at all, and been very shy of looking at a worm, or, in fact, any bait. One of the best baskets we have heard of was taken in private water, and contained several fish of 2lb. or above, taken with red worm. The best pike we hear of were two killed in private water, 11lb. and 13lb.: the latter was a pattern fish, as handsome as one could wish to see. At present rain is falling, and there is a 2ft. fresh in Pickering Beck. Will some kind naturalist reader of the Gazette be good enough to enlighten us as to the food of the Grebes, greater and lesser? Do they catch and eat small fish to any extent or not? We have seen them very busy on trout-spawning beds on several occasions.—North-East.

### South Level Cut (Littleport).

Since my last report to Fishng Gazette some weeks back we have had a most glorious time among the roach, with an occasional good turn, "for this water," among the pike, and although the weather has been something of the coarsest for the last few days, the roach have still been feeding more or less, as the following will show. Nov. 26th. Messrs. T. Clark, senr., his son-in-law, and T. Clark, junr., Newmarket, 23lb. good roach in three hours. Nov. 27th. Mr. A. Pace, Newmarket, 17lb. roach; Mr. J. Rae, Newmarket, 18lb.; Mr. W. S. Fowler, Cambridge, 11lb. in four hours; Mr. E. W. Swann, Cambridge, 11lb. in four hours; Messrs. W. Purchas and R. Hills, Cambridge, 18lb. in three hours; Mr. S. O. Beeman, Littleport, 11lb. roach. Nov. 28th. Messrs. G. N. Latham and A. W. Whatton, 8lb. good roach in three hours. Snowing heavily. Nov. 29th. Mr. S. O. Beeman, Littleport, pike 8lb. Nov. 30th. Several London anglers down, and all took roach. Mr. J. Hutt, Cambridge, having half an hour to spare, after a disappointing turn for pike, devoted it to roaching, with the result of 4lb. good ones. Dec. 2nd. Mr. Hailstone, 7lb. splendid roach under the hour. Dec. 3rd. Mr. Hailstone, 21lb. roach in three hours; Mr. F. Ely, 14lb in a hour and a half. These two lots were a picture.—Charlie South.

### Teme (Tenbury).

A heavy downfall of snow visited this district on Sunday last, stopping the angling for a short time; but it has made scarcely any difference to the colour of the water, which still keeps clear, but has slightly risen, and is now in capital angling order. At the end of last week the fish were sporting well at the maggot and red worm, and some nice fish were landed. A few were taken with the grasshopper. The water near Little Hereford was tried on Friday, and a good lot of grayling were landed with the red worm, averaging 12oz. each. A good dish of fish were taken in the water near Corn Brook with the maggot, the same day. On Saturday a gentleman from Worcester visited the water, and, with the maggot, took a capital lot of grayling, weighing 5lb. the lot. A few very good fish were taken in the Berrington Court district, with the grasshopper. The snow began to melt on Monday, and was disappearing quite fast; but on Tuesday there was a nasty mist till midday, when it cleared up and became bright. The Kyre, Rea, and Ledwyche have greatly improved since the snow, and are in good fishing order; but none been had this week.—Worcester.

### Teme (Ludlow).

The melting of the snow which fell heavily last Sunday has brought very little water into the rivers, being absorbed in the ground, which was very dry. The streams have been abandoned since Sunday's snowfall; but on the previous Friday and Saturday good fish were caught. Mr. Carter caught above Burway Meadows, in the Teme, on Saturday, with the maggot, three brace and a half of good grayling and some perch and roach; the grayling turned the scale at 3½lb. the lot. Some few fish were caught below the Paper Mills with the red worm, which is an excellent bait at present. The salmon are lying pretty thick, I am told, in the Teme, in the deep waters below the weir at Ashford, having as yet had no opportunity of crossing the weir owing to the scarcity of water. There has been some better fishing at the end of the week at Clun, which is now in good condition. Mr. Hartshorn, from Ferny Hall, caught a pike of 7½lb., but full of spawn, at Oaker Mill, Aston-on-Clun. Some fine grayling were taken in that quarter on Saturday. The red worm and maggot appear to be the most favourite bait, and some good fish have been landed, both from the Corve above Elms Lodge and the Ony.—S. Ludlow.

### Trent (Swarkestone and Shardlow District).

A quantity of rain has fallen during the last two days, and if it will continue a little longer we shall have the much-needed rise, when anglers may expect to have a chance of obtaining some sport. A few pike have been taken at Weston, Messrs. Clemson and Smith securing one each, weighing 7½lb. and 3lb. respectively. Mr. D. Silvers got two pike from the Black Pool at Weston, which scaled 9lb. and 4lb. Mr. Martin, of London-road, Derby, also caught one weighing 7½lb. at the same place with his new harness tackle. I understand that large quantities of salmon are lying at the water meetings near to Twyford Ferry, and it is to be hoped that the water bailiffs and keepers will keep their eyes upon them.—Spinning Bait.

### Trent (Newark).

The sharp frosts of last week were succeeded last Sunday by a very heavy fall of snow; the wind then veered round to the south and a rapid thaw set in, to be followed by a heavy rain; so by Wednesday morning not a vestige of snow was left lying on the ground. This combination of circumstances will have the effect of bringing down the river the much-desired fresh of water. To-night (Thursday) there is 3ft. of extra water in the main river, not unmixed with snow broth I reckon, and it is still rising; so angling matters will not be very brisk until the water clears down again. I have no items of importance to communicate this week, except a chub of nearly 4lb. that was weighed in on the 30th ult. at one of our clubs. To-day (Thursday) the weather is very stormy.—The Trent Otter.

Since my last there is nothing in the way of sport to report. Frost set in on Friday night, and on Sunday night we had a heavy fall of snow, which has now nearly disappeared, causing a rise in the water; but, until the snow broth has quite gone, I fear it is of little use anyone going out.—F. T. L.

### Trent (Nottingham).

There is scarcely any angling news to communicate from this district since my last report. The weather, almost daily, has been boisterous and cold; added to which we have experienced a heavy downfall of snow. This has run into the river and checked sport for the time being. But anglers generally will be delighted to learn that the river is running at a greater height than has been the case for the last six or seven months. Immediately the snow-broth disappears sport should improve amongst roach (so far a most indifferent season), dace, chub, perch (yearly growing less in the Trent), and bream.—The Man at the Clubs.

### Torcross Ley.

The water is rising very fast, and the weather favourable. Pike are on the feed. Mr. J. Clarke landed 23 pike during the last three days, the largest scaling 12lb. 10oz. —Devon.

### The Wharfe (Yorkshire).

On the 30th ult. we had our first instalment of snow this season, and it came down so steadily all day that at night there was quite a deep covering. Since then, however, the weather has completely changed, and, as I write (Wednesday), not a vestige remains, so that for some days there will be little chance of grayling fishing, owing to the snow broth, with which the streams will certainly be filled.—Francis M. Walbran.

### Wye and Derwent.

We had a beautiful woodland water come down the Derwent last Saturday, which was the cause of many of the local anglers in this district turning out bottom fishing, and I am pleased to say that some good dishes of grayling, roach, dace, and a few chub were killed between Darley Bridge and Ambergate with both maggots and cockspur worms. Since then nothing has been done on either the Wye or Derwent with the rod, for on Sunday we had a very heavy downfall of snow, which quite put a stop to fishing altogether. On Tuesday we had a very great quantity of rain, which took away all the snow, and has caused both rivers to have high waters on them; in fact, we have had a great deal of rain daily since Tuesday, so that both rivers have been on one continual boil. To-night (Thursday) it is raining in torrents, with every appearance of floods on both rivers before long. Angling prospects looking bad for next week. Weather very unsettled.—George James Eaton.

### The Yare (Norwich).

The past fortnight nothing of any note has oocurred in the angling "line" on this river; the weather has been very unpropitious, changing from the depth of winter of last Saturday, Sunday, and Monday to the mild, humid atmosphere of yesterday, and ending to-day (Thursday) with a terrific storm of wind from the N.W., accompanied with heavy driving showers of hail, sleet, and rain; even one of our oldest veterans would, I fancy, make tracks if he were on a Norfolk broad to-day. Several catches of jack from private waters have been made; in one instance, on water connected with the Bure, as many as ten fair-sized fish were caught; the best, however, was one landed on Monday last, which scaled upwards of 14lb. I trust the weather may settle down, and then, as the weeds are dying fast, we may hope for some records of good catches as of yore; there is all the best time coming. Prospects nothing to boast about, there being another difficulty besides bad weather, that is, the trouble to obtain bait; no doubt this will cause surprise, but I can, from experience, testify to its being the fact, having been twice disappointed; this is unaccounted for by the catchers.—Robert Moll.

### Yore (Hawes).

Trout spawning has made most favourable progress. The fish are up the runners in scores. I "viewed over" four runners on the 30th ult., and they were literally swarmed with spawning fish. Grayling are still off the feed, but should improve now, as the weather appears to be more settled, and some little frost prevails during the night. I do not hear of anything being done worth reporting. There will be plenty of fishing next week, as the water is out to-day.—Corry.

Good Potatoes.—We confess to having quite an Irish liking for a good potato, whether baked, fried, or boiled. Messrs. J. H. Kenny and Co., of 4, Portugal-street, Lincoln's Inn, W.C., sent us a bag of their Magnum Bonums the other day, and we can truly say it is a long time since we tasted potatoes of such excellent quality. They cost only one halfpenny per pound if bought by the bag of 112lb., as will be seen from Messrs. Kenny's advertisement in our columns. We find we can get a far better potato at half the ordinary price by obtaining them from Messrs. Kenny, who are large growers.

# CLUB REPORTS.

## ACTON PISCATORIAL SOCIETY.

The ordinary weekly meeting of this society was held at their clubhouse, the George and Dragon Hotel, High-street, on Thursday evening last. The minutes of the previous meeting having been read by the secretary (Mr. Williams) they were confirmed. There being no business of importance to report, the chairman (Mr. W. Eydmann) read over the takes of fish, when those caught by Mr. West, viz., five roach, weighing 6lb. 15oz., were much admired, one of them going 1lb. 14oz. The members resolved, on the motion of Mr. Brooks, seconded by Mr. Cook, that the whole five of them be set up in one case at the expense of the club, and they have been sent to Mr. J. Baker, of Ealing, for that purpose. At nine o'clock the members and their friends adjourned to the large room of the hotel and held another very successful smoking concert, Mr. F. Eydmann in the chair; Mr. F. E. Blake, who is now a member of this club, presided at the piano. Several excellent songs were rendered by Messrs. H. C. Walker, W. Howell, J. Pike, W. Cook, F. E. Blake, J. Howell, and his two brothers. The members are requested to attend the meeting next Tuesday, at 8.30 sharp, so that the business of the club may be finished by nine o'clock, as the club is desirous of continuing these concerts every Tuesday evening during the winter.—W. E.

## AMICABLE BROTHERS ANGLING SOCIETY.

On 30th ult. Mr. Taylor saved the club from a blank by weighing in roach. On Monday, Dec. 1st, the thirty-second annual supper took place, Mr. Say in the chair, Mr. Squires in the vice chair; pianist, Mr. Knidd. Thirty-one members and friends sat down to a most substantial repast, and after the supper harmony reigned supreme. Mr. Field commenced by singing "The Thorn," followed by Mr. Bygrave, who gave a topical song, the greater part of it touching up the crack members of the club, which was received with great humour on their part—encore song; Mr. Harding, "Twenty Years Ago"; Mr. Chevalier, "Mr. Right and Mrs. Wrong"; Mr. Murray, the president of the Central Association, sang "The Bell Ringer" in a masterly style; the chairman, "Another Kind Love"; Mr. Dacey, "Pat Molloy." The chairman proposed the toast, "Success to the Amicable Brothers." Dr. Johnson sang "The Admiral"; the chairman, toast, "The Health of Mr. Murray, and Prosperity to the Central Association," which was responded to by the president, who stated that it was simply a work of time, and that not very far distant, when it would be at the top of the list, a hope that was shared by all present. "The Health of Mr. Crumplen" was next proposed, including "The Press"; Mr. Crumplen responded with a very humorous remark respecting Dr. Johnson, who differed so much from the Dr. Johnson of years long ago, who defined the angler as one who held a rod and line, with a worm at one end and a fool at the other. Mr. Medcalf proposed "The Health of the Hostess and her Little Ones," and also thanking her for the able manner in which the supper was placed on the table, which was warmly responded to by all present. Mr. Tommy Feetchum gave his "Tombstones"; Mr. Baldock his "Dutchman" song; Mr. Brady, "My Sweetheart, When a Boy," encore, "Wee, Wee"; Mr. Bell, song and encore; Mr. Bygrave, "Good Time Come"; Mr. Badcock, "What John Bull Said," encore, "Broken-down Masher"; Mr. Field, "Dear Friends of Old"; Mr. Richardson, "With Her Big Boss Eye"; Mr. Chevalier, "Blue-eyed Mary Ann"; pianist, a solo; Mr. G. O. Smith, "The Anchor's Weighed"; Mr. Field, the last song of the morning, "Down by the River Side." The chairman returned thanks to the members of the Carlyle Club, who attended in great force, and they, in answer, promised to do the same in future. Two o'clock was the extension of time, and all left highly pleased, with a promise to return on next Monday, December 8th, when the distribution of prizes will take place.—J. Worledge, sec.

## ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge, with thanks, the receipt of £1 1s. donation from the committee of the Foresters' Hall, Clerkenwell-road, and 5s. from W. H. Brougham, secretary Thames Angling Preservation Society. The Angling Tournament.—There are many tickets yet unsettled for. Secretaries and friends will oblige by sending in their remittances for tickets they have disposed of as early as possible. The next meeting of the committee will take place on Friday, Dec. 12th, at 9 p.m.—R. Ghurney, sec.

## THE CAVENDISH ANGLING SOCIETY.

The seventh annual supper of the above society will be held at the Duke of York Tavern, Wenlock-street, New North-road, N., on Thursday, the 11th inst., supper on table at 8.30 sharp. At the general meeting on Nov. 27th, it was resolved to employ a pianist, to be in attendance every Thursday, when a concert will follow the business of the society.—E. O.

## THE CLAPTON.

The usual weekly meeting was held on Monday last at the Swan Hotel, Upper Clapton; Mr. C. B. Parry in the chair. The minutes of the preceding meeting were read, approved, and signed. The secretary read the circular which he proposed to send to all members (on reply post card) giving the full particulars, lines of trains, &c., for the competition at St. Margaret's on Saturday next. This was approved. The secretary reported the regret of himself and many members that, on account of its being the weekly meeting night, we were unable to be present at the concert in aid of the Anglers' Benevolent Fund, which was to be held at the Foresters' Hall this evening. Mr. Howse suggested that a liberal contribution to the "collecting box," then on the table, for the fund would be a *practical* way of evincing sorrow. The idea was most cheerfully carried out, and every member present readily contributed. We hope to have a good outing on Saturday. Shall return to headquarters at the Swan, Upper Clapton, between nine and ten, when we should be pleased to see any anglers and friends, anticipating good sport. A cordial vote of thanks to the chairman closed the proceedings.—Henry Howse, hon. sec.

## COBDEN ANGLING SOCIETY.

The members of the above will fish a match on the 7th inst., at Taplow. There are six prizes to be contested for.—C. Reeves, sec.

## GOLDEN BARBEL.

On the 30th, in spite of the cold winds and snow, several of the members succeeded in getting fish. Mr. J. Roach had nice lot of his namesakes from the Thames. He remarked to a friend, "If there was more water in the river we should be able to get a heap of fish where those come from; but till there is we must be thankful for what we can get." On the 9th a concert and a draw for two cases of fish will take place for the benefit of our old friend and member, Tom Adams. Members and friends who can make it convenient to attend will receive the thanks of "Old Tom," who has been out of work some time.—Pixie.

## GOOD INTENT ANGLING SOCIETY.

There were not many fish brought to the club on Nov. 30th. Messrs. Snook and W. Solomon had some nice roach. On December 2nd there was a fair attendance of members, and all the details were settled for our Christmas prizes. There will be a long list; all members competing must go by the 8.45 train from Liverpool-street. I anticipate a good muster. The prizes will be fished for at Broxbourne on the 14th inst.; all members are allowed to compete, including honorary members.—R. Murphy.

## GLOBE ANGLING SOCIETY.

Only a few of our members ventured out on the 30th ult., consequently our show of fish was very small, Messrs. L. Harrington, F. Lawrence, H. Lake, and S. Howell being the only four to weigh in, which consisted of roach, dace, and chub. The 7th Dec. being the last of our year, there will be several prizes fished for, and I hope to be able to make a good report for the wind-up. Our distribution of prizes will take place on the 15th inst. Members will oblige by attending in full force at the next meeting to make all necessary arrangements for the annual supper, and several other matters of importance.—J. J. Holmes, sec.

## GRANGE ANGLING SOCIETY.

The annual fortnightly meeting was held on the 27th ult., Mr. Hunt occupying the chair. After the usual business was concluded the chairman presented to Messrs. Jones, Raffey, and Tagg, the prizes they won at the match held on the 21st October at Egham. The chairman also announced that the committee had arranged for a two days' match to take place in December for five prizes, presented by Messrs. Hockley, Brook, Farrow, and Ryder. Last Saturday Mr. I. H. Rich captured two pike, weighing 18lb., the largest scaled 12½lb.—W. K.

## GREAT YARMOUTH PISCATORIAL SOCIETY.

Although the weather was so very unfavourable on Monday last for anything appertaining to angling pursuits, I am very pleased to record the fact that the closing jack competition of 1884, of this society came off on Barton Broad on that day, and I am proud to say that it only tends to show that the members now comprising this society are made of good true metal that will not be daunted in anything they may undertake, more especially when their best prize of the season (a handsome cup, presented by Councillor Bayfield) was won in a masterly style by Mr. Harrison—the artist well known by his numerous paintings of scenes of our broads and landscapes—by catching two fish in such a mode as clearly shows that he has also made the fish in the broads and rivers a study as well as the scenery surrounding them. And, as the President (Mr. Bayfield) remarked at Tuesday's meeting, when presenting him with his prize, the only hope of the society and friends was that he might long live to enjoy many a contest with the Yarmouth Piscatorials, to which Mr. Harrison suitably responded. The President proposed the health and prosperity of Mr. and Mrs. Lark, regretting much that circumstances had called him away just when his company was required most, adding that all were greatly indebted to Mr. Lark, whose labours in the anglers' cause seemed never too heavy or weary when good could be got out of them, and wishing he was in Yarmouth instead of London on that occasion. Mrs. Lark, on entering the room, returned thanks to the gentlemen present for the kind feelings expressed regarding herself and husband's health, and therefore wishing one and all health and prosperity, and success to the society. The health of the chairman (D. S. Bayfield), and the vice-chairman (C. K. Lamb), and the members present followed, and it need scarce be added were most enthusiastically drunk, which brought a most harmonious meeting to a close.—J. E. Pretty.

## GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening at the Mason's Hall Tavern, Mason's-avenue, Basinghall-street, Mr. Field in the chair. The minutes of the previous meeting were read and confirmed. In the absence of any particular business, Mr. Crumplen obtained leave to read a paper on "Mermaids," which he stated had been written by the office boy of the *Anglers' Journal.* Judging from the paper in question, the sooner this office boy is got rid of the better; the paper bristled with puns to an extent which suggested that a goodly portion of the writer's income had gone for reserve seats in the gallery of some theatre where the sacred lamp of burlesque was kept constantly burning, and when it is added that the paper shone with several words, the pronunciation of which was just a little too much for a veteran paper-reader like Mr. Crumplen, a very fair notion of the youth's precociousness may be formed. He is evidently a bad boy, or a boy who looks on the bad side of things in general, and mermaids in particular, for after giving various accounts of the appearances of mermaids at different times and places, he arrives at the conclusion that if they put him in mind of anything it is of a half monkey and half fish badly joined. As was pointed out by one of the members, such a sweeping condemnation was hardly just. Mermaids, like all other beings real or imaginary, have their good points, in proof of which he cited the instance of the "Merman," who, having politely tapped at the side of a vessel and requested the pleasure of an interview with the captain, informed that official that he was greatly inconvenienced by the presence of the ship's anchor at his front door, as it prevented his family going to church. From mermaids to shirts is a long leap, perhaps; but some angler's shirts, made of "flannelette," were next introduced to the meeting, which, if everything said of them be true, are all that an angler can desire, almost to the ensuring of a good catch of fish to be shown at his next society's meeting. A vote of thanks to the chairman concluded a very pleasant evening. The entertainment to take place next Tuesday is a series of dissolving views, illustrative of the Upper Thames. A good selection of songs has also been arranged for.

## HAMMERSMITH UNITED ANGLING SOCIETY.

On Thursday, Nov. 27, there was a nice show of dace taken by Mr. Smith, at Tedddington, with old Joe Baldwin. Most of them were of exceptionally large size, but none quite up to our specimen weight of 7oz. Those of our members who had patience, and remained late at the club, were rewarded by seeing a fine take of chub sent up by Mr. Geen, from Oxfordshire. There were four trays of fish, weighing 42½lb. This is the correct weight of these fish, and the reason for emphasising it is that on Saturday last, at Twickenham, this take was spoken of as weighing 120lb. I correct this error on behalf of my friend P. G., who is a stickler for correct weights, and recommended Master Dick Coxen to bring a notebook and pencil next time he pays us a visit, and not trust to his memory, which, on occasions when all are so ready to welcome him, is liable to become somewhat defective towards the small hours. Mr. Hobden tried the roach at Twickenham on Saturday with Dick Coxen, but it was too cold, and his bag did not exceed 5lb. in weight. The 30th was a similar day, when Mr. Penny and another of our members fished with G. Coxen, and with similar result.—H.

## HOXTON BROTHERS ANGLING SOCIETY.

Very few members out on the 30th ult. W. Norman had four handsome jack weighing 24lb. 2½oz.; H. Steadman, chub, 2lb. 5½oz. The outing for the Christmas prizes (which, I am pleased to state, are very numerous) will take place on December 14th. The water not yet decided upon.—R. Ghurney, sec.

## THE LINCOLN ANGLING SOCIETY.

Our members went out on the 30th ult. to fish for three prizes, but only one prize was taken. Mr. Ulph brought in some fine roach, weighing in all 2lb. 7½oz., from Windsor; Mr. Bingle, being the successful winner of the prize, brought in a splendid show of roach, dace, and perch from Temple. The other members only met with indifferent sport.—H. Bingle, sec.

## MESSRS. SUTTON'S ANGLING SOCIETY.

The angling association in connection with the Royal Seed Firm, of Reading, held their annual meeting in the Abbey Hall on Thursday, Nov. 27, for the distribution of prizes competed for during the past summer. In the unavoidable absence of members of the firm, Mr. J. Adey was chosen to fill the chair. After reviewing the association in its progress during the past five years, he congratulated the members on the successful termination of another season. The prizes (value £10 10s.) were then presented to the successful members by Mr. T. Caudwell, and, as usual, the awards were for specimen fish. Hearty thanks were accorded to the Messrs. Sutton for the interest manifested by them in the pastime of their employés, and also for their liberality in providing the valuable prizes each season. A cordial vote of thanks to the secretary for his exertions on behalf of the association, and to the chairman, terminated the meeting.—F. Squire, hon. sec.

## LIVERPOOL ANGLING ASSOCIATION.

At the meeting on the 20th ult. Mr. R. Wilson weighed in a very nice pike of 9lb. 10oz., taken out of the lake at Knowsley on an ordinary perch hook, with gut trace and minnow for bait. Our sixth annual dinner took place on the 27th ult. at our new quarters, the Canton Hotel, 14, Victoria-street. The weather turned out unfavourable; but notwithstanding this drawback, and the absence of several members through illness who would otherwise have been present, 40 sat down to and thoroughly enjoyed the excellent *dejeuner* provided for them by that able caterer, Mr. W. Vines. After fully satisfying the requirements of material nature—no mean task as it turned out—the company adjourned to their club room, there to pass the remainder of the evening in the social enjoyment of pipe and glass, music and song. On entering the room the first thing that met the eye was the handsome and valuable bookcase made and presented to the association by Mr. A. Harrison, assisted by Mr. J. Evans. Can an association go wrong with members in it like these? No, surely not! In the unavoidable absence of the president, Mr. Sergencson, through sickness, Mr. Pratchett occupied the chair, with Mr. W. Pearson opposite. The toast list consisted of "The Queen and Royal Family"; "The Army, Navy, and Volunteers" (ably responded to by Mr. Thos. Bloomfield, a survivor of "The Gallant Six Hundred" immortalised by the Poet Laureate in the "Charge of the Light Brigade"); "The Liverpool Angling Association," "The Officers of the Association," "The Donors of Prizes," "The Winners of Prizes," "The Chairman," "The Vice-Chairman," "The Treasurer," "The Hon. Secretary," and "The Visitors." In responding for the association and himself, the chairman said that, as a man of few words, he must simply thank them for their kind reception of the toast, and assure every one that he was ready and willing to at all times do all he could to further the interests of angling and the association. The vice-chairman, in acknowledging the toast in his name, travelled over similar ground as the chairman, and there cannot be a doubt that in these two officers the association have steadfast and tried supporters. Mr. W. Jones, treasurer, in reply to the toast of the officers, with which his name was coupled, treated the company to one of his eloquent speeches, which are always listened to with delighted attention. Mr. Jones has the happy knack of saying good things in the most appropriate language, and in him also the association has a staunch supporter. In the absence of Mr. J. E. Martin, who should have responded to the toast of the donors of prizes proposed by Mr. A. Gregory, Mr. Boulding took up the strain in a neat and telling speech. This gentleman is also a good speaker, and invariably commands the interest and attention of his hearers. He is, too, a firm and consistent adherent of the association, and can be relied on at all times. Mr. E. Chandler (who is just recovering from a severe sickness), on rising to respond to the winners of prizes, proposed by Mr. Leaman, who most feelingly coupled his name with the toast, was greeted with a perfect storm of cheers and applause. He said he felt very deeply the great sympathy shown him by the reception his name had met with, and it made him feel that angling is a pastime which is not only delightful in itself, but brings its votaries closer together in the bonds of a lasting brotherhood. He thanked everyone most heartily, and hoped to be spared to be amongst them for many years, and added that all the time he was laid-up his mind had been with the members in their outings and competitions, and so vividly did his imagination fill up the picture that at times he felt as if taking part in the fray. The hon. sec., in replying to the toast of his health, kindly and pointedly proposed by Mr. Boulding, had little to say, as deeds spoke louder than words, he remarked, and they all knew that he had grudged neither time nor trouble during the last four years to make the society a success, efforts which he should not relax in the future if continued in his position, and only asked the members to back him up, when failure would be out of the question. Mr. R. Roberts, in proposing the visitors, made what may be called his maiden speech, and a little gem it turned out, to the point in every way, pleasantly alluding to the presence of visitors, not only on this occasion, but at our various outings, and carried the meeting with him when he said visitors always had been, and would be, welcome. The little speech was greatly appreciated, and it is hoped we shall hear Mr. Roberts oftener. Mr. Neale briefly but ably replied for the visitors, saying he had enjoyed the evening very much indeed, and that as he always tried to make friends he felt sure he had made some that evening. The singing was throughout of a high class, there being some excellent vocalists amongst the company. Mr. Rawsthorne opened the ball with "Did you ever feel that way," and subsequently "The Midshipmite," singing both as only he can. Mr. Humphreys gave "A Life on the Rolling Sea" and "Sailing," and rendered them both in really first-class style. Mr. J. Evans was in good voice with "Beer, Beer," rolling it out in his usual cheery and jaunty manner. Mr. Robinson, with "Take it, Bob," and another or two, sang well and tunefully, and is a pleasant and attractive vocalist of no mean order. Mr. Chandler favoured the company with a comic song, and, considering his state of health, was very good. Mr. W. Jones ably and truly rendered his "Hunting Song," rattling this difficult song off with great *eclat*. Mr. Leaman gave "Rhine Wine" as it should be given. Mr. Neale, with "Simon the Cellarer," achieved a great success, and is evidently a singer of considerable merit. Mr. W. Davies warbled out "Brogue and Blarney" as if to the manner born, and had kissed the famous "stone." Last, but far from least, comes Mr. Hudson, who sang "I Fear no Foe" perfectly, and "brought down the house." This gentleman (a visitor) presided at the piano, and played the various accompaniments very well indeed. He had, and well deserved, the warmest thanks of those present for his voluntary and successful efforts in adding to the general harmony and enjoyment of the evening. Unfortunately, twelve o'clock arrived all too soon, and put an end to the scene; but each and all separated with the friendliest feelings, looking forward hopefully to the next reunion as only generous souls have a right to do.—R. WOOLFALL, hon. sec.

## NORTH-EASTERN ANGLING SOCIETY.

The Clout Testimonial.—A special meeting will be held at the club-house, Mr. Haylock's Shepherd and Flock, Great Swan-alley, Moorgate-street, on Wednesday evening, the 17th December, at 9 o'clock prompt, to consider the best means of carrying out the above. Secretaries and delegates of societies and friends are respectfully invited to attend.—G. T. FLETCHER, sec.

## NORTH-WESTERN ANGLING SOCIETY.

The 35th half-yearly supper and distribution of prizes took place on Thursday evening, the 27th November, at the club-house, Lord Southampton, Maitland-park, N.W., Mr. Lealand in the chair, faced by Mr. Aldis. After the good things provided by the worthy host, Mr. Wetenhall, had been properly cared for, and the cloth removed, the Chairman proposed the loyal toast, and the business of the evening was got through very satisfactorily. The Chairman proposed the toast of the evening: "Success to the North-Western Angling Society," with which he proposed the health of its secretary, Mr. Hillier, which was heartily received. The secretary, when able to get a hearing, thanked the members and visitors present for their kind feelings towards him, and hoped it might be his lot to receive many such. He stated that the funds of the society was still in a satisfactory condition; was pleased that the members had verified his statement at the last supper, that this would be a prosperous season, and that the aggregate weight of fish weighed in that season (the whole year) would be far exceeded this. This they had done, for they in the first half-year had exceeded the whole of last season. Some first-rate songs were rendered by Messrs. Underwood, Lealand, Aldis, Marshall, Greenwood, Lancaster, Packman, Hayes, and Wynn. Jack prizes were taken by Messrs. W. Plumpton, senr., W. Plumpton, junr., Hayes, J. Shackel, and Culpitt; bream, R. Marshall and W. Plumpton, senr.; roach prizes by Mr. G. Weaver and F. Hill; perch, E. Cross. All fish by Messrs. Aldis, Underwood, and Hillier. The following members also took prizes for excursion: Messrs. Hill, G. Weaver, W. Weaver, C. Billings and Underwood. A good list of prizes was presented for this half-year. Mr. Wynn proposed, "The health of the Treasurer," Mr. Wetenhall, saying that he was a jolly good fellow, and when he replied, it was soon seen that Mr. Wynn had made no mistake. Several other toasts, amongst which was "The Chairman and Vice-Chairman."—W. HILLIER, sec.

## PECKHAM BROTHERS ANGLING SOCIETY.

The members of the above club will fish for seven prizes on the 7th inst. at Kingston (drain barred). Train leaves Vauxhall at 7.35, the match to terminate at 4.30. I hope the members will turn up in large numbers; likewise the fish.—GADFLY.

## THE PISCATORIAL SOCIETY.

The ordinary weekly meeting of this society took place on Monday evening last at Ashley's Hotel, Covent-garden, and was well attended. There was a splendid show of fish on the tables. Amongst the members present were Messrs. Gillatt, Pattisson, Huggett, Fennings, H. B. Brown, Gray, Sachs, Goodger, Blamey, Harden, Foreman, Perelli Rocco, Jesse, Robinson, Meyer, Inderwick, Wheatstone, Hall, H. H. Brown, Walker, Booker, Butler, Watson, Blundell, Adlington, C. C. Blundell, Dr. Brunton, J. Lander (hon. sec.), &c., &c., and amongst the visitors were Messrs. S. Kosterlitz and J. W. Atkinson. Mr. Gillatt was unanimously voted to the chair. The minutes of the previous meeting were read and confirmed. Mr. Foreman's show of pike was 12lb. 10oz., from public waters, and arrived too late for last week's report. The ballot took place for the proposed new member—Mr. Neish, of Watling-street, proposed by Mr. Harden, seconded by Mr. H. B. Brown. In the result the Chairman announced that Mr. Neish had been unanimously elected a member of the society. The Chairman thereupon proposed the "Health of the New Member," which was responded to with enthusiasm. The smoking concert, as previously announced, takes place on the 15th inst., Mr. Foreman in the chair, and Messrs. Goodger and Norman Harrison as vice-chairmen. Mr. Fennings, referring to the Piscatorial Society's ball, announced that three of the committee had taken sixty tickets. Application must be made as early as possible by those wishing to attend the ball, as the number will be limited. Coote and Tinney's band. The dancing will commence punctually at 9 o'clock. Dr. Brunton, in some well-chosen remarks, referred to the death of our late member, Dr. Llewellyn Thomas. As a personal friend he could speak as to the estimable qualities of that gentleman. He had not been so much amongst us lately, but he was a keen fisherman, especially for trout, and his heart was thoroughly with us. Unfortunately, the society had lost a good member, and he, Dr. Brunton, a kind friend. He proposed a letter of condolence be written to Dr. Thomas's relatives, in which all present heartily concurred. The chairman announced the weights of the fish on table. Mr. Huggett showed 32lb. 4oz. of chub, the three largest 9½lb., from the Lodden; Mr. Meyer showed two chub, the largest 4lb., from Datchet; Mr. Robinson showed 47lb. 11oz. of pike, the largest 15lb., from Avon public waters. The chairman proposed the health of the successful anglers in the order they had weighed in their fish—viz., Mr. Huggett, Mr. Meyer, and Mr. Robinson. Mr. Huggett pointed out the advisability of weighing in early, so as to have the advantage of being the first named amongst the successful anglers, and being called upon first to reply. He thanked the members for their kindness. There was nothing unusual connected with the show of chub on the table; they were caught in the usual Nottingham fashion, and his experience was that so soon as you hooked a large chub, he generally ran straight towards you, at times nearly under the punt, thus all control was lost for a second or two, with the result that Mr. Chub often got under boughs or in weeds; he lost two nice large fish on the present occasion in this manner. Mr. Meyer said he was fishing with Lumsden; they tried the boughs and usual haunts of the chub without success. At last they tried the open water, and took the two fine fish he showed on the table; they saw large numbers of barbel; the weather was fearfully cold. Mr. Robinson caught his fine show of pike with snap. His experience was that of his friend Huggett—viz., that they would not take spinning bait. The weather was fearfully cold, and his fisherman managed a couple of gallons of ale during the day. He found less difficulty in getting the large fish than the smaller ones. Dr. Brunton introduced what he considered an improvement in a pike paternoster, by the insertion of a swivel, and exhibited same to the members present. Mr. Wheatstone was of opinion the swivel was of little or no use. Mr. Pattison was also of that opinion, the swivel being in the wrong place. Mr. Robinson introduced for inspection one of his gut pike paternosters, which, he claimed, beat the Doctor's into fits. A little good-humoured banter followed, and the chairman proposed "The Continued Success of the Glorious Old Piscatorial Society." He was proud to be chairman with such a fine show of fish on the tables. The toast was "The Piscatorial Society—Long may it Flourish," drunk with enthusiasm. Mr. Godfrey proposed the health of the chairman, who was a staunch supporter of the society. This gentleman briefly replied, and the business terminated.—T. H.

## RODNEY PISCATORIALS.

On the 30th ult., Mr. G. Dodd exhibited some nice roach from the Thames, with which he succeeded in winning the first gross-weight prize for November, given by Mr. T. Hughes. Mr. C. A. Grant won the second prize given by Mr. G. Dodd. The first prize, given by Mr. R. Chantry for the Windsor competition of this date, fell to Mr. Flower, who managed to get among some dace. Messrs. C. Grant, R. Chantry, R. Smith, C. A. Grant managed to find some fish, but they were small. The snow coming down soon put an end to their sport. At the meeting held at headquarters on the 3rd, Mr. Flower was elected chairman for the ensuing quarter, and a hearty vote of thanks was tendered to Mr. R. Smith for the able manner in which he had fulfilled that office during the past two quarters. Members that were not present on this evening are informed that in future Rule 6 will read—"No member allowed to fish with more than two rods. For special competitions, the where and how to be decided at the meeting held previous to the outing. Open competitions, members can fish from punt or bank." Rule 12: "All fish weigh according to Thames rules, bar perch, trout, and bream; when from any other river shall be 7in., 9in., and 9in. Members weighing in live fish must submit to have such fish marked in such a manner as to be recognised should they be brought to be weighed on a future occasion." The following has been added to Rule 4: "Any member misusing a privilege ticket, granted to him to travel by any of the railway companies that grant the privilege to travel on their lines at the reduced fares granted to anglers, shall be expelled and forfeit all prizes he might be entitled from this society." Mr. A Liversage's prize will be given for the gross weight takes during December. For the December special, Messrs. Diggins, C. A. Grant, and Hotham will contribute, to be decided according to rules.—PIXIE.

## ROYAL GEORGE ANGLING SOCIETY.

The 30th ult. proved itself anything but a good day for angling; at any rate, eight of our members had pluck enough to face it. Messrs. Hewell and Parsons visited the lower Thames, and were well rewarded for their trouble—a more splendid show of roach has not appeared on our trays this season than were placed there by the two above-named gentlemen, many of the roach going 15½oz., besides a nice barbel. Messrs. Rider, Palmer, Wood, Holden, Carter, and Forey went to Henley, to fish for a prize given by Mr. Scomer, but only one of the above-named gentlemen were successful in getting fish—namely, Mr. Holden—but not sufficient to win the prize offered. We expect a large number at Waterloo Station on the 7th inst., ready for the first train, in order to compete for the Christmas sweepstakes; if not, I know one member who will feel disappointed, that is—W. H. RIDER.

## STAINES ANGLING CLUB.

In spite of the weather on November 30th, the members of the above club turned out to fish for the prize in continuation of the previous competition on the 23rd ult.; but only one, Mr. James Drake, succeeded in taking a fine jack, but not sufficient in weight to take the prize.—F. SYKES.

### WELLINGTON.

On Monday, Mr. Charles Newbury weighed in 11lb. 14oz. of chub, the two heaviest being 5lb. 2oz. and 3lb. 1oz. We had a large attendance at the half-yearly meeting on Wednesday, when the balance-sheet was passed showing a very satisfactory state of affairs. Mr. Heaton was balloted for and duly elected a member. Mr. Palmer weighed in tench and carp. The distribution of annual prizes will take place on the 17th inst. at 9 o'clock, preceded by a supper at 7.30, for which I shall be glad to take members' names as early as possible.—W. W. Alexander, sec.

### WEST GREEN ANGLING SOCIETY.

Mr. Wilsher's monthly prize was won by Mr. Hay, Mr. Firkins being second after a very close race. Mr. Coleman's prize for the largest jack not being taken, it will be fished for this month with Messrs. Elders and Haddon's monthly. Members are requested to attend on Wednesday next, at a special meeting, to elect a president and other special business.—J. Guyver, sec.

## THE ROMANCE OF ANGLING.

By "Streams-o'-the-North."

Most Englishmen, I may safely say, are sportsmen at heart, and further, I think that no country in the world can boast of such a number and variety of sports as the land of our birth. But of all the sports indulged in by us, none of them, in my judgment, possess the romantic element in so great a degree as the gentle sport of angling. In fact, to write a paper on the romance of shooting, or even hunting, as practised in England would be a task that even a highly-strung imagination would find a large amount of difficulty in doing. There seems to be scarcely room for romance and sentiment in dealing with the sternly practical elements of powder and shot, although no one likes a shot better than I do. I cannot but feel that these sports cannot be termed romantic or sentimental. In the days of old, "when knights were bold and barons held their sway," when the fierce boar and bounding deer ran wild and free in the ancient and mighty forests of old England, the chase in these times certainly possessed these elements in a large degree. Since the introduction of the rifle, however, the romance of the chase has to a great extent disappeared. The weapons of the present day are dreadfully deadly and certain, and rob the sport of much of the old enthusiasm and adventure it possessed. We must, besides, remember that the animals hunted now are very different. It is nowadays the timid hare and scared fox in place of the wild boar, wolf, or bounding roe of the bygone times.

"Away with sports of charge and noise,
And give me cheap and silent joys."

The ancient sport of angling, or, as old Izaak has termed it, the "contemplative man's recreation," has, however, unlike other sports, not suffered by new innovations or the flight of time—the fish are still "all there," but 'cuter, certainly, if they are not so numerous ; and in spite of the strides of the last thirty years in the manufacture of splendid tackle and novel baits, the task of getting a good basket of trout is more difficult now than in the old time when the poet sang :—

"'Tis delightful the trout to ensnare ;
To gaze on his tints, like the cheek of the fair,
And sigh when their brilliancy sinks in decay,
As bright as the rainbow, yet fleet as its ray."

Yes, everything about our beloved sport tends to throw around it an undying halo of romance and sentiment. Its associations are so numerous and diversified that it speaks to us in a multitude of voices, and brings almost every power in our nature into play. The scenes of the sport lead us far away from the toil-worn desk and busy town, from the hum of the Exchange and the friction of life. It is true that the mind is called into *active* employment, but then it is *recreative*. It affords an entire diversion of thought ; our contemplative faculties operate in another sphere ; our eyes gaze upon a complete change of object in the glorious expanse of nature by flood and field or heather-clad mountain.

The romantic element, however, surrounding our sport is more especially existing in the purest form of it—viz., "fly fishing." Speaking for myself, I must admit that ever and anon the resolution has well-nigh taken hold upon me "never to handle a worm again." I dare say that in this respect I may be in the position of many juniors and tyros in the art, *waiting* until they have grown into their "angling manhood" and become sufficiently proficient to discard the worm and stick to the fly only. Opinions may differ on this point, yet after all there is little to romance about (so far as the lure is concerned) in a "fine smellin' worm" or a "gud midden maggit," as we say in the North. Far be it from me, however, to decry the mode of fishing adopted (of necessity) by the poorer angling communities of our large towns. Their sport yields them true and infinite pleasure. How keen and eager they are, as they fish of an evening after a day of sweat and toil, in the crowded docks, in the muddy tidal waters, or slimy canals near our densely-populated cities. To such I say, "Go it ! my humble brethren ; although your baits are bred amidst rottenness, although to us, whose lot is cast in happier 'hunting-grounds,' such sport savours more of 'fish-killing' than angling-proper. Dire necessity is a hard master with you, and my best wish is that such opportunities as your richer and more fortunately placed brethren enjoy may one day be yours. I can fully believe that often you may dream of a Heaven that will provide a river whose waters are crystal clear, whose banks are *not* lined with mud, where tall chimneys will give place to waving trees, where fragrant air will replace sewer smells, golden trout slimy eels, and silver salmon grobbing gudgeon." Heaven grant that such an angling paradise may be the lot of our poorer brethren of the "maggot and paste."

Far be it still from me to inveigh against punt fishing, though to Northern anglers—mountain stream fishers—I freely confess it savours of 6ft. by 2ft. ! Nor will I revile canal and bank fishing, keeping to an allotted number of feet in case you incur the severe displeasure of your angling neighbour, who guards with jealous eye his baited ground. Opportunities for these modes of angling are rare with us in the North, and though such may possess philosophic and contemplative elements, yet they do not breathe of feeling and romance. The associations and surroundings are wanting. They lack the elements of *pursuit, difficulty, and adventure* (except when the unlucky angler gets occasionally "tipped in" by the rope of a passing barge). There is too much "sit me down at ease" in it. *Umbrella* and *tall hat!* And I regret I notice a growing tendency amongst anglers in many parts to desire great ease and comfort in their piscatorial excursions. Like the "battue" system in grouse shooting, where the sportsmen employ both men and dogs to drive the frightened birds to a given spot where sits my lord, with breechloaders ready for him, flunkeys, champagne, and sandwiches ; so in fishing there is a prevalent feeling (pardonable, of course, in old men) to get on heavily-stocked and carefully-preserved waters. *Get up late of a morning.* Drive up to the water side. *Doesn't wade, of course ; 'fraid of cold.* Not forgetting *cork soles* and an *air cushion* in case of a chill *behind.* Then catch in a few yards of water, in an hour or two, a large number of unsophisticated trout. Butler brings lunch, and dine at 6 p.m. with "my lud." All very well, I say, once of a time, and seldom the better. This is not the sort of thing to breathe energy, spirit, and poetry into our sport. Happy the anglers anywhere born amidst crystal streams ; and if you are sufficiently high-spirited, will you not prefer to be unfettered ? to wander where fairy fancy pleases—"o'er moor and mountain green," by "fell and fountain,"—to lead the mimic fly and catch your fish when you can and where your can ? The more wary the trout and the greater the difficulties of filling the creel, the greater the pleasure and purer the sport. Fly-fishing, more especially in mountain rivers, is most exciting. It requires greater skill and physical exertion, and brings all our faculties into play. I can bring to mind as I write fly-fishing holidays spent by the streams of our "canny borderland"—in the glens of Coquet, and the "wild, heaving wannies o' bonnie North Tyne" ; and they are to me red-letter days in an angler's history. Have we not, all of us, anglers of every county, such red-letter days, full of the most delightful memories ? And do they not form the romantic in our angling lives ? As we sit by the fire, "many's the time and oft," as the song says, pleasant are the recollections and pictures of the past as they cross our mental view. How they rise and grow ! Again in fancy we roam down the banks of our beloved stream ; again we wander o'er the heather-clad moor, and away where the grey boulders rise in some swirling pool, do we :—

"Cast the fly lightly where yellow fins gleam
And the bright-spangled beauties we wile frae the stream."

As we sit we fancy we hear again the rush of the waterfall, and the curlew and plover's cry on the fells. Thoughts and reveries like these lend romance to our sport ; and as the race for wealth—or more properly *bread*—grows fiercer, these times of sport and recreation are more keenly longed for, though hardly snatched, and in the midst of the "moil and toil" of active business life there come these pleasurable anticipations, and it often happens, in the poet's words, which I alter for the occasion, that

"On 'Change and the market the keen angler sees
The mountains ascending, and visions of trees ;
The *pen* becomes *rod*, in the ink salmon glide,
And the river rolls on by the chair at his side."

It is then that a romantic fever seizes the angler—work he cannot. He has a chum angler whom he knows is game for a day any time, and to him he communicates confidentially the "infection," informing him that he feels "*all overish, you know.*" "*Wants a breath of fresh air,*" &c., &c. On his return home that evening he astonishes the partner of his joys and sorrows by intimating that he is *not* going out to-night ! "Put the children to bed, my dear. I'm going to be busy, my dear"—which means a serious business. The fever is coming to a crisis. His wife, good soul that she is, knows the symptoms well. "*Going a-fishing to-morrow,* my dear !" Forth from its hiding-place comes the tangled tackle-book ; again does he with much deliberation prepare for the work of the morrow ; with skilful and eager hands does he make up his favourite "casts," and with the aid of the old March brown, woodcock, blue dun, and favourite hackles, like Walton's angler,

"He doth his many toils prepare,
And arm himself with every watery snare ;
His hooks, his lines, renew with careful eye,
Increase his tackle and his rods retie."

That night he rambles down the meadow, rod in hand, and at his favourite pool, again does he hook and play that *same old salmon.* He sees him pounding through the dark water, while the line plays merrily through the rings, till the click of the swift-running reel becomes a knocking at his door, and pebbles thrown at his window at 4.30 a.m. by his wakeful "comrade in arms" outside reminds him that

"The stream will not flow and the hills will not rise
Till the slumbers have all passed away from his eyes."

See now our anglers as they gaily tramp along. Need we ask whither they go ? Their way lies over the meadows. It is a bright morning in spring. Away through the forest they pass, where every tree seems bursting into new life. How beautiful the larch wood looks—as Mrs. Hemans beautifully says,

"The larch has hung all her tassels forth."

The dancing daffodil is everywhere in the valley. The catkins cover the green, bending willows. The mosses are bright. Primrose stars peep in thousands amidst the brown and faded leaves of the wood. The tender-eyed daisy is everywhere. The birds twitter their love notes on every branch. The clouds are silver-grey. Just the day for sport—

"A day without too bright a beam,
A warm, but not a scorching sun,
A southern gale to curl the stream,
And, master, half the work is done."

How sweet is the morning air, fresh from the rain-moistened hills ! How exhilarating it is ! They expand, for the first time properly for weeks, their City-cramped lungs. But, good Heavens ! what on earth is up with them ? The elder of the two especially, whose locks are silver-tinted, seems the worst. They are actually leaping stiles like lads of ten years ! How they joke, and smoke, and chaff, and talk. Hear them roaring with laughter. Surely, they have discovered the "Elixir of Life" ! What a change from the men of yesterday ; the lines of thought worn on their face in the busy mart and exchange have all disappeared. What a marvellous change ! The romance of the sport is working its spell upon them. We need scarcely describe the angler at his day's sport. He seems a kind of amphibious animal, in and out of the water all day. See how his eye, his brain, his arm nerve themselves for the work. How neatly does he cast his fly, and irresistibly, too, for as the hours speed pleasantly and too swiftly by, he lures many spreckled beauties from their rocky haunts, and as the day wears on his heart grows lighter as his creel grows heavier. If it is summer instead of spring, what sights and sounds greet his eyes and ears, for the soul of no true angler can be indifferent to Nature's charms. How the swallows and martins dart and wheel in mazy circles round his head in friendly recognition. He sees the dipper nodding its beautiful little head as he jumps from stone to stone. Down by the streamy shallows he sees the wagtail tripping lightly over the sands. He knows these birds and a host of others. The angler's eyes are keen, and he sees and notices all. He has many acquaintances in his piscatorial excursions. He knows the trees by their leaves and bark—knows the difference between the watercress and marshwort when he comes across it. The familiar sights of fishes, birds, plants, and trees of every description all minister to his pleasure as he rambles by the stream, and with the music of nature in his ears and everything so wondrous fair, the angler feels, in the words of the poet, that—

> " While by some gilding river he sits down,
> His mind's a kingdom, and content his crown."

And now, as the day is departing and his hours of pleasure draw swiftly to a close, the glow of the sunset leaves a dark red in the clouds, the trout rise with quick splashes ; the "gloaming" steals over the scene ; the winds rock themselves to sleep in the cradle of the mountain glens ; the bats come forth from their hiding-place and circle round his rod and line ; the silver mist begins to rise ; the birds cease their singing ; the heather bleater pipes his last note ; the cry of the curlew is sad ; the peace of the departing day is only disturbed by the rustle of the leaves, the dash of the stream, or the splash of the last trout he has just creeled.

These descriptions may be old and hackneyed, perhaps, but they will never fade. They speak to us with an eternal freshness, and are full of deep feeling. Shall we not say that a day's angling with these romantic associations I have named sends a man home and to the toil and wear of life a better man, physically, mentally, morally, and intellectually ?

The sport of angling, further, from its romantic nature, often develops and strengthens other characteristics. How very often do we find the keenest anglers possessing some feature of pre-eminence over their fellows ?—*a keen* angler and a *good* artist combined, for instance. And why so ? Because the nature of the sport tends to cultivate and develop artistic ability by the sights of nature.

> " In field and forest, flood and hill,
> Tower and abbey, church and mill."

As a rule, anglers (country-bred anglers especially) possess "a bit of the naturalist" about them. They know the difference between a common water-rat and a vole when they see it ; they can tell an otter's track ; know every bird by its flight ; find a nest as easily as a schoolboy ; and discourse for hours on plants, birds, bees, fishes, and animals.

*Angling* and *poetry* are inseparable ; a treatise on angling would be incomplete and wanting in freshness without its poetry, and in our days some of the best of Nature's poets are first-rate anglers. Poetry breathes through every association of the sport.

*Angling is philosophic.* If any man wants to be a true thinking man and a philosopher let him become an angler, and he will find the " recreation of the contemplative man" to be the most philosophic sport going. One of the best works on natural philosophy in the abstract is old Walton's work. It contains the purest philosophy drawn from the purest of sources—viz., *Nature* herself.

*Angling is, further, scientific and technical.* It is a pure art, and affords any amount of room for scientific research. The feathers of almost every bird are called into requisition to aid us in our mystic art.

> " Each gaudy bird some slender tribute brings."

In no sport has such patient, thoughtful, scientific, and technic al ability been displayed as in the beautiful and ingenious inventions of tackle and devices of all kinds during the last thirty years. In short, the *poetry* of the sport, the *philosophy* of the sport, and the *science* of the sport clothe it with the beautiful and the romantic.

In spite of all that has been said, however, some less enthusiastic souls will yet say they don't see it—don't see any romance about the thing ! How the d—l can we be romantic when we lost that fish, and well hooked, too—that *fish* which was *the fish* of our dreams ? How can we be philosophic when he broke away and we parted company ? Even then, friend, the muse comes to our aid, and in the words of the poet we can say :

> " The last links are broken which bound us to thee,
> The last words are spoken which rendered thee free."

The " last links " being poetically " cutgut " ; the last words being poetically ——well, as Francis says, they didn't rhyme with Shem or Japhet !

There are other occasions, also, when only philosophy can assist us, when after a hot summer's day we decide to have a " cast " at sundown, and on reaching our favourite pool find that we have been anticipated, and the gnats are there before us. They evidently know we are " naturalists." How affectionate ! How they peep into our eyes, nestle lovingly in our ears, kiss our hands, and—Lord ! how they tingle ! We smoke them ; they like it. We whiskey them ; they like that, too. We breathe inward short prayers ; still on they come down our wristbands and collars. Talk of Zulus ! We quit the pool in desperation, and we philosophise as we see the skimming swallows in wheeling circles feeding on these plaguey imps. The philosophy is, " What is our curse is another's blessing !" These incidents and unpleasant occasions of many sorts will happen, and though the romantic flies away on the wings of the morning, then does a little good-tempered, genial philosophy come to our aid, the philosophy of a " blast of baccy and a wee drappie." Anglers as a class are genial, and it is astonishing the effect of a drink and a smoke in restoring their disturbed equilibrium.

The following lines portray the romance of the sport by an enthusiastic angler unknown to fame :—

> " Britannia ! Hail ! fair land of flood and field,
> Whose ancient hills their crystal fountains yield ;
> Hail to each angler true, and hail the sport
> Which to our latest hours we still shall court.
> Come o'er the hills and roam afar with me,
> Where some clear river wanders to the sea,
> Where silver streams pour down the grassy vale,
> While o'er the heather blows the healthful gale ;
> When 'vernal spring' comes tripping on the scene,
> And blushing Nature dons her robe of green ;
> When snow wreaths quit the hills, and rains descend—
> Then by the stream the pliant rod we bend,
> And o'er each finny haunt we cast the fly
> With cautious hand and ever-watchful eye.
> Down by yon pool, some speckled monarch's home,
> Whose dark grey boulders fret amidst the foam ;
> Where mosses cling and cascades pour their streams—
> These are the spots that haunt the angler's dreams,
> And there we love to stand, where oft before
> We've lured the 'spangled beauties' to the shore.
> Hail to the sport which smooths the path of life,
> Which threads of pleasure weaves, 'midst cares and strife.
> Hail to the sport, within whose gentle arms
> No warlike sounds disturb, nor fierce alarms ;
> The music of the stream bids such depart,
> And purest pleasure lends the angler's heart.
> Such sport our choice while life's fleet hours remain—
> Peace is her watchword, calm content her reign."

## THAMES TROUT.

The present season has been very favourable for the spawning of these fish. The following letter from William Milbourne, an old and thoroughly practical fisherman, will be read with interest :—" In the back water at Hampton Court no less than six brace of Thames trout have spawned, and from the size of the beds they must have been very large fish. I never saw so many trout spawn in that piece of water before. The beds are eighteen inches below the water, and if it keeps for another week, the fish will be fully hatched out. It must show how largely the stock of trout in the Thames is increasing for so many fish to spawn in so small a piece of water." This interesting report was confirmed at the Committee Meeting of the T.A.P.S., on Tuesday last, by some of the members who had been taken by Milbourne to see them. This account will be considered as specially good news to the Thames trout anglers, and in addition to what has been done in the tidal waters by the Richmond Piscatorial Society in turning in twenty-five brace of trout of ten inches in length, and what Mr. H. Dickinson intends doing at Kingston, by putting in fifty brace of similar fish. B.

[Trout eggs take months to " hatch out."—Ed.]

## THAMES FLOUNDERS.

In connection with the movement of introducing these fish above the locks and of recently putting in seven thousand at Hampton Court, the following letter which I have received from that neighbourhood is very satisfactory :—" Charles Davis has caught a Thames flounder whilst fishing for perch, and which must have been one of those recently turned into the river. The water is so low and bright that when the sun is out some of the flounders may be seen lying on the bed of the river. They look very healthy, and are doing well." B.

## THE CLOSING OF THE SEASON ON TWEED AND TEVIOT.

The salmon angling on these rivers has now closed, and it has, on the whole, been a very good one. Saturday was the last available day for wielding the rod and line, but the unfavourable state of the weather precluded the possibility of large captures being made. However, the takes got on both rivers since our last have been satisfactory, as will be seen from the following results :—November 26th—On the Hendersyde water, Mr. R. Waldie-Griffith had seven salmon, the heaviest being 31½lb.; on the Sprouston water, Mr. Wood, London, got three, 33lb., 18lb., and 10lb. ; on the Carham water, Mr. Hay Gordon had one of 25lb. ; on the Floors lower water in the forenoon, Mr. Croall killed one salmon of 20lb. and a grilse, and Mr. Forrest had one salmon of 25lb. and two grilse. In the afternoon on the same water Mr. A. Steel, Kelso, killed one salmon of 20lb., and Dr. Mackenzie, Kelso, had one of lesser weight. November 27th.—On the Floors upper water, Mr. A. F. and Lieut. Thistlethwayte, had four—14lb., 15lb., 16lb., and 21lb. ; on Floors lower water, Mr. Walker, Scarborough, had seven fish—all good weights. On Sprouston Dub, Mr. Wood had three—18lb., 25lb., and 28lb. ; on Sprouston water, Mr. W. A. Sommerville one of 16lb. ; on the Ednam House upper water, Mr. James Gibson one of 13lb. ; on the lower water Mr. Young had two—22lb. and 17lb., and Mr. Gibson two—22lb. and 18lb. On the Teviot, Mr. A. Hope had one of 23lb. ; Mr. P. Jack, one of 11lb. ; and Mr. Johnston, Kirkaldy, one of 7lb. November 23rd—On Floors upper water, Mr. Thistlethwayte had three—10lb., 17lb., and 19lb.; on the Ednam House upper water, Mr. Drummond one of 15lb. ; on the Carham water, Mr. Hay Gordon had eight—27lb., 18lb., 18lb., 12lb., 11lb., 9lb., 8lb., and one of lesser weight. November 29th.—The frost to-day was very intense, and made angling very unsatisfactory. On Sprouston Dub, Mr. A. Somerville had three—18lb., 20lb., and 23lb. Mr. Hay Gordon, on Carham water, had one of 18lb. ; Mr. Thistlethwayte, on Floors water, had one of 18lb. ; on the Ednam House lower water, Mr. Houston Boswall got one of 17lb. ; on the upper water, Mr. Drummond one of 15lb.—Melrose District.—November 24th.—On the Pavilion water, General Henry had one salmon, as had also Colonel George Henry. November 25th.—Captain Erskine, on the Pavilion water, had one fish ; General Henry one of 28lb. ; Colonel George Henry one salmon. November 26th.—Colonel George Henry, on the Pavilion water, had splendid sport, killing some grand fish ; his take numbered six salmon, the total weight being 107lb., giving an average of nearly 18lb. each. November 27th.—Colonel Henry got one fish.—November 28th.—On the same water Captain Erskine had one of 28½lb. ; General Henry two fish, and Colonel G. Henry one. November 29.—On the Pavilion water, Mr. Bain had four salmon—5lb., 9lb., 16lb., and 18lb. ; while one of 26lb. fell to the rod of Colonel George Henry.—Coldstream District.—November 29th.—On the Tweed, Mr. J. W. Campbell, Sunderland, got two fish—19lb. and 21lb. ; and Mrs. J. W. Campbell, one of 8lb. weight. Maxwheel, Kelso, Dec. 4.

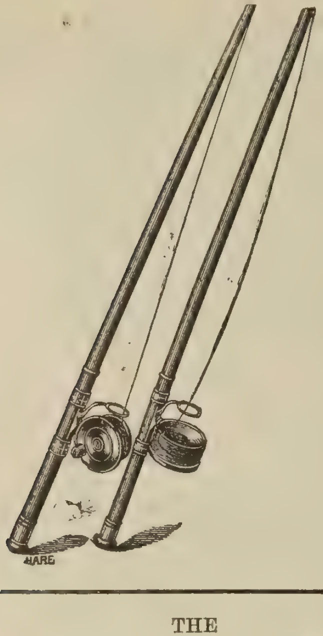
The Leigh Shrimp Fishery.—The whole population, about 1,700, is chiefly engaged in shrimping, and their prosperity varies with the season and the weather. Fishing is chiefly carried on with small trawls, and besides shrimps, which are sometimes taken in immense quantities, dabs, plaice, and even soles are caught. The " take " of shrimps varies within wide limits, a boat sometimes taking a hundred gallons in a single day or night ; but forty gallons is considered a good haul, and, of course, very often the work is not even remunerative. But the market price of shrimps at Billingsgate is, if possible, of more importance to the Leigh fishermen than the amount of the take, and this will be believed when we add that it fluctuates between four shillings as a maximum and one shilling as a minimum price per gallon. The shrimps are boiled on board boat and then picked over, the brown fetching a much higher price than the red. They are sent up to London at night by goods trains, and sometimes the freight amounts to as much as 2,000 gallons. The Leigh shrimping fleet now consists of about a hundred boats, which are mostly small.—From *Cassell's Family Magazine* for December.

Catching the Train.—Hurry to or from trains should in all cases be avoided. It is dangerous to the healthy habitual traveller as well as the invalid. Many a one has suffered permanent dilatation of the heart in hurrying to catch a train ; many a one has dropped down dead from the same cause. Hurry in catching trains tends to weakness of the nervous system, to indigestion, and to heart disease, to say nothing of the risk of catching cold from sitting down in the carriage heated, in cases where the person has to walk quickly instead of riding.—" *A Family Doctor" in Cassell's Family Magazine* for December.

A serial issue of Dr. Geikie's " Life and Words of Christ " is about to be published in sevenpenny monthly parts by Messrs. Cassell and Company. This edition will have the advantage of a series of full-page frontispieces, and with Part 1 will be issued a large map in colours of Palestine in the time of our Lord.

Ceylon Tea.—The Ceylon Tea and Coffee Agency, whose " Ceylon Bungalow " at the Healtheries was daily thronged with an appreciative crowd, have sent us some samples of their teas. Ceylon Teas are rapidly gaining favour in Europe, and especially in England, and we have tasted none that we like better than those supplied by this agency. A blend of Ceylon and China tea is a most excellent arrangement.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen ; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)



## MALLOCH'S New Patent CASTING REEL.

See the *Field*, November 1st; the Fishing Gazette, Nov. 9; *Pictorial World*, Oct. 9.

Any Angler can learn to cast well with it with Half-an-hour's practice.
A longer line can be cast than by any other Reel.
It can be used in situations where coiling on the ground is impossible.
There is no risk of fouling with sticks or grass.
It will cast a lighter bait than a Nottingham Reel.
In casting, the Reel cannot over-run.

*Descriptive Circular and Price on Application.*

Prize Medals Awarded—National Fisheries Exhibition, Norwich, 1881, for Fishing Reels; International Fisheries Exhibition, Edinburgh, 1882, For Fishing Reels and Gaffs.

Received the Highest Awards in the World at the Great International Fisheries Exhibition, 1883; Gold Medal for General Collection of Rods and Fishing Tackle; Gold Medal for Flies; Gold Medal for Salmon Reels; Gold Medal for Trout Reels; Silver Medal for Trout Rods; Bronze Medal for Salmon Rods; Special Money Prize for Salmon Flies; Special Money Prize for Salmon and Trout Reels. Also, set Diplomas of Honour.

## Freeman's Chlorodyne.

**THE ORIGINAL AND ONLY TRUE.**

TRADE MARK.

IT IS THE GREATEST MEDICAL DISCOVERY OF THE PRESENT CENTURY, and is regarded as a boon to mankind.

It is the best known remedy for Coughs, Consumption, Whooping Cough, Bronchitis and Asthma.

It effectually checks and arrests those too often fatal effects of Diseases, Diphtheria, Diabetes, Fever, Croup, Ague, &c.

It acts like a charm in Diarrhœa, and is the only known Specific in Cholera and Dysentery.

It effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, Convulsions and Spasms.

It is the only palliative in Rheumatism, Gout, Cancer, Toothache, Neuralgia, Sciatica, Lumbago, &c.

It rapidly relieves pain, from whatever cause, allays the irritation of Fever, soothes and strengthens the system under exhausting diseases, restores the deranged functions, stimulates healthy action of the secretions of the body, and gives quiet and refreshing sleep, and marvellously prolongs life.

It may be taken by old and young at all hours and times, according to the directions.

It is extensively used by Medical Men in their official and private practice at home and abroad, who have given numerous written testimonials of its wonderful efficacy.

Sold by Chemists and Patent Medicine Dealers all over the world in bottles, 1s. 1½d., 2oz. 2s. 9d., 4oz. 4s. 6d., half-pints 11s., and pints 20s. each, and by the Inventor, RICHARD FREEMAN, 70, Kennington Park-road, London, S.E. Free by Post.

Purchasers are Cautioned not to have palmed upon them any substitute. See that the Trade Mark, "The Elephant," is on the wrapper, &c., and the words "Freeman's Original Chlorodyne" are engraved on the Government Stamp—which is the only True Chlorodyne.

THE ODOR OF THE FOREST, THE SPARKLE OF THE STREAM.

## FOREST and STREAM.

The American Journal of Angling and Shooting.

The Forest and Stream has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

The Sportsman Tourist.
Sea and River Fishing.
Game Bag and Gun.
Yachting and Canoeing.
Natural History.
Fishculture.
The Kennel.
The Rifle.

The angling department is in the charge of Mr. Fred Mather, the well-known angler and fishculturist.

The weekly numbers of the Forest and Stream annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the Forest and Stream Publishing Company, 37, Park-road, New York, U.S.

Subscription Agents for Great Britain:
Messrs. Sampson Low, Marston, Searle, and Rivington,
Crown Buildings, 88, Fleet Street, London,
who can supply specimen copies.

The Fishing Gazette.

SATURDAY, DECEMBER 13, 1884.

## "BIGGER LEEARS."

IN the very interesting report of the Appletreewick and Burnsall Angling Club which we publish this week, we notice the Chairman, Mr. J. V. Burrows, in referring to the fish in the club waters, said he "often heard of bigger fish elsewhere"; but it reminded him of what an old Scotch keeper said, when asked what *he* thought of some bigger fish than his own which were reported: "Aye, aye! they're nae bigger fish; they're just bigger *leears!*"

## PROFESSOR COSSAR EWART'S VISIT TO AMERICA.

IT is reasonable to anticipate that the promised report of Professor Cossar Ewart to the Fishery Board for Scotland regarding his recent visit to America will be a publication possessing a considerable amount of interest. The embassy was undertaken with the view of gleaning all available particulars respecting the latest working aspects of fish culture.

Keeping in view the store of valuable information supplied by the able delegates sent by the United States Government to the International Fisheries Exhibition of 1883, it is unlikely that Professor Ewart will be in a position to add to the knowledge held by English culturists much that is new in direct relation to the work that is now going on in America. At the same time the professor is singularly well qualified to point out to what extent, and in what manner, the example of America may be followed in this country so as to develop the wealth of its seas and rivers. In addition to his great scientific capabilities, Professor Ewart has a wide knowledge of all matters affecting British fisheries, and more especially of the operations connected with the immense fishing industry on the Scottish coast. Only recently, too, the professor was engaged in an eminently practical inquiry conducted upon the fishing grounds of our northern seas.

A forecast of the American report has already been published. Its contents are largely devoted to the methods adopted in hatching the ova of sea fishes, but it may be assumed that when the full document appears some attention will be given to a description of American fresh-water fish propagation.

Naturally, Professor Ewart is greatly impressed by the aid which is directly given by the United States Government towards the encouragement of such operations. Drawing comparisons between the value of American and British fisheries, he states significantly that during the ten years from 1872 to 1882 about £400,000 was granted to the commission for carrying on its investigations; and that during the year 1883 the sum given for the same purpose amounted to £70,000.

Assuming that the fisheries of the United States and of Canada have a value representing, say, £12,000,000, it is shown that in 1883 in all a sum of £100,000 was set aside in these countries for hatching experiments and other efforts for developing the productiveness of coast and inland waters. On this point Professor Ewart says, "Although the value of British fisheries in 1883 is estimated at £25,000,000, as far as I am aware only £300 was provided for kindred work."

And further it must be borne in mind that the United States Government places other very important facilities at the disposal of their fishery commissioners. All the public departments with which they may have come into contact have instructions to lend every assistance; while for sea investigations several excellently-equipped vessels are provided, notably the *Albatross*, a twin screw steamer specially fitted up for the purpose.

Professor Ewart visited all the chief fish-hatching establishments in the States, and appears everywhere to have met with courteous and obliging attention. He speaks hopefully about the introduction of the fresh-water herring and the white fish into British lakes, and more particularly of the land-locked salmon. With regard to the Californian salmon, it appears that 2,000,000 fry were placed in the Sacramento river in 1878, since which, by a continued annual introduction of a like quantity, the increase in the catch has risen from 5,000,000lb. to 10,000,000lb., which is now the average.

Referring to carp ponds, the professor says that since the introduction from Germany in 1875 of that fish they have been carefully propagated in the national carp ponds and in the arsenal ponds. "The result is that the carp has greatly improved, and is now sought for, not only by the American States, but by Europe as well. For inland districts the carp is especially useful. It prefers warm, sluggish water, and is easily and cheaply fed."

Of course, Professor Ewart's report will, as we have said, be largely occupied by details regarding sea fisheries, the collecting of which was the ostensible object of his visit to the States as the representative of the Fishery Board for Scotland. But from the particulars we have touched upon it will be seen that the professor's journey must have an important and highly-interesting bearing upon all the aspects of fish culture, as well as the preservation of the fisheries of the United Kingdom.

## SHORE FISHING.—No. VI.

### BY E. G.

I AM reminded by a friend that I have as yet said nothing about bait fishing for grey mullet. I, however, hope to get to that further on. My object now is to talk about rock fishing. Nearly every kind of fish may be caught from the rocks, but the wrasses, curners, raths, gwrachans, &c.—for they rejoice in many an alias—are the staple game of the rock fishist, and very good fun it is to catch them. It is true that when caught they are of little use, except as bait for lobsters, &c.; but true anglers do not fish for the pot—if they did, Wells, the Nottingham wormist, would soon find his occupation gone, for who would waste time and money on bream and barbel?

There are ten or more different kinds of wrasse found on our coasts, but the principal kinds caught from the shore are the Ballan wrasse (*Labrus maculatus*), the largest kind running sometimes up to 8lb., 3lb. or 4lb. being a very common size; the cork wing (*Crenilabrus melops*), which is much smaller than the former; and the rock cook (*Crenilabrus microstoma*) still less. There is no fish, as far as I know, which varies so much in colour as the Ballan wrasse; from the same hole in the rocks you may catch them of a dozen different colours, from brilliant red to dirty brown. The smaller species do not vary quite so much, though the cork wing is often of different colours. Occasionally, where the water runs deep, the cook or blue wrasse (*Labrus coquus*), the most brilliantly-coloured of the tribe, or the three-spotted (*Labrus trimaculatus*) may be taken.

Wherever there are rocks and weed in the open sea and inside harbours and the sides of piers, where there are piles or large stones, there will wrasse be found. They are, as a rule, a bold biting fish, but in very clear water are sometimes remarkably shy, and not to be got with the gear ordinarily used for them. I had a good illustration of this a few summers back. The water at Aberffraw was unusually bright; the local wrasse fishers had given up in despair, and said there were none about. Mr. R. Williams and I guessed that the coarse lines were at the bottom of the matter, and so went to Llangwyfan Point one afternoon. We used single gut, and soon had over fifty fine wrasse, and on the throw-out line, which we baited with half a wrasse, two splendid congers some 30lb. each. Having as much as we could carry, we gave up fishing, leaving the fish well on the feed. Of course, all the wrasse fishers were out the next day, but caught nothing—a pretty good proof of the superiority of fine gear.

To find a place to fish, go at, or just before, low water to the shore, and take notice if there are any gullies running up through the rocks—the wider the better—and try and find a deep one where there is a clear place between the weeds with a gravel or sandy bottom. These are the best places, as if there is not much swell you can keep your line between the two ranks of weeds, and have one hook on the bottom, which gives a chance at flat fish, which are very fond of such places on the flowing tide, as also are pollack, bass, and the smaller-sized coal fish. The fish, too, do not see you so well as they can when you have to fish on the top of the weeds.

If, however, you cannot find any such place, pick out the deepest channel you can, or in default of either, you may be able to find a pool in the rocks where the water runs from 8 to 12ft. Some of these places are full of fish, but never of any size. However, I will suppose it is low water when you have found your place and are ready to start, having the same rod, line, and float as recommended for fishing at a river's mouth. If you have found a place with a clear space between the weeds, use the gimp upper tackle and a yard of single gut below with three small but strong hooks on it; if there is not much depth of water, and so not much chance of heavy fish, ordinary perch hooks will do. Set your float so that the bottom hook will drag on the ground, and bait it with a lug, mud, or white sand worm; the latter is in most places the best, though for some unknown reason professional fishermen do not generally think anything of it. The second hook may have the same bait, the top one a live or dead shrimp or prawn. When you have a bite, if it is a wrasse he will bob the float two or three times, and then take it under. Strike quickly, and keep him well under the rod, as he will always try to rush back into the weed and so break you.

Have a large shrimp net with a long handle to dip him up, and when unhooking take great care of your fingers, for the spines on the dorsal fin can give dangerous wounds. If there is no clear space in the gully, but a good depth of water over the weeds, keep on the float and use a gut paternoster with the first hook a foot or more up the gut; the lead then can be just on or a little in the weed, and the hook clear of it. The wrasse then that are in the weed at the side of the gully will be able to see your bait. If you stay long in a place take note at what rate the tide rises, and keep altering the depth every few minutes. Also, if in a strange place take great care that you are not cut off from the shore. And so, gradually working back, you may in some places keep on fishing until high water. If you can find a deep gully running up into the cliff or a projecting rock or point where there is deep water close in, you may fish at any time of tide; but you may take it as a general rule that the flood tide is best for all rock fishing. When fishing in water above 10ft. deep, always use the sliding float, and remember to fish as near the bottom as you can, and also use stronger hooks, as the very large wrasse keep to such places, and do not often go where it dries a low water. Lobsters, too, are not unfrequently taken from such deep places. I once assisted a lady to land a monster weighing 8½lb., and have caught many up to 2lb.

It is well to take a good stout whiting line; attach to it a piece of line somewhat less in size and 4ft. long, at the end of which put a conger hook. You can buy them at Brooks's prepared for use, or get some fisherman to show you how to "gauge" it, as the process is technically called. Then just above the junction of the two lines tie a stone about 2lb. weight, using for this some common weak string that will carry away if the stone gets foul in the rocks. Bait with a small wrasse, scaled, and with the backbone taken out; or what is better, a mackerel, herring, pilchard, or squid.

Throw out as far as yon can into the deepest water—never mind the weeds; in the daytime the congers are lurking in the ore-weed, and will not be able to see you. Make the line fast round any projecting rock, and haul it in every ten minutes or so to see whether the crabs have taken the bait. If you get a conger run away with him as far from the water as you can before trying to unhook him; he will slide along easily enough on the wet sea-weed. If, however, you are fishing from a place where you have to haul him up a bare dry rock, a gaff is advisable, though not absolutely necessary. Before trying to unhook a conger, give him three or four good blows on the vent with a heavy stick or stone; this has what a friend calls "a soothing effect." Nearly all the baits mentioned before for shore fishing will do for wrasse; but the best are lug, mud, and sand worms, shrimps and prawns, alive or boiled, soft crab, small live crabs, mussels, tails of whelks, and in some places pieces of figs. I think it most likely they take this latter bait for spawn of some kind.

Wrasse always feed best in the daytime. I have never caught them after dark; in fact, I think they go early to their holes and keep quiet till daylight, for I have never caught them in trammells when both set and hauled in the dark. Pollack, coal-fish, and conger will feed well after sun down, so if you have found out a deep place with good standing room, you may continue fishing with every probability of success until late on in a summer or autumn night.

### Places Suitable for Fly-fishing from the Shore.

In reply to "Castleconnel" and others, it is difficult to lay down any hard and fast rule about this, as in many places the fish will come in-shore and play well on the top for a few seasons, and then, for some unaccountable reason, not show again for years. I have seen this in many places. Take, for instance, the mouth of the Otter at Budleigh Salterton. This used to be a good place, but not a fish has been seen or caught there this year (except mullet), although a great many people have been fishing all through the summer. The mouth of the Dysyni, at Towyn, Merionethshire, is considered to be very good for shore-fishing for bass; but one season when I was there they never came in. Mr. Wilcocks, too, reports that they stopped playing at Teignmouth Harbour for a long time, but were caught there in numbers when ground or drift-line fishing. I recommend, therefore, anyone going to the sea who does not wish to go afloat to take bottom fishing gear as before described, and then in the event of no fish showing at the top, they can try float-fishing. Barmouth, Merionethshire, is a good place, and so are Seaton, Exmouth, Weymouth, and the Portland Breakwater, and the backwater called the Fleet, between Portland and the mainland; and to get nearer London, I have been told of enormous bass being taken at Herne Bay from the Pier. In fact, it may be taken as a general rule that anywhere near the mouth of a harbour or estuary is good; also note that those places which have a fair depth of salt water in them at dead low water are the most likely, as the fish remain in and do not go off to sea as they do when the bed of the harbour is nearly dry, and what water there is in the channel and pools becomes brackish. All projecting points where there is a strong tide stream are very good places, and channels between islands and the shore. Holyhead Harbour, and the stream between the island and Anglesey called the river—it is near the Valley Station—abounds with bass and pollack; in fact, the coast of Anglesey is very good for all kinds of shore-fishing, as is also the west coast of Ireland. It is to be noted that by far the best sport with the fly is to be got from a boat, as when the fish are not showing you can row about and trail the flies until you see some break the water, and very large numbers are taken this way. I once caught sixty odd pollack when rowing about waiting for the bass to play up. I will supply more information as to the best places, and send it to the Gazette before the spring. Until then it will not be required, as the fish, after the late severe weather we have had the last week, have gone off into the deep water. I was, however, surprised to see large numbers of pollack playing within 20 yards of the shore on the afternoon of Saturday, November 30th last; and some years ago I saw a great many very fine ones playing near Aberffraw on Christmas Day. These are, however, exceptional instances. Bottom fishing, though, may be carried on in deep water from the shore all the winter.

## THE MAY-FLY WEEK.

Three of us—the Colonel, Tony, and myself—met by appointment on Monday, 9th June, for a week's fishing in Berks. We had a fine stretch of five miles of river open to us, and another couple of miles belonging to the Marquis was at our service. With everything in the shape of rods and tackle, high and low waders, tobacco enough for a month, and sundry luxuries, such as soups, curried prawns, sardines in tomatoes (which, by the bye, are a great comfort if a hasty meal is wanted), we arrived at the inn, where we had engaged rooms for the week. The keeper and three boys, all waiting for us, whipped our tackle off the carriage, while the landlord and his son carried our trunks up to our bedrooms. After lunch, our rods were put together, only waiting for the "men behind them" to begin the onslaught.

"Shall it be up or down, keeper?" said I. "Is the fly well up?" "How are the weeds?" This last question I asked in considerable trepidation, as I know so well what a lot of difference they make in the chance of sport. I hate to find whole reaches shaved as bare as a gravel path. "Oh," says keeper, "I haven't touched the weeds in such and such meadows, as I know you like plenty of 'em, so I left them until you had been down." "Good fellow," said I. "Well, master Tom," said he, "you know I like to have everything right for you when you come," and as far as his section of the water went everything *was* right. Such a lot of beautiful flowing weeds with the little white flower just showing above the water, little gullies of sharp water running between them, and *such* a lot of trout. I sent the Colonel to the bottom of the highest meadow, Tony down to the lowest part of the river, myself taking the middle. After about a couple of hours' fishing cut weeds came down to me and put an end to our fun, my friend higher up having experienced the same inconvenience an hour sooner.

Although Monday was very cold, there was a good sprinkle of May-fly, and the fish took it well. One can sometimes catch trout while floating weeds are about; but when they come down *en masse*, as they did then, one had better give over for a time, as it is impossible to get a fly into the water, and then the larvæ of every kind get rubbed off the weeds, and the fish can get a good dinner without coming to the surface. The weed had not passed us until after dark, and not a fish would stir. I ought to mention that these were not weeds cut in our water, but miles above, and the people on the upper water tried to get rid of them, expecting us on Tuesday.

Tuesday we walked up to the higher parts of the river, where the May-fly has not been seen for the last twenty-five years or more. There was a time when they had plenty of fly, but the wholesale cutting of weeds has sent the larvæ down lower and lower every year. I do not think there can be a doubt about this. The larvæ have no power of travelling far up stream, and unless we get a south-west gale there is no possibility of the mature fly being carried up far, and south-west is not the quarter from which the wind has been blowing of late years until much later in the year than June! English springs are altered nowadays. We plied the "alder" with very good effect, and late in the evening the "coachman."

Wednesday there was a grand rise of "the fly," and in the early part of the day the fish took our imitation well; but they soon got *very particular*, and after twelve o'clock they declined it altogether, and began rolling and tumbling about like tame fish just fed to repletion. There seems to be a kind of "dog in the manger" feeling amongst them. "I have had enough, and don't care for another blessed fly; but *you* shan't have one either—get away," and then you see a couple of huge waves rolling along, and two fish just simply "bunting" each other. I have seen it in my garden, where I had some fine fish. These got so tame that they would take worms, gentles, or anything else out of my hand, and when they couldn't eat another bit they "set-to" chiveying one another all round the pond. In the evening the "coachman" fetched them, and we ended the day with a lot of fish.

Thursday another great rise of fly, and the same game repeated after twelve o'clock. The water got very low and as clear as crystal—*then* the evil of ruthless weed-cutting tells. The fish have no hiding-places, and when the angler goes near enough to cast the following might be the kind of language used by the fish if they could speak:—"Here they come again." "I'm off." "Come along, Mary Ann." "Look sharp." "Tell all the other fellows." "Up you go to the big hole at the top." "Hooray!" "Now let them flog their arms off." "Mustn't they think us a lot of fools?" The Colonel counted sixty 2-pounders scuttling up like racehorses. I do not know whether he heard their remarks.

Friday was the hottest day of the week; the May-fly not nearly so numerous, but more of the grey drake than on previous days. Is this grey drake which dances so prettily by the sheltered side of the hedges, sometimes far away from the river, the female fly? The habits of the two are very different: while the yellow drake flutters straight away to leeward, and hardly seems able to steer a course, the grey drake seems better able to resist the current, and finds a suitable place to disport itself. You may see them in countless thousands dancing up and down with a graceful, regular swing, the downward flight showing the make of the fly to perfection, its three delicate abdominal filaments raised at an angle of 70 deg. No wonder the fish go crazy over these beautiful flies. The May-fly is by far the largest-bodied fly we have, and a week's feeding on it puts a lot of flesh on. In taking the hook from a trout's mouth, you will often hear him utter a sort of "Ga-a-a-w," and bring up a bunch of May-flies as big as an egg, and perhaps two or three minnows as well. We all caught some good fish in the evening, but had to work hard for them. One of our party raised some lovely blisters on his thumb and third finger. I am an older fisherman, and the first thing I do when I get a new rod is to scrape all the varnish off the part where the hand touches, and I have only a few places, as hard as horn, on my fingers. It would take a lot of fishing to blister my hands. The other is one of those handy men who can use his left hand just as freely as his right, and so he eases his hands immensely.

Saturday is our last day, and we must be in at 2.30 to luncheon and pack up our things. There was not a May-fly to be seen on the lower water, so I walked up a couple of miles and tried the "alder" and "coachman." "Coachman" in the early morning sounds strange, but I have used it all day on this river, and there are men who never use any other fly, even though the May-fly is on. I found one long stretch of water with a splendid ripple on it, and got some good fish. When we reckoned up our takes, we found that the total of fish killed was 80½ brace, over 1lb. and up to 2¼lb. This means a lot of fun altogether, as, of course, we got heaps of fish under the pound, which are not sizeable. We separated at five o'clock at the railway station after a most enjoyable week, and made up our minds that we would have that "big one" under the "hanger" next year.

T. A.

[Very rich, that "Ga-a-a-w."—Ed.]

## CHUBBING DAYS.

The chub is a fish I have always had a strong regard for: he is difficult to catch; fights strongly when hooked; and, on the light tackle, which is a *sine quâ non* in successful chub fishing, proves a by no means despicable opponent to the wily piscator. He is a regular gourmand in his way, his *cuisine* embracing a variety of items, from cheese to baby frogs, while occasionally a minnow or some other small fry does not come amiss.

A great deal of my time this summer was spent in endeavouring to inveigle some particularly large and wary old chub from their accustomed element—my temporary home being near a small tributary stream which held great numbers of the aforementioned fish. It was a changeful little river—at one point it would seem the very beau ideal of a trout stream, spreading out and rippling brightly over a gravelly shallow; at another gathering in its waters until it was so narrow one might almost jump across it, and seemed as though the only occupants it could possibly boast of must be minnows or the small fish commonly known in the country as "tiddlers." Again, at another point, it would form a deep, fishy-looking pool, shored up by old camp shedding on one side, with, on the other, trees and bushes stretching themselves across its depths. It was at these pools, as the sun went down and the evening drew on, one might hear that kind of gluttonous smack of the lips which seems such a characteristic of a chub's rise; or, if one crept cautiously to the edge of the camp shedding or in the intervals between the bushes, might perchance see a shoal of those fish, dwindling down from pompous-looking Gamaliels of three or four pounds weight to the very youngest member of their family. Here, towards the close of the day, I used to bring my rod, and, with the most cunningly-compounded baits do my very best to lure some of the larger fish from their haunts; but they proved very St. Anthonys to every temptation I could place before them, from cheese of a strong and ancient smell to lob-worms scoured up to the very pink of perfection. I used frequently to get some of their smaller brethren, up to a pound or a pound and a half, who, not having sufficient experience of their own, were, no doubt, too proud and headstrong to profit by the advice of their elderly relatives. One evening, however, when the ground was damp from recent rain, I came upon a crowd of juvenile frogs disporting themselves by the roadside; they were the very things I wanted, so a number were quickly introduced to an improvised bag to subsequently form an appetising dish for my friends of the stream. The next day, at the usual time, I wended my way thither, with all the necessary tackle for dapping with one of the hopping fraternity, and, on arriving at my destination, carefully put one of the frogs on the hook, treating him "as though I loved him." My next proceeding reminded me more of some of the scenes in Fennimore Cooper's Indian tales than anything else, for, creeping on hands and knees to the edge of the water, as though stalking some dusky Mingo, I thrust out the rod upon which the line was twisted until the baited hook was at the extreme point, then, judging my distance, commenced unwinding, until the bait alighted a few inches from the nose of one of the aldermanic chub. He did not make two bites at it, but in a moment had gulped poor froggy down and turned towards his haunt; then, when he felt the hook, I should have liked one of those persons who say that a chub is a dead-hearted fish to have seen him fight. He made some splendid rushes first to one side and then to the other, making the lissom fly-rod curve and bend like a willow wand, and, when he was at length fairly vanquished, still showed a dogged resolve to fight to the last, even when in the landing-net making a last fruitless effort to return to his native element. On being weighed he turned the scale at 4lb., and was one of the handsomest chub I had seen. I managed, before leaving that night, to secure four more fish, not one of which was under 3lb. They were the patriarchal members of the tribe of chub, who, I have no doubt, had had their homes for years in the worn-out submerged timbers of the old camp shedding. I was thoroughly satisfied that night with having at last managed to outwit my cunning adversaries, and, before turning in, gladdened the heart of an old dame, whose cottage I passed on the homeward route, with a present of a brace of the fish. I presume that she had some means of making them palatable, or else that fine sauce—hunger—had something to do with it, for she was always greatly pleased to receive the contents of my creel whenever they were of sufficient importance to be given away.

A few days after this, having some time on my hands, I determined to try for a hoary-headed old chevin I had often noticed in a little pool at one of the sharp curves of the stream. He had his haunt amongst the gnarled and twisted roots of an old tree which grew half in and half out of the water, and had often been hooked, but had invariably managed to get amongst the convenient old roots and "smash up" his would-be captor's tackle. However, I determined to try a fall with him; so, on this particular evening, I provided myself with a stout gut collar and two or three great, fat-bodied, grey-winged moths, and, with my trusty rod, started fully armed for the fray. By the time I reached the pool it was nearly dark, the moon, then near the full, throwing just enough light to enable me to see what I was about. It is a strange, quieting sensation, the sense of being alone in the night-time by the riverside; the silence, perhaps, only broken by the "plop" of some rising fish, or the rustle of a bat's wings as he swiftly sweeps by one. It always gives me a tendency to moralise; but there is a time for everything, and this was a time for fishing, not moralising; so, putting my rod together, I fixed one of the moths on a strong, sharply-pointed hook, and threw him in the direction of the old patriarch's retreat. No sooner had it reached the water than there was a splash, and, on striking, I found to my disgust that I had got hold of a chub about a pound weight instead of the one I was in search of. He was quickly brought to book, not, however, before he had made enough disturbance to frighten every fish within hearing for some time to come. After that the time was spent in quietly smoking and arranging my tackle, until I again heard the welcome gulping sound betokening chub on the rise again. The bait was then once more sent out in the direction of the old tree roots, and remained struggling on the water, until suddenly I felt a a strong jerk, and knew that I had hooked something good. Holding the rod in the left hand, I instantly commenced bombarding (with some flints I had provided) the haunt of my adversary, with the result of frightening him down stream, where he was conquered and brought to the landing-net in some shallows there. He proved to be the one I was in search of; but to my astonishment, when forced from the old *chevaux de frise* which had proved of such service to him, he caved in with a very poor fight for a fish scaling a little over five pounds. However, the fact of his being the largest chub I had caught compensated me in a great measure for his want of play, and I wended my way home thoroughly in the humour to appreciate the soothing pleasures of tobacco, after having accomplished what so many had previously failed in. That was the last night I was to spend in the friendly little village; but, as I sat over a tumbler of hot grog, and puffed forth clouds of smoke from my pipe in honour of my capture, it seemed to me that it was a very good ending to an exceedingly pleasant visit. Since then I have treasured up some very pleasing recollections of the time which is docketed in my memory as "Chubbing Days." H. D. B.

[We think our readers would like to have another yarn or two from "H. D. B." —ED.]

## WASP GRUBS AND MEAL WORMS.

ANGLERS frequently write to ask us where they can obtain wasp grubs, and we fear some may have been disappointed at our not replying. The fact is, the last time we wrote to a man who used to sell them, our letter came back with the words "Gone, no address," stamped on it. We are now able to give the address of Mr. C. Bradley, 62, Jacob-street, Bradford, Yorkshire, who informs us that he has got a large stock of well-cured wasp grubs and meal worms. Mr. Bradley has sent us samples of each, and certainly we have never seen better. The meal worms are big, lively fellows, and the wasp grubs are in the dry comb, and look as if they had only recently come from the nest; in fact, they remind us of many an exciting expedition to rob a nest for the sake of the splendid bait for all kinds of fish which the firm white grubs afford. The best way to take a nest is to mark it in the daytime by means of a small bough stuck in the ground directly over the entrance, and at dusk, when the wasps are all at home, make a squib by putting some rock powder in the palm of the hand, moistening it, and then with the blade of a knife working it into a paste and rolling it cigar shape. This squib is then stuck on a bit of stick, the point lighted, and then it is carefully introduced into the nest; a turf is clapped on the hole, and when you no longer hear the squib fizzing you dig out the nest, put the comb into a cloth, and carry it home to look over. We always used to reserve the best comb for the hook and use the grubs alive, and bake or boil the rest for ground-bait. Nests in the ground do not, as a rule, take long to capture, unless the wasps have chosen to make their home among the roots of a tree, in which case the smoke often escapes through fissures in the ground, and you find an angry army about you in no time. We shall not soon forget the first nest we robbed. It was in the river bank, and to get at it, two or three of us, country cousins in holiday time, stripped stark naked, carried straw across the water and in this state of nature set fire to it and took the nest. Of course, we all got stung, but that only added to the excitement and enhanced the value of our capture. On another occasion, many years later, from "information received" from a ploughboy, a party of us started after dark to take a very strong nest in an old willow stump. Large drops of rain fell as we marched down by the old mill and along the river to the *rendezvous*, and a tremendous storm of rain, thunder, and lightning broke as if by magic while we were in the middle of operations. Only a few pieces of broken comb were obtained; but they proved to be full of splendid unformed yellow grubs, and in the slightly-coloured water caused by the rain for the next two or three days we had grand sport with chub, trout, and eels.

Talking of chub reminds us that that handsome fish is now at its best; the colder the weather the more boldly he bites and fights, and very capital sport it is to let your float on fine Nottingham line work down under the boughs and round the eddies under the brown worn clay banks, then to see it disappear suddenly, pulled under by a good fish. For baits we prefer a white plump morsel in the shape of cheese paste on a triangle, or a bit of pith, or half-a-dozen gentles; but we doubt not as good a bait as could possibly be used would be two of Mr. Bradley's wasp grubs with a meal worm in between. Put one grub well up a round bend barbel hook, then put the hook through the middle of a meal worm, so that the ends can move about, then finish the bait with another wasp grub. If the fish are on they will accept this bill without hesitation.

GEORGE JAMES EATON, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(ADVT.)

## ANSWERS TO CORRESPONDENTS.

**G. ATTWELL.**—It is a difficult matter to recommend you, as the best places are all private. Write to Mr. H. Rout, 43, Gt. Northern-street, Huntingdon.

**CAPTAIN L.**—The best way (in fact, the only way, unless you use nets) to keep a good stock of trout in the stretch of river which runs through your land is to give them plenty of cover.

**JUVENILE ANGLER** (Aberdeen).—We don't know how the matter stands in Scotland, but fancy you are at perfect liberty to kill pike in any open water, or where you can get the owner's permission.

**T. J. A.**—Many thanks for the address of Mr. Gordon.

**LIVE SNAP.**—We have had quite enough "Brandy and Pike Baits" at present.

## SALMON IN THE RIVER TEST.

SIR,—Happening to be in Romsey a few days ago, I walked round by the river to see if any salmon had worked up after the late rain. The water just above Broadlands was slightly discoloured, so that it was difficult to see. Proceeding as far as the mill (belonging, I believe, to a Mr. Zilwood) which prevents them from ascending any higher, I was fairly astonished at the hundreds of fish just below the wheel, all more or less trying to perform an impossible feat—viz., get up any higher. It was quite sad to see the way in which they jumped and knocked themselves against the brickwork (and two ugly stakes which might easily be removed). I counted as many as seventeen jump in the minute. The fish seemed to run from about 5lb. to 8lb., though I saw a few that would turn the scale at 20lb. The miller informed me that the "whoppers" would not be up for another week or two, when they would be worth looking at. I noticed that a great many had scars about the nose and back of head, caused no doubt by hitting themselves against the brickwork, or by a blow from a blade of the wheel. I also saw two fish lying dead a little way down the stream. It seems a pity that some contrivance, in the shape of a well-leaded net, could not be placed across the river to prevent the fish from injuring themselves.—I am, &c., HAMPSHIRE.

Dec. 9.

## ON STRIKING A SALMON.

SIR,—To fulfil my promise, I send you a few lines on this subject. I intended to reply to some of Mr. Kelson's letters that appeared in the GAZETTE; but seeing the able letter from Major Traherne, I gave up thought of it as his views and mine quite agree.

I have seen Mr. Kelson strike a salmon off the reel, and know exactly how he does it. Before I saw him do it, I told him it was a mistake, and say so still. I cannot see any advantages in striking, but see a great many disadvantages. The following are a few of them :—

You cannot strike with regularity the different lengths of casts; slow and quick running streams makes this impossible.

You could not wind in a fish, with a reel sufficiently stiff to strike a salmon at the end of a long line in a heavy, rapid stream. Striking without a fish would make a very stiff reel overrun.

The fly will often be snatched away before the fish has time to take it.

Fish new from the sea are so tender in the mouth, the hook is pulled through the flesh. If the hook took hold of a thin piece of skin sufficient to land a fish, it would be broken away.

Fishing with plain winged flies, the fish often takes hold of the wings only; the sudden jerk cuts the wings in two, and your fly is useless.

I could mention a good many more, but consider the above sufficient to prove striking a salmon off the reel is a mistake.

The plan I have adopted for years is to hold the line between finger and thumb, which can be done in addition to the rod; keep the point of the rod as near the surface of the water as possible. When a fish rises and misses it, continue working the fly towards the shore; it will often make another rush and take hold of the fly. The fish gives a pull from 1ft. to 3ft., the larger the fish the longer the pull will be. In quick running water he either makes down or across stream; if in quiet water he goes down, where he rose, head first. Raise the rod very quietly, keeping the line quite tight. The moment the fish feels the hook, he pulls the line from between the finger and thumb; this is all that is required to hook a fish.

If the fly is properly brought over the fish and this plan adopted, nine fish out of every ten will be hooked.

Fishing with hooks up to 1½in. long, with large spring flies, you cannot hold the line too tight. I always find a greater proportion of fish get away fishing with flies up to 3½in. long.

The following are some of the advantages of the slow, steady pull over striking off the reel :—

You can hook a fish with the same regularity any length of cast, in slow or quick running water. The fly cannot be snatched away, if the fish misses it; he has another chance of taking it. Should he only have the wings in his mouth when he gets time to turn, he runs a good chance of being hooked. If the hook only took hold of a thin piece of skin, if a steady strain was kept on it, it would be sure to be landed; but the chances are, after the fish turned, the hook would be sure to take a fresh hold. The same would apply to fish new from the sea. I have tried double-hooks and, after a good deal of experience, found out they did not rise so many fish. I lost more fish with them than we did with single hooks. I tried a double and single dressed exactly the same, harling out of a boat at the same time, for days, and always found the single took the greatest number of fish. The double hooks are losing favour every year.—I am, &c., P. D. MALLOCH.

Perth, Dec. 10.

[How the doctors will differ! Forrest, of Kelso, told us at the Fisheries Exhibition that Tweed salmon anglers use more double and less single hooks every year.—ED.]

## BREEDING RUSTY BLUE FOWLS.—BURBOT OR EEL-POUT CAUGHT WHILST LIVE BAIT FISHING.

SIR,—At the beginning of the present year I attempted to breed a few rusty-blue fowls, as the hackles were so difficult to obtain; so matched a pile game cockerel, bred from a black-red cock and pile hen, with four Andalusian pullets, the chicks from which hatched out some white, some grey, and some dun. Not having room myself to rear them, I got a cottager in the country to do it for me, where the fowls could get a good grass run, a really indispensable consideration if good healthy chicks are wanted, I paying a killing price—that is, the same as I could buy similar-sized fowls from a poulterer, when I wanted them. Of course some of the chicks grew to be white, with here and there dun or reddish feathers. These we have used for the table, and nicer or better for the purpose could not have been, as they proved plump, juicy and tender, one cockerel turning the scale at 5¼lb. Many of the other chickens have just turned out the correct colours desired; the cockerels have hackles blue up the centre with reddish edges. Some of the pullets have very nicely-marked honey dun hackles; that is, yellow at the edges and dun in the middle. It is my intention to match three of this kind and one white one with the best cockerel the next spring, then matching the chicken from this cross with another cockerel of this year's; thus I hope to make a strain that in time will breed true to colour and game character.

I had almost forgotten to say that one of the cockerels had one of the nicest gold hackles I ever saw; I inclose a few small ones for your acceptance. You will find them just the thing for detached-bodied spinners, or small palmers; the large hackles I presented to a salmon angler, who I knew would make good use of them.

Did you ever know a burbot—called here a barbowt—killed with a live-bait? I had one, weighing just over 2lb., brought me the other week that was taken by a live roach whilst the captor was pike fishing.—I am, &c., S. Howarth.

Burton-on-Trent.

[We wish Mr. Howarth success. The little red-gold hackles he sends are very nice. We have not heard of a burbot taking live-bait before.—Ed.]

### BARBEL AT CHELSEA.

Sir,—I was told the other day, on reliable authority, that some good-sized barbel had been taken in Chelsea Basin, near the railroad, above Cremorne, during the last autumn; and that a couple of smelts were got just below old Battersea Bridge.—I am, &c., Rusty Barb.

### WHY HAS THE "FISHING GAZETTE" PROSPERED?

Sir,—First, because it was a want in the sense of a means for more free and full intercommunication between anglers of every degree; secondly, because it has been edited from the first by a practical and ardent angler, who had favoured no particular tackle-maker over and above other manufacturers; thirdly, because chiefly through the Editor's influence, in combination with some of the leading London and other anglers, fish culture had been encouraged, and poaching, especially in the Thames, had been greatly discouraged and all but stamped out, and the "calling," moreover, of the professional fishermen elevated, and their reports of actual sport inserted week by week, and also the interesting club reports; fourthly, because the Gazette had opened its columns for the insertion of articles of great interest to all its readers; and finally, because the public and the "Trade," wholesale and retail, have enabled the proprietors to enlarge the columns, thereby giving more ample space for increasing advertisements, and the insertion of articles and of yet more correspondence from a vastly-increased number of buyers and readers of the paper. While admitting that the wheels of the little "machine" ran rather stiffly at first, it is all the more satisfactory that they had since been kept well greased by public appreciation and public patronage.—I am, &c., A Reader from the First.

[While we cannot but be gratified by the good opinion of one we know to be among our earliest subscribers, modesty compels us to remind our readers of the line in *italic* which heads our Correspondence columns!—Ed.]

### A NOTE FROM RINGWOOD.

Sir,—The late rains have improved the river much, and pike are taking freely. Last week some good takes of pike and perch by Mr. Winton, L.P.T. On the 7th inst. the inhabitants were much amused by a school of salmon, about 30 in number, from 7lb. to 30lb., trying to leap the mill dam, a sight never seen before, they making every effort to rush the stream, but failed in their endeavours, and many landed on the grass and were carefully put back in their natural element, which augurs an excellent season next year. Salmon fishing commences on February 2nd.—I am, &c.,

Ringwood. C. W.

### SHARK FISHING.

Sir,—In the Fishing Gazette of the 15th ult., "Colin" writes, "he has seen sharks feed without turning over at all." I imagine these must be ground sharks, because those caught in mid-ocean have the snout projecting so far beyond the mouth that it is almost impossible for them to do so, and quite impossible when taking a bait attached to a hook.

During nearly six years I have had at sea it has been my luck to catch a very great number, and I have never seen any, other than ground sharks, take a bait without turning on its side. During the famine in India, when taking coolies from Madras to Mauritius, we were becalmed on the Line for a month; a good many coolies dying and being thrown overboard caused a lot of sharks to collect round the ship. I had the pleasure of catching 21 in that passage alone. To take a bait without turning over on its side, a shark would have to be almost perpendicular in the water, for if swimming in a horizontal position, its snout would come against the chain of the hook and push the bait away. The mouth of a ground shark is like that in nearly all other fish, therefore it has no necessity to turn over. Has "Colin" ever seen sharks caught with a fly, a bamboo rod, and a winch holding several hundred yards of ¼in.-rope? The idea seems to me absurd. Say there are 400 yards of rope; that length coiled up on a winch would be more than one man would care to carry about, and it would be quite out of the question throwing a fly with such a line.

The sharks that "Colin" saw harpooned must have been very small or thin-skinned. I have stood on the poop rail 15ft. above the water with a harpoon, the staff of which had 6lb. of lead in the butt end, and struck a shark in the middle of the back; but the harpoon has jumped up again like an indiarubber ball. I have struck many of them, but never done more harm than take a piece of flesh away when it has happened to strike near the side.—I am, &c., George F. Rose.

### CARP FISHING.

Sir,—Your remarks on carp fishing in to-day's Gazette draw me on to tell you how I used to catch these artful ones 25 years ago, since when I have never fished for them. I was then resident at Frankfort-on-the-Main, in which river the carp, in the vicinity of the city, were plentiful. After trying many baits in vain, I bethought me of one I had seen used in Paris by the Lutetian cockneys, and found it successful. I got from the slaughterhouse—then situated in the Dom Platz—a tin canister full of blood—whether of sheep, oxen, or goats, or of all intermingled, I cannot say. With this coagulated gore I was able, after some practice, to bait my hook. The baiting was, of course, very frequent. The hook had to be let down very gently, and the bait would melt off after a few minutes' immersion. Every bite which did not result in a catch also necessitated rebaiting. But I caught a good many carp. I presume that in a river which flows pretty rapidly, as does the Main, these fish do not, as a rule, attain to such a size as those in ponds. With me they used to run from 1lb. to 4lb., but generally between 2lb. and 3lb., which seemed to be the average weight of those caught in nets in the same localities.

I daresay you have often seen anglers using blood as bait on the quays in Paris. I was a youngster when I fished with it, and do not think I should care to try it now. It is not pleasant to handle, and is apt, in summer, to become smelly on the least provocation. But in those days, wherever there was water I was bound to fish, and I shirked no nastiness short, perhaps, of holding in my mouth "worrums for bait."—I am, &c.,

London, 29th Nov. M. B.

["Blood will tell," no doubt; but we have never used it, and fear our correspondent's suggestion will not help us much. You must draw the line somewhere.—Ed.]

### UNDYED PIG'S WOOL WANTED.

Sir,—Can you or any of your readers kindly inform me where I can get undyed pig's wool? The old Irish pig, I believe, formerly grew it in profusion; but, then, he has been so much improved that, like the Red Indian at the hands of the Yankees, he has been improved off the face of creation! Wool, please note, is what I am in search of, and not hair. It may sound an anomaly talking of wool on a pig; but there is an old proverb in this country which shows the expression to be a recognised one. "Much cry and little wool," as Pat said when he was shearing his pig.—I am, &c., An Irish Correspondent.

### OBESITY IN ROACH.

Sir,—With reference to the case of above, mentioned by "Giant" as having occurred in my experience, I inclose a rough sketch, which will give you an idea of the nature and extent of the abnormal enlargement in the fish in question. I had been with a cast net fishing for bait, but only got a few over-sized roach, among which was this one. I had intended to forward it for your inspection, but by some inadvertence it was flung away when dead. I hardly think this deformity could have been caused by the rentention of ova in the fish. I had a stickleback in my globe, some time ago, with a similar enlargement of the throat, but not to the same extent.—I am, &c., A Coggeshall Volunteer.

[We should say it evidently was a tumour, and tumours arise from various causes. Only a microscopical examination would give the probable cause.—Ed.]

### LARGE GUDGEON AND GREAT SALMON.

Sir,—In your issue of the 29th, "Pixie" inquires for a suitable companion to his 4oz. 7½in. gudgeon. He will find, in "Little's Angler's Annual," 1882, the record of a specimen measuring from snout to tail 7½in., which was taken at Isleworth, 9th August, 1879.

It may interest Mr. P. D. Malloch to learn that his salmon (believed to be about 80lb., and certainly heavier than 70lb.) has been surpassed, as "Yarrell" states that in 1821, a salmon weighing 83lb. was shown at Groves', the fishmonger, in Bond-street; and in the *Field*, 12th April, 1868, mention is made of a salmon, caught in the Shannon and exhibited at Limerick, weighing 78lb.—I am, &c., Giant.

Peckham Rye.

### SEASONABLE DINNER TO THE RIVER KEEPERS.—AN APPEAL TO ALL ANGLERS.

Sir,—Will you allow me, through the columns of the Fishing Gazette, to appeal to the anglers of the Thames on behalf of these men whose efforts, there is every reason to believe, have stamped out the poaching system? The entertainment extends to the Thames Conservancy keepers and the lock keepers (who all hold deputations) also to those fishermen who have kindly assisted the keepers in their nightly duties. I am desirous of making this appeal *direct* to the anglers of *all* classes, even the bank fishers; and whether it is a sixpence, a shilling, or half-a-crown, it will evince their appreciation of the work, and I shall be able to show in The Fishing Gazette what they have done. They can either send it direct to me, and I shall be pleased to receive it, or they can give it to any of the river-keepers employed by the Thames Angling Preservation Society, and the sooner the better.—I am, &c.,

7, Ironmonger-lane, Cheapside, Dec. W. H. Brougham.

[We shall be happy to contribute to this fund, and trust many of our readers will see their way to assist in giving the men a jolly good dinner.—Ed.]

### A QUERY.

Sir,—In the article on "Dr. Hamilton's Flyfishing for Salmon, Trout, and Grayling," by "The Amateur Angler," is not the word "crush," in the expression, "The deep, mellow 'crush'" of the wood-pigeon's note a local term?—I am, &c.,

Mark Antony.

[The "Amateur Angler" kindly replies as follows.—Ed.]

"I am not aware of Dr. Hamilton's authority for the use of this word. Possibly he had in his mind the tremulous murmuring sound forced or *crushed*, as it were, through the rings of the bird's *trachea* and bronchial tube. If Dr. Hamilton sees this note he will doubtless give us his own explanation. The inquiry is an interesting one.—A. A."

### A NOTE FROM NORWAY ON FLIES, HOOKS, LANDING-NETS, &c.

Sir,—Perhaps you will not object to "northern lights" on certain fishing matters, and specially on some matters which have recently lent their interest to your columns.

1st. As to "Wickham's Fancy." I have found that during the whole season here, in the region between Trondhjem and the Swedish frontier, this admirable fly has held its own in lake and river. No "sunk fly" makes so brilliant a show as this; it is surprising in this respect when let down several feet into the deep, clear water of a Norwegian lake. The frailty of the body may be remedied without impairing the fly's killing properties by simply running fine orange silk carefully up over the hackle.

2nd. As to eyed-hooks. My experience here—a crucial one both as to weight and numbers of fish—has determined me to use the eyed-hooks of Messrs. Hall and Bankart exclusively in the forthcoming season, and to counsel my friends to do the same. I, too, have been "bitten" over theoretical hooks and typical flies, and am therefore grateful for hooks on which I can tie flies that are portable in a small space, grip readily, have never once in a whole season broken with me (though I have not used larger than No. 2), and, finally, that are unfailing killers. The eye seems to me to be helpful to a truthful representation of the natural insect. Anyway, the trout—and big trout, too—will take the flies tied on these hooks even in calm water.

In fact, the originators may congratulate themselves on a win "all along the line." The only apparent (and apparent only) weak point is the threading of the eye in cold, damp, windy weather by the water side. But is the objection a fair one? Is not any manipulation of our delicate tackle a positive trial at such a time, even knotting two pieces of gut together? There is, however, a very simple remedy. Let the fisherman carry in his book by the side of the penknife and scissors that very useful little instrument used by watchmakers in manipulating the minute objects of their trade—a kind of pointed nippers, working on the principle of sheapshears—cost: one shilling. The "unkind elements" may turn all your fingers to thumbs; but with these nippers you have perfect control of the finest gut. Considering how infinitely useful such a tool is to the fly-tier and tackle-maker, it is strange that it is not once recommended for use by any author on fishing matters.

3. One of your correspondents touched on a genuine nuisance. What is more provoking when trolling from a boat than to see your big fish kick just as he gets into the borders of your net, flip some of the many hooks of your minnow-tackle into the upper meshes, and then, with his hanging weight, rip half-a-dozen meshes before he reaches the bottom of the net—or boat—or lake! To meet this, I would suggest: (1.) That the net be less deep than usually is the case. (2.) That it be made rather broader immediately below the ring than at the ring itself (to give the weight of the fish a chance of an earlier support); and (3.) That the upper meshes be made much larger and of much coarser thread than the lower ones, so that if the hooks do catch the net the latter will be strong enough to resist tearing.

Whilst on this topic, can any of your readers give me a good dressing for landing-nets, to prevent the hook catching in the thread itself?

4. Some years ago, in the *Field* paper, a correspondent recommended to fishermen the use of lock-screws for boot-soles, as a safeguard when fishing rocky streams or lakes with bouldered shores, where it is often hard to get firm footing. After seven or eight years' experience of these I should like to record, in gratitude to that correspondent and as a hint to your readers who may not have tried them, what a boon they are. With a set and a half of such screws the soles will last out the boots. There are very few kinds of rock on which the wearer cannot safely walk or stand at, say, an angle of 45° (perhaps greater); and the screws themselves don't kick out, as hob-nails do, and let in water. They are those short, fat, hemispherically-headed, hard steel screws used in door-locks, and are not to be got easily in the country; but they are well worth ordering specially. They should be *screwed*, *not nailed* in, wide apart, and somewhat diagonally. Perhaps they suit best in four rows, thus—3, 4, 4, 3, with another 3 placed as a triangle in the heel. But the heel-

screws are not a *sine qua non.* Anyone can screw them in, giving them, of course, a little oil and a small hole to start in, and they will suit any ordinary thick sole.

To conclude a somewhat, I fear, prolix letter, some of your readers would possibly like to have the dressing of the best fly for rapid streams in Norway, and also an admirable lake and river fly in some Irish and Welsh streams. I got the pattern in Sligo, but it is a Redditch tie. Hook, any trout size; wings and tail, brown mallard; body, medium orange floss, with a pinch of claret; mohair at shoulder; silver wire ribbing, and black hackle. I don't know the name, but "Claret Cup" would be a justifiable one, considering the way the fish treat it.—I am, &c., A. H. Gribble.

Egersund, Norway, Dec. 3rd.

[Anglers will be much obliged to our correspondent for this practical letter.—Ed.]

## WOBBLE *VERSUS* SPIN.

Sir,—I was much interested in an account of the "Dorset Wobble" in your last issue, and I venture to give my opinion on the matter.

The more eccentric the orbit is that the bait gyrates in, the more likely are you, in well-fished waters (I am speaking of) to kill. The wobble, in fact, is what "draws"; as the keeper remarked in aforesaid article, "that's what I wants."

The regular spin of the Pennell flight and all artificial baits is nowhere in comparison with the more erratic in its revolutions; and for large pike in aforesaid places I have known an "otter" most effective in striking big fish—not landing, recollect. The spoon is the perfection of a pike bait, taken all in all, but you can't get it made proper shape in shops. As Pennell says, the shape makes all the difference; the Canadian one is also first-rate. Large pike are decidedly "canny," and if you want to catch them try something out of the ordinary mode of artificials. They soon "spot" the ordinary "accurate spinning," and won't thus be deluded. Not for Joe.—I am, &c,, Swivel.

[This is a very interesting question. As we have already said, although in some waters the wobble kills best, we much prefer the clean spin as a rule, and *especially with an artificial bait.* We should like to hear some other opinions on this subject, and for our own part intend to give the two systems a trial, one against the other.—Ed.]

## INFORMATION ABOUT THE ELWY WANTED.

Sir,—Would any of your readers who have fished the Elwy at Llanfair, Talhairn, or St. Asaph, kindly give their experience in your columns or otherwise? I saw the river at both places last July; but there was very little water at that time, and the trout appeared to run very small. I noticed the salmon ladder at Llanfair. I am, &c.,

Stalybridge. J. S.

[The *Angler's Diary* says: "the Clwyd and Elwy are well stocked with trout, and there are salmon occasionally. The Plough, a good hotel at St. Asaph, gives leave to fish. Excellent fly-tyers live near the hotel." Doubtless the trout are like those in most Welsh streams—of small size.—Ed.]

## DRESSING FOR HOOK WHIPPING WANTED.

Sir,—Will you kindly inform me if there is anything which will satisfactorily take the place of "cobbler's" wax to cover the whipping of hooks on gimp? I experience a difficulty in making the wax look neat.

A reply to this inquiry in your next issue will oblige,—Yours, &c.,

Cornhill, E.C. E. E. S.

[We know nothing so *reliable* as shoemaker's wax. "E. E. S." should use a little shellac as varnish over the wax, or dissolved sealing-wax is sometimes used. We always use shellac, as it wears best. But perhaps some reader can give "E. E. S." more information on this point. Our friend Mr. Yarde writes: "My plan is to take ¼oz. of *finest* red sealing-wax and digest it till dissolved in a little bottle containing 1oz. of best rectified spirit." The sealing-wax is only used *over* the *black wax.*—Ed.]

## SPINNING TACKLE FOR PIKE.

Sir,—I was rather interested by the letter headed "The Dorset Wobble," in your issue of Dec. 6th.

Having for over twenty years practised *spinning* for pike (in preference to any other mode of capture), I consider the "wobble" of a *natural* spinning-bait is very attractive to the pike, and gives the bait the enticing appearance of a wounded fish.

As regards the description of spinning-tackle, I heartily endorse the editorial footnote *re* Pennell's snap, the said "flight" being, in my humble opinion, by far the best of the many spinning flights yet introduced. The S-hook keeps the tail properly twisted, and the "flying" triangles hanging *free* from the bait are far more easily driven into the pike's hard jaws than the old style of triangle arrangement, the hooks of which are so firmly embedded in the bait that it requires heavy striking to move them.

Using Pennell's flight always, I very seldom lose a fish after once he takes the bait fairly.

Two strokes in quick succession I find the best mode of striking—in fact, a good imitation of the postman's double-knock. There can be no doubt that the majority of fish lost in spinning are missed by striking "gingerly," when the smarter stroke would have had the desired effect.

It is often argued that spinning cannot be practised on *weedy* waters. It is, however, quite possible to spin over a river or lake where the weeds are within *nine inches* of the surface. Of course a light bait is necessary in this case, and quick spinning is required to keep the bait from sinking into the weeds. Spinning has the following advantages over live-baiting:—

(1) That a large area of water can be fished thoroughly in a short time.

(2) There is no waiting for the fish to "gorge," or much possibility of his rejecting the bait after once seized.

(3) There is no encumbrance of live-baits, nor the trouble of getting them and keeping them *alive.*

(4) The small pike can be returned to the water, and wholesale "slaughter of the innocents" avoided.

(5) The exercise of spinning will keep the angler *warm*, even in the coldest weather.

Finally, there is no necessity to give your baits *brandy;* but the advocates of the Blue Ribbon need have no conscientious samples against the use of baits preserved in *spirits of wine* or "methylated" spirits.—I am, &c.,

Ilford, Dec. 8th. A. R. H.

[We quite agree with "A. R. H." (by the way, it's years since he sent us a line), and there are few things more enjoyable than spinning over a good stretch of fairly open, fairly stocked water. We would rather catch half a dozen pike by spinning than double the quantity in any other way.—Ed.]

## THE ROMANCE OF BOTTOM FISHING.

Sir,—We must all have read "Streams-o'-the-North's" pleasant article upon the "Romance of Angling" with pleasure, and thanked him for it. It is a subject of which anglers can never be tired.

To those of us who have thrown the fly over the mountain stream and hill-shadowed loch, it will recall happy memories and bright anticipations; nor will the charm be lost even by those whom fate has not so favoured, and whose lot is cast in less pleasant places. No, for we men of "maggot and paste" *can* appreciate and admire the beauties of nature, and although the heather-covered hills and sparkling streams may be little more than words to us, yet the very description of them, particularly by a brother of the craft, brings to us, like a picture, something of the fresh breeze and rushing burn.

We do love these scenes, and envy the author as we read of them, and we do admit the superiority of fly-fishing, and dream of the dashing trout; but we cannot allow that in our humbler sport there is no romance, and suffer it to be sneered at, and ourselves pitied.

Other pens may be taken up to vindicate the honour of our beloved craft of bottom-fishing. I hope so; but if not, it will not be because our case is too desperate for a defence. We men of the "maggot and paste" are a long-suffering race, and we will forgive "Streams-o'-the-North" for his cruel wit. He has fallen into a common error; and if he has not, as I expect, enjoyed a day's chub-fishing, we ought, perhaps, to pity rather than blame him.

I am happy to say that I have wielded the fly-rod on stream and loch, and very much have I enjoyed the sport, and long to be at it again. I have also patiently coaxed the wary roach with pill of paste, and I would not say for a moment that I have enjoyed that less. I agree with "Streams-o'-the-North" in this: that I, too, have resolved never again to handle worms *for trout*, nor should I care, I think, for fishing in a punt. I also agree with him that the difficulty of capture gives the sport its chief charm; is there, then, no difficulty in bottom-fishing? From my own experience, I should say that in this respect, it is very far superior to the other—too much so, indeed; and if "Streams-o'-the-North" should ever condescend to the "maggot and paste" business, he may perhaps find that there is less "fish-killing" about it than he expected. Anyhow, I know I often wish there was a little more.

And there is a romance about it, too. I confess the "slimy canal" does not sound nice; but it has its romance notwithstanding. How often has the slow-flowing, sedgy stream, with its willow-lined banks, furnished the artist with a subject? What angler has not been sometimes struck with the beauty and peacefulness of the scene—when the sun has just set a mass of golden-red, and the November afternoon is quickly becoming twilight. Yes, there is a beauty, a romance, a melancholy about the evening scene which is very fascinating, at any rate, to the angler as he pauses to hear the plaintiff cry of plover, or less melodious croak of partridge. It is time to pack up; there is no chance of even another bite. And see how carefully our angler puts away his tackle, and cases his rod, and with what pleasure he surveys the fish in his basket as he adds to them the last of their brethren lying on the grass. How pleasant seems the cheerful fire at home, how fragrant the pipe of tobacco, and how lovely look the fish—bream, roach, or chub—as he spreads them on the table and recounts their capture. Let us not forget that "Father Izaak" was a bottom-fisher: let us follow in his footsteps, and may we have his contented mind, and contemplations like his of the earth and its Creator.—I am, &c.,

J. H. W.

[We did not read "Streams-o'-the-North" as claiming that only fly-fishers can appreciate the beauties of nature; or, on behalf of other anglers, we should have resented the insinuation. Of course we prefer fly-fishing; but when that cannot be had, we feel just as enthusiastic about the next best kind of fishing which may be in season.—Ed.]

## A NOTE FROM NOTTINGHAM.

Sir,—The water being so discoloured, and the weather so stormy, there has been nothing doing this week. A friend of mine reports a few chub being caught in the Clifton Water. Mr. Smith and friend got a few nice roach over 1lb. each on Saturday in the Holme Pierpoint Water, but rain coming on they had to give it up. Several chub have been weighed in in our club, the largest 3lb. Some good sport would be had among the coarse fish if the weather would settle down a bit. Some very large pike have been caught near Mansfield. One of our local papers reports one of 25lb. weight.

P.S.—In your issue of the 29th ult. you give an account of a four-footed angler. Now I could a tale unfold of one; but I expect some of your readers would think I was cramming them. However, as I know it to be true, here goes:—Some forty years ago, when my father was a young man, he used to spend a deal of his time at a place not far from Nottingham called the Jolly Gardens. Some of you Nottingham readers will remember it well, and the many pleasant days they have passed there boating on the ornamental water. In the centre of the pond was an island, bordered round with a thick privet hedge, and many a time my father has caught roach with his hands through a hole in the hedge as they swam past. They used to keep a small terrier dog at the house, who would follow him about a good deal, and often sat watching him catch these fish. Well, one day the dog left him, but soon returned with a fish in its mouth and dropped it down by the side of him. He thought he would watch it to see where it got them from, and discovered it had found another hole in the hedge, and caught the fish until he had a hatful, and many a time after caught him fish whenever he took it upon the island. As the above is a fact, and my father well known, you may insert it in your paper if you think well.—I am, &c.,

Nottingham, Dec. 8th. A. West.

## TO PREPARE PITH AND BRAINS FOR WINTER CHUB FISHING.

A Worcestershire correspondent asks us how to prepare this bait, and we cannot do better than give the "Trent Otter's" instructions. On p. 51 of his capital work, "Float-Fishing and Spinning in the Nottingham Style,"* he says:—

"And now we will look for a few minutes at a bait that is used during the winter, and is, in my idea, the winter bait *par excellence* for chub: I allude to pith and brains. The pith is the spinal cord of a bullock; your butcher will draw you a piece out when you want to use it. The brains are used for ground-bait, and they must be washed perfectly clean and well scalded, or else boiled for a few minutes in a bag. They can then be cut up very small with a knife and thrown in. Don't, however, be extravagant in this matter; a very few pieces are quite sufficient. The pith itself when you first see it looks a very dirty and disagreeable affair; the pieces are about as thick as your forefinger, and I have had them a foot long. The skin must be slit from end to end with a pair of fine-pointed scissors, carefully pulled off, and thrown away, being useless. The pith must then be washed two or three times in clean water till it is perfectly clear from blood and all other impurities, and as white as card. Some anglers recommend that it should be scalded, boiled, &c.; but I say don't be deluded into doing anything of the sort, for I have tried it, and boiling ever so little makes it very soft, and it won't stop on the hook at all. I say do nothing more to it than I have recommended above. After it is washed and clean it is ready for use, and for this bait a No. 4 hook is the best. Cut off a piece of pith about the size of a hazel nut and put the hook through and through it several times till you have worked the pith up the shank; it will then stop on the hook very well. When you have a bite with this bait play your fish very carefully, for I have found that two out of three of the fish so caught have only been hooked by the skin at the side of the mouth. This is a clinking bait to use in the depth of winter, when the snow lies deep on the ground, and when the thermometer indicates a few degrees below freezing point. Indeed, I think it is useless to try it unless there is a little frost."

# RIVER REPORTS.

## TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | |
|---|---|---|
| Add | 30 minutes for | Chelsea. |
| | 40 „ | Putney. |
| | 45 „ | Hammersmith. |
| | 50 „ | Barnes. |
| | 55 „ | Kew. |
| | 75 „ | Richmond. |
| | 80 „ | Twickenham. |
| | 85 „ | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | Morning. | Afternoon. |
|---|---|---|
| Saturday, December 13 | 10.55 | 11.27 |
| Sunday, „ 14 | 11.54 | 12.0 |
| Monday, „ 15 | 12.19 | 12.42 |
| Tuesday, „ 16 | 1.4 | 1.25 |
| Wednesday, „ 17 | 1.45 | 2.4 |
| Thursday, „ 18 | 2.21 | 2.37 |
| Friday, „ 19 | 2.52 | 3.10 |

New Moon Dec. 17. Izaak Walton died Dec. 15, 1683.

## THE LOWER THAMES.

### General Remarks.

There is not much to say about the river this week, except that the roach anglers have been well in at Twickenham, and making some first-rate scores. The report of the condition of the tidal waters is as follows :—"The water is now rising and discoloured, which is raising the hopes of the lampern fishermen. There was quite a fair on the 7th in the deeps at Twickenham with the punts ; but the anglers did not do much through the water rising. On the same day there were 68 bank anglers between Richmond and Kingston Bridge, but they had also indifferent sport from the same cause." The report from Sunbury is—"Very few of the fishermen have been out ; but the water is getting a good colonr for fishing, and a little higher." From Chertsey, the report is "The water has been rising, and there is a little colour in it."

### Angling Results.

**Richmond.**—Henry Wheeler, one day, in a couple of hours got 22lb. weight of splendid roach, and during the week he has been getting some good fish. Christopher Brown, in one day, 16lb. Job Brain, in the same time, 12lb. Henry Mansell, in three days, 40lb. F. Brown, in similar time, 56lb.

**Twickenham.**—John Spong, in one day with Mr. Johnson, 40lb. weight of good roach, and in two other days with Mr. Hilton, 46lb. Edward Finch, in one day, 10lb. Samuel Cole, in the same time, seven dozen. Richard Coxen, in three days, twenty dozen. George Coxen, in one day with Mr. Peachey, twelve dozen of roach and dace, and W. Spong, in one day, six dozen.

**Teddington.**—Charles Baldwin, in five days, twenty-five dozen of roach and dace, and a couple of barbel. A. Kemp, in one day, three barbel weighing 16lb., and another day a barbel of 5½lb. Joseph Baldwin, in two days, nine dozen of fine roach and dace, and three barbel. J. Stevens, in one hour and a half, four dozen of roach and dace, and William Messenger, in one day, ten and a half dozen of good fish. It is refreshing to see the Teddington fishermen so well employed.

**Kingston.**—The only report is from John Johnson, sen., who says he has been out for three days in the tideway and got thirty dozen of dace. The bank anglers have not been doing very much amongst roach, dace, gudgeon, and perch.

**Long Ditton.**—H. Buttery has been out once and got a jack of 3lb.

**Hampton Court.**—John Smith has had one day's jack fishing, resulting in the capture of a jack of 2¾lb. Charles Davis, in one day, two dozen of roach. The anglers at "Tagg's Island Fishery" have been getting a nice few roach and dace and some perch. The present condition of the river should suit the fishing here, especially for roach.

**Sunbury.**—The fishermen here have not been out, but the bank fishers have, and in addition to a jack of 4lb. have taken a good number of roach and dace.

**Shepperton.**—James Haslett, in two days, has taken four jack of the respective weights of 9lb., 5¼lb., 4lb., and 2lb., and one and a half brace of perch.

**Staines.**—Charles Hone, in one day, four dozen of roach and one jack.

## UPPER THAMES.

Since my last notes, quite a nice little push of water in the Upper Thames has been brought about by the continuous, but not yet heavy, rain. A south-west wind, with an extra dash of west in it, has aided to drive away the rotting leaves and débris which for weeks had been accumulating in the various nooks and corners of Father Thames's elongated trunkosity. This will be of great service to piscators by sweetening the vitiated water and putting all classes of winter-feeding fishes in the humour to enjoy the all-round Christmas fare that wily rodsters are sure to offer on the off-chance of a little return for capital expended. The Henley waters, by which I mean Marsh Pool, Henley, and Hambledon, have been yielding up some fair samples of perch, but nothing of size specially deserving notice ; the best perch, going 1½lb., had from the deep below Hambledon Lock (this is a grand bit of deep eddy fishing, and should be ledgered with lob worm). In the Hartley district, several piscators from the banks have done fairly ; but Mr. Wainwright's take of some 7lb. of good roach in two hours, is the best. At Hurley Mill, in consequence of the little push of water, the worthy proprietor, Mr. Tom Street, has lately had some nice eels, four of which I saw going 7lb., and some half-dozen trout, which I did not see, up to 2lb. each, carefully returned under the piscatorial eye and *esprit de corps* of such a rare old angler as Tom Smith. Marlow, Bourne End, and Cookham correspondents have evidently lost their vocation ; but from Bray I hear of one gentleman, Mr. Johnson, getting 30 odd dozen of perch, only one of which scaled 1lb., and eight over ½lb. Thursday evening : Water a nice height, and very gradually rising, the colour being that mignonette tint so delightful to the connoisseur in roach pigments.—Marlow Buzz.

### Thames (Cookham).

Mr. Russell and friend, out with Jones, the new fisherman, at Cookham, on the 7th, three jack, one 5lb¼lb, one 4lb., one ¾lb. The jack are on the feed.—H. W.

### Thames (Datchet).

The past week's fishing has been of a very uncertain kind, owing to the weirs being drawn and put in again ; consequently, there has been a rise and fall of 2ft. or 3ft. daily, and the fish have been too much disturbed, but still the fishing has been better for the rain, and will improve. My best day was nine dozen of roach and dace with a patron ; another day, one barbel and one chub ;—mean having a good haul of them before I write again. Lob-worms are plentiful just now. J. Hone, on the 7th, took 9lb. of barbel, and it is reported one of them has possessed himself of rod, line, and all the lot (lucky barbel !). Hone has also had several good takes of roach up river. I hear the jack ran well on the 7th, one being taken at Monkey Island of 19lb., and some smaller ones.—G. Lumsden.

The water is in a first-rate condition for all-round fishing. Out with Mr. Smith on the 7th inst. : One barbel, 4lb. 9½oz ; roach, 1lb. 13½oz., ditto, 12½oz., ditto, 11½oz., ditto, 9oz. ; perch, 15½oz. Out three days this week—8lb. first day, 9lb. next, the third day 6lb. My son out Tuesday—12lb. of very good roach, the largest 1½lb., taken by the tail end of the lob.—James Hoare.

### Thames (Eynsham).

There has been no angling done in this neighbourhood all this week, owing to the heavy rains having made the water very thick, but with a few fine days it will soon be right again. Thursday, the 4th, Mr. Green, in the Windrush, took 21½lb. chub, although the wind all the time was blowing a perfect hurricane, making it very difficult to keep the bait in the water.—W. B. Howe.

### Thames (Oxford).

Fishing for the past two weeks has not been, in this district, worth the proverbial tinker's anathema off a common. The Cherwell is rolling down in pea-soupy volumes, and the Thames, in point of density and colour, is very little different. No one seems to care to go out on the chance of coming back wet through, and its concomitants, cold and rheumatism; for my own part, so bad has it been that I have not cared to go out. One benefit, however, of the heavy water will be the total disappearance of the leaves and decaying aquatic vegetation, which, like the juice from the hay grass whilst it is about, sickens the fish, and throws them off the feed, though I have a suspicion that much may be accounted for by the exhaustion produced by spawning. A well-known local angler has just brought me word that a fish weighing 15lb. was taken three weeks since at Duxford whirlpool on the Upper Thames. The gentleman in question, who is a great friend of my own, and on whose veracity I can place implicit reliance, avers it was a chub. I am sceptical as to its species, because I know big carp lay in these upper reaches, and this I opine it was. I once knew of a chub weighing 8lb., which was taken at Parson's Pleasure, and I have seen some monsters in the Evenlode at Handbro' Mill—some of them, I should say, over 37lb. Whatever this fish was, there is presumptive evidence it was netted, and the man who caught it says he gets the same frequently up to 10lb. Its measurement was exactly 36in., and it was exhibited in Oxford the next day and sold for 3s. 6d. Everyone who ate of it was ill. On Friday, Mr. S. Bowell had three jack from 1¼lb. to 1½lb., and to-day Mr. Watts had three jack, the largest 5lb., and the other two 2½lb. each.—Cherwell Otter.

### The Thames (Windsor.)

The much-desired change, a good push of water, has come at last, which will move those stubborn rushes, and other impedimenta to the spinner for jack. Roach, which have, in consequence of a bright low water, been very shy, are now feeding well, and those fond of this branch of angling will now obtain good sport. I visited Monkey Island to-day, and was assured by the enthusiastic Robert Plummer, junr., that excellent sport had been had, and every prospect of good roach fishing, water being now a trifle too thick for jack. Before the water coloured following is list of sport had in that quarter:—Plummer, junr., out with Mr. Page, of London, 7th inst., four jack of the following weights : 18lb., 4lb., 3lb., 2¾lb. A friend of mine witnessed the capture of the largest fish, which he put down at 20lb. 6th inst. Mr. Page and friend, with the same fisherman, seven jack, largest only 3½lb., the lot going 16lb. Mr. Beningfield, of London (1st inst.) with Robert, five jack, 19lb. ; and 9th inst., two jack, 7¾lb. Another day five dozen of good roach. At Datchet James Hoare piloted a patron, Mr. Smith, of London (7th inst.) to some fair roach swims, resulting in 8lb. of roach and a barbel of 4lb. 8th inst., Hoare had 9lb. of roach ; and 9th inst., in two hours, 8lb. In the Datchet waters to-day, Mr. Barwell, of the Friendly Anglers, out with Richard Gray, had 24lb, of barbel. Before this change in water a few nice jack were had nearer here, largest, which I weighed, going 11lb., taken by Mr. James Gray on the 4th inst. A friend of mine on the 3rd inst., one just 7lb. and Mr. Stinton, of Eton, on the 7th inst. had one of 4lb. Mr. Howard, of the Friendly Anglers, out with James Gray, on the 7th inst., had, in less than an hour, four jack, going about 15lb. Strange to say, after this, six other runs resulted in a blank. Several smaller have been had. Should rain cease, water will fine down, and excellent sport be had with jack, which are, undoubtedly, very plentiful, as many as thirteen fish being had lately on the Thames in one day to one rod. Till then roach and chub are well worth trying ; for the former, gentles, and latter, tail of lob worm or cheese.—B. R. BAINBRIDGE.

### Thames (Wraysbury).

The long-looked-for colour has come at last ; the water is in splendid fishing order, and wind is right. With these advantages there certainly ought to be grand takes just now. The "Old Fleet" ought to see some of the old frequenters sitting on the banks, for a better spot in the Thames there is not. Of course, the place, like all others, wants to be known. It was here Mr. Little took his 17lb. pike a few weeks since ; several smaller ones have been taken since. Roach are feeding in the deep holes under the bank, Lea style, a lump of groundbait covering the pellet of paste. The best inn for anglers is the Green Man. Anglers should write beforehand to insure accommodation.—ROACH.

---

### Ancholme District.

The weather has been much milder, but few anglers have been out, and the sport has not been of a high-class colour. The waters remain very low ; the snow of last week has not made any sensible difference in the volume. A good flood is needed to stir up the fish, and put them on the feed.—THOMAS FORD, Caistor.

### Chichester.

"The rain it raineth every day," not excepting Sundays. Jupiter Pluvius has showered down blessings until the dry and parched earth is now in places assuming the quagmire state. I have not heard of any enthusiast braving the weather in this quarter, and from other districts reports are *nil*. When we get a change, Selham will well repay a visit. Willison tells me pike are numerous.—GEORGE F. SALTER.

### River Colne (Wraysbury).

Water in splendid condition for all-round fishing. Anglers will be glad to hear another piece of water in this village is now open to them upon payment of £2 2s. per annum ; 21s. paid at once will open the water to the subscriber up to end of present season. The water is known as "Walker's" or "Taylor's" ; it runs from Horton Bridge to Wraysbury Mill, and includes the mill race and pool at the latter place. I have seen three trout taken from the water this week and put back again ; one perch taken on the 7th over 2lb. This water is noted for large roach and chub. The gentleman who has the letting is very particular as to whom he grants a ticket. Pot-hunters had better not apply.—ROACH.

### The Dove.

The river is running in capital order ; but we have not had a great number of rods out since our last. The weather, though mild, has been of a cheerless character, add it is only the most ardent rods that have ventured to the river-side. Sport has not been of a very remunerative nature. Somehow grayling don't appear inclined to rise, no matter what flies are offered them. The absence of frost, no doubt, accounts for this. If the weather were more seasonable, in all probability matters would mend considerably. The best bait for coarse fish generally has been the worm, though several moderate dishes of chub have fallen victims to cow's brains. The maggot does not seem to operate in the present state of the water.—THE SPLODGER.

### Exe and Canal (Exeter).

We have had heavy downpours of rain since my last report. The river is flooded, and until it fines down we shall not be able to do anything worthy of mention. In the canal a few perch have been taken with the usual allurements, live minnows and worms.—J. A. KELLEY.

### Ilfracombe.

Sea fishing. The weather having been so stormy, many boats had washed up their nets, as they considered the herring fishing over; but on Monday, those that had kept in their nets, went out for a fresh trial, and were well rewarded, some bringing in from five to ten maize in a boat, which made all hands busy again, as they consider the fish to be more plentiful now than they have been for the season. Tuesday, the largest catch was by Mr. Williams, 11 maize. Wednesday, G. Rudd, 11 maize. Saturday, Mr. German, fishing from the jetty, caught a ling 14lb., and on Monday, Mr. Bear, a cod 12lb. Thursday, rain and wind.—E. COMER.

### Lea (Tottenham).

The water is now, and has been for the last few days, in capital condition for all-round fishing, and the jack and roach have been fairly on the feed. Mr. Beresford, on Friday, fishing his favourite place, the lower pool, got a couple of handsome little jack, the two weighing 9½lb. Mr. Bell, on Monday, killed a nice little fish of 3½lb., and Messrs. Dodd and Williams have been getting roach and dace, using gentles and paste for bait. The subscribers to the upper water (Ford's) have, since the run of fresh water, been having some capital sport with the jack.—HACKLES RED.

### Leicester.

The late heavy rains have in some measure put a check upon angling operations, as the river and brooks in this neighbourhood are now bank full and thick water rapidly comes down. A few of the more staunch followers of the piscatorial art, however, keep showing up day by day, but the results of their efforts, as may be imagined, have been but poor. A few chub were caught, Mr. Condor showing a brace between 3lb. and 4lb., an odd brace or two of pike have been landed, but with these exceptions little has been done. Angling will doubtless show a large improvement to what it has been lately when the waters get down again. The weather of Thursday was bright and fine, and exceptionally mild.—ALERT.

### Lugg and Arrow (Leominster).

Both these streams are now in good order for bottom fishing ; the melting of the snow, and the rain which has visited this part, have made both streams rise, and slightly coloured, but are now running clear very quickly, and by the end of the week will be in splendid fishing order. The anglers of this part have been using the red worm and maggot with good success this week, and some good lots of fish have been taken. In the Kingsland water, some very good grayling have been taken with the worm. The Arrow, near Ivington, was tried on Saturday, and a capital lot of fish were taken with the maggot. Good sport has been had near Aymestr with the worm. Fishing quiet near Stanton. The Pinsley is in good fishing order. Some good fish were taken on Monday with the worm.—GWYNNE.

### Medway (Tunbridge).

At last the river is in flood. It has been full and muddy all the week. This very cause prevented all angling ; but, no doubt, we shall feel the benefit of it when it fines down, which will not be for some days. The Local Society have determined to stock the ballast pit with trout. Five hundred yearlings are ordered, which will be paid for by private donations, and if the sum is sufficient the order will be extended to a thousand.—YE MEDWAY WATER RAT.

### The Ouse (Huntingdon).

During the very stormy weather nothing much could be done. Monday, the 8th, being a better time, I went out for a few hours. I had not been at work long before I had a run. Striking the fish, I found something hanging rather heavy, and with his twisting and rolling about for thirty-five minutes, I succeeded in landing a handsome fish a little over 20lb., measuring 3ft. 4in. in length, and 1ft. 7in. round the girth. After this was all over, I had another go for another run, which turned out to be on the reverse— one about ¾lb., which had the impudence to kill one of my best baits, so I put him back again to give him the chance of getting a twenty-pounder. I hear of a little being done among the smaller ones. The water is in splendid condition, and there is good prospect for good fishing. I was out on the 3rd, but my time was taken up by watching a strange bird, which I followed up, and succeeding in shooting, turning out to be a splendid bittern—a very rare bird about this locality.—H. ROUT.

### South Level Cut (Littleport).

Though the weather has been very unsettled since my last report, I do not think here cau be much fault with the following : Dec. 4th, Mr. Hailstone, 25lb. very fine roach in 2¾ hours ; Mr. Cannon, Newmarket, 13lb. in 2½ hours. Dec. 5th, Mr. W. L. Agger, Cambridge, 25lb. good roach in 4 hours ; Mr. F. Ely, 18lb. in 3 hours ; Mr. Cannon, Newmarket, 18½lb., and Mr. B. C. Norton, Cambridge, 17lb. in 3 hours. Dec. 6th, Messrs. J. M. Wright, and W. Knights, Ely, 11lb. roach in 1½ hours ; Mr. Hailstone, 25½lb., largest 1lb. 5oz. ; Mr. A. Pace, Newmarket, 18lb. good roach ; Mr. McAdam, Lynn, 8lb. in 1½ hours ; Dec. 7th, two Cambridge, and two London anglers out, and all did well. Dec. 8th, Mr. W. L. Agger, Cambridge, 23lb. roach ; Mr. C. Brown, Ely, 17lb. ; Mr. W. Buckle, Ely, 14lb. ; Mr. W. Grimsdale, Cambridge, 12lb., two largest 1lb. 5oz., and 15½oz. ; Mr. Marshall, Cambridge, 9½lb., largest, 1lb. 1oz. ; Mr. H. Lea, Cambridge, 15lb. ; Mr. A. T. Ellis, Cambridge, 17½lb. in 4 hours ; Mr. Hailstone, 8lb. ; Mr. S. O. Beeman, Littleport, 6lb.; Dec. 9th, Messrs. Duigan and Fowler, Cambridge, 15lb. roach ; Mr. Saville, Cambridge, 10lb. ; Mr. J. Hutt, Cambridge, 10lb. Dec. 10th, Mr. F. G. Tuck, New Barnes, Ely, 15lb. good roach in 3¼ hours ; Mr. Hailstone, 15lb ; Mr. G. Barker, Cambridge, 10lb. in 3¼ hours ; T. South, Littleport, two pike, 4¼lb., and 2¼lb. ; Sergt, Bryant, Ely, one pike, about 6lb.—CHARLIE SOUTH.

### Severn and Stour (Kidderminster).

Since my last report, the takes of fish have not been so good ; but I think the anglers have in a great measure themselves to blame. Short tackle is all very well when the water is in flood and the fish under the banks. Good takes of fish are generally the rule at such times ; but as the water recedes the fish recede also, and long tackle is indispensable to insure success. We have had a fall of snow lately, filling the river to the brim, but closing the mouths of the fish at the same time The Severn is bankful at the present time, so angling prospects are but poor. A few fishermen were out last week, but little has been done. J. Giles, of ours, and a friend succeeded in taking 15lb. of chub with brains for bait. Two or three others have only taken a few fish with the same, while another angler tried the cockspur worm, and took from 3 to 4lb. of roach and dace. We have had several good showers of rain since last Thursday, and although it serves to keep the river in flood, it will wash the snow broth out of the stream, so that by next week I hope I shall have some good catches to report. No reports from the Stour that I have heard of. No one visiting this stream, though there must be plenty of fish in the still deeps, or in the slow-running water between the weirs and the forges or mills as the case may be, which are located occasionally on the river. We shall wind up on the 22nd, a very successful year, both numerically and financially, and our prospects for the coming year seem as rosy as we could wish.—E. E.

### Teme (Ludlow).

The Teme and all the streams within ten miles of here have benefitted largely from the recent rains. The streams are full and in good fishing order, though they are at present slightly coloured. A large quantity of salmon have managed to leap the Ashford weir since the water has risen, and large numbers have been seen these last few days making up the Teme for their spawning beds. Fishing has not been indulged in to any great extent this week, though anglers are to be found who frequent the river banks in all weathers. In the Leintwardine district fishing has almost come to a close this year. Below Steventon some good grayling and perch were caught on Monday with the red worm ; the grayling averaged ½lb. each. The Clun is nearly bank full. There has been little done in this district this year, and I am informed that the river is full of grayling and other fish.—S. LUDLOW.

### Teme (Tenbury).

This stream has undergone a complete alteration since last week. Since the snow has gone, there have been several heavy downpours of rain had in this part, which has made the water coloured, and it has risen considerably higher than it has been for some months. The anglers have visited the water well this week, the weather still keeping very mild. Good fishing has been had with the red worm and maggot. In the Rochford district some very fine grayling have been landed with the maggot. Fishing, on Saturday, in the Eastham part, a fine lot of fish were taken with the maggot. Some very good grayling have been landed with the red worm in the water near Little Hereford. Good sport has been had in the Berrington water this week. Fishing quiet near Corn Brook. The Kyre, Rea, and Ledwyche are very quiet.—WORCESTER.

### Trent (Nottingham).

The Trent in this district on Thursday was in excellent condition for bottom fishing. and was rapidly fining down. From Tuesday to Thursday morning the water receded about 8in. The weather on Monday and Wednesday was adverse to the votaries of the art, and only very few anglers patronised the river. Mr. H. Wild, the well-known fly expert, caught some very choice dace in the Radcliffe length on Tuesday, with the little red or cockspur worm ; and on Thursday two Nottingham gentlemen returned from Willington with a rare basket of chub, roach, and dace, the last-named being unusually fine. There does not seem to have been much doing at either Shardlow or Weston, although attention is still devoted by the Derby contingent to the "Blackpool," below Weston Cliff. With a little less tinge in the water pike are now almost certain to run well. Recently a large number of these fish have been caught with the livebait in the Nottingham and Grantham Canal, near Hickling.—THE MAN AT THE CLUBS.

### Trent (Newark).

The heavy fresh we had down the river the latter part of last week will do a lot of good in helping to clear the bottom of the river. It is still running at a very fair height, and a little colour with it ; but still it is going down very nicely, and I noticed to-day that it would soon be in fairish trim for most sorts of winter fishing. The weather has been wonderfully mild this week. I have not heard of anything being done this week in the way of sport. If the water keeps improving another day or two as it has done this last two or three, there should be a chance for a little sport among the roach, &c., with the cockspur worm. Chub, with pith and brains, and jack should be found in the quiet corners and backwaters, as the heavy water would drive them out of the streams.—The Trent Otter.

We had about 3ft. of water in the latter end of last week, and a very dirty colour, consequently angling has been out of the question, so far as the Trent has been consemed; the water is now falling, but a lot of colour in it yet. When it gets right I shall not be surprised to hear of some good roach being got. Mr. Dale tried the Witham last Tuesday, but found the water in very bad trim; he only got one dace, 8½oz., and two nice roach. Mr. Curtis had two small jack, out of a private water. I should like to see another good fresh on just to finish the clearing out of the river, and then get in trim by Christmas.—F. T. L.

### Waveney (Beccles).

Owing to the continued heavy falls of rain during the last two weeks the river has been in a constant state of flood, and sport has been almost at a standstill: nevertheless, one or two have been out. Mr. A. Darby, of the "Fyona," with two gentlemen, the early part of last week, and had nine jack in two days. Capt. James has also been in amongst them, taking several nice fish. If weather continues as at present (Thursday) some good fishing may be looked forward to during the Christmas holidays, and water will be in good order.—A Waveney Angler.

### The Wharfe (Yorkshire).

Since my last report the river has been in full flood, occasioned by very heavy rains and westerly gales. Of course, there is nothing being done in the way of grayling fishing, and, according to the weather that we have experienced to-day, there does not seem to be much chance of any for some time to come. These high floods have been the salvation of the gentlemen who collect trout ova for breeding purposes. The becks have been almost dry up to now, and they were beginning to despair. I saw a grand lot that Mr. Chippendale, of Ilkley, had obtained the other night; there were about 10,000, and only about 12 dead ones in the whole bottleful. Mr. Critchley (sec. of the Burnsall Club) came into the bar at the Crescent Hotel at Ilkley the other evening, where several of us were talking angling matters over, and asked who would go up to Addingham to try for another lot. I should have liked to have made one of the party, tired though I was with a day's fishing, but I was obliged to reach home before seven o'clock. I have no doubt but they would get another grand batch. The club alluded to above gave an excellent dinner the other evening at the Crescent Hotel, Ilkley. A full report will be found elsewhere. I never remember spending a more pleasant and sociable evening.—Francis M. Walbran.

### Wye and Derwent.

We had a great deal of rain fall yesterday (Thursday) all over Derbyshire, which was the cause of both the Wye and Derwent being flushed to-day. The Derwent is of a good colour for either worm or maggot fishing; and if the weather only keeps fine, we ought to have some good sport yet, both among grayling and coarse fish. Sport during the week has been very uncertain, and only small baskets have been the order of the day. Fly fishing is all over for the Derwent this year, and, taking the season through, we have had a very bad one; in fact, it is the worst I have known. Weather to-night (Thursday) is fine, with every appearance of a frosty night. Some sharp, white, frosty nights would improve the fishing much.—Geo. Jas. Eaton.

### The Yare (Norwich).

Several ardent pike fishermen have been out to try their luck, but with the disadvantage of having only very small bait (the dearth of bait still continues). One party last Saturday, with only a small number of gudgeon, were successful in killing six takeable jack on the Yare, and my impression is, that with some good fresh-caught dace (without brandy dose) a good day's sport might now be had. The weather has again been unfavourable to the pursuit of the gentle art, but with colder, finer weather, we should soon be amongst them again. The news from the district of the Bure is of a similar character; three friends of mine out fishing on one of the best broads only caught two undersized fish. In this instance, their non-success was attributed to the insignificant bait they were supplied with, and even these had to be angled for. Strange, eh! This mild weather ought to bring the bait back again to the shallow water. Prospect—not cheering.—Robert Moll.

Thames Riparian Owners.—On December 3 a meeting of Thames riparian owners and owners of fisheries was held at the Westminster Palace Hotel. Sir Gilbert A. Clayton-East presided. It was resolved to establish a Thames Riparian Owners Defence Association, the objects of which are as follows:—To watch any proposed legislation or action of any public body affecting riparian interests, and to take such action in relation thereto as may be deemed advisable to protect the members of the association against frivolous and vexatious prosecutions, and to take steps for securing to its members the free and uninterrupted enjoyment of their property, and to protect the same from depredation and wilful or malicious injury. Sir Gilbert East consented to become president. Mr. E. Clett was appointed secretary.

Black Bass have Spawned in Germany.—Herr Max von dem Borne, the celebrated German fishculturist, writes to Prof. Baird as follows: "Berneuchen, June 15, 1884. You will recollect that you kindly sent to me, in the fall of 1882, by Mr. George Eckerdt, seven larged-mouthed and seventy-five small-mouthed black bass. In consequence of the long passage the greater part of the lot died, so that I had this spring three large-mouthed old fish and ten small-mouthed two-year-old bass. To-day I had the satisfaction of finding that the three large fish had spawned, and the pond actually swarms with fry. I have caught with a small net more than 2,000, and have put them into another pond which is free from other fish. I have no doubt that next spring the small-mouthed bass will spawn, and that the experiment will be successful.—*Forest and Stream.*

To Recent Subscribers.—Since we last asked our readers to be kind enough to send us the names and addresses of any anglers they know who were not acquainted with the Gazette, hundreds of new subscribers have taken the paper, and we ask them if they will kindly take the trouble to help us in the way we suggest, so that we can send specimen copies. Many of our advertisers have been in the paper continuously for years, and have voluntarily acknowledged the benefit they have received. If any of our readers can induce friends they may know who advertise, to give the Gazette a trial, it will greatly aid us in still further improving the paper.

Holloway's Ointment and Pills.—During every break of wintry weather exertions should be made by the afflicted to recover health before unremitting cold and trying storms set in. Throat ailments, coughs, wheezings, asthmatical affections, shortness of breath, morning nausea, and accumulations of phlegm can readily be removed by rubbing this fine derivative Ointment upon the chest and neck. Holloway's treatment is strongly recommended with the view of giving immediate ease, preventing prospective danger, and effecting permanent relief. These all-important ends his Ointment and Pills can accomplish, and will surely prevent insidious diseases from fastening on the constitution, to display themselves afterwards in those disastrous forms that will probably embitter life till death is almost prayed for.—Advt.

## CLUB REPORTS.

### APPLETREEWICK, BARDEN, AND BURNSALL ANGLING CLUB.

The annual meeting of the members and friends of this now famous club was held at the Crescent Hotel on Wednesday evening last, and for the first time was made the occasion for dining together. Thirty-two or three guests sat down to a first-rate repast, reflecting, in its preparation, the highest credit upon the host and hostess, Mr. and Mrs. Mercer, and their valuable assistant, Miss Palmer. The chairman was a member of the committee, Mr. J. V. Burrows, who, with the vice-chairman, Mr. Crabtree, proved to be the "right men in the right place," and they were supported by many influential members and friends of the club. The following is a list of the guests:—Mr. J. V. Burrows (also member of committee), chairman; Mr. Thomas Crabtree (hon. treasurer), vice-chairman; Major Middelton, Mr Ed. Middelton, Mr. Wm. Kelsall; committee: Messrs. J. Suttle, G. Demain, Joshua Hart, Wm. Fox, T. J. Critchley (hon. sec.) N. Chippendale, and J. Dawson; Messrs. T. G. Dawson, Francis M. Walbran, Wm. Margerison, Capt. Ramsbottom, Messrs. L. Robinson, W. H. H. Ward (hon. sec. Bradford Waltonians), J. W. Frasor, T. Peel, J. B. Dewhirst, A. Critchley, Jas. Critchley, G. B. Scott, W. J. S. Thompson, S. Earle, W. H. Fletcher, J. Barber, E. Wilkinson, A. Walker, John Lee, A. Wood, J. Brydon, and C. A. Watson. After dinner the chairman said that he had to give them the toast of "Success to the Club." In 1871 or 1872 a few gentlemen rented about two miles of the River Wharfe, and the subscription was 10s. a year. For a long time members were scarce, and the small subscriptions were not always paid. But gradually, by the liberality of His Grace the Duke of Devonshire and other riparian owners, a better and more flourishing state of things was brought about. That was in 1880. Now they had 50 members and seven miles of the best trout fishing in the North of England. They were met as a fraternity of anglers to promote good feeling and hearty fellowship. Their art was a healthy and an inexpensive amusement, linking together in a common bond of brotherhood the lawyer, the merchant, and the manufacturer. To all of them angling was a treat—the height of human felicity; for independently of the sport, the romantic surroundings like those to be found in such abundance on the banks of the Wharfe refreshed the mind and the body, and must be seen to be appreciated, for its lovely hills and verdant valleys were poetry itself. He had hoped to see amongst them more of those riparian owners to whose generous treatment the club owed so much. They would have been heartily welcomed, and they would have seen what pleasures were conferred by the privilege. The club had not neglected the breeding of fish, and the ground was now well stocked with grayling and trout. He often heard about bigger fish elsewhere, but it reminded him of what an old Scotch keeper said when asked what he thought of some bigger fish than his own which were reported: "Aye! aye! They're nae bigger fish, they're jist bigger leears." He concluded by commending the toast to their good will. Mr. W. Margerison and Mr. G. Demaine replied to the toast. Mr. Edward Middelton proposed "The Committee of the Club." Their exertions had resulted in the possession of seven miles of the best fishing, fully equal to anything to be found in the country. It had required the exercise of much tact and perseverance, with much expenditure of time and trouble. All the length had been most effectually staked, and two of the committee who lived in the neighbourhood—he referred to Messrs. Lister and Demaine—had personally superintended this important work. He knew it had been well done, for he had left a little tackle there himself. (Laughter.) He was glad and pleased to acknowledge Mr. Chippendale's success in fish breeding. Thousands of fish had been turned into the river, thus adding to the sport of the club. He was sure all would heartily drink the health of the committee. Mr. J. Hart, in reply, said he would have preferred that his duty had been performed by one who had known the club, and had been a member of the committee in its darker days. The riparian owners might think that the club and its members were well up in funds; but it must be remembered that to not a few the fishing was not easy of access, and therefore necessitated the expenditure of time and money. They could just pay their way, and what with watching and hatching they had done a good work. He felt himself very happy amongst many of the friends of his youth, and amid the beautiful scenery of his native valley. Many of them passed their days amidst the ceaseless whirr of machinery, and could therefore all the more highly appreciate the glories of Wharfedale. Mr. W. Fox also responded. He was only a junior member of the committee, but he thought it contrasted favourably with some of its predecessors. As to fish breeding, there had been much difficulty and a good deal of labour. In two years 90,000 trout fry had been turned into the river. He hoped this good work would be continued. Mr. James Suttle also replied briefly. Mr. Hart next proposed the Secretary and Treasurer, Messrs. Critchley and Crabtree, and spoke in the highest terms of their services in connection with the club. Mr. Critchley, in responding, said it was a pleasure to see so many present, but he felt some regret that those who had so generously forwarded the interests of the club in giving permission were not more strongly represented, as they would have had the heartiest welcome it was possible to give. Mr. Crabtree responded in a humorously practical speech. Mr. Wm. Kelsall responded for the riparian owners, and stated that it would give him great pleasure to communicate to them the kindly and hearty way in which their names had been received. He was sorry they were not there in force, and it was certainly their loss. Mr. Critchley then gave "The Visitors." Major Middelton said he found it difficult to express the great pleasure which it gave him in being their guest. Everything had gone off most pleasantly, and they were especially indebted to Mr. Walker for the entertainment of the evening, whilst the catering of Mr. and Mrs. Mercer and their aide-de-camp, Miss Palmer, deserved the highest eulogium he could pass upon them. He hoped the pleasant festive gathering might become an annual occurrence, and that he might always be honoured by an invitation. (Applause.) Mr. F. M. Walbran also responded. He had fished in different parts of the country, including Staffordshire, Derbyshire, and Yorkshire, and he did not know that he had fished better waters than were to be found in connection with the Appletreewick, Barden, and Burnsall Angling Club. (Applause.) He was rather sceptical for some time as to the fine grayling to be found at Burnsall, but he was now fully convinced such was the case, although he had not caught them himself, a visitor having secured some very fine ones, weighing 1¾lb. and 1½lb. respectively, and gave his testimony that he had never seen such fine grayling brought out of the Ure. Mr. W. Fox, in giving the health of Mr. N. Chippendale, Mr. Lister Robinson, and Mr. Geo. Demaine, reverted, in a few appropriate words, to the interest each of the gentlemen named had taken in the hatching of fish, but especially Mr. Chippendale, who had spared neither time nor money, and had carried out the work most efficiently. These remarks were further supported by the Chairman, and the toast was drunk with enthusiasm. Mr. Chippendale, Mr. Demaine, and Mr. Lister Robinson each replied and subsequent toasts included "The Chairman," and "The Host and Hostess." Musical selections were given at intervals by Mr. Jas. Critchley, Mr. C. H. Watson, Mr. W. H. H. Waugh (Bradford), Mr. G. Demaine; and comic sketches by Mr. Albert Walker (Otley).

### AMICABLE BROTHERS ANGLING SOCIETY.

The thirty-second annual distribution of prizes took place on Monday, Dec. 8th, when fifty-six prizes were handed over to the winners, Mr. Partrick taking the lead with the gross weight of roach, Mr. Medcalf ditto of jack, Mr. Moir ditto of bream, Mr. Dwelly ditto of perch, Mr. Harding ditto of chub, Mr. Say the heaviest one bream, Mr. Harding winning two other prizes, Mr. Partrick four ditto, Mr. Medcalf and Mr. Say three ditto; Messrs. Chevalier, F. Plumstead, Worledge, and Dwelly three each; Messrs. Robinson, jun., Dacey, A. Plumstead, Pedley, and Arnold two each; Messrs. Bryant, Taylor, Lake, Wicks, Marshall, Bond, Carrington, and Squires one each. The prizes were of the usual description, and included three one guinea prizes given by the hostess. During the distribution several songs were sung by the ladies as well as the gentlemen. Prizes were given to be fished for by Mr. Partrick, Mr. Arnold, Mr. Chevalier, Mr. A. Plumstead, Mr. Say, Mr. Medcalf, Mr. F. Plumstead, Mr. Harding, Mr. Lake, Mr. Moir, Mr. Dwelly, and Mr. Marshall. Mr. Fairbrother occupied the chair in a very able manner, and will give two prizes.—J. WORLEDGE.

### ANCHOR AND HOPE ANGLING SOCIETY.

The members of the above society competed for five prizes at Tonbridge on the 7th inst., with the following result :—Mr. Hale, jun., first ; Mr. Shakel, second ; Mr. West, third ; Mr. Dipple, fourth. The following also had fish : Messrs. A. and F. Davis. A match will take place on the 21st inst., for Mr. Morgan's prize. Members are requested to attend the club for particulars as to where and how it is to be fished.—D, DAVIS, sec.

### ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of £1 from the donation box of the Clapton Angling Society, and £1 from the donation box of the Edmonton and Tottenham Angling Society. Secretaries and friends will oblige by sending remittances for tickets at their earliest convenience.—R. GHURNEY, sec.

### THE ANGLERS' ASSOCIATION, FORESTERS' HALL, CLERKENWELL-ROAD.

The usual monthly delegate meeting will take place on Monday evening next, Dec. 15th, at 9 o'clock. The new visiting lists have been rearranged and divided into three districts. Secretaries of societies will oblige by forwarding to me at once any change of club-house or secretary, and any alteration in the addresses, so as to make the new lists as perfect as possible. The visits will commence with the new year, 1885.—R. GHURNEY, sec.

### BATTERSEA FRIENDLY ANGLING SOCIETY.

The next visit on the South London list will take place to the above club on Tuesday, December 16th. Very few members out on the 7th inst., the only ones weighing in being Mr. Martin, roach, and Mr. Ford, with dace. On December 14th there will be three prizes, for members not having won a prize this season. In consequence of Mr. Austin having broken down, and several other non-starters, I venture to predict the three following as the winners :—Mr. C. Hedges, 1st ; Mr. Robinson, 2nd ; and Mr. W. Johnson, 3rd.—A. T. SAMPSON, hon. sec.

### BIRMINGHAM PISCATORIAL ASSOCIATION.

The annual dinner of the Birmingham and Midland Counties Piscatorial Association was held at the Grand Hotel, on Thursday, Dec. 4th. Mr. Oliver Pemberton (president) occupied the chair, and amongst those present were the Rev. Dr. Crosskey, Alderman S. Edwards, Messrs. A. Parker, J. Allday, Cope, Dunn, Botteley, S. Basnett, R. Mann, Haseler, Seals, Sharp, &c. There was a good attendance. Letters of apology for non-attendance were read from the Mayor (Alderman Martineau) and the Hon. F. Hanson. Dr. Crosskey, after the loyal toasts, proposed "The Birmingham Piscatorial Association," and said that the true fisherman was, in his opinion, the man who could stand by the side of the river or stream the whole of such a day as that, and, returning in the evening without having had a bite, say that he had had a "beautiful day." (Hear, hear.) Angling was not merely catching fish. It was the close walking with Nature. The "refresher" of a day in the country by the side of the river was more than money could buy. He was delighted to see so large a number of working men devoting their Saturday afternoons to fishing excursions. He should like to see the railway companies offering better facilities to fishermen for getting into the country. (Hear, hear.) Mr. O. Pemberton replied. He read a letter from Mr. Allan Bagott, a Trent Fisheries Commissioner, stating that the Commission had lately passed a by-law, which would prohibit the use of nets which were less than 1in. in mesh when wet. By this by-law they hoped to stop the wholesale slaughter of fish by poachers. Persons using nets which were less than 1in. in mesh would be liable to a penalty of not less than £5. (Applause.) The President then presented a few prizes to several members, the Association Silver Cup being taken by Mr. Adams Parker for the best specimen fish of the season —viz., trout 2½lb. Other valuable prizes were taken by Messrs. E. Hooper, Bottleley, Thornton, Reynolds, &c. Mr. Adams Parker then proposed "The Health of the President," and after alluding to the various improvements that had taken place in the fishing, informed the company that negotiations had been entered into for the purpose of confining the swans during the spawning season, the letter of Lord Lichfield, referring to the same, causing great satisfaction. The health of the vice-president, treasurer, and hon. sec. were also honoured. The Birmingham Glee Party attended.

### BORDESLEY WALTONIANS.

The members of the above club met at host Mason's Old Lodge, Coventry-road, on Nov. 25th, to celebrate their 14th anniversary. A capital spread being placed upon the table by the worthy host, and to which, as a matter of course among a company of anglers, ample justice was done. After the withdrawal of the cloth Mr. Miles, president of the society, was voted to the chair, Mr. W. T. Howlett being voted to the vice-chair, Mr. W. H. Brecknell, the esteemed vice-president, being absent through illness. The chairman, in proposing the toast "Prosperity to the Bordesley Waltonians," dwelt upon the pleasing fact that the society was in a flourishing condition financially, that its list of members was full, while others were on the nomination list ready for enlistment whenever a vacancy occurred. He next proceeded to speak of the action the club had taken in pressing, through the Central Association, for the return to cheap fares for anglers by the London and North Western and Great Western companies, passing on to remark what he considered the wise action taken by the club in raising the minimum size of fish taken in fishing matches so as to exclude the microscopical specimens he had seen taken in other parts of the country. "The Health of the Queen," also the various officers of the society, having been drunk, some capital singing followed, a most enjoyable evening being wound up by hearty votes of thanks being given to the chairman and vice chair, also to the worthy host and hostess for their admirable catering.—E. TILDESLEY, sec.

### CITY OF LONDON ANGLING SOCIETY.

On the 30th we had four members out, Mr. Chambers being the only one to weigh in, he having roach from Amberley. On the 7th Mr. Castell had a good show of roach, dace, and perch from Roydon ; Mr. T. Payne bream and dace from Amberley ; Mr. McDonell a small jack, taken on roach tackle from St. Margaret's ; and Mr. Chambers gudgeon from Penton Hook.—CAS.

### CLAPTON ANGLING SOCIETY.

The ordinary weekly meeting was held at the Swan Hotel on Monday last, Mr. George Colls in the chair. The minutes of the preceding meeting were read and signed. The secretary reported that the competition held on Saturday last was, by reason of the tempestuous weather, not satisfactory in a "fishing" point of view ; those "veterans" who did attend were rewarded with but indifferent sport, the result being that only the secretary's prize was taken, with a jack of 3¾lb., falling to the lot of Mr. H. Short. Mr. Wood had two small jack, Mr. Woodhead (not fishing in the competition) four chub, one going 2¾lb. Mr. R. Ghurney very kindly officiated as "clerk of the course," it is needless to say in a most satisfactory manner. At the conclusion an adjournment was made to the Red Lion, where ample justice was done to the substantial fare provided. Mr. H. Shaw weighed in some fine chub on Monday, and reported that at Angel-road there had been some good takes of jack (one scaling 7½lb.) and some fine chub. Mr. Ghurney attended the meeting, and was handed the collecting-box for the "Anglers' Benevolent," the contents being augmented by the members present, one sovereign being handed to Mr, Ghurney, the chairman expressing his conviction that the "Clapton" would in the future be well to the fron with their contributions to this deserving charity. Mr. Ghurney warmly thanke the members for their contribution. A cordial vote of thanks was accorded to Mr Ghurney for his valued services on the Saturday, which Mr. Ghurney responded to, saying he was always pleased to help any angling society to the best of his ability. The usual vote of thanks was accorded to the chairman, aud the proceedings terminated.—HENRY HOWSE, hon. sec.

### COBDEN ANGLING SOCIETY.

The members mustered pretty strong on the 7th inst. to take part in the contest, which took place at Taplow. As far as sport was concerned it was pretty good, for most of the members caught fish. I may say we did not have what I call good catches, but the prizes were all secured by the following members—namely, Messrs. Dunn, sen., 1st ; G. Jenkins, 2nd ; Webley, 3rd ; Tucker, 4th ; Andrews, 5th ; and Simmons, 6th.—C. REEVES, sec.

### DUKE OF NORFOLK ANGLING SOCIETY.

We had some nice fish from our waters at West Drayton on Dec. 7th—Mr. Allen having one roach that weighed 1½lb. full weight, Mr. Whitehall three nice jack, and Mr. Avon jack and perch. We fish the closing match of the season on Dec. 14th at Uxbridge for prizes consisting of pieces of beef, wine, and cigars ; the beef and a handsome lamp being the gift of our worthy host and member, Mr. Green. The roach has gone to Cooper to be preserved.—J. AVON, sec.

### GLOBE ANGLING SOCIETY.

Although the majority of our members were out on the 7th inst. to compete for the various prizes given for that day, the shows of fish were not so numerous as was anticipated, nevertheless the trays were well filled by the following gentlemen :—Mr. A. Chambers, a few splendid roach from the Stort, weighing 3lb. ; Mr. Lawrence, two small chub, 2lb. 4oz. ; Mr. J. Ballard, roach, 1lb. ; Mr. W. Brown, one roach and one dace, 12oz. ; Mr. L. Harrington, one roach, 7oz. ; Mr. H. Lake, roach, 3lb., dace, 6oz., perch, 5oz. ; Mr. S. Howell, 10lb. of pretty roach ; and your humble servant a fine tray of roach weighing 18lb.—J. J. HOLMES, sec.

### GREAT YARMOUTH PISCATORIAL SOCIETY.

The business this week consisted of enrolling Mr. Davis, host of the Maid's Head, Stalham, a member, and from his knowledge of the waters, and his reputation as well studying the wants of the angler, will be sufficient guarantee that he will be well patronised, as, beyond question, Stalham stands first for plenty of jack. Mr. Harrison weighed in 7¾lb. jack, Mr. Lamb 3¾lb. jack from there, and, as soon as the weather is more severe, I anticipate good baskets from that locality.—J. LARK.

### GRESHAM ANGLING SOCIETY.

The entertainment announced in the reports of the two previous meetings took place this (Tuesday) evening at the society's rooms, Masons' Hall Tavern, Masons'-avenue, Basinghall street. There was a very large attendance, the two spacious rooms belonging to the society being completely filled. A very long programme of songs and instrumental music was divided into two parts, the interval being occupied with the exhibition of some excellent dissolving views, illustrative of the Upper Thames from its source to Teddington. A brief description of each picture was given by Mr. Parker, and suitable songs were interposed. Among those who rendered help, vocally or instrumentally, must be mentioned Mrs. Atkins, Miss Layton, Miss Howse, Messrs. Chalmers, Elliott, Dean, Austin, Butler, J. E. Harding, Atkins, B. A. Parker, and Shrimpton. Messrs. Winterbottom and Brown officiated as accompanists. At the close of the entertainment Mr. Chambers, in a humorous speech, proposed a vote of thanks to the ladies and gentlemen who had so kindly contributed to the pleasures of the evening, and this having been seconded by Mr. Clarke, was carried by acclamation. A vote of thanks to the chairman was then proposed by Mr. Crumplen, seconded by Captain Alfred, and carried unanimously. Dr. Defriez, in returning thanks, explained that Dr. Brunton, who had been asked to fill the position, was unavoidably absent.—H.

### HOXTON BROTHERS ANGLING SOCIETY.

Very few fish on the 7th inst. Messrs. W. Norman and J. Huntley had jack and Mr. A. Dean roach. The Christmas prizes, which are very numerous, consisting of poultry, joints, cod fish, spirits, wines, cigars, tea, and pudding ingredients, will be fished for on Dec. 14th, at Ware, in the River Lea, the boundary from the engine house to the railway bridge below Ware town. The prizes will be distributed on Tuesday, Dec. 23rd, at the club house at 10 p.m.—R. GHURNEY, sec.

### THE LINCOLN ANGLING SOCIETY.

Our members went out fishing on the 7th inst., and met with the following result : —Mr. H. Bingle brought in from Temple some nice dace, roach, and perch, weighing in all 2lb. 12oz. ; Messrs. Embleton and Sheen some jack, weighing respectively 4lb. and 4lb. 5oz., from St. Margarets. The other members met with very poor sport.—H. BINGLE, sec.

### LIVERPOOL ANGLING ASSOCIATION.

We had again a good muster at our meeting last week, and the members seem to have fairly settled down in the Canton, and to fully appreciate its more convenient position for the majority. At this meeting the handsome and valuable bookcase, presented by Mr. Harrison and embellished by Mr. J. E. Martin (our "art member"), was formally taken over, and the library fairly inaugurated by Mr. Sergencson placing therein, on loan, for the use of members for three months, his very valuable works on angling, consisting of 24 volumes, amongst which are the following :—"Treatyse of Fysshyne with an Angle," attributed to Dame Juliana Barnes, 1450 ; "A Booke on Fishing with Hooke and Line," by Leonard Mascall, 1590 ; "The Secrets of Angling," by John Dennys, Esq., 1613 ; "The Chronicle of the Compleat Angler" of Isaak Walton and Charles Cotton ; "A Book on Angling" and "By Lake and River," Francis ; "The Angler Naturalist," "Fly Fishing and Worm Fishing," and "The Modern Practical Angler," Pennell ; "The Fly-fisher's Entomology," Ronald ; "The Practical Angler for Trout," Stewart ; "Angler's Complete Guide," Little ; "Fish and Fishing," Manley ; "British Angling Flies," Theakstone ; "The Scientific Angler," Foster ; "Guide to Rivers and Lakes" (England), Blakely ; and others. Mr. J. Evans presented the "Fly-fisher's Guide," by G. C. Bainbridge, and Mr. R. Roberts gave "Bowlker's Art of Angling." A vote of thanks was unanimously passed to Messrs. Sergencson, Evans, and Roberts for the books so kindly presented. Any members having books on fishing that they can spare, or care to part with, will oblige by bringing or sending them to the clubhouse, where they will be welcome and every care taken of them. The present quarter ends on the 18th inst., and I have respectfully to ask members in arrear to kindly "pay up," and start the next year and season with a clean page. After a remuneration had been voted the attendants at the annual dinner and other minor matters disposed of, the meeting was closed.—R. WOOLFALL, hon. sec.

### NORTH-EASTERN ANGLING SOCIETY.

Only one of our members on the war path on the 7th inst., his perseverance being rewarded with one small jack. Donors will greatly oblige, if convenient, by sending in their presents by the first day of the new year.—G. T. FLETCHER.

### NOTTINGHAM AND NOTTS ANGLERS' PRESERVATION ASSOCIATION.

The annual general meeting of the members of the above association was held at the Golden Ball, Coalpit-lane, Nottingham, on the evening of the 4th inst., under the presidency of Mr. H. Shrewsbury, who was faced in the vice-chair by Mr. R Ludwig. Mr. F. Wilkinson, the secretary, submitted the yearly report, which urged on the members present the desirability of taking into consideration the reports of the various deputations who had waited on the railway authorities in the matter of travelling privileges, and also on the Nottingham Town Council in reference to fishery rights. The report also urged the necessity of united action, and stated that negotiations were pending with a view to open up the Trent as a national river for fair and legitimate angling. Mr. Wilkinson added that proofs were not wanting that the association, in their proposed undertaking, would have the support and assistance of such kindred associations as London, Sheffield, Birmingham and Yarmouth. An animated discussion followed the reading of the report, and, on the proposition of the secretary, it was resolved to call a town's mass meeting of anglers for the purpose of considering the best means of opening up the river for angling purposes. The following officers were elected for the ensuing year :—President, Mr. Ludwig ; vice-president, Mr. Digby ; treasurer, Mr. H. Benson ; trustees, Mr. S. Dickenson and Mr. J. Grieves ; secretary, Mr. F. Wilkinson. Committee : Messrs. Whittaker, Bishop, Wilkins, Wallace, Belshaw, Arnold, Parsons, Bee, Brothwell, Wicket, and Wrightman. The committee meetings for the year will be held at the Shoulder of Mutton, Smithy-row, Nottingham.

### PECKHAM BROTHERS ANGLING SOCIETY.

Messrs. Gibbs, Gafney, and Lang took the first three prizes in the match at Kingston, the others will be fished for on the 14th, at Weybridge. Train leaves Vauxhall at 8.50. A match for a supper, Chairman's side v. Secretary's side, is spoken of : members wishing to compete will please give their names in at once. After Christmas a roach fishing match, Messrs. Page and Stidolph v. Messrs. Gafney and Duke, will take place for a money stake ; the river to be named later on.—Gadfly.

### THE PISCATORIAL SOCIETY.

The usual weekly meeting of this society took place at Ashley's Hotel, Covent-garden, on Monday last. Amongst those present were Messrs. Jesse, Gillatt, Foreman, H. B. Brown, Pattisson, Booker, Blundell, Huggett, Gray, Harden, Neish, Walker, Lemann, Fennings, Rev. G. Sumner, Goodger, Hill, Bennett, Aldridge, Watson, H. H. Brown, Adlington, C. C. Blundell, J. Lander (hon. sec.), &c., &c. Mr. Jesse was unanimously voted to the chair. The hon. sec. read the minutes of the previous meeting, which were duly confirmed. A letter was read from Mr. W. H. Brougham, asking The Piscatorial Society to give their usual contribution to the Thames River Keepers' dinner.—Referred to the committee. A letter was read from Mr. Oldham Chambers, secretary of National Fish Culture Association, saying that that society had forwarded us their various publications, and also inclosing two numbers of their *Journal* and a circular *re* coarse fish. Our next smoking concert takes place on the 15th inst. Members are specially invited to bring their musical friends. The concert commences at 8.30 precisely. Mr. Foreman will not wait! One A.M. said he had been fishing in Derbyshire and Staffordshire—in the Dove. He had the two best days in some of the best water. On the first day he killed eight brace—largest fish over 1½lb., and several others nearly that size. The next day he also did well, capturing ten brace, averaging the same weight as on the day previously, the flies used being the winter dun, also the green bumble, and the honey dun bumble. He perhaps lost a few fish with rather rough handling, but as time pressed he thought it the better way to get the fish out as soon as possible. In those November days they only rise one or two hours in the middle of the day ; they were in half-depth water—not in shallows or deeps, but between. He also fished other waters, but the weather was too unpropitious for good sport. He recommended certain stations on the Wye to the members of this society. Mr. Pattisson has been fishing at Hertford for roach, dace, and pike. He took a good quantity of roach and five dace, the largest dace over 12oz. The chairman proposed the health of the successful anglers, Messrs. Foreman and Huggett. Mr. Foreman showed one pike, 4lb. 5oz., from Thames ; Mr. Huggett chub, 8lb. 13oz., and roach from Lodden. Mr. Foreman thanked the members for their kindness. He and his friend H. B. Brown went to Maidenhead, and fished under Cliveden Wood ; he had two runs only during the day, only getting the one fish. Mr. Brown also took a fish, but too small to show. Mr. Huggett thanked the gentlemen for their kindness. He had not had such good sport as usual ; the fish were not well on. The weather was all that could be desired, and he heard the skylarks mount and sing as if in the days of spring ; he took the fish with greaves. One A.M. produced some twisted lines for the inspection of members ; they were not of silk, but were exceedingly good and strong, being cable laid. He intends to use them instead of silk for the future. The Chairman, rising, gave the toast of "Continued Prosperity to The Piscatorial Society," which was responded to most heartily. Mr. H. B. Brown proposed the health of the chairman, and that gentleman having replied, a very pleasant evening's business was brought to a close.—T. H.

### PRINCESS OF WALES ANGLING SOCIETY.

The usual bi-weekly meeting of the above society was held on December 7th, at the Society's room, George-street, Portman-square. The following members weighed in :—Mr. A. Porter, three nice jack, 14¾lb., and 8lb. of roach ; Mr. Gordon, 4lb. of roach from Uxbridge ; Mr. E. Porter, 4lb of dace from Richmond. All members are earnestly and particularly requested to attend on Thursday, the 18th inst., as business of urgent importance is to be brought forward by the secretary.—C. Attewell.

### PRIDE OF DERBY ANGLING CLUB (DERBY).

The ordinary fortnightly meeting of this society, which numbers nearly 100 members, took place on Monday evening last at the Old English Gentleman inn, and was well attended, there being about 40 members and friends present. Mr. J. Cadman occupied the chair. The minutes of the previous meeting were read and confirmed. Several matters of importance were discussed, in addition to which Mr. J. O. Manton and Mr. Sigall were proposed as members, and their election will be proceeded with at the next meeting. Mr. Martin also explained his new harness tackle for pike fishing. After the business had been transacted, a smoking concert was held, and proved very successful. Mr. J. Bland opened the ball with "The Spell is Broken," and afterwards gave "Good-bye, Sweetheart," in capital style. Mr. J. Tomlinson rendered "She Wore a Wreath of Roses" ; Mr. Peach gave the "Four Jolly Smiths" ; Mr. Bradley, "The Anchor's Weighed ;" and Mr. Pountain, "Tom Bowling." Mr. J. Saxton rendered the "Little Hero" very tastefully ; and Mr. Bland gave the last song of the evening, "Mary Dunbar," which fairly "brought down the house." The National Anthem was then sung, and the company dispersed much pleased with the evening's amusement. Mr. Jackson presided at the piano in his usual capital style.—Thos. Whyman, hon. sec.

### RICHMOND PISCATORIAL SOCIETY.

There was a roach competition amongst the members of this prosperous society on Wednesday last, for the gross weight of fish, and the measurement to be not less than 8in. in the extreme length, which is 1in. more than the Thames standard. It was open to the Thames, and the hours of competition were fixed from 9 a.m. till 5 p.m., one rod only to be used, and the fish to be measured and weighed in at the Station Hotel not later than 10 p.m. The entrance fee was 2s. 6d., and there were three prizes. Mr. A. J. Little presided at the meeting in the evening, with Mr. H. Dickinson in the vice-chair. There was a very excellent attendance of members, including Messrs. H. B. Terrill, H. Taman, J. H. Gaunt, H. E. Gaynor, W. H. Brougham, Marjason, W. Johnson, E. H. Smith, Scantlebury, Michels, &c., &c. The fish were weighed in in the following order :—Mr. John Wotton, eleven roach, weighing 3lb. 11oz., the largest 10½oz. ; Mr. Marjason, nine roach, weighing 2lb. 14½oz. ; Mr. W. Johnson, 17 roach, weighing 6lb. 11oz., the largest 11oz. ; Mr. A. J. Little, ten roach, weighing 2lb. 13½oz. ; and Mr. E. H. Smith, 116 roach, weighing 39lb. 4oz., the largest 13oz. The day in the tidal waters was a very unfavourable one, owing to the gale of wind and the heavy stream through the opening of the weir, Mr. Johnson getting nearly all his fish in the last half-hour. The splendid show of roach made by Mr. E. H. Smith was made at Cookham. The prizes were awarded as follows :—First, Mr. E. H. Smith ; second, Mr. W. Johnson ; third, for largest specimen, Mr. E. H. Smith.—B.

### STOKE NEWINGTON ANGLING SOCIETY.

The members of the above fished at St. Margaret's on Nov. 30th for three prizes, only one being taken by Mr. W. Robinson ; the remaining two, with one given by Mr. G. Whitmore, will be fished for on the 14th inst., go where you please, the heaviest gross weight of any kind of fish to take the prizes in rotation.—T. Gretton.

### UNITED BROTHERS, DEPTFORD.

A little rain in the week took some of our members out on Dec. 7th, but not much sport. Mr. G. Belton, roach and dace from the Lea. In the week we have had some nice dace from the Ravensbourne.—H. Tyler.

### WOOLWICH INVICTA ANGLING SOCIETY.

The members of the above club had a competition for several handsome prizes at Twickenham on the 7th inst., Mr. G. Walker taking the first prize, Mr. H. Davis the 2nd ; Mr. G. Knight, 3rd ; Mr. F. Latham, 4th ; Mr. Cooke taking the hon. members' prize. Messrs. Lindley, Perry, Sillery, and Timpson also weighed in fish. Messrs. B. Miles and W. Hart, of the Woolwich Brothers Angling Society, accompenied the above, they having a very handsome take of dace. Amongst the fish taken were some very good-sized roach and dace. Mr. C. Miles, Queen's Head, Twickenham, supplied punts and attendance.—F. Latham, hon. sec.

### WEST GREEN ANGLING SOCIETY.

Several members out on the 7th inst., but only two weighing in fish—Mr. Hoy, with a nice brace of Jack from Tottenham, and J. Guyver, with one jack scaling just under 5lb. Mr. Elder, late vice-president, was unanimously elected president, Mr. Woodward Dudley being elected vice-president ; Mr. Thomas Dudley being elected auditor in place of Mr. Golding, retired.—J. Guyver, sec.

## THE PROPOSED TAY SALMON FISHING BILL.

The following is the report of the committee appointed to consider the proposed new Bill for the Tay salmon fishery district, and which was recently submitted to a meeting of the whole proprietors of salmon fisheries in the district :—

At the meeting of proprietors of salmon fisheries in the Tay district, held on Aug. 1 last for the purpose of considering the heads of a Bill for amending the present Salmon Fishery Acts which had been prepared and circulated by the district Board, it was remitted to that Board and to the new Board then to be shortly elected to consider the heads of the Bill in the light of the discussion and votes which took place at that meeting, and at the two meetings of upper and lower proprietors for the election of a new Board that remit was repeated and confirmed. The newly-elected Board were thus in the position, as regards the Bill, of a committee of the proprietors to reconsider the heads of a Bill to communicate with parties having different interests and views, and to report results to the general body of the proprietors. The first meeting of the new Board was held on the 19th ultimo, when intimation was made to them that the Bill would be opposed at every stage, and not on any trivial, unimportant ground, but on the very essence of the whole proposal—viz., the exchange of weekly for annual close time, or, in other words, the extension of the weekly close time and extension of the annual fishing season in lieu thereof. The Board saw at once that such an opposition put the matter beyond the region of compromise, and as there was no prospect of convincing the parties whose opposition had been intimated after full discussion by correspondence of the point at issue, the only course open to the Board is to report the fact, and that while they would have been ready to do their utmost to make the minor details of the Bill meet the views of parties and carry through an unopposed Bill, it was beyond their powers to carry through Parliament a Bill to which opposition had been so distinctly intimated, or to incur responsibility for the expense of such a Parliamentary contest. The Tay Fishery Board make this report with much regret. They hoped that the proposed changes would have been directly beneficial to parties in the upper districts, and also to some of the lower proprietors above and below Newburgh, both of which classes of proprietors have complained loudly that recent legislation has not been beneficial to them in the way that was expected and intended ; and the Board also hoped that the change would be of great value to the whole river (even independently of works for opening up new breeding grounds) by increasing the produce, which, as regards numbers of fish taken, has not been improved under the present arrangement ; and they further expected and hoped that such a result would become very much greater by the opening of the Tummel and other tributaries from which salmon are at present excluded, and by the erection of fishways to effect that object. The Board consider that until the changes contemplated by the Bill are carried out, little advantage can be derived from these expedients, and it is therefore matter of regret to some extent that the expense of bringing Colonel Macdonald to Scotland, and other expenses in relation to his visit and fishway, have been incurred, if the object is to be defeated by opposition or failure to promote the Bill.

Having explained this position of matters, the Board will leave it to the general body of proprietors to deal with the Bill and the opposition to it as they think best. When the Act of 1858 was got, the expense of it as an unopposed Bill was £400, and as all parties expected to share the benefit of it equally, the expense was paid from the assessment ; and, probably, if the present Bill had been so treated, no objection would have been made to a repetition of such an arrangements. But the case of an opposed Bill is very different, and the advantages to be derived from the Bill now under consideration are not so equally distributed as in 1858. It would, therefore, be necessary that if a contest is thought of, the expense should be allocated, in some degree, according to the extent of *direct* benefit to be derived from the change, for it would not be fair that a park whose present assessable fishing valuation is £20, which may by the operation of the Act become worth £100 (thereby deriving a benefit of £80), should pay upon £20, while proprietors of from £2,000 to £3,000 rentals, who have no prospect of direct benefit, and may be losers by the improvement of fishings above and below theirs, should pay upon their whole rentals. These are matters which will require full consideration in the view of intimated opposition, and they are now pointed out by us in order that proprietors who are disposed to take an interest in the matter may have the point fully brought before them, and be ready to consider it at the meeting. P. Mc.G.

The truth of the old saying, "It is an ill wind that blows no one any good," has been abundantly proved by the Newbury Angling Association, who, owing to the excessive drought in various places, have been enabled during this past fortnight to turn no fewer than 121½ brace of splendid trout, from ½lb. to 1lb. weight into their trout streams. The Association owe a deep debt of gratitude to Mr. Hippisley, of Lambourn-place, for the gift of 60 brace, and to Mr. Hedges, of Bucklebury, for the gift of 61½ brace. The Shaw stream thus bids fair to become one of the best preserves in this part of the country.—*Newbury Weekly News.*

## ANNUAL DINNER OF THE NORWICH PISCATORIAL SOCIETY.

THAT celelebrated haunt of the Norfolk and Norwich brethren of the rod, the Walnut Shades, Norwich, presented an appearance of unwonted gaiety and liveliness on Thursday the 4th inst., when the members of the Norwich Piscatorial Society, with their friends, met to celebrate their annual dinner.

Mr. E. Hartwell Corbyn, one of the oldest members of the society, having become host of this rendezvous of anglers since the society held their last dinner, surpassed himself in his efforts in the way of catering, the fine dining-room presenting the most *recherche* appearance, and every possible arrangement for the comfort and ease of the guests had evidently been a matter of careful consideration.

The programme of the evening's proceedings, gem of workmanship, bearing on the front a marine scene in steel engraving, and on the back an exquisite design lithographed from the charming sketches by Mr. S. F. Howitt, of two favourite angling spots, showed that our anglers were not wanting in pluck, as the toasts to be "tackled" numbered thirteen, with twenty-six responses.

Mr. Charles Daniels, President of the Society, occupied the chair, faced by Mr. Fred Parker in the vice, and there were present :—Mr. I. O. H. Taylor, F.R.H.S., Mr. Alderman Newman, Mr. Councillor Matthews, Mr. Geo. Daniels, Mr. G. C. Davies, Mr. C. Laight, of Redditch, Mr. C. J. Greene, Mr. Whincop, Mr. T. Allen, Mr. S. F. Howitt, Mr. F. Knight, Mr. C. Mackie, Mr. A. Sim, Mr. W. Page, Mr. Russell, Mr. Wigg, Mr. T. Dunmore, Mr. F. Lacey, Mr. H. Lacey, Mr. English, Mr. C. Page, Mr. Hockey, Mr. Hewitt, Mr. E. H. Corbyn, Mr. Plummer, Mr. O. B. Wilson, Mr. Barnes, Mr. H. C. Townshend, Mr. R. Otty, Mr. W. Gill, Mr. W. Butler, Mr. McWright, Mr. R. Bradly, Mr. F. F. Bradly, Mr. Rice, Mr. Norris, Mr. Cushing, Mr. Beeston, Mr. E. H. Capon, Mr. Perowne, Mr. J. Barnes, Mr. Gathergood, Mr. Hewson, Mr. R. Page, Mr. A. Bunnett, Mr. J. Weyer, Mr. W. G. Capon, &c.

"The Queen and the rest of the Royal Family" having been given by the President in a well-chosen speech, and duly honoured, "The Army, Navy, and Reserve Forces" was next proposed, and was ably responded to by Quartermaster English, N.A.V., and Corporal Capon, V.B.N.R. Mr. Tom Allen, in proposing "The Mayor and Corporation of Norwich," evinced a thorough knowledge of the affairs of and love for the old city, which was evidently fully reciprocated by the responders, Mr. Newman, J.P., and Mr. Councillor Matthews, the former of whom dwelt upon the antiquity of municipal bodies and the great benefits they conferred in times gone by, and said that the same spirit which actuated leading citizens in the past was manifested by those of the present day. Mr. Councillor Matthews spoke on the recent great improvements made in the city, and humorously referred to the incessant and arduous duties in connection with committee work.

Mr. G. C. Davies, in giving "The Yare Preservation and Kindred Societies," said that such associations had given a high moral tone of sportsmanlike feeling to anglers generally. As a yachtsman, he gave his angling friends some very valuable suggestions as to mooring their boats out of the way of sailing craft, and remarked that he was certain those gentlemen who indulged in yachting would extend every courtesy to fishermen.

Mr. C. J. Greene (Yare Preservation Society), Mr. J. J. Rice (East Anglican Piscatorial Society), and Mr. G. G. Whincop (Champion Angling Club) responded.

The familiar and genial presence of Mr. Robert Moll, the secretary of the Norwich Angling Club and local correspondent of the FISHING GAZETTE, was missed—his absence being owing to indisposition.

Mr. I. O. H. Taylor proposed "The Norwich Piscatorial Society," and expressed his pleasure at attending the meeting, because this association was an offspring of the Yare Preservation Society. Such societies were doing an excellent and valuable work, not only in promoting sport, but in improving the character of anglers, for when a man joined such institutions he was bound over, as it were, to keep the peace by fishing in a legitimate manner. (Hear, hear.) He gave "The Health of Mr. Capon, the hon. secretary."

The President said that every member appreciated the duties performed by Mr. Capon, and, as a slight token of their regard for him, he had much pleasure in asking that gentleman to accept of a present that took the form of a silver teapot and a pair of equestrian bronzes.

Mr. W. G. Capon, the society's popular secretary, in acknowledging the presentation, expressed his surprise and pleasure at the kindness of the members, and said that on looking round the board, seeing so many smiling faces, and thinking that the face was indicative of the mind, recalled to memory Shakespeare's words on mercy in the trial scene in *The Merchant of Venice*, "It blesseth him that gives and him that takes." In this instance he believed the pleasure was twofold—as it pleased him to accept the presentation, so it pleased the members to give. (Applause.) Mr. Capon promised that by his acts he would endeavour to merit their respect and esteem in the future as in the past. With respect to the society, he reported that it has just experienced the most successful season it had ever known; several valuable papers had been read by various members, and two fishing matches had been contested. The first match, held at Horning Ferry, brought over 40 members into competition; and the second, in which forty-two members competed, was held at Buckenham. At the latter match, the challenge trophy was competed for besides twenty other prizes. (Applause.)

Mr. C. J. Greene proposed "The Health of the President," and said that Mr. Daniels was a true sportsman, and it was a convincing proof of the respect in which the club held him, that since it had been established it had year after year elected him as its president. He hoped Mr. Daniels would long continue to occupy the post he now so ably filled. (Applause.)

Mr. G. C. Davies said he could not allow this toast to pass without saying that one of the most interesting chapters in his book, "The Rivers and Broads of Norfolk," was written by Mr. Daniels. It was a description of a sunset he saw while fishing on the Yare, and one of the reviewers of the work accorded special praise to this particular chapter.

The President, in acknowledging the toast, said that he appreciated the honour which the members had conferred upon him by repeatedly electing him to this office. They had in Norwich about 48 associations formed on a similar basis as this, with a membership of between 1,400 and 1,500 members of the adult population of the city. The meetings were held in taverns and inns; but it was a significant fact that never before had Norwich been so free from crime and drunkenness than at the present day, and it spoke volumes for the excellent services these clubs did in promoting good-fellowship, moderation, and intellectual intercourse amongst the members. (Hear, hear.) Having referred to the natural beauties of our broads and rivers, Mr. Daniels said he was very pleased with the good-fellowship existing among the members and with the harmonious working of this club. (Applause.) In conclusion, he gave "The Health of the Vice-President," and Mr. Parker also replied.—The remaining toasts were "The Trade and Commerce of Norwich," "The Committee," "The Visitors," "The Host and Hostess," and "The Ladies."

The musical arrangements contributed in a very great degree to the success of the meeting, the programme containing several choice *morceaux*, notably Mr. Hewson's delightful rendering of "The Lost Chord" and "A Winter Story"; while Mr. C. Campling sung Corney Grain's well-known "Three Fishermen," and as an encore gave, with capital effect, "Always go Home to Tea." Mr. E. Hartwell Corbyn, now in the front rank as an effective tenor, sang, with rare power and sweetness, "The Death of Nelson," and "Hearts of Oak" received the usual good treatment from Mr. F. F. Bradly.

Mr. Hewson's whistling solo, a performance of great merit, was much appreciated, and the novel dental solo of Mr. F. Knight was received with applause. Mr. Tom Dunmore, the buffo singer, contributed two comic songs in his usual stirring style; while Mr. Beeston, the Poet Laureate of Norwich anglers, convulsed the room by one of his topical productions. A violin solo by Mr. W. E. Tuddenham agreeably varied the proceedings, and the masterly performance of Mr. Arthur Bunnett on the pianoforte added much to the harmony of the night. A recitation by Mr. E. H. Capon was also well received.—A. S.

EIGHTH YEAR OF PUBLICATION.

# THE DOUBLE ILLUSTRATED WINTER NUMBER OF THE

# Fishing Gazette

WILL BE PUBLISHED ON

## DECEMBER 20TH.

Among the Special Features in this Number will be—

A PORTRAIT AND BIOGRAPHICAL NOTICE OF

**EDWARD BIRKBECK, Esq., M.P.,**

Chief Promoter of the Great International Fisheries Exhibition of 1883, &c., &c.

A PORTRAIT AND BIOGRAPHICAL NOTICE OF

N.B.—Advertisers in this Number desiring Notice of their Articles should send Samples to the Editor at the above Address.

## RISING OF THE SEVERN AND REMARKABLE ESCAPE.—EIGHT HOURS IN THE WATER.

Owing to the recent snow and rains the floods from the country have caused the Severn and Verniew to rise to an unusual height, and in some places the banks have been overflowed, the low-lying fields being partially under water. A remarkable escape from drowning occurred on Friday night near Pool Quay. It seems that as a man named Daniel Edwards, of Guilsfield, near Welshpool, was returning home between 10 and 11 at night, he by some means got into the Severn, and the force of the current took him down the stream for a considerable distance. Near the railway bridge he fortunately caught hold of a bush by the riverside, to which he clung, and remained hanging until the water subsided. His perilous position was discovered on the following morning by a man named Richard Davies, who was attracted by Edwards' cries for help; obtaining a ladder he succeeded in getting him out at 7 o'clock on Saturday morning, after he had been in the river eight hours at the least. Edwards has only one arm, a circumstance which must have made his enforced hanging by the bush for so long a time a severe muscular strain almost unendurable.

---

A Good Shark Story.—The Gloucester (Mass.) *Advertiser* is responsible for the following: One of the crew of the schooner *Francis W. Homans*, of this port, informs us that on the recent trip to Georges they caught a large shark and cut his head off, which they left on board and threw the body overboard. Ten minutes after, to the great surprise of all hands, the shark was seen swimming alongside without his head, and remained in sight three-quarters of an hour. This seems incredible, but several of the crew substantiate it. Captain John Hawson informs us that he has witnessed the same feat on the west coast of Africa—when the crew would catch sharks and cut their heads off, the fish would swim off as if nothing had occurred.

**FISHING RODS—AND TACKLE.**
BULMER'S "FISHING GAZETTE" GOSSAMER GUT LINES,
Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—Fishing Gazette Notice, September 18, 1883.

See also notices in the Fishing Gazette for Dec. 17, 1881; June 28th, 1882; July 1, 1882; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d. Fishing Gazette Gossamer Gut, Tapered, 8d each; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d. and 1s. 6d.; prepared ditto, 20 yards, 1s.; stout, 1d. a yard; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d.; Gossamer Gut, 12in., 3s. 6d.; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz.; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal, 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen; Treble ditto, 2d. each. Pennel Snaps, 2½d.; Jardine, 3½d. each; Gut or Gimp Spinning Flights, 6d. each; Spoon Baits (Jack's size), 9d. each; Gut and Gimp Traces, 6d. each, Fishing Gazette Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d.; ditto Twisted Gut, stout or fine, 1s. each; 3in. Jack Float, 6d.

WINCHES. — Nottingham, from 6d.; Brass, from 8d.

HEATON'S PATENT REELS, "Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ¾in., 1s. 6d.

Rods made to order or fitted with screw-joint ferrules.

Price List free on application.

Postage extra on all orders, and all must be accompanied by a remittance.

All goods marked in plain figures.

**A. BULMER, 62, WANDSWORTH ROAD, S.W.,**
Corner of Nine Elms Lane.
Three minutes' walk from Vauxhall Station.

**Freeman's Chlorodyne.**
THE ORIGINAL AND ONLY TRUE.

IT IS THE GREATEST MEDICAL DISCOVERY OF THE PRESENT CENTURY, and is regarded as a boon to mankind.

It is the best known remedy for Coughs, Consumption, Whooping Cough, Bronchitis and Asthma.

It effectually checks and arrests those too often fatal effects of Diseases, Diphtheria, Diabetes, Fever, Croup, Ague, &c.

It acts like a charm in Diarrhœa, and is the only known Specific in Cholera and Dysentery.

It effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, Convulsions and Spasms.

It is the only palliative in Rheumatism, Gout, Cancer, Toothache, Neuralgia, Sciatica, Lumbago, &c.

It rapidly relieves pain, from whatever cause, allays the irritation of Fever, soothes and strengthens the system under exhausting diseases, restores the deranged functions, stimulates healthy action of the secretions of the body, and gives quiet and refreshing sleep, and marvellously prolongs life.

It may be taken by old and young at all hours and times, according to the directions.

It is extensively used by Medical Men in their official and private practice at home and abroad, who have given numerous written testimonials of its wonderful efficacy.

Sold by Chemists and Patent Medicine Dealers all over the world in bottles, 1s. 1½d., 2oz. 2s. 9d., 4oz. 4s. 6d., half-pints 11s., and pints 20s. each, and by the Inventor, RICHARD FREEMAN, 70, Kennington Park-road, London, S.E. Free by Post.

Purchasers are Cautioned not to have palmed upon them any substitute. See that the Trade Mark, "The Elephant," is on the wrapper, &c., and the words "Freeman's Original Chlorodyne" are engraved on the Government Stamp—which is the only True Chlorodyne.

TO FLY DRESSERS.—For Sale, some Red Turkeys, Toms and Hens, cheap —Apply, at once, to D. McMILLAN, Fishing Tackle Maker, 29, Friars' Vennel, Dumfries.

THE ODOR OF THE FOREST, THE SPARKLE OF THE STREAM.
**FOREST and STREAM.**
The American Journal of Angling and Shooting.

The Forest and Stream has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—
The Sportsman Tourist.
Sea and River Fishing.
Game Bag and Gun.
Yachting and Canoeing.
Natural History.
Fishculture.
The Kennel.
The Rifle.

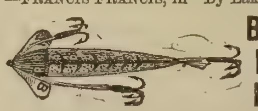
The angling department is in the charge of Mr. Fred Mather, the well-known angler and fishculturist.

The weekly numbers of the Forest and Stream annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the Forest and Stream Publishing Company, 37, Park-road, New York, U.S.
Subscription Agents for Great Britain:
Messrs. Sampson Low, Marston, Searle, and Rivington, Crown Buildings, 88, Fleet Street, London, who can supply specimen copies.

"The very best artificial bait ever yet invented."
—Francis Francis, in "By Lake and River."



**BROWN'S PHANTOM MINNOWS**
Are made ONLY at the original address, 36, George Street, Aberdeen, and can be had of the principal dealers in London and the Provinces. None genuine unless stamped "W. B." on the spinner. Minnows mounted for Pike and Mahseer a speciality.

## THE FISHERIES DIPLOMA.

"LONG-EXPECTED come at last!" will be the expression of recipients of the above. It was to be such an elaborate and beautiful work of art that months would be required to produce it. As a matter of fact, it has taken over a year to "hatch out," and everyone will be disappointed to find it is only an ordinary black and white print, which could have been produced far more effectively in a quarter of the time by a dozen firms we could name.

We think Mr. Linley Sambourne has cause to complain of this weak and imperfect reproduction of his very spirited and comprehensive design; he has traversed the whole world of waters, and very happily combined all their poetical and practical features. Water deities and sprites entwine themselves gracefully among their aquatic subjects, and are supported by all the paraphernalia of fishing.

## SOME ANGLING REMINISCENCES.

BY R. B. MARSTON.

THE following notes do not pretend to be more than sketches from memory, given in the hope that they may be useful, and perhaps interesting, to some of my readers. To me they recall the details and experiences of many and many a pleasant angling holiday spent with some enthusiastic brother of the rod amid that lovely and varied country scenery which, in my opinion, lends the sport of angling its greatest charms. It seems to me, in spite of what is sometimes said to the contrary, that every angler—and especially every town angler—must of necessity be a lover of nature; and the humbler the angler, the harder and more dreary his everyday life, the more does he appreciate those breaks in the cloud when, in place of the grimy walls which shut out light, and air, and health, his eyes wander over the features of some bit of country landscape. It is not those who can express their delight in these things who alone can appreciate them; it is not necessary to know the name of a flower, a bird, or an insect to be able to see their beauty. You might think, perhaps, as the night mail hurries you through the Black Country, and you catch a glimpse here and there of half-naked men wielding sledge-hammers, their forms thrown into ruddy relief by the forge fire, that their thoughts were as heavy as their work; but thousands of them are genuine anglers, and if you could look into their brains you would find there pictures of scenes by brook and river as vivid as painter or poet could reproduce. I think it was Mr. Geen who, when advocating at a public meeting greater freedom for coarse fish anglers and more protection for their fish, said a large employer of labour in Sheffield had informed him that his steadiest and hardest working hands were anglers. I can bear testimony to the fact that in my many rambles I have met a larger proportion of genuine disciples of old Izaak among the humbler devotees than in those of higher pretensions. We all of us know how difficult it is to get decent fishing in England now, and how much more limited is the chance of our poorer brethren of the rod; and I think it is the duty of everyone who feels any interest in the welfare of by far the largest class of anglers—viz., the poorer ones—to do all he can to induce them to remain anglers by improving and extending their opportunities for fishing.

My first experience of fishing was when a very small boy, nearly thirty years ago, in a pond in Shropshire well stocked with Prussian carp and newts or "askels," as we used to call them. The fish and askels bit freely, and we youngsters were thoroughly imbued with the angling virus; but it "took" best in the case of cousin Sam and myself; for many years afterwards—in fact, until he went as a man to America, and died in the wilds of Tennessee, we never lost a chance of fishing together when we got it. Through the same farm in which Long Meadow Pool is situated, or as much as is now left of it by the widening of the railway, runs the fishful Onny Brook. We had cast longing eyes on its quiet stretches and rippling streams, but the "powers that be" had less fear of our getting into danger on the banks of the shallow old pond. Our catches of pond fish were always given to the wife of one of the farm labourers, who professed to be mightily pleased with them and praised our skill. "But why doan't 'e catch some o' they fine trouts 'i the bruck? I be zure ye'll get some down there 'i the cow paster," pointing across the meadow to where the alders and willows marked the course of the stream. This was the very thing we longed to do; these encouraging words fired our zeal. But though the pond had lost its attractions, it was years before our patience was rewarded with anything but minnows, eels, and "rough 'uns"—the common term in Shropshire for any fish with rough scales. One year my father had brought down from London a new fly-rod, and it was my greatest delight to watch him thrash away; nor shall I ever forget the first fish I saw hooked with a fly. It was a big chub, and the state of excitement "the Amateur Angler" got into over that fish was only equalled when he caught his first trout in Dovedale the other day. The A. A. could jump almost any ditch in those days; but I was lost in admiration, not unmixed with fear, when I saw him spring clean into the boughs of an old sally tree overhanging the brook. It spoke wonders for his tackle that nothing was broken, and there was the fish still splashing on the surface; but Walton himself could not have expected to land it after such a gymnastic manœuvre, when he had all he could do to keep from falling into the water, and to our deep disappointment the fish got off. After that I used to "borrow" that rod, and am afraid I rapidly—and vainly—used up the governor's stock of flies in the attempt to capture a trout. At last, one hot summer's day, when I had almost given up hope, I saw a great trout sailing about on a shallow. Almost despairingly I cast my flies over him, when, to my utter astonishment and no slight consternation, he rose and gulped down a big red-spinner. For one second I felt a cold shiver go through me, and the next that trout was gasping high and dry on the ground. A shout of victory brought my companions, who were bathing in the pool above, around me. "Caught him with fly," was all I could say, and there was the fly in his jaw to prove the almost incredible fact. "He must have been blind!" said Sam, quite seriously. But the day I caught that trout—and I expect he was fully as old as I was—I felt I could call myself a fly-fisher. Every chance after that found me thrashing away; and having no one to teach me, I gradually learned from that best of all teachers—experience—something of how to catch trout, but a great deal more of their haunts and habits. A year or so after this I discovered in my father's library a fat little book labelled "Walton's and Cotton's Complete Angler." It was on the top shelf, and it was only by climbing on to the back of an armchair I could reach it. My thirst for angling information nearly led me into breaking my neck, as it often has done since, for the smooth-rounded mahogany slipped from under my foot, and Walton and I came down with a crash. But what a treasure I had found! It was a very pretty 32mo. half-bound edition, which had just been published by Messrs. Bell and Daldy and my father's firm, with capital illustrations of Walton and Cotton and the different fish. Here was the very mentor I wanted. It lies before me now showing signs of age and use, and, curiously enough, the first words I opened on just now is where Peter tells Piscator "for his encouragement, that his fortune has made him happy to be scholar to such a master; a master that knows as much both of the nature and breeding of fish as any man, and can also tell him as well how to catch and cook them, from the minnow to the salmon, as any that I ever met withal." How many thousands of piscators have since then blessed their good fortune in having found such a master!

I simply devoured Walton and Cotton, and never for an instant grudged it many a whacking and other punishment at school, righteously earned through studying fish and fishing instead of French and Latin. The more experience one gets in angling the more can one appreciate the "Complete Angler"; the early veneration of its practical part fades as you begin to think you know more about it than Walton did; then you feel the charm of its style; and finally, after traversing the wide field of angling literature, you come to acknowledge how really "complete" it is. Details have been elaborated, but in its main features angling is now much as it was in Walton's day. To kill a good trout or other fish on *single hair* is still reckoned the highest proof of angling skill. How I should like to try that artificial minnow he describes:

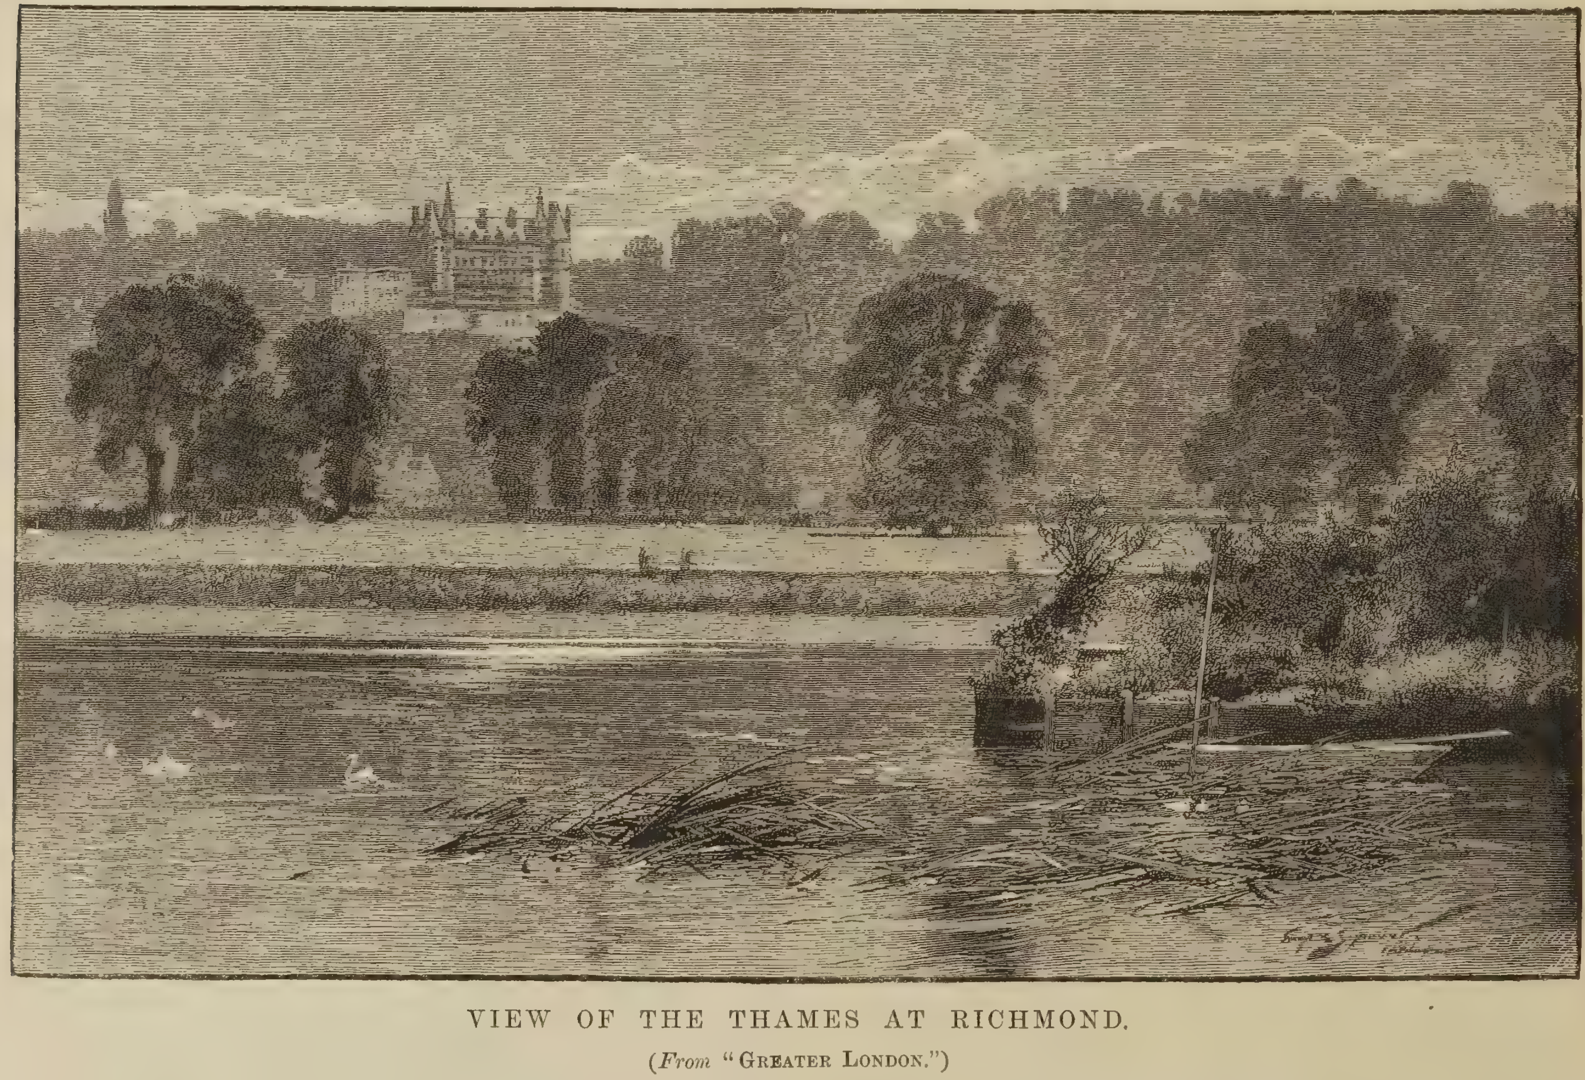
> "It was made by a handsome woman that had a fine hand and a live minnow lying by her; the mould or body of the minnow was cloth, and wrought upon, or over it, thus with a needle: the back of it was very sad French green silk, and paler green silk towards the belly, shadowed as perfectly as you can imagine just as you see a minnow. The belly was wrought also with a needle, and it was, a part of it, white silk, and another part of it with silver thread; the tail and fins were of a quill which was shaven thin; the eyes were of two little black beads; and the head was so shadowed, and all of it so curiously wrought, and so exactly dissembled, that it would beguile any sharp-sighted trout in a swift stream."

Of course it would kill. I wish that "handsome woman"[*] was still living!

Soon after I discovered Walton I was at school at Croydon. A schoolfellow had some relatives at Beddington, and asked me to spend a half-holiday there. He borrowed an old fly-rod and reel and I found the flies—blue duns, I remember. Mr. McRae's house is on an island, as many of my readers know; at that time the bit of water here by the road in front of the house was almost free—*i.e.*, you had only to ask permission to fish it (anglers were not so numerous then as now). There were several good fish rising, and, greatly to my own astonishment, I got a brace and a half in a very few minutes. It was a new experience to me to see the trout before catching them, and with no fringe of alders to hide behind. They did not do this in the Onny Brook; there I had learned that the only way to get them in the pools was in a stiff breeze, or by dapping over the alders. My friend was evidently not quite pleased at my success, for he had tried times out of number in vain, and suggested that we should try the mill-tail with an artificial minnow. As this was against orders—in fact, considered rank poaching by our host—I suppose that was why I fell in with the suggestion at once. I had a guttapercha minnow, and in a very few minutes it was spinning down the rapid mill-tail at the back of the house. I ought to say I had previously had a little experience in minnow-fishing, and caught a few trout spinning in the rapid parts of the Onny. At the second cast an enormous trout followed the minnow, and gave me such a turn that I stopped drawing it, and of course he turned tail; then I cast the minnow again carefully up under the camp sheathing, and out came a monster, seized the bait, and we both gave an unfortunate involuntary shout. Directly over the mill-tail was a window, and at it appeared our host. I am sure now he would have enjoyed seeing the sport, but I felt so conscience-stricken that I dropped the point of the rod, and the fish shook the minnow out. "Now, youngsters, if you don't look sharp you'll miss the train," was all the reprimand we got. But time and fish have changed since then. Twenty years afterwards, casting a long line and dry fly up stream, I thought myself lucky in getting a brace or two of fish out of the same water. They are 'cute enough now at any time; but late in the season, after months of persistent thrashing from clever hands, your Wandle trout develops a sagacity which you may often in vain try to overcome.

---

[*] My better-half happened to look over my shoulder just now and saw this wish. I had to explain, and am told I am "a bookworm, and writing pad, and fishing mad."



VIEW OF THE THAMES AT RICHMOND.

(*From* "Greater London.")

In subsequent notes I hope to give some particulars respecting waters I have fished in every part of the country.

(*To be continued.*)

## ODDS AND ENDS IN SALMON FISHING.

By Geo. M. Kelson.—(No. 7.)

One more year is gently raising its wings and gliding into the endless realms of eternity, and "Merry Christmas," with all the usual ills, pills, bills, is wending its way again into what may almost be termed the melancholy season of salmon and of fishermen. In his repose, how could the angler's days which succeed so many brilliant triumphs be quite free from gloomy reaction? Indeed, if the manifold contemplation of all past pleasures flow on in the shadowy vale of sadness at times, and rob us now and again of a gentle sigh or two, as if to stir its silent yet authoritative disposition, it is, on other occasions, a sweet enjoyment, and such a satisfaction to have a pensive and lively remembrance of our fond and engaging achievements.

However, in this period of our leisure, when beside the rapid stream we are replaced by the wild fowl seeking its food, driven by stress of weather from frozen marshes, but finding little shelter beneath the naked twigs—and even Nature, in her sure reason, after coaxing everything into harmony, is calmly resting in her wintry sleep—we, in all glowing Christmas feeling, meeting true and winning fresh friends, are as usual ever ready to trace whatever amuses or is likely to improve us.

The Gazette (may I just mention this little weekly visitor, so proud of its wide welcome?) complacently regards itself as rendering some assistance to all anglers, besides endeavouring to cultivate that mutual good-will which this season of the year especially commemorates. In its pages—of a truth—its aim is to inspire a constant flow of content. In its voice of earnest reason it gives due allowance and tenderly regards the failings of some, while of necessity it knows that no living angler is perfectly free from fault. And in wishing its readers in all sincerity a Merry Christmas and many Happy New Years, it has the satisfaction of feeling deeply conscious of its thorough impartiality—conscious that by its never-ending flow of interest, fact, and precept it is building up a pillar of knowledge, not easily overthrown, to guide its students' steps aright.

In postponing to-day further remarks upon wading, and in opening the subject at issue which the illustration foreshadows, I desire to prepare the way, for the moment, by alluding to committees of associations.

Whilst recognising their difficulty in laying down infallible rules for unerring policy—easy enough in principle, though not in practice—I, for one, am, at any rate, convinced that our pleasure should be measured by a much larger scale, and diffused over a wider extent.

Committees free from all control are a little bit apt to be prejudiced, and led sometimes—though in most cases with the best intentions—by a few of their prominent members.

Difficult as it may be to push one from cherished beliefs, what—let me ask—is the least use of delusive and arbitrary rules which frustrate so much of our sport?

For instance, Nottingham fishing, we know, is prohibited in most salmon rivers, and is never seen except in private water.

Why should we thus have to skip over magnificent stretches that often hold no end of fish—perhaps three-fourths of our beat, or even more—where the fly is absolutely useless?

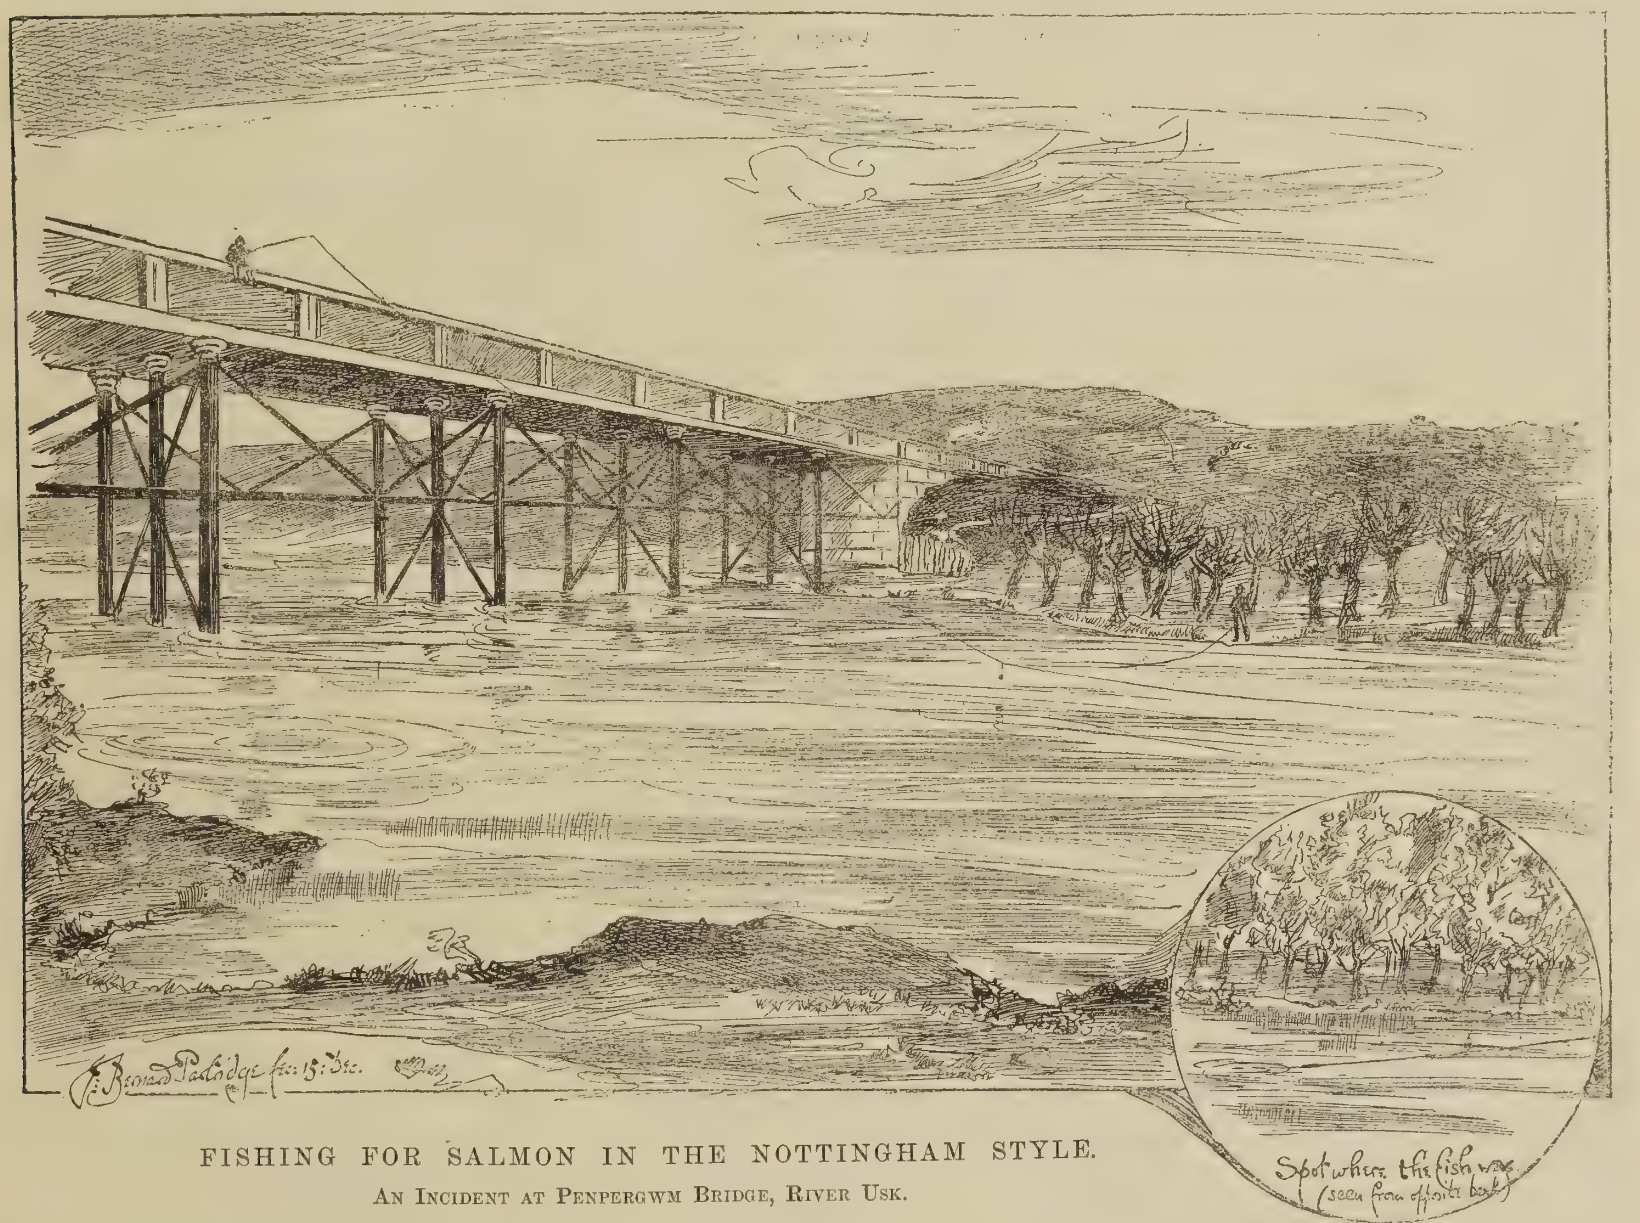
Is it because the art and pleasure of Nottingham fishing is not considered; or, if so, misunderstood?

To have worms, prawns, and all kinds of artificial spinning baits at work in the named catches would be a foolish idea, never to enter our heads. But when the water is so low that fly-fishing is a farce and the precious prawn simply a certainty, why should we remain idle day after day ?—why ? Who *could* understand ? I really cannot.

Obviously, the question can rest but little longer, nor would it have laid dormant so long were committees fully alive to the magnitude of the interests at stake, for not only is this style of fishing sportsmanlike, but he only has a glimpse of the pleasures our sport affords who is unskilled in this delicate, remunerative, and exciting employment.

I need say no more than to confidently hope that committees will perceive during the next few weeks—before the season opens—the policy and propriety of abandoning their unwise opposition to this very pleasant and diversified mode of angling.

No feat which testifies more strikingly to the combined influence of angling genius and self-command can be more significant than a faultless management of the Nottingham winch in an " engagement " upon a salmon river. And in dealing with the various requisite items one by one—before passing on to the practical details, I can scarcely over-estimate the value of Slater's new patent, which has deservedly gained much popularity.



J. Bernard Partridge fec: 15: Dec.
Spot where the fish was
(seen from opposite bank)

FISHING FOR SALMON IN THE NOTTINGHAM STYLE.

An Incident at Penpergwm Bridge, River Usk.

The recovery of slack line with this reel is performed by smart and continuous strokes or raps on the far side of the revolving disc by the flat hand. Thus impelled—the spin being rapid and unceasing—the line coils evenly round and round, guided by the forefinger of the other hand, always to be at liberty for the purpose.

All that is of immense importance to us, as it provides immediate security against a dangerous disadvantage ; for so expeditiously can the work by this means be accomplished, that with no end of line out we are able to keep on good terms with a lively fresh-run salmon in the spring that makes towards us !

Yes, slack line is brought about by one's fish heading up stream, and the moment this is discovered the rod should be raised rapidly and thrown back well over the shoulder, gradually bringing it forward again, as the reel receives the line by the tapping process described.

You must know there are no particular endowments requisite here, though some of us are more susceptible than others ; and by scanning and regarding all the bearings, by collecting issues which resolve one upon the other, we glean experience, while the whole finally becomes deeply rooted, indissolubly united.

First of all, then, in alluding to Nottingham rods, I seem to have come suddenly to a dead stop.

Are you aware there are some insatiable individuals—and I believe in many angling respects I am one—who, whatever objects may engross their hearts, always have a sensation of restlessness and a desire for chance—that is, unless their materials have more than a magnetic attraction, and are, in reality, perfect in every way ? Be that as it may, the so-called Nottingham rods for salmon fishing are good for nothing and all fiddlededee ; still, on rivers that hold no salmon and for lighter work they seem to fall in with the fashion.

For our purpose they should be made of greenheart, an entirely different model, and 14ft. in length.

But as far as lines are concerned, I can see no room for improvement, unless it be in the quality of the silk.

Of the American supply a great deal has been offered—for and against. I can only say that I have often used one of the very fine samples—and dressed, too—with the greatest satisfaction ; and although I—in common with other anglers who understand all about it—prefer an undressed line, on this winch there is, however, but little fear of disappointment with them. I do not notice that they " knuckle " more readily than our own, or that the dressing deserves its horrid reputation. The infallible receipt for this waterproofing business is as yet an unpossessed treasure—there is none perfect—no, not one ; but whether of English compounds or not, we should never allow any line to get out of order, and be limp and lifeless by becoming waterlogged. In my judgment, the undressed plaited specimens lie closer, wind truer, and are handier. By their clinging propensity you never see that confused loose heap on the reel caused by the least mismanagement, and which is invariably the case with the others ; and so the novice, in the absence of this cumbrance, is much less likely to run into danger.

And again, when wading or fishing from a boat they are a little more buoyant in comparison, which you will learn presently is of some importance ; but from a bridge or other eminence, the condition in this respect is pretty much the same.

I need not discuss their merits or demerits any further now ; suffice to say that three hundred yards of either, dressed or undressed, as the angler may prefer, is about the proper quantity.

As regards floats, it is indispensable that we have a variety.

Where the stream is not heard to flow—gliding, like happiness, smoothly away—goose or swan quills answer very well with the usual eye at one end and cap at the other; but where the little ripples murmur in their course, our pilot may be of cork, cane, or bamboo, with the eye or ring *at each end.* Anyone who has fished for barbel, chub, or the like with a float need not be told the amount of shot required. My system is to have a reserve of half-a-dozen different-sized pipe-leads; you can slip one off and replace it by a heavier or lighter weight, according to the force of water and size of float in use, having already fixed a couple of split shot 18in. from the hook on the gut trace for the lead to rest against. I say "two" to be doubly secure.

These 3ft. single gut traces must be looped at the ends, not knotted there, but whipped, and have a diminutive trout hook attached 1¾in. from the lower extremity to hold up the head of the worm.

Now we get to the hook: that may be any size you like according to the length of the worm. I often think they would be better were they longer in the shank; at any rate, it is advisable to bind on a single gut loop in the same way as for fly-making, leaving the eye as small as possible. And in baiting, having fastened the hook to the loop of the trace, insert the point into the worm about 1½in. from head, and thread down to about the same distance from the tail; but take care not to puncture the worm. This is more easily managed by keeping a small tin box in your pocket of silver sand, to dip the worm into beforehand. You may then give the loose head a couple of turns round the gut trace, secure it by the little trout hook, and you are ready for the fray.

In fishing with a prawn (which should be but little larger than a full-sized brown shrimp, and parboiled—two minutes will be ample—with a good lump of saltpetre in the water), take a fine baiting-needle, and having hitched the hook to it—which, in this case, is tied on a strand of good, sound gut, with a fine-whipped loop at the other end—pass it in, drawing the gut through from the extreme point at the head and out immediately under the tail, leaving the bend of the hook to lie amongst the legs. A very small red glass bead dropped down the shank of the hook first will go no farther than the bend, and form a butt for the prawn's head, as this bait must hang straight.

I have found this system to be as effective as the ordinary double triangle; but that boasts so many supporters, that one of these days I may give an illustration of it.

For choice, give me a prawn in preference to a worm; it is, I believe, by far the best bait for this style of angling.

In quiet water the "bite" of a salmon is seldom more than that of a gudgeon, yet in most cases you will want an extra long disgorger to get the hook back. You will soon find, too, that trout, where they run large, will occasionally accommodate you as well.

And the last and cheapest accompaniment—found in every fishing manufactory in the kingdom, as far as my experience goes—is a brand new temper, as all this extra effort is more than likely to double distress. You know it would argue the most extraordinary ignorance of human nature to expect you to submit to any defeat without some resentment. So let me accentuate the advantage of this precious attribute. It is not, of course, that the *old one* can be easily disarmed of its cheery power, nor is it that I desire to charm you by adulation in your own opinion of it; but what if you feel the influence of a new one to render even painful deformity from age agreeable! Moreover, the good wishes of all "unthawed rivals" would be purchased for a mere trifle.

Being thus fortified, we will, in a minute, touch upon the scene of action.

You know, however much our habits, superstitions, and manners of warfare are woven into an attractive web of romance, writers, so far as I know, all very properly agree that *Fly-fishing* is an inexhaustible recreation, and yields the most infinite sport. Do not the detailed biographies, drawn from the stores of one's experiments, observations, and adventures of this special branch, teem with more genuine and touching reality?

Indeed, the following little parody bears me out in this; at any rate, Nottingham fishing must be out of all question here:—

> Dear is that pool in which no sun affrights,
> Dear the loud roar of water from the heights;
> And as a child, when scaring sounds molest,
> Clings close, and closer to its mother's breast,
> So the wild torrent and the rapid's roar
> But bind us to our joyous sport the more.

That is no reflection on our useful accessories, the nodding-nose, single-tapered gentle, or the cringing, double-tapered worm—is it? No;—more of the element of "Nepenthian" and "Jock Scott" about it—rather—it must mean fly-fishing. And now that you are fully equipped, we will picture ourselves at the riverside.

If it is necessary to use either the cane or bamboo float, "set it" by putting a small piece of split cork on the line the depth required, or by a morsel of lucifer match with two half-hitches; by so doing the double-eyed float has room to play between there and the split shot. You will observe this is to facilitate striking the fish, and that you will be freed from the weight of this monster float, which would otherwise hinder you. If you mean to try the worm, it should be very deep in the water, the nearer the bottom the better, and even trail along it where the current is sufficiently fast to carry it on, and the bed of the river not too foul.

It is essentially necessary not to check the float; you can pay out line quickly enough to avoid this.

Fishing down your swim in beats, begin near the bank and take two or three "runs" before shifting your position a couple of yards further across for fresh water; but always recover your line well over to the side from whence you started.

If you are in a boat, do not have any iron foot to your punt-pole; and if wading, allow a minute or two for the water to clear if you make much of a stir—but this refers to the prawn only. The lobworm should be started at once, which cannot be too large so long as it is bright and well scoured.

Take no notice of "splashes" or "boils" in the water, and proceed quietly. A salmon is very often inquisitive, and sometimes rushes at nothing whatsoever—like a kitten—and stops before it gets there. On the other hand, he very often means something else, and should he take either bait, wait till the float disappears, and while counting ten quickly, carefully reel up slack line (it is here that the undressed favours us again, as we can see more what we are about), press the revolving disc on the extreme limit of the circumference of the winch, and strike. Then look out for squalls, using discretion how much pressure to keep up there as the fish takes off, or, if preferred, you can easily apply the well-arranged check; but by all means hold the rod nearly upright.

The strike should be exactly the same as usual, provided you have reeled up the slack. It is a common error to throw the rod back, almost down on the water behind you; indeed, you would seldom hit a salmon at all that way. Sometimes in zigzag streams there is as much as a dozen yards of loose line to pick up first, especially with over a hundred yards out, as seen in the illustration. It is of not much use trying from the bank except in places where you can take up your position well in front of the fish.

As the water becomes vapid, so do salmon settle down in their various haunts; but you can always stone them out of unfavourable quarters. It is a capital plan to throw into the different catches two or three worms or prawns from the bank, keeping well out of sight.

Managed skilfully, it is marvellous what a strain we can put on with this fine tackle. As an example, I witnessed an old brother salmon fisherman fishing from Ramsgate pierhead not long ago hook, play, and kill a monster conger of from 40lb. to 50lb.

I say "kill," although the fish eventually got away. However, Mr. Parker is a perfect Nottingham angler; during the battle he was heavily handicapped by the vast concourse of people who came running up. At one time he must have had one hundred and forty yards of line out, and perhaps more. But after the fish was gaffed, and while bringing it up the step-ladder, it spun round, unscrewed the gaff from its socket, and dropped into the sea to die with the "thorn" in its side.

"Ah!" (said a robust old angler) "that's just *my* luck with this fine tackle. I often get them on, but"——

> "The merest thread,
> The filmiest web,
> Is strong enough for me,"

interrupted the gentleman with the rod, and smiling, added, "Try your luck again, my gallant Waltonian—whichever way it goes you can quite depend it won't affect the money market or lower the consols for a day; but if you really mean to succeed, proceed to exceed me." (Laughter.)

Our illustration affords another instance of what may be done, and remembering so well all that passed, I will relate a few of the circumstances.

Impatient of my helplessness—for I had been engaged two long hours in the conflict—but still engrossed in active and eager observation, I was suddenly startled by an ejaculation at my side:

"Snakes! a'int it 'ot? My name isn't 'Bill' if ever yer gets 'im up, surr."

It was some strapping young fellow who had a third return (because there was no fourth, I presume) to Nantyderry, and had missed his train.

"Indeed it is," I replied; and thinking it had been rather warm for me so long on a seat almost red-hot, I asked him to fetch my flask.

"Cert'ny, surr; I'm the werry boy for that ere job."

And as the poor wretch, all "ragged, tattered, and torn," came climbing up the bank, basket and all, I heard him muttering, "Ugh! 'ope there's enuff fer two."

Three minutes more and he was smacking his lips, declaring himself fit for any "biznis."

"Will you go below, my man, and——"

"Go? Rather. I would'nt lose him for five bob, an' I'm orf'ly 'ard up just now."

But in giving my instructions, "Bill's" appearance was indeed opposed to such a theory, and exclaimed, "It's suercide; yer must niver try that ere game, mister."

He soon began, however, to feel a little more assured, and it seemed as if the voice of prudence whispered to him as the silver clinked in my pocket while stepping down from the parapet.

"Come, come," I urged.

"Yes, yes, er course—splendid; but I niver 'eard er that dodge afore."

And away "William" went with the back line from a spare reel tied through a ledgering bullet, and placed himself on the oozy brink of the stream.

Then came a tremendous splash, a rush, and, "By the lord 'arry, surr, e'es gone," shouted "Bill."

"Not a bit of it," I replied, though like lightning he had shot up the river and under the bridge!

"Well, well, that ere reel *do* pick up line sharp, and no mistake," I heard "Mr. Bill" saying to himself.

"Do so and so," I requested; and before you could say "Jack Robinson" a well-directed stone aimed from the upper side of the bridge roused the fish, which fortunately took down stream again.

"That wore a shaver," "Bill" exclaimed.

Time went on. Every now and again the fish would show himself, and at length getting the worst of it, and his struggles becoming weaker, he suddenly determined to lie still.

"Now is your time," said I; and my companion, with a quick glance, just inquired—

"Shall I?—good;" and cleverly popped the bullet over the line as illustrated.

"S'pose as 'ow——"

"Never mind."

"But, I say, if 'e goes orff while——"

"Keep on," I said, rattling the silver in my pocket, "and be quiet, please."

"*Oh!*" *(with a bow, as if that tempted him)* "my eye; all serene, captin."

And in the lull that followed "Bill" pulled all the line down there from my reel, and I was by his side attaching it again."

"It's all over wid 'im; ain't 'e er booty!"

And rubbing his hands, my valued friend went off with, "Er—thank yer, surr; gude day. But 'ow be yer a-goin' on if yer gets 'old of another up there?" . . .

I may observe that the experiment was rather dangerous, although he had packed the line in readiness along the bank as I wished.

But the successful issue—it may be taken for granted, all other tactics were beset with dire possibilities which the illustration before us shows, the trees on our side, the opposite bank being strictly private ground—was confined to this means only.

I have cut the story short; but it was a hard-fought battle, and worthy of being delineated by the pen of a Partridge.

And here let me remind you that reason will triumph over failure, and if you ask me how some become more proficient than others, I should say—first, because they constantly and systematically pursue and endeavour to recollect the best methods they know, which invests them with a capacity for readily perceiving links in the art above the common level, which associate and hold together till they are almost in possession of an ideal; and secondly, by reflection. Upon a future occasion I may tell you of many interesting episodes of our pitch battles, sometimes ending well, sometimes with disaster; yes, even incidents which, in childhood's happy hours, were related in my presence.

It all comes to memory without beck and call—too readily, too pleasantly. But so much seemed "Hebrew" to me in those times.

You know the old story about "old heads on young shoulders," don't you? Now, I remember in my youthful days, when friends were most probably taking an active interest in my future, I often used to steal away rod in hand to the river side as the shades of evening were falling; and while burning for the pleasure, loitering about waiting for a rise of fly which never seemed to come, my fancy frequently wandered from the present into the future. It would actually occur to me that we schoolboys were unnaturally and arbitrarily restrained and inconsistently punished. How strange it was, I thought, and what hard lines, with such happy means of reward (for the very sight of the water was enough), an hour or so to devote to one's favourite hobby was never allowed—never, in all probability, ever dreamt of. Then, again, I would think how the love of sport once engrafted might supersede almost all other aspirations; yes, how by its delights lofty and ideal ambition might be stifled in its tender life and die. But sometimes I thought of the other worldly affairs, of duties in life, and perhaps of the dreams and faiths of boyhood; this would all come to me for the moment as if to "win me from my love"—to snatch me, as it were, from an increasing temptation; for what else? Well, don't we all know how boyish desire to restrain a passion always ends? And now—now that the veil is withdrawn, I have a far clearer view of it all, and as it drifts home to me, bringing to memory many a glowing impulse—many a resolution unfulfilled—aye, many an enjoyable hour for ever gone by—I wake from the dream and pause.

However, I was only thinking what *would* boys do once in possession of the proven armour of experience, which, alas! comes so late to all!

## THE WHITBY SALMON FISHERY.

### Gratifying Results of Fish Culture Experiments.

The salmon fishing by the net at Whitby during the past season was the most successful ever known, the number of fish caught being nearly 1,500 more than were captured last year. By an apparently singular contraversion of circumstances the number caught on the river by the rod during the same period was the least, with the exception of the year 1876. This is easily explained by the long-continued drought during the past summer, which prevented the salmon getting up the river, and probably to the same circumstance is due the unusual quantity caught in the sea. Though the fishermen sometimes complain of some of the restrictions which are in operation as regards their fishing, it would seem that, after all, such are much in their favour, for without some wise check being exercised there is little doubt that the supplies of salmon would be considerably diminished, and the means of a livelihood for these enterprising toilers correspondingly lessened. Below we give a tabulated statement of the salmon (*Salmo salar*), salmon trout, and bull trout (*Salmo eriox* and *trutta*) caught by the net at sea, and also by the rod and line in the river respectively:—

| By net at Sea. | | By rod and line on the River. | | | |
|---|---|---|---|---|---|
| Year. | Total. | Salmon. | Salmon trout and Bull trout. | Not distinguished. | Total. |
| 1876 | 4,706 | 5 | 82 | — | 87 |
| 1877 | 5,641 | — | — | 358 | 358 |
| 1878 | 3,511 | 15 | 140 | — | 155 |
| 1879 | 4,227 | 20 | 271 | — | 291 |
| 1880 | 2,032 | 57 | 180 | — | 237 |
| 1881 | 3,376 | 120 | 160 | — | 280 |
| 1882 | 5,107 | 101 | 82 | — | 183 |
| 1883 | 4,480 | 160 | 171 | — | 331 |
| 1884 | 5,833 | — | — | 107 | 107 |
| Total by the net | 38,913 | | | Total by rod and line | 2,029 |

It will be seen from the above that, taking the average for the last nine years, over which period the statement extends, the fishermen have caught by the net 4,323·6 fish per year, whereas the anglers have only taken at the rate of 228·5 per year. In the salmon fishing at sea, cobles (small undecked boats), each with two men and a net, are employed, the cost of the license to each craft being £2 10s. The cost to each angler for river fishing is 10s. for the same period. It would be difficult, if not impossible, to state exactly the value of the salmon caught at sea during the last season, inasmuch as no official return of the price is made; neither can the exact weight of the fish landed be ascertained. But, speaking generally, it would not be far out of it if we estimated the weight of each fish at a little within 4lb., which, being reckoned at the rate of ninepence per pound, that being about the average price realised at the wholesale market during the season, will bring up the monetary or commercial value to, say, £840. Reckoning each fish at 3¾lb., the result would be £820 odd; at 4lb. each fish the amount would be nearly £875; but, placing the actual weight of each fish at an indefinite figure somewhere between 3¾lb. and 4lb., the approximate value of the sea trout landed at Whitby during the season may be fairly stated to be that which we have mentioned—namely, £840. We think that these figures make it clear that the salmon fishery of Whitby is by no means an insignificant factor in seafaring adventure. Whether it is likely to develop or not to any much larger extent it is, of course, impossible to tell; but it is certainly obvious that, had it not been for the enterprise and perseverance of the Esk Fishery Association and Board of Conservators, there would, practically speaking, have been no salmon fishing at sea in the district. It may be observed that the introduction of salmon into the river Esk was due to the artificial propagation carried on by the Esk Fishery Association. Prior to this there were a good many sea or bull trout in the river; but when the Association first began to cultivate and improve the river—namely, in 1866—it was thought that they might with advantage introduce the more valuable fish (*Salmo salar*) by artificial propagation. Accordingly a breeding house was established in Arncliffe (which house has since been transferred to Grosmont and enlarged), and ova was procured from other rivers, principally the Tees. The result has been quite successful, as after a few years from the commencement of the experiment, these much-prized fish, as shown by the statistics given above, rapidly increased every successive year. Some of the fish were of fairly large size, several weighing 18lb. or 19lb. having been landed by the rod. There is no doubt that even larger fish are in the river, as several have been taken out dead at different times, such fish, when alive, healthy, and in season, being estimated to weigh pretty well on to 30lb. It may be observed that the "Californian Incubator" was used, which obtained the gold medal at one of the fishery exhibitions, and which was the joint invention of Mr. Samuel Wilkinson, secretary to the Whitby Esk Fishery Association, Col. Flamstead, and Brockett, sen., at that time the water bailiff. It has been ascertained that salmon depositing their spawn in pure salt water is a useless operation, as it is all destroyed. It is an interesting question, however, as to what amount of brackish water will destroy it; and as we have a lot of late-spawning fish depositing their ova in the streams just below Ruswarp Mill dam, over which they cannot get when heavy in spawn, and up to which dam spring tides rise for about two or three feet, covering the spawn beds for about two hours each tide for some three or four days at each period of high tides, some ova from fish spawning there was procured, and placed in a box in the gravel at that spot. This was done in order to ascertain whether it would come to life. Though nothing came of the experiment for the first two years, it was found that this year a good portion of it was hatched, thus showing that it was not all killed by the salt water. These experiments will be repeated, and probably we shall be able to give an account of them.

Jno. J. Jackson.

## CHRISTMAS HOLIDAY ARRANGEMENTS, 1884.

The Great Eastern Railway Company announce that a special booking office will be opened at the Liverpool-street Station from the 20th to the 24th December for the issue of tickets for use from Liverpool-street Station on any day up to and including the 25th December; also that tickets may be obtained at the company's West-end office, 44, Regent-street, and at the City booking offices as under:—

Blossoms Inn, Lawrence-lane, Cheapside; 48, Lime-street, City; Spread Eagle, 3, Whittington-avenue, Leadenhall Market; Swan with Two Necks, Gresham-street; Messrs. Cook and Son, Ludgate-circus, Fleet-street; Messrs. Cook and Son, First Avenue Hotel, Holborn; Messrs. Gaze and Sons, 142, Strand; 16, Holborn; Golden Cross, Charing-cross; 70, St. Martin's-lane; 28, Regent-circus, Piccadilly; Spread Eagle, Piccadilly-circus; 34, Albert-gate, Knightsbridge; 33, High-street, Kensington; Mr. Whiteley, Westbourne-grove; 241, Oxford-street; Army and Navy Hotel, Victoria-street, Westminster.

On Monday, Tuesday, and Wednesday, 22nd, 23rd, and 24th December, additional trains will be run from Liverpool-street to relieve the principal main line trains. On Christmas-Eve special midnight trains will leave Liverpool-street at 11.55 p.m. for Norwich and Yarmouth *viâ* Cambridge, calling at the principal intermediate stations, and 12.15 a.m. for Ipswich, calling at the principal intermediate stations below Brentwood.

Senders of Christmas packages are requested to fasten the address to each package securely, and as an additional security against loss or delay, are recommended to put inside each package the full address of the consignee.

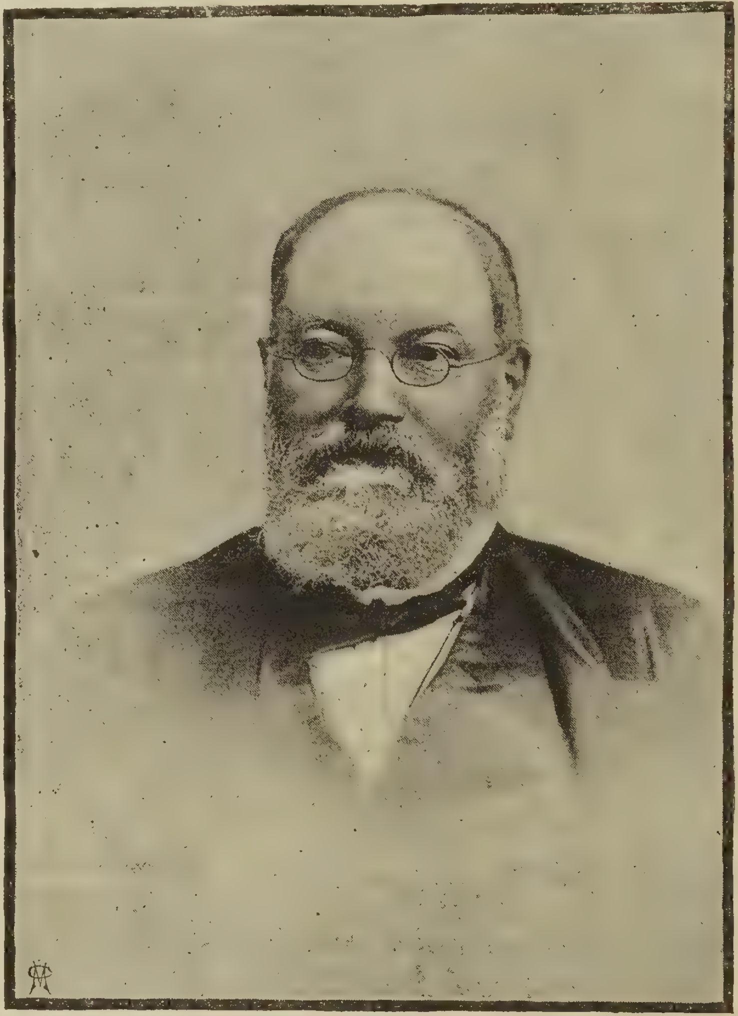
George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen. Orders punctually attended to.—(Advt.)

## MR. THOMAS SPRECKLEY,

### President of the Thames Angling Preservation Society.

On the 26th of March next Mr. Spreckley will complete the seventh year of his reign as ruler of the Thames Angling Preservation Society, and if the anglers of London, and especially of the Thames, do not celebrate the occasion by giving a dinner in his honour they ought to be ashamed of themselves.

We think that anyone who is acquainted with the history of the Thames Angling Preservation Society will agree with us that during the last seven years more has been done to protect and improve the fishing than at any previous period of the existence of the Society. We say this without wishing to reflect in the least on the gentlemen who have held the position now occupied by Mr. Spreckley, who has made it one of a personal and practical character. He has thrown his whole heart into the work with the energy and devotion which characterise all that he does, and in a manner which proves that this "labour of love" is now the pet hobby of his life. Anglers as a class are not an easy body to please, but we have never met one who would not willingly acknowledge the good work which Mr. Spreckley has done. There may have been differences of opinion as to what was the best to be done in certain cases—this is only natural; but we do not believe there is a single angler interested in the Thames who would not, if it were necessary, give his vote for Mr. Spreckley as far and away the best "all-round" president the T.A.P.S. could have, or is ever likely to get again. It is no slight cause for congratulation that a Society which, in the matter of funds, is wretchedly supported by the great majority of London angling clubs, is presided over by a gentleman who not only devotes far more time to the work than could be reasonably expected, but is also ever ready to put his hand into his pocket and from his own purse supply those means for carrying on the work of preservation which should be provided by the anglers as a body. To what a great extent Mr. Spreckley does this will never be known—indeed, we do not suppose that he knows himself.



Mr. Thomas Spreckley,
President of the Thames Angling Preservation Society.

A few words about the subject of our notice will be of interest to our readers, and it is with great pleasure we are able to add a portrait of our "grand old president." Mr. Spreckley was born at Wymondham, near Melton Mowbray, in the year 1821. His father was a farmer; he came to London in 1835, and commenced business in St. Paul's Churchyard in 1849, removing to Wood-street in 1852, and Cannon-street in 1862. He is at the head of the eminent firm of Spreckley, White, and Lewis, of 13 and 15, Cannon-street. His partners liberally co-operate with him in all objects of benevolence, and particularly in the philanthropic work of preserving the *free* fishery of the Thames from Staines to the Medway, for the benefit and pleasure of all classes of anglers. He is a large employer of labour, and the esteem and affection in which he is held by all who know him is due to his open-hearted, genial, and thoroughly English character, and the fact that he always follows his favourite advice to others—"Act fairly and squarely, and do as you would be done by."

For some years previous to 1877 Mr. Spreckley had been an annual subscriber to the Thames Angling Preservation Society. On the 4th of December of that year he was elected on the committee; on March 26, 1878, he became chairman and treasurer; and on August 9, 1881, president of the Society. During the period he has been at the head of affairs the following, among other important work, has been done:

By netting the Chelsea, West London, and East London Waterworks reservoirs, the ponds at Kew Gardens, Amhurst Park, Thames Ditton, and Weybridge, and a portion of the Hampshire Avon during the years 1879 to 1883 about *twelve tons* of fine fish of all kinds have been put into the river below Staines.

In 1883 and 1884 twelve thousand young flounders were removed from the tidal waters to portions of the river above Teddington Lock. This has been done by Mr. Spreckley, with the help and approval of the flounder fishermen, who hope by this means to provide the fish with spawning grounds not affected by the heavy tides which now carry up and deposit thousands of tons of London sewage all along the river banks as far as the tide goes. Fish culture experiments have proved that there is no more fatal enemy to embryo fish life than mud; and, if this is the case with ordinary clean mud, if we may use the expression, what must be the effect of the poisonous Thames filth, now deodorised to some extent by enormous quantities of powerful chemicals!

It is acknowledged by common consent that in spite of the great increase of anglers, fish of all kinds are steadily increasing in that portion of the Thames under the care of the T.A.P.S. This is unquestionably owing to the practical extinction of netting—we say practical extinction because we firmly believe the T.A.P.S. have "scotched the snake," and it no longer pays the poachers to run the almost certain risk of being caught and heavily punished. We are aware that there are now and then "reports of netting," but they never stand the test of inquiry—are invariably founded on nothing, or at least on nothing, on which action can be taken. One of the best and most reliable river-keepers it is possible to employ is an old punt, covered with tenter-hooks, filled with stones and then sunk in suitable deep places. We hope Mr. Spreckley will see his way to enrolling, or rather inrolling, a few more of these "honorary river-keepers."

The entire abolition of night-lines, on which so many fine Thames trout were wont to come to grief, of snatching, the complete revision of the old by-laws, the protection of tributary streams, the recovery of fish washed out of the river into ditches by floods, are most important matters which the T.A.P.S. has carried out under Mr. Spreckley, who is always delighted to acknowledge the willing aid afforded by the committee, by the paid and honorary bailiffs, and last, but by no means least, by the secretary, Mr. W. H. Brougham. As we hope to give a portrait of Mr. Brougham, and some notice of his work as secretary of the T.A.P.S. later on, we purposely say nothing about it here.

Apart from his special hobby, it is well known to our readers that Mr. Spreckley takes a great interest in all that interests anglers; no testimonial to an angler is set on foot to which he is not a most liberal subscriber; he is President of that most useful institution, the Anglers' Benevolent Society.

We gratefully acknowledge the great aid he has given us in the matter of anglers' tournaments. He is Treasurer of the City Dispensary, a member of the Council of the National Fish Culture Association, and a member of most of our best angling societies.

In conclusion, we are sure that in the name of all genuine anglers we may wish him a very merry Christmas, and hope that he may long be spared to watch over that splendid stretch of water which, unaffected by the nightmare of riparian wrongs, is happily and honourably distinguished as—"The Free Fishery of the Thames."

## THE SALMON DISEASE.

At a meeting at Berwick-on-Tweed of the Special Committee appointed by the Tweed Commissioners to inquire into the damage done to the river by the salmon disease, it was resolved to invite the co-operation of the various fishery boards of Scotland and England.

## OGDEN'S HYBRID FLY.

The other day, Mr. James Ogden, of 28, Winchcomb-street, Cheltenham, sent us a fly which is a cross between the iron blue and the yellow dun, and as he has got no particular name for it, we have christened it "Ogden's Hybrid." He tells us that he has never used any fly with greater success than this, especially on a cold or rough day. No experienced fly-fisher will need to try this fly; he will know at a glance that it must kill. We strongly recommend those who are looking up their stock for next season to get some of these little beauties.

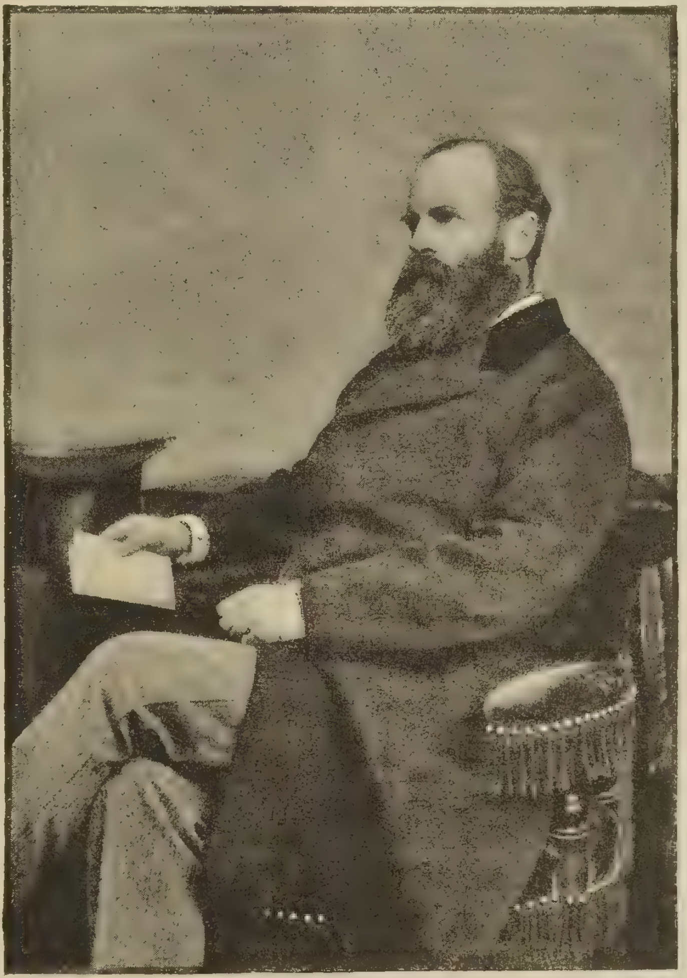
## MR. EDWARD BIRKBECK, M.P.

We have the pleasure to give our readers this week a portrait of Mr. Edward Birkbeck, M.P., to whose untiring exertions as chief promoter of the Norwich National Fisheries Exhibition of 1881, and the London Great International Fisheries Exhibition of 1883, our British fisheries are so deeply indebted ; as they also are to the great services he has rendered by securing attention and legislation for them in the House of Commons.

Mr. Birkbeck was born at Keswick Hall, Norwich, on Oct. 11, 1838. He received a private education. Born and bred in the sporting county of Norfolk, it is no wonder that outdoor sports have always been his principal recreation—fishing, shooting, and especially yachting, afford that rest which is so indispensable to such an indefatigable worker as Mr. Birkbeck. To those long cruises in the North and other seas, extended in some cases to the Polar regions, is due that interest in, and intimate acquaintance with, our fisheries and fishermen which Mr. Birkbeck has so constantly exhibited. There is hardly a fishing ground from the Dutch coast to the farthest limit of Spitzbergen which he has not visited at one time or another.

Since January, 1879, Conservative Member for North Norfolk, he has won the esteem of both political parties by the course he has pursued and the valuable services he has rendered while in the House of Commons. His speeches evince a thorough knowledge of the subject, go straight to the point, and always command attention. A glance at a few of the matters to which he has successfully directed attention will abundantly prove this. It was Mr. Birkbeck who :

1. Obtained the Government Inquiry under Messrs. Buckland and Walpole on the Norfolk Sea Fisheries in the winter of 1879-80, the results of which led to another Government Inquiry in January, 1883, and the granting of a ten years' special "Order in Council" for protecting the Crab and Lobster fisheries.
2. Obtained a Government Inquiry into the Norfolk Mussel Fisheries in 1879.
3. Obtained the Government Inquiry as to the depredations by foreign on English fishermen in 1880, the result of which was the holding of an International Conference at the Hague in 1881, and the drawing up of a convention between the leading European Maritime Powers.
4. Obtained a Government Departmental Inquiry in January, 1880, as to objections of fishing interest to the proposed new regulations for fishing-vessel lights, and was granted a select committee to inquire into same, which resulted in the abandonment of an important portion of the objections.



MR. EDWARD BIRKBECK, M.P.

But Mr. Birkbeck has not devoted his attention solely to legislation for our sea fisheries. It is chiefly due to his exertions that the Bill brought in by the Government in the spring of this year was enlarged from being a partial measure for the better protection of certain fisheries into the comprehensive Freshwater Fisheries Act of 1884, by which *all* our freshwater fish are protected, and the establishment of Fisheries Boards in any district made possible.

In August, 1882, Mr. Birkbeck was appointed by the President of the Board of Trade a member of the Sea Fishing Trade Committee.

For nearly a quarter of a century Mr. Birkbeck has been connected with the National Lifeboat Institution, of which he is now Chairman. He is Vice-Chairman and a Vice-President of the National Fish Culture Association, and that Society is to be sincerely congratulated on the very great and practical interest he takes in its affairs ; and he proposed and carried the scheme for providing fishing vessels with aneroid barometers at a nominal price by this Institution. It is difficult to overrate the important nature of this suggestion, and upwards of 1,800 fishing vessels are now provided with most valuable instruments, by means of which timely warning is given of those sudden storms which, unless prepared for, are so often fatal in the fishing fleet.

We cannot pretend to give more than a very incomplete account of the good work to which Mr. Birkbeck so zealously devotes himself, not only in respect to fisheries, but also as regards agriculture and other industrial questions : whatever he takes in hand prospers. The secret of this success lies in the fact that, with an almost insatiable appetite for hard work, Mr. Birkbeck combines a thorough knowledge of how best to deal with men and things—in one word, tact, without which the hardest worker may often labour in vain. During the recent Fisheries Exhibitions so many of our readers have been brought into contact with Mr. Birkbeck, that it is unnecessary for us to bear testimony to his unvarying courtesy, kindness, and geniality.

But it is as the prime mover and guiding spirit of the recent great Exhibitions* that Mr. Birkbeck's name is chiefly known to his countrymen—and not to them only, for it may truly be said the whole civilised world has recognised and responded to his influence. That he has been most ably supported by all, from the Prince of Wales down to the humblest official who has been connected with these Exhibitions, no one has more heartily acknowledged than Mr. Birkbeck. His services have been publicly and repeatedly recognised by members of the Royal Family, the Government, representatives of foreign nations and our colonies, the press universally, and the public generally.

## WIMBLEDON PARK LAKE.—ANGLING NEAR LONDON.

There are several ways of getting to this noted water. The South-Western Railway intersects the parish, and has a station at Wimbledon, about seven miles from Waterloo terminus. The London, Brighton, and South Coast Railway has a branch from here to Mitcham Junction, where it meets the lines to Croydon, the Crystal Palace, and London Bridge ; also to Epsom and Leatherhead ; and another branch proceeds to Tooting, Streatham, Peckham Rye, and London Bridge. Anglers taking the train either from Waterloo or London Bridge, those who are fond of a quiet country walk can alight at Hayden's-lane Station, and pass through a portion of the Wimbledon Park Estate from the road leading to Wandsworth, and I think it is quite as near as going on to Wimbledon. If you go on to Wimbledon, pass the "Coffee Palace" and turn down the first turning on the right by the side of the nursery; keep on about two hundred and fifty yards, when you will see a pillar-box let into the wall near a gateway ; take the first turning on the left past the pillar-box, and keep straight up the roadway until you come to a cross-road skirted by an iron fence. From this point on a fine, clear day a magnificent view can be obtained of the surrounding country, and you can see the lake (nearly 35 acres in extent), glistening through the trees in the valley below. The slopes are dotted with noble trees. It contains a great number of splendid carp. (The 14-pounder exhibited at the Fisheries was a beautiful specimen, but was eclipsed last summer by a grand fish weighing over 18lb.) Carp are for the most part taken while ledgering with paste and worms ; sometimes gentles are used. Strong, but fine tackle is essential. Carp weighing altogether over 100lb. have been taken this season ; but many more have broken away than have been captured. Three to six-pounders are most numerous.

There is a record kept at the cottage.

Besides these, there are shoals of bream, large roach, pike, eels, and a fair sprinkling of perch, tench, and flounders.

I have taken a jack there weighing nearly 11lb. ; but they have become terribly cunning of late. Most of the fishing from the bank is done at the further end of the lake, where the keeper's cottage stands. All along the bank in a line with the cottage the water is from three to five feet deep. The charge is 1s. 6d. per day for jack fishing, and 1s. per day for bottom fishing ; two rods allowed. As a rule, the baits used are gentles, paste, and worms—gentles for choice. Anglers fishing for bream and roach seldom have a reel, nearly all using tight lines.

When ledgering, all the knowing ones put a large pellet of bread and bran about a foot above the hook. This answers a double purpose, as it not only enables the angler to throw out long distances without a plummet, but gets the fish together ; and when once they are "on," make the best use of your time, for it is a singular characteristic of this place that they often go "off" again ere you can say "Jack Robinson."

Another strange thing is that you seldom capture a bream of over 3lb. Taking one time with another, most of the bream are taken with gentles ; but sometimes they prefer paste, and at others worms—but very seldom.

As a rule, the best dabs have been secured between daybreak and 11 o'clock a.m. Bream here often bite so quickly (in fact, more like roach), it requires all the skill of the angler to hook them. Many bream are lost whilst playing them on the surface. I have seen them turn right over and wrench themselves from the hook. The members of one London angling club last year took the better part of a *ton* of bream. Immense heaps of ground-bait are used. There are two sorts of eels in this water—the sharp-nosed or willow-backed eel, and the broad-nosed, big-headed black eel. The latter is very indifferent to the former in flavour. Fishing for eels begins rather early in the season. On warm, muggy days the shallows will be found to be the best places. Ledger with lob-worms or small dead fish, such as gudgeon, minnows, and stone loach. When using the latter more time must be given. The best time for bream is from the middle of June until the end of August. The best time for pike is from the end of October until Christmas. February is also a good month.

---

* The Norwich National Fisheries Exhibition was a great success. The number of visitors to the Great International Fisheries Exhibition, 1883, was 2,703,051 ; to the International Health Exhibition, 4,167,683. It seems probable that before the series of Exhibitions is completed, a number equal to half the population of Great Britain and Ireland will have visited them. He is also on the Executive Council of the Inventions Exhibition, 1885, and one of the Royal Commissioners of the 1886 Exhibition.

Captain S—— says the snap-tackle is by far the best to use. He has fished in the lake for over twenty years, and he should be a good judge.

Lastly, anglers wishing to pass a quiet, peaceful day, and enjoy the beauties of nature near home, cannot do better than pay a visit to this well-stocked and picturesque piece of water. A.

## BEFORE DAYLIGHT TO DAGENHAM.

It seems but the other day that I arranged with a friend for a nocturnal trip to the lake yclept Dagenham ; yet I find upon referring to my record—as I call it—that that trip was undertaken over six years ago, on a certain August Bank Holiday. What a change since then ! One of the then joyous companions of the gentle craft has been called away at the early age of thirty, and nothing remains but the memory of a genial friend, who, no matter how bad the sport, stuck it out with his friend to the last. Well, 'tis man's lot to lose and make friends as well as foes, and "so the world wags."

I had been fishing at Higham Hill fishery on the previous Saturday, and there saw a certain gentle brother, who I will call S——, and he asked me, "Where are you going on Monday ?" I told him that I had arranged with C—— to meet in front of the Town Hall, Stratford, at midnight, "the mystic hour," and thence make our way through Barking on to Dagenham Lake. "Oh," said he, "perhaps I'll turn up." I said, "Very well," and we parted at Page's lock, near Park station. Each went home, not overladen with fish ; but bright were the anticipations of sport on Monday.

I think I have read somewhere that there is more happiness in the knowledge of pleasure to come than very often in its realisation, and experience has taught me its truth. "Expect nothing and you will not be disappointed." Just so ; but where is the angler who has been treasuring up bright visions of bumping roach, real red-finned silvery beauties, for weeks before the day of days, who expects nothing ? I ask, Where is he ? And echo answers not. He does not exist. Anglers being such hopeful beings, then we, of course, were animated in like fashion. I got everything ready on the Sunday, made ground-bait the last thing, saw to my rods and tackle, and did not forget my plummet—a general failing with some anglers ; in fact, to be sure, I went over the things several times, and it is a very good plan for an angler to adopt, as he is then almost certain not to be a nuisance to his brother craftsmen, for although they lend readily enough, they don't like it. At least, that is my own feeling.

Ten minutes before the hour of midnight I shouldered my basket, and somewhat heavily laden made my way to our trysting-place, to find I was the first at the rendezvous. I had not been there many minutes before I was asked, "What luck ?" by a tramcar driver, who told me he was then going "off," and would be "on" again at 7 o'clock next morning. I informed him that I had not been fishing, but that I was awaiting the arrival of a friend, it being our intention to walk to a place called Dagenham Lake. "Oh, ah !" said he, "I fished there many years ago—had very good sport ; but now," with a sigh, "I can't get away, and if I do, I'm glad to rest myself, of which I don't get too much. I'm on again at 7 in the morning." A tramcar came up at this moment, and out tumbled my friend C——, so the car driver bade me "Good night," wished us plenty of sport, and departed. I could not help pitying that car driver.

Having shaken hands with C——, I told him about S——, saying he might turn up ; and talk of the —— well, at that precise moment he did turn up. We then made a start as the clock marked 12.15, going along the Romford-road, and making our way to the right through Upton, we, after about an hour's walking found ourselves in the Barking-road. I had the misfortune to plumb one of the Dagenham ditches on a former occasion (whilst taking a short cut) with my leg. C—— and S—— were with me at the time, so whenever the darkness confused me a bit on our way from Romford-road to Barking-road (which is rather a difficult way to find in the dark, although one may know it well by daylight), I was told that they had no desire to plumb any of the ditches with *their* legs ; if it pleased me, it would not *them*, &c. However, I did not put them to the trial, but brought them safely to the Barking-road, where, just before reaching the bridge over the Roding, a guardian of the night turned his bull's-eye upon us as we were going along talking and laughing, and a voice came forth from the darkness of the night, "Oh, fisherman !" said he of the bull's-eye. We wished him "Good morning," crossed the bridge, and were soon in Barking, and found it wonderfully quiet ; not even a snore disturbed the stillness of the hour. But I warrant me snoring was going on more or less. Yes, Barking slept as we wended our way through its deserted streets, and we noisy anglers were the only ones, seemingly, unwrapped in slumber.

Turning to the left after passing the road that leads to the railway station, we journeyed on, crossed the railway, and were now on the direct road to the Chequers, which all anglers know who visit the lakes is at the present moment like unto a checkboard ; but what a checkboard has to do with "chequers" I leave the more learned to solve.

The eastern sky betokens the advance of coming day as we reached the Chequers, and we congratulated ourselves at having timed our journey beautifully. The people of this house of refreshment for man and beast were in dreamland, I suppose. I know in a few minutes we were in Muddy-lane, and likewise in a thick mist, of the presence of which we were unconscious until we plunged into the aforesaid lane. We passed the word to pass the bottle, just to keep the damp air outside one's anatomy. That is, C—— and I did so to the tune of "old Jamaica," whilst friend S—— kept the fog at bay with milk and water. *Sua cuique voluptus.*

When we got out of the lane the mist was not so thick, and we could see the sheds ; but the mist on the water was quite 10ft. high. C—— asked an angler who had arrived before us, and who was putting together his rod, &c., if he had "caught anything," which elicited a rather short answer from the not too good-tempered rodster. We crossed the ditch by the sheds, and made our pitch between them and "Man-of-war" point. Of course we could not at first see our floats on account of the mist. As for the sun, of the rising of which we had anticipated a glorious view, we saw it not till nearly five o'clock, about which time a slight breeze sprang up and swept away the vapours of the night. Then—then did old Sol warm us, and brighten our view of lake and landscape, and afterwards made glorious the whole of the day.

I am forgetting the fish, a thing an angler should never do. Well, we did not find the big ones "on." We got a small roach now and again ; but the slimy ones were *non est*, until later in the day. What are called "town biscuits" make the best paste for here. Just scrape off the brown outside, put your piece (it is best to make it several times during the day) of biscuit in your clean paste rag, and dip it in the water. It must not be too wet ; but it must be wet enough to knead into a nice, fairly-tough paste. This is only to be learned by experience, therefore I've said enough on that point ; but note that this paste is only suitable for still or quiet-running water. We plumbed the depth and ordered our floats so that the hook just touched the bottom, and our floats showing about a quarter of an inch above the water. I put this in the plural number, as we all fished in the same way. The fish here don't always take the float under : sometimes it is raised half an inch or more ; at other times it will go, thus raised, sailing away in some direction, and if the angler strikes he does not necessarily make certain of a fish. Oh, no ! How they do it I don't know ; but the bream, more especially, manage it, and strike as you will at times, you cannot hit them. The only way is to let them have it and strike when the float slants a little. Here, again, experience is the best teacher of all. *Some* of the eels here are of good size. I had hold of one in the afternoon, but the twisting rascal twined himself round some of the sedges and bit my gut, but not for the last time, alas !

About two o'clock in the afternoon C—— went to fill my bottle at the Chequers, and he was so long gone that I thought he must be in for something good. So it turned out. There was a little shanty sort of place at the corner of Muddy-lane, alongside the line, and here lived a man. Why, or for what purpose, I don't know. C—— found that he had a boiled leg of mutton just ready for the knife, and he and two or three others sat down to it at a shilling a head. They left the bone of that leg of mutton very visible, and my friend C——'s conscience smote him—he did not think the man made fifty per cent. out of that joint of Southdown. While C—— was away we caught for him on his lines a small eel and a flounder. He had baited with small red worms.

Everything, in time, passes away, and that day ended like all other days past and to come have and will ; but at six o'clock S—— cried "Enough !" and packed up. We were sorry to lose his company ; he, however, was not to be persuaded, so off he went, and we stuck it out till nearly 9 o'clock. I had two dozen roach, three bream, two perch, and one eel. I think C—— fared rather worse. Thus ended all our bright visions. We had a glorious day as regards weather, and enjoyed ourselves immensely ; but as a fishing day we found it a failure. Yet, withal, contented and happy-minded, as all anglers should be, we packed up, and as ill-luck would have it, walked to Rainham thinking to catch the train timed to be there a few minutes before ten. Excursion train after excursion train passed through the station, and the one for us did not come up till something after 11 ! Advice to anglers on Dagenham intent : Don't go, at holiday time, to Rainham on your return, but make for Barking Station, and you'll not have your patience tried as ours was. Although we had been out of bed for about 36 hours, we did not feel sleepy until we found ourselves in the train ; it was then as much as we could do to keep awake, but we managed it. There was no great incident—no capture of a fish that might have formed a stuffed memento of our trip ; yet our first nocturnal walk to "take time by the forelock, fish by the gills, and the top of the morning for our health's sake," will be remembered by the two now remaining of that merry and light-hearted trio of jolly anglers as long as life lasts. Jeffonham.

## *MY* NOTION OF A GOOD OLD-FASHIONED WINTER.

I.

The poets rave about the driven snow—
"Nature's fair winding sheet" they love to dub it ;
In sober prose 'tis odious, you know,
And I'm inclined to snub it !

II.

It drives *sans merci* in your face and eyes,
Powders you well—in every corner poking ;
You toil knee-deep beneath the cheerless skies,
Until your socks are soaking.

III.

The bards romance about the "sparkling rime"—
The icicles of this enchanting season ;
They laud the frost in poesy sublime—
That's *rime*, but hardly reason !

IV.

For if the sober truth must be confessed,
It numbs your toes, and makes your joints rheumatic ;
Of hoar frosts, icicles, and all the rest,
*Mine* is a hate emphatic !

V.

We read about the "shining sheets of ice"—
"The ring of steel" (our poets overdo it !) ;
It *sounds* all right, but isn't quite as nice,
If haply you *fall through it !*

VI.

They also sing of 'Xmas and the joys
Of festive board, which I beg leave to question ;
*I* leave mince pies to madmen, or to—boys—
Abhorring indigestion !

VII.

The ideal picture we have but to strip
Of all the glamour they have thrown around it—
Behold a monster with an iron grip !
(Snowing again !—confound it !)

VIII.

A grim old wretch who loves to make us smart,
With him, in verse, I have a lance to splinter ;
And don't I hate, detest with all my heart,
Your good "old-fashioned winter" !

IX.

The maid may love it : when it brings her "*chaps*"
It brings *me* chilblains and a torpid liver ;
For four fell months I swathe myself in wraps—
One long, protracted shiver !

Eastbourne. F. B. Doveton.

# TROUT FLIES, AND HOW TO TIE THEM.

By H. F. N.

(With Illustrations.)

I THINK it is an undoubted fact that the great majority of amateur fly fishermen do not tie their own flies, probably not above eight per cent., if indeed that. Votaries of the angle may, roughly speaking, be classed under two heads—*i.e.*, those who, owing to the pressure of business, or the time taken up in other pursuits, find in fishing a pleasant relaxation from work, or an agreeable variation of sport; and those who, having plenty of time, throw themselves into the sport heart and soul. Like lovemaking, fishing may be said to be the business of the idle, or the idleness of the busy. Now, to the man with an extremely limited time at his disposal I would say: go to your tackle-maker for your flies by all means, only take care that you pay such a sum for them as to allow a chance of the hooks and gut being good. But to the man who makes fly fishing his principal recreation in life (and who is almost sure to be an enthusiast on the subject), I say: if you want to get the greatest possible enjoyment out of your fishing, tie your own flies; for you will probably find that you get almost as much pleasure out of doing so as out of the actual fishing itself.

With what regret the ardent angler lays aside his rod for the winter, and, as he thinks of the long drear months that must elapse before he can again throw his flies over the streams he knows so well, speculates as to how he will get through the time! The man, however, who ties his own flies, can wile away many of the long winter evenings in dressing a stock of flies for next year's campaign; and as he does so, lives over again the enjoyable hours of the last season and anticipates those of the next, grassing many a trout as he sits at his smoking-room table. Besides, what is the pride of the angler who had just netted the monarch of the brook with one of Messrs. Brown and Robinson's duns, to that of him who, for the first time, has taken a fish (be it but a quarter-of-a-pounder) with a fly of his own making? Never shall I forget my sensations on seeing a fish coming with open mouth at the first fly I ever made—a black gnat by courtesy, but no more like a black gnat than I to Hercules! I can only say that in striking I broke my top joint, and sent the fish (a six-ounce trout) flying about twenty yards behind me! I have that black gnat still, for I would not endanger its reputation a second time. Then, from a more practical point of view, the man who ties his own flies is much more likely to become a proficient in the art of catching fish than he who does not. The shyness of trout has much increased with the yearly increasing number of fishermen, and on many well-whipped waters the fish require a very good imitation of the fly on; and (though perhaps he is not necessarily so) the fly fisher is more likely to be a good entomologist than he who depends on his tackle-maker, and who, even if he knows what he wants, frequently cannot get it of the exact shade or pattern. To be able to tie a fly by the water's side may occasionally mean the difference between a good basket and an empty one—as I myself found the first time I began to take a few materials for the purpose with me on my fishing excursions. I had tried a dozen varieties of flies in vain, when I put on an old fly with a very pale yellow fur body and a light honey-dun hackle—the only one of its kind in my book. I soon found I had "struck ile," for the fish took it at once, and after catching three on it, it went off with a good fish on a visit from which it did not return. I sat down, ate my lunch, and tied a couple like the one I had lost. At the end of the day I had got twelve brace, never having had a rise at any other fly than my "yellow godsend," as I christened it. Now I have endeavoured to point out a few of the many advantages that are to be found in tying one's own flies, and that are usually admitted by anglers; but a general impression seems to exist among those who have never tried to do so, that to tie a fly is a very difficult operation, and it is a common thing to hear a man say: "Oh, I could never tie a fly, my hands are much too large and clumsy; I haven't got the fingers for finicking work." I can only say that the man who first taught me would have taken about number fourteen size in gloves, had he ever worn such things, which is extremely doubtful, however, as his hands betrayed no signs of such preservation, and he being a gamekeeper—by name Robert Jones—and about the best fisherman in all North Wales, combining a most marvellous knowledge of the habits of trout, with decided views on theology, politics, and smoking mixtures. The truth is, that the only essential qualifications are—decent eyesight, and a real desire to learn; and given these, and a fair stock of patience, anyone of ordinary intelligence, who can whip a piece of gut on to a hook, would soon learn to turn out a hackle fly well enough to kill, though a somewhat longer apprenticeship is necessary to learn to make a good winged fly of a more complicated nature, such as a red spinner, which is about the hardest fly of any to tie well. I have had many pupils in the art from among my fishing companions, the last of whom, a fisherman of twenty-four years' standing, I taught about a couple of months ago. After starting him one evening, and seeing him tie a couple of hackle flies in a most creditable manner, I left him at it about eleven o'clock. On seeing him in the morning, I remarked upon his washed-out appearance, when he produced a capital winged fly which he had achieved after many failures at two o'clock that morning, at which hour he had retired on his laurels to his downy couch! This is an instance of the fascination fly-tying exercises over one when once taken up; though, personally, I recommend an earlier retirement to rest!

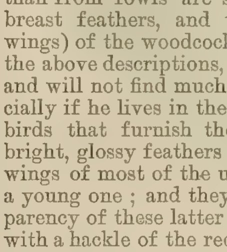
Now, before going on to detail the different steps in the making of a fly, we come to the important point of the materials out of which the artificial fly is made. As Mrs. Beeton would say, first catch your materials and then tie your fly; and very hard your materials sometimes are to catch when the eluding hen, or the ubiquitous cock, are the objects of your pursuit. It is surprising how many good fishermen are unable to accurately describe a fly to you—that is to say, they can tell you the colours, and whether with or without wings, tails, or ribbing, but are ignorant as to what bird or animal furnished the materials used. For my part, I never neglect an opportunity of collecting these necessaries of the art; and for the bodies of flies, the workbaskets of my sisters and lady friends afford me happy hunting grounds, though I must plead guilty to sometimes obtaining only such leave as is currently reported to be necessary in France. I do not know that I ever went so far as a friend of mine, a skilful salmon fisher, who was once staying at a country house where there was a pheasant aviary in the grounds containing two fine cock golden-pheasants, on whose brilliant toppings my friend at once set his unlawful affections. Unable any longer to resist his desires, he arose one morning about six o'clock, and proceeded to the cage, and, having caught one of the birds, relieved it of a few of the coveted feathers—an operation which is often, and, indeed, usually, performed without any evil results. Unfortunately, however, he learned at luncheon on the following day from one of the young ladies, whose pets the birds were, that "Tommy" (the bird in question) had been found dead—the result, no doubt, of a fight with "Jack," the other bird! My friend, I regret to state, adjourned with the lady in question to the cage, where he very kindly held an inquest on the deceased bird, for the purpose of which it was necessary, as he then explained, to remove the rest of the toppings! "And so, you see, I got the lot!" he added to me, with an unblushing smile.

And now let us return to our muttons—I mean materials. Let us first invest in a pair of embroidery scissors, two pairs of tweezers or pliers (one pair for nipping on to the hackle, and the other for the silk in the manner I shall afterwards explain), which can be purchased at almost any fishing-tackle shop, a small bottle of varnish sold for the purpose, some cobbler's or white wax, and half a dozen reels of the finest machine-silk of the various colours—black, white, orange, red, claret, and yellow. It is very difficult to get machine-silk for tying purposes fine enough—the Gossamer silk, as it is called, being too fine for a beginner to work with, as it is apt to break on the slightest provocation, either in being waxed or in tying with it. For the bodies of flies we require peacock and black ostrich herls, the dark blue fur of the mole, the light blue fur that grows nearest the skin of the rabbit, fur from the hare's ear, side, and lug, and a few crewels, silks, and filoselles of various colours, especially yellow, and what are known as neutral tints. The materials for bodies will not be complete without some gold and silver tinsel, both flat and round.

We now come to the important question of hackles, and, with regard to these, as to all other materials mentioned here, I do not pretend to give a list of all those, or half of those, one may want for one fly or another, but merely those that are in more general request for the flies most commonly used. As the fly-tyer progresses in his art, he will soon find out for himself many others that he wants. The most useful hackles are those that grow high up on the necks of poultry, especially the dark red ones from the gamecock, the lighter red from the golden Hamburgh, and those red ones, having a black centre, called coch-y-bondu hackles—those both from the cock and hen being used, the hen's hackles always being softer and less spiky than the cock's. Also, we must have ginger and black hackles from hens of that colour; and last, but by no means least, blue hen hackles, varying from the palest smoke to a dark steel colour. Some of these blue hackles have a golden freckle or tinge at the edges, and are most invaluable, though rather hard to get. Hackle feathers other than from fowls are starling neck feathers, partridge and grouse back and breast feathers, and the scapularies (or small feathers growing outside the wings) of the woodcock, starling, landrail, gull, and moorhen. With hackles of the above descriptions, the intending fly-tyer may consider himself well started, and will not find much difficulty in obtaining the necessary wing feathers, especially if he lives in the country, and is the possessor of a gun. Now among birds that furnish the last-named feathers the starling ranks first, as the bright, glossy feathers in the centre of its wing are admirable for making the wings of most of the upright winged flies called duns, especially if the bird be a young one; and they also do well for spinners, though the brilliant transparency of these latter flies often renders it more desirable to dress them buzz, with a hackle of the requisite shade. Other useful wings are those of the landrail, snipe, moorhen, blackbird, tomtit, jay, woodcock, partridge, pheasant, widgeon, and brown hen, and certain of the breast and tail feathers of these birds, and of the mallard and teal. All feathers and hackles should be kept with a little camphor to keep off the ravages of moths and insect life, and, if this precaution is taken, they may be kept for years, and yet remain fit for use, especially in the case of hackles, if all the fluffy part on the lower part of the quill has been stripped off. I have found a most convenient way of keeping feathers ready for use is to get, or make, a book like a large fly book, with parchment pockets, into which the hackles are put, tied up in little bundles of eighteen or so. And now enough of materials: let us to work, and ascertain if our hands are all thumbs, or really can boast the usual complement of fingers.

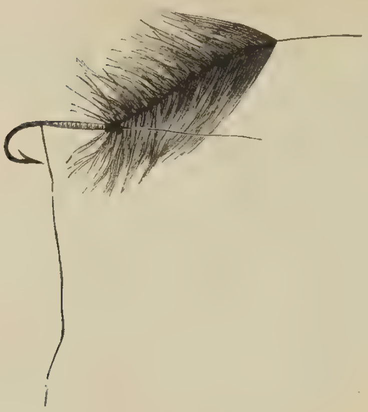
Of all flies, I always choose a coch-y-bondu upon which to start a beginner, as being one of the easiest to tie, and let him begin on a good-sized hook (say No. 8), as in the illustrations. As he progresses, the tyer will find himself better able to manage flies on the smaller sizes of hooks. Get all your materials ready to begin with: about fourteen inches of silk, a couple of strands of peacock's herl of a bronze shade, and a medium-sized hackle. Hold your silk in your left hand and wax it well, and, having done so, remove superfluous wax with a piece of wash or other leather. Bite the end of the gut for about half an inch, to prevent it slipping from the hook after the fly is tied. Now with your left hand take hold of the tip of the hackle, and with the thumb and forefinger of the right hand draw back the fibres until you get the hackle as in Fig. 1. You are now ready to start, so take the hook, barb downwards, between the thumb and forefinger of your left hand, with the bitten end of the gut on the underneath side, and place the end of the tying silk across the middle of the shank of the hook, keeping it there with the thumb. Take two turns round the hook towards the head, and then a turn or so back, so as just to bind over where you began, to prevent the silk from unwinding in case you should loosen the pressure of the thumb. Then wind again (from you, of course, unless left-handed) towards the head, taking care that each lap is close to, but not on the top of, the other, until you get nearly to the end, having first once passed the silk between the gut and shank to prevent the former from drawing. Then place the tip of the hackle, light side up, where you have stopped winding; take two turns of the silk over it, and commence to wind down towards the tail of the hook, and, having got to the place in the hook where the tail of the fly usually ends, tie a half-hitch knot. Before, however, getting quite to the end, snip off whatever of the other end of the tying silk has not already been bound over. Your fly is now in the state shown in Fig. 2. Take the strands of peacock herl, lay the thinner ends on the top of the hook, as if the fly were going to have two huge tails, and bind over it, working up towards the head of the fly, and then make a half-hitch just by the hackle, which brings your fly to the point shown in Fig. 3. Now take hold of the ends of the herl and wind it round the shank of the hook in the same manner as the silk, till you get to where you made your knot. Take one turn of the silk over the herl, and tie a half-hitch; snip off the remnant of the herl, and you have the body made. Another plan is, instead of tying in the hackle point as you whip on the gut, to tie it in after you have finished the body. This latter method does well enough for simple hackle flies; but the former is preferable when you wish to avoid the bulkiness occasioned by extra knots. Next take your pliers, and pinch one pair on to the butt of the hackle, and the other pair on to the silk, about four inches down, as shown in Fig 4. Now comes

Fig. 1.



the somewhat difficult operation of winding on the hackle; but the plan of weighting the tying silk with the pliers, and winding the hackle on the left-hand side of it, prevents the novice from getting the hackle wound too far up to the head, and possibly on to the gut—a common failing with beginners. In winding the hackle, take care to pull just enough with the pliers to keep the quill taut and prevent it from unrolling, and mind you keep the hackle always at right angles with the hook, and not to twist it. When you have rolled on the hackle, let the pliers holding the quill hang down; un-nip the pliers from the silk, and with the latter take two turns over the hackle quill, and then a half-hitch, and you have Fig. 5. Cut off the superfluous quill, take another lap or two with the silk, and finish off with a couple of knots. Cut off the remaining silk and varnish the head, and you have made your fly. You may now proceed to re-light your pipe, and, unless an exception to the general rule, will spend the next half-hour in admiration of the results of your maiden effort.

Fig. 2.



Suppose your fly had been a red spinner: before winding quite down to the tail end with your silk, you would lay your two or three long tail fibres on the top of the shank, bind over their butts as you wind to the end, and, without tying any knot, bind on the ends of the floss silk and gold tinsel together as you work up towards the head, in the same way as you would do the peacock herl in the coch-y-bondu, and then tie a knot. Now wind the the floss silk to the shoulder, where you have already brought the tying silk, nip on the pliers (the weight of which will prevent it unrolling), and next bring up the tinsel in spiral coils. Take two turns over the floss and tinsel with your tying silk, and then a hitch, cut off the ends, and you are ready to wind the hackle as before. If you want a fur body, the method is rather different. Take a little of the fur between finger and thumb of the right hand and twirl it round the tying silk, continuing the twirling a little as you wind the silk up to the shoulder, and when there remove superfluous dubbing, and make your knot. This operation of putting on the dubbing is commenced, of course, when the tying silk is in the position shown in Fig 2. When the hackle runs from head to tail (as in the Wickham and other flies), its point must be tied in at the tail together with the silk herl or tinsel for the body, the tying silk brought up to the shoulder, then the material for the body, and, lastly, the hackle, as if it were a tinsel ribbing. This kind of fly, however, is too hard for the novice to begin with, as it is very difficult to roll the hackle so that the fibres all point regularly the same way.

Fig 3.

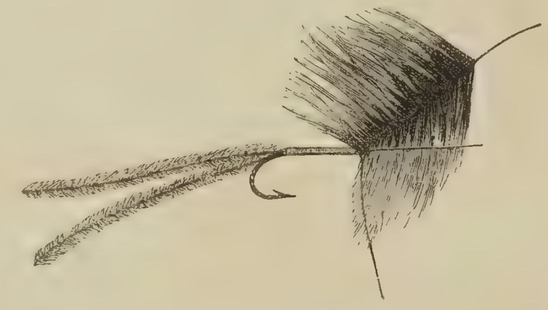


Fig. 4.

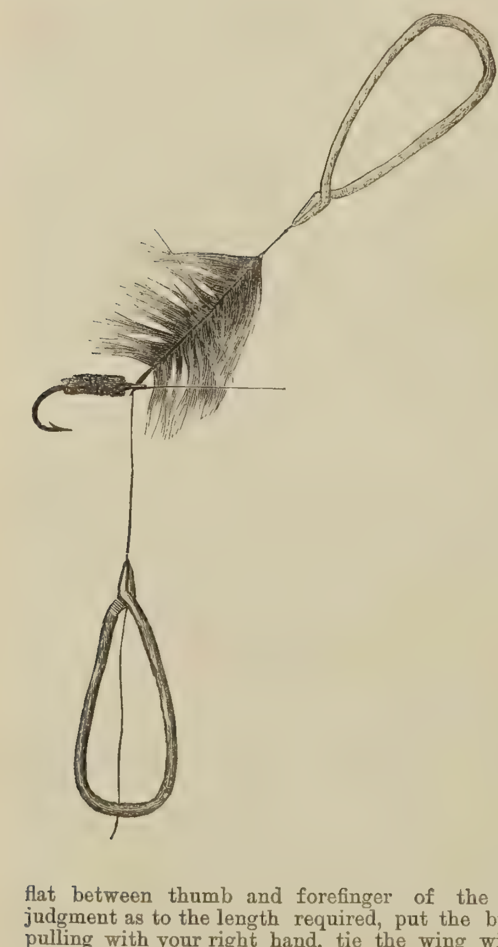
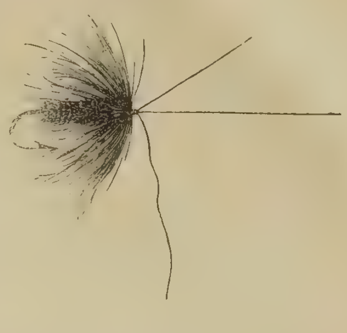


And now as to the wing, if your fly is to have one; in which case, if you have operated aright, there will still be a little of the bare shank of the hook left at head. Take a right and left side wing feather, cut out a small piece from each, and lay the one on the other. Now take a piece of Gossamer silk about seven inches long, lay on a little varnish with a stick (which is preferable to waxing the silk in this case), and having made a loop in the middle, hold one end between your teeth and the other with your right hand. Then take hold of the tips of the wing flat between thumb and forefinger of the left hand, and, using your judgment as to the length required, put the butt ends through the loop, and, pulling with your right hand, tie the wing with the silk. Fig. 6. shows the wing thus tied, the object being to nip in the butt without splitting the fibres. Cut the ends of silk off as close to the knot as possible, and lay the wing on the bare part of the hook, the place where it has been tied coming just over the tying silk as it hangs. Bind the wing down with three turns, and then make a knot. Here we have Fig. 7. Cut off the remnant of the butt, take another turn or so with the silk, and finish with two knots or half-hitches. Cut off the end of the silk, varnish the head of the fly, and, if the fates have been propitious, you have made your winged fly. With a good deal of practice you will be able to tie on the wing without first tying it in the manner shown in Fig. 6; but that method will save you much trouble at first. Before I stop, let me observe that the apparently easy operation of making a knot or half-hitch is the rock on which all beginners split, as they are apt to remove the pressure of the forefinger, which prevents the silk from uncoiling, and do not always make a firm hitch, owing to the loop twisting. The loop through which it is intended to pass the end of the silk should be long, and left hanging loosely down. The beginner will soon realise what is meant by this. Another piece of advice is always to touch the silk with varnish before tying a knot. I have now endeavoured to explain on paper how the artificial trout fly is made; but I confess that half-an-hour's observation of a practised hand at work is worth a ton's weight of written dissertation on the subject.

Fig. 5.



I have said nothing as to the advantages from an economic point of view of tying one's own flies, and doubtless to most fishermen the cost of the excellent artificial flies sold at the tackle shops is a trifling matter; but to some it may not be a drawback that the cost price of home-made flies comes to something like a farthing apiece. For my part, if it cost me twice as much to make my own flies as to buy them, I should still consider the pleasure and advantages derived from tying them oneself more than worth the difference.

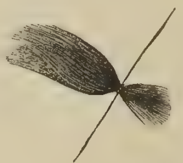

Fig. 7.

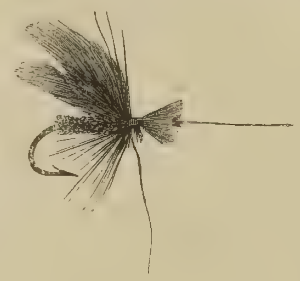


## RECIPE FOR WATERPROOFING SEA LINES, LANDING-NETS, &c.

In his interesting letter last week, Mr. Gribble asks for a recipe for dressing the landing-net so that the hooks will not readily catch in it. It seems to us that a good *stiff* dressing is the thing wanted, and after looking through various books, think the simplest and best for the purpose is described in "Sea Fish and How to Catch Them," by W. B. Lord, R.A., in the revised edition, 1863.

### Recipe.

"Make a coil of your line, which should be bound round in three or four places with thread; take of best glue half a pound, water a little more than half a pint, placed in a large pipkin or other convenient vessel; warm gradually until the glue is thoroughly dissolved and quite clear, when your coil of line should be put in and boiled for twenty minutes. Take out your line, cut the bands, and lay it on the grass (a dry day, of course, being chosen for the operation), arranging it up and down like the teeth of a large saw, so that the strands shall not come in contact. In about four hours it will be dry, when it must be recoiled round the hand, and placed in a boiling solution of catechu—half a pound of catechu to one pint of water; keep boiling for three-quarters of an hour, remove it from the solution, and hang it up to cool for a quarter of an hour. When cool, wash it well in cold water, and dry for use. For this very excellent method I am indebted to 'W. W.,' a correspondent to the *Field*, and I beg to congratulate him and his brother fishermen on the discovery he has made, as it is excellent of its kind, and far superior to anything which has hitherto been made use of for the purpose."

Last week another correspondent asked for the recipe for a varnish. We recommended shellac, and perhaps it will be useful if we give Mr. Lord's recipe for making a

### Finishing Varnish.

"The durability and strength of fishing-tackle is materially increased by using the varnish, directions for which I am about to give, to such portions as are fastened with thread or silk—the fastenings of hooks, loops, chop-stick ends, &c. Take of shellac half an ounce, naphtha two ounces; mix, and allow the gum to thoroughly dissolve in the spirit; keep tightly corked for use, and apply when required with a small camel-hair pencil, which should be secured with a small stick to the bottom of the cork, when it will remain soft, and be always at hand when wanted."

Another capital dressing for nets and sea lines is that used by sea fishermen, and it will be found equally useful for preventing any kind of net from rotting. We take the recipe from that invaluable and standard work, "The Sea Fisherman," by Mr. J. C. Wilcocks.*

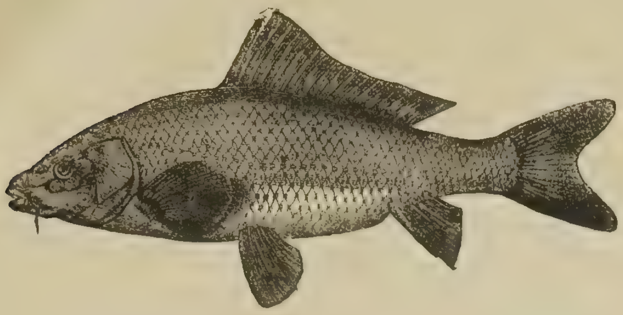
### Recipe for Barking or Tanning Lines.

"Catechu and oak-bark are used for this purpose: half a pound of catechu to three pints of water, and a handful of oak-bark, if you can get it; pulverise and boil until the catechu is well dissolved, then pour it over the lines in a basin or tub, and allow to soak twenty-four hours. There is no objection to using oak-bark exclusively, if you are near a tan-yard or bark-mill; but a gallon of oak-bark has not more power of tanning than half a pound of catechu. In a town catechu is often procurable when oak-bark is not to be obtained."

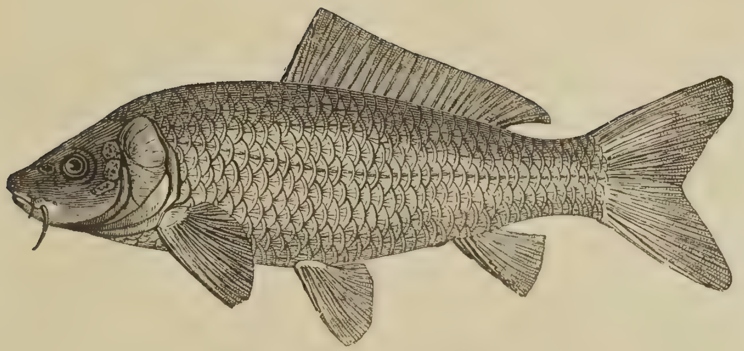
**Illness of Mr. James Gregory, of Birmingham.**—We regret to hear Mr. J. Gregory has been dangerously ill for the past five weeks with typhoid fever, and although the doctors have pronounced him out of danger, it will be some time before he can attend to his duties again.

---

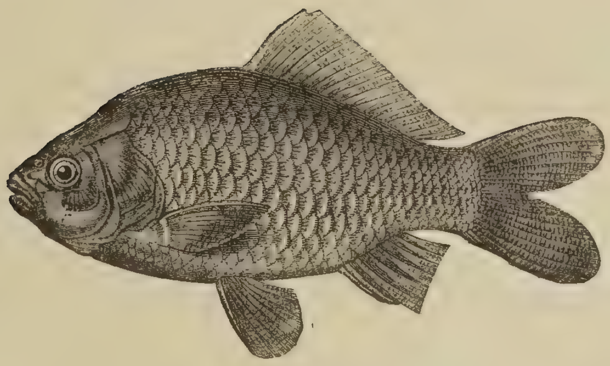
* London; Longmans and Co., Paternoster-row. Fully illustrated, price 12s. 6d.



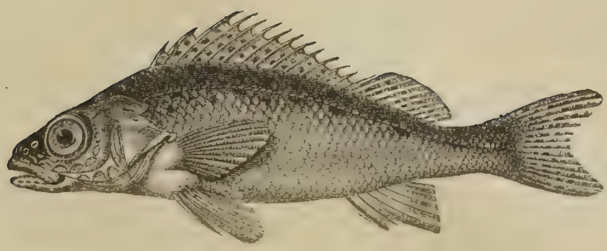
THE COMMON CARP (*Cyprinus Carpio*).



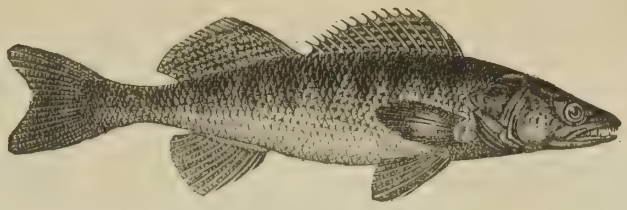
THE ROYAL OR MIRROR CARP (*Rex cyprinorum*).
(Scales four times as large as in common carp.)



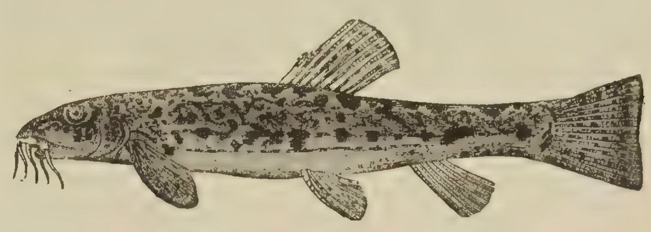
THE CRUCIAN CARP (*Cyprinus carassius*).



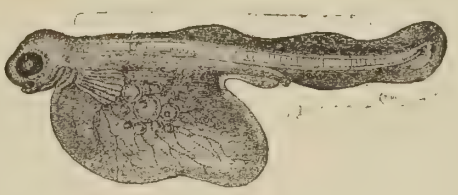
THE POPE OR RUFFE (*Acerina vulgaris*).



THE PIKE PERCH (*Perca lucioperca*).
(Called the Wall-Eyed Pike and Glass-Eyed Pike in America.)



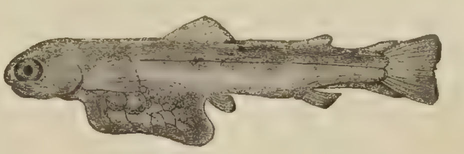
THE LOACH OR STONE LOACH (*Cobitis barbatula*).



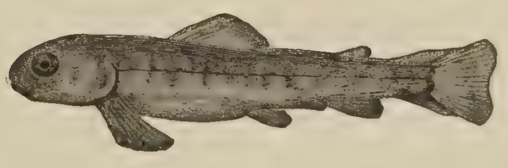
YOUNG TROUT JUST HATCHED, WITH THE UMBILICAL SAC ATTACHED.

(Four times the natural size.)

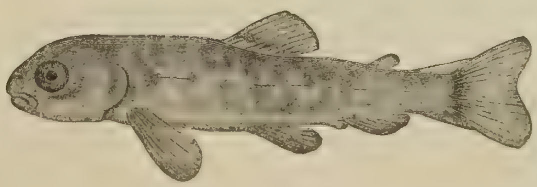
For six weeks or two months the fish exists on this "oil bag," taking no other food. The bag gradually becomes absorbed and disappears. (It requires from 90 to 140 days for salmon and trout eggs to hatch out, according to the temperature.)



YOUNG TROUT A MONTH OLD, THE OIL BAG NEARLY ABSORBED.



YOUNG TROUT SIX WEEKS OLD.



YOUNG TROUT FOUR MONTHS OLD.

## THE LATE SALMON-ROD ANGLING SEASON ON TWEED AND TEVIOT.

Votaries of the gentle art have once more put away for a season their rod, lines, and flies, and will now rest content on the recollections of their recent exploits until the near approach of February, 1885, warns them of the approaching termination of the close season, and induces them again to put them in order for another campaign. The angling season of 1883 had been a very successful one, and, at its close, anglers laid away their paraphernalia perfectly satisfied with the exceedingly good sport they had experienced on Tweed and Teviot. In the month of October, however, the disease broke out among the fish with considerable virulence, and great fears were entertained that the next season would be a bad one for the disciples of Old Izaak.

Notwithstanding this serious drawback to the prospects of 1884, the past season has completely belied the fears that were entertained at the end of the season of 1883. Whether or not the very open winter we experienced last year had anything to do with the excellent past year's fishing we cannot say; but one thing is certain, and that is that we have not had so good a fishing for some years back, notwithstanding the fact that between 10,000 and 11,000 diseased fish were removed from the rivers by the bailiffs of the River Tweed Commissioners. It may be interesting to some of our piscatorial readers to give a table of the diseased fish taken from the rivers during the past five years, which is as follows:

| | 1880. | 1881. | 1882. | 1883. | 1884. |
|---|---|---|---|---|---|
| Salmon ............ | 3,827 | 2,372 | 14,250 | 3,919 | 6,665 |
| Grilse ............ | 356 | 260 | 1,858 | 211 | 951 |
| Sea Trout......... | 1,460 | 187 | 1,454 | 673 | 2,700 |
| Total | 5,143 | 3,819 | 17,572 | 4,803 | 10,316 |

The extent of the disease can thus be seen at a glance, and, as it was worse in 1883 than it had been for a couple of years previous, the wonder is that the past season has been such a good one to the angler. When the season opened in February of the present year no fishing took place for a week, owing to the adverse state of the elements; but on Friday, the 8th, Mr. J. R. Hay-Gordon, on the Carham water, had "first blood," killing two nice clean-run fish. Another week's interval intervened here, owing to waters again being out of order; but, on the 16th, one salmon was killed, and in the Jedburgh district one common trout of 5lb. was also got. The spring fishing may be said to have commenced in earnest on Monday, the 20th February, and from thence was, with a few interruptions caused by small floods, till the end of March pursued with very much success. The number of fish killed during the month of February would amount to about 80, in comparison with the previous year's take of about 20. One of the fish killed on the Hendersyde water (on the 25th of February) was said to weigh 42lb., and was 4ft. long, and beautifully made in proportion. The lucky fisher was Mr. Barclay, Essex. Another good fish killed was one bordering closely on 20lb., by Mr. Drummond, Ednam House Water. Amongst the gentlemen who were also successful during the month were Mr. Morton, London; Mr. Russell, Yorkshire; Mr. J. R. Hay-Gordon, Liverpool; the Messrs. Jas. and Charles Kerts; Mr. T. Johnston, wine and spirit merchant, Kelso, &c. March fished well, although about eight days were lost through floods. As is usual, the month of April was not a good one, somewhere between 20 and 30 being killed, in comparison to about 16 the previous year. The Floors Castle waters contributed the largest quota of the salmon killed as above stated, while one of 10lb. was caught on the Teviot. Trout fishing during the middle of the month was excellent, some large baskets having been got. The net fishing at this time, too, was beginning to fall off, salmon and trout being scarce. The spring fishing ended with the month of April, and was considered very satisfactory. The summer fishing was, like the previous year's, a very poor one, very few fish being killed during the months of May, June, and July. The month of August was a repetition of the previous one, and although during the month of September a few fish were got, still the fishing was not what was expected, and the summer fishing finished up with the close of the month, and may be termed a very middling one. The back-end fishing may be said to have begun in earnest during the second week of October, and on the 9th October the Hon. H. Brougham, on the Mertoun water, killed three salmon, the weights being 16, 16, and 15lb.—a good beginning indeed. Four days were again lost through the rivers being out of order; but on the 15th angling was again resumed, and may be said to have gone on steadily till the end of the season, excepting three days in the first week of November, when a very opportune flood put a stop to angling, as stated. Towards the end of the month strong frosts made large takes out of the question; but the success got by the various anglers for three weeks previous fully compensated for this drawback. The rivers during the back-end season were always well stocked with fish, and little or no disease has been as yet observed. To make a comparison between last year's fishing and the present one shows that the one just closed was better, all over, than that of its predecessor, and a great improvement on that of the previous three years. In fact, on the Sprouston water we are led to believe that the same number of salmon has not been got for about eight or ten years. On some waters, however, things have not been nearly so good, as, for instance, that of Birgham Dub, leased by Mr. A. Denison, who has had very poor sport on his "casts." Floors, Upper and Lower, waters have also been somewhat disappointing. Besides that which we have already mentioned as being good and giving plenty of sport, the casts on the Hendersyde, Carham, Mertoun, and Ednam House waters have all done well, as have also those on the Makerstoun fishings. We subjoin a list of the fish killed during the season on the various waters in our immediate neighbourhood, the most of which may be relied upon for its accuracy, seeing that nearly all the statistics have been supplied to us by the kindness of the various owners, tenants, or lessees of the fishings. Many fish have, of course, been killed that we could know nothing of; but the following information will give to anglers a fair estimate of the salmon taken by the sportsman on the various salmon waters in the district:—

On the Upper and Lower Floors water, fished by his Grace the Duke of Roxburghe and his friends, over 30 salmon were killed during the spring; and, on the *upper* water alone, from the 10th of November to the end of the season, Mr. A. F. Thistlethwayte, London, killed between 60 and 70 fish. The total number of salmon killed on both Upper and Lower water, exclusive of Mr. Thistlethwayte's, was (during the whole season), as near as can be estimated, between 80 and 90, thus making a total for the season of somewhere near 160 fish.

On the Hendersyde Water, during the spring months, we believe that the number of fish got was nearly 30. The back-end fishing, however, may be relied upon as being entirely accurate, the statistics being kindly furnished to us by Sir George Waldie-Griffith, who says:—"The following is a summary of the Hendersyde fishings from the 15th September till the end of the season. Only four salmon and four grilse were caught up to the 17th October, at which date the good fishing on this water began. The season, as a whole, was most remarkable for the lowness and clearness of the water. Total number of fish killed 203, made up as follows:—143 salmon, total weight 2,883lb., average weight over 20lb.; 60 grilse, total weight 496lb., average over 8lb. Largest take in one day—November 18—was got by Sir G. W. Griffith, and numbered 12 fish, weighing 218lb.; and the heaviest fish killed was by Captain Bridges, one of 33lb., and the fly used was the Durham Ranger." In comparing the above fishing with that of the two previous years, we find that in 1883 the takes were as follows:—Salmon, 59, weighing 1,051lb., average 18lb; grilse, 61, weight 520lb., average 8½lb. In 1882 the salmon killed numbered 80, weighing 1,519lb., average 19lb.; grilse, 15, weighing 108lb., average 7lb. In 1881 the total fish killed numbered 156, weighing 2,039½lb.

Birgham water (leased by Mr. Denison) has this year been a most disappointing, and not a third of the fish got last year—which numbered 88—have this year fallen to the rod of this veteran angler. The lowness of the river has much to do with this, as also the want of heavy floods.

Ednam House water has this season done very well indeed, Mr. Drummond, the lessee, having 81 fish to his credit against 60 in 1883, and 50 in 1882, and 74 fish in 1881. During the spring 11 salmon were got, the heaviest scaling close on 20lb., while the gross weight of the others would be about 80lb. The weights of the fish killed on this water during the past season are as follows:—

| | | lb. | | | lb. |
|---|---|---|---|---|---|
| 1 | salmon of | 3 | 2 | salmon of | 16 |
| 1 | " " | 5 | 6 | " " | 17 |
| 1 | " " | 7 | 8 | " " | 18 |
| 4 | " " | 8 | 5 | " " | 19 |
| 10 | " " | 9 | 8 | " " | 20 |
| 3 | " " | 10 | 3 | " " | 21 |
| 2 | " " | 12 | 5 | " " | 22 |
| 2 | " " | 13 | 4 | " " | 25 |
| 1 | " " | 14 | 1 | " " | 27 |
| 1 | " " | 15 | 2 | " " | 28 |

It will be seen from the foregoing that of the salmon killed most of them scaled from 16lb. to 22lb. The total weight of the whole fish killed was 1,234½lb. The most killed in one day was six, and the heaviest fish got was 28lb. The best taking flies were the Gibson (named after Mr. Drummond's fisherman), Jock Scott, Greenwell, and the Wilkinson.

Makerstoun water has done fairly well during the past season, and although Mr. Cockburn has not had so many fish to his credit this year as last, still he has had good sport, as on some days he could count from 8 to 10 salmon to his own rod, and some of them running from 25lb. to 30lb.

Sprouston water, which was fished promiscuously during the spring months, yielded fairly well, and the salmon got numbered somewhere between 50 and 60. The autumn season on the "casts" on this water have excelled, we understand, anything done on them for some years, and the total number of salmon killed during that time is stated to be 180 fish, while last season's kills were put down at 90 salmon.

On the Upper Cornhill water Col. Biden has had also fairly good sport, and his "takes" cannot be much less for the present season than those of last year, taking into account the proportion of time he fished this year and last. Many of the Colonel's fish ran from 17lb. up to 21lb.

Captain Vivian and Mr. Arkwright, on the Rutherford water, fared well also, so far as good "takes" were concerned, and many of their fish ran to good weights.

On the Mertoun water, which is leased by the Hon. H. Brougham, we don't think we exaggerate one iota when we state that, single-handed, he has killed more fish on the Tweed this year than any other gentleman can boast of to his own rod. Of course we have not his actual "takes" for the season to record from book; but when we give it at, say, from 150 to 160 salmon we don't think we are far off the mark, and many of his fish were splendidly proportioned and of good weights.

Carham water, leased by Mr. Hay-Gordon, Liverpool, has proved an excellent hold for the "king of fishes," and during the spring Mr. Gordon had 30 fish, while during the back-end season he, along with other friends, managed to kill nearly 100 salmon on this fastness.

Major-General Henry and his friends, angling on the Pavilion water, at Melrose, have killed, during the season, 165 salmon, as compared with 149 last year.

On the Bernersyde water, owned by Lieut.-Colonel Haig, rare good sport was also got during the back-end season, and the total number of salmon and grilse got numbered 162 fish. The heaviest got was one of 29lb., and the best day's fishing saw fourteen beauties brought to bank. In one week, from November 11th to November 17th, no fewer than 66 fish were got by rod and line, a feat we should imagine nearly unprecedented; and, in the same week, the greatest "take" by one rod was the grand total of 51 salmon. Rare sport, indeed! The following table shows the salmon killed, as well as the weights of each:—

| | | lb. | | | lb. |
|---|---|---|---|---|---|
| 1 | salmon of | 4 | 14 | salmon of | 17 |
| 1 | " " | 5 | 13 | " " | 18 |
| 2 | " " | 6 | 22 | " " | 19 |
| 6 | " " | 7 | 12 | " " | 20 |
| 7 | " " | 8 | 19 | " " | 21 |
| 14 | " " | 9 | 11 | " " | 22 |
| 6 | " " | 10 | 3 | " " | 23 |
| 4 | " " | 11 | 1 | " " | 24 |
| 1 | " " | 12 | 1 | " " | 25 |
| 1 | " " | 13 | 3 | " " | 26 |
| 2 | " " | 14 | 1 | " " | 27 |
| 4 | " " | 15 | 3 | " " | 28 |
| 9 | " " | 16 | 1 | " " | 29 |

It will thus be seen by the above that 64 salmon came under the heading of from 19lb. to 22lb., being a large percentage of the whole "take." Their total weight was 2,705lb., and the average of the whole was between 16lb. and 17lb. Very good, indeed!

Of the gentlemen who fished the various waters in this district other than those above named, and were very successful, we may mention that the Earl of Hardwicke, who had fished the Floors Castle water, had good sport, and the same nobleman had splendid sport on the Dupplin water, having up to the 3rd November killed over 100 salmon in the various Scotch rivers he had angled on. In the latter water he had 55 salmon in 16 days, the weight of which was 1,038½lb., and he had also 10 grilse of 75lb. On the Sprouston water Mr. J. Brunlees, C.E., London, had 9 one day; while, on the same waters, Messrs. Whatman and Balfour, London, killed 17 salmon with one rod in one day's angling. Of the others who were most successful were Mr. Cooper, London, on Floors water; Mr. Wood, London, on Sprouston water; Mr. Mayor, London; Mr. Crawhall

Newcastle; Mr. Bidden, Q.C., London; Mr. Barrington, London; Mr. Walker, Scarborough, &c., &c.

### Teviot

has again been a disappointment to anglers, as very few fish have been got from its pools and streams, owing, in a great measure, to the smallness of the volume of water flowing in the bed of the stream, as many fish were to be seen in the various "casts." The champion for the year was Mr. A. Turnbull, the Cemetery, Kelso, who had 9 fish to his own rod, this being four less than last year, when he topped the list with 13.

In bringing this *résumé* to a close, we must congratulate those anglers who visit the banks of the Tweed in the search of salmon fishing on the success which has attended their efforts during the past season—both spring and autumn; and as the rivers are at present very full of fish all bent on Nature's duty, and with little or no appearance of the dreadful fungoid disease, we anticipate for them another seaason of large "takes," once the new campaign opens in 1885.

## A FEW PISCATORIAL JOTTINGS FOR THE SEASON.

By "Chub Chavender."

The spawning season of the trout is fully upon us, and in many rivers the earlier fish have deposited their beautiful coral and opaline gems of spawn—for when it is considered that each egg has the initial life of the carmine-spotted silver-bellied 3-pounder lying latent within it, surely such globules are "gems of price." According to "B."—your valued Thames correspondent—the trout of that river had deposited them as early as the first week of December. In most of the chalk rivers, however, this is exceptionally early, and in the Itchen and Test it is not likely that the bulk of the fish will have done with their conjugal duties till January, though it is true the exceptionally mild weather will hasten the act of generation very considerably. Some of the first batch of the males are busily at work in the former of these two rivers at the time of writing, but if a sharp frost comes the earliest eggs will receive a check which will assimilate them in point of time closely with the succeeding batches. Last year in the upper Itchen I found the fish were ready all at once about the Christmas week.

Don't the grayling have a glorious time of it in some parts of the Itchen below Winchester and in the Test spawn-eating!

By the bye, speaking of the Itchen, I heard a capital story to-day told me by perhaps the best fly-fisher in the county. Once on a time—it boots not when—he was accompanied by a brother piscator to fish. This gentleman, though in every respect an admirable sportsman, was at night-time remarkably nervous, and as they returned in the dark from their field of operations the conversation feel upon the escape of two lunatics from a neighbouring asylum. The bank-side was dark, and everything was hushed and solemnly still, when the clank of chains fell upon the ears of both. "Oh, dear!" stammered the affrighted one; "perhaps it's those two poor lunatics. Let us make haste!" "Nonsense," returned the narrator; "and even if it is, the poor creatures won't hurt us." "Oh, do come on C——" was the reply, and with more haste than caution our timid friend made his way as rapidly as his shaking legs would allow. Presently, as they got into a field—the sound of chains still quite apparent—poor Timorous espied in his way the form of a lazy, slumbering cow, and forgetting the frailty of his rod, he lashed out with it on the beast's back. The second blow let loose the fly on his line, and as the cow rose the recoil of the rod hooke it in the root of her tail. The prick of the hook was sufficient to rouse her todactivity. On went the cow, and whirr—whirr went the check-winch. Piscator ran and tumbled after, the cow increased her pace, and finally ploughed her way through the hedge. Unwilling to let go, Piscator followed and essayed to jump the obstacle, when plump he fell face foremost in the slush and mud on the other side. Whirr went the reel and snap went the gut, and as our timorous angler picked himself up out of the slough of despond into which he had fallen, aided by the narrator of the story, a large dog with a broken chain attached to his collar bounded up and fawned upon them. It had simply broken its chain, and was seeking for a master.

What a pity it is that such a really good pike pond like that of Alresford is not better cared for. During the dry weather, previous to the recent rains, the bulk of its area has been almost dry. Yet there are still, notwithstanding the great takes of the members of the Gresham, some very fine jack in it—aye, and big trout, too. I saw one which had been slain by a local in the summer of 1883 which went 14½lb., and, in my judgment, it was a brown trout (*S. fario*), too. It might be made a magnificent trout lake if cleaned out and looked after, but it seems hopeless to expect that this will be done. Previous to the occupation of the pond by the "Gresham," I had one very red letter day, in which 96lb. of jack were taken to my own rod alone *spinning*. Yet, when I wrote you, Mr. Editor, suggesting that you visited it, you replied that you thought the myriads of white fish would prevent any considerable sport. By the bye, there s a tradition of Alresford pond which most probably most of the "Gresham" who have visited that classic town of Tichborneism must have heard. It is to the effect that a certain person desired to drown a dog. He repaired to the pond and tied a brick on the poor creature's neck. Then he threw the dog in, but the brick slipped ere Ponto reached the bottom. As he ascended to the surface a dozen voracious monsters of the deep darted for him, and ere the agonised creature could scarcely cry out he was torn to pieces by pike before the eyes of his executioner. My informant assured me that two huge pike were seen fighting over a long length of its entrails, one at each end, like two birds at a worm. I couldn't help exclaiming "*Credat Judæus*" as I heard the conclusion.

A correspondent some time since mentioned the capture of a roach which was disproportionately deep for its length—in fact, its belly was of aldermanic proportions. In another issue a writer suggests that this might have been due to obstruction of the ova, as in the case of carp. There is great probability in this suggestion, for I have several times found large carp (12, 13½, and 15lb.) dead at spawning time in a large lake formerly under my control which, on evisceration, showed several hard masses of tumefied ova packed close together, and finally to such an extent that it impeded the ordinary functions of nutrition. But I have another theory as to this obesity, and that is that it was caused by tapeworm. I have on various occasions found roach to contain great lengths of the certode. On one occasion no less than 30ft. of the worm was taken from a roach of 1lb. weight—there were five of them. Dr. Spencer Cobbold kindly identified them with Creplin's *ligula digramma*. It is very advisable that fishermen taking abnormal fish should use the knife and endeavour, by means of a little rough-and-ready dissection, to discover what is really the cause of the abnormal appearance. It is similar with trout. You catch a black trout, and seeing nothing except the dark colour to warrant you in thinking it an old fish, you nevertheless reject it as one. If, however, you open it, you will probably find its liver is perforated with the "fluke," a parasite quite similar to that which is found in the hepatic organ of a sheep. A most interesting study is this of the diseases of fish, and quite worthy the angler's attention in the interregna of sport.

*Re* the influence of drugs on fishes.—I picked up a book some time since at an "old book" stall entitled "Every Man his own Farrier," published by Sowerby of Halifax, in 1852. It is by an "Old Farrier," and in the addenda there is a collection of capital recipes (for the most part), amongst which occurs one—"Prechtl's Method of Preserving Fish Alive." It instructs one to soak bread-crumbs in brandy, and after pouring a little of this in the mouths of the fish, to fill them (the mouths) with the brandified bread. The fish are then to be packed in clean straw, and they, it is said, will come to life in water after ten or twelve days—I think that is the time, but not having the book near me at time of writing am not sure to a day or two. I sent this "recipe" to Mr. Oldham Chambers, but have not since heard from him in reference to it. On the face of it, it is absurd; but it would be interesting to know how long a perch, say, might live under the influence of spirit *out* of the water. Coccalus indicus, tobacco, and cordamous have each a stupefying effect on fish, and an old poacher's dodge is the mixing of *a* spirit—not brandy—with paste, and so stupefying trout so that they can be readily taken out at a lower part of the river as they float down. I do not give the name of the spirit for obvious reasons; it is nevertheless a fact, for I caught a poacher red-handed at the little game in Hertfordshire some years ago.

By the way, I wish to ask a question of the practical fishculturists who read your paper. Is it within their observation that the process of artificial spawning has a tendency to deteriorate the vitality of the species of trout?—that is to say, have they noticed that at about the third and fourth generation of artificially-bred fish the fecundity fails, and barren fish, which are in good condition all the year round, result? At any rate, this I *know:* there are many fish taken out of a particular river I wot of which has been subjected to artificially-bred fish for many years which are absolutely without developed ovaries, and in some cases even the rudimentary ovary requires careful looking for. In the course of spawning operations carried on during the past four years on the river I have repeatedly come across fish of 1lb. and 1½lb. with pink flesh, bright colours, and absolutely no indication of spawn.

Mem. for trout fishermen.—When you bring your fish home and empty them from the creel, do so one by one into cloths, wetted, and wrung out. Roll the fish tightly, and next morning the colours of the fish will be restored to their original beauty. As a rule, if they are allowed to meet the air and dry they are part-coloured next morning, and look very unpleasant. For specimen fish, roll tissue paper all round them before the slime dries, taking care to roll enough on. It can be washed off easily. The colours will be just as they were in the stream even after a long journey.

The chub should soon be amenable to pith and brains now. Don't forget, oh Thames piscators, that when the thermometer is below freezing-point you will find *Cyprinus cephalus*—not in shallow water under the overhanging branches of osier, &c., but in deep, still lagoons, where the temperature is a degree or two higher than in air. There are various ways of preparing the pith for the hook. I boil till the pith becomes hardened, and then toss it in bran till cool. The bran scales off when you are using it, and is rather attractive than otherwise.

So also will the perch be "packed" and ready for slaughter. Let the tail of a well-scoured lob be not dispised, nor the lively black-backed minnow be discarded; but if you can get small gudgeon do so by all means, and use it in preference to any other bait for perch. Hook the hook through both lips; I like a triplet hook of small size.

Just a word to the amateur fishculturist. After getting the spawn safely in the hatching-boxes, taking care that your gravel is not too fine, else one part of the egg has not its complement of water in circulation, and letting each egg be apart from its neighbour; keep the light from them, especially candle light. Begin to feed as soon as the little fish are seen to skim the top of the water. You may give them groats, bullock's liver, or yolk of egg boiled hard and pounded in a mortar. Then mix a little water with the yolk, and scatter the food with a feather. There is one thing against this, and that is, that if there be much waste left at the bottom the egg engenders bysshus. This, however, does not seem to do a great deal of harm—not nearly so much, indeed, as the putrid remains of liver or worms. I, therefore, recommend yolk of egg in preference to any other food.

[We should very much like to hear the opinions of Mr. Andrews, Mr. Silk, and other pisciculturists on the point raised by our contributor as to whether artificial breeding has the effect he refers to.—Ed.]

## ADVERTISEMENTS IN THE "FISHING GAZETTE."

It is, of course, quite impossible for us to be answerable for the *bonâ fides* of all who use our advertising columns; but we may say this, that we trust any of our readers who mav be imposed upon in any way will let us know, and we will at once withdraw the misleading advertisement in the common interest. We take no credit for refusing to insert a certain class of objectionable advertisements, which, of course, pay well, but are properly tabooed by all respectable papers.

## PRAISE OF FLY-FISHING.

"The dictionary-making pensioner," as Cobbett used to call Dr. Samuel Johnson, defined angling as a silly thing, practised by a fool at one end of a rod and line and a worm at the other.

Let us after this see what fly-fishing is—whether it *is* a fool at one end of a rod and a worm at the other. The greatest names in arms, science, literature, and art—heroes, divines, mathematicians, poets, painters, sculptors—have been devoted to fiy-fishing. . . . . Other field sports may be more exciting than artificial fly-fishing, but there is not one requiring more skill or calling into exercise more intelligence and adroitness of mind and limb. A quick eye, a ready and delicate hand, an apprehensive brain, delicacy in the senses of touch and hearing, activity of limb, physical endurance, persevering control over impatience, vigilant watchfulness are qualifications necessary to form the fly-fisher. His amusing and chanceful struggles, teeming with varying excitement, are with the strongest, the most active, the most courageous, the most beautiful, and most valuable of river fish, and his instruments of victory are formed of materials so slight, and some of them so frail—they are beautiful as well—that all the delicacy and cunning resources of art are requisite to enable feebleness to overcome force.

Ephemera.

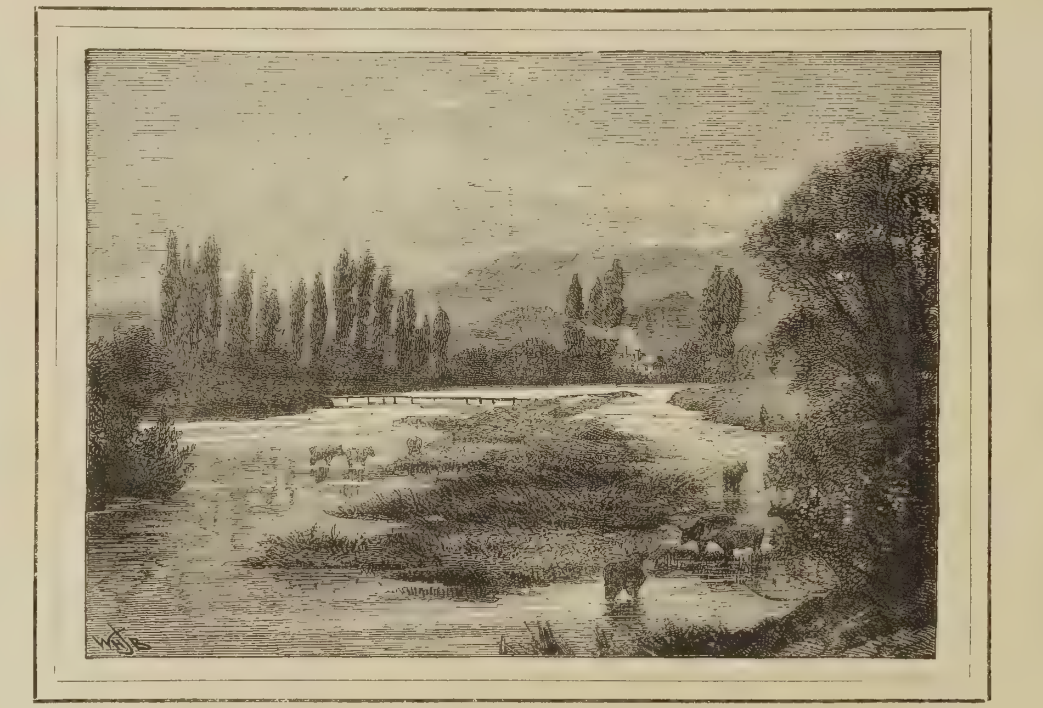
## THE FISH HATCHERIES OF SCOTLAND.

From a paper prepared by Mr. J. Barker Duncan, W.S., the hon. secretary of the Scotch Fisheries Improvement Association, it appears that there are seven hatcheries in operation in Scotland. These are:—(1) the Howietoun Fishery (Sir J. R. Gibson Maitland, Bart.); (2) the Solway Fishery (Mr. Joseph J. Armistead); (3) the Stormontfield Ponds; (4) the Dupplin Hatchery (Tay District Board); (5) the Loch Leven Hatchery (Loch Leven Angling Association); (6) the Linlithgow Palace Loch Fishery (Mr. A. G. Anderson; (7) the Marquis of Ailsa's Hatchery at Culzean, in Ayrshire.

## THE *SATURDAY REVIEW* ON DR. HAMILTON'S "RECOLLECTIONS OF FLY-FISHING."*

Many very pleasant books have been published this season—reminiscences full of anecdote of fair women and distinguished men. It may be a despicable confession, but we are compelled to admit that we prefer to these Dr. Hamilton's reminiscences of salmon he has met, and trout and sea-trout with whom he has been on intimate terms. This preference many fishers will feel, we think, and Dr. Hamilton's "Recollections" ought to be a great favourite with contemplative men. The book is a very pretty one, especially in the large-paper edition, limited to a hundred copies. Mr. Seymour Haden contributes a pleasant mezzotint of a salmon river, a "stream that flashes white," beneath dark, wet woods, and a soft, windy, cloudy sky. There is the native land of the angler's soul. There are woodcuts, also, representing Highland lochs and Lowland rivers like the Test. Dr. Hamilton writes in a good angling style—good, and not too good—with an agreeable laxity, here and there, in his English. He has fished much for forty years, and he has fished in the best places—the lochs and streams of the West Highlands, where, as the doctor says, it never rains half enough, and in the clear, slow waters like Itchen and Kennet. . . .

Anecdote is not Dr. Hamilton's only forte. He has also chapters on natural history, and pleasant bits of description of landscape. One delicious day with sea-trout and wild duck on an Argyleshire loch makes the heart sick to think how many months lie between us and the chance of those enjoyments. Among the "wrinkles" which Dr. Hamilton offers, the following is worth remembering:—"When the water is very bright and clear in the pools, many a fish may be hooked and landed by allowing the fly to sink as deep as you can, and then slowly sink and draw, never bringing the fly to the surface. You see a movement in the water, a swirl and twist, and your line tightens." Unlike most men—but with practical reason for his opinion—Dr. Hamilton prefers a dark fly on a dark day, a bright fly on a bright day. His remarks on flies, both for trout and salmon, are to the point, and not too long. He has found Mr. Herbert Spencer's reversed hackles pay on one loch; but the ordinary pre-scientific hackles are good enough for our turn. . . . . . Dr. Hamilton's remarks on gut, which in trout-fishing should be fine, but not too fine, are equally worthy of attention. He likes to be able to haul a trout the moment it is hooked across the weeds into clear water, and very fine gut will not stand this. At the same time, it is true that very fine gut will stand an *equable* strain beyond what could be expected, as we have proved in the case of sea-trout in Highland lochs. When there is no breeze, or next to none, on a loch, there is still a chance with fine gut, if the angler remembers that it *is* fine, and does not act as if he were using his ordinary stout tackle. Dr. Hamilton's book reminds one of so many delightful sights and sounds—the first view of the dark, wind-ruffled loch waters, the keen smell of bog-myrtle and peat in the Highland air, the cry and flight of birds, the clear stretches of Kennet, where the tiny circles tell of rising trout—that we leave it with regret, cordially recommending it to all good men, and wishing them no worse sport than that which the author so charmingly describes. A pleasanter book on a pleasanter topic has not been published for years.—*Saturday Review*, Dec. 13.



VIEW ON THE RIVER TEST AT LONG PARISH.

(*From* Dr. Hamilton's "Reminiscences of Fly-Fishing for Salmon, Trout, and Grayling.")

## SHORE FISHING.—No. VII.

By E. G.

When fishing from any projecting point where the tide stream runs strongly, and the water is deep, say, 20 to 30ft., put on almost as much lead as your float will bear, and make fast a piece of stout cotton or thread to the lower hook (take care that it is weaker than the gut, and so will carry away if it gets foul); it should be about 2ft. long, and have a buck shot or small pistol bullet at the end; then guess at the depth, and, if not deep enough, keep putting your line deeper until the float goes under, which it will do when the shot strikes the bottom—that is, if there is a good tide stream running. If there should be only a very slight stream the float will, perhaps, not go under, but, when the weight is down, will appear as if moored, and keep swaying from side to side. If it is dead slack tide or an eddy, throw out from the reel some 20 or 30 yards, and try the depth. In slack water the float will lie flat when the shot is on the ground. If the bottom is rocky, do not alter the depth, but take off the thread and shot and begin to fish; it is no use getting too low, as, if you are, the hook will be continually getting hung up. If it is a sandy bottom this plan may also be adopted to find the depth. In this case, after removing the thread, set your float deeper, so that the bottom hook may just drag, and give a chance of getting flat fish, rays, &c. Sometimes you may find a place where the tide stream sets right off from you: when this is so, take good long swims, and have a baby spinner just above the lower hook. Of course for this fishing a sliding float is necessary; in fact, I use them for all purposes, as when not required to slide they can be made fast by taking two half-hitches round the top.

In places such as the last mentioned you may put out a drift line. For this take 20 to 25 fathoms of strong snooding, well stretched to take the kinks out, an ordinary pike float, which place a yard away from the end of the line, where slip on a good-sized pipe lead, then affix a yard of finer snooding or plaited undressed silk, then a small brass swivel, and end with a yard of salmon gut and a good-sized Limerick hook—or, what is better, a Marston sliced hook. Bait with lug, rag, or sand worms; if the two latter, put on two, three, or four, according to size, or a slip of any bright fish, or squid in conjunction with a mussel, which should be hooked through the tongue. Let this drift out, and make the line fast; you don't want a rod. Very often this line will pick up mackerel or pollack. There is one drawback: it is apt to get in the way of your rod line. I think, however, I see a plan to keep it out of the way, and will give it a trial, and, if successful, report results. In these deep sort of places you may expect to get larger fish and a greater variety than in the shallow water—bream, ray, codlings, and sometimes large cod, mackerel, and gurnards; in fact, when you are fishing in five or six fathoms of water, it is impossible to say what may not come along. If you are not doing anything with dead bait, get a live sand eel, a small flat fish, a prawn, or any small fish, and try with it at about three-fourths of the depth of the water; or, if this does not do, put on a spinning bait, real or artificial. Remember, if you do not see any fish on the surface, you must put plenty of lead on the trace and spin as deep as you can, letting the bait go nearly to the bottom before beginning to draw it in. Small fry, suitable for bait, may be got in the rock pools with the shrimp net. It will sometimes happen that a school of mackerel will rush in after the "brit" or fry right under the point of your rod when you are float-fishing: when this is the case reel up and draw your hooks about quickly among the shoal; you will often pick up two or three in this way, and large numbers are often taken with a medium-sized Totnes minnow. Very often where there are deep gullies they will rush in after the "brit" at intervals of a few minutes for hours, and, if you have the luck to spot one of these places, you will have good sport with any spinning bait about minnow size. During the latter part of summer, and till quite late in the autumn, when the sea is calm or the wind off shore, enormous shoals of "brit" congregate in these spots, and there are always plenty of fish of all kinds looking after them, and being of a predatory nature will take a minnow. Large conger are frequently seen swimming along by the side of the rocks, trying to get their share of the spoil, and may often be gaffed. A friend who is very expert with the click often gets some very fine ones. I have seen him take them from 20 to 30lb. They are generally so intent on watching for a chance at the small fry that there is no difficulty in getting near them; but it requires a sure eye, hand, and foot to gaff them well, and I can only recommend this sport to those who possess these physical qualifications, as, in their absence, a dangerous fall, to say nothing of immersion and possible drowning, may be the result. If you are likely to try, it is best to have the handle of the gaff (which should be of ash or hickory) "checkered," as gunmakers do gun-stocks to give a sure grip, or have a large knob turned at the end. A friend who lived on the West Coast of Ireland told me he had speared them, using something like a salmon leister, or what sailors call a "grains," but for this a boat is required. I should imagine it must be an awkward job to get a big conger off the spear, though, unless the teeth were of great strength, he would smash them off directly he got on board. You will not find mackerel coming so close in shore, except in unfrequented places, and where there are few or no fishermen, as by using a stop net at the mouths of the gullies they would soon catch them up or frighten them away. If you have an opportunity, dip up a lot of the "brit," and use them for bait; put them on by running the hook through the heads of three or four like you do with gentles, so that they will hang down, as Greville F. says, like a bunch of keys. They are very tender, and die directly, so that it is no use putting them on for live-bait.

If you have luck to get a quart or so of them, take them home and try them fried—they are as good as whitebait; in fact, I expect they are the same thing, being nothing but herring or sprat fry, although sometimes other species are mixed with them—as, for instance, the mackerel midge (*Conchia glauca*), &c., &c.

In my next I have something to say about ground-bait, which, though considered of the greatest importance by the fresh-water angler, has not yet received the attention it merits by the salt-water one.

## A QUESTION AS REGARDS MR. BIRKBECK, M.P.

One of the things which no one can understand is the cause of the utter absence of any substantial recognition on the part of the Government of the great services which have been rendered by Mr. Birkbeck. It can hardly be because he is a Conservative!

## NOTTINGHAM ANGLERS AND ANGLING RIGHTS.

A "Public Rights Committee" has been formed by some of the leading citizens of Nottingham, and they have for some time past been obtaining evidence and getting counsel's opinion as to the rights and privileges of the public in the river Trent. The result is that the Committee have decided that they will leave no stone unturned in their endeavour to reinstate trout anglers in their rights; if necessary, they will go to Parliament for a new charter. There is to be a large meeting in Nottingham shortly, and then one in London afterwards.

## SPECIAL NOTICE.

**The Fishing Gazette**
FOR NEXT WEEK WILL BE PUBLISHED ON
WEDNESDAY, the 24th inst.
**RIVER REPORTS for Xmas Week must reach us on WEDNESDAY MORNING.**

JAMES OGDEN,
28, WINCHCOMB STREET, CHELTENHAM,
PRACTICAL ANGLER, FLY DRESSER, AND MANUFACTURER OF EVERY DESCRIPTION OF FISHING TACKLE.

James Ogden's Newly-Invented Premier Spinner,
Regd. Nov. 13th, 1883. This Bait is constructed upon an entirely new and improved principle. For Salmon or Pike, 6s. 6d.; Trout or Perch, 5s.; smaller do., 3s. 6d.
SILVER OR GILT. Also coloured similar to the Devon Baits, &c.
JAMES OGDEN'S MULTUM IN PARVO FLY RODS. PRICE 21s.,
The enormous and increasing demand for which is a sufficient guarantee for the high estimation in which they are held by the leading anglers of the day.
All Standard Flies ordered, or dressed correct to pattern, will be despatched by return of post.
N.B.—No Connection with any other Persons assuming the same Name.

KILLING BAITS FOR CHUB, ROACH, DACE, BREAM, &c.
WELL-CURED WASP GRUBS,
Price 3s. per pound. Also, LARGE MEALWORMS, 5s. per 1,000, 1s. per 200. Post free. Address—C. BRADLEY, 62, Jacob Street, BRADFORD, YORKSHIRE.
CASH WITH ORDER.

## ANNOUNCEMENT.

It is our intention during the coming year to publish illustrated accounts of the chief English, Scotch, and Irish Fishing-Tackle Manufacturers, both wholesale and retail. They will take the shape of

Interviews by our Correspondent,

with the heads of the respective firms. The first of the series will appear early next month, and will be devoted to the great English and Canadian house of Samuel Allcock and Co., with a portrait of the head of the firm, Mr. S. Allcock.

## NOTICES OF FISHING TACKLE, &c.

Mr. D. Slater, fishing-tackle maker, Newark-on-Trent, has sent us what we cannot but consider as—at the price—a marvel of rod-making. It is a three-joint pike rod with upright rings and winch fittings; the joints are half-brazed and the ferrules are ringed—that is to say, the end of each ferrule is double and thus all chance of splitting is avoided. This is a most valuable improvement; we have often found ferrules split both in fly and spinning rods when a little extra exertion is used—for instance, in swinging out a half-pound roach for pike the strain is very great. This rod is made of *best greenheart* from end to end. It is very light and powerful, provided with stoppers and partitioned bag, the whole, price 12s. 6d., and you can have it in four joints or stouter or slighter, as you choose. Mr. Slater evidently believes in small profits and quick returns.

Foster's Improved "Acme" Pike Line.—Messrs. D. and W. Foster, of Ashbourne, Derbyshire, send us one of their dressed "Acme" pike lines. We used a similar (though smaller) line the greater part of last fly fishing season, and were very much pleased with it. We have had no opportunity of trying the pike line yet; but have no hesitation in saying it will be found thoroughly reliable in every way.

## RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

Add
30 minutes for Chelsea.
40 " Putney.
45 " Hammersmith.
50 " Barnes.
55 " Kew.
75 " Richmond.
80 " Twickenham.
85 " Teddington.

Example:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | | Morning. | Afternoon. |
|---|---|---|---|---|---|
| Saturday, | December | 20 | ... ... | 3.26 | 3.45 |
| Sunday, | " | 21 | ... ... | 4.1 | 4.17 |
| Monday, | " | 22 | ... ... | 4.35 | 4.53 |
| Tuesday, | " | 23 | ... ... | 5.10 | 5.29 |
| Wednesday, | " | 24 | ... ... | 5.49 | 6.12 |
| Thursday, | " | 25 | (Xmas Day) | 6.34 | 6.59 |
| Friday, | " | 26 | (Bk. Holiday) | 7.27 | 7.57 |

☞ *River Reporters who want forms and envelopes should send a post card to the Publisher of the* Fishing Gazette, *12 and 13, Fetter-lane, London.*

### THE LOWER THAMES.

General Remarks.

The river has been rising and receding, and the water nicely coloured. The one great event of the week has been Mr. Bull's additional success amongst the large barbel at Teddington. In one day, at the beginning of the week, he caught sixteen barbel, estimated to weigh little short of 80lb.—he only weighed ten of the largest, which made exactly 60lb., the best fish weighing 8½lb., and all caught with pieces of lampern. The whole of the fish were put back again after being marked, so that Mr. Bull can recognise his old friends again.

Angling Results.

**Richmond.**—Henry Mansell, in a couple of days, has taken ten dozen of roach and dace. Job Brain, in the same time, twenty dozen. Henry Wheeler, in three days, 42lb. F. Brown, in two days, 37lb.; and Henry Howard, in one day, sixteen dozen.

**Twickenham.**—Richard Coxen, in five days, forty-three dozen of roach and dace. H. Spiers, in one day, seven dozen. C. Miles, the same quantity. J. Dobbins, eight dozen; and John Spong a similar result.

**Teddington.**—Benjamin Stevens, in one day, four barbel; and Mr. Bull and F. Kemp sixteen barbel.

The water has been all against fishing in the tideway this week, but it is now much improved.

**Kingston.**—John Johnson, sen., writes: "I have only had one day's fishing this week and that was in the tideway, when I got eight dozen of dace. My son John has been out twice, and got five dozen of roach at Kingston, and six dozen of dace in the Tideway. The perch should begin to feed now, if anyone would come and try for them. The river is in fine form for roach or bream. A carp was picked up below Teddington lock, on Friday last, from 7lb. to 9lb. in weight. It had a hole in the head, as though it had been struck with a hitcher. I should say the bream would feed, if properly baited." The bank anglers here, and at Surbiton and Thames Ditton, have caught a nice few roach, dace, perch, and chub.

**Hampton Court.**—George Martin, in two days, ten dozen of roach and dace; and Thomas Wheeler, in three days, sixteen dozen. At "Tagg's Island Fishery" there have been some good takes of roach and dace.

**Hampton.**—J. Langshaw, jun., in one day, six dozen of fine roach. The bank anglers have been doing well amongst the roach and dace.

**Sunbury.**—Mr. Edmonds has taken, in one day, 26lb. weight of fine roach. The bank anglers are estimated to have taken twenty dozen of roach and dace, in addition to some perch and chub.

**Walton.**—Mr. Alfred Mackrill, in a couple of days, with George Hone, four brace of perch, the best fish weighing 1½lb., and three dozen of roach; and Mr. Hickey, another day, with the same fisherman, one brace of jack. John Hone, in one day, three dozen of roach.

**Shepperton.**—Mr. M. H. Blamey, with David Hackett, in one day, seven chub, the five largest weighing 2½lb. each. Henry Purdue, in one day, three dozen of roach; and F. Purdue, two and a half dozen.

**Weybridge.**—Mr. White, in one day, with Herbert Curr, a jack of 5lb., and seven dozen of roach and dace.

**Chertsey.**—John Poulter, one day, three dozen of roach and one chub, and another day, two dozen of roach and one perch.

**Staines.**—John Keene, jun., one day, six dozen of roach; another day, eight dozen, and another day, six dozen. John Keene, sen., in one day, two dozen of roach.

## UPPER THAMES.

The state of the elements during the past week has precluded any chance of successful sport amid the finny tribes. The river is bank high, still rising, and of the proverbial pea-soup consistency. Roach can now be best approached with the tail of a lob on a light ledger, fishing available eddies and quiet lay-byes. Perch and chub should not be attempted until the flush is of a retiring disposition. Jack may be found close to the banks, and should be introduced to paternoster. At Maidenhead, Cookham, and Bray fair bags of roach and perch were had early in the week from the banks, one enthusiast taking 7lb. of roach, and another 6lb., all being had with worm for bait. At Hurley, on the 14th, Messrs. Kidd, Finch, and Parry, between them took some 10lb. of roach and dace. Several other bankers were out the same day with varying success, amongst whom I noticed a fair fisher, who obtained some 5lb. of good roach. This lady thoroughly deserved her success, for the day was very dirty, and hardly fit for a rat to be out; but then this lady must be a first rat-er. The Medmenham waters have yielded up some five jack lately, the best fish going 7lb., and had by Bob Young. I wish all my angling confrères and other readers of the FISHING GAZETTE "a Merry Christmas and a happy and prosperous New Year."—MARLOW BUZZ.

### Thames (Datchet).

The past week fishing has not been very good; as the weirs having been drawn up and down it must disturb the fish. I have not been out this week at all. My son, out on the 14th, took but very little—7lb. of roach. Out on the 15th, he got on very well at the start, until the weir was drawn, and then it was all up. The water went down at the least 2ft. Done but very little after—only 6lb. all through the day. I hear that the banker fishers have been getting on very well in the Old River this last week—been taking them with the worm. Roach: the water is rather thick at present, and the fish are like ice which have been caught. Very sorry to see more rain to-day, as I think we have had enough for the present. Better tidings I hope next week.—JAMES HOARE.

The changeable weather makes it almost impossible to know what to expect. The roach are biting very well at paste and tail end of lob. Have been out one day; roach bit very well in the evening. Have had other little turns, with following results: On the 12th inst. two dozen roach, ledgering with worm, averaging 1¾lb. On the 15th, two barbel and a few roach. On the 16th, after a severe frost, mid-day, five barbel and a few roach. Mr. Fenn tried the chub on the 16th, and got one 2lb. The rain that fell that night has postponed their biting, and jack ditto. Mr. Buchanan, on the 15th, 5lb. of roach, and on the 16th, 15lb. of roach, all with paste. Not many anglers out.—G. LUMSDEN.

### Thames (Goring).

Water now a little thick. In good order for roach fishing. Nothing doing here this week. Only a few roach.—J. RUSH.

### Thames (Oxford).

Unless settled weather intervenes between this and Boxing day the Christmas sport will be anything but good. Throughout the week very little has been done, and that not worth recording. Mr. Able Beesley, the champion punter, a well-known resident of this delectable locality, was caught by two of the honorary bailiffs on Sunday morning with a quantity of undersized fish in his possession, which he had taken at Port Meadow with a cast net. It appears that whilst one bailiff held the man who was in charge of the punt in conversation, the other, waiting his opportunity, dropped from the Black Swing Bridge into the boat, the man, relying on the decision in the case of Thomas Johnstone, having refused to come to land when called upon. When the party arrived at Mr. Beesley's house he treated his visitors in the rudest manner, and finally mounted the well and intimated his intention of knocking the first person who attempted to enter his boat into the water. From what I hear to-night I shall be required to take a verbatim report of the conference between Mr. Beesley, the Oxford Angling Society, and the City Bench, which will ensue in a few days. Before I write again—and then I hope it will be of heavy takes and large fish—the pleasant message of the bells will have again rung out over the silent country, and I trust that in their train they bring to Editor and readers alike a very merry Christmas.—CHERWELL OTTER.

### The Thames (Windsor).

Though heavy rain fell here last night, I venture to predict a good water during the Christmas holidays—not Parliamentary holidays—for jack, perch, and chub, unless we get an extraordinary downpour. I myself intend trying the former, devoting a day to spinning with sprats—an excellent bait in a slightly coloured water if you have the tackle suitable, as they are very tender. Doubtless I could do far better with my one-hook gut paternoster; but for very cold weather spinning is much to be preferred: there is exercise and pleasure in casting, besides being more sportsmanlike. By the bye, that last day of mine at Bray, I toiled all day spinning over every inch of that fishy-looking bit of water, from Wilder's Bucks down to the bottom of the Cut, without the sign of a run, and can attribute it to nothing—at least I have none of the proverbial anglers's excuses to offer. A nice ripple was on water, it was cloudy overhead, and wind in right quarter. Who knows the cause? Not scarcity of fish, as the Rev. Cecil Fardell, whom I was with, assured me that only two days before, on this piece of water, he had a brace 8lb., lost one about 12lb., and had 11 other runs. When water is fit I may have revenge in that quarter, but cannot pick a better day. Those who delight in "running the quill" for chub ought now to be able to get an unlimited supply of bullock's pith (spinal cord) and brains of their butcher, if seen to at once; and as regards water for its use, do not think anglers will be disappointed if fishing after this week. Any one requiring a day's fishing on this principle should place themselves in the hands of an experienced "chubbist," if I may use the expression, of whom there are a few on the Thames. One lesson from a good man is worth all that was ever written on the subject, especially if water is right and they feed well. Poor old "Nottingham George" was an adept at this business; but never again will he send home that little bit of steel that so bothered these big-mouthed gentry, who could not refuse a nicely-flavoured piece of pith when put on by his skilful fingers. Thanks to the kindness of many old patrons, in response to an appeal made by Mr. Francis Francis some time back, he is not in want, though his allowance is small, and I daresay a few shillings extra this Christmas would be the means of once again gladdening the old chap's heart, as it used to be when hitting those leviathan barbel and chub in the days of long ago. If, as I have always understood, he was the originator of the far-famed Nottingham winch, anglers owe him not a little. With respect to sport very few anglers have been out. At Monkey Island, Bob Plummer reports things very quiet and very few fishermen down. His son, out 16th inst. with two gentlemen, had one nice jack, a brace of perch, and a brace of chub. At Old Windsor Haynes had a good day with a gentleman, 14th inst., among roach and jack. From Datchet Lumsden appears to have done well. He tells me he has had the following:—12th inst., two dozen roach, averaging ¾lb., taken with worm—largest 1lb.; 15th inst., two barbel and one dozen roach; 16th, five barbel, 2½lb. average, and a few roach. Out with Mr. Buchanan yesterday, 15lb. of roach, and the day before 5lb. Hoare, sen., one day, 6lb. of roach. Mr. Howard, out with James Gray at Surly Hall, 14th, a brace of jack, his usual luck in getting more runs than fish not forsaking him.—B. R. BAMARIDGE.

---

### The Bure (Norwich).

Some very fair sport amongst the pike has been had lately. Reports of catches made on one broad show that 13 nice fish fell to the lot of one party and 10 on another occasion; whilst at a pretty little piece of inland water close to this river a friend of mine got eight very good fish, the largest scaling about 9lb. During the Christmas holidays all the stations on this stream ought to be busy, as the best of the Broad district is thus reached. Many Norwich anglers have already made their arrangements for 25th, 26th, and 27th inst., and I fancy Mr. Jack will have to be very careful to avoid an unpleasant rise in life, though if he falls a prey to his gluttony he does so in good company at this festive season. I wish every reader a very merry and joyous Christmas, and every success in their piscatorial efforts during the holidays.—ROBERT MOLL.

### Chichester.

The past week has been somewhat finer, a frost on Wednesday night giving promise of a successful day among the pike; but rain has fallen the whole of this day. The recent rains have improved the water, the canal gradually rising. A few good roach have been taken, but the canal side has been almost deserted by rodsters. No news has reached me from either Selham or the Ouse. We are hoping for a seasonable Christmas to make a raid on the Selham pike.—GEORGE F. SALTER.

### The Dove.

There is very little doing just now—in fact, I don't think twenty rods have been out along the whole course of the river since my last communication appeared. As I observed last week, things always slacken down a good deal on the Dove just before Christmas, but the spell will be broken directly the holidays set in; that is, if the weather remains anything like open. The flies on the surface are the winter duns, but there has not been much rise of grayling this week. We have had a fall of snow to-day (Wednesday), and as the temperature has fallen very low, we look like having a frosty Christmas. The river is in capital order for either fly or bottom fishing.—THE SPLODGER.

### Exe and Canal (Exeter).

A few roach and perch have been taken near the railway station during the past few days; but now the fish have been shelved for the Christmas turkeys, geese, and other festive comforts. Water clear now, and in good fishing order.—J. A. KELLEY.

### Ilfracombe.

Sea Fishing. Strong winds have prevailed during the past week and, as a consequence, the herring fishing has fallen off considerably, the most taken for the week having been 1½ maize, and those fishing from the rocks and jetty have had very little sport. On Saturday Mr. Slocombe caught a cod, 12lb., from the jetty, and on Monday some whiting from Shallow Path. Weather still very stormy.—E. COMER.

### Lea (Tottenham).

The water, more particularly the "Copper Mill Stream" is in capital condition and the roach the last few days have been well on the feed. Angling prospects for the coming holidays look very bright at present.—HACKLES RED.

### Lea (Edmonton).

The weather on the 14th was not very nice, but some good fish were taken, including one jack weighing 9lb. Some good roach were taken on Saturday and Monday. Mr. Short, of the Clapton, had a decent lot of chub, one scaling 2lb. 14oz. The water is very nicely coloured just now.—T. A. WARD, per W. W.

### Leicester.

The seasonable weather during the latter part of last week and the early portion of this caused the waters in the district to receive more attention from anglers, who, upon the whole, had good sport. Some rare lots of roach and dace were taken, and perch also came fairly well to hand. The best fish were caught with the fresh water shrimp, which is a killing bait at this period of the year in these waters. Pike have been well on the feed, and although no large ones have been captured, a good many between four and five pounds, have been brought to bank. Chub fishermen were fairly well rewarded for their efforts in the Leicester Angling Society's preserves at Aylestone. A few of the wielders of the rod and line visited the distant resorts at the beginning of the week, chiefly for pike, with the result of some nice specimens being shown. The largest that came under my notice was one scaling 8lb. Wednesday was a raw cold day, snow falling heavily at intervals, thus causing fishing to become dreary sport. To-day (Thursday) the weather has again been unfavourable, snow and rain continuing throughout the day, rendering matters very uncomfortable.—ALERT.

### Ouse and Ivel (Blunham).

Both rivers are in very good condition. Some nice jack have been taken. T. E.

### South Level Cut (Littleport).

Not so many anglers down this week, owing, I suppose, to the preparations for Christmas, but those who have been have in no case gone empty away. Dec. 11th.—Mr. A. T. Ellis, Cambridge, got 24lb. of roach in four hours—a picture. Dec. 12th.—Mr. F. Ely, 20lb. roach in three hours; Mr. E. M. Jones, and Master Morgan Jones, Cambridge, 21lb. very good roach in three hours; Mr. Hailstone, 21lb. roach; Mr. W. L. Agger, Cambridge, 10lb.; Mr. C. Brown, Ely, 20lb.; Mr. S. O. Beeman, Littleport, 10lb. Dec. 13th.—Messrs. J. M. Wright and W. Knights, Ely, 15lb. good roach in one and a half hour, largest nearly 1lb. Mr. S. O. Beeman, Littleport, 10lb. in three hours. Dec. 14th.—Several anglers out, and a good lot of roach taken. Dec. 15th.—Mr. C. Brown, Ely, 22lb. of roach; Mr. W. Buckle, Ely, 20lb.; Mr. J. Hutt, Cambridge, 13lb. in three and three-quarter hours; T. South, Littleport, six pike, 3¾, 3½, 3½, 3¼, 3, and 3lb. respectively; Messrs. Bryant and Webb, 10 pike, largest about 8lb. Dec. 16th.—Too much frost; still, Mr. W. L. Agger, Cambridge, got 14lb. roach, two largest 1lb. 4oz. and 1lb.; Mr. Bailey, Cambridge, 6½lb.; Mr. Hall, Cambridge, 7lb.; and Mr. H. Lee, Cambridge, 12lb. good roach.—CHARLIE SOUTH.

### Trent (Alrewas).

During the past week the river has been in fair condition for all-round fishing, and several good pike have been landed. The heavy rains of the last two days have caused another rise in the water, and put a stop to all fishing for the present.—ANON.

### Trent (Newark).

Thursday night.—Water is a couple of feet higher than usual, very much coloured, and I expect in a few more hours we shall have a lot of extra coloured water.—THE TRENT OTTER.

### Trent (Nottingham).

Angling news this week is very scarce indeed; and, excepting the capture of dace at Willington and a few roach at Weston (upper portion, near Cuttle Brook), there is really nothing to relate. Gales have succeeded gales, and on Thursday a most violent thunderstorm upset all calculations as to future sport. Salmon in abundance continue to run up the Dove, and the spawning season, so far, seems to have been a highly satisfactory one.—THE MAN AT THE CLUBS.

### Tweed and Teviot.

Since the closing of the salmon fishings on these rivers, the lovers of the rod and line have had very fair sport in angling for trout, in bottom fishing. Both rivers have now been running very full since the last day of November, and have thus afforded excellent sport. To say that the fish are at present in good, or even fair, condition, would be a misnomer, as they are as thin as rakes, and as soft as butter in summer. Why we have not a legal close time on these rivers for trout is a mystery to me as well as to many other disciples of old Izaak, and the sooner that some of the more influential anglers in the district take the matter up and lay it before the proper authorities, the better will it be for trout angling in the future. One basket of these emaciated fish that came under my notice weighed no less than 11lb., which I am bound to say, that if they had been in condition, would have weighed double what they did at the time of my seeing them. Worm is said to be the lure that all fish are caught with just now; but I am inclined to think that salmon roe is more like the lure, and, as the late Mr. T. T. Stoddart often remarked, "It would be better to legalise roe-fishing, than have it done as at present; for, were it made the law, roe would go up to such a price that only a few of the now would-be anglers would be able to afford the cost of it. I entirely agreed with this idea at the time, and do so still, as anyone who has any pretentions to be an angler can now easily get hold of a pot of salmon roe. The most successful anglers during the past week have been Messrs. Mabon, Lindsay, Cameron, Bell, Robertson, Oliver, Tait, and Johnston, and the baskets have ranged from 3lb. to 11lb. and 12lb. The weather is very open, and the spring fishing of next year promises well, so far as the season has yet gone. Very little disease is as yet to be seen in the river, and with no large flood to bring down the refuse from the upper districts, anglers are of opinion that the forthcoming spring fishing will be a good one.

### Waveney (Beccles).

The water is now getting a bit clearer, and, with a prospect of fine weather, will be in first-class order for angling during the Christmas holidays, which is the earnest hope of your humble servant. In spite of the heavy stream and thickness of the water, Mr. W. Oldham (who, by the bye, is an angler every inch of him) on Saturday last had between 7lb. and 8lb. of nice roach, all standard-sized fish. Wind S.W., clear air, and prospects generally good.—A Waveney Angler.

### Wye and Derwent.

Everything in the shape of fishing seems all over for this year, for to-day (Thursday) we have had a very heavy fall of snow, and a great quantity of heavy rain has also fallen all over Derbyshire, which has caused both the Wye and Derwent to have large waters on them, and now the snow broth has got into the river it will be very little use fishing again this side Christmas, as fish never feed kindly on any of the Derbyshire rivers when the snow broth has once got into the water. Sport during the week has been very bad, owing to the continual rises we have had on the Derwent on most days; in fact, I have not heard of more than two and three brace of grayling being killed of a day by any one angler. A few brace of chub, roach, and dace, and several perch have been killed with the worm during the week between Whatstandwell and Ambergate.—Geo. Jas. Eaton.

### The Yare (Norwich).

Still no good reports from any of the stations on this river. During the week past the weather has again been fickle and the water has been thick, which puts spinning or trailing out of the question. One or two instances of good sport have occurred in waters immediately connected with this stream; on one occasion six nice fish, averaging about 5lb., and last Saturday, between two and four o'clock, twelve jack were landed, and several escaped in consequence of being fouled in the weeds which line the banks of the water in question. I am pleased to say that the gentlemen were sportsmen enough to return seven which weighed under 3lb. each. The frost seems as if it cannot continue; when it does, I believe we shall speedily hear of some good catches. A good many parties are already arranged for the holidays, and I hope they may be lucky. Wishing all your readers a very merry Christmas plenty of sport.—Robert Moll.

## CASSELL'S "GREATER LONDON."*

THIS time last year we had the pleasure to speak very highly of Vol. I. of this admirable work. Vol. II., which completes it, and is even more interesting, has recently been published. There are more than 400 illustrations in the complete work, by the kindness of the publishers we are able to give, on page 298, a specimen—a charming view of the Thames at Richmond—which abundantly indicates their high quality. An excellent map is given with the second volume, and this shows that the district treated of extends beyond London proper, from Waltham in the north to Epsom in the south, and from Staines in the west to Purfleet in the east, thus including the whole of the Thames under the care of the Thames Angling Preservation Society. As every place on this stretch of the river is described, and, as a rule, also illustrated, the work should have a special interest for anglers. A very full index enables one to find in a moment what is said about the thousands of places mentioned in the work. From the pages devoted to Staines, we make the following interesting extracts:—

"Staines Stone.

"It is generally said—and we suppose that the statement may be accepted—the derivation of the name of the town is usually given as from 'Stane,' or 'Stana,' the Saxon term for stone; and it is supposed by Camden, and by various subsequent writers, that the appellation refers to the boundary-stone by the side of the river, which is said to bear date A.D. 1280, together with the words, 'God preserve the City of London.' This stone was repaired, and raised on a pedestal in 1781, during the mayoralty of Sir Watkin Lewes. The stone—be it Roman, Saxon, or Norman, in its origin—still stands on the north bank, a little above the bridge, near the church, on the Lammas Lands. It is adorned with the city arms and motto, and the names of sundry Lord Mayors who have visited it officially, for the purpose of enforcing their jurisdiction, or on swan-upping expeditions. On its base it bears engraved the words 'Conservators of the River Thames,' who, it may here be mentioned, regard the river above this point as the Upper Thames; whilst from here, down to Yanlet Creek, at the mouth of the Medway, it is called the Lower Thames.

"The court of Conservancy of the Thames, over which the Lord Mayor presides, holds eight sittings every year within the counties of Middlesex, Surrey, Kent, and Essex. It is in this capacity that the Lord Mayor of London is comically apostrophised by Tom Hood as—

'Conservator of Thames, from mead to mead,
Great guardian of small sprites that swim the flood,
Warder of London stone.'

"When Alderman Venables, as Lord Mayor, went by barge to Oxford, in 1826, it was part of the programme that the city banners should be waved over the stone. It may be added that several attempts were made in former times to extend the Lord Mayor's jurisdiction over the Thames as far as Oxford; but in this the city did not succeed, and ancient custom has determined the limit as already mentioned."

We should like to quote some of Mr. Walford's interesting notes about Kew, Richmond, Twickenham, Teddington, Kingston, and other places on the Thames, &c.; but must be content with referring our readers to the work itself. They will find it an almost inexhaustible storehouse of information, and we can imagine no more valuable or acceptable present than these handsome volumes. We are astonished to find that, instead of being about 30s. each, as we had imagined, the price is only 18s. for the two.

## ANSWERS TO CORRESPONDENTS.

A. C. Shelley, Crosby-square, E.C.—Unless you choose to become an assistant-riverkeeper or registered professional fisherman, you have no right to use a cast net or any other net in the Thames from Richmond Bridge upwards to Cricklade. The Thames Conservancy and the Thames Angling Preservation Association have legal powers to stop you; so you see the water-bailiffs, who threaten you with "all sorts of penalties," are right.

Oxonian.—Messrs. Hardy Bros., of Fenkle-street, Alnwick, sell a capital dead-bait tackle for pike. You work the bait exactly as with the old gorge, but strike directly you get a run.

H. S., Ponder's End.—The "Crystal" roach hooks are so called after the inventor, a fisherman of the name of Crystal, who used to fish with Mr. Greville Fennell. Messrs. Williams and Co., of Great Queen-street, have the original pattern, and were the first makers. You can get them either on hair or drawn gut; your best plan is to call and select sizes.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

⁂ Several Letters are crowded out this week.

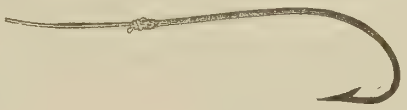
### EYED SALMON HOOKS.

Sir,—The "Great-eyed Trout-hook controversy" being for the present suspended, at any rate so far as I am concerned, pending experiments in the actual production of hooks with needle eyes, a few words on the subject of eyed Salmon hooks—whether turned-up or needle-shaped—may possibly not be without interest.

Whatever disadvantages may (or may not) attach to the turned-up eye in fine trout-hooks, they certainly disappear in the case of the large-sized hooks ordinarily employed in salmon and grilse fishing. The undoubted advantages of the system of metal eyes or loops are, on the contrary, brought out in strong relief, inasmuch as the two great points on which the eyed-hooks claim superiority over lapped-on hooks—namely, strength, and durability of the fly—are clearly more important in the case of very heavy fish, and flies which sometimes cost two or three shillings each. How annoying it is, again, when salmon are rising freely at the fly on the cast to find that the gut is so worn to the "unsafe point" by previous encounters as to necessitate a change of flies, whilst no other specimen of the same pattern, or size, may be, is in the tackle-box! . . . And it is almost always at the head of the fly that the fraying-away of the gut first takes place.

For these reasons I am entirely in favour of metal eyed salmon hooks—whether turned-up or needle.

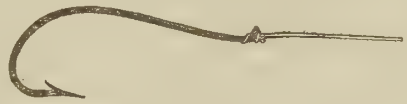
To take the latter first. The engraving is a facsimile of a needle-eyed grilse or small salmon hook* with the casting line attached.



NEEDLE-EYED GRILSE HOOK.

This attachment is of the simplest form, consisting merely of threading the gut (previously well soaked) through the eye, like thread through a needle, and then making round the central link a double half-hitch. The latter having been first drawn quite tight is then slipped downwards to its proper place by a sort of compound process of pushing and pulling—pushing the knot downwards towards the hook-shank with the one hand, and at the same time with the other pulling the central link tight. This it will be observed makes an exceedingly small knot, certainly smaller, taking it altogether, than is produced by attaching the central link to a gut loop. At the same time the hook stands out in a perfectly straight line with the gut, *and will so remain as long as the gut is kept moist.* This description of an eyed-hook and of gut fastening cannot, I believe, be surpassed for grilse or small salmon flies. The eye (N.B.) should not be drilled laterally but perpendicularly to the hook-bend when the latter is in the position of the engraving. Whether this form of needle-eyed hook would act equally well with Shannon or other large-sized salmon flies I am doubtful; but if it is found in practice that it will not do so—that, in other words, the "clasp" of the knot is insufficient to hold its own against the weight of the heavy hook—then the turned-up eyed-hook can be used instead.

I fear it may be somewhat difficult to gather from the annexed engraving the exact knot by which the gut is attached to the turned-up loop, or the precise angle at which the latter should be bent in order to ensure the hook standing in a perfectly straight line with the central link—two points quite essential in obtaining a perfect result. I will endeavour therefore to describe the mode of knotting verbally, observing only that however complicated it may appear as thus presented, when reduced to practice it is simple, as the saying goes, as A B C:—*The gut being thoroughly soaked*, pass a couple of inches of it through the loop, in the direction of the hook-bend; then pass it under the shank of the hook and again through the loop in a direction away from the hook-bend. The gut end and the central link will now be lying parallel. Make a "single-hitch" † knot with the former round the latter and pull the knot perfectly tight, then, by the sort of "pushing and pulling" movement already described, and "humouring" the gut in the process, draw the knot as far down the central link as possible,—that is, until it *presses close against the metal loop*, and, when it is firmly fixed in this position, cut the superfluous gut off close to the end. A *fac-simile* of this knot tied with stout salmon gut is shown in the engraving. The shank of the hook is incorrectly drawn and is very far from being what a Limerick hook ought to be, but the knot itself, and the loop, are of the exact size and there is no reason why they should be any larger, whatever be the length of shank or size of hook, and this observation holds good also whether the hooks be double or single.



TURNED-UP EYED GRILSE HOOK.

In order, however, to get a perfect result—that is, that the hook shank should stand in a line perfectly parallel with the central link of gut—it is necessary that the eye of the hook should be turned up nearly, *but not quite, to a right angle* and Messrs. Warner are now prepared I believe to supply hooks, single and double, with the eye turned up according to my instructions. If the angle of the turned-up eye is in the least degree "broader" or "narrower" than it should be, a corresponding deviation in the straightness of the set of the fly, upwards or downwards, will be the result.

Looked at from the fly fisher's—though not perhaps from the fly-tyer's—point of view, the advantages of salmon hooks with metal eyes, made as above, contrasted with flies with gut loops or tied on to the central link are so great and so obvious that I cannot doubt their absolutely superseding the latter in the long run.—I am, &c.,

---

* Greater London: A Narrative of its History, its People, and its Places. By Edward Walford, M.A. Illustrated. 2 vols., quarto cloth, price 9s. each.

* Manufactured by Messrs. Warner and Son, of Redditch.

† A single-hitch knot is all that will be usually necessary in practice, especially with small salmon hooks; but if desired, or in the case of large hooks, a double instead of a single hitch may be employed, to make assurance doubly sure.

London, Dec. 13th. H. CHOLMONDELEY-PENNELL.

### UNDYED PIG'S WOOL.

SIR,—Will you kindly forward to your Irish correspondent inclosed sample of undyed pig's wool?—I am, &c.,

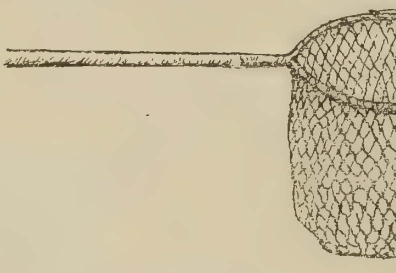
Central Arcade, Hope-street, Glasgow. WM. ROBERTSON.

[Mr. R. tells us he has 100oz. in stock, price 3s. per oz.—ED.]

### LANDING-NETS.

SIR,—Your correspondent, A. H. Gribble, hits the right nail on the head when he says of a landing-net "let it be made broader immediately below the ring than at the ring itself." All ordinary landing-nets are simply an unmitigated nuisance—too deep, terminating in a point—to me almost worse than useless.

My ideal net, though I can rarely get one made, is about 12in. deep (for trout fishing), same size all the way down, thus :—



(I'm not a good hand at sketching) and made of fine tanned water cord, so as not to catch the hooks.

I wish some of the tackle-makers would try this pattern and advertise it in your columns. By the way, Mr. Editor, I asked our mutual friend, "Red-Spinner," to get you—of your goodness—to lend me one of the blue-winged "coachmen" for a pattern, but it has not turned up yet.

Confer this blessing on me, and come down one day next summer with me and try it on our water.—I am, &c., AMWELL MAGNA.

Leytonstone, Dec. 13.

[Mr. Senior sent on the card all right, and we should have sent the fly, only that we thought the address was insufficient, and returned the card to Mr. S. to have it filled in. We now send the blue-winged coachman, and a very excellent fly it is for use, either in large or small size, and we shall certainly accept "A. M.'s" invitation. His idea of a landing-net is a capital one, and we elsewhere give a good waterproofing for it.—ED.]

## NOTICES OF BOOKS, &c.

CHRISTMAS AND NEW YEAR'S CARDS.—Mr. Harding, art stationer, of 157, Piccadilly, W., has sent us a selection of Christmas and New Year's specialities which he has published, and it gives us much pleasure to notice them, because, in addition to their "artistic merit," they are many of them designed specially for the angling community, and are all of a sporting character.

"THE COMIC ANGLING SERIES" consists of a set of six original drawings specially prepared by Geo. Lambert, all very comic and clever. One represents the Right Hon. Mr. Joseph C——mb——n dreaming of perch-fishing, lovely mermaids and the Caucus combing its back hair, while the "G.O.M.," like a "sweet little cherub sits up aloft," and watches over the slumbers of the "People's Tribune." Another card represents "'Arry" trailing for pike on the back of an elegant mermaid ; a dragon fly is evidently recommending her to tip him the mermaid fling. Mr. Lambert seems partial to mermaids, for the next scene shows us some punt anglers in pursuit of a fair syren who beckons them overboard.

"ANGLING COMICALITIES" is the title of another set of twelve original drawings by G. L. F., which will cause merriment in many an angling club circle. But the series we like best is one of six drawings of fish by Joachim Susini, entitled, "Piscatorial Studies," for the most part really excellent sketches of carp and bream, chub and roach, salmon, barbel, trout, and pike. The two latter appear to have been sketched in the spawning season, and are not so successful as the rest. The hunting scenes, by Alfred Roberson, Audax, and L. G. M., are very good, and so are Mr. Moore's Sporting Dogs.

"PRIMÆVAL CONCEPTIONS" may be fairly designated as weird and fanciful pictures of beauties and beasts ; and "Our Advanced Girls" are a decidedly "forward," but none the less captivating, "set."

We must congratulate Mr. Harding, who, by the way, is himself an accomplished angler, on the effectiveness and originality displayed in his productions and the taste with which they are got up. They are all the more welcome for being quite out of the ordinary hackneyed run of Christmas and New Year's cards. Another improvement is the entire absence of description or greetings ; the latter are provided in very neat gold-edged, gold printed, small cards intended to be sent with the pictures, which may well be trusted to tell their own tales.

SUTTON'S POCKET GARDEN CALENDAR.—Most anglers take an interest in their gardens, or if they do not their wives do, and we can recommend them to send a penny stamp to Messrs. Sutton and Sons, the Queen's Seedsmen, Reading, and ask for a copy of this little pocket Calendar. It is just the very thing for the amateur ; here is given with the calendar for the year full instructions in all garden operations, and much other useful general information. Many people are in the habit of letting their gardeners supply their seeds, but this is the greatest mistake they can make. We speak from experience, and can say that in our own case, and in that of numerous friends, disappointment is almost impossible if the seeds are obtained from the great Reading firm. For instance, we bought some of their prize medal hyacinths some time ago, and every bulb is coming on splendidly. We are glad to see that the angling club which has been formed among the employés of this firm is flourishing like a green bay tree, owing in a great measure to the hearty support which it receives from the members of the firm.

NORFOLK BROADS AND RIVERS. (By G. C. Davies.)—Our readers will be glad to hear that Messrs. Blackwoods have published a cheaper edition of this charming book. We have already noticed it on its first appearance, and it seems only needful now to mention its reappearance in this new and still very attractive form. The original photo-gravure illustrations have now given place to equally graceful and effective woodcuts from the same subjects. The text remains unaltered.

## CLUB REPORTS.

### THE ANGLERS' ASSOCIATION.

The ordinary delegates' meeting of the above Association was held on Monday last, December 15th, at the Foresters' Hall, Clerkenwell-road, and may be characterised as one of the most successful meetings ever held—Mr. P. Geen, president, in the chair. Numbers of well-known men were present, and the utmost cordiality and unanimity prevailed. The secretary (Mr. R. Ghurney) read the minutes of the previous delegates' meeting, which were duly confirmed. The secretary stated, in reply to a letter ordered to be sent to the Great Eastern Railway relative to granting privilege tickets from Park Station, that he had received an answer from the Company, in which they stated "that it was with a great amount of pleasure that they acceded to the request of the Anglers' Association to issue privilege tickets from that station" ; so, in future, all anglers will be able to take their privilege tickets from Park Station should they so wish. This will be a great boon to clubs in that district, and the announcement was received with great applause. The London and North-Western Railway have again been approached with a view of endeavouring to regain the concessions on their line, but up to the present unfortunately without success. The Anglers' Association have no intention of losing any opportunity that may arise of pegging away in their endeavours to once more regain these grand concessions. The secretary then brought the new visiting lists under the notice of the delegates, in which it was proposed to divide the clubs into four districts. This arrangement was very generally approved, and district officers were at once appointed. Mr. Jennings, No. 1, or Western district ; Mr. Manning and Mr. Thorling, No. 2, or Eastern district (the Eastern district being so extensive, it was deemed advisable to divide it, and the gentlemen above named will work it conjointly) ; Mr. Page, No. 3, or Southern district. Mr. Manning, in thanking the delegates for appointing him, said he had one great object in mind, and that was to give all the information in his power to the various angling clubs as to the work of the Anglers' Association, and to refute some of the false statements that have been allowed to be made broadcast in "another place," and it would be his strenuous endeavour to show the anglers of London who their real friends were. (Applause.) Mr. Tibbatts was next called upon to give some account of the negotiations that have for some time past been carried on between the delegates of the Central Association and the delegates of the Anglers' Association relative to amicably winding-up the Fisheries Society ; this he proceeded to do, and put the delegates in full possession of all the facts up to the present time. He was followed by Mr. Ghurney, Mr. Beckett, and Mr. Manning. It was then proposed by Mr. Marriott—"That having heard theaccount of our three delegates, we hereby express our entire confidence in them, and agree that the future conduct of the negotiations as to the Fisheries Society be left in their hands. This was seconded and carried enthusiastically. A conversation then ensued as to the advisability of the Anglers' Association renting waters on their own account for the use of their members, and it was agreed : "That the working committee be empowered to rent waters at their discretion for the exclusive use of the Anglers' Association." Upon the roll being called, the following clubs answered :—Alliance, Anglers' Pride, Bostonian, Brompton, City of London, Cavendish, Clapton, Cobden, Dalston, Edmonton and Tottenham, Golden Barbel, Good Intent, Hammersmith Club, Hammersmith United, Hoxton Brothers, Magdala, North-Eastern, Putney United, Phœnix, Prince of Wales, Portsmouth Waltonians, Peckham Brothers, Queen's, St. John's, Stepney, Sociable Brothers, Trafalgar, West Ham Brothers, Waltonians, West Green, Turnham-green Sun Dial. A vote of thanks to the chairman concluded the business.—H. J. TIBBATTS.

### ANGLERS' BENEVOLENT SOCIETY.

Since my last report I beg to acknowledge with thanks the receipt of 10s. (annual subscription) from Mr. Snook, Good Intent Angling Society, and 5s. (donation) from the Cobden Angling Society. The committee will not hold their meeting on Boxing night.—R. GHURNEY, sec.

### AMICABLE BROTHERS ANGLING SOCIETY.

On the 14th inst. Mr. Taylor weighed in one jack, 4lb. 13oz., and 4lb. of roach.—T. WORLEDGE.

### BATTERSEA FRIENDLY ANGLING SOCIETY.

A South London visit was paid to the above club on Tuesday last, but owing to being so near Christmas, but few clubs were represented, but still a very pleasant evening was spent. The harmony was well kept up by Mr. W. Johnson, "She Wore a Wreath of Roses" ; Mr. Hedges, "The Midshipmite" ; Mr. Wright (Wellington), "The Goose Club," which was received with great applause ; Mr. Bossiou (Clapham Junction), "The Spanish Cavalier" ; Mr. Allen (Bermondsey Brothers), a recitation, "The Brummagem Sweeps" ; Mr. F. Webb, "Old English Gentleman" ; Mr. R. Rodney Smith, "I've Only been Married To-day" ; Mr. Johnson, "The Blackguard Boat" ; Mr. Newton, "When Noah Hung Out in the Ark" ; Mr. Alexander (Wellington), "A Soldier Still," encored ; Mr. Anstis, "Bob Fubbs" ; Mr. Mathews, "Joe Muggins" ; Mr. G. Maddams, "The Death of Nelson" ; Mr. F. Ford, Mr. H. Martin, &c. On the role being called, the following clubs answered : Wellington, Rodney, Bermondsey Brothers. Mr. Allen announced the next visit would be to the Bermondsey Brothers. The meeting closed with a vote of thanks to the delegates for their attendance. A match was fished at Staines on the 14th, for three prizes presented by Messrs. Mumford, Martin, and Ford, for members not having taken a prize during the year, and was won by Mr. H. Payne, Mr. Gloster, sen., second, and Mr. Gloster, jun., third.—GEO. MUMFORD, president.

### COBDEN ANGLING SOCIETY.

Several of our members were out on the 14th inst. They went to various places. Messrs. Maples, Stead, and Webley weighed some very nice roach from the Thames and the canal. Our other members that went out were not so successful.—C. REEVES, sec.

### GOLDEN BARBEL.

On the 7th there was a nice show of fish from the Thames, contributed by Messrs. J. Green, J. Roach, J. Stanton, A. Crow, C. Crow, and G. Crow, and consisted of roach, dace, and jack. The result of T. Adams's draw fell to Messrs. Emanuel and Fairchild ; the former took the tench and the latter the bream. On the 14th Mr. Green had some good sport among the roach. Mr. Hall and several other members also had fish from the Thames.—PIXIE.

### GOOD INTENT ANGLING SOCIETY.

The members of this club, to the number of 56, fished at Broxbourne for our Christmas prizes on the 14th inst. The weather being so bad only six took fish, so it has to be finished on the 21st inst., the members to go where they please. I will give the full result next week. Mr. Snook, not being in the competition, brought in a capital show of roach ; also Mr. King some good fish.—R. MURPHY.

### GRESHAM ANGLING SOCIETY.

The ordinary weekly meeting of the above society was held on Tuesday evening at the Masons' Hall Tavern, Masons'-avenue, Basinghall-street. The chair was taken by Mr. Cartwright. The minutes of the previous meeting having been read and confirmed, the election of two new members was proceeded with in the usual way. Mr. Sowerbutts, one of the gentlemen elected, expressed the pleasure it afforded him in becoming a member of the society. Mr. Crumplen then read a paper, "The Life of Izaak Walton," for which a vote of thanks was accorded to him. Some very good songs brought a very pleasant meeting to a close after the usual vote of thanks had been accorded to the chairman.—H.

[For remainder of CLUB REPORTS see page 316.]

# THE SCOTTISH WIDOWS' FUND

was established in 1815 for the Assurance of Lives upon the *Mutual* principle, whereby the whole profits of the business are divided among the Assured alone, and now presents to the public every advantage which Life Assurance, conducted under the most favourable conditions, is capable of affording.

## Among the Chief Features are the following:—

The ACCUMULATED FUND exceeds EIGHT MILLIONS AND A QUARTER STERLING (the largest Life Assurance Fund in the United Kidgdom), all invested in securities of the highest class, and none of them involving any liability. The Annual Revenue considerably exceeds ONE MILLION STERLING.

The LARGE PROFITS REALISED are periodically divided upon a clear and equitable system, the Policies being increased by an annual percentage of Bonus for each annual premium paid. The Bonuses which have been added to Policies exceed EIGHT MILLIONS STERLING.

The BONUSES ARE DECLARED on the *Compound System* (*i.e.*, on both original Sums Assured and previous Bonuses), the whole Policy being thus productive of profit to the Policyholder. Bonuses may be surrendered for their value in cash, or applied to extinction of premiums.

INTERMEDIATE BONUSES are paid on Claims arising between divisions of profit, an arrangement which secures all the advantages of an annual division on the wider and more reliable basis of Septennial estimates.

SURRENDER VALUES, or "PAID-UP POLICIES" free of all future premiums, are granted for discontinued Policies. The Laws empower the Directors to make such Allowances at any time after payment of one full year's premium.

LOANS ARE GRANTED on Security of Policies within a small margin of their Surrender Value. The rates of interest at present charged are 4½ per cent. for Loans of £50 and upwards, and 5 per cent. for smaller amounts.

EXTENSIVE FOREIGN TRAVEL and Residence is allowed Free of Charge from the first. Most Policies become absolutely indefeasible and whole-world after the first five years.

## THE ATTENTION OF

PERSONS desirous of effecting LIFE ASSURANCE POLICIES for the benefit of their FAMILIES, or in connection with BUSINESS TRANSACTIONS is called to the above

**Financial Results and Conditions of Assurance,**

which show how peculiarly suitable the Society's Policies are for Family Provisions, and for all Trust and Security purposes.

# PIKE FISHING SPECIALITIES.

SEND TO

## FOSTER'S

FOR SAMPLES OF NEW PIKE LINES,

SENT FREE TO ALL APPLICANTS.

## THE NEW ACME 16-PLAIT DOUBLE-DRESSED LINES

**ARE WARRANTED FOR 12 MONTHS.**

We supply on the following Condition of Purchase:—Cash to be refunded if line be not satisfactory after 12 Months' wear. A condition not offered by any English or Foreign Contemporary Manufacturer.

### WHY DO WE OFFER THIS ONE-SIDED ADVANTAGE?

**Because we are confident the improved line is nearer perfection than any other make or style of line on sale.**

These lines are used and recommended by Wm. Senior (Editor, "Field"); R. B. Marston, (Editor, FISHING GAZETTE); A. Cheney (of "Fishing with the Fly"); A. J. Manley, M.A. (Author of "Notes on Fish and Fishing"); J. P. Wheeldon (late of "Bell's Life"); Harrington Keen ("Chub Chavender" of the "F. G."); G. Bankart ("Angler's Note Book"); F. M. Walbran ("British Angling Flies"); W. D. Tomlin ("American Angler"); and other leading living authorities.

SAMPLES FREE. NONE GENUINE WITHOUT *PATENT* ON LABEL.

PIKE FLIGHTS.—The "Archimedian" tackle is rapidly acquiring great notoriety as the best killing flight yet invented. Mr. F. S. Perkin, Stour Cottage, Chartley, Stafford, writes on Saturday last, December 13th:—"*Your 'Archimedian' worked well yesterday; we landed seven pike with it, whilst other arrangements were of little use.*"

"*Experience proves that, mounted with a salted gudgeon or pickled sprat, the 'Archimedian' works more successfully than other flights with the best of fresh bait.*"—W. GURNEY, Esq., Skegness (December 11th).

PATTERN, WITH SWIVELED TRACE, POST FREE FOR 1s. 9d.

Live Bait Tackles on finest Gimp-made Twist, Bronze Rustless Hooks, Swivels, &c., 6d. each, post free.

A CHRISTMAS GIFT. A CHRISTMAS GIFT.

## YULETIDE:

A PHOTO OF

## IZAAK WALTON,

Taken from an old original life-size Portrait in Oil (half-length), at present in our possession, will be given with EVERY purchase (cash), by post or otherwise, during the ensuing TEN days.

**D. and W. H. FOSTER, Manufacturers, ASHBOURNE.**

### CITY OF LONDON ANGLING SOCIETY.

The following members weighed in on the 14th: Mr. MacDonnell, roach, dace, and perch; Mr. Castell, roach and dace; and Mr. Chambers roach, all from the Stort. On the 21st we compete for prizes at Egham, towing-path only.—Cas.

### HAMMERSMITH UNITED ANGLING SOCIETY.

The half-yearly meeting of this society took place on Thursday evening, Dec. 4th, when the election of officers was made who will serve for the next half-year:—Mr. Smith, chairman; Mr. Alders, vice-chairman; Mr. Penney and Mr. Green were, as usual, re-elected as hon. secretary and treasurer; Mr. Reynolds and Mr. Alders, delegates to the Anglers' Association. On the 11th and 14th inst. a match was fished for Mr. Morris's prize; a second and third prize was also given from the funds of the society. The competition for these prizes was very keen, although the takes were not large, and resulted as follows:—1st prize, Mr. Inman, 7lb. 13½oz., from the tidal water; 2nd prize, Mr. Johnson, 7lb. 12oz., from Datchet; 3rd prize, Mr. Penney, 7lb., from the tidal. The other competitors were not in it at all, notably Mr. Hobden, whose catch did not exceed 2lb. in weight, although he fished the same spot at Cookham where Mr. Smith, of the Richmond Piscatorials, had the previous day had such a magnificent take of fish, when the fish were evidently "dead on"; but certain it is that the next day they were "dead off"—even the redoubtable Godden, the Cookham fisherman, who was trying to repeat his previous day's exploit, had to pull up the rypecks in disgust. This serves well to illustrate the "glorious uncertainty" of the sport. Our committee are about to arrange another smoking concert, and a reading on "Piscatorial Matters," which paper is being prepared by one who knows what he is about, and will not instruct us "to work half an inch of bullock's pith up the shank of a single hook." Due notice of this concert and reading will be given in the Gazette.—H.

### HOXTON BROTHERS ANGLING SOCIETY.

Twenty-six members were out on the 14th inst. to fish for thirty Christmas prizes. The boundary was from the Engine House to the Railway Bridge below Ware town, in the river Lea (towing-path only). Thirteen prizes only were won, the first being taken by Mr. G. H. Wood with two jack, weighing nearly 8lb. The remaining prizes will be fished for, by the unsuccessful competitors only, on the 21st inst. The prizes will be presented in the clubroom on Tuesday evening, Dec. 23, at ten o'clock.—R. Ghurney, sec.

### PECKHAM BROTHERS ANGLING SOCIETY.

The members of this society fished at Weybridge on the 14th inst., but owing to the state of the water, only one, W. Gardham, got any fish. The three remaining prizes will be fished for at Waltham on the 21st. Messrs. Freeman and Sons are subscribers to the prize list of this club.—Gadfly.

### THE PISCATORIAL SOCIETY.

In accordance with previous announcement, the second smoking concert this season of the above society took place on Monday evening last at Ashley's Hotel, Covent-garden. Mr. Foreman occupied the chair, and Mr. Goodger the vice-chair. Punctuallay at 8.30 the chairman called on Mr. King, who gave a pianaforte solo, which was well rendered and gave entire satisfaction. Mr. Walter Harrisson, song, "Speed on, my Bark," very powerfully rendered. As the company were not yet properly seated, Mr. King gave another pianofore solo, testing the capabilities of the instrument to its fullest degree. Mr. Danielli, comic song, "Muddle Puddle Porter," sung with capital effect; Mr. Godwin, song, "To-morrow will be Friday," telling how the monks of old fished, had bad sport, and took to malvoisie, applauded; Mr. Rhys, recitation, "The Midnight Charge at Kassassin," effectively given; Mr. Ball, song "I'll Sing Thee Songs of Araby," exceedingly well sung, and applauded; Mr. Phillips, comic song, "Far, Far Away," showing the present troubles of bank bachelors, exceedingly amusing; Mr. T. Hardman recitation, "Kissing Cup," encored; Mr. Norman Harrisson, comic song, "The Essexshire Farmer," most amusing; Mr. H. H. Brown, flute solo, selection from "Il Trovatore," applauded; Mr. King, song, "Only Once More," artically sung and loudly encored; Mr. Fennings then gave violoncello solo, and finished amidst cheers; Mr. Townley, who was really inimitable, gave a comic song, "She Wanted to be a Fairy," encored so persistently that Mr. Townley had to respond, and gave "Moses and Aaron"; Mr. Tomson, comic song, "I'll Place it in the Hands of My Solicitor," loudly applauded. The vice-chairman rose and called attention to the fact that this happened to be the anniversary of a good angler's death—one whom generations had called the father of anglers. Izaak Walton died this day 201 years ago, and all ought to revere his memory. He therefore gave, "To the Memory of Izaak Walton, the Father of Anglers." Mr. Jesse, song, "The Vagabond," cheers; Mr. Norman Harrisson, comic recitation, applause; Mr. King, song, "I Prythee Give Me Back my Heart," encored; Mr. H. H. Brown, flute solo, most excellently played, and applauded. The chairman rose and proposed the healths of the successful anglers, Messrs. Huggett and Blamey, who showed some nice chub and roach. He next proposed "The Continued Prosperity of the Piscatorial Society." Both these toasts were drunk with enthusiasm. Mr. Marsden, song, "Anchored," applause; Mr. Jesse, song, "The Charge of the Light Brigade," cheers; Mr. Ball, song, "The Pilgrim," splendidly sung, and applauded; Mr. Harden, song, "The Arab's Farewell to his Steed," well sung; Mr. Danielli, song, "Sailing," an opportunity was here given for a splendid chorus; Mr. Rhys, recitation, "Little Breeches," well done; Mr. Foreman (chairman), song, "The Anchor's Weighed," finished amidst shouts of "Bravo, Foreman"; Mr. Hardman, recitation, "The 10th Hussars and Trooper Hayes," most pathetically recited. The vice-chairman proposed "The Health of the Chairman," which was duly responded to with musical honours. Mr. Adlington sang "The Powder Monkey," applauded. The vice-chairman was proud to say we had had a splendid evening's entertainment without professional assistance; in his opinion professional assistance checked many amateurs, who refused to sing when professions were present. Mr. Huggett proposed a vote of thanks to those gentlemen visitors who had so ably assisted at the concert; carried by acclamation. The chairman proposed "The Health of the Vice-Chairman," who briefly replied. Dr. Brunton gave "Auld Lang Syne," the company all joining hands. "God Save the Queen" by the company terminated a most pleasant and successful evening.—T. H.

### RICHMOND PISCATORIAL SOCIETY.

On Wednesday this society held its weekly meeting at the club-room, Station Hotel, Mr. A. J. Little in the chair, Mr. H. Dickinson being in the vice-chair. The chairman congratulated Mr. Thomas Bull upon his fine take of barbel (eleven fish, weighing 64¾lb.), and which were entered in the books in competition for the barbel challenge cup. Mr. Bull, in a very interesting piscatorial speech, informed the members that the fish were caught at Teddington (fishing with Frank Kemp, of whom he spoke very highly), and were taken with slices of lamperns; that he had captured five others under 4lb., and, after the fish were weighed, the whole of them were returned to the river. He should be very pleased if other members could have as good sport, and spoke very enthusiastically of the fishing in the tideway. At the same time, although he had had many red-letter days, he, like the rest of anglers, had had many blanks. Mr. Abbott sang the well-known song, "Oh, the Gallant Fisher's Life," accompanied by Dr. Sellé, who had set the words to music, and the Doctor kindly presented the chairman with a copy. Dr. Sellé, who also composed "The Land and Water Revel," delighted the members with his rendering of the piece, and gave the society one of the 100 published editions, stating that the song was the result of a meeting between Mr. Frank Buckland (to whom the piece was dedicated), Mr. Rolfe (the celebrated piscatorial artist, who painted the frontispiece), and himself.

[*Several* Club Reports *are unavoidably held over till next week.*]

### RODNEY PISCATORIALS.

On the 7th inst., the members of the above commenced fishing for Mr. Liversage's prize, given for the gross weight of fish taken during December, punt or bank. Messrs. Chantry, Flower, and Co., punt fishing at Kingston, had a nice lot of dace; Mr. G. Dodd, bank-fishing in the upper waters, had some splendid roach, which landed him on the top branch for this day. On the 14th, 1st, Mr. G. Dodd, roach, 4lb. 2¼oz.; 2nd, R. Smith, roach, 4lb. 2oz.; 3rd, H. Flowers, 2lb. 2oz., roach and dace. On the 16th, between 8 and 9 a.m., Mrs. J. Hotham found "a little lamb," which has been added to the flock, and, at the time of writing, is going on quite well. A Merry Christmas to members and friends at home and abroad; and, Mr. Editor, please accept the same from—Pixie.

PATRONISED BY

GOODS CAN ONLY BE HAD FROM TACKLE MAKERS.
Awards.—Gold Medals: Paris, Berlin, Würsburg, Norwich. Highest Awards: Toronto, Melbourne, Adelaide, Sydney, Murcia, South Africa, &c.

WORMS IN DOGS.—"Greenhithe, September 11, 1878.—Having a Dog and Bitch Toy Terrier (each weighing about 3½lb.), and also a very large Mastiff Bitch, all evidently troubled with worms, I gave each Terrier one-half of a Naldire's Powder, and an entire Powder to the Mastiff. The result was most satisfactory, for after the discharge of a large quantity of worms the Dogs improved wonderfully, and were admired by all who saw them. I have not the slightest hesitation in using these Powders for all kinds of Dogs.—R. S. Dunbar." NALDIRE'S POWDERS are sold by all Chemists, price 1s., 2s., 3s. 6d., and 5s., with Full Directions for Use.

HOLLOWAY'S OINTMENT AND PILLS.—During every break of wintry weather exertions should be made by the afflicted to recover health before unremitting cold and trying storms set in. Throat ailments, coughs, wheezings, asthmatical affections, shortness of breath, morning nausea, and accumulations of phlegm can readily be removed by rubbing this fine derivative Ointment upon the chest and neck. Holloway's treatment is strongly recommended with the view of giving immediate ease, preventing prospective danger, and effecting permanent relief. These all-important ends his Ointment and Pills can accomplish, and will surely prevent insidious diseases from fastening on the constitution, to display themselves afterwards in those disastrous forms that will probably embitter life till death is almost prayed for.—Advt.

NOTICE.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c. must be addressed to the Editor of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Contributions are solicited, but the Editor will not undertake to return rejected MSS. unless accompanied with a stamped addressed envelope.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls, and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

ANNUAL SUBSCRIPTION.

The Annual Subscription, payable in advance, for the United Kingdom is 8s.; or post free, 10s. 6d.

To any part of Europe, the United States, and Canada, the Annual Subscription, including postage, s 12s. 6d.

ADVERTISEMENTS.

All communications respecting Advertisements must be addressed to the Manager of the FISHING GAZETTE, No. 12, Fetter Lane, London, E.C.

Scotch Agency—Mr. Geo. Stephen, 30, Clarence Street, Edinburgh.
Irish Agency—Mr. T. E. Fitz-Patrick, 3, O'Meara Terrace, Clonliffe, Dublin.
American Office and Agency—Mr. De Witt C. Lent, 30, Park Place, New York.

N.B.—All Remittances must be sent, and all Cheques and Money Orders must be made payable to Messrs. SAMPSON LOW, MARSTON, and CO., the Proprietors, 188, Fleet Street, E.C.

# The Fishing Gazette.

SATURDAY, DECEMBER 27, 1884.

## TO OUR READERS.

BY the time this issue of the GAZETTE is in the hands of our readers the festival of Christmas Day, 1884, will have commenced, and anglers will be making merry, enjoying those social and family meetings which are so appropriate at this season of the year. Anglers, however much they may follow old Izaak's advice, "Study to be quiet," when they are fishing, have always been noted for their social qualities when they get together, and every year they get more sociable and jolly. Any excuse is good enough to get up a dinner or a meeting. Whatever the ostensible object may be, the real attraction is the opportunity to meet a lot of good fellows and enjoy a chat about angling over a pipe or cigar, and much as they love to talk of their favourite water, they certainly do not care to *consider* it exclusively in the form of an *unmixed* blessing! The angling club system is extending every day, and as long as the clubs are of the right sort we say, "The more the merrier." By "right sort," we mean those which are animated by a desire to elevate the art and discountenance anything of an unsportsmanlike nature, and whose members do not fish simply for the purpose of catching prizes.

While on the subject of clubs, we would like respectfully to give a few words of advice, and we know many a club angler will agree with us that they are not quite uncalled for. We refer to the undue importance which in many clubs is given to what is called the "business" of the evening. You go to a club to have a talk with some of the members, and find that three-quarters of the evening is taken up with the discussion of matters which could be far better settled by the committee. Of course, all matters of general interest should be brought before the club and discussed; but the aim of the chairman of the evening should be to make it of general interest.

During almost the whole of this year the rainfall has been below the average of the previous ten years, and angling of all kinds, but especially salmon and trout angling, has been, as a consequence, unsuccessful as compared with previous seasons. Whatever our political opinions may be, we must all hope that Jupiter Pluvius will be more liberal next year, and extend the franchise to thousands of springs which are now dried up.

In conclusion, we must again thank our readers for the hearty support they have given us, assure them that we shall do all in our power to make the GAZETTE of interest and value to them, and sincerely wish them all a Happy Christmas and most Prosperous New Year.

## LOCH LEVEN TROUT OVA FOR AMERICA.

THE Anchor Line steamer *Furnessia*, which sailed from Glasgow on Friday, 19th December, carries to New York one hundred thousand Loch Leven trout ova for the United States Commission of Fish and Fisheries.

Mr. Spencer Baird, Commissioner, proposes to send the eggs when received to the station in Michigan to be hatched out for introduction into the Great Lakes.

The ova were packed by machinery, so as to avoid handling as much as possible. They were enumerated by being spread in water over square wooden frames, covered with suitable netting, each mesh of which isolates a single ovum. The frames were then inverted on squares of felted moss, leaving each ovum in its proper position and perfectly separated from the others. Three layers of moss and eggs are placed in a tray, and six trays in each box. A large ice receptacle covers a double column of trays, the ice in which will be occasionally replenished on the voyage to insure an even temperature throughout.

Through the kindness of Messrs. Henderson Bros., ample space in the ice-house has been placed free of freight at the disposal of the Howietoun Fishery, by whom the eggs have been presented.

The Loch Leven trout is a pure *Salmo fario*, and one of the very best strains that can be obtained for stocking purposes. We have had ample proof that it has done well when transplanted to our slow South of England trout streams, though, of course, it loses somewhat of the superb flavour of the fish which are bred in Loch Leven.

## AN INCIDENT IN PIKE FISHING.

BY J. P. WHEELDON.

ONE of the very oddest incidents I ever saw in my life in connection with pike fishing came under my notice only so recently as towards the close of last season. I was fishing with a right good and trusty friend, known to scores of readers of the FISHING GAZETTE, in a magnificent river in the West of England. You want his name, eh? Here you are, then—Tom Hughes to wit, some time host of a certain little angling crib within hail of the Great Eastern Railway station. A real good fellow every inch of him; an A 1 man with a "roach pole," perhaps better with a jack rod.

Instead of the middle of February, it might very well have been the middle of June. Save that the trees were leafless, the branches only just beginning to shoot out little gummy, sticky buds as heralds of spring, there was very little else of winter or its associations to recall the dismal period to our mind. Grass had grown thick and high in the meadows, and down by the riverside it was absolutely luxuriant; whilst March buttercups, with here and there beautiful straggling patches of wild jonquils, gave the moist water meadows an air as though they were clothed in cloth of gold in honour of the approaching summer. As to the hedge bottoms, they were simply magnificent. One could not stir a step without meeting clusters of the delightful star-like blossoms of wild primroses shining out from backgrounds of smooth, deep green ivy leaves and the pale fronds of springing ferns. Then was the air scented and perfumed with the true, delicious, never-to-be-forgotten odour of wood violets. There were hundreds—aye, thousands—of shy blossoms hiding like little frightened children amongst the broad leaves of polypoddies, or nestling within the shadow of the crinkley primrose leaves, and each sweet purply-blue, or pale greyish white floweret, breathed its tribute of gratitude to the warm, delightful sunshine, which was fast hurrying every blade of grass and tiny leaf towards perfection. To tell of birds! Ah me! 'twas like a concert of fairy-like musicians perched on every tree, where speckled thrush challenged yellow-billed blackbirds to vocal conflict; where sweet twittering linnets, with restless, jerking flight, hurried apace from clumps of gorse bushes, blazing in golden splendour, to where whitethorns covered the wild nettles and dock leaves in the hedge bottoms below with a frequent tiny shower of summer snow; where gay, pink-breasted chaffinches piped shrilly from every bough, and still gayer yellow hammers trilled their wild song from the tops of high hedges. Over all sung the prince of spring songsters—the shrill, glad-voiced lark—that bird which, unlike the nightingale, fills one's soul and bosom with hope, and fires ambition once more. Nay, I can hardly say why it is so, save it may be that the bonny speckled songster, with upraised crest and bright, bold eye, springs to the skies bravely, and breasting the billows of air when morning suns tint every leaf and blade of grass with glory, makes all things glad and bright. Whereas the nightingale—ah, he sings sadly, complainingly, and low, breathing a sweet, wild lament at that time when most men's bosoms yield to a solemn feeling of despondency—to wit, the close of a brilliant summer's day, when wreathing clouds of soft mists are rising from the meadows; when the light dies out of the bloodshot, garish sky; when queenly Venus shines shyly out from her throne, set amidst a sea of emeralds and silver sheen; and when black night is seen slowly stealing up over the sky to take the drowsy earth in its mighty grasp.

I can fancy somebody saying, "Ah, yes, a lovely bit of gush, old fellow; but about this incident?" Well, to commence with, let me say it was a regular roasting morning, with a blazing hot sun, and the river was like a calm, shining expanse of glass, clear as crystal, and without a ripple on it from one end of a a wide reach to the other.

"Not very much like jack fishing," you'll say, and very naturally. And indeed it was not. We had tried every good corner fruitlessly; and lay-byes which, before that scorching hot day, had never failed to hold a lodger, were here returned as apparently tenantless. Thus, after working a mile or so of good water to no earthly purpose, we gave it up as a really bad job, and both sat down on our wicker baskets to try if we could coax the roach to "come at it."

Tom was fishing a hundred yards above me, and nearer a little isolated cottage, where a perfect lady in cotton stockings, who lived to all appearance entirely upon bubble-and-squeak, sold ginger-beer at a halfpenny a time. We had some of that beer, too, that day—at least, I can answer for myself; and curiously enough, whenever I went for a bottle, there was invariably bubble-and-squeak on. Well, my swim was a literally charming pitch. A lot of old thorns and alders growing upon the bank had had their roots partially disarranged by heavy floods and runs of land water during preceding winters, and had partly fallen over until they laid at a considerable angle across the stream. All the upper portions of the boughs were submerged and settled deep down in the water. Very probably they will be swept entirely away when next I go there, and that sweet little swim may be a thing of the past. However, there they were then; and just above, say, fifty or sixty yards, came thundering down a mighty, swift, impetuous run of water which, breaking full upon the bank on which I sat, might very probably have had some hand in the displacement of the old thorns and alders.

It was the very place for a big salmon or trout to be in; and, believe me, before I put my pike rod and spinning bait down, I had a very great mind to "tiddle" that little dace along under the bank just to see what would result from such a course. To my credit be it spoken, I did'nt do it, but sat contentedly down on my roach swim.

"Although I says it as should'nt,"—*vide* Mrs. Brown, or some other old frump—"which her father was a 'ighly respectable cheesemonger in the Borough," nobody in this wide world—no, not even Joe Woodard himself, could have fished for roach that day better than I did. I don't say they might not have caught more, because I got none at all. No, not a smell—not a scale—not even a whiff of a roach; but in the art of "trying for 'em" I was perfect. George Lee said only the other night that he was open to back "Woodey," fit and well, against "anybody breathing, roach only to weigh." All right, George; but just wait until you see me shape, my boy, and then see what you'll say. Upon reflection he'll very likely say just the same thing—put the money down, and win. Such is the criss-crass ignorance and obstinacy of mankind, who will not be convinced by theory alone. Yes, there they were, "tons of 'em." They were all round my float. There were huge, great "bangers," plenty of them, of two pounds and more apiece. There were scores, aye, hundreds of pounders, and pound-and-a-halfers, enough to drive a Ponder's End man stark, staring mad, and they kept rolling over and over, and plashing the water up in little silvery showers of spray, until I scratched my head in sheer despair and shied more ground-bait in, tried ledgering on the bottom, fishing midway, two inches off and two on, and at last gave it up in downright desperation, and went and had another bottle of ginger-beer at the residence of the bubble-and-squeak lady.

Having had a cooler for a halfpenny, I came back to the swim and tried again. I might just as well have tried round the base of Nelson's monument, and for the life of me I could not make out the strength of the business.

At last out came the murder. After a lot of fiddling I managed to nick one little sprat of a half-pounder. I call him "a sprat," because there were such perfectly awful members of the same family in similar shops all round me; and at the very instant that I was chuckling and "chortling in my joy," all to myself, over my triumph, bless me! my Sowerbutts cane gave forth a mighty twang; the top bent as though the Jabberwock himself was hooked, and away went my roach and about a foot or two of my gut line. "Ho! ho! ha! ha!" cried I, or something in the same strain; "Master John Pike stands confessed, does he?" Indeed he did, and the next instant was "on the rampage," if ever precious fish was in this world, assaulting and bullying those peaceful roach in the most shameless and unheard-of fashion, and turning the whole blessed delicious quietude of the scene of only a few minutes before into one of unheard-of bustle and confusion. I'll be hanged if he wasn't like a mad pike.

First he splashed up amongst some sedge and rushes on the opposite shore; then he came shooting across the stream, the frightened roach jumping in every direction; and next he came sailing in under my feet for all the world like one of those "long, low, black-hulled piratical schooners," which Captain Marryatt was so fond of describing in chase of a lubberly Dutch galliot, in this case represented by a fat two-pound roach. I shouted for Tom to come and see the fun, and down went his rod, and he came through the long grass, mopping his head as though it had been the middle of August. Quoth he when he had watched a little of the performance, "I'm darned—absolutely darned, old man, if that fish is'nt a twenty-pounder." There was a little bridge fifty yards below us, and on to this bridge went Tom and I. Under the bridge, and all round the side piles, the water was quite shallow, certainly not more than 2ft. in depth. While we stood there on the look-out for my gentleman, he sailed right in on to the shallows, and lay motionless save for a quivering of his fins and tail, and full in view under our very noses. There was a little jack about a pound, previously entirely unnoticed, lying amongst some weeds. Did'nt he make tracks! Just a little! A few he did, and edged quietly away perhaps a yard or so, then gave one shoot through the water, and he was off—off like the stranger and away, while the big pike took no more notice of him than an Irish policeman would of an unmistakeable Yankee with a slouched hat, or a London officer of cold shoulder of mutton and pickles.

The next thing I noticed was Tom "doing Time" through the meadow. He went like Deerfoot with those wolves after him, and in less time than I thought possible was back again with his pike rod and the bait-can. There lay Master John in precisely the same place, and my chum quietly dropped a bright, flashing bait attached to a paternoster close to his nose. The fish backed a bit at first for all the world as though he had said to himself, "This is a wrong 'un." Greed getting the better of him, he "went for it," however, and to my delight and joy I saw him first dash at the bait, seize it crosswise in his great fanged jaws, and then, without any further ceremony, gulp it slick down. I could literally see every morsel of the gimp disappear down his throttle, and said I to Tom, "My boy, I'll bet you a pound to twopence that you get him!"

He on his part nodded and closed one eye, which meant that he thought it was highly probable. He likewise ejaculated the word "Stones!"—a custom of his; but this I fancy had no real bearing on the facts of the case.

Pulling line from the winch so that the fish might not feel any obstruction, Tom got over the bridge as fast as he could, jumped the fence, and stood amongst the sedge and rush beds by the waterside. Then, seeing everything clear, he wound up, and I, from my point of view on the bridge above, could see the loose line lifting along the bottom of the river, and gradually tighten from the point of the rod to the jaws of the fish. The very instant that he felt the pull the fish set his fins going and moved slowly away. At the very moment that he moved Tom hit him, and to my unbounded astonishment the hook came clean out of his mouth, and with one sweep of his great tail he had vanished to the deeps above.

I never felt so utterly flabbergasted in my life. As for Tom, his face was a perfect study, and he stood looking at the tackle, and feeling the point of the hook on the ball of his thumb as though even with the entire disappearance of the fish he could hardly realise the fact. "Did you ever see anything like that before?" he asked as he rejoined me, and I told him, "That I never had, and never should again." The only explanation I can give of it is this:—The gimp was full short, and the fish had got the bait partially down the throttle. At the very instant my friend struck him he was in the act of opening his throat and jaws. The hook was torn clean away from the lips of the bait, and missed the pike altogether. Had he been shutting his mouth instead the whole order of things would have probably been entirely reversed.

**Messrs. Dorey Lester and Co.'s Fac-Simile of a Diamond Ring.**—Among the numerous advertisements which appeared in our double number last week was one of a coupon entitling the holder, on payment of two shillings, to "one Single Stone Paris Diamond Ring." We had the curiosity to send for one, and find that it is really a wonderful piece of workmanship. The stone has all the lustre of a fine brilliant, and has been cut with the greatest care. The mount is a gold-cased alloy of wonderful "finish"; in fact, the "get-up" of the whole thing is so good that even an expert might easily be deceived. It will, as stated, cut glass. Anyone who wishes to make a present which is sure to please should cut out the coupon in last week's F. G., and send it with a money order for two shillings to Messrs. Dorey Lester and Co., Kilburn, London, N.W.

George James Eaton, of Starkholmes, Matlock-Bath, Derbyshire, respectfully invites Noblemen and Gentlemen to try his standard FLIES for the present season. No flies sent or made up but what he himself has proved sure killers. A trial is all that is required, from gentlemen who can fish, to prove whether they may be genuine or not. Patronised by some of the best fishermen of the day. All flies dressed on the best Kendal hooks. Prices: Point Flies 2s. 6d. per Dozen; Dropper Flies, 2s. per Dozen Orders punctually attended to.—(Advt.)

HOLLOWAY'S PILLS.—Nervous Debility.—No part of the human machine requires more watching than the nervous system—upon it hangs health and life itself. These Pills are the best regulators and strengtheners of the nerves, and the safest general purifiers. Nausea, headache, giddiness, numbness, and mental apathy yield to them; they dispatch in a summary manner those distressing dyspeptic symptoms, stomachic pains, fulness at the pit of the stomach, abdominal distension, and overcome both capricious appetites and confined bowels—the commonly accompanying signs of defective or deranged nervous power. Holloway's Pills are particularly recommended to persons of studious and sedentary habits, who gradually sink into a nervous and debilitated state, unless some such restorative be occasionally taken.—[Advt.]

## ANSWERS TO CORRESPONDENTS.

A. G. Forbes.—You should get a copy of Ronald's "Fly Fisher's Entomology," published by Longmans; it is the best book we know on trout flies.

# CORRESPONDENCE.

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

### A THIRTY-POUND SALMON TAKING GENTLES.

Sir,—I venture to send you the following exciting struggle with a salmon, as I cannot hear of anything similar having ever occurred on this water.

Whilst roach fishing in the Ringwood Avon, to-day, I hooked a salmon of between 30lb. and 40lb.; I was using a fine crystal hook baited with gentles, and the finest of Nottingham silk lines,

Upon being hooked, the fish took things somewhat quietly; but becoming aware that all was not right, he commenced a series of tremendous rushes, frequently leaping out of the water and throwing himself upon the line.

Hurdle, the fisherman, dexterously followed him with the punt and succeeded several times in turning him just as the last foot of the 80yd. of line had run out; at length, after 20 minutes of the most exciting sport, the hook became disengaged, and we looked at each other as only fishermen can on such occasions.

The fight of a fish of this weight on such slender tackle can, I assure you, be much better imagined than described.—I am, &c., H. Hare Winton.

Guildford, Dec. 18.

P.S.—The river is full of enormous salmon, the spawning beds being literally covered with them; the water being excessively low, their little domestic arrangements are clearly visible. This augurs well for February next.

### THE MAY FLY (GREEN DRAKE).

Sir,—In your issue of the 13th inst., there is an interesting article headed "The May-fly Week." Having, as I fancy, learnt most of what I know concerning this fly on the same stream, but lower down, than the writer of the above-named article, I venture to give him and your readers what I have learnt; but if I am wrong I shall be glad to be corrected.

"T. A." asks if the grey drake is the female fly? I believe that he is right in his supposition. I have for several years noticed that there are two sizes of green drakes on the river, and remember once starting the theory to two brother anglers that the larger sized ones became grey drakes, and the smaller ones the black, or, as in some places, the death drakes (*vide* Mr. Francis Francis's "Book of Angling," and also "Ronald's Entomology"), after changing their skins. Soon afterwards I was reading an article in the *Field*, by Mr. Francis Francis, wherein I found that he had some years previously propounded the same idea, and as I had certainly read this article myself, I must have unconsciously appropriated his idea without due acknowledgment. If "T. A." will examine those May flies, or "grey drakes" that, as he writes, "dance up and down with a graceful regular swing," &c., he will find that some are smaller-bodied, blacker-winged, and with longer tails or whisks than the bluer-blacked winged larger whiter-bodied drakes; the former he will find to be the black or male drakes, and the latter the grey or female drakes.

Ronald, in his "Fly-fisher's Entomology" under the "Dark Mackerel," has a note (see page 93) in his first edition in which the following occurs:—"The tails and the two forelegs of the male increase to about double their former length, those of the female receive an accession of not quite one third. The male carries two large stemmata upon his head and a pair of calipers at the end of his body, which two peculiarities chiefly distinguish his appearance from the female."

I have also read, either in F. F.'s or Ronald's book, that the male drake, when settled, raises his forelegs above his head in a slanting direction forwards.

The grey drake, or female, after the fly has risen several days, may be seen often dancing up and down, over, and every now and then touching, the water for a second, and then springing up again, aided by their whisks or tails; they are then laying their eggs, which are exuded from the last ring but one of the body towards the tail end. When this process is finished, the female often falls exhausted on the water, and is either drowned or eaten by some fish or bird.

I believe that the reason why the "yellow [green] drake flutters straight away to leeward, and hardly seems able to steer a course," is, that being but recently hatched on the water's surface, it has not got got its wings hardened by exposure to the air; as I have often noticed when wading, &c., that when the fly is just out of its larva case, or "shuck" as some call it, the wings are all crumpled up, and look softer than if examined later on after its escape from its larva case.

I am also indebted to an angler I first met on the river side in 1878, who kindly pointed me out the differences between the grey and black drakes, as well as teaching me how to float a dry May-fly over a rising fish. He had fished the stream I allude to for nearly 40 years, and I unexpectedly met him last year in his old haunts, though he was not fishing then.

I have also noticed that trout make a peculiar noise when you are unhooking your fly from them, and if returned to the water will disgorge dead May flies, and sometimes minnows.

By the bye, I find it a good dodge when returning undersized fish to separate some of the stems of the sedge, &c., and slightly wedge the fish between them, as they are kept in their natural positions and are able to recover at their own leisure, instead of being thrown in, and often stunned or killed.

One saves time during the rise, and also, when grayling fishing, avoids cold fingers, as you do not have to hold and nurse them in the water in an awkward position perchance until the fish recovers. I generally place them so that their heads point upstream, and, if possible, out of the stream in a quiet corner.—I am, &c.,

Hull, Dec. 18. J. B. J.

### SALMON ANGLING IN THE NOTTINGHAM STYLE.

Sir,—I see my report last week was unavoidably left out; this week there is no fishing news to write about, the Trent being bank full and out of condition. The weather during the week has been all against fishing—snow-storms one part of the day and sunshine the other, finishing up on Thursday with a violent thunderstorm, that will long be remembered for the time of the year. Salmon anglers will sympathise with Mr. Kelson, having hold of a fish for two hours on a bridge, and give him credit for the very ingenious method of landing it. I beg leave to differ with him in his description of the Nottingham style of angling for salmon with worm, as you never see a Nottingham fisherman, who has any knowledge of the gentle art, who has any slack line in bottom fishing with a running float, as both Nottingham and Derby anglers take a pride in keeping their line tight and their float held back, thus allowing their bait to travel first, striking as soon as it disappears. As an old Derby angler once said to me, he liked to see it go straight down their throats, and he has killed hundreds of salmon in his time, fishing in the so-called Nottingham style, himself and son having killed as many as 40 fish in a season.

Now, Mr. Editor, I like to give merit where it is due, as the Derby anglers have certainly been the first to introduce this style of fishing with worm for salmon, and there are some first-rate fishermen amongst them, myself being one of the first in Nottingham to adopt their style of fishing, having got a few instructions from Mr. Brown, of Derby, who has been a salmon fisherman on the Trent upwards of 25 years, the one I have alluded to above. I hope Mr. Kelson will not think me impertinent in venturing to criticise so experienced a salmon fisherman.

Several salmon have been taken out at King's Mills to see if they had spawned, and carefully returned, not having begun yet.

Your paper is getting an increased circulation in Nottingham. Half-a-dozen of my friends are going to take it. Wishing you a merry Christmas and a happy New Year,—I am, &c.,
A. W.

Dec. 22.

---

Sir,—In this week's Fishing Gazette (Christmas Number) your learned and experienced contributor, Mr. G. M. Kelson, in an article under the above heading, makes a statement that, in the interests of common justice, cannot be allowed to remain unchallenged; the sentence in question being this:—"Be that as it may, the so-called Nottingham rods for salmon-fishing *are good for nothing and all fiddlededee; still, on rivers that hold no salmon*, and for lighter work, they seem to fall in with the fashion. For our purpose they should be made of greenheart, an entirely different model, and 14ft. in length." In the paragraph preceding that just quoted, Mr. Kelson says:—"First of all, then, in alluding to Nottingham rods, I seem to have come suddenly to a dead stop." Now, in my opinion, it would have been better if Mr. Kelson had made a "dead stop" just there, or else to have gone a little further and told us why Nottingham rods are "good for nothing, and all fiddlededee." "On rivers that hold *no* salmon," says Mr. Kelson, "these rods seem to fall in with the fashion." Precisely so; and they also "fall in with the fashion" on rivers that do hold salmon, because the Trent is a salmon river to all intents and purposes; and, as I have seen these light barbel and chub Nottingham rods, when they have been in conflict with large salmon, and seen them come out victorious from the battle, I don't think they merit the term "good for nothing." If Mr. Kelson had stood on the banks of the Trent near here some time ago, and had seen that old and skilful angler in the Nottingham style, "Old Kitty," hook, play, and kill a large salmon when worm-fishing for barbel, he would not have written those words about our Nottingham rods being "good for nothing." Scores of salmon have been killed in the Trent by an ordinary 12ft. Nottingham barbel rod. I should like to know why our Nottingham style of fishing should have foisted upon it a heavy greenheart 14ft. rod, when a 12ft. or 12½ft. ordinary barbel rod will do the work just as effectively and a lot easier for the fisherman. I have seen a salmon (fresh run) hooked, played, and killed by an ordinary roach rod, line, and fine-drawn gut tackle—aye, and helped to eat him, too. I venture to say that it would be almost an impossibility to fish the "Corporation" swim, say, with a 14ft. greenheart salmon rod, a barbel line, a small cork float, and an ordinary gut bottom tackle. The rod would be out of all proportion to the rest of the tackle. The rod must be light in order to handle comfortably with one hand. It must be built so that you can draw down the line between the rings and cast out cleanly and squarely from 20 to 25 yards, or even more, with a small cork float and ordinary shotted tackle. I don't believe this tackle could be cast with a long greenheart rod; anyhow, I am quite satisfied that our ordinary Nottingham rods, built purposely for float-fishing for salmon, cannot be improved on for the style (I am not alluding to ledgering; but float-fishing pure and simple). I should like to stand on the banks of some famous salmon river, Mr. Kelson looking on, and if the fish were in a taking humour, and worm fishing in the Nottingham style was allowed, and if, at the end of a day's fishing, Mr. Kelson did not say that the Nottingham rod had done its duty, why I should be quite ready to order my coffin from the nearest joiners. But, however, I am quite willing to write an article on "Salmon Fishing in the Nottingham Style" for the columns of the Fishing Gazette," giving the tools required, and a description of the *modus operandi* as practised on the Trent; that is, if the Editor could spare the space, and its readers would care to read it. In my humble opinion, Mr. Kelson, by his bright, clear, and racy descriptions of fly fishing, fly making, wading and casting for salmon, stands almost without a rival in that branch of sport, even if he does sometimes soar away into the realms of fancy and grandiloquent language that we poor mortals can scarcely follow; but when he comes to describe worm-fishing in the Nottingham style with a float, I see, in several details of his very interesting article, he is clearly at fault. Time and space prevent me from saying any more on this subject just at present; but I must say to ye "Nottingham Georgies," ye "Baileys," ye "Bendigoes," and ye "Old Kitties," that the oracle hath spoken and declared that the rods ye handle so tenderly, and look at so lovingly, and put put away so carefully—those rods that have stood the brunt of the battle so often—are henceforth, and for ever, to be dubbed "good for nothing," and "all fiddle-de-dee," and nothing remains for you but just to break them across your knee, and boil the kettle with the remains, and as thoughts of their past glory and strength vanish up the chimney with the smoke, to wearily exclaim "*Sic transit gloria mundi.*" Thanking you in anticipation for the space, which, in common justice to our style, I hope you will not refuse—I am, &c.
The Trent Otter.

Newark-on-Trent, Dec. 22.

---

## FECUNDITY OF ARTIFICIALLY BRED TROUT.

Sir,—"Chub Chavender" wishes to know if it affects the fecundity of fish to breed them artificially? Most decidedly not; in all waters that I have collected ova from, either rivers or ponds, I have found such fish as described by "Chub Chavender." They are certainly large enough and, to all appearance, old enough to have developed ova; but that is not always the case. I have some fish that weigned from 4lb. to 5lb. each, and were five years old before they developed any ova, but now they spawn annually, like the other fish.

Another circumstance is, I have known fish to develop ova only once in two years instead of annually, as is usually the case. This circumstance was first brought to my notice by Mr. James Ramsbottom, of Long Island, U. S. America. In going to a particular lake in the State of Maine for trout ova, we found that one year most all of the female fish were full of ova, and the succeeding year the majority seemed barren, but the year following that they were all right again. We then came to the conclusion that the fish only spawned once in two years, and such we found afterwards to be the case.

My experience is, that artificially bred fish, kept in ponds, will develop 25 per cent. more ova than a wild fish of the same weight and age. Further, I do not believe that there is such a thing as a completely barren fish, either naturally or artificially bred, providing time is given to devolop either the milt or ova.—I am, &c.,
W. T. Silk,

Burleigh Park, Stamford.
Pisciculturist to the Marquis of Exeter.

[This is most valuable testimony from one who is a thoroughly practical pisciculturist with great experience.—Ed.]

---

## LARGE NEW ZEALAND TROUT.

Sir,—The inclosed cutting from a newspaper has been sent to me by a friend in New Zealand. He asks what sort of a trout it could be, and says that there are some indigenous trout in the rivers, and others that have been raised from ova sent from England and America. If it lies between John Bull and Jonathan to furnish such fish, I think old John must take a back seat; unless, indeed, the specimen mentioned should turn out to be a *bull*-trout.—I am, &c.,

Carlisle.
Silver Grey.

The following is a copy of the cutting:—

"A noble trout was caught in the river Selwyn a few days ago, and was placed on exhibition at the Dive, Christchurch. It measured 35½in. in length and 24in. round the shoulders, and weighed 25lb.

[This is probably one of the descendants of the Hampshire trout sent out 17 or 18 years ago by Messrs. Youl, Buckland, and Francis; they run far larger than their English ancestors. There were no trout in New Zealand prior to their introduction from England, and the Americans have not sent any *S. fario*.—Ed.]

---

## PARTICULARS OF SALMON FISHING WANTED.

Sir,—Will any of your readers oblige me with a list of salmon-fishing rivers in the North of England and Scotland; the best time of the year for fishing them, the nearest stations to go to, and whether hotel or other accommodation. Also cost of licenses (if any), and whether free fishing, or by permission, and from whom?

My salmon fishing has hitherto been confined to the Tees; but owing to the Dinsdale Dam obstruction, salmon cannot ascend this river till the autumn, when there are floods, and it is generally well into September before a start can be made in the higher reaches of the river. This year it was October before anything was done, owing to the dryness of the season. Now, as the season expired on 1st November, it only left a month to get the worth of your license (25s.), and I know many anglers who only got one or two fish. I only got four myself, and disgust compels me to seek "fresh fields and pastures new": hence the questions I ask.

Perhaps there may be some guide or book published which will answer my purpose.

Any information will be gratefully received.—I am, &c.,
G. J. S.

Middlesborough.

["G. J. S." should get Little's "Anglers' Annual," published by G. Little and Co., 63, Haymarket, price 1s. This gives particulars of English rivers under counties. He should also get Watson Lyall's 1s. "Sportsman's Guide," published at 15, Pall Mall, London. It gives the Scotch salmon and trout fishings under counties. The "Anglers' Diary," published at the *Field* office, is a work we find invaluable, in spite of its shortcomings. Personally, we should recommend the Eden in Cumberland, and the Tweed.—Ed.]

---

## EYED SALMON HOOKS.

Sir,—In Mr. C. Pennell's letter on this subject in your issue of Dec. 20th, in reference to the angle at which the eye should be placed, he writes:—"In order however, to get a perfect result it is necessary that the eye of the hook should be turned up nearly, but not quite, to a right angle . . . . If the angle of the turned-up eye is the least degree 'broader' or 'narrower,' then it should be, a corresponding deviation in the straightness of the set of the fly upwards or downwards will be the result."

As this particular point engaged my very special attention as far back as 1878, when Mr. Hall and I were consulting about the first order for eyed hooks, and as our past six years' experience and my present decided opinions are strongly opposed to this dictum of Mr. Pennell's, I beg to explain why and how I practically tested the matter in 1878, which test, I think, ought to be conclusive to anyone's mind who will take the trouble to try it. I believe in practical tests in preference to theories elaborated over the dinner-table, and have already shown how I tested the "needle eyes" to their disadvantage as compared with turned-up eyed hooks.

Something has been written by enthusiasts in angling matters even before my day as to the propriety of lashing the gut on the inside of the shanks of fish-hooks, in preference to the outside or back of hook, and all practical fly-dressers will probably agree that (in the old system of gut lashed to the straight hook) the preferable plan is to lay the gut along the inside of the shank before wrapping it on with silk. I am not going into that question: I take it for granted as an established custom, and admissible one.

Now, the angle at which the steel eye is "pitched" determines the line upon which the "pull" on the point of the hook falls, and it will be obvious that the higher the pitch of the eye the higher will the "pull" be thrown on the shank, and in Mr. Pennell's second illustration it is pretty clear that the pull will fall quite on the back of the hook-shank, and not on the true line, or on the underside.

I assume, for argument's sake, the opinion to be settled that the pull is best on the underside of the shank nearest the point, and in order to obtain it so in a steel-eyed hook it is absolutely necessary to make the pitch of the eye very slight indeed, and a turn upwards from the horizontal line of shank of about 12 degrees is enough for the purpose, and better than any greater angle, whereas, taking Mr. Pennell's words in a liberal sense, would certainly mean an angle of 35 to 40 degrees.

It is practically not of much importance whether the "pull" falls on the direct line of hook-shank or underneath it, though the latter gives a better tendency to sending the point home in striking a fish, and the lower the pitch of the eye the more the direction of the pull is thrown inwards.

If Mr. Pennell, or any of your readers, will repeat the following very simple experiment, which determined my opinion in 1878, they will see at once at what angle the eye of the hook ought to be pitched to obtain a pull directly on the line of shank of any hook, whether it be of trout or salmon size.

Take 5in. or 6in. of stout lead wire (such as is used for fastening up plants, or shoots of fruit trees, to their supports), and double it into a loop with the ends equal. Take 6in. of salmon line (selecting it so as to bear about the same proportion in thickness to the lead wire as a piece of stout single salmon gut will be to a salmon hook), loop the two together exactly as if two lengths of gut were looped for any angling purpose. Now pull gently but firmly on both till closed up tightly, but not with sufficient force to cut into the lead wire. When it is seen that the lead wire loop is jammed up closely, slacken off the salmon line very carefully (so as not to disturb the form of the eye formed in the lead wire) and remove it entirely. The loop left in the lead wire will now show with the nearest approach to perfection what shape a metal eyed-hook should be, and the experimentalist will probably be surprised to see how slight the "pitch" of the eye really is.

But we have something more to perform with actual hooks and gut—viz., to form a knot to prevent slipping of the gut, and this necessary knot slightly disarranges the previous proportions. If the steel eye is pitched at quite as low an angle as the lead wire shows, the outside formation of the knot pressing against the rigid steel throws the central line of gut a little lower downwards, and to allow for this a slight additional elevation of the eye is desirable, say 5° or 6°; but it should not exceed in the whole 20° from the horizontal line, and I think that will be found about the actual average pitch of the eyed hooks already made, though variations occur owing to some carelessness on the part of the hookmakers, and I hope the new hooks brought out by Messrs. Woodfield and Sons, of Redditch, under Mr. Hall's supervision, will be found to follow the general design.

The knot described so clearly by Mr. Pennell, as attached to his second illustration, is the identical knot which has been several times before described by Mr. Hall in the *Field* and Fishing Gazette, and the same knot on which we founded our early experiments, and adopted the form of eye hitherto so successfully used in eyed-hooks. It makes no difference whatever whether the hook be a 0 0 trout-hook or a 3in. salmon-hook: the fastening is identical, and the principle is the same, and amounts to this—that the gut knotted to an eye made straight with the shank throws the "pull" too low down beneath the shank; one of 20° throws it nicely upon the line of shank, and one "of nearly, but not quite, a right angle," throws it well above the back of the hook. Whichever direction a pull is desired can be obtained by the pitch of the eye, and I volunteer it as my distinct opinion that if Mr. Pennell has his salmon-hooks made with the eyes turned up at a pitch of 30 to 35°, he will spoil his hooks for neatly hooking fish.

The shapes of his hooks (as illustrated) are not good—the points tend too much inwards toward the shank; but I suppose "doctor's differ" on this matter, so I will let it alone, further than to express my opinion that it is so.—I am, &c.,
George Bankart.

[We think it only fair to Mr. Pennell to say that we got the engravings done, and had the greatest difficulty in getting the engraver to understand what was wanted. The engravings were intended to illustrate the "eye" only, and Mr. Pennell distinctly states in his letter that the shape of the hook is wrong. Personally, we would far rather use a hook in which the point pointed in towards the shank than out away from it. The knot Mr. Pennell described is as old as the hills. Mr. Hall has in our columns protested against it being called his method.—Ed.]

## WOBBLE v. SPIN.

Sir,—In the case of "Wobble v. Spin," may I be allowed to state the experience I have had of the wobble? Some time ago I met a gentleman (well, shall I say "wobbling" for jack?) and who, I afterwards found out, was considered the best man in that part of the country. I saw he was not fishing in the ordinary manner, and after having got into conversation with him, asked to have his principle explained to me. I will commence with the hook first, which consisted of three hooks soldered together, but not the ordinary treble hook, one being smaller than the other, obtainable at any fishing-tackle shop. The piece of gimp to which it was attached was a liitle longer (nearly double, I should say) than the ordinary length of gimp attached to treble hooks; of trace there was none, nor even a swivel or lead. The way it was baited was by fastening the gimp loop to a baiting needle, and threading it in at the vent and out of the mouth, exactly between the lips, which are allowed to be open, the water running right through the gills. The hook is drawn close up to the vent, the two larger ones pointing upwards, and the smaller one downwards. No weight ought to be used of any kind, as the great idea in this style is to "wobble" as *slowly* as possible. This I must impress most particularly on my readers. I must say myself I prefer about two yards of gut, with a gimp loop at each end, one to fasten on to the gimp hook, and one to fasten on to the line. I find one of the largest swivels (I think they are called "buckle swivels") on the running-line very useful; but, curiously enough, the make of the largest size is very indifferent, as, though it is possible to thread the thickest gimp through a medium size, by far the greater quantity of the largest-sized ones will not take a loop of thick gut; so, in choosing them, mind and try them first. Do not bind the swivel on to the line, but join it on a loop formed at the end in the ordinary manner of joining loop to loop. Perhaps some persons are ignorant of of the manner of joining gimp to gut, so I will let them know. Unlay the gimp as far as required, and make what is known as a "fisherman's knot" with the exposed silk as one end and the gut as the other, soaking the gut well first in warm water to make the knot form at the end of the silk an ordinary knot, such as one would use at the end of a piece of thread for sewing purposes; but do not pull this tight. Pass the end of the gut through this knot and form a similar knot round the strand of silk; pull each tight, separately, and then draw them together; the ends ought to be whipped and varnished well, care being taken not on any account to varnish the exposed gut, or your line will snap. With a double end, such as a loop would have, the knot is just the same, the two silk ends being tied as one end; but mind each knot is drawn tight before the silk and gut are drawn together. In drawing the bait through the water a slight curving motion is necessary. It will be found sometimes that the bait does not wobble, but comes through the water perfectly straight. A slight jerk given to the bait will rectify this; but, from experience, I do not think this matters much as long as you "wobble" as slowly as possible. I have, I know, pointed this out before; but I cannot impress it on you too much, as it is of such importance. There are two drawbacks to the wobble, that certainly, I should say, might be rectified. One is that after a quarter of an hour's use, or less, the vent tears and the entrails of the fish begin to come out. The second is that I must say I have lost a good many fish—I mean, missed them in striking—with the wobble tackle. This does not in reality seem so bad as one would think, for the simple reason that one has so many more runs wobbling than when spinning; the proportion, I should say, is one lost to every four caught. This might be obviated by having a treble hook hanging down below the other; but then one could not fish a weedy river half so well. I forgot to mention that the size of the hook used is of the largest. I have found this style of fishing kill when fish would not look at any other bait. I never use a very large bait, and never, except in a lake, fish more than a few yards from the banks. Those who have not tried this style as yet, it is my advice to go wobbling on their first opportunity.—I am, &c.,

McWalton.

Sir,—If "Swivel" or any of your correspondents are likely to have a day or two of good pike angling offered to them, I would willingly join, when, unless I am sorely mistaken, it would be easy to convince them a wobbling bait would prove far more killing than a bait that spins to perfection, such as we covet for trout angling. I think you may add that my experience warrants my asserting that I can put either bait upon the hooks in the desired form. I am not asserting that a perfect spin will not take pike. Far from it. Yet I do assert that a wobble will kill when the other will not. The more a bait appears wounded or in trouble the greater appears to be the greed for it. The pike is a savage fish, and, like dogs, will fly at anything in trouble. If you send a howling dog down a street, the meanest mongrel is certain to attack him.

Please note each must fish out of the same boat, which, I take it, is the only fair test, for there is such a thing as luck—one may get into a company of these fish, and so have all the sport.—I am, &c.

New Broad-street, E.C. Sixty Years an Angler.

[Our correspondent is one of the most successful Thames trout anglers, and he only uses the spinning bait or the fly.—Ed.]

## ARTIFICIAL GOLD FISH.

Sir,—I am curious to know why artificial gold fish are not made, for, I think, several piscatorial authors say that pike regard that as a *bonne bouche*. If such is the case, why is not an imitation of that fish made?—for, as far as I know, it has not a place among the myriads of artificial pike baits made. Many thanks for your punctual answer in Saturday's number.—I am, &c., Juvenile Angler.

[There are plenty of gilt and silver artificial baits, and the capital "Comet" bait, sold by Mr. Bambridge, fishing tackle maker, Eton, is silver and red in colour, like the red and silver carp called gold fish.—Ed.]

## SOLUTION OF SHOEMAKER'S WAX—FLIES, &c.

Sir,—In making artificial grasshoppers, the worsted with which the lead is covered is apt to slip, to prevent this I adopt the following plan:—Dissolve a little shoemaker's wax in naphtha, and with a feather give the lead a slight coat. The naphtha quickly evaporates, leaving a thin coat of wax on the lead. This prevents the worsted slipping, and will not show through. After coating, the leads can remain to dry for half an hour, or longer if you like.

I am of the same opinion as yourself, that there is nothing so reliable as shoemaker's wax, used in the usual way, for tying on hooks and fly-making. A coat of shellac varnish over the whipping makes it firm and impervious to the action of the water.

"E. E. S." experiences a difficulty in making the wax look neat. Some wax is nearly black, and some a light-brown. The light is the best for fishing-tackle making, and used sparingly. It was mentioned some time ago about wax showing through floss silk on the bodies of salmon-flies. Now, just for an experiment, I have tied on three hooks with silk not waxed at all, which I send for your inspection. Instead of waxing the silk I gave the shanks of the hooks a coat of the solution. If these small hooks will stand the test tied on with unwaxed silk, I should think it would not be a bad plan to give the shanks of salmon-fly hooks a coat of solution; the whipping silk would then require but little wax.

I have found the three following flies to kill trout and grayling from the beginning to the end of the season:—Blue dun, claret-bodied blue, and small red palmer. Those three, with the following, would comprise a good assortment fit for any occasion on the waters near Ludlow:—March brown, blue and white-winged coachman, red spinner, silver-twisted blue, red tag, yellow dun, and pale blue.

If you think anything that I have said worth notice or of use to any amateurs or others, I shall be much pleased to see it in your columns when you have space and time.—I am, &c., T. B. Hodges.

13, Raven-street, Ludlow.

[The hooks are firm enough, but the wax is such a protection to the silk that it ought to be used outside as well as in. The blue coachman is a capital fly; the body should be made of bronze as well as green herl.—Ed.]

## WADING BOOTS, SCREWS, &c.

Sir,—In answer to your correspondent's ("F. R. C. S.") inquiries respecting wading *boots*, the only advantage that I can find in them is convenience. They are easier to put on, and perhaps they may be a little lighter; but, for practical use and hard work, I think there can be no comparison to thin wading stockings, with tight fitting leather boots which lace up. They give more support to the ankle than any other kind of wading boot.

I see your correspondent, A. H. Gribble, speaks very highly of screws for boot soles. Having used them for many years, I quite indorse all he says about them. They cad be at 7d. a gross from Nettlefold and Co., High Holborn, London, who now keep them in stock in two sizes—small for shooting boots, and larger for fishing boots.

I finished up one of the worst fly fishing-seasons that I have known for many years with three weeks on the Teme, using one of Reuben Heaton's strike-from-the-reel winches, which I found perfection for grayling fishing. Though using the finest gut collar, I never broke it or lost a fish from striking too hard, the reel always giving with the greatest ease and never over-winding.—I am, &c., G. Yarde.

## MR. HALL'S PATTERNS OF HOOKS.

Sir,—Your issue of this date is one of a most interesting character to the general angler. I want to ask you where I can obtain Hall's eyed-hooks with the right side-twist? I have used them during this season, but I can only obtain four sizes in Manchester, and they all have the objectionable fault of the side-twist, commencing at the back side of the hook-bend. Do you know any maker who now produces the right hook in all the sizes? If so, kindly oblige your numerous readers, and—Yours, &c., T. T.

Heaton Moor, near Stockport, Dec. 13.

[Write to Messrs. Woodfield and Sons, Easemore Works, Redditch—they make the improved eyed-hook for Mr. Hall; and although they will not supply you, they will give you the names of some retail houses who keep their patterns. They make them from 0 0 0 (midge size) up to May-fly size.—Ed.]

## POACHING IN THE TONE.

Sir,—I have such an exalted opinion of the power of the press that I look to it to redress grievances that, but for it, would have to be endured patiently, or otherwise; and, as "the law's delay" is proverbial, to put down practices either really illegal, or, though not directly prohibited, most undesirable.

It is for this reason, and also because I know that there are some acts the performers of which would blush to find fame, that I ask you to give publicity to the following.

About a fortnight ago, a gentleman fishing in the Tone, near Taunton, saw a man in possession of a number of trout, of ½lb. and upwards, which had evidently been caught by means of nets, eel-traps, or "rave," and having been caught (which they *might* have been heedlessly), were not returned to their native element. It is worthy of note that this person, who wittingly retained trout during the close season, boasts of his skill, success, and ardour as an angler. Of his success he has thus given an example; his skill is doubtful; and of his sportsmanlike instincts the less we say the better.—I am, &c., Helwr.

## THE ROMANCE OF BOTTOM FISHING.

Sir,—You have partly anticipated a reply I feel bound to make to your correspondent, "J. H. W.," in your editorial footnote to his letter in the issue for Dec. 13. As you say, I do not claim for one moment that there is romance *only* in fly-fishing, or that romantic scenery and romantic associations are found *only* in "Streams o' the North." This would be presumption and egotism on my part, so long as there are rivers in Hampshire and Wales, or spots in England like Dovedale in Derbyshire. The pictures I drew in my contribution to our Gazette were *personal* experiences in the pursuit of our beloved sport on our borderland rivers, and I cannot but feel that fly-fishing for *trout and salmon*, and wanderings in such scenery and amidst such associations as I have (perhaps very sentimentally) described, do possess more romance than any other form of fishing.

I am sure my "comrade-in-arms," "J. H. W.," will agree with me that the romantic element in the various modes of angling is one of *degree*. If a canal is *not* slimy then it is more romantic than one that is. It is purely a question of association in the lure adopted, whether *pills* of paste, maggots, grub, worms, *fine-smellin'* or otherwise—in interesting or uninteresting scenery and other surroundings of whatever kind.

I assure "J. H. W.," who is, I feel sure, an enthusiastic brother of the craft, that the thought of "sneering" or "pity" for anglers of the "paste and maggot" never entered my mind. My allusion to "poorer brethren" was meant for the many hundreds of the humbler classes who cannot afford to join a club, nor a *real* day's outing, and who have to content themselves with coarser sport in most *unromantic places*. With such I deeply sympathise. I am sure from "J. H. W.'s" letter that he is a right good sort, and one, if it were my lot to meet on the banks of *any* stream, it would be a real pleasure to exchange flasks with, and a crack and a smoke would make us "real cronies." I confess I never saw a chub in the water in my life: if I did (I wish I had the chance), I know this—I would try my level best to slay him with paste, maggot, or any other *fair* means. I have for over 20 years been a most enthusiastic angler; but my sport has been confined to these royal fish—trout and salmon—almost wholly, and therefore *baiting a swim*, to my mind, seems a low sort of angling, and coarse baits generally. But, as Mr. Editor says, one must take and be enthusiastic about the *next best kind of fishing one can get;* although it may be less romantic, it will still be very pleasant and philosophical, and I can only say, had I the choice of so many kinds of fish and fishing as my South country brethren, I would be at it to-morrow. If "J. H. W." ever comes North, and would like a day *on the romantic* for trout and salmon in the season, I shall be pleased to have his card through the Editor. I shall be happy indeed to give him the hospitality of—Yours, &c., Streams-o'-the-North.

P.S.—I think I must add that if any articles are sent on "bottom fishing," as suggested by "J. H. W.," they should be entitled, "The *Philosophy* of Bottom Fishing," not "The *Romance* of Bottom Fishing." You see philosophy is *deep*, and is always at the *bottom* of everything. Philosophy goes always to the *bottom where the mud is;* whereas romance is at the *top*, *above*, where the *flies are*, for romance always *soars*, having beautiful wings, *like flies and fly-fishing! D'ye see the difference?* Will "J. H. W." pardon my joke?

## HELP FOR FISHER FOLK.

Sir,—Early in the New Year from two to three hundred fisherwomen or seafaring men's wives are to visit London, with a view to enlisting sympathy in favour of refuge Harbours to save the loss of life from shipwreck, which has increased very much during the last few years. Two women will come into each district as representatives.

The women will probably remain in London for about a week. Some ladies have kindly volunteered to look after them a bit, and the Crystal Palace Company has invited them for one day to the Palace, but I shall be glad if any one will write to me who desires to render any further help in any way.—I am, &c.,

F. Johnson

The National Refuge Harbours Society of United Kingdom,
17, Parliament-street, London, Dec. 15th, 1884.

## THE HALF-BRED OF THE YARE.

Sir,—Will Mr. Robert Moll kindly inform me in what the "Half-bred of the Yare" differs from the white or silver bream? By so doing, he will greatly oblige.—I am, &c., Mark Antony.

### THE RIVER ELWY AT ST. ASAPH.—PENNELL'S FLIGHTS, &c.

Sir,—In answer to "J. S.," may I tell him of a day I had on the Elwy in April last?

I reached St. Asaph in the morning, and hurried into the comfortable Plough Hotel for breakfast. Trout were offered, and I "rose" at once; but when they came they were no larger than average Thames gudgeon; yet I was told they were of fair size for the water. Very brown and sweet they were, and, as I was trying to satisfy an angler's appetite with a dozen or two of them, in came one of the "excellent" fly-tyers, who lived near. On the principle of encouraging local industry I bought some flies, the first eight of which raised my hopes, for I thought that such gut and hooks implied the evidence of some good fish. I inclose a march brown for your admiration.

In the river small trout were very plentiful; but salmon, parr, and smolt even more so. The fly of the district was not appreciated; but my own throws and a Francis were esteemed delicate morsels, and I got trout as fast as I could wish. Two out of every three went back, and all would have been returned but for my breakfast experience. The parr and smelts were a nuisance; dozens hung on to my flies and fairly were drawn out, as well as my patience. I returned to the Plough with fourteen brace of 6-inch trout, and was highly complimented on the size of my fish; other baskets were of smaller average. I hear that sea trout or sewin go up the Clwyd and Elwy in autumn. May I ask if any of your readers have done any rod fishing in the sea off the North Wales coast? I have heard of fly fishing for bass off the weir at Llandrillo, but not for some years.

The letters you have published about Pike Spinning have interested me very much. "A. R. H." is quite right in what he says about the importance of striking and the holding power of Pennell's flights. A few years ago I killed twenty-two pike in succession without missing a fish, all with gudgeon on these flights. I find that gudgeon or dace will spin straight on them, but roach wobble. Mr. Pennell himself objects to roach as bait, probably for this reason. I cannot say which is best—wobble or spin. The weak point of the flight is that the triangle lies in the hollow of the bait, and when a broad one, like a roach is used, if it is taken depthways, with the triangle outwards, it prevents the pike's jaws from closing well on the hooks. I lost two pike in this way one afternoon last autumn, and in each case the roach was nearly torn in two by the stroke. I mean to hang an extra triangle outside when next I go a-spinning, which I hope will be soon.—I am, &c.,

Hanley, Staffs. J. T. H.

P.S.—From being an occasional reader I have become a regular subscriber, and congratulate you very heartily on the form your paper is in. I enjoy it very much indeed.

### SPINNING FLIGHTS.

Sir,—I shall feel greatly obliged if you will kindly examine the inclosed spinning flights, and favour me with your opinion as to the sizes and shapes of hooks most suitable for the purpose. I had only a few single hooks to make them with, which I have soldered roughly together, so they do not fully represent my ideas.

To bait: Push the lead down the throat of the bait till the eye the gimp goes through is in the mouth; then insert the *small hooks* of the lowest triangle in the tail; curve the tail as required for the spin; insert next triangle, draw hooks well in, and insert remaining triangle on the other side, then the liphook.

I think the flight has the following advantages:—

1. The small hooks hold the bait more firmly, and are less likely to tear out than single hooks, especially with a tender bait, injure the bait less, and render it more durable than the ordinary flights.

2. The single hooks require less force in striking, and penetrate deeper than double hooks, as the degree of force necessary for insertion increases with the number of hooks.

3 The hooks are more easily disengaged, and injure the fish less—an important consideration when unsizeable fish are hooked.

4. The lead being in the body of the bait instead of on the trace, does not impede force of the strike; consequently the chances of hooking the fish are increased; and is more conducive to sport and facile for casting.

I have only had one opportunity of trying it during *one hour's* fishing; two fish came to bank. I think of registering the design if you consider it of sufficient merit.

I take the Fishing Gazette every week through stationer, and, next to fishing, derive the greatest pleasure in perusing it, and am indebted to it for many valuable "wrinkles." I should like to know if you have ever seen the "liver fluke," so destructive to sheep, adhering to fish? I took some sticklebacks out of a pond at Barnet, in 1882, with several adhering to each fish.—I am, &c.,

A. E. Ellison Smelt.

P.S.—The Trent Fishery Board issue licenses, and specify the "close time" as for *trout and char*. I have always thought the "char" was only found in lakes. Am I right, or is the grayling classed with the chars?

[We think Mr. Smelt's tackle is a very good one. "Chub Chavender" speaks of finding flukes in the livers of "black" trout. The parasite Mr. S. refers to is the common fish leach. The char is, we believe, found only in lakes, and we question if there are any char under the Trent Board's jurisdiction. They simply adopt the wording of the Act.—Ed.]

### THE NOTE OF THE WOOD PIGEON.

Sir,—The line quoted in my book, in which the word *crush* appears, is from Campbell's beautiful poem on "Field Flowers," and ought to have been between inverted commas.

In Johnson's Dictionary, one of the definitions of the "N.S. Crush" is "the act of rushing together." The notes coo-coo-o—coo—coo-oo, as uttered by the wood-pigeon (Cushat), rushing, as it were, one into the other, could not, I think, be better expressed than by this word.—I am, &c.,

December 13. Edward Hamilton, M.D.

### ON STRIKING A SALMON.

Sir,—"I have seen Mr. Kelson strike a salmon off the reel, and know exactly how he does it. Before I saw him do it I told him it was a mistake, and say so still."

These words will be found in Mr. Malloch's letter to you last week. Pardon me for suggesting the statement is but one more proof that anglers "form their opinions from the means afforded" (making use of my own words the week before).

I will explain:—

I was experimenting with a new reel in Mr. Malloch's presence, having previously declared that it was not strong enough in the brake for my purpose. Being a clever workman, he himself altered it; but still I said the same, and, in trying, failed.

I conclude—like others would, I suppose, in reading his letter—that what *he saw* he objected to, and so did I.—I am, &c., Geo. M. Kelson.

### CROAK.—PIG'S WOOL.

Sir,—Will you kindly inform me if there is any other British bird (except the raven) to which the above term (*i.e.*, croak) is applied; and, if so, may I trouble you to quote the authority?

*Re* Pig's Wool.—In answer to an Irish correspondent, he can only get what he requires in *small quantities* from breeders keeping *old boars.* He might get a "tuft" from the Zoo.

It must have been in the days of Tubal Cain, or shortly after, that the *shearing* referred to took place.—I am, &c., Mark Antony.

[We hope "Mark Antony" will never come to be considered as a fine specimen of the animal he refers to in his second paragraph. We confess the expression "*croak* of the "partridge," used by "J. H. W.," seems inappropriate. The raven alone "croaks," the partridge "calls."—Ed.]

### ANCHOVIES OFF THE DEVON COAST.

Sir,—During the last week or two large shoals of anchovies have visited our bay, and a great many are hauled in entangled in the herring nets. There are generally a few every year, but I have never seen them so abundant. I should think no fish has so wide a gape; the body might easily be passed through the jaws. As perhaps you have never seen a specimen of the fresh fish, I will send you some the next time the boats are able to get out. I mean to salt some down, and see if they will prove equal to the Italian fish.

Budleigh Salterton, Dec. 13. E. G.

[Many thanks in advance.—Ed.]

### SCALE FOR ASCERTAINING THE WEIGHT OF FISH.

Sir,—Referring to Mr. H. W. Crompton's letter in your issue of the 6th inst., as to the method of ascertaining the weight of salmon from the dimensions, I have before me a newspaper report as follows:—"A salmon weighing nearly 80lb. has been taken in the Tay, a few miles above Perth. The fish was 5ft. in length, and 2ft. 5in. in girth."

If Mr. Crompton will kindly work out the calculation by his method, I think he will find this fish falls far short of 80lb. Will he kindly inform me how he accounts for the deficiency?—I am, &c., G. J. Snaith.

P.S.—This is probably the same fish as Mr. P. D. Malloch reported in Gazette of 29th Nov. having been caught and returned to the river, it being close season.

### A FINE SILK LINE.

Sir,—I am sending you by this post sample reel of silk which is very much used in Nottingham for roach and dace fishing.

I shall be glad if you will, the first opportunity you may have, give it a trial, and favour the readers of your paper with your opinion upon the same.

I may say that I have used it myself now for several years, and would not wish for a stronger and lighter line, killing on different occasions trout close upon 2lb., a roach 2lb. 5oz., and a barbel 3½lb. I am using the same line now which I bought three years ago, and would not take double the price for it (which was very trifling).

Should any of your friends require one, I shall, upon hearing from you, be glad to obtain one for them.—I am, &c., E. Sagwell.

5, Southey-street, Nottingham.

P.S.—I have not measured the length, but am told that each reel contains about 100 yards.

[This silk thread is very fine and wonderfully strong. Anglers will find it very useful in various ways—for the whippings on rods and large hooks, for fastening gimp loops, &c. The advantage of using a fine line like this is, you can cast a light float tackle out easily, and the weight of this line does not draw it in towards you as a heavy line does.—Ed.]

### VARNISH FOR FLY HEADS AND WHIPPINGS.

Sir,—I constantly see questions about varnish for fly heads and whipped hooks in your columns, and in other sporting papers. I tried sealing-wax first, and then orange shellac, dissolved in spirits of wine. Both these are good; but the latter method may be improved by the addition of a very small quantity of Venice turpentine. I got this hint from "Stoddart," and what I now always use is as follows:—I take a two-ounce phial, and half fill it with best orange shellac, broken small, but not in powder (this permits the spirit to act more readily at first), then I fill it up with ordinary methylated spirit, place it in a sunny window, and shake it every day for a few days—say four or five; then I put in a bit of Venice turpentine, about the size of a large pea, and place the bottle in a vessel of hot water, shaking occasionally, until all is dissolved. Now, the hot spirit dissolves much more shellac than when cold, and I have purposely added an excess of shellac, so that the spirit is what we call saturated with shellac. On cooling, and standing for some time, the upper portion becomes quite clear, and may be decanted off from the sediment below, and is fit for use. Keep the bottle well stoppered. The Venice turpentine has the effect of making the varnish less brittle and "chippy," and much more tenacious.—I am, &c.,

Coole Abbey, Fermoy, Ireland. H. W. Peard, M.B.

[Many thanks. Has Mr. Peard tried the varnish recommended by Mr. Lord, and quoted by us in last issue of the Gazette?—Ed.]

### A NOTE FROM NOTTINGHAM.—SHEEP'S PITH, &c.

Sir,—The late fresh has made very little difference in the fish biting, not being sufficient to clean the bottom. At Weston and Shardlow quantities of Burton slime are coming down, covering your bait as soon as thrown in. Very little has been done among the coarse fish. On Tuesday, Mr. Walker, of Nottingham, got six good pike at Shardlow, weighing 36½lb., every fish being over 6lb.—a splendid sample. A few chub have been taken in the same length with Cockspur worm. On Friday, Mr. F. West got two nice pike at Weston—one 13lb., another 4lb. Mr. Nairn, on Saturday, got four fish down the river. An angler in the Colwick water, on Wednesday, took a few eels—something rather unusual for December.

A hint to chub fishermen: Use sheep's pith; it is a much whiter bait. Cut it in lengths an inch long, leaving the skin on; drop in boiling water for two minutes, which sets both ends, and makes a grand bait.

In my letter last week you put "Jolly Gardens," instead of "Folly Gardens," some time the residence of the late Mr. R. Sutton, proprietor of the *Nottingham Review*. We may be Jolly Anglers, Mr. Editor; but cannot stand Jolly Gardens.—I am, &c.,

December 15. A. W.

A Truly Noble Lord.—While the riparian owners on either bank of the river Thames are, in some instances, so anxious about their alleged fishery rights, they would do well to follow the example of the Right Honourable the Earl of Carnarvon, who holds the rare and ancient "Free Warren" exclusive sporting rights over a lot of land other than the farms and park of the Castle Highclere estate, in Hampshire. Some time before the passing of the Ground Game Act, his lordship permitted the tenants of the farms to take the rabbits and to course the hares in conjunction with the Sydmonton Coursing Meetings held over Squire Kingsmill's estate. Again, the noted Dulverton Wood, on Lord Carnarvon's Devonshire property, is reserved for some of the wild red deer, hunted by the Devon and Somerset staghounds, the wood in question being a favourite resort of the noble quarry. Still, again, when Mr. Grenfell, of Taplow Court, permits anglers not only to angle thereabout in the river, but to "picnic" in the woods, and such gentlemen as Mr. John Walter, M.P., and Mr. Richard Benyon, of Englefield Park, throw open their delightful gardens to the public in certain days in summer, and that several generations of West Berks and Herts folk had revelled in the beauties of Highclere Park, and the in springtime cowslip-decked Beacon Hill, it is really ungenerous for any riparian owner—"gentle" or otherwise—to talk about his rights to the fishing in such a public river as the Thames. *Noblesse oblige!* Given a far stricter river police, and the speed of the steam-launches regulated, there is no reason why the Thames should not be as safe and as free from rowdyism as any public or private garden, and the grass and trees of the riparians held as sacred as the flowers in the people's parks.—Rusty Barb.

WORMS IN DOGS.—"Greenhithe, September 11, 1878.—Having a Dog and Bitch Toy Terrier (each weighing about 3½lb.), and also a very large Mastiff Bitch, all evidently troubled with worms, I gave each Terrier one-half of a Naldire's Powder, and an entire Powder to the Mastiff. The result was most satisfactory, for after the discharge of a large quantity of worms the Dogs improved wonderfully, and were admired by all who saw them. I have not the slightest hesitation in using these Powders for all kinds of Dogs.—R. S. Dunbar." NALDIRE'S POWDERS are sold by all Chemists, price 1s., 2s., 3s. 6d., and 5s., with Full Directions for Use.

# RIVER REPORTS.

### TIME OF HIGH WATER IN THE THAMES.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge (given below).

| | | | |
|---|---|---|---|
| Add | 30 | minutes for | Chelsea. |
| | 40 | ,, | Putney. |
| | 45 | ,, | Hammersmith. |
| | 50 | ,, | Barnes. |
| | 55 | ,, | Kew. |
| | 75 | ,, | Richmond. |
| | 80 | ,, | Twickenham. |
| | 85 | ,, | Teddington. |

Example :—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington about 3.25, or eighty-five minutes later ; but it must be remembered that a strong wind accelerates or retards the tide very much.

For Times of High Water at London Bridge.

| | | | Morning. | Afternoon. |
|---|---|---|---|---|
| Saturday, | December | 27 ... ... | 8.29 ... ... | 9.1 |
| Sunday, | ,, | 28 ... ... | 9.41 ... ... | 10.15 |
| Monday, | ,, | 29 ... ... | 10.50 ... ... | 11.23 |

## THE LOWER THAMES.

### General Remarks.

As the few days before the Christmas Holidays commence will exhibit very little results in angling from the deficiency of anglers, it may be as well to refer to the early prospects of jack and perch fishing, and point out some of the most likely places for sport. It is often a matter of surprise that in the neighbourhood of Teddington and Twickenham so few jack now come to grief. In the "Blue Book" of the T.A.P.S. for 1864 there is this report : "It is computed that nearly 500 jack have been captured in the deep at Teddington," and this is for one season's fishing. Between Teddington Wear and the "City Stone" at Staines there is an almost continuous link of good fishing ground for jack and perch. The reach of Kingston has always been noted for perch and a good quantity of jack ; but this has been far exceeded by the famous deep at Hampton, where memorials of the past will never be forgotten. As far as memory will serve it has produced the largest jack—not many years ago—of 28lb., and a brace of perch on one paternoster, weighing 6lb., both piloted by that excellent fisherman, Mr. William Milbourne. The district of Sunbury contains some very fine perch, and there is a record of one of 4lb. some years ago being caught, which can be confirmed by the Messrs. Stroud. The big pike so often spoken about, has not yet been taken at Walton, and if it has grown with time it must be a huge monster now. At all events, there are plenty of good jack in this portion of the river. At Shepperton the jack are generally plentiful, and it is not many years ago two of 20lb. each were taken in one week just above the lock. It will be remembered that the monster jack netted out of Kew Gardens was put in the Thames from the landing stage at the Chertsey Bridge Hotel, but its re-capture has not yet been effected. There are some good jack places in this neighbourhood, and that at Borough head close by, is noted for both jack and perch. Here Mr. Forbes got his magnificent take of perch ; and in the "Blue Book" previously referred to, it says—"On the 25th day of February, 1864, a jack of 20½lb. was taken by an angler from London, and about the same time a perch of upwards of 4lb. was captured by a stranger, both fish being in excellent condition." Penton Hook, which follows on from this point, abounds with jack, and many a good one has been taken out of it. The water right up to Staines is capital ground for both jack and perch. The prospects are now of a more encouraging character through the increase of water, and there can be little doubt, when both jack and perch can be found on the feed, the anglers will be well satisfied with their sport. The river has been rising, and the water in such bad condition, the immediate prospect of fishing is not at all bright. There is not much to report in the way of angling, and what there is comes from the tail-end of last week.

### Angling Results.

**Richmond.**—Henry Wheeler, in three days, 50lb. of roach. There was a large attendance of anglers on the 21st, and they got some remarkably fine dace from 9in. to 10in. in length.

**Twickenham.**—Edward Finch, in one day, 11lb. of roach. John Spong, in two days, with Mr. Johnson, 20lb. of roach ; another day, with Mr. Meyer, 16lb. ; and another day with Mr. Hilton. Richard Coxen, in two days, seventeen dozen of roach and dace. C. Miles, in one day, six dozen. Samuel Cole, in two days, 17lb. ; and Pert Hammerton, in one day, 6lb.

**Kingston.**—The bank anglers here and at Surbiton have been getting some roach, dace, and perch.

**Hampton Court.**—George Martin, in one day, three dozen of roach. At "Tagg's Island Hotel," the anglers have been getting a nice quantity of roach and dace.

**Walton.**—Mr. Hickley, with George Hone, one jack of 2lb.

**Shepperton.**—James Haslett, in one day, two and a half brace of perch.

**Staines.**—John Keene, jun., in one day, a brace of jack and two dozen of roach. J. Keene, sen., with Mr. Little, five roach and one dace ; and S. Keene, one dozen of roach.

## Thames (Datchet).

The water is falling fast, and if the weather holds fine, there will be a good chance at the jack and perch by the end of the week. The past week has been almost a blank to all, and I have nothing to mention. Twice I have started with patrons, and the rains descended, and the winds blew, and blew us home again ; and one day, with a patron, a brace of chub.—G. Lumsden.

## Thames (Goring).

Water now thick, but will do for jack and perch about the end of the week. Nothing doing here in the way of fishing.—J. Rush.

## Thames (Monkey Island).

Very few fishermen down, and very little doing. On Thursday two gentlemen, out with my son, two dozen nice roach, several going ½lb., and one turned the scale at 1lb. On Friday, out with Mr. Thomas, three nice jack, about 12lb., all got in about one hour ; after that time the wind got so boisterous it was almost impossible to hold a punt where there was any probability of catching a fish. On the 21st inst., out with Mr. Allard and friend, a dozen and half very fine roach, and one dozen returned, which were not sizeable fish. These were all taken in one swim in a very short time. Some bank anglers took three trout while ledgering for barbel—one fish 6lb., one 4lb., and the other 1½lb. ; also two barbel. The 6lb. and 4lb. fish were taken out and weighed on the bank, and returned without the slightest injury. The smaller fish had got the hook too far down to be easily extricated, and I believe it is one of the trout that I turned in about three weeks ago, when I had 20 brace sent me from our society (the Windsor and Eton Preservation Association), and which were a very handsome sample of trout. This is only a small number to what the association has been putting in between Monkey Island and Staines. Good all-round fishing ought to be had, providing we get the weather more settled, and not such rough winds. No doubt there are plenty of jack in the river, and very large ones.—R. Plummer, sen.

## Thames (Oxford).

With the present fine cold weather pith and brains should have their due effect wherever it is possible to find a nice bluff bank with shelving, hollow walls and a gentle oily run of water outside. To-day the river had cleared down considerably ; but it is not yet sufficiently fine for my liking. I prefer to eat my dinner in a clear light, and so I fancy do the fish. As long as old Cotton's maxim, "fine and far off" is observed—and this applies more particularly to chub fishing, with a due attention to keeping out of sight, and other similar matters, let me have the water bright when I go a-fishing. The Angling Society held a meeting on Thursday evening, and it was decided to prosecute Abel Beesley for taking undersized fish, and also to proceed against the man who had charge of the punt for aiding and abetting. It is high time this Beesley and his *confrères* are convinced that they must not carry on their illicit games in open defiance of the regulations laid down by the Conservancy for the protection of the fishery. Last time I was present at a raid on Mr. Beesley's boat. I should think we returned nearly half a bushel of fish to the water, and it was only at Mr. T. Spreckley's solicitation we refrained from prosecuting him. On this occasion, I have it from one of the eye-witnesses that the well of his punt was literally chock full of fish so crowded together that they were suffocating. The cast net is the most destructive appliance for taking fish it is possible to use, not only on account of the number a man can catch at a throw, but also because of the quantities of small fry which they will not take the trouble to return to the water again. Mr. Geo. Galpin was haled to the Abingdon Court of Petty Sessions, on Monday last, for unlawfully taking fish in private water, the property of the Earl of Abingdon. Mr. Galpin pleaded that he had permission to fish there ; but this was strongly denied by Abram Greenwood, the head keeper. From all accounts, there was some very strong swearing done, and not by the defendant.—Cherwell Otter.

## The Thames (Windsor).

As I anticipated, water has dropped off considerably, being quite a foot lower than when I wrote last, but not quite clear—just the colour to bother jack if using good bright bait, either live baiting or spinning. It is by no means too much discoloured for chubbing, and either pith and brains, greaves or cheese ought to kill well ; gentles will doubtless be best for roach and worms for perch, either the tail end of a well-scoured lob worm or good sized red worms. A very keen wind is blowing, and in wishing all my brother anglers the compliments of the season, I would advise good wrapping up if "angling they will go." The cold nor-easter of last Saturday doubtless found me out ; in consequence I am hors de combat, and those jack I contemplated fighting, will live to fight another day. It perhaps will not be out of place to remind anglers that they ought to be grateful for the mild winters so long enjoyed. Seventy-one years ago last Sunday horses and carts crossed the Thames at Windsor on the ice, an ox was roasted, and a fair held.—B. R. Bambridge.

## Chichester.

During the past few days the weather has been cold and cheerless, and but few anglers were by the water side. The rains have but slightly improved the depth of water here, so I suppose we must wait patiently for another downpour or the springs breaking up. Mr. Weir has taken a couple of fine eels, one of 3½lb., but no pike have been recorded. No news from either Selham or the Ouse. Wishing brother anglers a happy Christmas and good sport during the holidays—George F. Salter.

## Ilfracombe.

Sea fishing, owing to the stormy weather, this week has been very slack. A few boats went out on Monday and had a short drift ; they caught about half a maize each boat. Some fine cod have been caught, but very few herrings. Weather at present very cold. Wind : E.N.E.—E. Comer.

### Lugg and Arrow (Leominster).

These streams are in good order for either the worm or maggot fishing, both still keeping slightly coloured. Both streams had run nearly clear at the beginning of the week, but rain falling heavily in this district made them begin to slowly rise, and to get coloured again. The fish are biting well, and some good fish have been taken. Good sport has been had with the grasshopper. The Arrow was fished on Friday by Mr. Wilson, who, with the grasshopper (his own make), landed ten brace of fine grayling, all in capital condition. A good dish of grayling were taken from the Lugg near Aymestry, with the maggot, the same day. A gentleman fished the water dear Eardisland at the beginning of the week, and took a nice lot of grayling with the grasshopper. Some good fish have been landed in the Lugg near Kingsland. Good sport has been had in the Stanton district. Some fine grayling have been taken near Ivington. Fishing quiet near Ford's Bridge. The Pinsley is in good fishing order. Some fine fish have been taken this week with the maggot.—Gwynne.

[This report was crowded out last week.]

### South Level Cut (Littleport).

Since the wind has shifted round to the north and north-east, the fishing has been very so, so. The following is the best I can do: Dec. 18th, Messrs. Bryant and Webb, Ely, four pike, largest from 8lb. to 9lb.; M. F., Ely, 8lb. good roach. Dec. 19th, Mr. F. Drew, Cambridge, a nice little lot of good roach, largest 1lb. 6oz. Dec. 20th, Mr. J. Dingley, London, 18lb. good roach; four other anglers out; but do not know what their takes were, their object seeming to be, the last few weeks, to keep it *dark*. Dec. 22nd, Mr. F. G. Tuck, New Barnes, Ely, a jack 2½lb., and a few good roach; three other old anglers out, but not much good done. Nov. 23rd, Mr. H. Lee, Cambridge, 11½lb. splendid roach; Mr. Hailstone also 9lb. good roach; my son Tom, a pike 3¾lb., and some good roach, largest 1lb. 5½oz.—Charlie South.

### Teme (Tenbury).

Up to Tuesday night this stream had run into capital condition for angling, having run nearly clear; but on Tuesday night rain fell heavily in this district, and made the water begin to colour again, and to rise. The fish have been biting freely at the maggot and red worm, and some good dishes of fish have been taken with the grasshopper. There has been but little fly-fishing of late. Salmon have been seen going up the stream since the water has risen daily. The water near Little Hereford was tried by a gentleman on Friday, who took a very nice dish of grayling, and a few eels, with the maggot. Near the Teme Bridge, a nice lot of fish were taken the same day with the red worm. A good dish of grayling were landed near Rochford, with the maggot. Good sport has been had in the water near Berrington, and some fine fish have been taken. In the Eastham district a few nice grayling have been landed. Fishing quiet in the water near Cornbrook this week. The Kyre is in good order, and a few fish have been landed with the worm. The Rea and Ledwyche are very quiet.—Worcester.

[This report was crowded out last week.]

### Teme (Ludlow).

The Teme and all the streams around here are now quite full, and in good fishing order. This last week or two there has been no angling except bottom fishing with the maggot and worm. Salmon continue to pass over Ashford Weir, and can now ascend the Teme with comparative ease. Down Ashford water, two gentlemen paid the Teme a visit on Saturday, and fished nearly all day with the worm and maggot, but caught nothing better than perch, roach, and chub; the grayling would not bite at all. On Monday, in Oakley Park quarter, one gentleman landed nine grayling, and another eleven, both with the maggot and worm. Some fair fishing in the Clun. On Tuesday, up the Felton waters of the Corve, twelve grayling were landed with the maggot. Some few fish have been taken in the Ony, but nothing doing in the Leintwardine water or the Ledwyche.—S. Ludlow.

[This report was crowded out last week.]

### Trent (Newark).

As foreshadowed in my last, the water came down very high and very much charged with colour. By the 21st, there was at least 4ft. of extra water in the main river. Since, then, however, it has gone down nearly a couple of feet. To-day, Tuesday, it seems to be still receding, but it is very dirty, and I am afraid that all that can be done these Chrismas Holidays, under the present prospects (at least, however, for the next four or five days) will be to try all the slack corners with cockspur worms for roach and dace. A little sport by this means might be had. Pike and chub fishing will be quite out of the question, for the present at least, so those holiday makers who must go fishing cannot do better than try the little worm in quiet corners.—The Trent Otter.

Mr. W. Lane, fishing in the Trent near Newark, caught three nice pike between 4lb. and 5lb. each. Mr. J. Longden, one of 3lb., spinning; water very high.

### Waveney (Beccles).

My anticipations as to Christmas sport are, I fear, now entirely out of the question although at the time of writing last week's report the weather was promising. On Thursday, Friday, Saturday, and Sunday it rained heavily, and the river is again brought to overflowing. No rain has fallen since Sunday afternoon, and with fine weather for the next two or three days it may be worth trying about Friday or Saturday. Wind very cold, N.E.—A Waveney Angler.

### Wye and Derwent.

Both the Wye and Derwent have run down wonderfully since my last report, and both rivers are in excellent condition (especially the higher lengths) for either fly or bottom fishing. I have seen several grayling rise to-day (Tuesday), but I have been trying worm and maggot. I have killed sixteen roach and three grayling, and several other anglers have killed nice little baskets of both grayling, roach, and dace. The pike-fishers have killed a few fish with both live bait and spinning. One jack of 2¾lb. was killed with worm. Otters are very numerous on the Derwent just now; two were seen this morning playing on the banks of the river just below Cromford Station at 8 o'clock. Fish are now nicely on the feed. Weather fine and frosty.—Geo. Jas. Eaton.

Smolts in December.—A curious fact in connection with the natural history of the salmon is just reported from the River Severn, celebrated for its salmon and eels. At this time of the year the former migrate from the estuary to the upper streams to deposit their spawn, and at the same time the latter go to the sea for the same purpose. The eels are commonly taken in this month, and some fishermen have found in their nets several young salmon in what are called the "smolt" state—*i.e.*, fish of about 3oz., with bright silvery scales over the ordinary scales of the "samlet," which is the name the young fry are known by until they migrate. The remarkable fact is that these smolts should be on their way to the sea in December, all observation by pisciculturists having hitherto never seen smolts in the river except in the spring, when they go down to the sea.—*Daily Telegraph*.—[We have caught them late in the autumn.—Ed.]

To Recent Subscribers.—Since we last asked our readers to be kind enough to send us the names and addresses of any anglers they know who were not acquainted with the Gazette, hundreds of new subscribers have taken the paper, and we ask them if they will kindly take the trouble to help us in the way we suggest, so that we can send specimen copies. Many of our advertisers have been in the paper continuously for years, and have voluntarily acknowledged the benefit they have received. If any of our readers can induce friends they may know who advertise, to give the Gazette a trial, it will greatly aid us in still further improving the paper.

## CLUB REPORTS.

### THE CAVENDISH ANGLING SOCIETY.

The sixth annual supper of the C.A.S. was held at the Duke of York Tavern Wenlock-street, New North-road, N., on Thursday, the 11th inst. Thirty-four members and friends sat down to an excellent repast provided by the much-esteemed host and president, Mr. W. E. Humberstone. The chair was admirably filled by Mr. M. Palmer, while Mr. H. Canton ably discharged the duties of vice-chairman. The chairman, in a few introductory remarks, stated that the last service rendered by the vice-chairman and himself was selecting swims for the members at the last competition; but he really thought everyone present preferred the swim they were then at. Such toasts as "Success to the C.A.S.," "The Officers," "The Chairman," "Vice-Chairman," "Visitors," "Host," &c., were enthusiastically drank and responded to. The following gentlemen enlivened the evening with some excellent singing:—Mr. Canton, comic song; Mr. F. Granfield, "Balaclava"; Mr. Walker, "Saving them all for Mary"; Mr. D. Aubegny, "Will-o'-the-Wisp"; Mr. C. White, comic song; Mr. W. Lee, a pleasing ballad; Mr. Gorden, recitation by G. Manville Fenn, entitled "The Engine-driver's Story"; Mr. Young, "Give Me Back My Heart Again"; Mr. S. Penton, "You Never Miss the Water until the Well Runs Dry"; Mr. Howard, "If I was only Long Enough," and "Oh, what a Beauty"; Mr. James, jun., "Brown Upside Down"; encore song, "Duckfoot Sue"; Mr. Brett, "Midshipmite"; Mr. Walker (encore), "We Won't go Home till Morning"; Mr. Platt, "Sailing"; Mr. C. Elliott, "Rattling Mare"; Mr. E. Chambers, "Just Down the Lane"; Mr. Harding, "Rocked in the Cradle of the Deep." The indefatigable chairman reminded all present of a little box on the table which was connected with a society established to assist our brethren when in sickness and distress—A. B. S.—which appeal was readily responded to by everyone present. Ten prizes were promised to be fished for at the coming competition, which will engage the attention of the committee. The new prize list was handsomely subscribed to, and will surpass in value any of the preceding ones, and will be no small inducement for members to persevere to obtain good shows. At 2.25 the morning following one of the most enjoyable suppers was brought to a close, and all wended their way peacefully home. Mr. Canton will take the chair on the 18th inst. at the concert following the business of the society, when we anticipate a good gathering. We shall be pleased to welcome old or new friends any Thursday to our concerts at 9.30, Dec. 25th of course excepted.—E. C.

### CLAPTON ANGLING SOCIETY.

The usual weekly meeting was held on Monday last, Mr. D. H. Kidd in the chair. The minutes of the preceding meeting were read and signed. Mr. H. Short weighed in 6lb. 2oz. chub, heaviest 2lb. 13½oz., from the Lea at Angel-road, where three jack of 9lb., 6lb., and 4lb., respectively had been taken in one day the preceding week. Mr. Short reports that the water is in capital condition for all round fishing, and a visit to Angel-road would most likely result in sport. A new working member was elected. It was agreed that another meeting should be held to compete for the two prizes not won at the last outing. These would be supplemented by a handsome photographic album since presented by one of the members. The date and place of meeting were left for future consideration. I have to announce that a "ladies' evening," comprising concert and entertainment, has been arranged for Monday night, the 29th inst., at which the Scenes of the Thames (dissolving view effects), so successfully shown at the late Gresham meeting, will be given. Mr. Parker has most kindly volunteered to give his entertaining descriptions. I am promised some excellent musical talent, so that an enjoyable evening may be anticipated. All members will have full notice, and a card of admission for two friends will accompany it. Members of angling societies and residents in the neighbourhood are condially invited. Commence at 8, terminate about 10.30 p.m.—Henry Howse, hon. sec.

### CLYDESDALE ANGLING CLUBS' PROTECTIVE ASSOCIATION.

A large and representative meeting of anglers was held in the Religious Institution Rooms, Glasgow, on December 12th, for the purpose of considering several matters brought under their notice by the executive of the Clydesdale Angling Clubs' Protective Association, in regard to the improvement of the Clyde for angling purposes. Mr. Loudon M'Queen occupied the chair, and the clubs represented were—Abingdon, Kirkfieldbank, Buckland, Glasgow Dodgers, Glasgow Wanderers, Glasgow Junior Wanderers, Walton, West of Scotland, and others. A long discussion took place as to the best means by which the association could carry out the proposal to have a close time for trout and regulating the hours of fishing; and it was ultimately resolved that, carrying along with them the proprietors interested, the association should approach Parliament wlth a view to obtaining statutory powers as the best and most satisfactory means of obtaining the object aimed at.

### GLOBE ANGLING SOCIETY.

A complimentary visit was paid by the Great Northern Brothers to the above on Wednesday evening, the 10th inst., but owing to the heavy downfall of rain which prevailed throughout the evening it did not turn out so successful as was at first anticipated. Nevertheless, a very pleasant evening was spent. The chair was ably filled by Mr. W. Brown, of the Globe, and the vice-chair, in a like manner, by Mr. J. Dingley, of the Great Northern Brothers. The chairman sang the first song, after which harmony prevailed the whole evening. On the 14th inst. we had an excellent show of fish. Mr. S. Howell weighed in 16lb. 8oz. of pretty roach; Mr. A. Chambers, roach; Mr. F. Lawrence, chub; Mr. W. Brown, roach; Mr. H. Lake, roach, dace, and chub; Mr. J. J. Holmes, 27lb. 12oz. of very fine roach, several scaling from 12oz. up to a 1lb. 2oz. Our sixth annual distribution of prizes took place on Monday evening, and proved very successful. There was a numerous attendance of members and friends, and a long list of prizes given for our new season. The following are the names of those most successful that took prizes:—Messrs. S. Howell, H. Lake, H. Jeffries, S. Orrow, W. Brown, W. Lawrence, J. Brown, C. Franklin, J. Ballard, G. Brown, and your humble servant.—J. J. Holmes, sec.

### LINCOLN ANGLING SOCIETY.

A few of our members were out on the 14th inst., and one prize was taken by Mr. Bingle who brought in a very fine show of roach, dace, gudgeon, and jack from West Drayton; Mr. Johnson good show of roach from Windsor., The other members brought in not such good trays. We all go out on December 21st to fish for our annual Christmas prizes, amounting to six, and have decided on Sunbury, where we hope to have good luck.—H. Bingle, sec.

Our members went out in full force on the 21st inst. to fish for the Christmas prizes, and each member brought in a very fine show of fish, consisting of dace, gudgeon, and perch, and all the prizes were taken by the following gentlemen, viz.:—Mr. Pearce, 1st; Mr. Sheen, 2nd; Mr. Johnson, 3rd; Mr. Bingle, 4th; Mr. Emblem, 5th; and Mr. Ulph, 6th. The weather being very rough, marred a little the sport and pleasure. All the members were thoroughly satisfied with their day's sport, Sunbury being the place we fished for the prizes.—H. Bingle, sec.

### MACCLESFIELD UNITED ANGLING SOCIETY.

The above society held their annual supper on the 17th inst. at Mr. James Bale's, the Three Crowns Inn, Sutton, the catering, as usual, being of the first class, game having been presented by Messrs. Brocklehurst, Major Stancliffe, and N. Goodwin, Esq. The cloth being removed, Councillor C. Rowbotham was called to the chair. "The

Queen and Royal Family" were duly honoured. "Mr. Cunliffe Brooks, M.P., the Worshipful the Mayor, Major Stancliffe, and N. Goodwin, Esq.," honorary members, were next toasted. The worthy chairman then called the secretary to report the doings of the society the last 12 months, which are as follows :—Special day at Turk's Head Reservoir on Good Friday ; not a fish took. Match resumed on May 10th. First prize won by W. Sefton, with one trout, weight 15¼oz. ; second prize won by G. Smith, one trout, weight 13¼oz. The rest of the prizes were fished off on the evening from 7 to 9 the week following, and were won by F. Maurice, F. Leah, B. Leah, J. Maurice, and Captain Hulme. Special day, July 12th, at Taylor's Pool. 1st prize won by J. Moores ; 2nd, C. Lambourne ; 3rd, W. Bond ; 4th, Captain Hulme ; 5th, W. Williams ; 6th, J. Broadhurst ; 7th, F. Leah ; 8th, B. Leah ; 9th, J. Williams. Prizes presented by Mr. James Bale. Special day (by the kind permission of the Worshipful the Mayor, B. B. Brocklehurst, Esq.) at the Barracks Pool. First prize won by W. Sefton (presented by Mr. H. Parkinson) ; second prize won by J. Broadhurst (presented by Mr. James Bale). Special day at Rudyard Lake, Oct. 4th. First prize won by J. Roome ; 2nd, W. Sefton ; 3rd, W. Williams ; 4th, J. Hollaway ; 5th, J. Moores ; 6th, S. Beswick. The following are fish that have been weighed in for previous prizes, monthly prizes, and the heaviest basket :—June 12th, James Bale, weight, at Langley, 5lb.—premium for trout ; J. Moores, Taylor Pool, roach, 15⅝oz. ; B. Leah, pike, Whaley Bridge, 1lb. 4oz. ; W. Sefton, trout, Langley, weight 1lb. ½oz. Aug. 3rd, W. Sefton, roach, Canal, weight 7oz. Sept. 27th, W. Williams, Langley, trout, 8oz. Oct. 6th, S. Beswick, Rudyard, roach, 10½oz. ; Captain Hulme, Langley, trout, 14¼oz. Oct. 11, W. Williams, Rudyard, perch, 8oz. Oct. 21, W. Sefton, pike, weight 4lb. 12½oz. previous. Nov., Captain Hulme, Rudyard, perch, 9¼oz. previous. Nov., J. Bale, Rudyard, pike, 3lb. 13¾oz. Heaviest basket, James Bale, Langley, two trout, weight 7lb. 8oz. The chairman having presented the prizes, the evening was spent in harmony. Songs were sung by Messrs. Scarlon, Lingsby, and others, and Mr. Joseph Bale enlivened the evening with the "Imitation of the Birds," returning a vote of thanks to the chairman.

## NORTH-EASTERN ANGLING SOCIETY.

The Clout Testimonial.—At the special meeting held on the 17th inst., Mr. Taylor having been voted to the chair, addressed the meeting in a few well-chosen and feeling remarks eulogistic of Mr. Clout's energy, affability, and kindness to all, high or low, availing themselves of the Pulborough and Amberley privilege. Mr. Rook had travelled to Pulborough on many occasions and had always met with the greatest courtesy from Mr. Clout, and thought the time had arrived, and it was the duty of fishermen to make some recognition for his services, and should feel the greatest pleasure in aiding to get up a testimonial to that gentleman, that something should be subscribed for by the great body of anglers that he could look at with pride for the rest of his life. Mr. Savage thought Mr. Clout fully deserved the appreciation of anglers, and felt great pleasure in supporting the proposition. Mr. Denny would do his utmost to support the testimonial, and thought it would be a good thing to send subscription cards to the various clubs, then every member would have the opportunity of subscribing to the fund ; he also suggested that cards be sent to Pulborough, Amberley, and neighbourhood, where the fishermen use. Mr. Haylock would feel the utmost pleasure in doing all that lay in his power in furtherance of the object in view ; had known Mr. Clout for a great number of years, and had always found him to be a thorough gentleman. Mr. Fletcher proposed that a committee be formed to carry the matter out and bring it to a successful issue, the committee to meet once a fortnight, the first meeting to be on Thursday, January 8th, 1885. Mr. Reynolds supported that proposition. The following gentlemen, members of various angling societies, offered their services on the committee with power to add to their number :—Messrs. Donald Smith, Denny, G. Goll, Haylock, Clarke, Wright, Pommerat, King, Savage, Taylor, Winter, Jacks, Alfred Clout, Hayward, Wilkins, and Newman. Mr. Clark proposed, seconded by Mr. Rook, that Mr. Haylock be the treasurer to the fund. Mr. Clark proposed, seconded by Mr. Haylock, that Mr. Fletcher be the secretary to the fund. Mr. Fletcher proposed, seconded by Mr. Goll, that these proceedings be published. Mr. Rook proposed, seconded by Mr. Thompson, a vote of thanks to the chairman for the able manner he had conducted the meeting, which brought the proceedings to a close. Several members were out on the 21st for prizes, only two showing up with fish—viz., Messrs. Haylock and Melbourne, a jack each from the Ouse, best fish 8lb.—G. T. Fletcher, sec.

[We should say that the thousands who have availed themselves of Mr. Clout's excursions ought certainly to support this testimonial to him. From what we have heard, we should say he fully deserves the compliment.—Ed.]

## NORFOLK ANGLING SOCIETY.

The third monthly supper of the above society took place on Wednesday, 10th inst., in the spacious club-room, and a good muster of members and friends partook of the bountiful supply of viands provided by the worthy host and hostess, whose experience in that line enables them to serve everything up in the most tempting manner. After the cloth was cleared the remainder of the evening was devoted to harmony, assisted by the able pianist, Mr Symonds. Amongst the principal singers may be mentioned Messrs. Raymond, Munday, and Simper, who were loudly encored. The chairman's health being proposed by his old sterling friend, Mr. Chapman—who was at his best on this occasion, and turned up quite early, as his slippers were not put to warm for him—was the signal for a regular hearty burst of applause, the company evidently trying to outdo one another, so pleased were they at once again seeing that worthy in his old place after his severe illness, from which he has not yet quite recovered ; but the hearty wish was, "May he soon be in his old form, for we cannot afford to lose the good old ones." Another jolly old face was present in the person of Mr. Gibson, who, like our worthy host, well fills an arm-chair ; he looked more jolly this evening, evidently greatly benefitted by his late journeys up the Rhine. Let us hope it will benefit him in health and happiness during the remainder of his life, and that we may have the pleasure of his company on many future occasions. The worthy host and hostess came in for their share of musical honours. A word of praise must be given to Mr. Praunsmandell for his amusing song given in his usual hearty style. Something would appear wanting should you look down the table and did not see him in his old place supporting the worthy vice-chair. His strict business habits make him always punctual and to be depended upon, whether in pleasure or charity. Mr. Pilgrim showed a very handsome tray of roach and dace from the Thames, his good-humoured face beaming all over with smiles, especially at the mention of the last shilling. The company broke up at a late hour, evidently well pleased with themselves and one another by all appearances.—Nip.

## THE PISCATORIAL SOCIETY.

The usual weekly meeting of this society took place on Monday evening last at Ashley's Hotel, Covent Garden, and there was a splendid show of fish upon the tables. Amongst the members present were Messrs. Fennings, Arter, Pattisson, Sachs, Gray, Huggett, Foreman, Meyer, Gillatt, Sumner (Rev. J.), Murray, Crumplen, H. B. Brown, Lecluse, Lemann, Booker, Lander (hon. sec.), Jesse, Goodger, Sparrow, Harden, H. H. Brown, Brunton (Dr.), &c. Mr. H. B. Brown was unanimously voted to the chair. The minutes of the two previous meetings were read and confirmed. The hon. sec. read a letter from one member, Mr. Hare Winton. This gentleman has been roach fishing at Ringwood. One day last week he hooked a salmon quite 30lb. in weight, the same having taken a gentle on roach tackle ; he played the fish most successfully for 20 minutes, but eventually the hold of the hook gave way. Hurdle, the keeper, handled the punt with the greatest skill. Mr. Lemann read a letter from a friend of his residing in Paris, describing the fishing in the Seine. The friend in question had taken some good roach, chub, &c.; but stated that, from the way the river was netted, it was impossible to get many good fish. Any person paying 15s. for a license was entitled to use a large cast net all the year round, and this was being done all day long ; added to which, there was no close season. Mr. Sachs also testified to the immense amount of netting which took place there. If the Parisians wished for sport, they would have to do as in the Thames, viz., to preserve the water. The best fishing was near the bathing machines. (Laughter.) Dr. Brunton has had the good fortune to come across an old angling book treating on the capabilities of the Clyde as a trout and salmon river. Although the Clyde was unfortunately more polluted than the Thames, still the salmon persisted in passing up its waters. The Clydesdale Angling Clubs Protective Association had taken the question in hand, and hoped to be able to do something for the benefit of anglers generally, the Clyde being practically a free river. He would be glad if the society would give a subscription towards the preservation of the said river ; personally he intended to subscribe, and the subject was well worthy of support. "One A. M." seconded, and after some discussion the matter was referred to the committee. Mr. Murray said a deputation from the Central Angling Association were about to wait upon the South-Eastern Railway Company, by appointment, for further concessions, and trusted the same would be granted. Mr. Fennings called attention to the Piscatorial Society's ball ; he was particularly desirous that as many members of the society should be present as possible. The tickets were going off well, Coote and Tinney's band had been engaged, and it was expected to be in every way a great success. The Chairman next proposed the healths of the successful anglers. He was pleased to be in the chair with such a fine show of fish before him. Mr. Huggett showed three trays of pike, weighing 87lb. 8oz., the three largest fish being 10lb. 12oz., 9lb. 8oz., and 9lb. 8oz. respectively. Mr. C. Blundel showed a tray of chub weighing 10lb. 11oz., largest 3lb. 1oz. Mr. Huggett, in reply, thanked the members for their kind compliments ; he was very glad to be able to show the pike on the table. He took them snap fishing with single triangle. He produced the line (one of Carter's) for inspection, and considered for its size, it was one of the best and strongest he had ever used. Mr. Blundell said he went to the Ouse for Jack, but they would not run. They at last got near some rushes, and tried for chub. He thanked them for their kind expressions. The chairman next gave the toast of "Success to the Piscatorial Society," which was drunk *con amore*. Mr. Goodger proposed "The Health of the Chairman." Mr. H. B. Brown, in a few well-chosen words, replied, and, in conclusion, wished the members, both present and absent, "A Merry Christmas and a Happy New Year."—T. H.

## RODNEY PISCATORIAL SOCIETY.

On the 21st inst. the members of this society took possession of their new quarters, at the Albion, just been built for Mr. T. Hughes, in the Rodney-road, Walworth, where they will be happy to meet friends on any Sunday or Wednesday evening. Mr. R. Smith visited Windsor on the 22nd, and succeeded in getting 4lb. 12oz. of nice roach from the bank ; Mr. G. Dodd, bank-fishing in the upper water, managed to get 2lb. 8oz. of roach, the largest fish weighed over 1lb. ; and Mr. C. A. Pocock, who visited Shepperton, landed some perch. Prizes are offered by Messrs. Flower, C. A. Pocock, Deggins, and Hotham for competition on the 28th, the where and how to be decided on the 24th by the members present.—Pixie.

## ROYAL GEORGE ANGLING SOCIETY.

I have not much to report this week, only to state that the sweepstakes that I mentioned in my last was fished for, and the members came in as follows : Mr. Wood first, followed by Messrs. Guynam, Palmer, Rider, Healey, Carter, and Beale. The prizes will be handed over to the above-named gentlemen on Tuesday night next, when we have arranged for a smoking concert. I think it will be the biggest night of the season, judging from the number of promises to attend. Last meeting night the balance-sheet for the quarter was read by the secretary, and gave every satisfaction. In fact, the majority of the members were quite surprised to know we stood so well, considering the expenditure of the last few months. I am pleased to be able to state that our members are increasing to such an extent that we shall soon be compelled to ask the landlord of our "headquarters" to enlarge the room. Before closing this report, I should like to mention, for the benefit of those members who read the Fishing Gazette, and do not come up often, that we have engaged a piano for the season, also a gentleman who knows how to finger it. I am bound to make this statement for this reason : he is a most intimate friend of—W. H. Rider.

## SILVER TROUT ANGLING CLUB.

The 21st half-yearly dinner of the above club was held on the 27th ult., under the presidency of Mr. Pettitt, the chairman, at the Freemasons' Arms, 81, Long-acre (the house where the club was originally formed), when the members and friends sat down to a substantial repast, served in a very liberal and excellent manner by the worthy host, Mr. Woodrow, who is himself an honorary member. After the removal of the cloth, the members gave themselves up to harmony and conviviality, the usual toasts on this occasion being dispensed with. Mr. Pettitt, being enthusiastically called upon to open the proceedings, gave one of his old favourites in an admirable manner ; and some excellent songs were rendered by the Bros. Dumenil, Mr. Hewitt, Mr. Williams, Mr. Parsons, Mr. Brigden, Mr. Cherry, jun., Mr. Oldfield, Mr. Deaton, Mr. Harris, and others, several encores being demanded and readily complied with. Mr. Alexander ably officiated at the piano, and was well supported by Mr. Mansfield, who rendered some excellent solos on the flute, piccolo, and ocharina, which were much applauded, and added greatly to the evening's enjoyment. The Chairman returned thanks to the members present for their support on that occasion, and also tendered the thanks of the members and himself to their worthy host for the liberal manner in which he had treated them, and for his efforts to make the dinner a success. Mr. Woodrow, in reply, thanked the members for the expression of their satisfaction. The harmony was kept up to a very late, or rather early, hour, and with "Auld Lang Syne" a very enjoyable evening was brought to an agreeable conclusion.—J. Hewitt, sec.

## SOUTH-EASTERN ANGLING SOCIETY.

No news of any catches for the past week or two. It is ordered that a special meeting be called for Tuesday, Dec. 23rd, on matters of vital importance, when it is hoped that one and all will attend, as everyone is concerned in the questions to be gone into.—T. H. Weston, sec.

## ST. MUNGO ANGLING CLUB.

This club held its fourth annual supper in Forsyth's Cobden Hotel, on Dec. 12th, Mr. John Urie, the president, in the chair, and Mr. Andrew Paterson, vice-president, being croupier. Among the members present were : Dr. Dougall, and Messrs. W. Freeland, James Paterson, J. G. Todd, J. Jeffray, W. Fraser, and Mr. W. Craig Ramsay, the secretary. After the usual loyal and patriotic toasts, the prizes gained during the season were presented. Mr. W. Robertson, the winner of the president's prize, made a suitable response to the toast of the prize-takers. It was noted that Mr. James Paterson, a member of the club, had gained the championship prize for Loch Leven for the season, and that on the previous season the club had the highest average baskets of any club in competition. The meeting closed with a vote of thanks to the president and secretary for their services.

## STOKE-UPON-TRENT ANGLING SOCIETY.

The first of a series of musical and literary entertainments in connection with the above society was held in the society's club-room, Roebuck Hotel, on Wednesday evening, Dec. 10th, the president, J. E. Hassall, Esq., in the chair. There was also a good muster of members and friends, who thoroughly enjoyed the evening's entertainment, some capital songs being rendered in first-class style. Our best thanks are due to those friends (non-members) who so kindly contributed to the harmony of the evening. It was also found that the society possesses vocalists of no mean order. Mr. G. Wright and Mr. F. Clark very ably presided at the pianoforte. The meeting, which was very successful, terminated, after the usual vote of thanks, with "Auld Lang Syne" and the "National Anthem." I am also pleased to add that this flourishing society has secured two more miles of excellent fishing on the river Sow, from Milford-bridge to its confluence with the Trent, on the Earl of Shrewsbury's estate. Mr. E. Cocker and Mr. F. S. Dale, fishing this water on Monday, Dec. 8th, succeeded in capturing four nice jack, the largest fish weighing 6lb. 10oz.—J. Hollins, hon. sec.

### STOKE NEWINGTON ANGLING SOCIETY.

Three prizes will be fished for on the 28th inst., go-where-you-please; the heaviest gross weight of any kind of fish to take the prizes in rotation. No fish weighed in after 10 p.m.—T. Gretton.

### WAVENEY ANGLING CLUB, BECCLES.

The usual monthly meeting was held on Thursday evening last at the Club-room, Caxton Arms. The Mayor (Clifford Smith, Esq.) occupied the chair. There was a very good attendance of members. The minutes of the last meeting having been read and confirmed, Mr. C. J. Pickthall gave a humorous reading entitled, "My Big Fish." Messrs. Palmer and Gilman also contributed to the amusement of the evening by a short reading and a recitation, respectively. Votes of thanks were accorded to these gentlemen for their contributions to the evening's entertainment, and to the Mayor for presiding. The next meeting will take place on Thursday, January 8, 1885, when it is hoped a practical paper will be read by one of the members on "General Fishing in the river Waveney."

### WELLINGTON.

On the 14th inst. Messrs. Jenner and Crocker weighed in roach and a 3lb. jack from Shepperton, and Mr. Newbury and Mr. Cade, from Datchet, had about 9lb. of roach and dace. On Wednesday, the 17th, the distribution of our annual prizes took place, in connection with which a supper was held, and which reflected great credit on our worthy hostess, Mrs. Hills. The chair was taken by Mr. Henry Hills, and the vice by Mr. Palmer, while Mr. Withers most ably officiated at the pianoforte. After the good things had been disposed of, and the usual loyal and patriotic toasts had been drunk and responded to, the business of the evening was proceeded with, a very handsome and valuable list of prizes being distributed by the chairman in his usual affable manner. The principal winners were Messrs. Andrews, Newbury, Hopkins, Wright, and Jenner. A very agreeable evening was spent, the harmony being of a superior order. Mr. Palmer beautifully sang "Half-Mast High," and "Far Away," and Messrs. Hills, Weare, White, Hillier, and many others also favoured the company. Mr. Bodell, of the Busy Bees, gave us the "Chiswick Volunteers." In responding to the toast of "Success to the Wellington," the chairman briefly alluded to the great progress that has been made by this society in the short time it has been established. Several gentlemen then offered prizes to be fished for between now and the end of the season, and a most successful meeting terminated, the only complaint being that the evening was too short.—W. W. Alexander, sec.

### WEST GREEN ANGLING SOCIETY.

Mr. Lione weighed in a very pretty jack weighing 5lb.; Mr. J. Guyver had one scaling 6½lb.; Mr. Hoy scaling two nice jack on Wednesday, one weighing 7lb., the other going 3½lb.—J. Guyver, sec.

### UNITED BROTHERS, DEPTFORD.

Several of our members were out on the 14th; rather poor sport. Mr. J. Payne, some perch; Mr. J. Currans, roach, from the Thames.—H. Tyler.

## SEA FISHING NOTES.

A friend who made a summer tour of the Isles of Scilly, Man, and Arran sends me the following jottings from his note-book:—

Around the rocks of Scilly, especially in the deep channels, are fish in profusion—pollack, mullet, salmon peel, smelt, and the very curious and rare little lancelet. This fish does not possess scales; has one fin along the back, joined at the anal to form the tail; no other fin. The name *Amphioxus* was bestowed because the fish thus characterised appears as if sharp at both ends. Pallas was the first naturalist who had an opportunity of examining the fish now called the lancelet, and he was led to arrange it under the name of *Limax lanceolatus;* but the little animal now named the lancelet remained in doubt, until it was in the more proper sense discovered in the harbour of Polperro, in 1831, after a severe storm. But of this discovery and its figure you will find all particulars in "Couch," Vol. IV. p. 415, which will well repay perusal.

The Waltonian who anathematises the east wind will be surprised to learn that it favours the salt-water fisher in Scilly. The warm gales of Devon and Cornwall probably temper the wind which visits us over the malarious marshes of Holland and Germany. The west wind is, on the contrary, very boisterous as it rolls in with the swell of the Atlantic. Prawns and shrimps are plentiful, and limpets on the rocks, especially on those of the north islands, to which they adhere, covered with the canopy of their beautiful "patella" shell. The other fauna is, of course, limited. The more noble animals find no cover or space for their security, although there are, in old books, sly records of wild boars and fallow deer. On the island of Teän the rabbits are white giants, looking almost spectral as they are skulking and scudding among the heath and furze bushes. The tea and coffee plants flourish and defy the elements even in winter.

Life in Scilly displays a peculiar character of simplicity—there is no scope for grandeur and high style; yet the fish and fig pastry, the island cake, the clotted cream, and, *par excellence*, the inimitable junket, richly flavoured with wine and pure brandy, with its layer of luscious Cornish cream, and its powdering of sugar, might satiate the proselytes of Epicurus.

Isle of Man.—The sports of this island are somewhat limited. The salmon in the larger rivers are small, but of a very rich flavour. The excellent little trout in the valley streams and delightful burnies rise briskly at the fly in season, and the marine fishing in the bays affords capital amusement. For the herring, as full of flavour as those of Loch Fyne, is the chief prize, some of the boats engaged in this fishery being 28 tons burden, with ten men, and constructed at a cost of £100. The herring fishery, indeed, is termed the "harvest," and its finish is celebrated by a real harvest home. The prominence of the fish is proved by the institution of a special form of prayer during the fishery by Bishop Wilson, and it is very quaintly displayed even in the wording of the oath solemnly administered to the Deemster.

The chief fowling is among the water birds — ducks, curlews, puffins especially being plentiful on the cliff and headlands. Partridges, woodcocks, and snipe are scarce; kestrels and sparrow-hawks, here termed merlyns, abound. Rabbits are plentiful in some districts around the base of the hills; to some of these, it may be, the very curious hybrid—the tailless cat of Man (or Manx cat), called rumpy cat and hubbin—owes its origin.

Murray, however, 1864, says:—"Till lately it was overrun by swarms of white Angola rabbits, which were originally introduced by the Duke of Northumberland, but increased by thousands; they were destroyed after the building of the lighthouse. It may therefore be that they have again multiplied.

There is a bank of alluvial sand—the tiny islet of Coquet—lying off a mile from the beautiful river of that name that streams down through dingles and valleys from the wilds of Northumberland. It was here that Cuthbert communed with a princess, and an abbess; the royal maid was Ælfleda, sister of Ægfred. The holy woman he visited to cite her nuns for their flirtations with the monks of Coldingham, and two sea monsters kneeled in homage to him on the rocks. As a record of the wantonness of the sisterhood, there is a cross in black marble on the floor of Durham Cathedral, to bar a woman from desecrating the choir with her footsteps.

> "O, freshly from his mountain holds
>   Comes down the rapid Tyne;
> But Coquet, still the stream of streams,
>   So let her still be mine.
> There's many a sawmon lies in Tweed,
>   An' many a trout in Till,
> But Coquet—Coquet—aye for me,
>   If I may have my will."

Creel.

## THE NATIONAL FISH CULTURE ASSOCIATION.

The Secretary of the National Fish Culture Association was enabled recently to spawn some of the trout in the salmonidæ tank at the Aquarium, South Kensington, the fish operated upon being the *S. Levenensis*, *S. Fontinalis*, and the Gilleroo trout of Ireland. It will be interesting to observe the result, on account of the prolonged captivity to which the fish have been subjected.

The Hon. Professor Baird, Commissioner of Fish and Fisheries in America, has most kindly promised to forward to the Association early next year a consignment of 50,000 eggs of land-locked salmon and brook trout. Such a gift will be much appreciated by the Council, as it will be the means of greatly extending their share of fish. The Secretary informs us that he will be very grateful for donations of salmon and trout eggs from fish culturists, there being at South Kensington every appliance and apparatus to successfully hatch them.

Through the generosity of Lord Onslow, the Association on Monday last was permitted to net the waters intersecting his lordship's park at Guildford, which resulted in the capture of 1,500 fine specimens of carp. As it was not possible to despatch them to London on the same day, Mr. T. Andrews, of Westgate House, Guildford, through whose instrumentality and influence the generous concession was made to the Association, very kindly retained them at his fish culture establishment until the following day, when they arrived at South Kensington in perfect condition. The fish have been placed in one of the ponds in the Exhibition grounds.

Fish Farming.—Mr. W. Oldham Chambers, F.L.S., secretary of the National Fish Culture Association, read a paper at the Herefordshire Natural History Society, Watford, on Tuesday, December 16th, upon the "Acclimatisation of Foreign Food Fishes," in which he urged, not only the introduction of fish to our waters, but the *re*-acclimatisation of those that had, through various maleficent causes, been swept away from our rivers. As an instance of this he mentioned the shad which was at one time prolific in the Thames; but now, on account of the pollution of the water through the present system of sewerage, this branch of the fishing industry had ceased to exist, although in America it constituted a very important feature. In regard to the present deplorable condition of agriculturists, he was of opinion that much relief might be occasioned by utilising waste land, partially covered with water, for the purposes of fish culture, being convinced that fish farming was more remunerative than wheat farming, especially as foreign competition rendered profit from abundant harvests impossible. The farmer was entirely dependent upon seasons, whilst the fish culturist might rely solely on his own resources. Mr. Chambers was listened to by an attentive audience; and after a protracted discussion a vote of thanks was accorded him for the paper he had so kindly read.

Bro. James Willing, Junior.—Bro. James Willing, who has been nominated one of the candidates for the office of Grand Treasurer, was initiated in the Domatic Lodge, No. 177, on the 11th March, 1870, was appointed secretary in 1874, and elected as W.M. in 1877. In the interim—in 1874—he became founder and first W. Master of the Metropolitan Lodge, No. 1507, and four years later, founder and past W. Master of the Royal Savoy Lodge, No. 1744; of both these lodges he is at the present time treasurer. In 1883 he assisted to found the Strand Lodge, No. 1987, and was designated in the warrant of constitution its first W.M.; and this year, at the conclusion of the usual term of service, his brethren were so highly impressed with the manner in which he had discharged his duties that they unanimously re-elected him to the chair. He is likewise a joining member of the Asaph Lodge, No. 1319. In R.A. Masonry Bro. and Comp. Willing has played a similarly active part. He was exalted in the Victoria Chapter, No. 1056, in 1872, was a founder and subsequently Z. of the Priory Chapter, No. 1000, Southend, and founder and First Z. of the Metropolitan Chapter, No. 1507. On retiring from the chair of First Principal, he was elected to the office of Treasurer, and only resigned that responsible post during the present year in order to resume, for the second time, by the choice of his companions, the chair of First Principal. Quite recently Bro. Willing was advanced to the Mark Degree in the Old Kent, Time Immemorial, Lodge, and no doubt he will in due course make his mark in this branch of Freemasonry, as he has already made it in the Craft and Royal Arch. He is likewise a member of the Board of General Purposes, and since 1877 has been on the Committee of Management of the Royal Masonic Benevolent Institution. As regards our Charities, Bro. Willing has constituted himself a Life Governor of each of them, and has five times served the office of Festival Steward, namely, for the Benevolent Institution in 1876 and 1883, for the Girls' School in 1879, and for the Boys' School in 1877 and 1882. In the outer world Bro. Willing has secured the esteem and respect of all with whom he is brought in contact. Only the other day his friends presented a very handsome testimonial, consisting of a silver epergne and fruit stands to the value of 300 guineas.

John Milbourne Fund.—Anglers and rowing men are reminded that this list will close on the 31st of December.—W. H. Brougham, hon. sec., Swayfield Villa, Hounslow.

# NOTICES OF BOOKS, &c.

An Almanack for the Year 1885. (By Joseph Whitaker, F.S.A.)—Mr. Whitaker's almanack is well known to many of our readers, but we do not think anglers of all classes are fully aware how much valuable matter of direct interest to them it contains (*i.e.*, the half-bound edition with the appendix). Close seasons for game, wild birds, and fish ; dates of the commencement and ending of the varying close times for nets and rods on the British and Irish salmon rivers ; the close times for coarse fish, with an epitome of the Freshwater Fisheries Acts 1878 and 1884, &c. On page 412 is a list of all the English, Scotch, and Irish Hunts and Hounds. We are glad to see that there are over 350 couples of stag hounds, nearly 7,000 couples of fox hounds, besides nearly 3,000 couples of harriers and beagles. This gives a total of over

Nineteen Thousand Hounds

maintained in the United Kingdom exclusively for hunting purposes.

### The State of the British Navy.

In the "advertisement" to this edition of Whitaker's Almanack, the Editor calls attention to the comparative list of the ironclad fighting ships of the world —"a list which," he says, "will convince Englishmen that the efforts now being made to strengthen our navy have not been commenced a day too soon." Yes, and it will more than ever convince them of the utter inadequacy of the proposed increase. The *Pall Mall Gazette* does indeed deserve well of the country for having opened our eyes to the fact that the commerce of "that empire on which the sun never sets"—nay, the very empire itself—is at the present moment guarded by a fleet which—as all our greatest naval authorities have convincingly proved—is hardly a match even for the French Fleet. For once in our political history we have seen men of all parties—Conservatives, Liberals, Radicals—unanimous in the opinion that our "first line of defence" (first and last, we should say) is utterly unequal to defend us. And yet those in power, self-condemned by the recent increase they have been goaded into "proposing," instead of taking the ten millions they could have at once for the asking, simply talk of frittering away five over five years. None are so blind as those who will not see—

> "Whom not our oracles, nor Heaven, nor fate,
> Nor frequent prodigies permit to join"

in the universal demand for an adequate fleet. What would Virgil have thought of such a "prodigy" as our newest *Agamemnon*, for instance, which will not even answer her helm ! The history of the world proves that the only way to secure peace is to be fully prepared for war. We must always remember that the next time we are at war with a civilised Power an insurrection in Ireland is certain, and one also possible, if not probable, in India. Nelson was an angler, and there can be no doubt that in fly-fishing he learned the value of that "quick striking" which made him the terror of Europe ; but even he would be powerless without ships.

# NOTICES OF FISHING TACKLE, &c.

The "Comet" Spinning Bait for Pike, Perch, &c.—Mr. B. R. Bambridge, fishing-tackle maker, Eton-on-Thames, sends us a sample of his "Comet" bait. We have heard it very highly spoken of by several good anglers who have used it, among others Mr. James Temple. He got some splendid perch with it recently in the Kennet, fish of two or three pounds, ; and he says both perch and pike come at it "like bull-dogs." The bait spins on the gimp, which is passed through a tube, and this is, in our opinion, by far the best plan. The metal shell of the bait is silvered on the outside and red inside. We should be glad if Mr. Bambridge would try the effect of attaching a couple of smaller triangles to the lower ends of each of the fans to hang close and yet loose, and do away with the flying triangle from the swivel, which always interferes to some extent with the spin. The smaller triangles would be extended, by the rotation of the bait, beyond the radius of the fans, whereas the single independent triangle lies between them and, as Mr. Temple pointed out to us, is thus rendered useless when, as is usually the case, a fish strikes at the head of the bait. We are glad to see Mr. Bambridge, who is himself a practised angler, mounts his "Comets" on stained gimp. We have no hesitation in recommending pike anglers to buy this bait.

Brown's Improved Phantom.—Mr. Francis Francis, in his delightful book "By Lake and River," says : "I looked up my old acquaintance, Mr. Brown, of Aberdeen, the inventor of the phantom minnow, which is the best artificial bait ever yet invented." The only objection we ever had to the "phantom" was its extreme lightness, and this has recently been got over in a very ingenious and effectual way by Mr. W. Bell, who now carries on the late Mr. Brown's business. We had the pleasure of making Mr. Bell's acquaintance when in Aberdeen in the spring, and have much pleasure in testifying to his courtesy, and thorough business qualities. Anglers will find they are thoroughly well treated in any business they may do with him. We said just now that our only objection to the phantom was its extreme lightness ; but this very quality gives it its chief value in many cases. For instance, you can cast it overhand with a salmon rod (and the small sizes for trout with a fly rod) almost as easily as a fly ; but, all the same, it is a decided advantage to have both a light and a weighted phantom with you. In external appearance they are exactly alike, and in the weighted minnow the capital principle of making the water fill out the silk skin, to look like a solid bait, is not interfered with at all. We hear that the trade generally think very highly of the new phantom, and, as the Yankees say, have "filled good lines" for it. No one can touch the Aberdeen house in the make of phantoms ; they employ the same hands who made for the original inventor.

Birds Drowning Fishes.—Captain McLean, of the barque *Firth of Lorn*, of Glasgow, which sailed from Lyttleton, New Zealand, April 26th last, passed Cape Horn, May 23rd, and arrived at London August 21st, reports the following singular circumstance: July 22, when in latitude 26deg. 1min. north, longitude 29deg. 48min. west, a floating spar was seen, and a boat was lowered and the spar towed alongside. On examination it was found to be valueless, being worm-eaten throughout, but a large shoal of fish which had accompanied the spar abandoned it, and commenced eating the barnacles from the ship's bottom. This continued until the 27th of July, when in latitude 38deg. 42min. north, longitude 34deg. 36min. west, the fish left the ship after having cleared the ship's bottom, by which the speed of the vessel was increased two knots per hour. Soon afterwards a singular commotion was observed on the ocean, which was nearly calm. Birds were seen moving about on the surface with great rapidity, occasionally disappearing beneath the water and coming up again, half strangled. As the vessel approached, it was seen that a shoal of fish several acres in extent was visible on the water. A gannet or liver would alight on the back of a great fish, spread its tail and wings to catch the breeze, dig its claws deep into the finny monster's hide, and go before the wind at such a tremendous speed as soon to drown the animated craft. The bird would then devour the fish at its leisure.—*Manchester Courier*.

## COQUET SALMON FISHERY DISTRICT.

The following are the recent alterations in the By-laws affecting anglers :—

### Kinds of Nets that may be Lawfully Used.

(*a*) No person shall use any net for taking salmon, except as follows :—
A draught net or hang net.

(*b*) The manner of using such nets shall be as follows :—
The same may be used with or without a boat, and by any number of men not exceeding three.

Any person offending against this By-law shall be liable for each offence to a penalty not exceeding five pounds.

The minimum size of the mesh of nets for catching salmon that may be lawfully used shall, when the nets are measured wet, be 1½in. from knot to knot, or 6in. round.

Any person using a net in contravention of this By-law shall be liable for each offence to a penalty not exceeding five pounds.

### Alteration of Annual Close Season.

The By-law of 1874, relating to "Alteration of Annual Close Season," is repealed.

The annual close season for all modes of salmon fishing, except with rod and line, shall commence on the 15th day of September in each year, and terminate on the 25th day of March following, both days inclusive ; and the annual close season for fishing for salmon with rod and line shall commence on the 1st day of November in each year, and terminate on the 31st day of January following, both days inclusive ; and the annual close season for fishing for freshwater trout with rod and line shall commence on the 1st day of November in each year, and terminate on the 3rd day of March following, both days inclusive.

Heavy penalties are imposed under the Salmon Fishery Acts 1861—1873 for the breach of any of the provisions relating to the annual close season as fixed by this By-law.

### Use of a Gaff in Connection with a Rod and Line.

During the month of October in each year no person shall use a gaff in connection with a rod and line.

Any person acting in contravention of this By-law shall be liable for each offence to a penalty not exceeding five pounds.

### Nets not to be Used in the Night Time.

Between the expiration of the first hour after sunset and the commencement of the last hour before sunrise, no person shall use any net in any inland waters except a landing-net used auxiliary to a rod and line, or a net for taking eels.

Any person acting in contravention of this By-law shall be liable for each offence to a penalty not exceeding five pounds.

An Amateur Angler's
DAYS IN
DOVEDALE.

Being an Account of My Three Weeks' Holiday in July and August, 1884. Imp. 32mo. Fcy. boards, 1s. Limp leather-cloth, gilt edges, 1s. 6d.

*** Also a Large-Paper Edition, printed on hand-made paper, parchment binding, price 5s.

From the *Standard*, Dec. 24, 1884.

"'An Amateur Angler's Days in Dove Dale,' by E. M. (London ; Sampson Low, Marston, Searle, and Rivington). Although this little volume may not be specially a Christmas book, it is eminently a holiday one, and would be a most appropriate present for any one, man or boy, fond of piscatorial pursuits. It may, indeed, be enjoyed almost as heartily by those wholly ignorant of the gentle art as by adepts. It is written in an exceptionally bright and genial style, and the author, although he professes to be as little skilled in the ways of Nature as of fish, must have been flying in the face of his inner promptings all his life, as his writings bespeak an intense love of Nature and a keen power of observation. A strong vein of quiet humour runs through the volume, mingled with thoughts sometimes serious, sometimes playful. Altogether it is one of the most pleasantly written little books which we have read for a long time."

London : Sampson Low, Marston, & Co.,
188, Fleet Street, E.C.

THE
GREAT REMEDY

For HEADACHE, SEA, or BILIOUS SICKNESS, CONSTIPATION, INDIGESTION, LASSITUDE, LOW SPIRITS, HEARTBURN, AND FEVERISH COLDS. Prevents and Quickly Relieves or Cures the worst form of TYPHUS, SCARLET, JUNGLE, and other FEVERS, PRICKLY HEAT, SMALL POX, MEASLES, ERUPTIVE or SKIN COMPLAINTS, and various other altered CONDITIONS of the BLOOD.

"It
'SAVED MY LIFE,'

for the Fever had obtained a strong hold on me. In a few days I was quite well."—Extract from letter of C. Fitzgerald, Esq., formerly Correspondent of the Manchester Guardian in Albania referring to

LAMPLOUGH'S
PYRETIC SALINE.

Sold by all Chemists in Bottles, 2s. 6d., 4s. 8d., 11s., and 21s. each.

LONDON, E.C.

SPECIALITIES
TO BE HAD FROM ALL FISHING TACKLE MAKERS.

**Perk's Registered Waterproof Lock Joint Trout Rods.**
**The Patent "Climax" Fly Box.**
**The Patent "Double Pulley" Spinning Rod End Ring.**
**The Patent Spring Hook Swivels,** 2s. per dozen.
**The Registered "Fishing Gazette" Live Bait Floats.**
**The "Fishing Gazette" Pliers.**
**The New Pattern Baiting-Can for Barbel, &c.**
**Court's Enamelled Brown Rust-proof Hooks.**
**Gregory's Flexible Trout and Pike Baits.**
**The Marston's Favourite Trout Rod.**
**S. Allcock and Co.'s Cane Built Trout Rods,** 10½, 11, 11½, and 12ft.
**S. Allcock and Co.'s Salmon Built Cane Rods,** 17 and 18ft.
**S. Allcock and Co.'s Hall's Improved Pattern Eyed-Hooks.**
**The Standard Waterproof Braided Trout and Salmon Lines,** Warranted Pure Silk.
**S. Allcock and Co.'s Self-Locking Check and Plain Reel. "Patented."** Instructions.—First press the thumb-piece inwards, then give a quarter turn to right to throw off the check; by reversing the movement the check is put into position again.
**S. Allcock and Co.'s New Steel Collapsing Ring.** There have been many objections to the different kinds of rings now in use, both from difficulty in folding and from their injuring the Net, but in this new pattern these objections have been overcome.
**Wood Jointed Landing Rings.** A circular wood ring in four joints, with spring fasteners, making a compact and serviceable article.
**S. Allcock and Co.'s Crank-Shank Needle-Eyed Hooks, "Patented."**
**S. Allcock and Co.'s Spring Clasps for Rod Joints, "Patented."** By the use of these any person can make his rod into a lock joint rod.

Trade Mark.

Sole Agents for **THE NEW CONVERT ROD HOLDER, "PATENTED."**
With this article forced into the bank of the river, the rod may be held at any angle required, or its position easily changed.

MAJOR TRAHERNE'S PATTERNS OF SALMON FLIES.

**The Patent Fly Book.** Patented May 6th. Protects the Flies from being crushed. It is Light, Portable, and Serviceable.

THE CHROMO PICTURES, "PIKE AND TROUT," 2s. 6d., and in Gilt Frames, 5s. each.

S. ALLCOCK & CO.'S Goods can only be had from Tackle Makers.

Awards.—Gold Medals : Paris, Berlin, Würsburg, Norwich, Calcutta. Highest Awards; Toronto, Melbourne, Adelaide, Sydney, Murcia, South Africa, &c.

# LIBRARY VOLUMES

## PUBLISHED BY SAMPSON LOW, MARSTON, SEARLE, AND RIVINGTON.

## INTERESTING ART VOLUMES.

### THE LIVES OF THE PAINTERS OF ALL HISTORY.

UNDER THE TITLE OF

### ILLUSTRATED BIOGRAPHIES

OF THE

### GREAT ARTISTS.

**The TIMES says :—**

"*Few things in the way of small books upon great subjects, avowedly cheap and necessarily brief, have been hitherto so well done as these biographies of the great masters in painting.*"

Each Volume contains about 15 or 20 Full-Page and Smaller Illustrations, exhibiting the best Examples of the Master, and also a Portrait. The Biographies have been prepared by authorities who have made the subjects their special study, and are the best competent to write upon them. The volumes are strongly bound in cloth, crown 8vo in size, price 3s. 6d. each, unless otherwise stated.

**The Biographies Published are :—**

SIR JOSHUA REYNOLDS.

WILLIAM HOGARTH.

GAINSBOROUGH and CONSTABLE.

SIR THOMAS LAWRENCE and GEORGE ROMNEY, 2s. 6d.

TURNER.

SIR DAVID WILKIE.

SIR EDWIN LANDSEER.

GIOTTO.

FRA ANGELICO and the EARLY PAINTERS of FLORENCE.

FRA BARTOLOMMEO, ALBERTINELLI, and ANDREA DEL SARTO.

MANTEGNA and FRANCIA.

LEONARDO DA VINCI.

MICHELANGELO BUONARROTTI.

RAPHAEL.

TITIAN.

TINTORETTO.

CORREGGIO, 2s. 6d.

WATTEAU, 2s. 6d.

VERNET and DELAROCHE.

MEISSONNIER, 2s. 6d.

ALBRECHT DURER.

LITTLE MASTERS of GERMANY.

HANS HOLBEIN.

## FISHING RODS—AND TACKLE.

BULMER'S "FISHING GAZETTE" GOSSAMER GUT LINES,

Three yards, 8d. each.

"We want nothing better than his finest, on which we have this season killed a 2lb. trout, a 2lb. tench, a 2lb. eel, and a 4lb. pike, and that, too, on a stiff rod. In fact, with fair play, it will take any average trout that will take a fly out of the May-fly season."—FISHING GAZETTE Notice, September 18, 1883.

See also notices in the FISHING GAZETTE for Dec. 17, 1881; June 28th, 1882; July 1, 1882; and March 8th, 1884.

LINES.—Gut, 3 yards, 3d., 4d., and 6d. FISHING GAZETTE Gossamer Gut, Tapered, 8d each; Best 8-plait Silk Line, 25 yards, 1s., 1s. 3d. and 1s. 6d.; prepared ditto, 20 yards, 1s.; stout, 1d. a yard; Good Gut, 12in., 1s. a hank, about 100 strips, 14in., 1s. 6d.; Gossamer Gut, 12in., 3s. 6d.; 14in., 4s. 6d.

HOOKS.—Crystal, and all other Hooks on Best Gut or Hair, 6d. doz.; on Gossamer Gut to Match Lines, 8d. per doz. Eel hooks, 6d. 100. Kendal, 1s. 100. Double Jack Hooks to Gimp, 1½d. each, 1s. 3d. dozen; Treble ditto, 2d. each. Pennel Snaps, 2½d.; Jardine, 3½d. each; Gut or Gimp Spinning Flights, 6d. each; Spoon Baits (Jack's size), 9d. each; Gut and Gimp Traces, 6d. each, FISHING GAZETTE Gut and Gimp Traces, used with or without a lead, 4 swivels, 10d.; ditto Twisted Gut, stout or fine, 1s. each; 3in. Jack Float, 6d.

WINCHES.—Nottingham, from 6d.; Brass from 8d.

HEATON'S PATENT REELS, "Strike from the Winch," and Heaton's Patent Screw-joint Ferrule, capped up to ¾in., 1s. 6d.

Rods made to order or fitted with screw-joint ferrules.

Price List free on application.

Postage extra on all orders, and all must be accompanied by a remittance.

All goods marked in plain figures.

**A. BULMER, 62, WANDSWORTH ROAD, S.W.,**

Corner of Nine Elms Lane.

Three minutes' walk from Vauxhall Station.

## KING'S Fish Preservative.

For the Preservation with all their Sheen and Brightness, and Improvement, of Minnows, Dace, Roach and other Natural Baits, and for general use in the Piscatorial Museum.

Highly recommended by the Editor of the FISHING GAZETTE, "A.R.I.E.L.," and other leading Anglers.

**In Packets, 6d. and 1s. each; by post, 8 and 16 Stamps.**

## King's Natural Bait.

Acknowledged to be the most successful known for all bottom fish, seldom failing to ensure a heavy creel.

Anglers are respectfully cautioned to avoid imitations of this Bait, as it is a notorious fact that no sooner has an article proved itself of sterling value, than a host of imitators are ready with "something as good, or even better," by which they entrap the unwary.

Certainly this may be "the sincerest form of flattery," but it is not one that commends itself to the fair-dealing man, nor does it pay the inventor of the genuine article.

## THE NATURAL BAIT

Is now Sold by all Tackle Dealers

**In Packets, 3d., 6d., and 1s. each;**

AND BY

THE ODOR OF THE FOREST, THE SPARKLE OF THE STREAM.

## FOREST and STREAM.

The American Journal of Angling and Shooting.

THE FOREST AND STREAM has a very extensive circulation among gentlemen the world over. It stands at the head of all American publications of its class; and is constantly growing in interest and value. Its pages are filled with entertaining sketches of travel, camp life, field experiences, and original observations in Natural History. Its departments are:—

The Sportsman Tourist.
Sea and River Fishing.
Game Bag and Gun.
Yachting and Canoeing.
Natural History.
Fishculture
The Kennel.
The Rifle.

The angling department is in the charge of Mr. Fred Mather, the well-known angler and fishculturist.

The weekly numbers of the FOREST AND STREAM annually form two handsomely-printed volumes of over 500 pages each.

Terms, post free, 21s. per annum; 10s. 6d. for six months.

Published by the FOREST AND STREAM PUBLISHING COMPANY, 37, Park road, New York, U.S.

Subscription Agents for Great Britain:
Messrs. SAMPSON LOW, MARSTON, SEARLE, and RIVINGTON, Crown Buildings, 88, Fleet Street, London, who can supply specimen copies.

DR. J. COLLIS BROWNE'S

## CHLORODYNE

A few doses quite effectual. CAUTION.—The extraordinary medical reports on the efficacy of Chlorodyne render it of vital importance that the public should obtain the genuine, which is protected by Government stamp, bearing the words "Dr. J. Collis Browne's Chlorodyne." See decision of Vice-Chancellor Sir W. Page Wood, *The Times*, July 16, 1864. Numerous testimonials from eminent physicians accompany each bottle.

From W. C. WILKINSON, F.R.C.S., Spalding:—
"I consider it invaluable in phthisis and spasmodic cough; the benefit is very marked indeed."

Sold in bottles, 1s. 1½d., 2s. 9d., and 4s. 6d., by all Chemists.

Sole Manufacturer,

**J. T. DAVENPORT,**

33, Great Russell-street, W.C.

## Freeman's Chlorodyne.

THE ORIGINAL AND ONLY TRUE

IT IS THE GREATEST MEDICAL DISCOVERY OF THE PRESENT CENTURY, and is regarded as a boon to mankind.

It is the best known remedy for Coughs, Consumption, Whooping Cough, Bronchitis and Asthma.

It effectually checks and arrests those too often fatal effects of Diseases, Diphtheria, Diabetes Fever, Croup, Ague, &c.

It acts like a charm in Diarrhœa, and is the only known Specific in Cholera and Dysentery.

It effectually cuts short all attacks of Epilepsy, Hysteria, Palpitation, Convulsions and Spasms.

It is the only palliative in Rheumatism, Gout, Cancer, Toothache, Neuralgia, Sciatica, Lumbago, &c.

It rapidly relieves pain, from whatever cause, allays the irritation of Fever, soothes and strengthens the system under exhausting diseases, restores the deranged functions, stimulates healthy action of the secretions of the body, and gives quiet and refreshing sleep, and marvellously prolongs life.

It may be taken by old and young at all hours and times, according to the directions.

It is extensively used by Medical Men in their official and private practice at home and abroad, who have given numerous written testimonials of its wonderful efficacy.

Sold by Chemists and Patent Medicine Dealers all over the world in bottles, 1s. 1½d., 2oz. 2s. 9d., 4oz. 4s. 6d., half-pints 11s., and pints 20s. each, and by the Inventor, RICHARD FREEMAN, 70, Kennington Park-road, London, S.E. Free by Post.

Purchasers are CAUTIONED not to have palmed upon them any substitute. See that the Trade Mark, "THE ELEPHANT," is on the wrapper, &c., and the words "FREEMAN'S ORIGINAL CHLORODYNE" are engraved on the Government Stamp—which is the only TRUE CHLORODYNE.
